INSPECTION AND ADJUSTMENT

Preliminary Check

INFOID:000000006389818

DESCRIPTION

The purpose of the sonar sensor preliminary check is to confirm that there are no outside factors affecting the sonar system.

CONDITIONS

- Ignition switch ON
- No obstructions within 3.0 m (10 ft.) of sonar sensors

SONAR SENSOR STATUS CHECK

- Check that the sonar sensors are properly aligned (no deformation in sensor mounting areas).
- Check that snow, mud or other foreign objects are not adhering to the sonar sensors.
- Check that there is no deformation, scratches or other damage to the sonar sensors.
- · Check that water has not accumulated in the sonar sensors.

CAUTION:

Use water, cotton swab, or other soft material for cleaning the sensors.

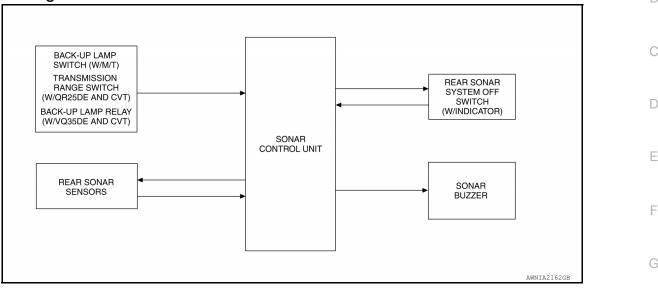

- 1. Inspect for the following:
- Physical damage to wiring
- Physical damage to harness connectors
- Loose or disconnected harness connectors
- Physical damage to system components
- 2. Check that there are no obstacles within each sonar sensor's detection range.

Sonar sensors	Detection range
Rear	Approx. 1.8 m (5.9 ft.) maximum

- 3. Check that there are no nearby ultrasound sources such as the sounds of vehicle horns, motorcycle engines or truck air brakes.
- 4. Check that the vehicle is on a level surface.

<u>SYSTEM DESCRIPTION ></u> SYSTEM DESCRIPTION REAR SONAR SYSTEM

System Diagram

System Description

INFOID:00000006389820

А

INFOID:00000006389819

FUNCTION

With power and ground supplied, transmission gear selector lever in R position, and the rear sonar system OFF switch ON (when indicator lamp is not illuminated), the rear sonar system will detect obstacles within 1.8 m (5.9 ft.) of the rear sonar sensors. The vehicle operator is notified of obstacles by varied rate of tone from the sonar buzzer depending on distance of obstacle being sensed.

REAR SONAR SYSTEM OFF SWITCH

With power and ground supplied to the sonar control unit, transmission gear selector lever in R position, the sonar system can be disabled and the sonar buzzer silenced by momentarily pressing the rear sonar system OFF switch. The sonar system OFF indicator lamp will be illuminated in the rear sonar system OFF switch. The rear sonar system and buzzer will be disabled and the sonar system OFF indicator will be illuminated until the ignition switch is turned OFF. When the ignition switch is turned ON, the rear sonar system will be enabled. Depressing the rear sonar system OFF switch again will enable the rear sonar system also. Enabling the rear sonar system will cause the rear sonar system OFF indicator to go out. If the indicator light is blinking there is a malfunction in the system.

SONAR BUZZER

With power and ground supplied to the sonar control unit and the transmission gear selector lever in R position, a stationary object that is at least 7.0 cm (2.8 in.) wide and 1.0 m (39.0 in.) tall and that is closer than 1.8 m (5.9 ft.) will be detected by the rear sonar sensors, causing the sonar buzzer to sound a tone. As the vehicle moves closer to the object, the rate of the tone will increase. When the object is less than 25.0 cm (10 in.) from the rear bumper, the tone will sound continuously.

REAR SONAR SENSORS

With power and ground supplied to the rear sonar sensors, the sonar sensors transmit an ultrasonic signal. This signal is reflected back to the sensor by objects large enough and close enough to be detected. The rear sonar sensors measure the time from the transmitted signal to the time the signal is reflected back and sends this information to the sonar control unit.

BACK-UP LAMP SWITCH (WITH M/T)

The back-up lamp switch provides a reverse signal to the sonar control unit.

TRANSMISSION RANGE SWITCH (WITH QR25DE and CVT)

The transmission range switch provides a reverse signal to the sonar control unit.

BACK-UP LAMP RELAY (WITH VQ35DE and CVT)

INFOID:000000006389822

Component	Function		
Sonar control unit	Controls sonar system and provides self-diagnosis		
Back-up lamp switch (with M/T)			
Back-up lamp relay (with VQ35DE and CVT)	Provides reverse signal for sonar control unit		
Transmission range switch (with QR25DE and CVT)			
ТСМ	Controls back-up lamp relay		
Sonar buzzer	Sounds a signal when objects are detected in the rear of the vehicle		
Rear sonar system OFF switch	Enables the driver to turn system off and signals a system malfunction		
Rear sonar sensor	Senses objects in the rear of the vehicle		

Self-Diagnosis Function

There are four modes of self-diagnosis. These modes must be followed in the following order:

- 1. Entering diagnostics mode
- 2. Requesting number of fault codes mode

INFOID:000000006389823

< SYSTEM DESCRIPTION >

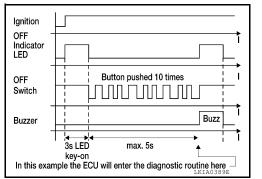

3. Requesting fault codes mode

4. Clearing fault codes mode

Self-diagnosis can be manually exited by turning the ignition OFF or selecting reverse gear. Self-diagnosis will exit unless a fault code request occurs before a message is repeated five times without acknowledgement.

ENTERING DIAGNOSTICS MODE

- 1. Turn ignition switch ON. Rear sonar system OFF switch indicator lamp illuminates for three seconds and then turns off.
- 2. Immediately push rear sonar system OFF switch ten times within five seconds.
- 3. The sonar buzzer will sound once and the sonar system OFF indicator will flash once.

REQUESTING NUMBER OF FAULT CODES MODE

1. While in "entering diagnostic mode", push rear sonar system OFF switch once within 30 seconds of entering diagnostic mode.

NOTE:

If the number of fault codes is not requested within 30 seconds after entering diagnostic mode, the system will return to regular operation mode.

- 2. The sonar buzzer will sound once.
- 3. Sonar system OFF indicator will flash once and sonar buzzer will sound once for each fault code detected.
- 4. There will be a four second pause.
- 5. The number of fault codes will repeat five times then pause. **NOTE:**

Self-diagnosis will exit unless "requesting fault codes mode" occurs before five repeats ends.

REQUESTING FAULT CODES MODE

- 1. While in "requesting number of fault codes" mode, push rear sonar system OFF switch once.
- 2. The sonar buzzer will sound once.
- Sonar system OFF indicator will flash and sonar buzzer will sound the first digit of the fault code followed by a one second pause.
- 4. Sonar system OFF indicator will flash and sonar buzzer will sound the second digit of the fault code followed by a four second pause.
- 5. Each fault code will repeat five times then pause.
- Write down each fault code. Then, acknowledge the fault code by pushing the rear sonar system OFF switch once (the sonar buzzer may sound).
 NOTE:

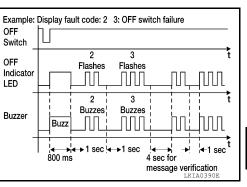

"Requesting fault codes mode" will exit unless the fault code is acknowledged before it is repeated five times. When all fault codes have been indicated, "clearing fault codes mode" will be entered. Refer to <u>SN-16, "DTC Index"</u>.

CLEARING FAULT CODES MODE

NOTE:

While in "clearing fault codes mode", self-diagnosis will automatically exit if no activity occurs for 30 seconds.

Example: 5 fault codes stored OFF Switch OFF 5 Flashes Indicator LED ŧ 5 Buzzes Buzzer Buzz $\Box \Box \Box \Box \Box \Box \Box \Box$ ▶ 1 sec .**⊲** ▶.⊲ 800 ms 4 sec for message verification T.KTA0388F

SONAR SENSOR CIRCUIT INSPECTION

Description

INFOID:000000006389825

With power and ground supplied to the rear sonar sensors, the rear sonar sensors transmit an ultrasonic signal. This signal is reflected back to the rear sonar sensor by objects large enough and close enough to be detected. The rear sonar sensors measure the time from the transmitted signal to the time the signal is reflected back and send this information to the sonar control unit. Refer to <u>SN-5</u>, "System Description" for more details.

Diagnosis Procedure

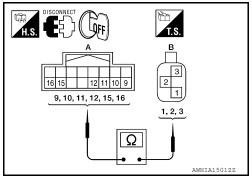

INFOID:000000006389826

Regarding Wiring Diagram information, refer to SN-17, "Wiring Diagram".

1. CHECK REAR SONAR SENSOR CIRCUITS

- 1. Turn ignition switch OFF.
- 2. Disconnect sonar control unit connector and rear sonar sensor connectors.
- 3. Check continuity between sonar control unit harness connector (A) and rear sonar sensor harness connectors (B).

Connector	Terminal	Connector	Terminal	Continuity
	16		1	
B24 (A)	15	B402, B403, B404, B405 (B)	3	Yes
	9, 10, 11, 12		2	

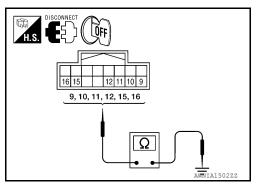

4. Check continuity between sonar control unit harness connector and ground.

Connector	Terminal	Continuity	
B24	9, 10, 11, 12, 15, 16	Ground	No

Are the inspection results normal?

- YES >> Inspection End.
- NO >> Repair harness or connector.

SONAR BUZZER CIRCUIT INSPECTION

< DTC/CIRCUIT DIAGNOSIS >

SONAR BUZZER CIRCUIT INSPECTION

Description

When the transmission selector lever is in the R position, a stationary object will be detected by the rear sonar sensors causing the sonar buzzer to sound a tone. As the vehicle moves closer to the object, the rate of the tone will increase. When the object is very close to the vehicle, the tone will sound continuously.

Diagnosis Procedure

Regarding Wiring Diagram information, refer to SN-17. "Wiring Diagram".

1.CHECK SONAR BUZZER

Refer to SN-11, "Component Inspection".

Is the inspection result normal?

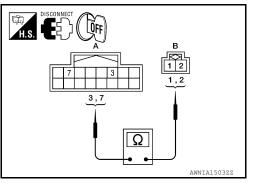

YES >> GO TO 2.

NO >> Replace sonar buzzer. Refer to SN-29, "Removal and Installation".

2. CHECK SONAR BUZZER CIRCUITS

- 1. Turn ignition switch OFF.
- 2. Disconnect sonar control unit connector and sonar buzzer connector.
- 3. Check continuity between sonar control unit harness connector (A) and sonar buzzer harness connector (B).

Connector	Terminal	Connector	Terminal	Continuity
B24 (A)	3	M41 (B)	2	Yes
024 (A)	7	M41 (B)	1	165

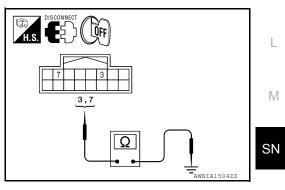

4. Check continuity between sonar control unit harness connector and ground.

Connector	Terminal	Continuity	
B24	3, 7 Ground		No

Are the inspection results normal?

YES >> Inspection End.

NO >> Repair harness or connector.

SONAR SYSTEM OFF SWITCH CIRCUIT INSPECTION

< DTC/CIRCUIT DIAGNOSIS >

SONAR SYSTEM OFF SWITCH CIRCUIT INSPECTION

Description

The sonar system can be disabled by momentarily pressing the rear sonar system OFF switch. The sonar system OFF indicator lamp will be illuminated when the rear sonar system is OFF. Enabling the sonar system will cause the sonar system OFF indicator to go out. The indicator will flash if a malfunction exists in the system.

Diagnosis Procedure

Regarding Wiring Diagram information, refer to SN-17, "Wiring Diagram".

1.CHECK REAR SONAR SYSTEM OFF SWITCH

Refer to SN-13, "Component Inspection".

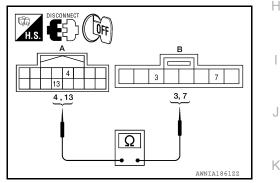

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Replace rear sonar system OFF switch. Refer to <u>IP-12, "Removal and Installation Instrument</u> <u>Panel"</u>.

2.check rear sonar system off switch circuits

- 1. Turn ignition switch OFF.
- 2. Disconnect sonar control unit connector and rear sonar system OFF switch connector.
- Check continuity between sonar control unit harness connector (A) and rear sonar system OFF switch harness connector (B).

Connector	Terminal	Connector	Terminal	Continuity		
P24 (A)	4	M20 (P)	3	Yes		
624 (A)	B24 (A) 13 M39 (B)		7	res		

 Check continuity between rear sonar system OFF switch harness connector and ground.

Connector	Terminal		Continuity			
M39	3, 7	Ground	No			
1005	2, 6	Cround	Yes			

Are the inspection results normal?

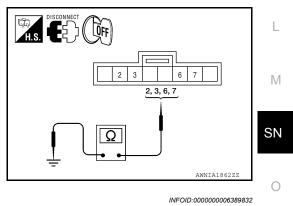

YES >> Inspection End.

NO >> Repair harness or connector.

Component Inspection

REAR SONAR SYSTEM OFF SWITCH

1. Disconnect the rear sonar system OFF switch connector M39.

SYMPTOM DIAGNOSIS SONAR SYSTEM SYMPTOMS

Symptom Table

INFOID:000000006389836

NOTE:

Always perform Preliminary Check and Self-Diagnosis Function before diagnosing vehicle by symptom. Refer to <u>SN-4</u>, "Preliminary Check" and <u>SN-6</u>, "Self-Diagnosis Function".

Symptom	Repair order
When the transmission gear selector lever is in the R position and the sonar system is ON, the rear sonar system does not operate.	 Check sonar control unit power and ground circuits. Refer to <u>SN-9, "Diagnosis Procedure For Rear Sonar System"</u>. Check back-up lamp switch (with M/T). Check transmission range switch (with QR25DE and CVT). Refer to <u>TM-297, "Component Inspection (Transmission Range Switch)"</u>. Check back-up lamp relay (with VQ35DE and CVT). Check related harness and connections for back-up lamp re- lay. Check rear sonar sensors. Refer to <u>SN-10, "Diagnosis Pro- cedure"</u>. Check rear sonar buzzer. Refer to <u>SN-11, "Diagnosis Proce- dure"</u>. Replace sonar control unit. Refer to <u>SN-28, "Removal and Installation"</u>.
Buzzer sounds although there are no obstacles within the detec- tion range (false detection).	 Check all sonar sensors for misalignment or damage (in- cluding bumper and fascia). Refer to <u>SN-4</u>, "<u>Preliminary</u> <u>Check</u>". Check all sonar sensors for dirt or ice buildup. Refer to <u>SN-4</u>, "<u>Preliminary Check</u>". Check sonar sensors. Refer to <u>SN-10</u>, "<u>Diagnosis Proce- dure</u>". Replace sonar control unit. Refer to <u>SN-28</u>, "<u>Removal and Installation</u>".
The sonar system still operates when the sonar system OFF indi- cator lamp is ON.	 Check sonar system OFF indicator lamp. Refer to <u>SN-13</u>. <u>"Diagnosis Procedure"</u>. Replace sonar control unit. Refer to <u>SN-28</u>. "Removal and <u>Installation"</u>.
The sonar sensors do not detect objects within the detectable range (intermittent operation).	 Check sonar sensors. Refer to <u>SN-4</u>, "Preliminary Check". Replace sonar control unit. Refer to <u>SN-28</u>, "Removal and <u>Installation"</u>.
When the sonar system is OFF, the OFF indicator does not light and the sonar buzzer does not sound.	 Check sonar system OFF switch. Refer to <u>SN-13, "Component Inspection"</u>. Check harness and connections for sonar system OFF switch. Refer to <u>SN-13, "Diagnosis Procedure"</u>. Replace sonar control unit. Refer to <u>SN-28, "Removal and Installation"</u>.
When the sonar system is OFF, the OFF indicator lamp does not light but the sonar buzzer does sound.	 Check sonar system OFF indicator lamp. Refer to <u>SN-13</u>, <u>"Component Inspection"</u>. Check harness and connections for sonar system OFF indicator lamp. Refer to <u>SN-13</u>, "Diagnosis Procedure". Replace sonar control unit. Refer to <u>SN-28</u>, "Removal and <u>Installation"</u>.
When the sonar system is OFF, the sonar buzzer does not sound but the OFF indicator lamp lights.	 Check sonar buzzer. Refer to <u>SN-11, "Component Inspection"</u>. Check harness and connections between sonar buzzer and sonar control unit. Refer to <u>SN-11, "Diagnosis Procedure"</u>. Replace sonar control unit. Refer to <u>SN-28, "Removal and Installation"</u>.

Perform the necessary repair operation.

< PRECAUTION > PRECAUTION PRECAUTION

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRF-TENSIONER" INFOID:00000006389837

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front D air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SR and SB section of this Service Manual.

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SR section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

WARNING:

- When working near the Airbag Diagnosis Sensor Unit or other Airbag System sensors with the Ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the Ignition OFF, disconnect the J battery, and wait at least 3 minutes before performing any service.

Precautions Necessary for Steering Wheel Rotation after Battery Disconnect

INFOID:00000006389838 Κ

NOTE:

- Before removing and installing any control units, first turn the push-button ignition switch to the LOCK position, then disconnect both battery cables.
- After finishing work, confirm that all control unit connectors are connected properly, then re-connect both battery cables.
- Always use CONSULT to perform self-diagnosis as a part of each function inspection after finishing work. If М a DTC is detected, perform trouble diagnosis according to self-diagnosis results.
- This vehicle is equipped with a push-button ignition switch and a steering lock unit.

If the battery is disconnected or discharged, the steering wheel will lock and cannot be turned.

SN If turning the steering wheel is required with the battery disconnected or discharged, follow the procedure below before starting the repair operation.

OPERATION PROCEDURE

 Connect both battery cables. NOTE:

Supply power using jumper cables if battery is discharged.

- 2. Carry the Intelligent Key or insert it to the key slot and turn the push-button ignition switch to ACC position. (At this time, the steering lock will be released.)
- Disconnect both battery cables. The steering lock will remain released with both battery cables disconnected and the steering wheel can be turned.
- 4.

PRECAUTION

< PRECAUTION >

- 5. When the repair work is completed, re-connect both battery cables. With the brake pedal released, turn the push-button ignition switch from ACC position to ON position, then to LOCK position. (The steering wheel will lock when the push-button ignition switch is turned to LOCK position.)
- 6. Perform self-diagnosis check of all control units using CONSULT.

SONAR SENSOR

< UNIT REMOVAL AND INSTALLATION >		
UNIT REMOVAL AND INSTALLATION	А	
SONAR SENSOR		
Removal and Installation		
 Removal 1. Remove the rear bumper fascia and energy absorbing foam. Refer to <u>EXT-42, "Removal and Installation"</u> 2. Disconnect the rear sonar connector. 	С	
 Remove the rear sonar sensor from the rear bumper fascia. Disconnect the sonar sensors from the harness. Remove the sonar sensors retainers from the rear fascia assembly. 	D	
Installation Installation is in the reverse order of removal.	Ε

SONAR CONTROL UNIT

Removal and Installation

Removal

- 1. Remove the LH trunk side finisher. Refer to INT-30, "Exploded View".
- 2. Disconnect the sonar control unit connector.
- 3. Remove the two bolts and remove the sonar control unit.

Installation

Installation is in the reverse order of removal.
