# PRECAUTION PRECAUTIONS

# Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SR and SB section of this Service Manual.

#### WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SR section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

#### PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

#### WARNING:

- When working near the Airbag Diagnosis Sensor Unit or other Airbag System sensors with the Ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the Ignition OFF, disconnect the battery and wait at least 3 minutes before performing any service.

#### Precaution for Work

INFOID:000000008730795

- When removing or disassembling each component, be careful not to damage or deform it. If a component may be subject to interference, be sure to protect it with a shop cloth.
- When removing (disengaging) components with a screwdriver or similar tool, be sure to wrap the component with a shop cloth or vinyl tape to protect it.
- Protect the removed parts with a shop cloth and prevent them from being dropped.
- Replace a deformed or damaged clip.
- If a part is specified as a non-reusable part, always replace it with a new one.
- Be sure to tighten bolts and nuts securely to the specified torque.
- After installation is complete, be sure to check that each part works properly.
- Follow the steps below to clean components:
- Water soluble dirt:
- Dip a soft cloth into lukewarm water, wring the water out of the cloth and wipe the dirty area.
- Then rub with a soft, dry cloth.
- Oily dirt:
- Dip a soft cloth into lukewarm water with mild detergent (concentration: within 2 to 3%) and wipe the dirty area.
- Then dip a cloth into fresh water, wring the water out of the cloth and wipe the detergent off.
- Then rub with a soft, dry cloth.
- Do not use organic solvent such as thinner, benzene, alcohol or gasoline.
- For genuine leather seats, use a genuine leather seat cleaner.

# CVT Shift Selector (Park Position Switch)

| <ul> <li>Park position switch detects that CVT shift selector is in the P (Park) position and then transmits the signal is BCM and IPDM E/R.</li> <li>BCM confirms the CVT shift selector position with the following 5 signals:</li> <li>P (Park) position signal from CVT shift selector (park position switch)</li> <li>P(N) position signal from TCM</li> </ul> | SEC      |
|---|----------|
| <ul> <li>P/N position signal from TCM</li> <li>P (Park) position signal from IPDM E/R (CAN)</li> <li>P/N position signal from IPDM E/R (CAN)</li> <li>P/N position signal from TCM (CAN)</li> </ul>   | L        |
| <ul> <li>IPDM E/R confirms the CVT shift selector position with the following 3 signals:</li> <li>P (Park) position signal from CVT shift selector (park position switch)</li> <li>P/N position signal from TCM</li> <li>P/N position signal from BCM (CAN)</li> </ul>  | Μ        |
| BCM INFOID:000000008527   | N<br>156 |
| BCM controls INTELLIGENT KEY SYSTEM (ENGINE START FUNCTION), NISSAN VEHICLE IMMOB<br>LIZER SYSTEM-NATS [NVIS (NATS)], and VEHICLE SECURITY SYSTEM.<br>BCM performs the ID verification between BCM and Intelligent Key when the Intelligent Key is carried into the   | 0        |
| detection area of inside key antenna and push-button ignition switch is pressed. If the ID verification result<br>OK, push-button ignition switch operation is available.<br>Then, when the power supply position is turned ON, BCM performs ID verification between BCM and ECM.<br>the ID verification result is OK, ECM can start engine.                        | Р        |
| ECM   | 157      |
| ECM controls the engine   |          |

ECM controls the engine. When power supply position is turned ON, BCM starts communication with ECM and performs the ID verification between BCM and ECM.

#### < SYSTEM DESCRIPTION >

If the verification result is OK, the engine can start. If the verification result is NG, the engine can not start.

#### IPDM E/R

IPDM E/R has the starter relay and starter control relay inside. Starter relay and starter control relay are used for the engine starting function. IPDM E/R controls these relays while communicating with BCM.

#### NATS Antenna Amp.

The ID verification is performed between BCM and transponder in Intelligent Key via NATS antenna amp. when Intelligent Key backside is contacted to push-button ignition switch in case that Intelligent Key battery is discharged. If the ID verification result is OK, the operation of starting engine is available.

#### TCM

TCM transmits the shift position signal (P/N position) to BCM and IPDM E/R. And further, TCM transmits the shift position signal (P/N position) to BCM via CAN communication.

- BCM confirms the CVT shift selector position with the following 5 signals:
- P (Park) position signal from CVT shift selector (park position switch)
- P/N position signal from TCM
- P (Park) position signal from IPDM E/R (CAN)
- P/N position signal from IPDM E/R (CAN)
- P/N position signal from TCM (CAN)

IPDM E/R confirms the CVT shift selector position with the following 3 signals:

- P (Park) position signal from CVT shift selector (park position switch)
- P/N position signal from TCM
- P/N position signal from BCM (CAN)

#### Combination Meter

Combination meter transmits the vehicle speed signal to BCM via CAN communication.

BCM also receives the vehicle speed signal from ABS actuator and electric unit (control unit) via CAN communication. BCM compares both signals to detect the vehicle speed.

#### Door Switch

Door switch detects door open/close condition and then transmits ON/OFF signal to BCM.

#### Outside Key Antenna

Outside key antenna detects whether Intelligent Key is outside the vehicle and transmits the signal to BCM. Three outside key antennas are installed in the front outside handle LH, front outside handle RH and rear bumper.

#### Hood Switch

Hood switch detects that hood is open/closed, and then transmits the signal to IPDM E/R. IPDM E/R transmits hood switch signal to BCM via CAN communication.

#### Inside Key Antenna

Inside key antenna detects whether Intelligent Key is inside the vehicle and transmits the signal to BCM. Two inside key antennas are installed in the front console and rear parcel shelf.

#### Remote Keyless Entry Receiver

Remote keyless entry receiver receives each button operation signal and electronic key ID signal from Intelligent Key and then transmits the signal to BCM.

#### Intelligent Key

Each Intelligent Key has an individual electronic ID and transmits the ID signal by request from BCM. Carrying the Intelligent Key whose ID is registered in BCM, the driver can perform, remote start, door lock/ unlock operation, remote trunk, panic alarm and push-button ignition switch operation.

# < SYSTEM DESCRIPTION >

#### Push-button Ignition Switch

Push-button ignition switch detects that push-button is pressed and then transmits the signal to BCM. BCM changes the power supply position with the operation of push-button ignition switch. BCM maintains the power supply position status while push-button is not operated.

#### Security Indicator Lamp

Security indicator lamp is located on combination meter. Security indicator lamp blinks when power supply position is any position other than ON to warn that NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS [NVIS (NATS)] is on board.

#### Starter Control Relay

Engine starting system functions by controlling both starter relay and starter control relay. Both relays are integrated in IPDM E/R. Starter relay is controlled by BCM and starter control relay is controlled by IPDM E/R on request from BCM.

IPDM E/R transmits starter relay and starter control relay status signal to BCM via CAN communication.

#### Starter Relay

Engine starting system functions by controlling both starter relay and starter control relay. Both relays are integrated in IPDM E/R. Starter relay is controlled by BCM, and starter control relay is controlled by IPDM E/R on request from BCM. IPDM E/R transmits starter relay and starter control relay status signal to BCM via CAN communication.

#### Stop Lamp Switch

Stop lamp switch detects that brake pedal is depressed, and then transmits the signal to BCM.

#### Transmission Range Switch

Transmission range switch is integrated in CVT assembly, and detects the CVT shift selector position. TCM receives the transmission range switch signal and then transmits the P/N position signal to BCM and IPDM E/R.

BCM confirms the CVT shift selector position with the following 5 signals:

- P (Park) position signal from CVT shift selector (park position switch)
- P/N position signal from TCM
- P (Park) position signal from IPDM E/R (CAN)
- P/N position signal from IPDM E/R (CAN)
- P/N position signal from TCM (CAN)

IPDM E/R confirms the CVT shift selector position with the following 3 signals:

• P (Park) position signal from CVT shift selector (park position switch)

- P/N position signal from TCM
- P/N position signal from BCM (CAN)

#### Vehicle Information Display

Vehicle information display is integrated in combination meter. Various information and warnings regarding the Intelligent Key System are displayed. M

#### SYSTEM INTELLIGENT KEY SYSTEM/ENGINE START FUNCTION

# INTELLIGENT KEY SYSTEM/ENGINE START FUNCTION : System Diagram

# INTELLIGENT KEY SYSTEM/ENGINE START FUNCTION : System Description

INFOID:000000008527176

#### SYSTEM DESCRIPTION

• The engine start function of Intelligent Key system makes it possible to start and stop the engine without using the key, based on the electronic ID verification. The electronic ID verification is performed between BCM and Intelligent Key when the push-button ignition switch is pressed while the Intelligent Key is within the detection area of inside key antenna.

NOTE:

The driver should carry the Intelligent Key at all times.

- Intelligent Key has 2 IDs [Intelligent Key ID and NVIS (NATS) ID]. It can perform the door lock/unlock operation and the push-button ignition switch operation when the registered Intelligent Key is carried.
- When Intelligent Key battery is discharged, engine can be started by operating push-button ignition switch after contacting Intelligent Key backside to push-button ignition switch. At that time, the NVIS (NATS) ID verification is performed.
- If the ID is successfully verified, when push-button ignition switch is pressed, the engine can be started.
- Up to 4 Intelligent Keys can be registered (Including the standard Intelligent Key) upon request from the customer.

NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS

#### < SYSTEM DESCRIPTION >

# NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS : System Description

INFOID:00000008527178

#### SYSTEM DESCRIPTION

- The NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS [NVIS (NATS)] prevents the engine from being M started by Intelligent Key whose ID is not registered to the vehicle (BCM). It has higher protection against auto theft involving the duplication of mechanical keys.
- The ignition key integrated in the Intelligent Key cannot start the engine. When the Intelligent Key battery is Ν discharged, the NVIS (NATS) ID verification is performed between the transponder integrated with Intelligent Key and BCM via NATS antenna amp. when the Intelligent Key backside is contacted to push-button ignition switch. If the verification results are OK, the engine start operation can be performed by the push-button ignition switch operation.
- Locate the security indicator lamp and apply the anti-theft system equipment sticker that warns that the NVIS (NATS) is on-board the model.
- Security indicator lamp always blinks when the power supply position is any position other than ON.
- Ρ • Up to 4 Intelligent Keys can be registered (including the standard ignition key) upon request from the owner. Specified registration is required when replacing ECM, BCM or Intelligent Key.
- Possible symptom of NVIS (NATS) malfunction is "Engine cannot start". The engine can not be started because of other than NVIS (NATS) malfunction, so start the trouble diagnosis according to SEC-64, "Work Flow".
- If ECM other than genuine part is installed, the engine cannot be started. For ECM replacement procedure, refer to EC-538, "Removal and Installation" (with QR25DE) EC-999, "Removal and Installation" (with VQ35DE).

#### < SYSTEM DESCRIPTION >

#### PRECAUTIONS FOR KEY REGISTRATION

- The ID registration is a procedure that erases the current NVIS (NATS) ID once, and then reregisters a new ID. Therefore before starting the registration operation, collect all registered Intelligent Keys from the customer.
- When registering the Intelligent Key, perform only one procedure to simultaneously register both ID [NVIS (NATS) ID and Intelligent Key ID].

#### SECURITY INDICATOR LAMP

- Warns that the vehicle is equipped with NVIS (NATS).
- Security indicator lamp always blinks when the power supply position is any position other than ON. NOTE:

Because security indicator lamp is highly efficient, the battery is barely affected.

ENGINE START OPERATION WHEN INTELLIGENT KEY IS CONTACTED TO PUSH-BUTTON IG-NITION SWITCH

- When brake pedal is depressed while selector lever is in the P (Park) position, BCM activates NATS 1 antenna amp. that is located behind push-button ignition switch.
- 2. When Intelligent Key (transponder built-in) backside is contacted to push-button ignition switch, BCM starts NVIS (NATS) ID verification between BCM and Intelligent Key (transponder built-in) via NATS antenna amp.
- 3. When the NVIS (NATS) ID verification result is OK, buzzer in combination meter sounds and BCM transmits the result to ECM.
- BCM turns ACC relay ON and transmits ignition power supply ON signal to IPDM E/R. 4.
- 5. IPDM E/R turns the ignition relay ON and starts the ignition power supply.
- BCM detects that the selector lever position is P (Park) or N (Neutral). 6.
- BCM transmits starter request signal to IPDM E/R and turns the starter relay in IPDM E/R ON if BCM 7. judges that the engine start condition\* is satisfied.
- IPDM E/R turns the starter control relay ON when receiving the starter request signal. 8.
- Power supply is supplied through the starter relay and the starter control relay to operate the starter motor. 9.
- 10. When BCM receives feedback signal from ECM indicating that the engine is started, BCM transmits a stop signal to IPDM E/R and stops cranking by turning off the starter motor relay. (If engine start is unsuccessful, cranking stops automatically within 5 seconds.)

\*: For the engine start condition, refer to the table "POWER SUPPLY POSITION CHANGE TABLE BY PUSH-BUTTON IGNITION SWITCH OPERATION" below.

POWER SUPPLY POSITION CHANGE TABLE BY PUSH-BUTTON IGNITION SWITCH OPERA-TION

The power supply position changing operation can be performed with the following operations. NOTE:

- When an Intelligent Key is within the detection area of inside key antenna and when Intelligent Key backside is contacted to push-button ignition switch, it is equivalent to the operations below.
- When starting the engine, the BCM monitors under the engine start conditions:
- Brake pedal operating condition
- Selector lever position
- Vehicle speed

Vehicle speed: less than 4 km/h (2.5 MPH)

|                                       | Engine start/  | Push-button ignition switch     |                     |
|---------------------------------------|----------------|---------------------------------|---------------------|

# VEHICLE SECURITY SYSTEM

# VEHICLE SECURITY SYSTEM : System Diagram

# VEHICLE SECURITY SYSTEM : System Description

INFOID:000000008527180

F

INEOID:000000008527179

• The vehicle security system has two alarm functions (theft warning alarm and panic alarm) and reduces the possibility of a theft or mischief by activating horns and headlamps intermittently.

#### < SYSTEM DESCRIPTION >

• The panic alarm does not start when the theft warning alarm is activating and the panic alarm stops when the theft warning alarm is activated.

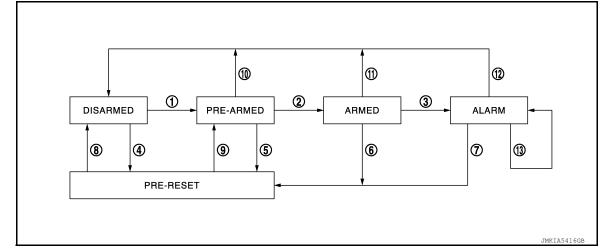

The priority of the functions are as per the following.

| Priority | Function            |
|----------|---------------------|
| 1        | Theft warning alarm |
| 2        | Panic alarm         |

#### THEFT WARNING ALARM

- The theft warning alarm function activates horns and headlamps intermittently when BCM detects that any door or hood is opened by unauthorized means while the system is in the ARMED state.
- Security indicator lamp on combination meter always blinks when power supply position is any position other than ON. Security indicator lamp blinking warns that the vehicle is equipped with a vehicle security system.

#### NOTE:

• BCM ignores the door key cylinder UNLOCK switch signal input for 1 second after the door key cylinder LOCK switch signal input.

- To lock/unlock all doors by operating remote controller button of Intelligent Key or door request switch (if equipped), Intelligent Key must be within the detection area of outside key antenna. For details, refer to <u>DLK-21</u>, "System Description".
- To open trunk by operating trunk opener switch, Intelligent Key must be within the detection area of outside key antenna. For details, refer to <u>DLK-41, "System Description"</u>.

#### DISARMED Phase

The vehicle security system is not set in the DISARMED phase. The vehicle security system stays in this phase while any door is open because it is assumed that the owner is inside or nearby the vehicle. Security indicator lamp blinks every 2.4 seconds.

When the vehicle security system is reset, each phase switches to the DISARMED phase directly.

#### PRE-ARMED Phase

The PRE-ARMED phase is the transient state between the DISARMED phase and the ARMED phase. This phase is maintained for 30 seconds so that the owner can reset the setting due to a mis-operation. This phase switches to the ARMED phase when vehicle conditions are not changed for 30 seconds. Security indicator lamp illuminates while being in this phase.

To reset the PRE-ARMED phase, refer to the switching condition of No. 10 in the table above.

#### ARMED Phase

The vehicle security system is set and BCM monitors all necessary inputs. If any door or hood is opened without using Intelligent Key, vehicle security system switches to the ALARM phase. Security indicator lamp blinks every 2.4 seconds.

To reset the ARMED phase, refer to the switching condition of No. 11 in the table above.

#### ALARM Phase

BCM transmits "Theft Warning Horn Request" signal and "High Beam Request" signal intermittently to IPDM E/R via CAN communication. In this phase, horns and headlamps are activated intermittently for approximately 50 seconds to warn that the vehicle is accessed by unauthorized means. ON/OFF timing of horns and headlamps are synchronized. After 50 seconds, the vehicle security system returns to the ARMED phase. At this time, if BCM still detects unauthorized access to the vehicle, the system is switched to the ALARM phase again. This RE-ALARM operation is carried out a maximum of 2 times.

To cancel the ALARM operation, refer to the switching condition of No. 12 in the table above. **NOTE:** 

If a battery terminal is disconnected during the ALARM phase, theft warning alarm stops. But when the battery terminal is reconnected, theft warning alarm is activated again.

J

SEC

Ο

Ρ

#### < SYSTEM DESCRIPTION >

#### PRE-RESET Phase

The PRE-RESET phase is the transient state between each phase and DISARMED phase. If only the condition of hood is not satisfied, the system switches to the PRE-RESET phase. Then, when any condition is changed, the system switches to the DISARMED phase or PRE-ARMED phase.

#### PANIC ALARM

- The panic alarm function activates horns and headlamps intermittently when the owner presses the PANIC ALARM button of Intelligent Key outside the vehicle while the power supply position is OFF or LOCK.
- When BCM receives panic alarm signal from Intelligent Key, BCM transmits "Theft Warning Horn Request" signal and "High Beam Request" signal intermittently to IPDM E/R via CAN communication. To prevent the activation due to mis-operation of Intelligent Key by owner, the panic alarm function is activated when BCM receives the signal for 0.4 0.6 seconds.
- Panic alarm operation is maintained for 25 seconds.
- Panic alarm operation is cancelled when BCM receives one of the following signals:
- LOCK button of Intelligent Key: ON
- UNLOCK button of Intelligent Key: ON
- PANIC ALARM button of Intelligent Key: Long pressed
- Any door request switch (if equipped): ON

# COMMON ITEM : CONSULT Function (BCM - COMMON ITEM)

INFOID:000000008527319

А

В

С

G

### APPLICATION ITEM

CONSULT performs the following functions via CAN communication with BCM.

| Direct Diagnostic Mode | Description   |   |
|------------------------|---|---|
| Ecu Identification     | The BCM part number is displayed.   |   |
| Self Diagnostic Result | The BCM self diagnostic results are displayed.  |   |
| Data Monitor           | The BCM input/output data is displayed in real time.  |   |
| Active Test            | The BCM activates outputs to test components.   | E |
| Work support           | The settings for BCM functions can be changed.  |   |
| Configuration          | <ul><li>The vehicle specification can be read and saved.</li><li>The vehicle specification can be written when replacing BCM.</li></ul> | F |
| CAN Diag Support Mntr  | The result of transmit/receive diagnosis of CAN communication is displayed.   |   |

#### SYSTEM APPLICATION

BCM can perform the following functions.

|                                      |                      |                    |                        | Direct I     | Diagnosti   | c Mode       |               |                       |               |
|--------------------------------------|----------------------|--------------------|------------------------|--------------|-------------|--------------|---------------|-----------------------|---------------|
| System                               | Sub System           | Ecu Identification | Self Diagnostic Result | Data Monitor | Active Test | Work support | Configuration | CAN Diag Support Mntr | - H<br>I<br>J |
| Door lock                            | DOOR LOCK            |                    | ×                      | ×            | ×           | ×            |               |                       |               |
| Rear window defogger                 | REAR DEFOGGER        |                    |                        | ×            | ×           | ×            |               |                       | SEC           |
| Warning chime                        | BUZZER               |                    |                        | ×            | ×           |              |               |                       | -             |
| Interior room lamp timer             | INT LAMP             |                    |                        | ×            | ×           | ×            |               |                       |               |
| Remote keyless entry system          | MULTI REMOTE ENT     |                    |                        | ×            | ×           | ×            |               |                       |               |

#### < SYSTEM DESCRIPTION >

# INTELLIGENT KEY : CONSULT Function (BCM - INTELLIGENT KEY)

INFOID:000000008527320

#### SELF DIAGNOSTIC RESULT

Refer to BCS-49, "DTC Index".

#### DATA MONITOR

| Monitor Item [Unit]                           | Main | Description  |
|---|------|--|
| REQ SW -DR [On/Off]                           | ×    | Indicates condition of door request switch LH.   |
| REQ SW -AS [On/Off]                           | ×    | Indicates condition of door request switch RH.   |
| PUSH SW [On/Off]                              |      | Indicates condition of push-button ignition switch.  |
| SHIFTLOCK SOLENOID POWER SUP-<br>PLY [On/Off] | ×    | Indicates condition of power supply to shiftlock solenoid.   |
| BRAKE SW 1 [On/Off]                           | ×    | Indicates condition of brake switch.   |
| BRAKE SW 2 [On/Off]                           |      | Indicates condition of brake switch.   |
| DETE/CANCL SW [On/Off]                        | ×    | Indicates condition of P (park) position.  |
| SFT PN/N SW [On/Off]                          | ×    | Indicates condition of P (park) or N (neutral) position.   |
| UNLK SEN -DR [On/Off]                         | ×    | Indicates condition of door unlock sensor.   |
| PUSH SW -IPDM [On/Off]                        |      | Indicates condition of push-button ignition switch received from IPDM E/R on CAN communication line.   |
| IGN RLY1 -F/B [On/Off]                        |      | Indicates condition of ignition relay 1 received from IPDM E/R on CAN communication line.              |
| DETE SW -IPDM [On/Off]                        |      | Indicates condition of detent switch received from TCM on CAN communication line.                      |
| SFT PN -IPDM [On/Off]                         |      | Indicates condition of P (park) or N (neutral) position from TCM on CAN com-<br>munication line.       |
| SFT P -MET [On/Off]                           |      | Indicates condition of P (park) position from TCM on CAN communication line.                           |
| SFT N -MET [On/Off]                           |      | Indicates condition of N (neutral) position from IPDM E/R on CAN communica-<br>tion line.              |
| ENGINE STATE [Stop/Start/Crank/Run]           | ×    | Indicates condition of engine state from ECM on CAN communication line.                                |
| VEH SPEED 1 [mph/km/h]                        | ×    | Indicates condition of vehicle speed signal received from ABS on CAN commu-<br>nication line.          |
| VEH SPEED 2 [mph/km/h]                        | ×    | Indicates condition of vehicle speed signal received from combination meter on CAN communication line. |
| DOOR STAT -DR [LOCK/READY/UNLK]               | ×    | Indicates condition of driver side door status.  |
| DOOR STAT -AS [LOCK/READY/UNLK]               | ×    | Indicates condition of passenger side door status.   |
| DOOR STAT -RR [LOCK/READY/UNLK]               | ×    | Indicates condition of rear right side door status.  |
| DOOR STAT -RL [LOCK/READY/UNLK]               | ×    | Indicates condition of rear left side door status.   |
| ID OK FLAG [Set/Reset]                        |      | Indicates condition of Intelligent Key ID.   |
| PRMT ENG STRT [Set/Reset]                     |      | Indicates condition of engine start possibility.   |
| PRMT RKE STRT [Set/Reset]                     |      | Indicates condition of engine start possibility from Intelligent Key.                                  |
| I-KEY OK FLAG [Key ON/Key OFF]                | ×    | Indicates condition of Intelligent Key OK flag.  |
| PRBT ENG STRT [Set/Reset]                     |      | Indicates condition of engine start prohibit.  |
| ID VERI CANCL [STOP]                          |      | Indicates condition of Intelligent Key ID authentication.  |
| ACC BATTERY SAVER [STOP]                      |      | Indicates condition of battery saver.  |
| CRNK PRBT TMR [On/Off]                        |      | Indicates condition of crank prohibit timer.   |
| AUT CRNK TMR [On/Off]                         |      | Indicates condition of automatic engine crank timer from Intelligent Key.                              |
| CRNK PRBT TME [sec]                           |      | Indicates condition of engine crank prohibit time.   |
| AUTO CRNK TME [sec]                           |      | Indicates condition of automatic engine crank time from Intelligent Key.                               |
| CRANKING TME [sec]                            |      | Indicates condition of engine cranking time from Intelligent Key.                                      |

Revision: August 2012

# **DIAGNOSIS SYSTEM (BCM)**

#### < SYSTEM DESCRIPTION >

| Monitor Item [Unit]    | Main | Description   |
|------------------------|------|---|
| DETE SW PWR [On/Off]   |      | Indicates condition of detent switch voltage.   |
| ACC RLY -REQ [On/Off]  |      | Indicates condition of accessory relay control request.   |
| RKE OPE COUN1 [0-19]   | ×    | When remote keyless entry receiver receives the signal transmitted while oper-<br>ating on Intelligent Key, the numerical value start changing. |
| RKE OPE COUN2 [0-19]   | ×    | When remote keyless entry receiver receives the signal transmitted while oper-<br>ating on Intelligent Key, the numerical value start changing. |
| TRNK/HAT MNTR [On/Off] |      | Indicates condition of trunk room lamp switch.  |
| RKE-LOCK [On/Off]      |      | Indicates condition of lock signal from Intelligent Key.  |
| RKE-UNLOCK [On/Off]    |      | Indicates condition of unlock signal from Intelligent Key.  |
| RKE-TR/BD [On/Off]     |      | Indicates condition of trunk open signal from Intelligent Key.  |
| RKE-PANIC [On/Off]     |      | Indicates condition of panic signal from Intelligent Key.   |
| RKE-MODE CHG [On/Off]  |      | Indicates condition of mode change signal from Intelligent Key.   |

#### ACTIVE TEST

| Test Item                  | Description  |  |
|----------------------------|--|--|
| INTELLIGENT KEY LINK (CAN) | This test is able to check Intelligent Key identification number [Off/ID No1/ID N02/ID No3/ID No4/ID No5]. |  |
| INT LAMP                   | This test is able to check interior room lamp operation [On/Off].  |  |
| FLASHER                    | This test is able to check hazard lamp operation [LH/RH/Off].  |  |
| HORN                       | This test is able to check horn operation [On].  |  |
| BATTERY SAVER              | This test is able to check battery saver operation [On/Off].   |  |
| TRUNK/BACK DOOR            | This test is able to check trunk actuator operation [Open].  |  |
| OUTSIDE BUZZER             | This test is able to check Intelligent Key warning buzzer operation [On/Off].                              |  |
| INSIDE BUZZER              | This test is able to check combination meter warning chime operation [Take Out/Knob/Key, Off].             |  |
| INDICATOR                  | This test is able to check combination meter warning lamp operation [KEY ON/KEY IND/Off]                   |  |
| IGN CONT2                  | This test is able to check ignition relay-2 control operation [On/Off].                                    |  |
| ENGINE SW ILLUMI           | This test is able to check push-button ignition switch START indicator operation [On/Off].                 |  |
| PUSH SWITCH INDICATOR      | This test is able to check push-button ignition switch indicator operation [On/Off].                       |  |
| ACC CONT                   | This test is able to check accessory relay control operation [On/Off].                                     |  |
| IGN CONT1                  | This test is able to check ignition relay-1 control operation [On/Off].                                    |  |
| ST CONT LOW                | This test is able to check starter control relay operation [On/Off].                                       |  |
| IGNITION RELAY             | This test is able to ignition relay operation [On/Off].  |  |
| REVERSE LAMP TEST          | This test is able to check reverse lamp illumination operation [On/Off].                                   |  |
| TRUNK/LUGGAGE LAMP TEST    | This test is able to check cargo lamp illumination operation [On/Off].                                     |  |
| KEYFOB PW TEST             | This test is able to check power window operation using the Intelligent Key [Off/DOWN/UP]                  |  |
| SHIFTLOCK SOLENOID TEST    | This test is able to check shift lock solenoid operation [On/Off].   |  |

#### WORK SUPPORT

| Support Item          | Setting | Description                       | D |
|-----------------------|---------|-----------------------------------|---|
| IGN/ACC BATTERY SAVER | On*     | Battery saver function ON.        | Ρ |
| IGN/ACC BATTERT SAVER | Off     | Battery saver function OFF.       |   |
| REMOTE ENGINE STARTER | On*     | Remote engine start function ON.  |   |
| REMOTE ENGINE STARTER | Off     | Remote engine start function OFF. |   |

# **DIAGNOSIS SYSTEM (BCM)**

#### < SYSTEM DESCRIPTION >

| Support Item                 | Setting |          | Description   |
|------------------------------|---------|----------|---|
|                              | BUZZER  |          | Buzzer reminder function by door lock/unlock request switch ON.                       |

#### DATA MONITOR

| Monitored Item        | Description   |
|-----------------------|---|
| REQ SW -DR [On/Off]   | Indicates condition of door request switch LH.      |
| REQ SW -AS [On/Off]   | Indicates condition of door request switch RH.      |
| PUSH SW [On/Off]      | Indicates condition of push-button ignition switch. |
| UNLK SEN -DR [On/Off] | Indicates condition of door unlock sensor.          |
| DOOR SW-DR [On/Off]   | Indicates condition of front door switch LH.        |
| DOOR SW-AS [On/Off]   | Indicates condition of front door switch RH.        |
| DOOR SW-RR [On/Off]   | Indicates condition of rear door switch RH.         |
| DOOR SW-RL [On/Off]   | Indicates condition of rear door switch LH.         |

Revision: August 2012

# **DIAGNOSIS SYSTEM (BCM)**

#### < SYSTEM DESCRIPTION >

| Monitored Item         | Description  |  |  |
|------------------------|--|--|--|
| DOOR SW-BK [On/Off]    | Indicates condition of trunk switch.                                   |  |  |
| CDL LOCK SW [On/Off]   | Indicates condition of lock signal from door lock and unlock switch.   |  |  |
| CDL UNLOCK SW [On/Off] | Indicates condition of unlock signal from door lock and unlock switch. |  |  |
| KEY CYL LK-SW [On/Off] | Indicates condition of lock signal from door key cylinder switch.      |  |  |
| KEY CYL UN-SW [On/Off] | Indicates condition of unlock signal from door key cylinder switch.    |  |  |
| TR/BD OPEN SW [On/Off] | Indicates condition of trunk opener switch.                            |  |  |
| TRNK/HAT MNTR [On/Off] | Indicates condition of trunk room lamp switch.                         |  |  |
| RKE-LOCK [On/Off]      | Indicates condition of lock signal from Intelligent Key.               |  |  |
| RKE-UNLOCK [On/Off]    | Indicates condition of unlock signal from Intelligent Key.             |  |  |
| RKE-TR/BD [On/Off]     | Indicates condition of trunk open signal from Intelligent Key.         |  |  |

#### ACTIVE TEST

| Test Item             | Description  |   |
|-----------------------|--|---|
| FLASHER               | This test is able to check turn signal lamp operation [LH/RH/Off].     |   |
| THEFT IND             | This test is able to check security indicator lamp operation [On/Off]. |   |
| VEHICLE SECURITY HORN | This test is able to check vehicle security horn operation [On].       | ( |
| HEADLAMP(HI)          | This test is able to check vehicle security lamp operation [On].       |   |

#### WORK SUPPORT

| Support Item       | Setting | Description         | • |
|--------------------|---------|---------------------|---|
| SECURITY ALARM SET | On      | Security alarm ON.  |   |
|                    | Off     | Security alarm OFF. |   |

# IMMU

# IMMU : CONSULT Function (BCM - IMMU)

#### SELF DIAGNOSTIC RESULT Refer to BCS-49, "DTC Index".

#### DATA MONITOR

| Monitor Item [Unit]      | Description  |    |
|--------------------------|--|----|
| CONFRM ID ALL [Yet/DONE] |  | Ν  |
| CONFIRM ID4 [Yet/DONE]   |  | I) |
| CONFIRM ID3 [Yet/DONE]   | Switches to DONE when an Intelligent Key is registered.                    |    |
| CONFIRM ID2 [Yet/DONE]   |  | ľ  |
| CONFIRM ID1 [Yet/DONE]   |  |    |
| TP 4 [Yet/DONE]          | DONE indicates the number of Intelligent Key ID which has been registered. |    |
| TP 3 [Yet/DONE]          |  | (  |
| TP 2 [Yet/DONE]          |  |    |
| TP 1 [Yet/DONE]          |  | F  |
| PUSH SW [On/Off]         | Indicates condition of push-button ignition switch.                        |    |

#### ACTIVE TEST

| Test Item | Description   |
|-----------|---|
| THEFT IND | This test is able to check security indicator operation [On/Off]. |

# **DIAGNOSIS SYSTEM (IPDM E/R)**

#### < SYSTEM DESCRIPTION >

# DIAGNOSIS SYSTEM (IPDM E/R)

# CONSULT Function (IPDM E/R)

INFOID:000000008527329

#### APPLICATION ITEM

CONSULT performs the following functions via CAN communication with IPDM E/R.

| Direct Diagnostic Mode | Description   |  |
|------------------------|---|--|
| Ecu Identification     | The IPDM E/R part number is displayed.                                      |  |
| Self Diagnostic Result | The IPDM E/R self diagnostic results are displayed.                         |  |
| Data Monitor           | The IPDM E/R input/output data is displayed in real time.                   |  |
| Active Test            | The IPDM E/R activates outputs to test components.                          |  |
| CAN Diag Support Mntr  | The result of transmit/receive diagnosis of CAN communication is displayed. |  |

#### ECU IDENTIFICATION

The IPDM E/R part number is displayed.

#### SELF DIAGNOSTIC RESULT

Refer to PCS-20, "DTC Index".

#### DATA MONITOR

| Monitor Item [Unit]           | Main<br>Signals | Description   |
|-------------------------------|-----------------|---|
| MOTOR FAN REQ [%]             | ×               | Indicates cooling fan speed signal received from ECM on CAN communication line            |
| AC COMP REQ [On/Off]          | ×               | Indicates A/C compressor request signal received from ECM on CAN commu-<br>nication line  |
| TAIL&CLR REQ [On/Off]         | ×               | Indicates position light request signal received from BCM on CAN communica-<br>tion line  |
| HL LO REQ [On/Off]            | ×               | Indicates low beam request signal received from BCM on CAN communication line             |
| HL HI REQ [On/Off]            | ×               | Indicates high beam request signal received from BCM on CAN communication line            |
| FR FOG REQ [On/Off]           | ×               | Indicates front fog light request signal received from BCM on CAN communica-<br>tion line |
| FR WIP REQ [Stop/1LOW/Low/Hi] | ×               | Indicates front wiper request signal received from BCM on CAN communication line          |
| WIP AUTO STOP [STOP P/ACT P]  | ×               | Indicates condition of front wiper auto stop signal                                       |
| WIP PROT [Off/BLOCK]          | ×               | Indicates condition of front wiper fail-safe operation                                    |
| IGN RLY1 -REQ [On/Off]        |                 | Indicates ignition switch ON signal received from BCM on CAN communication line           |
| IGN RLY [On/Off]              | ×               | Indicates condition of ignition relay   |
| PUSH SW [On/Off]              |                 | Indicates condition of push-button ignition switch  |
| INTER/NP SW [On/Off]          |                 | Indicates condition of CVT shift position   |
| ST RLY CONT [On/Off]          |                 | Indicates starter relay status signal received from BCM on CAN communication line         |
| IHBT RLY -REQ [On/Off]        |                 | Indicates starter control relay signal received from BCM on CAN communication line        |
| ST/INHI RLY [Off/ ST /INHI]   |                 | Indicates condition of starter relay and starter control relay                            |
| DETENT SW [On/Off]            |                 | Indicates condition of CVT shift selector (park position switch)                          |
| DTRL REQ [Off]                |                 | Indicates daytime light request signal received from BCM on CAN communica-<br>tion line   |
| HOOD SW [On/Off]              |                 | Indicates condition of hood switch  |

Revision: August 2012

# DIAGNOSIS SYSTEM (IPDM E/R)

#### < SYSTEM DESCRIPTION >

| Monitor Item [Unit]   | Main<br>Signals | Description  | А |
|-----------------------|-----------------|--|---|
| THFT HRN REQ [On/Off] |                 | Indicates theft warning horn request signal received from BCM on CAN commu-<br>nication line |   |
| HORN CHIRP [On/Off]   |                 | Indicates horn reminder signal received from BCM on CAN communication line                   | В |
| HOOD SW 2 [On/Off]    |                 | Indicates condition of hood switch 2   |   |

#### ACTIVE TEST

| Test item      | Description  |   |
|----------------|--|---|
| HORN           | This test is able to check horn operation [On].                          | D |
| FRONT WIPER    | This test is able to check wiper motor operation [Hi/Lo/Off].            |   |
| MOTOR FAN      | This test is able to check cooling fan operation [4/3/2/1].              |   |
| EXTERNAL LAMPS | This test is able to check external lamp operation [Fog/Hi/Lo/TAIL/Off]. |   |

# BASIC INSPECTION DIAGNOSIS AND REPAIR WORK FLOW

Work Flow

INFOID:000000008527190

**OVERALL SEQUENCE** 

< BASIC INSPECTION >

| 1. Get detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurs).       A         2. Check operation condition of the function that is malfunctioning.       B         >> GO TO 2.       CHECK DTC         2. CHECK DTC.       C         1. Check DTC.       Perform the following procedure if DTC is detected.         - Record DTC and freeze frame data (Print them out using CONSULT.)       D         - Erase DTC.       Study the relationship between the cause detected by DTC and the symptom described by the customer.         3. Check related service bulletins for information.       A         Are any symptoms described, DTC is detected?       Symptom is described, DTC is detected>>GO TO 3.         Symptom is described, DTC is detected>>GO TO 4.       Symptom is not described, DTC is detected>>GO TO 5.         3. CONFIRM THE SYMPTOM       G         Try to confirm the symptom described by the customer.       A         Also study the normal operation and fail-safe related to the symptom.       G         Verify relation between the symptom and the condition when the symptom is detected.       H |
|--|
| 2. Check operation condition of the function that is malfunctioning.       B         >> GO TO 2.       2.CHECK DTC         C       1. Check DTC.         2. Perform the following procedure if DTC is detected.       D         - Record DTC and freeze frame data (Print them out using CONSULT.)       D         - Erase DTC.       - Study the relationship between the cause detected by DTC and the symptom described by the customer.         3. Check related service bulletins for information.       E         Are any symptoms described and any DTC detected?       F         Symptom is described, DTC is detected>>GO TO 3.       F         Symptom is not described, DTC is detected>>GO TO 4.       Symptom is not described, DTC is detected>>GO TO 5.         3. CONFIRM THE SYMPTOM       G         Try to confirm the symptom described by the customer.       G         Also study the normal operation and fail-safe related to the symptom.       G         Verify relation between the symptom and the condition when the symptom is detected.       H  |
| >> GO TO 2.         2.CHECK DTC         1. Check DTC.         2. Perform the following procedure if DTC is detected.         - Record DTC and freeze frame data (Print them out using CONSULT.)         - Erase DTC.         - Study the relationship between the cause detected by DTC and the symptom described by the customer.         3. Check related service bulletins for information.         Are any symptoms described and any DTC detected?         Symptom is described, DTC is detected>>GO TO 3.         Symptom is not described, DTC is detected>>GO TO 4.         Symptom is not described, DTC is detected>>GO TO 5.         3.CONFIRM THE SYMPTOM         Try to confirm the symptom described by the customer.         Also study the normal operation and fail-safe related to the symptom.         Verify relation between the symptom and the condition when the symptom is detected.  |
| 2.CHECK DTC       C         1. Check DTC.       C         2. Perform the following procedure if DTC is detected.       D         - Record DTC and freeze frame data (Print them out using CONSULT.)       D         - Erase DTC.       Study the relationship between the cause detected by DTC and the symptom described by the customer.       D         3. Check related service bulletins for information.       E         Are any symptoms described and any DTC detected?       F         Symptom is described, DTC is detected>>GO TO 3.       F         Symptom is not described, DTC is detected>>GO TO 4.       F         3. CONFIRM THE SYMPTOM       G         Try to confirm the symptom described by the customer.       G         Also study the normal operation and fail-safe related to the symptom.       Verify relation between the symptom and the condition when the symptom is detected.   |

| Try to confirm the symptom described by the customer.<br>Verify relation between the symptom and the condition when the symptom is detected.   |
| J  |
| >> GO TO 6.  |
| 5.PERFORM DTC CONFIRMATION PROCEDURE   |
| Perform DTC CONFIRMATION PROCEDURE for the detected DTC, and then check that DTC is detected again. At this time, always connect CONSULT to the vehicle, and check self diagnostic results in real time.   |
| If two or more DTCs are detected, refer to BCS-47. "DTC Inspection Priority Chart" and determine trouble   |
| diagnosis order.   |
| Freeze frame data is useful if the DTC is not detected.  |
| <ul> <li>Perform Component Function Check if DTC CONFIRMATION PROCEDURE is not included on Service<br/>Manual. This simplified check procedure is an effective alternative though DTC cannot be detected during</li> </ul>   |
| this check.  |
| If the result of Component Function Check is NG, it is the same as the detection of DTC by DTC CONFIR-<br>MATION PROCEDURE.  |
| Is DTC detected?   |
| YES >> GO TO 7.  |
| NO >> Check according to <u>GI-47. "Intermittent Incident"</u> . O<br>6.DETECT MALFUNCTIONING SYSTEM BY SYMPTOM DIAGNOSIS  |
| Detect malfunctioning system according to SYMPTOM DIACNOSIS based on the confirmed symptom in step   |
| 4, and determine the trouble diagnosis order based on possible causes and symptom.   |
| Is the symptom described?  |
| YES >> GO TO 7.<br>NO >> Monitor input data from related sensors or check voltage of related module terminals using CON-   |
| SULT.  |

**1**.DETECT MALFUNCTIONING PART BY DIAGNOSIS PROCEDURE

## DIAGNOSIS AND REPAIR WORK FLOW

< BASIC INSPECTION >

Inspect according to Diagnosis Procedure of the system.

Is malfunctioning part detected?

YES >> GO TO 8.

NO >> Check according to <u>GI-47, "Intermittent Incident"</u>.

8. REPAIR OR REPLACE THE MALFUNCTIONING PART

- 1. Repair or replace the malfunctioning part.
- Reconnect parts or connectors disconnected during Diagnosis Procedure again after repair and replacement.
- 3. Check DTC. If DTC is detected, erase it.

>> GO TO 9.

## 9.FINAL CHECK

When DTC is detected in step 2, perform DTC CONFIRMATION PROCEDURE again, and then check that the malfunction is repaired securely.

When symptom is described by the customer, refer to confirmed symptom in step 3 or 4, and check that the symptom is not detected.

Is DTC detected and does symptom remain?

- YES-1 >> DTC is detected: GO TO 7.
- YES-2 >> Symptom remains: GO TO 4.

NO >> Before returning the vehicle to the customer, always erase DTC.

## ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT

< BASIC INSPECTION > ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT А ECM ECM : Description INFOID:000000008779185 Performing the following procedure can automatically activate recommunication of ECM and BCM, but only when the ECM is replaced with a new one\*. \*: New one means an ECM that has never been energized on-board. (In this step, initialization procedure by CONSULT is not necessary) NOTE: If multiple keys are attached to the key holder, separate them before beginning work. D Distinguish keys with unregistered key IDs from those with registered IDs. ECM : Work Procedure INFOID:00000008779186 Ε 1.PERFORM ECM RECOMMUNICATING FUNCTION 1. Install ECM. Contact backside of registered Intelligent key\* to push-button ignition switch, then turn ignition switch to F ON. \*: To perform this step, use the key that is used before performing ECM replacement. 3. Maintain ignition switch in the ON position for at least 5 seconds. 4 Turn ignition switch to OFF. 5. Check that the engine starts. Н >> GO TO 2.  $\mathbf{Z}$ .PERFORM ADDITIONAL SERVICE WHEN REPLACING ECM Perform EC-176, "Work Procedure". >> Inspection End. BCM BCM : Description INFOID:000000008542216 SEC BEFORE REPLACEMENT When replacing BCM, save or print current vehicle specification with CONSULT configuration before replacement. L NOTE: If "Before Replace ECU" cannot be used, use the "After Replace ECU" or "Manual Configuration" after replacing BCM. M AFTER REPLACEMENT CAUTION: When replacing BCM, you must perform "After Replace ECU" with CONSULT. Ν - Complete the procedure of "After Replace ECU" in order. - If you set incorrect "After Replace ECU", incidents might occur. - Configuration is different for each vehicle model. Confirm configuration of each vehicle model. When replacing BCM, perform the system initialization (NATS). BCM : Work Procedure INFOID:000000008542217 **1.**SAVING VEHICLE SPECIFICATION P 

Enter "Re/Programming, Configuration" and perform "Before Replace ECU" to save or print current vehicle specification.

NOTE:

If "Before Replace ECU" cannot be used, use the "After Replace ECU" or "Manual Configuration" after replacing BCM.

## ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT

< BASIC INSPECTION >

>> GO TO 2.

2.REPLACE BCM

Replace BCM. Refer to BCS-77, "Removal and Installation".

>> GO TO 3.

3. WRITING VEHICLE SPECIFICATION

- 1. Enter "Re/Programming, Configuration".
- If "Before Replace ECU" operation was performed, automatically an "Operation Log Selection" screen will be displayed. Select the applicable file from the "Saved Data List" and press "Confirm" to write vehicle specification. Refer to <u>BCS-62</u>, "<u>CONFIGURATION (BCM)</u>; <u>Work Procedure</u>".
- 3. If "Before Replace ECU" operation was not performed, select "After Replace ECU" or "Manual Configuration" to write vehicle specification. Refer to <u>BCS-62, "CONFIGURATION (BCM) : Work Procedure"</u>.

>> GO TO 4.

**4**.INITIALIZE BCM (NATS)

Perform BCM initialization. (NATS)

>> Work End.

|---|-------------|-------------|
|   |             |             |

## DTC/CIRCUIT DIAGNOSIS P1610 LOCK MODE

## Description

ECM forcibly switches to the mode that inhibits engine start, when engine start operation is performed 5 times or more while communication between ECM and BCM is not normal.

## DTC Logic

#### DTC DETECTION LOGIC

#### NOTE:

- If DTC B1610 is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to <u>BCS-65, "DTC Logic"</u>.
- If DTC B1610 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to <u>BCS-66, "DTC Logic"</u>.

| DTC No. | Trouble diagnosis name | DTC detecting condition   | Possible cause | F |
|---------|------------------------|---|----------------|---|
| P1610   | LOCK MODE              | When ECM detects a communication malfunction between ECM and BCM 5 times or more. | _              |   |

#### DTC CONFIRMATION PROCEDURE

**1.**PERFORM DTC CONFIRMATION PROCEDURE

- 1. Turn ignition switch ON.
- 2. Check DTC in "Self-Diagnostic Result" mode of "ENGINE" using CONSULT.

#### Is DTC detected?

- YES >> Go to SEC-69, "Diagnosis Procedure".
- NO >> Inspection End.

#### Diagnosis Procedure

| - 1 | .CHECK ENGINE START FUNCTION    |
|-----|---------------------------------|
|     |                                 |
|     | I CHECK LINGING START I UNCTION |

| 1. | Check that there are no DTC's except for DTC P1610 detected.                                       | SEC |
|----|--|-----|
|    | If detected, erase the DTC after fixing.   |     |
| 2. | Turn ignition switch OFF.  |     |
| 3. | Contact the registered Intelligent Key backside to push-button ignition switch and wait 5 seconds. |     |
| 4. | Turn ignition switch ON.   | L   |
| 5. | Turn ignition switch OFF and wait 5 seconds.   |     |
| 6. | Repeat steps 3 and 5 twice (a total of 3 times).   |     |
| 7. | Check that engine can start.   | M   |
|    |  |     |
|    |  |     |
|    | >> Inspection End.   |     |

Ρ

# B210D STARTER RELAY

### Description

INFOID:000000008527210

Located in IPDM E/R, it runs the starter motor. The starter relay is turned ON by the BCM when the ignition switch is in START position. IPDM E/R transmits the starter relay ON signal to BCM via CAN communication.

### DTC Logic

INFOID:000000008527211

### DTC DETECTION LOGIC

NOTE:

- If DTC B210D is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to <u>BCS-65, "DTC Logic"</u>.
- If DTC B210D is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to <u>BCS-66, "DTC Logic"</u>.
- If DTC B210D is displayed with DTC B2617, first perform the trouble diagnosis for DTC B2617. Refer to <u>SEC-117, "DTC Logic"</u>.

| DTC No. | Trouble diagnosis<br>name | DTC detecting condition   | Possible cause |
|---------|---------------------------|---|----------------|
| B210D   | STARTER RELAY<br>ON       | <ul> <li>IPDM E/R detects that the relay is stuck at ON position even if the following conditions are met for about 1 second.</li> <li>Starter control relay ON/OFF signal from BCM</li> <li>Transmission range switch input</li> </ul> | • IPDM E/R     |

### DTC CONFIRMATION PROCEDURE

### **1.**PERFORM DTC CONFIRMATION PROCEDURE

- 1. Ignition switch ON under the following conditions and wait for at least 1 second.
- CVT selector lever is in the P (Park) or N (Neutral) position
- Do not depress the brake pedal
- 2. Check "Self-diagnostic result" with CONSULT.

### Is DTC detected?

- YES >> Refer to <u>SEC-76, "Diagnosis Procedure"</u>.
- NO >> Inspection End.

### Diagnosis Procedure

INFOID:000000008527212

Regarding Wiring Diagram information, refer to SEC-29, "Wiring Diagram" or SEC-41, "Wiring Diagram".

# 1. CHECK STARTER RELAY POWER SUPPLY CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect IPDM E/R harness connector.
- 3. Check voltage between IPDM E/R harness connector E17 terminal 3 and ground.

| IPDN      | II E/R             | Ground | Voltage (V)     |  |
|-----------|--------------------|--------|-----------------|--|
| Connector | Connector Terminal |        | voltage (v)     |  |
| E17       | 3                  | Ground | Battery voltage |  |

Is the inspection result normal?

YES >> Replace IPDM E/R. Refer to <u>PCS-32, "Removal and Installation"</u>.

NO >> Check harness for open or short between IPDM E/R and battery.

# **B210E STARTER RELAY**

# Description

INFOID:000000008527213

А

Е

Н

SEC

L

Μ

Ν

INFOID:000000008527215

Located in IPDM E/R, it runs the starter motor. The starter relay is turned ON by the BCM when the ignition switch is in START position. IPDM E/R transmits the starter relay ON signal to BCM via CAN communication.

# DTC Logic

INFOID:000000008527214

# DTC DETECTION LOGIC

### NOTE:

- If DTC B210E is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to <u>BCS-65, "DTC Logic"</u>.
- If DTC B210E is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to <u>BCS-66, "DTC Logic"</u>.

| DTC No. | Trouble diagnosis name | DTC detecting condition   | Possible cause | F |
|---------|------------------------|---|----------------|---|
| B210E   | STARTER RELAY<br>OFF   | <ul> <li>IPDM E/R detects that the relay is stuck at ON position even if the following conditions are met for about 1 second.</li> <li>Starter control relay ON/OFF signal from BCM</li> <li>Transmission range switch input</li> </ul> | • IPDM E/R     | G |

### DTC CONFIRMATION PROCEDURE

# PERFORM DTC CONFIRMATION PROCEDURE Turn ignition switch ON under the following conditions and wait for at least 1 second.

- CVT selector lever is in the P (Park) or N (Neutral) position
- Do not depress the brake pedal
- 2. Check Self-diagnostic result with CONSULT.

### Is DTC detected?

| YES | >> Refer to <u>SEC-77, "Diagnosis Procedure"</u> . |
|-----|--|
|     |  |

NO >> Inspection End.

# **Diagnosis** Procedure

Regarding Wiring Diagram information, refer to SEC-29, "Wiring Diagram" or SEC-41, "Wiring Diagram".

# 1.CHECK STARTER RELAY OUTPUT SIGNAL/CVT MODELS

- 1. Turn ignition switch OFF.
- 2. Disconnect BCM harness connector.

3. Check voltage between BCM harness connector M18 terminal 62 and ground.

| 0 |                 |                            | Condition   |                 |        | onnector | BCM co    |
|---|-----------------|----------------------------|-------------|-----------------|--------|----------|-----------|
|   | Voltage (V)     | CVT selector le-<br>ver    | Brake pedal | Ignition switch | Ground | Terminal | Connector |
| Р | Battery voltage | P (Park) or N<br>(Neutral) | Depressed   | ON              | Ground | 62       | M18       |
|   | 0               | Other than above           | Depressed   | ON              | Ground | 02       | WIG       |

Is the inspection result normal?

YES >> GO TO 3. NO >> GO TO 2.

# **B210E STARTER RELAY**

### < DTC/CIRCUIT DIAGNOSIS >

# $\overline{2.}$ CHECK STARTER RELAY OUTPUT SIGNAL CIRCUIT

- 1. Disconnect IPDM E/R harness connector.
- Check continuity between IPDM E/R harness connector E63 terminal 33 and BCM harness connector M18 terminal 62.

| IPDN      | /I E/R   | B         | CM       | Continuity |
|-----------|----------|-----------|----------|------------|
| Connector | Terminal | Connector | Terminal | Continuity |
| E63       | 33       | M18       | 62       | Yes        |

3. Check continuity between BCM harness connector E63 terminal 33 and ground.

|   | IPDM E/R<br>Connector Terminal |    | Ground | Continuity |
|---|--------------------------------|----|--------|------------|
| - |                                |    | Cround | Continuity |
|   | E63                            | 33 | Ground | No         |

Is the inspection result normal?

YES >> Replace IPDM E/R. Refer to PCS-32. "Removal and Installation".

NO >> Repair harness connector.

**3.** CHECK STARTER RELAY POWER SUPPLY CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect IPDM E/R harness connector.
- 3. Check voltage between IPDM E/R harness connector E63 terminal 33 and ground.

| IPDI      | II E/R             | Ground | Voltage (V)     |  |
|-----------|--------------------|--------|-----------------|--|
| Connector | Connector Terminal |        | voltage (v)     |  |
| E63       | 33                 | Ground | Battery voltage |  |

Is the inspection result normal?

YES >> Replace IPDM E/R. Refer to PCS-32, "Removal and Installation".

NO >> Check harness for open or short between IPDM E/R and battery.

# **B2191 DIFFERENCE OF KEY**

### < DTC/CIRCUIT DIAGNOSIS >

# **B2191 DIFFERENCE OF KEY**

### Description

Performs ID verification through BCM and Intelligent Key when push-button ignition switch is pressed. Prohibits starting of the engine when an unregistered ID of Intelligent Key is used.

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name | DTC detecting condition                                 | Possible cause   |
|---------|------------------------|---|--|
| B2192   | ID DISCORD BCM-ECM     | The ID verification results between BCM and ECM are NG. | <ul> <li>Harness or connectors<br/>(The CAN communication line is open<br/>or shorted.)</li> <li>BCM</li> <li>ECM</li> </ul> |

### DTC CONFIRMATION PROCEDURE

# **1.**PERFORM DTC CONFIRMATION PROCEDURE

- 1. Turn ignition switch ON.
- 2. Check DTC in "Self-Diagnostic Result" mode of "BCM" using CONSULT.

### Is DTC detected?

- YES >> GO TO SEC-86, "Diagnosis Procedure".
- NO >> Inspection End.

### Diagnosis Procedure

### **1**.PERFORM INITIALIZATION

Perform initialization of BCM and reregistration of all Intelligent Keys using CONSULT.

Can the system be initialized and can the engine be started with reregistered Intelligent Key?

YES >> Inspection End.

NO >> GO TO 2.

### 2. CHECK SELF-DIAGNOSIS RESULT

- 1. Select "Self Diagnostic Result" mode of "BCM" using CONSULT.
- 2. Erase DTC.
- 3. Perform DTC CONFIRMATION PROCEDURE for DTC B2192. Refer to SEC-86, "DTC Logic".

### Is DTC detected?

YES >> GO TO 3.

NO >> Inspection End.

### **3.**REPLACE BCM

- 1. Replace BCM. Refer to <u>BCS-77, "Removal and Installation"</u>.
- 2. Perform initialization of BCM and reregistration of all Intelligent Keys using CONSULT.

Can the system be initialized and can the engine be started with registered Intelligent Key?

- YES >> Inspection End.
- NO >> GO TO 4.

**4.**REPLACE ECM

- 1. Replace ECM. Refer to <u>EC-538</u>, "Removal and Installation" (with QR25DE) or <u>EC-999</u>, "Removal and <u>Installation</u>" (with VQ35DE).
- 2. Perform "ADDITIONAL SERVICE WHEN REPLACING ECM". Refer to <u>EC-176</u>, "Work Procedure" (with QR25DE) or <u>EC-678</u>, "Work Procedure" (with VQ35DE).

>> Inspection End.

| Connector | Terminal  | Ground |                 |
| E39       | 1         |        | Battery voltage |

### Is the inspection result normal?

YES >> GO TO 2.

NO >> Check the following:

Harness for short or open between fuse block (J/B) and stop lamp switch

• 10A fuse (No. 10, located in fuse block [J/B])

# 2. CHECK STOP LAMP SWITCH

| Check stop lamp switch. Refer to TM-172, "Component Inspection (Stop Lamp Switch)". |
|---|
| Is the inspection result normal?  |
| YES >> GO TO 3.   |
| NO >> Replace stop lamp switch. Refer to <u>BR-18, "Exploded View"</u> .            |
| <b>3.</b> CHECK GROUND CIRCUIT (STOP LAMP RELAY)                                    |

### 1. Remove the stop lamp relay.

2. Check continuity between stop lamp relay connector E57 terminal 1 and ground.

| Stop la   | mp relay     |        | Continuity |
|-----------|--------------|--------|------------|
| Connector | Terminal (+) | Ground | Continuity |
| E57       | 1            |        | Yes        |

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair or replace damaged parts.

**4.**CHECK HARNESS BETWEEN STOP LAMP RELAY AND BCM

1. Check continuity between stop lamp relay connector E57 terminal 3 and BCM connector M17 terminal 27.

| BCM       |          | stop lamp relay |          | Continuity |
|-----------|----------|-----------------|----------|------------|
| Connector | Terminal | Connector       | Terminal | Continuity |
| M17       | 27       | E57             | 3        | Yes        |

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair or replace damaged parts.

5.CHECK HARNESS BETWEEN STOP LAMP SWITCH AND STOP LAMP RELAY

1. Check continuity between stop lamp relay connector E57 terminal 3 and stop lamp switch connector E39 terminal 2.

| Stop lamp switch |          | Stop lamp relay |          | Continuity |
|------------------|----------|-----------------|----------|------------|
| Connector        | Terminal | Connector       | Terminal | Continuity |
| E39              | 2        | E57             | 3        | Yes        |

Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair or replace damaged parts.

6.CHECK GROUND CIRCUIT (STOP LAMP RELAY)

1. Remove the stop lamp relay.

2. Check continuity between stop lamp relay connector E57 terminal 1 and ground.

| Stop lamp relay |              |        | Continuity |
|-----------------|--------------|--------|------------|
| Connector       | Terminal (+) | Ground | Continuity |
| E57             | 1            |        | Yes        |

Is the inspection result normal?

YES >> GO TO 7.

NO >> Repair or replace damaged parts.

**I**.CHECK POWER SOURCE (STOP LAMP RELAY)

1. Check voltage between stop lamp relay connector E57 terminal 5 and ground.

| Stop la   | mp relay     |        | Continuity      |
|-----------|--------------|--------|-----------------|
| Connector | Terminal (+) | Ground | Continuity      |
| E57       | 5            |        | Battery voltage |

Is the inspection result normal?

YES >> GO TO 8.

NO >> Repair or replace damaged parts.

8. CONNECTOR INSPECTION

Check BCM connectors and terminals for deformation, disconnection, looseness or damage.

Is the inspection result normal?

YES >> GO TO 8.

NO >> Repair or replace as necessary.

**9.**REPLACE BCM

# **B2555 STOP LAMP**

# **B2556 PUSH-BUTTON IGNITION SWITCH**

### < DTC/CIRCUIT DIAGNOSIS >

# B2556 PUSH-BUTTON IGNITION SWITCH

# **DTC Logic**

INFOID:000000008527242

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name | DTC detecting condition  | Possible cause  |
|---------|------------------------|--|---|
| B2556   | PUSH-BTN IGN SW        | BCM detects the push-button ignition switch stuck at ON for 100 seconds or more. | <ul> <li>Harness or connectors<br/>(Push-button ignition switch circuit is<br/>shorted.)</li> <li>Push-button ignition switch</li> <li>BCM</li> </ul> |

### DTC CONFIRMATION PROCEDURE

# **1.**PERFORM DTC CONFIRMATION PROCEDURE

- 1. Press push-button ignition switch under the following condition:
- Brake pedal: Not depressed
- 2. Release push-button ignition switch and wait 100 seconds or more.
- 3. Check DTC in Self-Diagnostic Result mode of BCM using CONSULT.

### Is DTC detected?

- YES >> GO TO SEC-96, "Diagnosis Procedure".
- NO >> Inspection End.

### Diagnosis Procedure

INFOID:000000008527243

Regarding Wiring Diagram information, refer to SEC-29, "Wiring Diagram".

# 1. CHECK PUSH-BUTTON IGNITION SWITCH INPUT SIGNAL

- 1. Turn ignition switch OFF.
- 2. Disconnect push-button ignition switch connector.
- 3. Check voltage between push-button ignition switch harness connector and ground.

| (+)<br>Push-button ignition switch |          | ()     | Voltage (V)<br>(Approx.) |
|------------------------------------|----------|--------|--------------------------|
| Connector                          | Terminal | _ (~   | (//pp/0x.)               |
| M38                                | 8        | Ground | 12                       |

Is the inspection result normal?

YES >> GO TO 4.

NO >> GO TO 2.

2.CHECK PUSH-BUTTON IGNITION SWITCH CIRCUIT

1. Disconnect BCM connector and IPDM E/R connector.

2. Check continuity between push-button ignition switch harness connector and BCM harness connector.

| Push-button | sh-button ignition switch BCM |           | BCM      |            |
|-------------|-------------------------------|-----------|----------|------------|
| Connector   | Terminal                      | Connector | Terminal | Continuity |
| M38         | 8                             | M17       | 1        | Yes        |

#### 3. Check continuity between push-button ignition switch harness connector and ground.

| Push-button ignition switch |          |        | Continuity |
|-----------------------------|----------|--------|------------|
| Connector                   | Terminal | Ground | Continuity |
| M38                         | 8        |        | No         |

| B2601   | SHIFT POSITION         | When there is a difference between P (Park)<br>range signal from CVT shift selector (park posi-<br>tion switch) and P (Park) position signal from<br>IPDM E/R (CAN). | <ul> <li>Harness or connectors<br/>(CAN communication line is open or<br/>shorted.)</li> <li>Harness or connectors<br/>[CVT shift selector (park position<br/>switch) circuit is open or shorted.]</li> <li>CVT shift selector (park position<br/>switch)</li> <li>BCM</li> </ul> |

### DTC CONFIRMATION PROCEDURE

# 1.PERFORM DTC CONFIRMATION PROCEDURE

- 1. Shift the selector lever to the P (Park) position.
- 2. Turn ignition switch ON and wait 2 seconds or more.
- 3. Shift the selector lever to any position other than P (Park) and wait 2 seconds or more.
- 4. Check DTC in Self-Diagnostic Result mode of BCM using CONSULT.

### Is DTC detected?

- YES >> Go to <u>SEC-100, "Diagnosis Procedure"</u>.
- NO >> Inspection End.

### **Diagnosis** Procedure

INFOID:000000008527251

Regarding Wiring Diagram information, refer to SEC-29, "Wiring Diagram".

# 1. CHECK CVT SHIFT SELECTOR SWITCH FUNCTION

- 1. Turn ignition switch ON.
- 2. Select "DETE/CANCEL SW" and "DETENT SW IPDM" in DATA MONITOR mode with CONSULT.
- 3. Check "DETE/CANCEL SW" and "DETENT SW IPDM" indication under the following conditions.

| Monitor item        | Сс                      | ondition                                 | Indication |
|---------------------|-------------------------|--|------------|
| DETE/CANCEL<br>SW   | CVT Shift se-<br>lector | In any position oth-<br>er than P (Park) | OFF        |
| 300                 | lector                  | P (Park)                                 | ON         |
| DETENT SW -<br>IPDM | CVT Shift se-<br>lector | In any position oth-<br>er than P (Park) | OFF        |
|                     |                         | P (Park)                                 | ON         |

### Is the inspection result normal?

YES >> Refer to GI-47, "Intermittent Incident".

NO-1 >> If DETE/CANCEL SW function is incorrect. GO TO 2.

NO-2 >> If DETENT SW - IPDM function is incorrect. GO TO 5.

### < DTC/CIRCUIT DIAGNOSIS >

# 2. CHECK CVT SHIFT SELECTOR CIRCUIT (BCM)

- 1. Disconnect BCM connector and IPDM E/R connector.
- 2. Check continuity between CVT shift selector (park position switch) harness connector and BCM harness connector.

| CVT shift selector (p | park position switch) | B         | СМ       | - Continuity | - |
|-----------------------|-----------------------|-----------|----------|--------------|---|
| Connector             | Terminal              | Connector | Terminal | Continuity   | C |
| M23                   | 6                     | M17       | 20       | Yes          |   |

3. Check continuity between CVT shift selector (park position switch) harness connector and ground.

| CVT shift selector (p | ark position switch) |        | Continuity | _ |
|-----------------------|----------------------|--------|------------|---|
| Connector             | Terminal             | Ground | Continuity |   |
| M23                   | 6                    | -      | No         | E |

#### Is the inspection result normal?

YES >> GO TO 3.

### NO >> Repair or replace harness.

3.connector inspection

### 1. Disconnect BCM.

2. Check connectors and terminals for deformation, disconnection, looseness or damage.

### Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair or replace as necessary.

### **4.**REPLACE BCM

- 1. Replace BCM. Refer to BCS-77. "Removal and Installation".
- 2. Perform initialization of BCM and registration of all Intelligent Keys using CONSULT.

### >> Inspection End.

# **5.**CHECK CVT SHIFT SELECTOR CIRCUIT (IPDM E/R)

Check continuity between CVT shift selector (park position switch) harness connector and IPDM E/R harness SEC connector.

| _ | CVT shift selector ( | park position switch) | IPDI      | M E/R    | Continuity | L   |
|---|----------------------|-----------------------|-----------|----------|------------|-----|
|   | Connector            | Terminal              | Connector | Terminal | Continuity |     |
| _ | M23                  | 6                     | E63       | 31       | Yes        |     |
|   |                      | 10                    |           |          |            | • M |

### Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair or replace harness.

**6.**CONNECTOR INSPECTION

1. Disconnect IPDM E/R.

2. Check connectors and terminals for deformation, disconnection, looseness or damage.

Is the inspection result normal?

### YES >> GO TO 7.

NO >> Repair or replace as necessary.

7.REPLACE IPDM E/R

1. Replace IPDM E/R. Refer to PCS-32, "Removal and Installation".

>> Inspection End.

# < DTC/CIRCUIT DIAGNOSIS >

# Component Inspection

# 1. CHECK CVT SHIFT SELECTOR (PARK POSITION SWITCH)

- 1. Turn ignition switch OFF.
- 2. Disconnect CVT shift selector connector.

3. Check continuity between CVT shift selector (park position switch) terminals.

| CVT shift selector | (park position switch) | Con            | dition            | Continuity |
|--------------------|------------------------|----------------|-------------------|------------|
| Ter                | minal                  | Con            |                   | Continuity |
| 5                  | 6                      | Selector lever | P (Park) position | No         |
| 5                  | 0                      |                | Other than above  | Yes        |

Is the inspection result normal?

YES >> Inspection End.

NO >> Replace CVT shift selector. Refer to <u>TM-178, "Exploded View"</u>.

# DTC DETECTION LOGIC

#### NOTE:

- If DTC B2602 is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to BCS-65, "DTC Logic".
- If DTC B2602 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to BCS-66, "DTC Logic".

| DTC No. | Trouble diagnosis name | DTC detecting condition  | Possible cause   |
|---------|------------------------|--|--|
| B2602   | SHIFT POSITION         | <ul> <li>BCM detects the following status for 10 seconds.</li> <li>Selector lever is in the P (Park) position</li> <li>Vehicle speed is 4 km/h (2.5 MPH) or more</li> <li>Ignition switch is in the ON position</li> </ul> | <ul> <li>Harness or connectors<br/>(CAN communication line is open or<br/>shorted.)</li> <li>Harness or connectors<br/>[CVT shift selector (park position<br/>switch) circuit is open or shorted.]</li> <li>CVT shift selector (park position<br/>switch)</li> <li>Combination meter</li> <li>BCM</li> </ul> |

### DTC CONFIRMATION PROCEDURE

# **1.**PERFORM DTC CONFIRMATION PROCEDURE

- 1. Start engine.
- 2. Drive vehicle at a speed of 4 km/h (2.5 MPH) or more for 10 seconds or more.
- 3. Check DTC in Self-Diagnostic Result mode of BCM using CONSULT.

### Is DTC detected?

- YES >> Go to SEC-103, "Diagnosis Procedure".
- NO >> Inspection End.

### Diagnosis Procedure

Regarding Wiring Diagram information, refer to SEC-29, "Wiring Diagram".

# 1. CHECK CVT SHIFT SELECTOR SWITCH FUNCTION

- 1. Turn ignition switch ON.
- 2. Select "DETE/CANCEL SW" and "VEH SPEED 1" in DATA MONITOR mode with CONSULT.
- 3. Check "DETE/CANCEL SW" and "VEH SPEED 1" indication under the following conditions.

| Monitor item      | Condition               |  | Indication |
|-------------------|-------------------------|--|------------|
| DETE/CANCEL<br>SW | CVT Shift se-<br>lector | In any position oth-<br>er than P (Park) | OFF        |
| 310               | lector                  | P (Park)                                 | ON         |
| VEH SPEED 1       | Vehicle not movi        | Vehicle not moving                       |            |
| VEN SFEED I       | Vehicle moving          |  | Varies     |

### Is the inspection result normal?

YES >> Refer to <u>GI-47, "Intermittent Incident"</u>.

NO-1 >> If DETE/CANCEL SW is incorrect. GO TO 4.

- NO-2 >> If VEH SPEED 1 is incorrect. GO TO 2.
- 2. CHECK DTC OF COMBINATION METER

< DTC/CIRCUIT DIAGNOSIS >

Check DTC in "Self-Diagnostic Result" mode of "METER/M&A" using CONSULT.

### Is DTC detected?

YES >> Perform the trouble diagnosis related to the detected DTC. Refer to <u>MWI-27, "DTC Index"</u>.

NO >> GO TO 3.

3. CHECK DTC OF ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

Check DTC in "Self-Diagnostic Result" mode of "ABS" using CONSULT.

Is DTC detected?

YES >> Perform the trouble diagnosis related to the detected DTC. Refer to <u>BRC-44, "DTC Index"</u>. NO >> GO TO 6.

**4.**CHECK CVT SHIFT SELECTOR CIRCUIT

- 1. Disconnect BCM connector and IPDM E/R connector.
- 2. Check continuity between CVT shift selector (park position switch) harness connector and BCM harness connector.

| CVT shift selector ( | /T shift selector (park position switch) |                    | BCM |            |  |
|----------------------|--|--------------------|-----|------------|--|
| Connector            | Terminal                                 | Connector Terminal |     | Continuity |  |
| M23                  | 6  | M17                | 20  | Yes        |  |

3. Check continuity between CVT shift selector (park position switch) harness connector and ground.

| CVT shift selector ( | park position switch) |        | Continuity |
|----------------------|-----------------------|--------|------------|
| Connector            | Terminal              | Ground | Continuity |
| M23                  | 6                     |        | No         |

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair or replace harness.

**5.**CHECK CVT SHIFT SELECTOR (PARK POSITION SWITCH)

Refer to SEC-104, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace CVT shift selector. Refer to <u>TM-178</u>, "Removal and Installation".

**6.**CHECK INTERMITTENT INCIDENT

Refer to GI-47, "Intermittent Incident".

>> Inspection End.

# Component Inspection

INFOID:000000008527255

# 1. CHECK CVT SHIFT SELECTOR (PARK POSITION SWITCH)

- 1. Turn ignition switch OFF.
- 2. Disconnect CVT shift selector connector.
- 3. Check continuity between CVT shift selector (park position switch) terminals.

| CVT shift selector (park position switch) |       | Condition      |                   | Continuity |
|---|-------|----------------|-------------------|------------|
| Terr                                      | ninal | Con            |                   | Continuity |
| 5   | 6     | Selector lever | P (Park) position | No         |
| 5   | 0     | Selector level | Other than above  | Yes        |

### Is the inspection result normal?

YES >> Inspection End.

NO >> Replace CVT shift selector. Refer to <u>TM-178, "Removal and Installation"</u>.

|   |  |   |  |   |

# **1.**CHECK CVT SHIFT SELECTOR SWITCH FUNCTION

1. Turn ignition switch ON.

Select "DETE/CANCEL SW" and "SFT PN/N SW" in DATA MONITOR mode with CONSULT. 2.

Check "DETE/CANCEL SW" and "SFT PN/N SW" indication under the following conditions. 3.

| Monitor item      | Сс                      | Indication                               |     |
|-------------------|-------------------------|--|-----|
| DETE/CANCEL<br>SW | CVT Shift se-<br>lector | In any position oth-<br>er than P (Park) | OFF |
| 300               | lector                  | P (Park)                                 | ON  |
| SFT PN/N SW       | CVT Shift se-<br>lector | In any position oth-<br>er than P (Park) | OFF |
|                   | lector                  | P (Park)                                 | ON  |

### < DTC/CIRCUIT DIAGNOSIS >

### Is the inspection result normal?

- YES >> Refer to GI-47, "Intermittent Incident".
- NO-1 >> If DETE/CANCEL SW is incorrect. GO TO 6.
- NO-2 >> If SFT PN/N SW is incorrect. GO TO 2.

2. CHECK BCM INPUT SIGNAL

### 1. Turn ignition switch ON.

2. Check voltage between BCM harness connector and ground.

| (+)<br>BCM |          | (-)    | Condition      |                  | Voltage (V)<br>(Approx.)                |
|------------|----------|--------|----------------|------------------|---|
| Connector  | Terminal |        |                |                  | (,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,, |
| M17        | 39       | Ground | Selector lever | P or N position  | 12                                      |
| IVI I 7    | 39       | Ground | Selector level | Other than above | 0                                       |

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair or replace harness.

# ${\it 3.}$ CHECK BCM INPUT SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect BCM connector.
- 3. Disconnect transmission range switch connector.
- 4. Check continuity between transmission range switch harness connector and BCM harness connector.

| Transmission | ransmission Range Switch BC |                    | BCM |            |  |
|--------------|-----------------------------|--------------------|-----|------------|--|
| Connector    | Terminal                    | Connector Terminal |     | Continuity |  |
| F85          | 2                           | M17                | 39  | Yes        |  |

5. Check continuity between transmission range switch harness connector and ground.

| Transmission Range Switch |          |        | Continuity |  |
|---------------------------|----------|--------|------------|--|
| Connector                 | Terminal | Ground | Continuity |  |
| F85                       | 2        |        | No         |  |

Is the inspection result normal?

YES >> GO TO 4.

NO >> GOT TO 5.

### **4.**REPLACE BCM

- 1. Replace BCM. Refer to BCS-77. "Removal and Installation".
- 2. Perform initialization of BCM and registration of all Intelligent Keys using CONSULT.

>> Inspection End.

### **5.**CHECK DTC OF TCM

Check DTC in "Self Diagnostic Result" mode of "TCM" using CONSULT.

### Is DTC detected?

- YES >> Perform the trouble diagnosis related to the detected DTC. Refer to TM-60, "DTC Index".
- NO >> Perform the trouble diagnosis related to the TCM power and ground circuits. Refer to <u>TM-163</u>. <u>"Diagnosis Procedure"</u>.

6.CHECK CVT SHIFT SELECTOR POWER SUPPLY

- 1. Turn ignition switch OFF.
- 2. Disconnect CVT shift selector (park position switch) connector.
- 3. Check voltage between CVT shift selector (park position switch) harness connector and ground.

# Component Inspection

INFOID:000000008527258

# 1. CHECK CVT SHIFT SELECTOR (PARK POSITION SWITCH)

1. Turn ignition switch OFF.

2. Disconnect CVT shift selector connector.

3. Check continuity between CVT shift selector (park position switch) terminals.

| CVT shift selector ( | CVT shift selector (park position switch) |                | Condition         |            |
|----------------------|---|----------------|-------------------|------------|
| Ter                  | minal                                     | Con            | ulion             | Continuity |
| 5                    | 6   | Selector lever | P (Park) position | No         |
| 5                    | 0   | Selector level | Other than above  | Yes        |

Is the inspection result normal?

YES >> Inspection End.

NO >> Replace CVT shift selector. Refer to <u>TM-178</u>, "Removal and Installation".

#### NOTE:

- If DTC B2605 is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to <u>BCS-65, "DTC Logic"</u>.
- If DTC B2605 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to <u>BCS-66, "DTC Logic"</u>.

| DTC No. | Trouble diagnosis name | DTC detecting condition   | Possible cause   |
|---------|------------------------|---|--|
| B2605   | PNP/CLUTCH SW          | When ignition switch is ON, P/N position<br>signal input from transmission range switch<br>and P/N position signal (CAN) input from<br>IPDM E/R do not match. | <ul> <li>Harness or connectors<br/>(CAN communication line is open or<br/>shorted.)</li> <li>Harness or connectors<br/>(Transmission range switch circuit is<br/>open or shorted.)</li> <li>IPDM E/R</li> <li>BCM</li> </ul> |

#### DTC CONFIRMATION PROCEDURE

# **1.**PERFORM DTC CONFIRMATION PROCEDURE

- 1. Shift the selector lever to the P (Park) position.
- 2. Turn ignition switch ON and wait 1 second or more.
- 3. Shift the selector lever to the N (Neutral) position and wait 1 second or more.
- 4. Shift the selector lever to any position other than P (Park) and N (Neutral) and wait 1 second or more.
- 5. Check DTC in Self-Diagnostic Result mode of BCM using CONSULT.

#### Is DTC detected?

- YES >> Go to SEC-112, "Diagnosis Procedure".
- NO >> Inspection End.

#### **Diagnosis** Procedure

INFOID:000000008527262

Regarding Wiring Diagram information, refer to SEC-29, "Wiring Diagram".

# 1. CHECK CVT SHIFT SELECTOR SWITCH FUNCTION

- 1. Turn ignition switch ON.
- 2. Select "SFT PN-IPDM" and "SFT PN/N SW" in DATA MONITOR mode with CONSULT.
- 3. Check "SFT PN-IPDM" and "SFT PN/N SW" indication under the following conditions.

| Monitor item | Co                      | Indication   |     |
|--------------|-------------------------|--|-----|
| SFT PN-IPDM  | CVT Shift se-<br>lector | Any position other<br>than P (Park) or N<br>(Neutral) position | OFF |
|              | lector                  | P (Park) or N (Neu-<br>tral) position                          | ON  |
| SFT PN/N SW  | CVT Shift se-<br>lector | Any position other<br>than P (Park) or N<br>(Neutral) position | OFF |
|              |                         | P (Park) or N (Neu-<br>tral) position                          | ON  |

Is the inspection result normal?

YES >> Refer to <u>GI-47, "Intermittent Incident"</u>.

#### Is the inspection result normal?

YES >> GO TO 6. NO >> GO TO 7.

# **B2605 SHIFT POSITION**

< DTC/CIRCUIT DIAGNOSIS >

# 6.REPLACE BCM

- 1. Replace BCM. Refer to BCS-77. "Removal and Installation".
- 2. Perform initialization of BCM and registration of all Intelligent Keys using CONSULT.

>> Inspection End.

7. CHECK BCM INPUT SIGNAL CIRCUIT

1. Turn ignition switch OFF.

2. Disconnect transmission range switch connector.

3. Disconnect BCM connector.

4. Check continuity between transmission range switch harness connector and BCM harness connector.

| Transmission Range Switch |          | BCM       |          | Continuity |
|---------------------------|----------|-----------|----------|------------|
| Connector                 | Terminal | Connector | Terminal | Continuity |
| F85                       | 2        | M17       | 39       | Yes        |

5. Check continuity between transmission range switch harness connector and ground.

| Transmission | Range Switch |        | Continuity |
|--------------|--------------|--------|------------|
| Connector    | Terminal     | Ground | Continuity |
| F85          | 2            |        | No         |

Is the inspection result normal?

YES >> GO TO 8.

NO >> Repair or replace harness.

**8.**CHECK INTERMITTENT INCIDENT

Refer to GI-47, "Intermittent Incident".

>> Inspection End.

# **B2617 STARTER RELAY CIRCUIT**

#### < DTC/CIRCUIT DIAGNOSIS >

# **B2617 STARTER RELAY CIRCUIT**

## Description

Located in IPDM E/R, it runs the starter motor. The starter relay is turned ON by the BCM when the ignition switch is in START position. IPDM E/R transmits the starter relay ON signal to BCM via CAN communication.

#### NOTE:

- If DTC B2617 is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to <u>BCS-65, "DTC Logic"</u>.
- If DTC B2617 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to <u>BCS-66, "DTC Logic"</u>.

| DTC No. | Trouble diagnosis name   | DTC detecting condition  | Possible cause   |   |
|---------|--------------------------|--|--|---|
| B2617   | STARTER RELAY<br>CIRCUIT | <ul> <li>An immediate operation of starter relay is requested by BCM, but there is no response for more than 1 second</li> <li>BCM is not commanding starter relay activation, but BCM detects starter relay output is active</li> </ul> | <ul> <li>Harness or connectors<br/>(Starter relay circuit is open or short-<br/>ed.)</li> <li>IPDM E/R</li> <li>BCM</li> </ul> | F |

#### DTC CONFIRMATION PROCEDURE

# 1.PERFORM DTC CONFIRMATION PROCEDURE

- 1. Turn ignition switch ON under the following conditions and wait for at least 1 second.
- CVT selector lever is in the P (Park) position.
- Do not depress the brake pedal.
- 2. Check Self-Diagnostic Result with CONSULT.

#### Is DTC detected?

- YES >> Refer to <u>SEC-117, "Diagnosis Procedure"</u>.
- NO >> Inspection End.

#### **Diagnosis** Procedure

Regarding Wiring Diagram information, refer to SEC-29, "Wiring Diagram".

# **1.**CHECK STARTER RELAY

1. Turn ignition switch ON.

2. Check voltage between BCM harness connector and ground under the following condition.

| BC                 | BCM |        | Condition                            | on Voltage (V)  |
|--------------------|-----|--------|--------------------------------------|-----------------|
| Connector Terminal |     | Ground | Condition                            |                 |
|                    |     |        | Ignition switch cranking             | 0               |
| M18                | 62  | Ground | Ignition switch ON (Park or Neutral) | Battery voltage |
|                    |     |        | Other than above                     | 0               |

Is the measurement value within the specification.

YES >> GO TO 3.

NO >> GO TO 2.

2. CHECK STARTER RELAY CIRCUIT

# **B2617 STARTER RELAY CIRCUIT**

< DTC/CIRCUIT DIAGNOSIS >

- 1. Turn ignition switch OFF.
- 2. Disconnect BCM harness connector and IPDM E/R harness connector.
- 3. Check continuity between IPDM E/R harness connector and BCM harness connector.

| IPDM E/R  |          | B         | Continuity |            |
|-----------|----------|-----------|------------|------------|
| Connector | Terminal | Connector | Terminal   | Continuity |
| E63       | 33       | M18       | 62         | Yes        |

4. Check continuity between IPDM E/R harness connector and ground.

| IPDN      | /I E/R   | Ground | Continuity |  |
|-----------|----------|--------|------------|--|
| Connector | Terminal | Ground | Continuity |  |
| E63       | 33       | Ground | No         |  |

Is the inspection result normal?

YES >> Replace BCM. Refer to <u>BCS-77, "Removal and Installation"</u>.

NO >> Repair harness or connector.

**3.**CHECK INTERMITTENT INCIDENT

Refer to GI-47, "Intermittent Incident".

>> Inspection End.

# **B261E VEHICLE TYPE**

#### < DTC/CIRCUIT DIAGNOSIS >

# POWER SUPPLY AND GROUND CIRCUIT

# Diagnosis Procedure

INFOID:000000008707228

Regarding Wiring Diagram information, refer to PCS-21, "Wiring Diagram".

# 1. CHECK FUSIBLE LINKS

Check that the following fusible links are not blown.

| Terminal No. | Signal name                  | Fusible link No.            |
|--------------|------------------------------|-----------------------------|
| 1            | Fusible link main            | E (80A)                     |
| 2            | Fusible link IPDM E/R        | A (250A), C (80A)           |
| 3            | Fusible link ignition switch | A (250A), B (100A), M (40A) |

#### Is the fusible link blown?

YES >> Replace the blown fusible link after repairing the affected circuit.

NO >> GO TO 2

# 2. CHECK POWER SUPPLY CIRCUIT

- 1. Disconnect IPDM E/R connectors E16 and E17.
- 2. Check voltage between IPDM E/R connectors and ground.

| IPDI               | M E/R | Ground | Voltage<br>(Approx.) |
|--------------------|-------|--------|----------------------|
| Connector Terminal |       | Gibuna | (Approx.)            |
| E16                | 1     |        | Battery voltage      |
| EIO                | 2     |        |                      |
| E17                | 3     |        |                      |

Is the inspection result normal?

YES >> GO TO 3

NO >> Repair or replace harness or connectors.

# **3.** CHECK GROUND CIRCUIT

- 1. Disconnect IPDM E/R connectors E18 and E63.
- 2. Check continuity between IPDM E/R connectors and ground.

| IPDM E    | E/R      | Ground | Continuity |
|-----------|----------|--------|------------|
| Connector | Terminal |        |            |
| E18       | 7        |        | Yes        |
| E63       | 41       |        | 165        |

Is the inspection result normal?

YES >> Inspection End.

NO >> Repair or replace harness or connectors.

# HOOD SWITCH

# **Component Function Check**

INFOID:000000008527281

# **1.**CHECK FUNCTION

1. Select HOOD SW in Data Monitor mode of IPDM E/R using CONSULT.

2. Check HOOD SW indication under the following condition.

| Monitor item | Condition |       | Indication |
|--------------|-----------|-------|------------|
| HOOD SW      | Hood      | Open  | ON         |
|              | nood      | Close | OFF        |

Is the indication normal?

YES >> Hood switch is OK.

NO >> Go to <u>SEC-124, "Diagnosis Procedure"</u>.

#### **Diagnosis** Procedure

INFOID:000000008527282

Regarding Wiring Diagram information, refer to SEC-51, "Wiring Diagram".

# 1. CHECK HOOD SWITCH SIGNAL CIRCUITS

- 1. Turn ignition switch OFF.
- 2. Disconnect hood switch connector.

3. Check voltage between hood switch harness connector and ground.

|           | (+)<br>IPDM E/R<br>Connector Terminal |        | Voltage (V)     |
|-----------|---------------------------------------|--------|-----------------|
| Connector |                                       |        |                 |
| E201      | E201 94                               |        | Battery voltage |
|           | 96                                    | Ground | Dallery Vollage |

Is the inspection result normal?

YES >> GO TO 3.

NO >> GO TO 2.

2. CHECK HOOD SWITCH SIGNAL CIRCUITS

1. Disconnect IPDM E/R connector.

2. Check continuity between IPDM E/R harness connector and hood switch harness connector.

| IPD       | M E/R    | Hood      | switch   | Continuity |
|-----------|----------|-----------|----------|------------|
| Connector | Terminal | Connector | Terminal | Continuity |
| E201      | 94       | E248      | 1        | Yes        |
| E201      | 96       | ⊏240      | 2        | 165        |

#### 3. Check continuity between IPDM E/R harness connector and ground.

| IPDN      | IPDM E/R |        | Continuity |
|-----------|----------|--------|------------|
| Connector | Terminal | Ground | Continuity |
| E201      | 94       | Ground | No         |
| 2201      | 96       |        | NU         |

Is the inspection result normal?

YES >> Replace IPDM E/R. Refer to PCS-32, "Removal and Installation".

NO >> Repair or replace harness.

# **HOOD SWITCH**

## < DTC/CIRCUIT DIAGNOSIS >

# 3. CHECK HOOD SWITCH GROUND CIRCUIT

Check continuity between hood switch harness connector and ground.

| Hood s   | witch            |                               |  |

# HORN FUNCTION

## **Component Function Check**

INFOID:000000008527284

# 1. CHECK FUNCTION 1

- 1. Disconnect anti theft horn relay.
- 2. Perform ANTI-THEFT HORN in ACTIVE TEST mode of THEFT ALM of BCM using CONSULT.
- 3. Check the horn operation.

|   | Test item                               |                            | Description         |
|---|---|----------------------------|---------------------|
| ANTI-THEFT HORN   | ON                                      | ANTI-THEFT HORN            | Sounds (for 0.5 sec |

NO >> Go to <u>SEC-126</u>, "Diagnosis Procedure".

# **Diagnosis** Procedure

INFOID:000000008527285

Regarding Wiring Diagram information, refer to SEC-51, "Wiring Diagram".

# **1.**INSPECTION START

Perform inspection in accordance with procedure that confirms malfunction.

Which procedure confirms malfunction?

Component Function Check 1>>GO TO 2.

Component Function Check 2>>GO TO 4.

# 2. CHECK HORN FUNCTION

Check that horns function properly using horn switch.

#### Do horns sound?

YES >> GO TO 3.

NO >> Check horn circuit. Refer to <u>SEC-126, "Component Function Check"</u>.

# **3**.CHECK HORN CONTROL CIRCUIT

- 1. Disconnect horn relay.
- 2. Disconnect IPDM E/R connector.
- 3. Check continuity between IPDM E/R harness connector and horn relay harness connector.

| IPDI      | IPDM E/R |           | Horn relay |            |

7. CHECK ANTI-THEFT HORN RELAY

# **HORN FUNCTION**

#### < DTC/CIRCUIT DIAGNOSIS >

#### Refer to SEC-128, "Component Inspection".

#### Is the inspection result normal?

- YES >> Replace anti-theft horn.
- NO >> Replace anti-theft horn relay.

## **Component Inspection**

INFOID:000000008527286

# 1. CHECK ANTI-THEFT HORN RELAY

- 1. Turn ignition switch OFF.
- 2. Disconnect anti-theft horn relay.
- 3. Check voltage between anti theft horn relay terminal and ground under the following conditions.

| (+)<br>anti-theft horn relay<br>Terminal | (-)     | Condition  | Voltage (V)<br>(Approx.) |
|--|---------|--|--------------------------|
| 3  | Ground  | 12 V direct current supply between terminals 1 and 2 | 12                       |
|  | Giodila | No current supply                                    | 0                        |

Is the inspection result normal?

YES >> Inspection End.

NO >> Replace anti-theft horn relay.

#### SECURITY INDICATOR LAMP < DTC/CIRCUIT DIAGNOSIS > SECURITY INDICATOR LAMP А **Component Function Check** INFOID:000000008527287 **1**.CHECK FUNCTION В 1. Perform THEFT IND in ACTIVE TEST mode of IMMU of BCM using CONSULT. 2. Check security indicator lamp operation. Test item Description ON Illuminates THEFT IND Security indicator lamp D OFF Does not illuminate Is the inspection result normal? YES >> Inspection End. Ε >> Go to SEC-129, "Diagnosis Procedure". Refer to BCS-77, "Removal and Installation". 1.

2. Perform initialization of BCM and registration of all Intelligent Keys using CONSULT.

>> Inspection End.

# SECURITY INDICATOR LAMP

#### < DTC/CIRCUIT DIAGNOSIS >

# 4. CHECK SECURITY INDICATOR LAMP CIRCUIT

- 1. Disconnect combination meter connector.
- 2. Check continuity between combination meter harness connector and BCM harness connector.

| Combina   | Combination meter |           | BCM      |            |
|-----------|-------------------|-----------|----------|------------|
| Connector | Terminal          | Connector | Terminal | Continuity |
| M24       | 6                 | M17       | 18       | Yes        |

3. Check continuity between combination meter harness connector and ground.

| Combina   | tion meter |        | Continuity |
|-----------|------------|--------|------------|
| Connector | Terminal   | Ground |            |
| M24       | 6          |        | No         |

Is the inspection result normal?

YES >> Replace combination meter. Refer to <u>MWI-81, "Removal and Installation"</u>.

NO >> Repair or replace harness.

## ENGINE DOES NOT START WHEN INTELLIGENT KEY IS INSIDE OF VEHICLE < SYMPTOM DIAGNOSIS >

#### SYMPTOM DIAGNOSIS А ENGINE DOES NOT START WHEN INTELLIGENT KEY IS INSIDE OF VE-HICLE В Description INFOID-000000008527289 Engine does not start when push-button ignition switch is pressed while carrying Intelligent Key. NOTE: · Check that vehicle is under the condition shown in "Conditions of vehicle" before starting diagnosis, and check each symptom. D The engine start function, door lock function, power distribution system, and NATS-IVIS/NVIS in the Intelligent Key system are closely related to each other regarding control. The vehicle security function can operate only when the door lock and power distribution system are operating normally. Ε Conditions of Vehicle (Operating Conditions) • "ENGINE START BY I-KEY" in "WORK SUPPORT" is ON when setting on CONSULT.

One or more of Intelligent Keys with registered Intelligent Key ID is in the vehicle.

## **Diagnosis** Procedure

**1.**PERFORM WORK SUPPORT

Perform "INSIDE ANT DIAGNOSIS" on Work Support in "INTELLIGENT KEY". Refer to BCS-21, "INTELLIGENT KEY : CONSULT Function (BCM - INTELLIGENT KEY)".

>> GO TO 2.

2.PERFORM SELF-DIAGNOSIS RESULT

Perform Self-Diagnosis Result in "BCM", and check whether or not DTC of inside key antenna is detected. Is DTC detected?

| YES | >> Refer to <u>BCS-49, "DTC_Index"</u> . |
|-----|--|
| NO  | >> GO TO 3.                              |

3.CHECK PUSH-BUTTON IGNITION SWITCH

Check push-button ignition switch. Refer to SEC-97, "Component Inspection".

Is the operation normal?

YES >> GO TO 4.

>> Repair or replace malfunctioning parts. NO

**4.**CONFIRM THE OPERATION

Confirm the operation again.

Is the inspection normal?

YES >> Check intermittent incident. Refer to GI-47, "Intermittent Incident".

NO >> GO TO 1. INFOID:000000008527290

# SECURITY INDICATOR LAMP DOES NOT TURN ON OR BLINK

#### < SYMPTOM DIAGNOSIS >

# SECURITY INDICATOR LAMP DOES NOT TURN ON OR BLINK

## Description

INFOID:000000008527291

Security indicator lamp does not blink when ignition switch is in a position other than ON **NOTE:** 

- Before performing the diagnosis, check "Work Flow". Refer to SEC-64, "Work Flow".
- Check that vehicle is under the condition shown in "Conditions of vehicle" before starting diagnosis, and check each symptom.

Conditions of Vehicle (Operating Conditions) Ignition switch is not in the ON position.

## **Diagnosis** Procedure

INFOID:000000008527292

**1.**CHECK SECURITY INDICATOR LAMP

Check security indicator lamp. Refer to <u>SEC-129, "Component Function Check"</u>.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace the malfunctioning parts.

2.CONFIRM THE OPERATION

Confirm the operation again.

Is the result normal?

YES >> Check intermittent incident. Refer to <u>GI-47, "Intermittent Incident"</u>.

NO >> GO TO 1.
