# BASIC INSPECTION DIAGNOSIS AND REPAIR WORKFLOW

#### Work Flow

#### **OVERALL SEQUENCE**

А

В

INFOID:000000003710235

## DIAGNOSIS AND REPAIR WORKFLOW

< BASIC INSPECTION >

## **1.**INTERVIEW FOR MALFUNCTION

Interview the customer about the symptom.

#### >> GO TO 2.

## 2.SYMPTOM CHECK

Verify the symptom from the customer's information.

#### >> GO TO 3.

**3.**BASIC INSPECTION

Check the operation of each part. Check that no symptoms occur other than those specified by the customer.

>> GO TO 4.

**4.**SELF-DIAGNOSIS WITH CONSULT-III

Perform the self diagnosis with CONSULT-III. Check that any DTC is detected.

Is any DTC detected?

YES >> GO TO 5. NO >> GO TO 6.

**5.**TROUBLE DIAGNOSIS BY DTC

Perform the trouble diagnosis for the detected DTC. Specify the malfunctioning part.

>> GO TO 7.

#### **6.**SYMPTOM DIAGNOSIS

Perform the symptom diagnosis. Specify the malfunctioning part.

>> GO TO 7.

**1**.MALFUNCTIONING PART REPAIR

Repair or replace the malfunctioning part.

>> GO TO 8.

8. REPAIR CHECK (SELF-DIAGNOSIS WITH CONSULT-III)

Perform the self diagnosis with CONSULT-III. Verfied that no DTCs are detected. Erase all DTCs detected prior to the repair. Verify that DTC is not detected again.

Is any DTC detected?

YES >> GO TO 5. NO >> GO TO 9.

**9.**REPAIR CHECK (OPERATION CHECK)

Check the operation of each part. Does it operate normally?

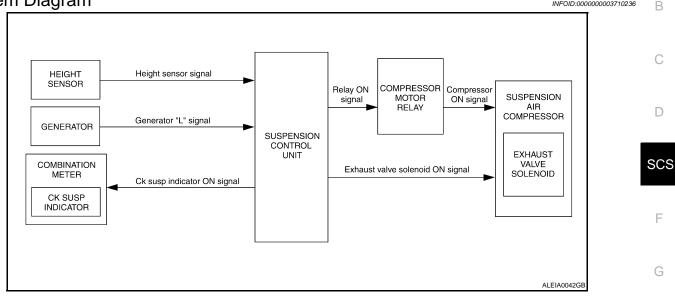

YES >> Inspection End.

NO >> GO TO 3.

#### < FUNCTION DIAGNOSIS >

# FUNCTION DIAGNOSIS SUSPENSION CONTROL SYSTEM

#### System Diagram

## System Description

#### SUSPENSION CONTROL SYSTEM

The suspension control system consists of the following components

- Suspension control unit
- Compressor motor relay
- Suspension air compressor
- Exhaust valve solenoid (built into suspension air compressor)
- Height sensor

The suspension control unit monitors vehicle ride height as indicated by the height sensor. The suspension control unit actuates the compressor motor relay to raise the vehicle ride height. The suspension control unit Κ actuates the exhaust valve solenoid to lower the vehicle ride height.

#### CK SUSP INDICATOR LAMP

The CK SUSP indicator lamp ground is controlled by the suspension control unit. The indicator lamp will come L on for 2 seconds when the ignition switch is turned ON. If the indicator lamp does not turn OFF there is a fault detected. Refer to SCS-7, "CONSULT-III Function".

Part name	Description
Suspension control unit	<ul> <li>Monitors height sensor input to determine vehicle height.</li> <li>Actuates the compressor motor relay or exhaust valve solenoid to raise or lower the vehicle accordingly.</li> <li>Sends a ground signal to the combination meter to activate the CK SUSP indicator lamp.</li> </ul>
Suspension air compressor (with built in exhaust valve solenoid)	<ul> <li>When the compressor is actuated, it pumps air into the system to raise the rear suspension.</li> <li>When the exhaust valve solenoid is actuated, it vents air from the system to lower the rear suspension.</li> </ul>
Height sensor	Provides vehicle height input to the suspension control unit.

sion)

## **DIAGNOSIS SYSTEM (SUSPENSION CONTROL UNIT)**

#### < FUNCTION DIAGNOSIS >

# DIAGNOSIS SYSTEM (SUSPENSION CONTROL UNIT)

## **CONSULT-III** Function

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

AIR LEVELIZER diagnosis mode	Description	
WORK SUPPORT	Supports inspection and adjustment. Commands are transmitted to the suspension control unit for setting the status suitable for required operation, input/output signals are received from the suspension control unit and received data is displayed.	(
SELF-DIAG RESULTS	Displays suspension control unit self-diagnosis results.	- -
DATA MONITOR Displays suspension control unit input/output data in real time.		- 1
ACTIVE TEST	Operation of electrical loads can be checked by sending drive signal to them.	-
ECU PART NUMBER	The part number of suspension control unit can be checked.	S

#### WORK SUPPORT

#### **Display Item List**

Item	Description	Condition
STANDARD HEIGHT LEVEL	Resets the vehicle height to the initialization flag setting stored in the suspension control unit.	Vehicle unladen, set in a horizontal position and not moving. <b>NOTE:</b> Do not take your eyes off the vehicle while CON- SULT-III is processing.
ADJUST HEIGHT INI	Sets the height initialization flag in the suspen- sion control unit when the control unit has been replaced or when the initialization flag has been cleared using the "CLEAR HEIGHT INI" proce- dure.	Vehicle unladen, move vehicle forward and back- ward approx. 5 m (16.4 ft) and rock vehicle side to side. <b>NOTE:</b> Do not move vehicle while CONSULT-III is pro- cessing.
CLEAR HEIGHT INI	Clears the initialization flag in the suspension control unit.	Vehicle unladen.

#### DATA MONITOR

## **DIAGNOSIS SYSTEM (SUSPENSION CONTROL UNIT)**

#### < FUNCTION DIAGNOSIS >

EXHAUST SOLENOID	ON/OFF
WARNING LAMP	ON/OFF

#### **CAUTION:**

The "COMPRESSOR active test will remain ON until it is turned off using CONSULT-III. Allowing the compressor to run for an extended period of time may cause damage to the suspension control system components due to excessive pressure.

NOTE:

- "TEST IS STOPPED" is displayed approximately 10 seconds after operation starts for all active test items except "COMPRESSOR".
- After "TEST IS STOPPED" is displayed, to perform test again, repeat step 6.

# COMPONENT DIAGNOSIS C1801 VEHICLE HEIGHT SENSOR

#### Description

The vehicle height sensor operates on a 5 volt reference signal from the suspension control unit. The suspension control unit also provides ground to the height sensor. Depending on vehicle height, the height sensor signal should have between 0.2V and 4.8V.

#### DTC Logic

INFOID:000000003710242

#### DTC DETECTION LOGIC

C1801       VEHICLE HEIGHT SEN- SOR       Vehicle height sensor voltage is less than 0.2V or greater than 4.8V for more than 60 seconds.          • Height sensor power/ground supply. Refer to <u>SCS-18. "HEIGHT SENSOR : Diagnosis</u> <u>Procedure"</u> .          F          • Height sensor signal circuit. Refer to <u>SCS-22. "Component Function Check"</u> .          F	DTC	Display contents of CON- SULT-III	Diagnostic item is detected when	Probable malfunction location	SCS
	C1801			<u>SCS-18. "HEIGHT SENSOR : Diagnosis</u> <u>Procedure"</u> . • Height sensor signal circuit. Refer to <u>SCS-</u>	F

## **Diagnosis Procedure**

## 1.CHECK HEIGHT SENSOR OPERATION

CONSULT-III

- 1. Turn ignition switch ON
- 2. Select "HEIGT SEN" of AIR LEVELIZER data monitor test item.

#### HEIGHT SEN : 0.2V - 4.8V

Is the HEIGHT SEN voltage within the given range?

- YES >> Height sensor is operating normally.
- NO >> Refer to <u>SCS-22, "Diagnosis Procedure"</u>.

#### < COMPONENT DIAGNOSIS >

## C1802 COMPRESSOR RELAY

## Description

INFOID:000000003710244

The compressor motor relay is controlled by the suspension control unit. The suspension control unit supplies voltage to the coil side of the relay to activate it. The compressor motor relay, when activated, supplies power to the suspension air compressor.

## DTC Logic

INFOID:000000003710245

#### DTC DETECTION LOGIC

DTC	Display contents of CON- SULT-III	Diagnostic item is detected when	Probable malfunction location
C1802	COMPRESSOR RELAY	<ul> <li>Driving transistor for the compressor relay is OFF and monitor voltage continues at a high level for more than 10 seconds.</li> <li>Driving transistor for the compressor relay is ON and monitor voltage continues at a low level for more than 5 seconds.</li> </ul>	Compressor motor relay. Refer to <u>SCS-20.</u> <u>"Component Function Check"</u> .

## **Diagnosis** Procedure

INFOID:000000003710246

## 1.CHECK COMPRESSOR MOTOR RELAY OPERATION

#### **CAUTION:**

The "COMPRESSOR" active test will remain ON until it is turned off using CONSULT-III. Allowing the compressor to run for an extended period of time may cause damage to the air levelizer system components due to excessive air pressure.

- CONSULT-III 1. Turn ignition ON.
- Select "COMPRESSOR" of AIR LEVELIZER active test items. 2.
- 3. While operating test item, check that the suspension air compressor turns ON.

ON : Compressor turns ON

#### OFF : Compressor turns OFF

#### Does the suspension air compressor operate properly?

- YES >> Compressor motor relay and suspension air compressor are operating normally.
- NO >> Refer to SCS-20, "Diagnosis Procedure".

< COMPONENT DIAGNOSIS >

## C1803 EXHAUST SOLENOID

## Description

The exhaust valve solenoid controls the vent function of the suspension control system. The exhaust valve solenoid is built into the suspension air compressor. The suspension control unit supplies voltage to the exhaust valve solenoid to activate it.

## Diagnosis Procedure

INFOID:000000003710249

# 1.CHECK EXHAUST SOLENOID OPERATION

#### **CAUTION:**

While operating this active test, the suspension control system will vent air pressure and the vehicle ride height will lower. Ensure the area around the vehicle is free from obstructions before beginning test.

CONSULT-III

- 1. Ensure the suspension control system has air pressure and is not drooping in the rear.
- 2. Select "EXHAUST SOLENOID" of AIR LEVELIZER active test items.
- 3. While operating test item, check that the exhaust valve solenoid opens to vent air from the system. The J vehicle should lower when the exhaust valve solenoid is activated.

#### ON : Air vents and vehicle ride height lowers

#### OFF : No air vents and vehicle ride height remains constant

#### Does the system vent properly?

YES >> Exhaust valve solenoid is operating normally.

NO >> Refer to <u>SCS-23</u>, "Description".

## C1804 HEIGHT ADJUSTING MALFUNCTION (COMPRESSOR)

#### < COMPONENT DIAGNOSIS >

## C1804 HEIGHT ADJUSTING MALFUNCTION (COMPRESSOR)

#### Description

INFOID:000000003710250

The compressor motor relay is controlled by the suspension control unit. The suspension control unit supplies voltage to the coil side of the relay to activate it. The compressor motor relay, when activated, supplies power to the suspension air compressor.

## **DTC Logic**

INFOID:000000003710251

#### DTC DETECTION LOGIC

C1804	VEHICLE HEIGHT AD- JUSTING MALFUNC- TION (COMPRESSOR)	Continuous compressor relay ON time is more than 120 seconds.	Compressor motor relay. Refer to <u>SCS-20.</u> "Component Function Check".

## Diagnosis Procedure

INFOID:000000003710252

## 1.CHECK COMPRESSOR MOTOR RELAY OPERATION

#### CAUTION:

The "COMPRESSOR" active test will remain ON until it is turned off using CONSULT-III. Allowing the compressor to run for an extended period of time may cause damage to the air levelizer system components due to excessive air pressure.

#### CONSULT-III

- 1. Turn ignition ON.
- 2. Select "COMPRESSOR" of AIR LEVELIZER active test items.
- 3. While operating test item, check that the suspension air compressor turns ON.

#### ON : Compressor turns ON

#### OFF : Compressor turns OFF

Does the suspension air compressor operate properly?

- YES >> Compressor motor relay and suspension air compressor are operating normally.
- NO >> Refer to <u>SCS-20, "Diagnosis Procedure"</u>.

## C1805 HEIGHT ADJUSTING MALFUNCTION (EXH SOLENOID)

#### < COMPONENT DIAGNOSIS >

## C1805 HEIGHT ADJUSTING MALFUNCTION (EXH SOLENOID)

#### Description

The exhaust valve solenoid controls the vent function of the suspension control system. The exhaust valve solenoid is built into the suspension air compressor. The suspension control unit supplies voltage to the exhaust valve solenoid to activate it.

## COMPRESSOR MOTOR RELAY

## Description

Receives suspension air compressor ON signal from suspension control unit. When activated, the compressor motor relay supplies power to the suspension air compressor.

#### **Component Function Check**

**1.**CHECK COMPRESSOR MOTOR RELAY OPERATION

#### CAUTION:

The "COMPRESSOR" active test will remain ON until it is turned off using CONSULT-III. Allowing the compressor to run for an extended period of time may cause damage to the suspension control system components due to excessive air pressure.

#### CONSULT-III

- 1. Turn ignition ON.
- 2. Select "COMPRESSOR" of AIR LEVELIZER active test items.
- 3. While operating test item, check that the suspension air compressor turns ON.

#### ON : Compressor turns ON

#### OFF : Compressor turns OFF

Does the suspension air compressor operate properly?

- YES >> Compressor motor relay and suspension air compressor are operating normally.
- NO >> Refer to <u>SCS-20, "Diagnosis Procedure"</u>.

#### Diagnosis Procedure

## 1. CHECK COMPRESSOR "ON" SIGNAL FROM SUSPENSION CONTROL UNIT

#### CONSULT-III

- 1. Turn ignition switch ON.
- 2. Disconnect compressor motor relay connector E130.
- 3. Select "COMPRESSOR" of AIR LÉVELIZER active test items.
- 4. While operating test item, check voltage to compressor motor relay connector E130 terminal 2.

(+)		(-)	Voltage
Connector	Terminal	(-)	vollage
E130	2	Ground	Battery voltage
	-		

Is battery voltage present while operating test item?

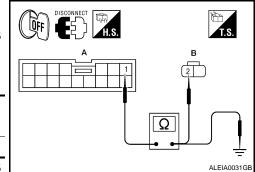

YES >> GO TO 3.

NO >> GO TO 2.

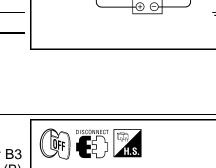

# 2. CHECK COMPRESSOR "ON" SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect suspension control unit connector B3.
- Check continuity between suspension control unit connector B3 (A) terminal 1 and compressor motor relay connector E130 (B) terminal 2.

Α		В		Continuity
Connector	Terminal	Connector	Terminal	Continuity
B3	1	E130	2	Yes

 Check continuity between suspension control unit connector B3 (A) terminal 1 and ground.

## HEIGHT SENSOR SIGNAL CIRCUIT

## Description

Supplies vehicle height input to the suspension control unit.

#### **Component Function Check**

## 1.CHECK HEIGHT SENSOR OPERATION

#### CONSULT-III

- 1. Select "HEIGT SEN" of AIR LEVELIZER data monitor test item.
- 2. While monitoring test item, add or take away weight from the rear of the vehicle. Check that the voltage value changes with vehicle height.

#### HEIGHT SEN : Voltage changes with vehicle height

Is the HEIGHT SEN data monitor responding normally?

- YES >> Height sensor is operating normally.
- NO >> Refer to <u>SCS-22. "Diagnosis Procedure"</u>.

#### Diagnosis Procedure

#### **1.**CHECK HEIGHT SENSOR POWER AND GROUND SUPPLY

Check height sensor power and ground supply. Refer to <u>SCS-18, "HEIGHT SENSOR : Diagnosis Procedure"</u>. <u>Are the inspection results normal?</u>

YES >> GO TO 2.

NO >> Repair harness or connector.

2. CHECK HEIGHT SENSOR SIGNAL CIRCUIT

- 1. Disconnect suspension control unit connector B3 and height sensor connector C8.
- Check continuity between suspension control unit connector B3 (A) terminal 3 and height sensor connector C8 (B) terminal 2.

-	A			В	Continuity
-	Connector	Terminal	Connector Terminal		Continuity
-	B3	3	C8	2	Yes

 Check continuity between display unit harness connector B3 (A) terminal 3 and ground.

	٩		Continuity
Connector	Terminal		Continuity
B3	3	Ground	No

Are the continuity results as specified?

YES >> Replace the height sensor. Refer to <u>RSU-24</u>, "<u>Removal and Installation</u>".

NO >> Repair harness or connector.

INFOID:000000003710272

INFOID:000000003710273

## EXHAUST VALVE SOLENOID CIRCUIT

< COMPONENT DIAGNOSIS >

#### EXHAUST VALVE SOLENOID CIRCUIT А Description INFOID:000000003710274 Receives exhaust valve solenoid signal from suspension control unit. When activated, the exhaust valve solenoid releases air pressure from the suspension control system. Component Function Check INFOID:00000003710275 1.CHECK EXHAUST SOLENOID OPERATION CAUTION: While operating this active test, the suspension control system will vent air pressure and the vehicle D ride height will lower. Ensure the area around the vehicle is free from obstructions before beginning test. CONSULT-III SCS Ensure the suspension control system has air pressure and is not drooping in the rear. 1 Select "EXHAUST SOLENOID" of AIR LEVELIZER active test items. 2. While operating test item, check that the exhaust valve solenoid opens to vent air from the system. The 3 vehicle should lower when the exhaust valve solenoid is activated. ON : Air vents and vehicle ride height lowers OFF : No air vents and vehicle ride height remains constant Does the system vent properly? YES >> Exhaust valve solenoid is operating normally. Н >> Refer to SCS-23, "Diagnosis Procedure". NO Diagnosis Procedure INFOID:000000003710276 1.CHECK EXHAUST VALVE SOLENOID SIGNAL (P)CONSULT-III 1. Connect suspension control unit connector B3. 2. Turn ignition switch ON. LŐN 3. Select "EXHAUST SOLENOID" of AIR LEVELIZER active test items. Κ 4. While test item is operating, check signal between suspension air compressor connector C9 terminal 2 and ground. (+)(-) Voltage Connector Terminal M C9 2 Ground Battery voltage ALEIA0036GE Is battery voltage present? YES >> GO TO 3. Ν NO >> GO TO 2. 2. CHECK CONTINUITY OF EXHAUST VALVE SOLENOID CIRCUIT 1. Turn ignition switch OFF. Disconnect suspension control unit connector B3 and suspen-2. sion air compressor connector C9. 3. Check continuity between suspension control unit connector B3 Ρ (A) terminal 9 and suspension air compressor connector C9 (B) terminal 2. Δ в Continuity Terminal Connector Connector Terminal B3 9 C9 2 Yes ALEIA0037G

## EXHAUST VALVE SOLENOID CIRCUIT

#### < COMPONENT DIAGNOSIS >

4. Check continuity between suspension control unit connector B3 (A) terminal 9 and ground.

	A		Continuity		
Connector	Terminal		Continuity		
В3	9	Ground	No		

Are the continuity test results as specified?

YES >> Replace the suspension control unit. Refer to <u>RSU-26, "Removal and Installation"</u>.

NO >> Repair harness or connector.

3. CHECK SUSPENSION AIR COMPRESSOR GROUND

- 1. Turn ignition switch OFF.
- 2. Check continuity between suspension air compressor connector C9 terminals 1 and 3 and ground.

Connector	Terminal	—	Continuity		
C9	1	Ground	Yes		
09	3	Ground	res		

Is continuity present?

- YES >> Replace the suspension air compressor. Refer to <u>RSU-22, "Removal and Installation"</u>.
- NO >> Repair harness or connector.

## SUSPENSION CONTROL SYSTEM INOPERATIVE

#### < SYMPTOM DIAGNOSIS >

## SUSPENSION CONTROL SYSTEM INOPERATIVE

#### Description

The suspension control system does not activate. It does not raise or lower the vehicle in response to ride height changes.

#### Diagnosis Procedure

INFOID:000000003710285

INFOID:000000003710284

#### **1.**SUSPENSION CONTROL UNIT POWER AND GROUND INSPECTION

Check the suspension control unit power and ground supply. Refer to <u>SCS-17. "SUSPENSION CONTROL</u> <u>UNIT : Diagnosis Procedure"</u>.

Does the suspension control unit power and ground pass inspection?

YES >> GO TO 2.

NO >> Repair or replace the malfunctioning part.

2.CHECK HEIGHT SENSOR SIGNAL INPUT

#### CONSULT-III DATA MONITOR

- 1. Turn ignition switch ON.
- 2. Select "HEIGT SEN" of AIR LEVELIZER data monitor item.
- 3. Check the monitor status.

#### HEIGT SEN

#### : 0.2V - 4.8V

Is the height sensor voltage normal?

- YES >> GO TO 3.
- NO >> Check height sensor signal circuit. Refer to <u>SCS-22, "Diagnosis Procedure"</u>.

#### **3.**CHECK GENERATOR "L" CIRCUIT SIGNAL

#### CONSULT-III DATA MONITOR

- 1. Start the engine.
- 2. Select "ACG L" of AIR LEVELIZER data monitor item.
- 3. Check the monitor status.

#### ACG L

#### : OFF with charge light OFF : ON with charge light ON

Is the generator "L" signal operating normally?

YES >> GO TO 4.

NO >> Check generator L circuit. Refer to CHG-11, "Diagnosis Procedure".

**4.**SUSPENSION AIR COMPRESSOR POWER AND GROUND INSPECTION

Check the suspension air compressor power and ground supply. Refer to <u>SCS-17. "SUSPENSION AIR COM-</u> <u>PRESSOR : Diagnosis Procedure"</u>.

Does the suspension air compressor power and ground pass inspection?

YES >> System is operating normally.

NO >> Repair or replace the malfunctioning part.

#### SUSPENSION CONTROL SYSTEM DOES NOT RAISE < SYMPTOM DIAGNOSIS > SUSPENSION CONTROL SYSTEM DOES NOT RAISE А Description INFOID:00000003710286 The suspension control system does not raise the vehicle in accordance with ride height changes. В **Diagnosis** Procedure INFOID:000000003710287 1.SUSPENSION CONTROL UNIT POWER AND GROUND INSPECTION С Check the suspension control unit power and ground supply. Refer to SCS-17, "SUSPENSION CONTROL UNIT : Diagnosis Procedure". D Does the suspension control unit power and ground pass inspection? YES >> GO TO 2. NO >> Repair or replace the malfunctioning part. SCS 2. CHECK HEIGHT SENSOR SIGNAL INPUT (P)CONSULT-III DATA MONITOR Turn ignition ON. 1 F 2. Select "HEIGT SEN" of AIR LEVELIZER data monitor item. Check the monitor status. 3. **HEIGT SEN** : 0.2V - 4.8V Is the height sensor voltage normal? YFS >> GO TO 3. Н NO >> Check height sensor signal circuit. Refer to SCS-22, "Diagnosis Procedure". ${ m 3.}$ SUSPENSION AIR COMPRESSOR POWER AND GROUND INSPECTION Check the suspension air compressor power and ground supply. Refer to SCS-17, "SUSPENSION AIR COM-PRESSOR : Diagnosis Procedure". Does the suspension air compressor power and ground pass inspection? J YES >> Inspect for a weak compressor, leak or restriction in the system. Repair or replace malfunctioning part. NO >> Repair or replace the malfunctioning part.

## SUSPENSION CONTROL SYSTEM DOES NOT LOWER

#### Description

The suspension control system does not lower the vehicle in accordance with ride height changes.

#### Diagnosis Procedure

INFOID:000000003710289

INFOID:000000003710288

#### **1.**SUSPENSION CONTROL UNIT POWER AND GROUND INSPECTION

Check the suspension control unit power and ground supply. Refer to <u>SCS-17, "SUSPENSION CONTROL</u> UNIT : Diagnosis Procedure".

Does the suspension control unit power and ground pass inspection?

YES >> GO TO 2.

NO >> Repair or replace the malfunctioning part.

2.CHECK HEIGHT SENSOR SIGNAL INPUT

CONSULT-III DATA MONITOR

1. Turn ignition ON.

- 2. Select "HEIGT SEN" of AIR LEVELIZER data monitor item.
- 3. Check the monitor status.

**HEIGT SEN** 

#### : 0.2V - 4.8V

Is the height sensor voltage normal?

YES >> GO TO 3.

NO >> Check height sensor signal circuit. Refer to <u>SCS-22, "Diagnosis Procedure"</u>.

3.EXHAUST VALVE SOLENOID CIRCUIT INSPECTION

Check the exhaust valve solenoid circuit. Refer to SCS-23. "Component Function Check".

Does the exhaust valve solenoid circuit pass inspection?

YES >> Inspect for a restriction in the system. repair or replace the malfunctioning part.

NO >> Repair or replace the malfunctioning part.

#### < PRECAUTION >

# PRECAUTION PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SR and SB section of this Service Manual.

#### WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SR section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

## Precaution for Rear Suspension

- When installing the rubber bushings, the final tightening must be done under unladen condition and with the tires on level ground. Oil will shorten the life of the rubber bushings, so wipe off any spilled oil immediately.
- Unladen condition means the fuel tank, engine coolant and lubricants are at the full specification. The spare tire, jack, hand tools, and mats are in their designated positions.
- After installing suspension components, check the wheel alignment.
- Caulking nuts are not reusable. Always use new caulking nuts for installation. New caulking nuts are preoiled, do not apply any additional lubrication.
