## **ROAD WHEEL**

ROAD WHEEL PFP:40300

# Inspection ALUMINUM WHEEL

AES000OP

Α

В

WT

Н

- 1. Check tires for wear and improper inflation.
- 2. Check wheels for deformation, cracks and other damage. If deformed, remove wheel and check wheel runout.
- Remove tire from aluminum wheel and mount on a tire balance machine.
- Set dial indicator as shown in the illustration.

Wheel runout (Dial indicator value):

Refer to WT-47, "SERVICE DATA"

#### STEEL WHEEL

- 1. Check tires for wear and improper inflation.
- Check wheels for deformation, cracks and other damage. If deformed, remove wheel and check wheel runout.
- Remove tire from steel wheel and mount wheel on a tire balance machine.
- b. Set two dial indicators as shown in the illustration.
- c. Set each dial indicator to 0.
- d. Rotate wheel and check dial indicators at several points around the circumference of the wheel.
- e. Calculate runout at each point as shown below.

Radial runout = (A + B)/2Lateral runout = (C + D)/2

 Select maximum positive runout value and the maximum negative value.

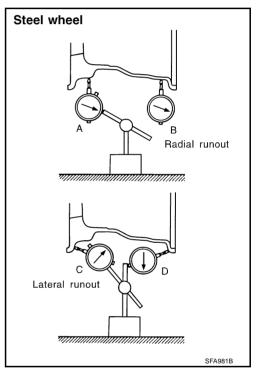

Add the two values to determine total runout.

In case a positive or negative value is not available, use the maximum value (negative or positive) for total runout.

If the total runout value exceeds the limit, replace steel wheel.

Wheel runout : Refer to WT-47, "SERVICE DATA"

# **ROAD WHEEL TIRE ASSEMBLY**

#### **ROAD WHEEL TIRE ASSEMBLY**

PFP:40300

# **Balancing Wheels (Bonding Weight Type) REMOVAL**

AES000JM

1. Remove inner and outer balance weights from the road wheel.

#### **CAUTION:**

Be careful not to scratch the road wheel during removal.

2. Using releasing agent, remove double-faced adhesive tape from the road wheel.

#### **CAUTION:**

- Be careful not to scratch the road wheel during removal.
- After removing double-faced adhesive tape, wipe clean traces of releasing agent from the road wheel.

#### WHEEL BALANCE ADJUSTMENT

- If a tire balance machine has adhesion balance weight mode settings and drive-in weight mode setting, select and adjust a drive-in weight mode suitable for road wheels.
- 1. Set road wheel on wheel balancer using the center hole as a guide. Start the tire balance machine.
- 2. When inner and outer unbalance values are shown on the wheel balancer indicator, multiply outer unbalance value by 5/3 to determine balance weight that should be used. Select the outer balance weight with a value closest to the calculated value above and install it to the designated outer position of, or at the designated angle in relation to the road wheel.

#### **CAUTION:**

- Do not install the inner balance weight before installing the outer balance weight.
- Before installing the balance weight, be sure to clean the mating surface of the road wheel.

Indicated unbalance value  $\times$  5/3 = balance weight to be installed Calculation example:

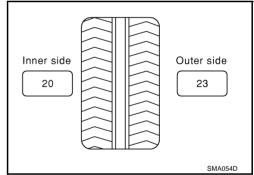

23 g  $(0.81 \text{ oz}) \times 5/3 = 38.33 \text{ g} (1.35 \text{ oz}) = 40 \text{ g} (1.41 \text{ oz})$  balance weight (closer to calculated balance weight value)

Note that balance weight value must be closer to the calculated balance weight value.

Example:

37.4 = 35 g (1.23 oz)

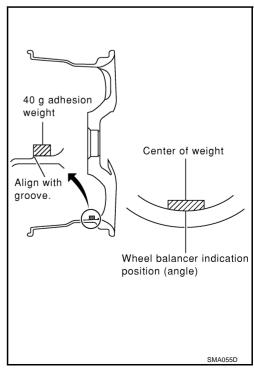

37.5 = 40 g (1.41 oz)

- a. Install balance weight in the position shown in the figure.
- b. When installing balance weight to road wheels, set it into the grooved area on the inner wall of the road wheel as shown in the figure so that the balance weight center is aligned with the wheel balancer indication position (angle).

#### **CAUTION:**

- Always use genuine NISSAN adhesion balance weights.
- Balance weights are unreusable; always replace with new ones.
- Do not install more than three sheets of balance weight.

## **ROAD WHEEL TIRE ASSEMBLY**

c. If calculated balance weight value exceeds 50 g (1.76 oz), install two balance weight sheets in line with each other (as shown in the figure).

#### **CAUTION:**

Do not install one balance weight sheet on top of another.

- 3. Start wheel balancer again.
- 4. Install drive-in balance weight on inner side of road wheel in the wheel balancer indication position (angle).

#### CAUTION:

Do not install more than two balance weights.

- 5. Start wheel balancer. Make sure that inner and outer residual unbalance values are 7.5 g (0.26 oz) each or below.
  - If either residual unbalance value exceeds 7.5 g (0.26 oz), repeat installation procedures.

#### Wheel balance (Maximum allowable unbalance):

Maximum allowable	Dynamic (At rim flange)	7.5 g (0.26 oz) (one side)
unbalance	Static (At rim flange)	20 g (0.70 oz)

Tire Rotation

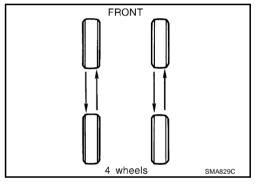

- After rotation the tires, adjust the tire pressure.
- Retighten the wheel nuts when the vehicle has been driven for 1,000 km (600 miles) (also in cases of a flat tire, etc.).

#### **CAUTION:**

- Do not include the T-type spare tire when rotating the tires.
- When installing wheels, tighten them diagonally by dividing the work two to three times in order to prevent the wheels from developing any distortion.

**Tightening torque of wheel nut** 

: 108 N·m (11 kg, 80 ft-lb)

## LOW TIRE PRESSURE WARNING SYSTEM

#### LOW TIRE PRESSURE WARNING SYSTEM

PFP:40300

# **System Components**

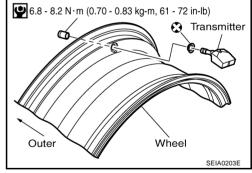

AES000NO

# **System Description** TRANSMITTER

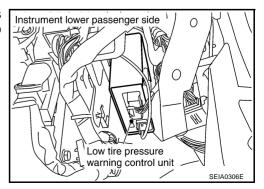

AES000NP

A sensor-transmitter integrated with a valve is installed on a wheel, and transmits a detected air pressure signal in the form of a radio wave.

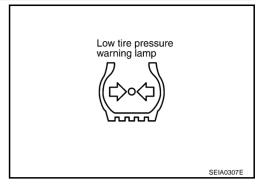

#### LOW TIRE PRESSURE WARNING CONTROL UNIT

Reads the radio wave signal received by the antenna, and controls the warning lamp and the buzzer operations as shown below. It also has a judgement function to detect a system malfunction.

## LOW TIRE PRESSURE WARNING SYSTEM

Condition	Warning lamp	Buzzer
Less than 190 kPa (1.9 kg/cm <sup>2</sup> , 27 psi) [Flat tire]	ON	Sounds for 10 sec.
System malfunction	ON	OFF

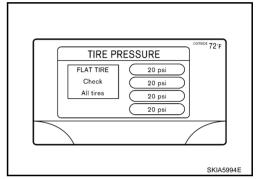

#### **ANTENNA**

Receives the radio wave signal transmitted by the transmitter.

#### **DISPLAY UNIT**

Displays the air pressure of each tire.

After the ignition switch is turned ON, the pressure values are not be displayed until the data of each wheel stabilizes.

#### **CAN COMMUNICATION**

PFP:23710

# **System Description**

AES0000Q

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

#### **CAN Communication Unit**

AES000Y2

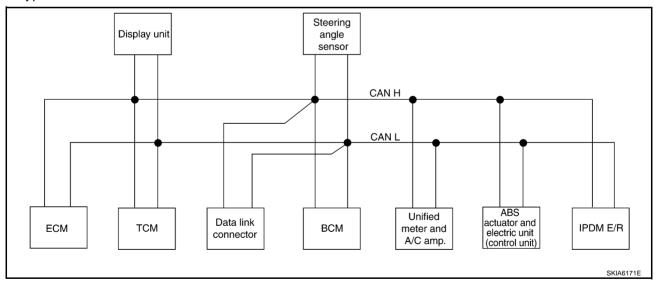

Go to CAN system, when selecting your car model from the following table.

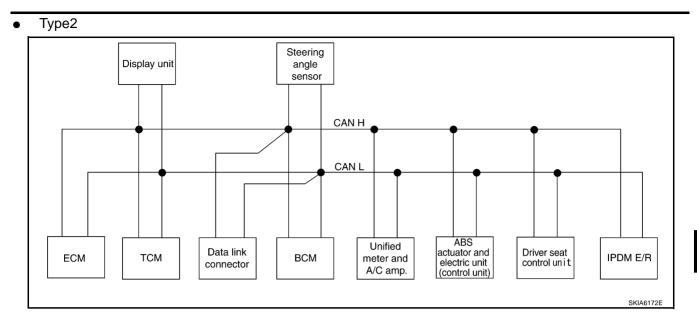

Body type		Wagon

# ID Registration Procedure ID REGISTRATION WITH TRANSMITTER ACTIVATION TOOL

AFS000NV

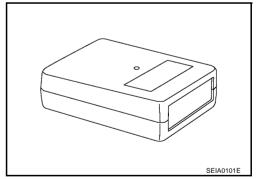

This procedure must do after replace transmitter or low tire pressure warning control unit.

- Turn ignition switch "OFF".
- 2. Connect CONSULT-II and CONSULT-II CONVERTER to data link connector.
- 3. Touch "AIR PRESSURE MONITOR", "WORK SUPPORT" and "ID REGIST".

#### NOTE:

If "AIR PRESSURE MONITOR" is not indicated, go to GI-40, "CONSULT-II Data Link Connector (DLC) Circuit".

4. With the transmitter activation tool (J-45295) pushed against the front-left transmitter position of the tire air valve, press the button then keep 5 seconds.

5. Register the IDs in order from FR LH, FR RH, RR RH or RR LH. When ID registration of each wheel has been completed, a buzzer sounds and hazard warning lamp blinks.

Activation tire position	Buzzer	Hazard warning lamp	CONSULT-II
Front LH	Once		
Front RH	2 times	2 times flashing	"YET"
Rear RH	3 times	2 times hashing	"DONE"
Rear LH	4 times		

<sup>6.</sup> After completing all ID registrations, press "END" to complete the procedure.

#### NOTE:

Be sure to register the IDs in order from FR LH, FR RH, RR RH, to RR LH, or the self-diagnostic results display will not function properly.

## ID REGISTRATION WITHOUT TRANSMITTER ACTIVATION TOOL

- 1. Turn ignition switch "OFF".
- 2. Connect CONSULT-II and CONSULT-II CONVERTER to data link connector.
- 3. Touch "AIR PRESSURE MONITOR", "WORK SUPPORT" and "ID REGIST".

#### NOTE:

If "AIR PRESSURE MONITOR" is not indicated, go to GI-40, "CONSULT-II Data Link Connector (DLC) Circuit".

4. Adjust the tire pressure to the values shown in the table below for ID registration, and drive the vehicle at 15 km/h (9.4 MPH) or more for a few minutes.

Tire position	Tire pressure kPa (kg/cm <sup>2</sup> , psi)
Front LH	250 (2.5, 36)
Front RH	230 (2.3, 33)
Rear RH	210 (2.1, 30)
Rear LH	190 (1.9, 27)

5. After completing all ID registrations, press "END" to complete the procedure.

Activation tire position	CONSULT-II
Front LH	
Front RH	"YET"
Rear RH	"DONE"
Rear LH

# Transmitter Wake Up Operation WITH TRANSMITTER ACTIVATION TOOL

AES000NW

- 1. With the transmitter activation tool (J-45295) pushed against the front-left transmitter, press the button then keep 5 seconds.
  - When ignition switch ON, then warning lamp is blinks as follow diagram transmitter must be waken up.

Warning lamp blinking timing		Need to activation tire position	
ON a b	a : 0.3sec b : 1.3sec	Front LH	
ON a a b	a : 0.3sec b : 1.3sec	Front RH	
ON a a a a b	a : 0.3sec b : 1.3sec	Rear RH	
ON a a a a a b	a : 0.3sec b : 1.3sec	Rear LH	
ON a b	a : 2sec b : 0.2sec	All tire	

SEIA0378E

- 2. Register the IDs in order from FR LH, FR RH, RR RH or RR LH. When wake up of each wheel has been completed, a hazard warning lamp 2 time flashing.
- 3. After completing wake up of all transmitters, make sure tire pressure warning lamp go out.

Self-Diagnosis DESCRIPTION

FSOONX

Α

В

During driving, the low tire pressure warning system receives the signal transmitted from the transmitter installed in each wheel, and gives alarms when the tire pressure becomes low. The control unit of this system has pressure judgement and trouble diagnosis functions.

#### **FUNCTION**

When the low tire pressure warning system detects low inflation pressure or another unusual symptom, the warning lamps in the combination meter comes on. To start the self-diagnostic results mode, ground the self-diagnostic (check) terminal. The malfunction location is indicated by the warning lamp flashing and the buzzer sounds.

CONSULT-II

#### **CONSULT-II Main Function**

In a diagnosis function (main function), there are "WORK SUPPORT", "SELF-DIAGNOSTIC RESULTS", "DATA MONITOR", "CAN DIAG SUPPORT MNTR".

Diagnostic test mode	Function
WORK SUPPORT	This mode enables a technician to adjust some devices faster and more accurately by following the indications on CONSULT-II.
SELF-DIAGNOSTIC RESULTS	Self-diagnostic results can be read and erased quickly.
DATA MONITOR	Input/Output data in the control unit can be read.
CAN DIAG SUPPORT MNTR	The results of transmit/receive diagnosis of communication can be read.

#### **CONSULT-II Application to Low Tire Pressure Warning System**

# How to Perform Trouble Diagnosis for Quick and Accurate Repair INTRODUCTION

ES000N

Α

В

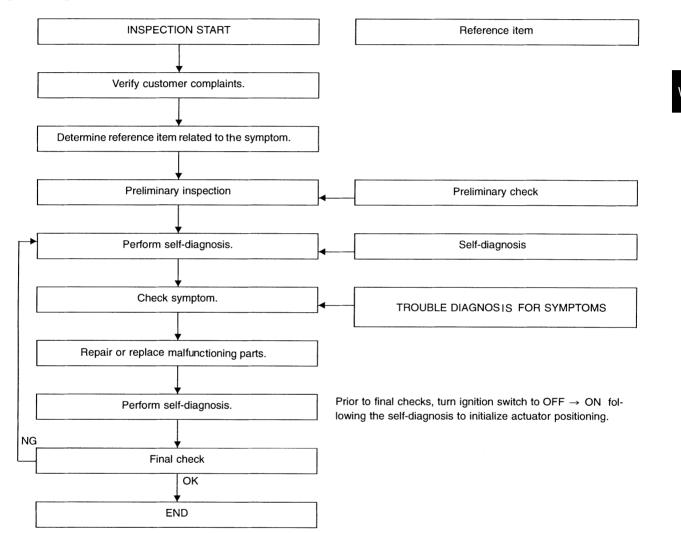

D

Н

M

- Before troubleshooting, verify customer complaints.
- If a vehicle malfunction is difficult to reproduce, harnesses, harness connectors or terminals may be malfunctioning. Hold and shake these parts to make sure they are securely connected.
- When using a circuit tester to measure voltage or resistance of each circuit, be careful not to expand connector terminals.

#### **WORK FLOW**

SEIA0100E

Preliminary check: WT-34 Self-diagnosis: WT-31 Trouble diagnosis for symptoms: WT-39

# **Preliminary Check**

AES000N

**BASIC INSPECTION** 

# 1. CHECK ALL TIRES PRESSURES

Check all tires pressures.

Tire pressure : 220 kPa (2.2 kg/cm<sup>2</sup>, 32 psi)

OK or NG

OK >> GO TO 2.

NG >> Adjust tire pressure to specified value.

# 2. CHECK WARNING LAMP ACTIVATION

- 1. Check warning lamp activation.
- 2. Does warning lamp activate for 1 seconds when ignition switch is turned "ON".

Does warning lamp active?

YES >> GO TO 3.

NO >> Check fuse and combination meter.

# 3. CHECK CONNECTOR

- 1. Disconnect low tire pressure warning control unit harness connectors M74 and R102.
- 2. Check terminals for damage or loose connection.
- 3. Reconnect harness connector.

OK or NG

OK >> GO TO 4.

NG >> Repair or replace damaged parts.

# 4. CHECK TRANSMITTER ACTIVATION TOOL

Check transmitter activation tool battery.

OK or NG

OK >> Carry out self-diagnosis.

NG >> Replace transmitter activation tool battery.

#### TROUBLE DIAGNOSIS FOR SELF-DIAGNOSTIC ITEMS

#### TROUBLE DIAGNOSIS FOR SELF-DIAGNOSTIC ITEMS

PFP:00000

# Inspection 1: Transmitter or Low Tire Pressure Warning Control Unit MALFUNCTION CODE NO. 21, 22, 23 OR 24

AES00001

# 1. CHECK CONTROL UNIT

Drive for several minutes. Check all tires' pressure with CONSULT-II "DATA MONITOR ITEM".

Are all tires' pressure displayed 0 kPa?

YES >> GO TO 2. NO >> GO TO 3.

# 2. CHECK ANTENNA CONNECTOR

Check antenna and feeder connector R102 for damage or loose connections.

## OK or NG

OK >> Replace control unit, GO TO 3.

NG >> Repair or replace antenna or feeder connector.

# 3. ID REGISTRATION

Carry out ID registration of all transmitters.

Is there a tire that cannot register ID?

YES >> Replace transmitter of the tire, then GO TO 5.

NO >> GO TO 4.

# 4. VEHICLE DRIVING

Drive at a speed of 40 km/h (25 MPH) or more for several minutes without stopping.
 Check all tires' pressure with CONSULT-II "DATA MONITOR ITEM" within 15 minutes after vehicle speed becomes 17 km/h (11 MPH).

Does "DATA MONITOR ITEM" displayed tire pressure as normal without any warning lamp?

YES >> INSPECTION END.

NO >> GO TO 5.

# 5. ID REGISTRATION AND VEHICLE DRIVING

- 1. Carry out ID registration of all transmitters.
- 2. Drive at a speed of 40 km/h (25 MPH) or more for 3 minutes, and then drive the vehicle at any speed for 10 minutes. Then check all tires' pressure with CONSULT-II "DATA MONITOR ITEM" within 5 minutes.

Does "DATA MONITOR ITEM" displayed tire pressure as normal without any warning lamp?

YES >> GO TO inspection applicable to DTC.

NO >> INSPECTION END.

# Inspection 2: Transmitter - 1 MALFUNCTION CODE NO. 31, 32, 33, 34, 41, 42, 43, 44, 45, 46, 47 OR 48

AES00002

# 1. ID REGISTRATION (CORRECTION OF TRANSMITTER LOCATION)

- 1. Carry out ID registration of all transmitters.
- 2. Drive at a speed of 40 km/h (25 MPH) or more for 3 minutes, and then drive the vehicle at any speed for 10 minutes.

>> GO TO 2.

#### TROUBLE DIAGNOSIS FOR SELF-DIAGNOSTIC ITEMS

### 2. REPLACE TRANSMITTER Check warning lamp for blink again, replace malfunctioning transmitter. 2. Carry out ID registration of all transmitter. В Can ID registration of all transmitters be completed? YES >> GO TO 3. NO >> GO TO Inspection 1. 3. VEHICLE DRIVING Drive at a speed of 40 km/h (25 MPH) or more for 3 minutes, and then drive the vehicle at any speed for $\Box$ 10 minutes. Then check all tires' pressure with CONSULT-II "DATA MONITOR ITEM" within 5 minutes. Does "DATA MONITOR ITEM" displayed tire pressure as normal without any warning lamp? YFS >> INSPECTION END. WT NO >> Replace malfunctioning transmitter, and perform "Step 3" again. **Inspection 3: Transmitter - 2** AES00003 **MALFUNCTION CODE NO. 35, 36, 37 OR 38** CHECK ALL TIRE PRESSURE Check all tire pressures. : 220 kPa (2.2 kg/m<sup>2</sup>, 32 psi) Tire pressure Н OK >> GO TO 2. NG >> Adjust tire pressure to specified value. 2. VEHICLE DRIVING Carry out ID registration of all transmitters. Drive at a speed of 40 km/h (25 MPH) or more for several minutes without stopping. Check all tires' pressure with CONSULT-II "DATA MONITOR ITEM" within 15 minutes after vehicle speed become 17 km/h (11 MPH). K >> Replace transmitter with new one if "DATA MONITOR ITEM" displayed 64 psi or more. Then GO TO 3. 3. ID REGISTRATION AND VEHICLE DRIVING Carry out ID registration of all transmitters. M Drive at a speed of 40 km/h (25 MPH) or more for 3 minutes, and then drive the vehicle at any speed for

10 minutes. Then check all tires' pressure with CONSULT-II "DATA MONITOR ITEM" within 5 minutes.

Does "DATA MONITOR ITEM" displayed tire pressure as normal without any warning lamp?

>> INSPECTION END. YES

NO >> GO TO the inspection applicable to DTC.

#### TROUBLE DIAGNOSIS FOR SELF-DIAGNOSTIC ITEMS

# Inspection 4: Vehicle Speed Signal MALFUNCTION CODE NO. 52

AES00004

# 1. SELF-DIAGNOSIS RESULT CHECK

Connect CONSULT-II and CONSULT-II CONVERTER to data link connector.

#### NOTE:

If "AIR PRESSURE MONITOR" is not indicated, go to GI-40, "CONSULT-II Data Link Connector (DLC) Circuit".

- Select "AIR PRESSURE MONITOR" on "SELECT SYSTEM" screen.
- Select "SELF-DIAG RESULTS" on "SELECT DIAG MODE" screen.
- 4. Check display contents in self-diagnostic results.

Is "CAN COMM CIRCUIT" displayed in the self-diagnosis display items?

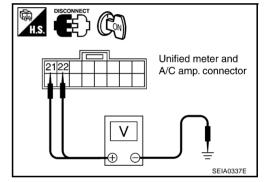

YES >> Malfunction in CAN communication system. GO TO <u>LAN-4</u>, "<u>Precautions When Using CONSULT-II"</u>.

NO  $\Rightarrow$  GO TO 2.

# 2. CHECK UNIFIED METER AND A/C AMP. POWER SUPPLY CIRCUIT

- 1. Disconnect unified meter and A/C amp. connector M56.
- 2. Check voltage between unified meter and A/C amp. harness connector M56 terminals 21 (R/W), 22 (G/R) and ground.

	Terminals		Voltage
(	(+) (-)		(Approx.)
Connector	Terminal (Wire color)		40.14
M56	21 (R/W)	Ground	12 V
WISO	22 (G/R)		

#### OK or NG

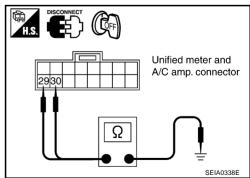

OK >> GO TO 3.

NG >> Check unified meter and A/C amp. power supply circuit for open or short.

# 3. CHECK UNIFIED METER AND A/C AMP. GROUND CIRCUIT

Check continuity between unified meter and A/C amp. harness connector M56 terminals 29 (B), 30 (B) and ground.

	Terminals		
(	+)	(-)	Continuity
Connector	Terminal (Wire color)		
MEC	29 (B)	Ground Yes	Yes
M56	30 (B)		

#### OK or NG

OK >> Check unified meter and A/C amp. self-diagnostic. Refer to DI-49, "SELF-DIAGNOSTIC RESULTS".

NG >> Repair or replace unified meter and A/C amp. ground circuit.

#### TROUBLE DIAGNOSIS FOR SYMPTOMS

PFP:00007

## Inspection 1: Warning Lamp Does Not Come On When Ignition Switch Is Turned On.

Α

В

DIAGNOSTIC PROCEDURE

## 1. SELF-DIAGNOSIS RESULT CHECK

Connect CONSULT-II and CONSULT-II CONVERTER to data link connector. 1.

#### NOTE:

If "AIR PRESSURE MONITOR" is not indicated, go to GI-40, "CONSULT-II Data Link Connector (DLC) Circuit".

- Select "AIR PRESSURE MONITOR" on "SELECT SYSTEM" screen.
- Select "SELF-DIAG RESULTS" on "SELECT DIAG MODE" screen.
- Check display contents in self-diagnostic results.

Is "CAN COMM CIRCUIT" displayed in the self-diagnosis display items?

>> Malfunction in CAN communication system. GO TO LAN-4, "Precautions When Using CONSULT-

NO >> GO TO 2.

# 2. CHECK COMBINATION METER

Check combination meter operation.

#### OK or NG

OK >> GO TO 3.

NG >> Check combination meter. Refer to DI-4, "System Description".

# 3. CHECK WARNING LAMP

Disconnect low tire pressure warning control unit connector.

#### Does the warning lamp activate?

YES >> Replace low tire pressure warning control unit.

NO >> GO TO 4.

# 4. CHECK UNIFIED METER AND A/C AMP. POWER SUPPLY CIRCUIT

Disconnect unified meter and A/C amp, connector M56.

2. Check voltage between unified meter and A/C amp. harness connector M56 terminals 21 (R/W), 22 (G/R) and ground.

	Terminals		
(	(+) (-		(Approx.)
Connector	Terminal (Wire color)		
MEG	21 (R/W)	Ground	12 V
M56	22 (G/R)

Connector	Terminal (Wire color)		Yes
M56	29 (B)	Ground	
IVIO	30 (B)		

#### OK or NG

OK >> Check unified meter and A/C amp. Refer to <u>DI-31, "System Description"</u>.

NG >> Repair or replace unified meter and A/C amp. ground circuit.

# Inspection 2: Warning Lamp Stays On When Ignition Switch Is Turned On. AESO0006

DIAGNOSTIC PROCEDURE

## 1. CHECK CONNECTOR

- 1. Disconnect low tire pressure warning control unit connectors M74.
- 2. Check terminals for damage or loose connections.

#### OK or NG

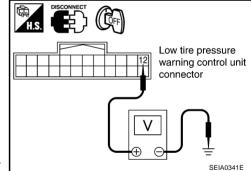

OK >> GO TO 2.

NG >> Repair or replace damaged parts.

# 2. CHECK POWER SUPPLY CIRCUIT 1

Check voltage between low tire pressure warning control unit connector M74 terminal 12 (R/W) and ground.

	Terminals		
	(+) (-)		(Approx.)
Connector	Terminal (Wire color)	Ground	12 V
M74	12 (R/W)		

#### OK or NG

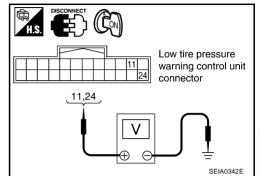

OK >> GO TO 3.

NG >> Check low tire pressure warning control unit power supply circuit for open or short.

# $\overline{3}$ . CHECK POWER SUPPLY CIRCUIT 2

- 1. Turn ignition switch ON.
- 2. Check voltage between low tire pressure warning control unit connector M74 terminals 11 (LG/R), 24 (G/R) and ground.

	Terminals		
(	(+)		(Approx.)
Connector	Terminal (Wire color)		
M74	11 (LG/R)	Ground	12 V
IVI 7 4	24 (G/R)		

#### OK or NG

OK >> GO TO 4.

NG >> Check low tire pressure warning control unit power supply circuit for open or short.

# 4. CHECK GROUND CIRCUIT

 Check continuity between low tire pressure warning control unit connector M74 terminal 20(B) and ground.

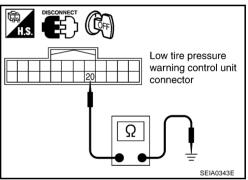

Terminals		Continuity	
(1	(+) (-)		Continuity
Connector	Terminal (Wire color)	Ground	Yes
M74	20 (B)		

#### OK or NG

NG

OK >> Replace low tire pressure warning control unit.

>> Repair or replace low tire pressure warning control unit ground circuit.

# Inspection 3: Warning Lamp Blinks When Ignition Switch Is Turned On.

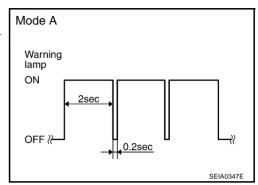

AES0000

NOTE:

If warning lamp blink below, the system is normal.

Blink Mode A

This mode shows transmitter status is OFF-mode.
 Carry out transmitter wake up operation. Refer to <u>WT-30</u>,
 <u>"Transmitter Wake Up Operation"</u>.

#### DIAGNOSTIC PROCEDURE

# 1. CHECK CONNECTOR

- 1. Disconnect low tire pressure warning control unit connectors M74 and R102.
- 2. Check terminals for damage or loose connections.

#### OK or NG

OK >> GO TO 2.

NG >> Repair or replace damaged parts.

# 2. CHECK TIRE PRESSURE WARNING CHECK CONNECTOR CIRCUIT

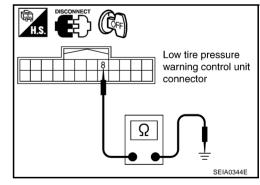

- 1. Disconnect low tire pressure warning control unit connector M74.
- Check continuity between low tire pressure warning control unit harness connector M74 terminal 8 (G) and ground.

Terminals		Continuity	
(-	(+)		Continuity
Connector	Terminal (Wire color)	Ground	No
M74	8 (G)		

#### OK or NG

OK >> Replace low tire pressure warning control unit.

NG >> Repair or replace harness connector.

# Inspection 4: Hazard Warning Lamp Blinks When Ignition Switch Is Turned On.

#### DIAGNOSTIC PROCEDURE

# 1. CHECK GROUND CIRCUIT

- 1. Disconnect low tire pressure waning control unit connector M74.
- 2. Check continuity between low tire pressure warning control unit harness connector M74 terminal 20 (B) and ground.

Terminals			Continuity
(1	(+) (-)		Continuity
Connector	Terminal (Wire color)	Ground	Yes
M74	20 (B)		

# Low tire pressure warning control unit connector

#### OK or NG

OK NG >> Replace low tire pressure warning control unit.

>> Repair or replace low tire pressure warning control unit ground circuit.

# **Inspection 5: "TIRE PRESSURE" Information In Display Unit Does Not Exist.**

AES00009

#### DIAGNOSTIC PROCEDURE

# 1. SELF-DIAGNOSIS RESULT CHECK

Connect CONSULT-II and CONSULT-II CONVERTER to data link connector.

#### NOTE

If "AIR PRESSURE MONITOR" is not indicated, go to GI-40, "CONSULT-II Data Link Connector (DLC) Circuit".

- 2. Select "AIR PRESSURE MONITOR" on "SELECT SYSTEM" screen.
- 3. Select "SELF-DIAG RESULTS" on "SELECT DIAG MODE" screen.
- 4. Check display contents in self-diagnostic results.

Is "CAN COMM CIRCUIT" displayed in the self-diagnosis display items?

YES >> Malfunction in CAN communication system. GO TO <u>LAN-4</u>, "<u>Precautions When Using CONSULT-II</u>"

NO  $\Rightarrow$  GO TO 2.

# 2. CHECK DISPLAY CONTROL UNIT

Perform display control unit self-diagnosis. Refer to AV-157, "Self-Diagnosis Mode (DCU)".

#### OK or NG

OK >> Replace low tire pressure warning control unit.

NG >> Repair or replace malfunctioning parts.

# Inspection 6: ID Registration Cannot Be Completed.

AES000OA

#### DIAGNOSTIC PROCEDURE

# 1. ID REGISTRATION (ALL)

- Carry out ID registration of all transmitters.
- Can ID registration of all transmitters be completed?

#### YES or NO

YES >> INSPECTION END.

NO >> GO TO WT-36, "Inspection 1: Transmitter or Low Tire Pressure Warning Control Unit".

#### **REMOVAL AND INSTALLATION**

#### **REMOVAL AND INSTALLATION**

PFP:00000

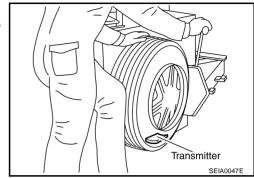

Transmitter REMOVAL

AES000KA

Α

В

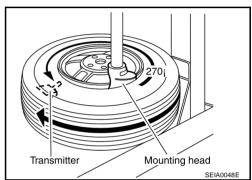

- I. Deflate tire. Unscrew transmitter retaining nut and allow transmitter to fall into tire.
- 2. Gently bounce tire so that transmitter falls to bottom of tire. Place on tire changing machine and break both tire beads ensuring that the transmitter remains at the bottom of the tire.

WT

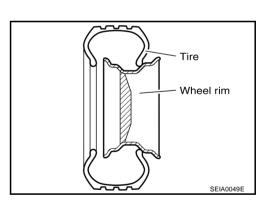

D

- 3. Turn tire so that valve hole is at bottom and bounce so that transmitter is near valve hole. Carefully lift tire onto turntable and position valve hole (and transmitter) 270 degree from mounting/dismounting head.
- 4. Lubricate tire well and remove first side of the tire. Reach inside the tire and remove the transmitter. Remove second side of tire.

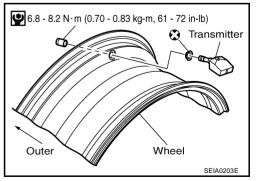

#### **INSTALLATION**

1. Put first side of tire onto rim.

2. Mount transmitter on rim and tighten nut.

Н

Κ

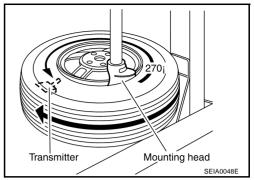

.

#### REMOVAL AND INSTALLATION

Place wheel on turntable of tire machine. Ensure that transmitter is 270 degree from mounting head when second side of tire is fitted.

#### NOTE:

Do not touch transmitter at mounting head.

- 4. Lubricate tire well and fit second side of tire as normal. Ensure that tire does not rotate relative to rim.
- 5. Inflate tire and fit to appropriate wheel position.
