< PRECAUTION > [2WD]

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the "SRS AIR BAG".
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

WARNING:

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

Precaution Necessary for Steering Wheel Rotation after Battery Disconnect

INFOID:0000000004041450

NOTE:

- Before removing and installing any control units, first turn the push-button ignition switch to the LOCK position, then disconnect both battery cables.
- After finishing work, confirm that all control unit connectors are connected properly, then re-connect both battery cables.
- Always use CONSULT-III to perform self-diagnosis as a part of each function inspection after finishing work. If a DTC is detected, perform trouble diagnosis according to self-diagnosis results.

This vehicle is equipped with a push-button ignition switch and a steering lock unit.

If the battery is disconnected or discharged, the steering wheel will lock and cannot be turned.

If turning the steering wheel is required with the battery disconnected or discharged, follow the procedure below before starting the repair operation.

OPERATION PROCEDURE

Connect both battery cables.

NOTE:

Supply power using jumper cables if battery is discharged.

- 2. Turn the push-button ignition switch to ACC position. (At this time, the steering lock will be released.)
- Disconnect both battery cables. The steering lock will remain released with both battery cables disconnected and the steering wheel can be turned.
- 4. Perform the necessary repair operation.

PRECAUTIONS

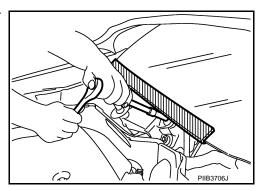

< PRECAUTION > [2WD]

5. When the repair work is completed, re-connect both battery cables. With the brake pedal released, turn the push-button ignition switch from ACC position to ON position, then to LOCK position. (The steering wheel will lock when the push-button ignition switch is turned to LOCK position.)

Perform self-diagnosis check of all control units using CONSULT-III.

Precaution for Procedure without Cowl Top Cover

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.

INFOID:0000000004114999

INFOID:0000000003858803

Precautions for Suspension

CAUTION:

• When installing rubber bushings, the final tightening must be carried out under unladen conditions with tires on ground. Spilled oil might shorten the life of rubber bushings. Be sure to wipe off any spilled oil.

 Unladen conditions mean that fuel, engine coolant and lubricant are full. Spare tire, jack, hand tools and mats are in designated positions.

After servicing suspension parts, be sure to check wheel alignment.

• Self-lock nuts are not reusable. Always use new ones when installing. Since new self-lock nuts are pre-oiled, tighten as they are.

FRONT SUSPENSION ASSEMBLY

< PERIODIC MAINTENANCE > [2WD]

PERIODIC MAINTENANCE

FRONT SUSPENSION ASSEMBLY

Inspection

MOUNTING INSPECTION

Make sure the mounting conditions (looseness, backlash) of each component and component conditions (wear, damage) are normal.

BALL JOINT AXIAL END PLAY

- 1. Set front wheels in a straight-ahead position.
- 2. Measure axial end play by playing and moving up/down with iron bar or equivalent between transverse link or upper link and steering knuckle.

Axial end play : Refer to FSU-19, "Ball Joint".

CAUTION:

- Never depress brake pedal when measuring.
- Never perform with tires on level ground.
- Be careful not to damage ball joint boot. never damage the installation position by applying excessive force.

SHOCK ABSORBER

Check for oil leakage, damage. Replace it if necessary.

WHEEL ALIGNMENT

Inspection INFOID:0000000003858807

DESCRIPTION

CAUTION:

- Camber, caster, kingpin inclination angles cannot be adjusted.
- If camber, caster, or kingpin inclination angle is outside the standard, check front suspension parts for wear and damage. Replace suspect parts if a malfunction is detected.
- Kingpin inclination angle is reference value, no inspection is required.
- Measure wheel alignment under unladen conditions.

NOTE:

"Unladen conditions" means that fuel, engine coolant, and lubricant are full. Spare tire, jack, hand tools and mats are in designated positions.

PRELIMINARY CHECK

Check the following:

- Tires for improper air pressure and wear.
- Road wheels for runout. Refer to WT-68, "Inspection".
- Wheel bearing axial end play. Refer to FAX-5, "Inspection".
- Transverse link or upper link ball joint axial end play. Refer to FSU-13, "Inspection" or FSU-15, "Inspection".
- Shock absorber operation.
- Each mounting part of axle and suspension for looseness and deformation.
- Each of suspension member, shock absorber, upper link and transverse link for cracks, deformation and other damage.
- Vehicle height (posture).

GENERAL INFORMATION AND RECOMMENDATIONS

- A four-wheel thrust alignment should be performed.
- This type of alignment is recommended for any NISSAN/INFINITI vehicle.
- The four-wheel "thrust" process helps ensure that the vehicle is properly aligned and the steering wheel is
- The alignment rack itself should be capable of accepting any NISSAN/INFINITI vehicle.
- The rack should be checked to ensure that it is level.
- Make sure the machine is properly calibrated.
- Your alignment equipment should be regularly calibrated in order to give correct information.
- Check with the manufacturer of your specific equipment for their recommended Service/Calibration Schedule.

ALIGNMENT PROCESS

IMPORTANT:

Use only the alignment specifications listed in this Service Manual.

- When displaying the alignment settings, many alignment machines use "indicators": (Green/red, plus or minus, Go/No Go). Do not use these indicators.
- The alignment specifications programmed into your machine that operate these indicators may not be correct.
- This may result in an ERROR.
- Some newer alignment machines are equipped with an "optional Rolling Compensation" method to "compensate" the sensors (alignment targets or head units). Never use this "Rolling Compensation" method.
- Use the "Jacking Compensation Method". After installing the alignment targets or head units, raise the vehicle and rotate the wheels 1/2 turn both ways.
- See Instructions in the alignment machine you're using for more information on this.

Removal and Installation

REMOVAL

K

Ν

INFOID:0000000003858809

Remove tires with power tool.

Remove wheel sensor and harness connector from shock absorber. Refer to BRC-133, "FRONT WHEEL SENSOR: Exploded View".

CAUTION:

Never pull on wheel sensor harness.

- 3. Remove brake hose bracket. Refer to BR-20, "FRONT: Exploded View".
- 4. Remove shock absorber from transverse link with power tool.
- Separate upper link from steering knuckle. Refer to FAX-6, "Exploded View"
- Remove shock absorber mounting bracket mounting nuts, and remove shock absorber assembly. NOTE:

If removing shock absorber is difficult, loosen upper link mounting bolts (vehicle side).

INSTALLATION

Note the following, and install in the reverse order of removal.

- Never tap on the ball joint cap of the stabilizer connecting rod with a hammer or a similar item when inserting the stabilizer connecting rod into the transverse link.
- Perform final tightening of bolts and nuts at the shock absorber lower side (rubber bushing), under unladen conditions with tires on level ground.

Disassembly and Assembly

INFOID:0000000003858810

DISASSEMBLY

CAUTION:

Never damage shock absorber piston rod when removing components from shock absorber.

FSU-9 Revision: 2009 March 2009 FX35/FX50

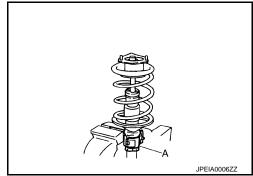

< REMOVAL AND INSTALLATION >

[2WD]

Install shock absorber attachment (A) [SST: ST35652000 (
)] to shock absorber and secure it in a vise.

CAUTION:

When installing the shock absorber attachment to shock absorber, wrap a shop cloth around shock absorber to protect it from damage.

2. Using a spring compressor (A) (commercial service tool), compress coil spring between rubber seat and shock absorber until coil spring with a spring compressor is free.

CAUTION:

Be sure a spring compressor is securely attached coil spring. Compress coil spring.

- Make sure coil spring with a spring compressor between rubber seat and shock absorber is free. And then remove piston rod lock nut while securing the piston rod tip so that piston rod does not turn.
- 4. Remove mounting seal, shock absorber mounting bracket, rubber seat, bound bumper from shock absorber.

Loosen while making sure coil spring attachment position does not move.

6. Remove the shock absorber attachment from shock absorber.

ASSEMBLY

1. Install shock absorber attachment (A) [SST: ST35652000 (-)] to shock absorber and secure it in a vise.

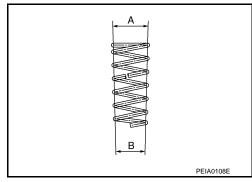

CAUTION:

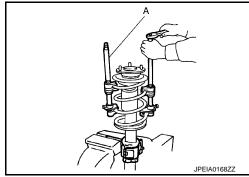

When installing the shock absorber attachment to shock absorber, wrap a shop cloth around shock absorber to protect it from damage.

Compress coil spring using a spring compressor (commercial service tool), and install it onto shock absorber.

CAUTION:

- Install with the large-diameter side (A) facing up and the small-diameter side (B) facing down.
- Be sure a spring compressor is securely attached to coil spring. Compress coil spring.

< REMOVAL AND INSTALLATION >

[2WD]

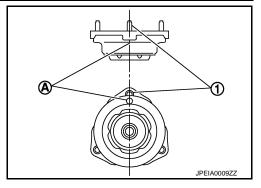

Install the shock absorber mounting bracket and rubber seat. CAUTION:

Align the paint mark (A) to the stud bolt (1) position when assembling.

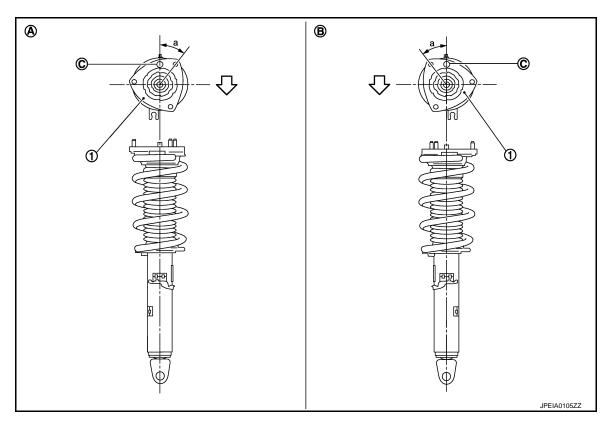

4. Apply soapy water to bound bumper.

CAUTION:

Never use machine oil.

Insert bound bumper into shock absorber mounting bracket, and then install it to shock absorber together with rubber seat.

- 1. Shock absorber mounting bracket
- A. Right side

B. Left side

C. Coil spring lower end position

<br

Install the shock absorber mounting bracket as shown in the figure.

Angle (a) : 30.0°

- Check that the lower end of the coil spring (C) is positioned at the spring lower seat of the shock absorber.
- 6. Secure piston rod tip so that piston rod does not turn, then tighten piston rod lock nut with specified torque.
- Gradually release a spring compressor, and remove coil spring. CAUTION:

Loosen while making sure coil spring attachment position does not move.

- 8. Remove the shock absorber attachment from shock absorber.
- Install the mounting seal to shock absorber mounting bracket.

Inspection Inspection

INSPECTION AFTER INSTALLATION

- Check wheel sensor harness for proper connection. Refer to <u>BRC-133</u>, <u>"FRONT WHEEL SENSOR: Exploded View"</u>.
- Check wheel alignment. Refer to <u>FSU-8</u>. "Inspection".
- Adjust neutral position of steering angle sensor. Refer to <u>BRC-9</u>, "<u>ADJUSTMENT OF STEERING ANGLE</u> SENSOR NEUTRAL POSITION: Special Repair Requirement".

INSPECTION AFTER DISASSEMBLY

Shock Absorber

Check the following items, and replace the part if necessary.

- Shock absorber for deformation, cracks or damage.
- Piston rod for damage, uneven wear or distortion.
- · Oil leakage.

Shock Absorber Mounting Bracket and Rubber Parts Inspection

Check shock absorber mounting bracket for cracks and rubber parts for wear. Replace it if necessary.

Coil Spring

Check coil spring for cracks, wear or damage. Replace it if necessary.

Disposal INFOID:0000000005153227

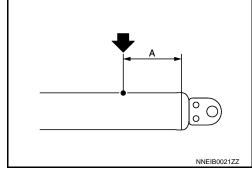

- 1. Set shock absorber horizontally with the piston rod fully extended.
- 2. Drill 2 − 3 mm (0.08 − 0.12 in) hole at the position () from top as shown in the figure to release gas gradually.

CAUTION:

- · Wear eye protection (safety glasses).
- · Wear gloves.
- Be careful with metal chips or oil blown out by the compressed gas.

NOTE:

- Drill vertically in this direction (
- Directly to the outer tube avoiding brackets.
- The gas is clear, colorless, odorless, and harmless.

A : 20 - 30 mm (0.79 - 1.18 in)

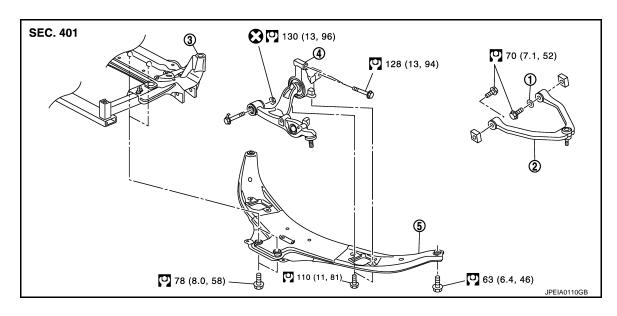

Position the drilled hole downward and drain oil by moving the piston rod several times.CAUTION:

Dispose of drained oil according to the law and local regulations.

TRANSVERSE LINK

Exploded View

- Stopper arm bushing
 Transverse link
- Upper link
 - Front cross bar

Front suspension member

Н

Refer to GI-4, "Components" for symbols in the figure.

Removal and Installation

REMOVAL

- 1. Remove tires with power tool.
- Remove shock absorber. Refer to <u>FSU-9</u>, "<u>Exploded View</u>".
- Temporarily install upper link and steering knuckle. Refer to FAX-6, "Exploded View".
- Remove stabilizer connecting rod. Refer to <u>FSU-17</u>, "<u>Exploded View</u>".
- 5. Remove front cross bar.
- 6. Remove transverse link from steering knuckle.
- 7. Set suitable jack under transverse link.
- 8. Remove transverse link.

NOTE:

If removing transverse link mounting bolt (front side) is difficult, rotating steering wheel and remove steering outer socket. Refer to <u>ST-25</u>, "<u>Exploded View</u>".

INSTALLATION

Note the following, and install in the reverse order of removal.

- Never tap on the ball joint cap of the stabilizer connecting rod with a hammer or a similar item when inserting the stabilizer connecting rod into the transverse link.
- Perform final tightening of bolts and nuts at the front suspension member installation and shock absorber lower side (rubber bushing), under unladen conditions with tires on level ground.

Inspection INFOID:0000000003858814

INSPECTION AFTER REMOVAL

Appearance

Check the following items, and replace the part if necessary.

- Transverse link and bushing for deformation, cracks or damage.
- Ball joint boot for cracks or other damage, and also for grease leakage.

Ball Joint Inspection

Manually move ball stud to confirm it moves smoothly with no binding.

Swing Torque Inspection

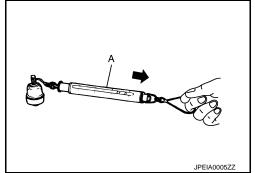

NOTE:

Before measurement, move ball stud at least ten times by hand to check for smooth movement.

 Hook a spring balance (A) at cotter pin mounting hole. Confirm spring balance measurement value is within specifications when ball stud begins moving.

> Swing toque : Refer to <u>FSU-19, "Ball</u> Joint".

- If swing torque exceeds standard range, replace transverse link assembly.

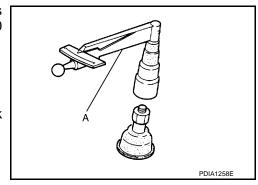

Rotating Torque Inspection

 Attach mounting nut to ball stud. Make sure that rotating torque is within specifications with a preload gauge (A) [SST: ST3127S000 (J-25765-A)].

Rotating toque : Refer to FSU-19, "Ball

Joint".

 If rotating torque exceeds standard range, replace transverse link assembly.

Axial End Play Inspection

· Move tip of ball stud in axial direction to check for looseness.

Axial end play : Refer to FSU-19, "Ball

Joint".

- If axial end play exceeds standard range, replace transverse link assembly.

INSPECTION AFTER INSTALLATION

- Check wheel sensor harness for proper connection. Refer to <u>BRC-133</u>, <u>"FRONT WHEEL SENSOR: Exploded View"</u>.
- 2. Check wheel alignment. Refer to FSU-8, "Inspection".
- 3. Adjust neutral position of steering angle sensor. Refer to BRC-9, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION: Special Repair Requirement".

INFOID:0000000003858827

< PRECAUTION > [AWD]

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal
 injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag
 Module, see the "SRS AIR BAG".
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

WARNING:

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

Precaution Necessary for Steering Wheel Rotation after Battery Disconnect

INFOID:0000000004041451

NOTE:

- Before removing and installing any control units, first turn the push-button ignition switch to the LOCK position, then disconnect both battery cables.
- After finishing work, confirm that all control unit connectors are connected properly, then re-connect both battery cables.
- Always use CONSULT-III to perform self-diagnosis as a part of each function inspection after finishing work. If a DTC is detected, perform trouble diagnosis according to self-diagnosis results.

This vehicle is equipped with a push-button ignition switch and a steering lock unit.

If the battery is disconnected or discharged, the steering wheel will lock and cannot be turned.

If turning the steering wheel is required with the battery disconnected or discharged, follow the procedure below before starting the repair operation.

OPERATION PROCEDURE

Connect both battery cables.

NOTE:

Supply power using jumper cables if battery is discharged.

- 2. Turn the push-button ignition switch to ACC position. (At this time, the steering lock will be released.)
- Disconnect both battery cables. The steering lock will remain released with both battery cables disconnected and the steering wheel can be turned.
- 4. Perform the necessary repair operation.

PRECAUTIONS

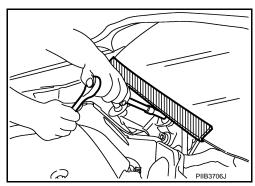

< PRECAUTION > [AWD]

5. When the repair work is completed, re-connect both battery cables. With the brake pedal released, turn the push-button ignition switch from ACC position to ON position, then to LOCK position. (The steering wheel will lock when the push-button ignition switch is turned to LOCK position.)

6. Perform self-diagnosis check of all control units using CONSULT-III.

Precaution for Procedure without Cowl Top Cover

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.

INFOID:0000000004041453

INFOID:0000000003858831

Precautions for Suspension

CAUTION:

- When installing rubber bushings, the final tightening must be carried out under unladen conditions
 with tires on ground. Spilled oil might shorten the life of rubber bushings. Be sure to wipe off any
 spilled oil.
- Unladen conditions mean that fuel, engine coolant and lubricant are full. Spare tire, jack, hand tools and mats are in designated positions.
- After servicing suspension parts, be sure to check wheel alignment.
- Self-lock nuts are not reusable. Always use new ones when installing. Since new self-lock nuts are
 pre-oiled, tighten as they are.

PERIODIC MAINTENANCE

FRONT SUSPENSION ASSEMBLY

Inspection INFOID:000000003858834

MOUNTING INSPECTION

Make sure the mounting conditions (looseness, backlash) of each component and component conditions (wear, damage) are normal.

BALL JOINT AXIAL END PLAY

- 1. Set front wheels in a straight-ahead position.
- Measure axial end play by playing and moving up/down with iron bar or equivalent between transverse link or upper link and steering knuckle.

Axial end play : Refer to FSU-39, "Ball Joint".

CAUTION:

- · Never depress brake pedal when measuring.
- Never perform with tires on level ground.
- Be careful not to damage ball joint boot. never damage the installation position by applying excessive force.

SHOCK ABSORBER

Check for oil leakage, damage. Replace it if necessary.

[AWD]

WHEEL ALIGNMENT

Inspection INFOID:000000003858835

DESCRIPTION

CAUTION:

- Camber, caster, kingpin inclination angles cannot be adjusted.
- If camber, caster, or kingpin inclination angle is outside the standard, check front suspension parts for wear and damage. Replace suspect parts if a malfunction is detected.
- Kingpin inclination angle is reference value, no inspection is required.
- Measure wheel alignment under unladen conditions.

NOTE:

"Unladen conditions" means that fuel, engine coolant, and lubricant are full. Spare tire, jack, hand tools and mats are in designated positions.

PRELIMINARY CHECK

Check the following:

- Tires for improper air pressure and wear.
- Road wheels for runout. Refer to WT-68, "Inspection".
- Wheel bearing axial end play. Refer to FAX-14, "Inspection".
- Transverse link or upper link ball joint axial end play. Refer to FSU-32, "Inspection" or FSU-34, "Inspection".
- Shock absorber operation.
- Each mounting part of axle and suspension for looseness and deformation.
- Each of suspension member, shock absorber, upper link and transverse link for cracks, deformation and other damage.
- Vehicle height (posture).

GENERAL INFORMATION AND RECOMMENDATIONS

- A four-wheel thrust alignment should be performed.
- This type of alignment is recommended for any NISSAN/INFINITI vehicle.
- The four-wheel "thrust" process helps ensure that the vehicle is properly aligned and the steering wheel is centered.
- The alignment rack itself should be capable of accepting any NISSAN/INFINITI vehicle.
- The rack should be checked to ensure that it is level.
- Make sure the machine is properly calibrated.
- Your alignment equipment should be regularly calibrated in order to give correct information.
- Check with the manufacturer of your specific equipment for their recommended Service/Calibration Schedule.

ALIGNMENT PROCESS

IMPORTANT:

Use only the alignment specifications listed in this Service Manual.

- When displaying the alignment settings, many alignment machines use "indicators": (Green/red, plus or minus, Go/No Go). Do not use these indicators.
- The alignment specifications programmed into your machine that operate these indicators may not be correct.
- This may result in an ERROR.
- Some newer alignment machines are equipped with an optional "Rolling Compensation" method to "compensate" the sensors (alignment targets or head units). **Never use this "Rolling Compensation" method.**
- Use the "Jacking Compensation Method". After installing the alignment targets or head units, raise the vehicle and rotate the wheels 1/2 turn both ways.
- See Instructions in the alignment machine you're using for more information on this.

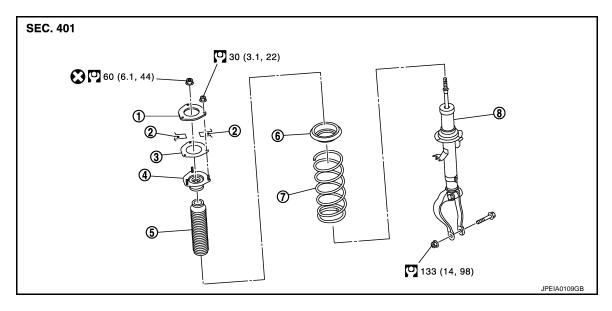

[AWD]

Removal and Installation

INFOID:0000000003858837

REMOVAL

- 1. Remove engine cover. Refer to EM-27, "Exploded View" (VQ35HR), EM-174, "Exploded View" (VK50VE).
- Remove front fender protector. Refer to <u>EXT-25</u>, "FENDER PROTECTOR: Exploded View".
- 3. Remove tires with power tool.
- 4. Remove wheel sensor and harness connector from vehicle. Refer to BRC-133, "FRONT WHEEL SEN-SOR: Exploded View".

CAUTION:

Never pull on wheel sensor harness.

- 5. Remove shock absorber actuator harness connector (with Continuous Damping Control).
- Remove front wheel vertical G sensor (with Continuous Damping Control). Refer to <u>SCS-61, "Exploded View"</u>.
- Remove brake hose bracket. Refer to <u>BR-20, "FRONT: Exploded View"</u>.
- 8. Remove stabilizer connecting rod with power tool. Refer to FSU-36, "Exploded View".
- 9. Remove wheel hub lock nut. Refer to FAX-16, "Exploded View".
- 10. Remove shock absorber from transverse link with power tool.
- Separate upper link from steering knuckle. Refer to <u>FAX-16</u>. "Exploded View".
- 12. Separate drive shaft from wheel hub and bearing assembly.
- 13. Remove shock absorber assembly.

NOTE:

If removing shock absorber is difficult, loosen upper link mounting bolts (vehicle side).

INSTALLATION

Note the following, and install in the reverse order of removal.

- Never tap on the ball joint cap of the stabilizer connecting rod with a hammer or a similar item when inserting
 the stabilizer connecting rod into the transverse link.
- Perform final tightening of bolts and nuts at the shock absorber lower side (rubber bushing), under unladen conditions with tires on level ground.

Disassembly and Assembly

INFOID:0000000003858838

DISASSEMBLY

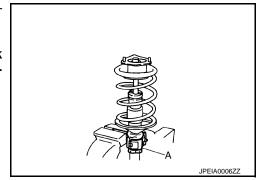

CAUTION:

Never damage shock absorber piston rod when removing components from shock absorber.

- Remove shock absorber arm. (With continuous damping control)
- 2. Install shock absorber attachment (A) [SST: ST35652000 ()] to shock absorber and secure it in a vise.

CAUTION:

When installing the shock absorber attachment to shock absorber, wrap a shop cloth around shock absorber to protect it from damage.

< REMOVAL AND INSTALLATION >

[AWD]

JPEIA0168ZZ

Using a spring compressor (A) (commercial service tool), compress coil spring between rubber seat and shock absorber until coil spring with a spring compressor is free.

CAUTION:

Be sure a spring compressor is securely attached coil spring. Compress coil spring

- Make sure coil spring with a spring compressor between rubber seat and shock absorber is free. And then remove piston rod lock nut while securing the piston rod tip so that piston rod does not turn.
- 5. Remove mounting seal, shock absorber mounting bracket, rubber seat, bound bumper from shock absorber.
- After removing coil spring with a spring compressor, then gradually release a spring compressor. CAUTION:

Loosen while making sure coil spring attachment position does not move.

7. Remove the shock absorber attachment from shock absorber.

ASSEMBLY

1. Install shock absorber attachment (A) [SST: ST35652000 (-)] to shock absorber and secure it in a vise.

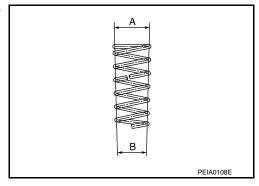

CAUTION:

When installing the shock absorber attachment to shock absorber, wrap a shop cloth around shock absorber to protect it from damage.

2. Compress coil spring using a spring compressor (commercial service tool), and install it onto shock absorber.

CAUTION:

- Install with the large-diameter side (A) facing up and the small-diameter side (B) facing down.
- Be sure a spring compressor is securely attached to coil spring. Compress coil spring.

Install the shock absorber mounting bracket and rubber seat. CAUTION:

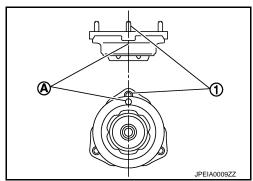

Align the paint mark (A) to the stud bolt (1) position when assembling.

Apply soapy water to bound bumper.

CAUTION:

Never use machine oil.

Remove shock absorber arm. (With continuous damping control)

Insert bound bumper into shock absorber mounting bracket, and then install it to shock absorber together with rubber seat.

- 1. Shock absorber mounting bracket
- A. Right side

B. Left side

C. Coil spring lower end position

⟨
⇒ : Vehicle front

• Install the shock absorber mounting bracket as shown in the figure.

Angle (a) : 30.0°

- Check that the lower end of the coil spring (C) is positioned at the spring lower seat of the shock absorber.
- 7. Secure piston rod tip so that piston rod does not turn, then tighten piston rod lock nut to the specified torque.
- Gradually release a spring compressor, and remove coil spring. CAUTION:

Loosen while making sure coil spring attachment position does not move.

- 9. Remove the shock absorber attachment from shock absorber.
- 10. Install the mounting seal to shock absorber mounting bracket.

Inspection

INSPECTION AFTER INSTALLATION

- Check shock absorber actuator harness connector for proper connection (with Continuous Damping Control).
- Check wheel sensor harness for proper connection. Refer to <u>BRC-133</u>, "<u>FRONT WHEEL SENSOR</u>: <u>Exploded View</u>".
- 3. Check wheel alignment. Refer to FSU-26, "Inspection".
- Adjust neutral position of steering angle sensor. Refer to <u>BRC-9</u>, "ADJUSTMENT OF STEERING ANGLE <u>SENSOR NEUTRAL POSITION</u>: <u>Special Repair Requirement</u>".

INSPECTION AFTER DISASSEMBLY

Shock Absorber

< REMOVAL AND INSTALLATION >

[AWD]

Check the following items, and replace the part if necessary.

- Shock absorber for deformation, cracks or damage.
- Piston rod for damage, uneven wear or distortion.
- Oil leakage.

Shock Absorber Mounting Bracket and Rubber Parts Inspection

Check shock absorber mounting bracket for cracks and rubber parts for wear. Replace it if necessary

Coil Spring

Check coil spring for cracks, wear or damage. Replace it if necessary.

Disposal INFOID:000000005153246

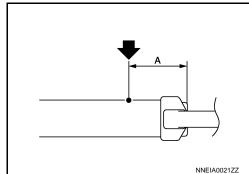

- 1. Set shock absorber horizontally with the piston rod fully extended.
- 2. Drill 2-3 mm (0.08-0.12 in) hole at the position () from top as shown in the figure to release gas gradually.

CAUTION:

- Wear eye protection (safety glasses).
- Wear gloves.
- Be careful with metal chips or oil blown out by the compressed gas.

NOTE:

- Drill vertically in this direction (
- Directly to the outer tube avoiding brackets.
- · The gas is clear, colorless, odorless, and harmless.

A : 20 – 30 mm (0.79 – 1.18 in)

3. Position the drilled hole downward and drain oil by moving the piston rod several times. **CAUTION:**

Dispose of drained oil according to the law and local regulations.

TRANSVERSE LINK

Exploded View

- Stopper arm bushing
 Transverse link
- 2. Upper link
- Front cross bar

3. Front suspension member

Refer to GI-4, "Components" for symbols in the figure.

Removal and Installation

INFOID:0000000003858841

REMOVAL

- Remove tires with power tool.
- 2. Remove shock absorber. Refer to FSU-27, "Exploded View".
- Temporarily install upper link and steering knuckle. Refer to <u>FAX-16, "Exploded View"</u>.
- 4. Remove front cross bar.
- 5. Remove transverse link from steering knuckle.
- 6. Set suitable jack under transverse link.
- 7. Remove transverse link.

NOTE:

If removing transverse link mounting bolt (front side) is difficult, rotating steering wheel and remove steering outer socket. Refer to <u>ST-25</u>, "<u>Exploded View</u>".

INSTALLATION

Note the following, and install in the reverse order of removal.

- Never tap on the ball joint cap of the stabilizer connecting rod with a hammer or a similar item when inserting the stabilizer connecting rod into the transverse link.
- Perform final tightening of bolts and nuts at the front suspension member installation and shock absorber lower side (rubber bushing), under unladen conditions with tires on level ground.

Inspection InfoID:0000000003858842

INSPECTION AFTER REMOVAL

Appearance

Check the following items, and replace the part if necessary.

- Transverse link and bushing for deformation, cracks or damage.
- Ball joint boot for cracks or other damage, and also for grease leakage.

Ball Joint Inspection

[AWD]

Manually move ball stud to confirm it moves smoothly with no binding.

Swing Torque Inspection

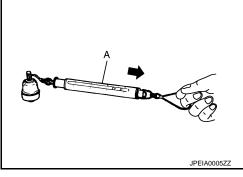

NOTE:

Before measurement, move ball stud at least ten times by hand to check for smooth movement.

 Hook a spring balance (A) at cotter pin mounting hole. Confirm spring balance measurement value is within specifications when ball stud begins moving.

Swing toque : Refer to FSU-39, "Ball Joint".

- If swing torque exceeds standard range, replace transverse link assembly.

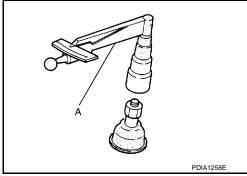

Rotating Torque Inspection

 Attach mounting nut to ball stud. Make sure that rotating torque is within specifications with a preload gauge (A) [SST: 3127S000 (J-25765-A)].

Rotating toque : Refer to FSU-39, "Ball Joint".

- If rotating torque exceeds standard range, replace transverse link assembly.

Axial End Play Inspection

Move tip of ball stud in axial direction to check for looseness.

: Refer to FSU-39, "Ball Joint". Axial end play

If axial end play exceeds standard range, replace transverse link assembly.

INSPECTION AFTER INSTALLATION

- Check shock absorber actuator harness connector for proper connection (with Continuous Damping Con-1. trol).
- 2. Check wheel sensor harness for proper connection. Refer to BRC-133. "FRONT WHEEL SENSOR: Exploded View".
- Check wheel alignment. Refer to <u>FSU-26</u>, "Inspection".
- Adjust neutral position of steering angle sensor. Refer to BRC-9, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION: Special Repair Requirement".

Wheel Alignment

Item Standard -1° 05' (-1.08°) Minimum Nominal -0° 20′ (-0.33°) Camber Degree minute (Decimal degree) Maximum 0° 25′ (0.41°) Left and right difference 0° 33' (0.55°) or less Minimum 2° 55′ (2.92°) Nominal 3° 40′ (3.67°) Caster Degree minute (Decimal degree) Maximum 4° 25′ (4.41°) Left and right difference 0° 39' (0.65°) or less 7° 55′ (7.92°) Minimum Kingpin inclination Nominal 8°40′ (8.67°) Degree minute (Decimal degree) Maximum 9° 25′ (9.41°) Minimum In 1 mm (0.04 in) Total toe-in Nominal In 2 mm (0.08 in) Distance Maximum In 3 mm (0.11 in) Toe-in In 0° 02′ 12″ (0.04°) Minimum Toe angle (left wheel or right wheel) In 0° 04′ 24″ (0.07°) Nominal Degree minute (Decimal Degree) In 0° 06′ 36″ (0.11°) Maximum

Measure value under unladen* conditions.

Ball Joint

| Item | | Standard |
|--------------------------------|-----------------|------------------------------------------------|
| Suring torque | Transverse link | 0.5 − 3.6 N·m (0.06 − 0.36 kg-m, 5 − 31 in-lb) |
| Swing torque | Upper link | 0 − 2.0 N·m (0 − 0.20 kg-m, 0 − 17 in-lb) |
| Magazinamant an anning balance | Transverse link | 7.8 – 56.3 N (0.8 – 5.7 kg, 1.8 – 12.6 lb) |
| Measurement on spring balance | Upper link | 0 – 61.5 N (0 – 6.2 kg, 0 – 13.8 lb) |
| Rotating torque | Transverse link | 0.5 − 3.9 N·m (0.06 − 0.39 kg-m, 5 − 34 in-lb) |
| Axial end play | | 0 mm (0 in) |
