PRECAUTIONS

Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER" used along with a seat belt, helps to reduce the risk or severity of injury to the driver and front passenger in a frontal collision. The Supplemental Restraint System consists of air bag modules (located in the center of the steering wheel and in the instrument panel on the passenger side), seat belt pre-tensioners, a diagnosis sensor unit, warning lamp, wiring harness, and spiral cable.

The vehicle (except Crew Cab model) is equipped with a passenger air bag deactivation switch. Because no rear seat exists where a rear-facing child restraint can be placed, the switch is designed to turn off the passenger air bag so that a rear-facing child restraint can be used in the front passenger seat. The switch is located in the center of the instrument panel, near the ashtray. When the switch is turned to the ON position, the passenger air bag is enabled and could inflate in a frontal collision. When the switch is turned to the OFF position, the passenger air bag is disabled and will not inflate in a frontal collision. A passenger air bag OFF indicator on the instrument panel lights up when the passenger air bag is switched OFF. The driver air bag always remains enabled and is not affected by the passenger air bag deactivation switch.

Information necessary to service the system safely is included in the **RS section** of this Service Manual. **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance should be per-
- formed by an authorized NISSAN dealer.
 Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air
- Bag Module, see the RS section.
 Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. Spiral cable and wiring harnesses (except "SEAT BELT PRE-TENSIONER") covered with yellow insulation either just before the harness connectors or for the complete harness are related to the SRS.
- The vehicle (except Crew Cab model) is equipped with a passenger air bag deactivation switch which can be operated by the customer. When the passenger air bag is switched OFF, the passenger air bag is disabled and will not inflate in a frontal collision. When the passenger air bag is switched ON, the passenger air bag is enabled and could inflate in a frontal collision. After SRS maintenance or repair, make sure the passenger air bag deactivation switch is in the same position (ON or OFF) as when the vehicle arrived for service.

Precautions for Steering System

NEST0002

- Before disassembly, thoroughly clean the outside of the unit.
- Disassembly should be done in a clean work area. It is important to prevent the internal parts from becoming contaminated by dirt or other foreign matter.
- For easier and proper assembly, place disassembled parts in order on a parts rack.
- Use nylon cloths or paper towels to clean the parts; common shop rags can leave lint that might interfere with their operation.
- Before inspection or reassembly, carefully clean all parts with a general purpose, non-flammable solvent.
- Before assembly, apply a coat of recommended power steering fluid* to hydraulic parts. Petroleum jelly may be applied to O-rings and seals. Do not use any grease.
- Replace all gaskets, seals and O-rings. Avoid damaging O-rings, seals and gaskets during installation. Perform functional tests whenever designated.

*: Genuine NISSAN PSF II or equivalent. Refer to MA-13, "RECOMMENDED FLUIDS AND LUBRI-CANTS".

ON-VEHICLE SERVICE

Steering System

Steering System

Checking Steering Wheel Play

 Place wheels in straight ahead position and check steering wheel play.

Steering wheel play: 35 mm (1.38 in) or less

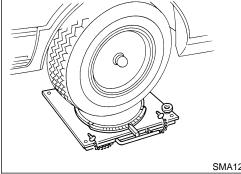

- If steering wheel play is not within specification, check the following for loose or worn components.
- a) Steering column. Refer to "STEERING COLUMN", ST-12.
- b) Front suspension and axle. Refer to AX-4, "Front Axle Parts" and SU-7, "Front Suspension Parts".
- c) Steering gear. Refer to "Description", ST-15.

ON-VEHICLE SERVICE

Checking Neutral Position on Steering Wheel

NG G SST490BA	 Checking Neutral Position on Steering Wheel PRE-CHECKING Make sure that wheel alignment is correct. Wheel alignment: Refer to SU-21, "Wheel Alignment (Unladen*1)". Verify that the steering gear is centered before removing the steering wheel. CHECKING Check that the steering wheel is in the neutral position when driving straight ahead. If it is not in the neutral position, remove the steering wheel and reinstall it correctly. If the neutral position is still not correct: Loosen tie-rod lock nuts. Move tie-rods, in opposite direction, the same amount on both left and right sides. This will compensate for error in the neutral position. 	GI MA EM LC EC FE CL
	Checking Front Wheel Turning Angle 1. Rotate steering wheel fully right, then left; measure turning angle. Turning angle of full turns: Refer to SU-11, "Front Wheel Turning Angle". 2. If it is not within specification, check stopper bolt adjustment. Refer to SU-11, "Front Wheel Turning Angle".	MT AT TF PD AX
SMA127	Checking and Adjusting Drive Belts Refer to <i>MA-16</i> , "Checking Drive Belts" (KA24DE) or <i>MA-25</i> , "Check- ing Drive Belts" (VG33E and VG33ER).	SU BR ST RS
Power steering reservoir =	 Checking Fluid Level Check fluid level with engine off. Check fluid level referring to the scale on the reservoir tank Use "HOT" range for fluid temperatures of 50 to 80°C (122 to 176°F). Use "COLD" range for fluid temperatures of 0 to 30°C (32 to 86°F). CAUTION: Do not overfill. Recommended fluid is Genuine NISSAN PSF II or equivalent. Refer to <i>MA-13</i>, "RECOMMENDED FLUIDS AND 	bt ha SC El

HOT MAX

р

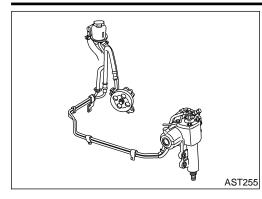

AST253

ST-7

LUBRICANTS".

Checking Fluid Leakage

ON-VEHICLE SERVICE

Checking Fluid Leakage

Check lines for improper attachment, leaks, cracks, damage, chafing and deterioration.

- 1. Run engine between idle speed and 1,000 rpm.
- Make sure temperature of fluid in reservoir tank rises to 60 to 80°C (140 to 176°F).
- 2. Turn steering wheel right-to-left several times.
- 3. Hold steering wheel at each "lock" position for 5 seconds and carefully check for fluid leakage.

CAUTION:

Do not hold steering wheel at lock position for more than 15 seconds.

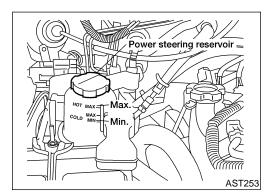

4. If fluid leakage from any line is noticed, loosen flare nut and then retighten.

Do not overtighten connector as this can damage O-ring, washer and connector.

- 5. If fluid leakage from power steering pump is noticed, check power steering pump. Refer to "Pre-disassembly Inspection", ST-18.
- 6. If fluid leakage from power steering gear is noticed, check power steering gear. Refer to "Inspection and Adjustment", ST-16.

Bleeding Hydraulic System

Raise front end of vehicle until wheels are clear of the ground.

 Add fluid to reservoir tank to specified level. Quickly turn steering wheel fully to right and left and lightly touch steering stoppers.

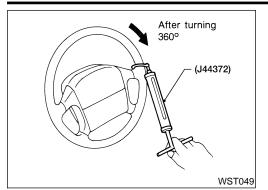

Repeat steering wheel operation until fluid level no longer decreases.

- 3. Start engine.
 - Repeat step 2 above.
- Incomplete air bleeding will cause the following to occur:
- a) Air bubbles in reservoir tank
- b) Clicking noise in power steering pump
- c) Excessive buzzing in power steering pump When this happens, bleed air again.

Fluid noise may occur in the valve or power steering pump. This is common when the vehicle is stationary or while turning the steering wheel slowly. This does not affect the performance or durability of the system.

ON-VEHICLE SERVICE

Checking Steering Wheel Turning Force

Checking Steering Wheel Turning Force

- NEST0013 Park vehicle on a level, dry surface and set parking brake. 1.
- 2. Start engine and run at idle speed or 1,000 rpm.
- Bring power steering fluid up to adequate operating tempera-3. ture. [Make sure temperature of fluid is approximately 60 to MA 80°C (140 to 176°F).]

Tires need to be inflated to normal pressure.

Check steering wheel turning force when steering wheel has been turned 360° from neutral position.

Steering wheel turning force:

39 N (4 kg, 9 lb) or less

- If steering wheel turning force is out of specification, check the 5. followina:
- a. Hydraulic system. Refer to "Checking Hydraulic System", ST-9.
- Steering column. Refer to "Inspection", ST-14. b.
- С Front suspension and axle. Refer to AX-4, "Front Axle Parts" and SU-7, "Front Suspension Parts".
- Steering gear turning torque. Refer to "TURNING TORQUE d. GL MEASUREMENT", ST-16.

MT

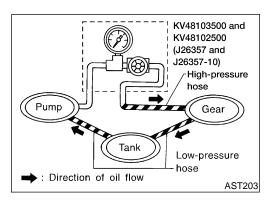

AT

TF

PD

GI

LC

Checking Hydraulic System

NEST0014 Before starting, check belt tension, driving pulley and tire pressure.

- Set Tool. Open shut-off valve, then bleed air. Refer to "Bleed-1. ing Hydraulic System", ST-8.
- Run engine at idle speed or 1,000 rpm. 2.
- Make sure fluid temperature in reservoir tank rises to 60 . to 80°C (140 to 176°F).

WARNING:

Warm up engine with shut-off valve fully opened. If engine is AX started with shut-off valve closed, fluid pressure in the power steering pump increases to maximum. This will raise fluid temperature abnormally.

SU Check pressure with steering wheel fully turned to left and right positions while idling at 1,000 rpm.

CAUTION:

Do not hold the steering wheel at full lock position for more than 15 seconds.

- ST Power steering pump maximum operating pressure: 7,649 - 8,238 kPa (78 - 84 kg/cm², 1,109 - 1,194 psi) at idling
- If pressure reaches maximum operating pressure, system is OK.
- If pressure increases above maximum operating pressure, BT check power steering pump flow control valve. Refer to "Components", ST-18.
- 4. If power steering pressure is below the maximum operating HA pressure, slowly close shut-off valve and check pressure again. SC

CAUTION:

Do not close shut-off valve for more than 15 seconds.

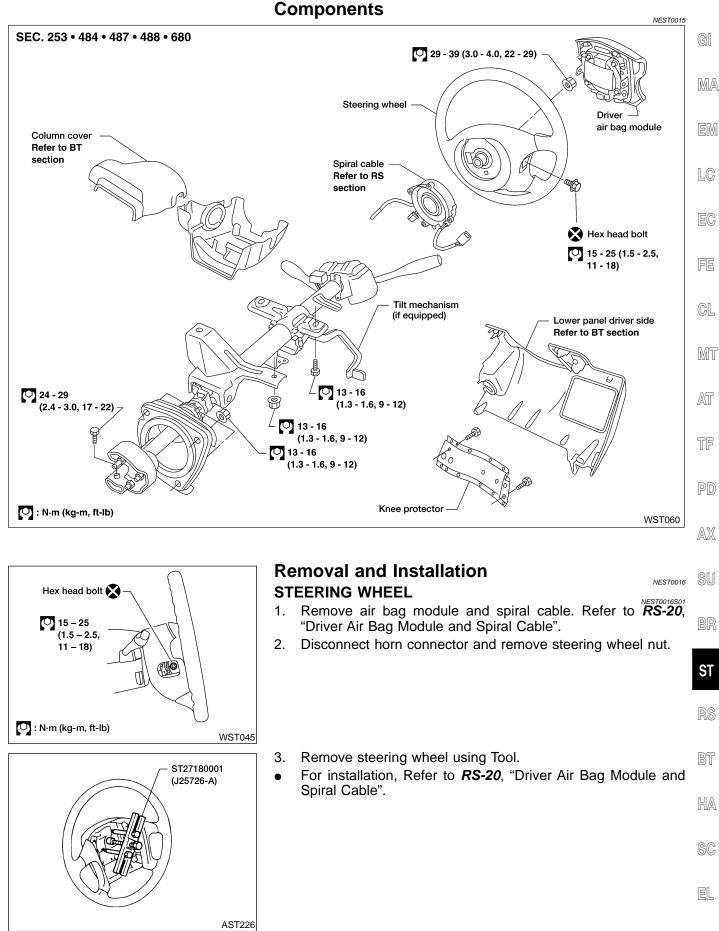

- If pressure increases to maximum operating pressure, gear is EL damaged. Refer to "Removal and Installation", ST-15.
- If pressure remains below maximum operating pressure, pump

is damaged. Refer to "Components", ST-18.

5. After checking hydraulic system, remove Tool and add fluid as necessary. Completely bleed air out of system. Refer to "Bleeding Hydraulic System", ST-8.

Components

Removal and Installation (Cont'd)

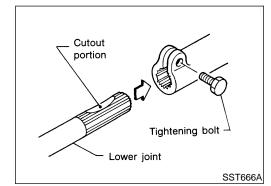

STEERING COLUMN

Removal CAUTION:

NEST0016S02

NEST0016S0201

- The rotation of the spiral cable (SRS "AIR BAG" component part) is limited. If the steering gear must be removed, set the front wheels in the straight-ahead direction. Do not rotate the steering column while the steering gear is removed.
- Remove the steering wheel before removing the steering lower joint to avoid damaging the SRS spiral cable. Refer to "STEERING WHEEL", ST-11.
- 1. Remove steering wheel, refer to "STEERING WHEEL", ST-11.
- 2. Remove steering column covers.
- 3. Remove instrument lower panel. Disconnect security lamp indicator.
- 4. Disconnect combination switch electrical connectors and air bag harness connector.
- 5. Remove knee protector.
- 6. Disconnect ignition switch and shift lock solenoid connectors.
- 7. Disconnect shift cable.
- 8. Remove bolt from lower joint.
- 9. Remove two steering column bolts and remove steering column.

Installation

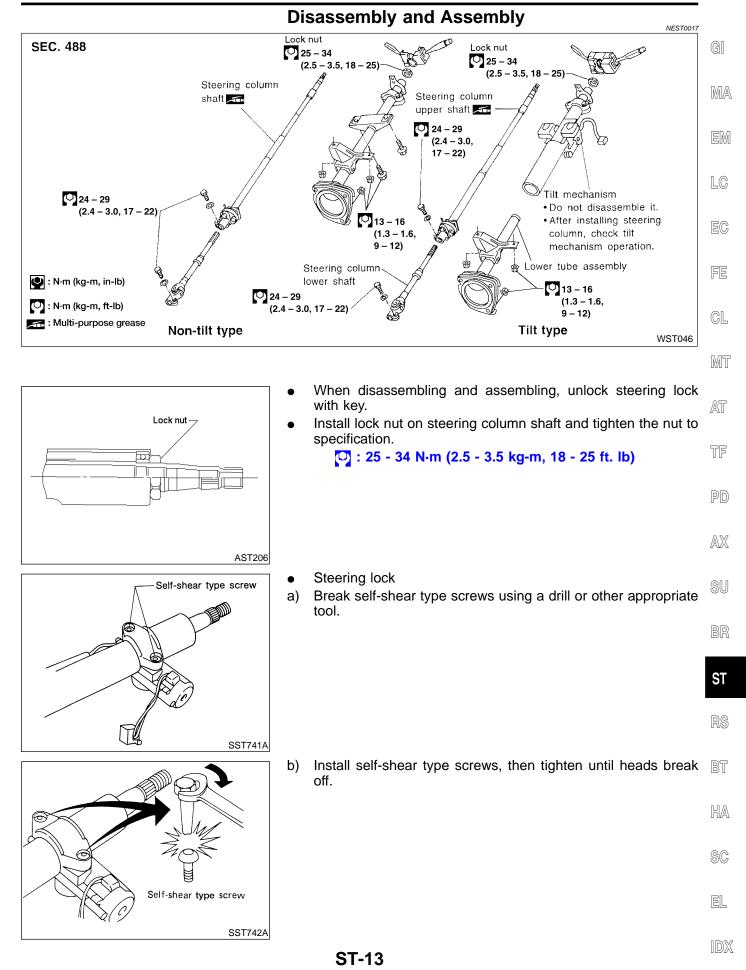

- When installing steering column, finger-tighten all lower bracket and clamp retaining bolts; then tighten them securely. Make sure that undue stress is not applied to steering column.
- When fitting steering lower joint, be sure tightening bolt faces cutout portion.
- Align spiral cable correctly when installing steering wheel. Refer to *RS-20*, "Driver Air Bag Module and Spiral Cable".

CAUTION:

After installation, turn steering wheel to make sure it moves smoothly. Ensure the number of turns from the straight forward position to left and right locks are the same. Be sure that the steering wheel is in a neutral position when driving straight ahead.

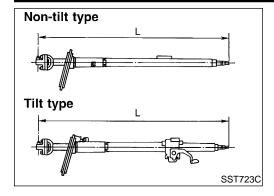

STEERING WHEEL AND STEERING COLUMN

Disassembly and Assembly

STEERING WHEEL AND STEERING COLUMN

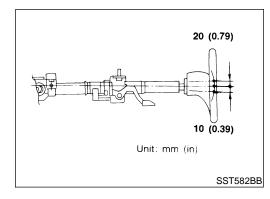

Inspection

Inspection

- If steering wheel does not turn smoothly, check the steering column as follows and replace damaged parts.
- a) Check column bearings for damage and unevenness. Lubricate with recommended multi-purpose grease or replace steering column as an assembly, if necessary.
- b) Check jacket tube for deformation and breakage. Replace if necessary.
- If the vehicle is involved in a light collision, check dimension "L". If it is not within specification, replace steering column as an assembly.

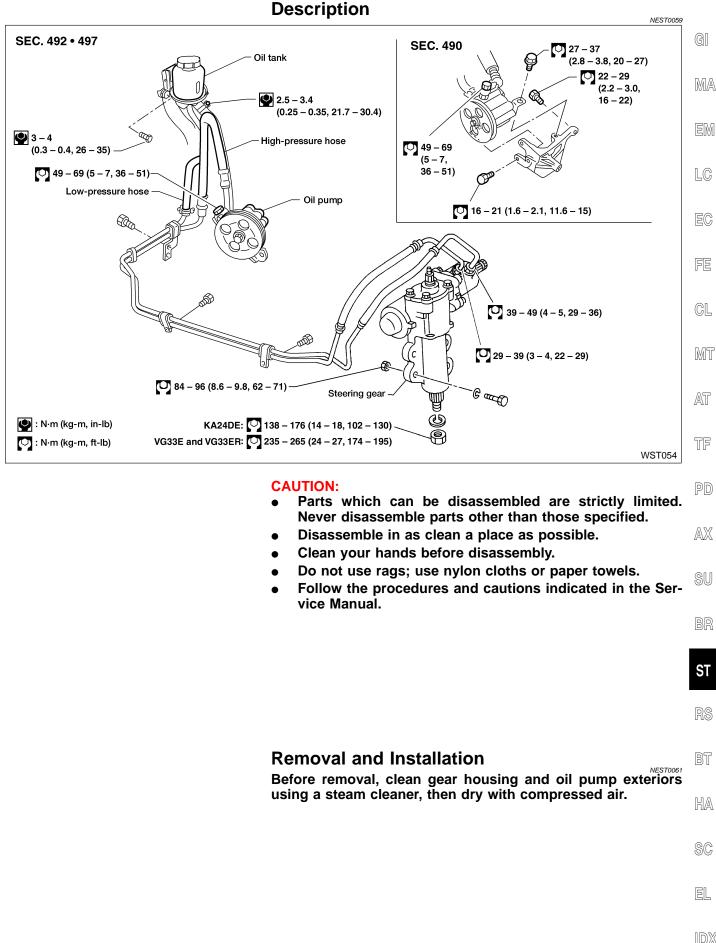

Column length "L": 863.1 - 864.7 mm (33.980 - 34.043 in)

TILT MECHANISM

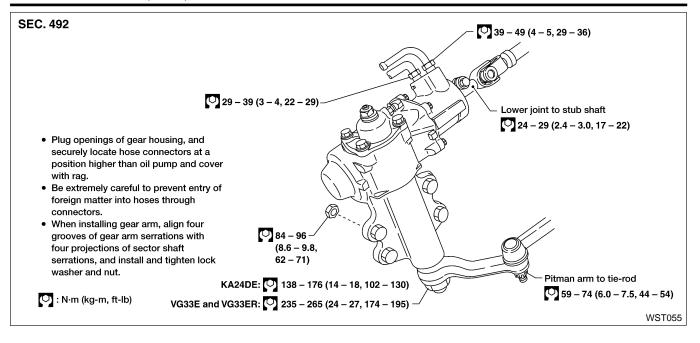

After installing steering column, check tilt mechanism operation (if equipped).

Description

POWER STEERING GEAR (MODEL: D600)

Removal and Installation (Cont'd)

Inspection and Adjustment

Before replacing power steering, make sure there is no oil leakage around sealing portion and check steering turning torque as follows:

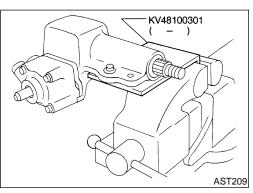

NEST0062501

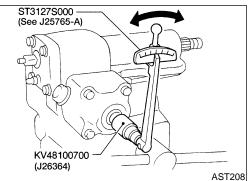

Check sealing portion.

- Sector shaft cover O-ring
- Sector shaft U-packing
- Sector shaft oil seal
- Rear housing O-ring
- Gear housing O-ring

TURNING TORQUE MEASUREMENT

- 1. Measure turning torque at 360° position.
- a. Install steering gear on Tool.

- b. Turn stub shaft all the way to right and left several times.
- c. Measure turning torque at 360° position from straight-ahead position with Tools.

Turning torque at 360°: 0.20 - 0.90 N·m (2.0 - 9.2 kg-cm, 1.8 - 8.0 in-lb)

POWER STEERING OIL PUMP

Components

Pre-disassembly Inspection

Disassemble the power steering oil pump only if the following items are found.

- Oil leak from any point shown in the figure.
- Deformed or damaged pulley.
- Poor performance.

Disassembly

CAUTION:

Parts which can be disassembled are strictly limited. Never disassemble parts other than those specified.

NEST0038

- Disassemble in as clean a place as possible.
- Clean your hands before disassembly.
- Do not use rags; use nylon cloths or paper towels.
- When disassembling and reassembling, do not let foreign matter enter or contact the parts.

POWER STEERING OIL PUMP

Disassembly (Cont'd) 1) Remove snap ring, then draw drive shaft out. Be careful not to drop drive shaft. • Extension bar Drive shaft SST010B Remove oil seal. 2) Be careful not to damage front housing. • SST034A 3) Remove connector and flow control valve with spring. C Front housing Be careful not to drop control valve. • D 1 AMAR Flow control valve SST036A Inspection NEST0039 If pulley is cracked or deformed, replace it.

If fluid leak is found around the pulley shaft, replace the oil seal.
