# PRECAUTIONS

< PRECAUTION >

## PRECAUTION

### PRECAUTIONS

#### Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:000000006251265

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SR and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SR section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

#### PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

#### **WARNING:**

- When working near the Airbag Diagnosis Sensor Unit or other Airbag System sensors with the Ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the Ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

#### Precaution for Procedure without Cowl Top Cover

INFOID:000000006251266

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.

#### Service Notice or Precautions

INFOID:000000006251267

- Always use recommended fluid. Refer to [MA-16. "FOR USA AND CANADA : Fluids and Lubricants"](#).
- Never reuse drained fluid.
- Be careful not to splash fluid on painted areas.

## PRECAUTIONS

### < PRECAUTION >

- When removing and installing clutch piping, use tool.
- Use new fluid to clean or wash all parts of master cylinder.
- Never use mineral oils such as gasoline or kerosene. It will ruin the rubber parts of the hydraulic system.

### **WARNING:**

**After cleaning clutch disc, wipe it with a dust collector. Do not use compressed air.**

# CLUTCH PEDAL

< PERIODIC MAINTENANCE >

## PERIODIC MAINTENANCE

### CLUTCH PEDAL

#### On-Vehicle Inspection and Adjustment

INFOID:000000006251270

1. Check to see if the clevis pin floats freely in the bore of the clutch pedal. It should not be bound by the clevis or clutch pedal.
  - a. If the clevis pin is not free, check that the pedal stopper bolt or ASCD clutch switch is not applying pressure to the clutch pedal causing the clevis pin to bind. To adjust, loosen the lock nut and turn the pedal stopper bolt or ASCD clutch switch.
  - b. Tighten the lock nut to the specified torque. Refer to [CL-10, "Exploded View"](#).
  - c. Verify that the clevis pin floats in the bore of the clutch pedal. It should not be bound by the clutch pedal.
  - d. If the clevis pin is still not free, remove the clevis pin and check for deformation or damage. Replace clevis pin if necessary. Leave pin removed for step 2.
2. Check clutch pedal stroke for free range of movement.
  - a. With the clevis pin removed, manually move the clutch pedal up and down to determine if it moves freely.
  - b. If any sticking is noted, replace the assembly.
3. Adjust clearance "(C)" while depressing clutch pedal fully. (With clutch interlock switch)

**Clearance (C) : 0.1 - 1.0 mm (0.004 - 0.039 in)**

4. Check clutch hydraulic and system components (clutch master cylinder, clutch operating cylinder, clutch withdrawal lever and clutch release bearing) for sticking or binding.
  - a. If any sticking or binding noted, repair or replace related parts as necessary.
  - b. If hydraulic system repair was necessary, bleed the clutch hydraulic system. Refer to [CL-9, "Bleeding"](#).

# CLUTCH FLUID

< PERIODIC MAINTENANCE >

## CLUTCH FLUID

### Bleeding

INFOID:000000006251271

#### **CAUTION:**

**Do not spill clutch fluid onto painted surfaces. If it spills, wipe up immediately and wash the affected area with water.**

#### **NOTE:**

Monitor the fluid level in the reservoir tank to make sure it does not empty.

1. Top off reservoir with new recommended brake fluid. Refer to [MA-16, "FOR USA AND CANADA : Fluids and Lubricants"](#).
2. Connect a transparent vinyl tube and container to the air bleeder valve on the clutch operating cylinder.
3. Fully depress the clutch pedal several times.
4. With the clutch pedal depressed, open the bleeder valve to release the air.
5. Close the bleeder valve.
6. Repeat steps 3 to 5 until clear brake fluid comes out of the air bleeder valve.
7. Tighten the air bleeder to the specified torque.

**Air bleeder      7.9 N·m (0.81 kg-m, 70 in-lb)**

### Removal and Installation

INFOID:000000006251273

#### REMOVAL

1. Remove the clutch pedal bracket nuts from inside the engine compartment.
2. Disconnect the clutch interlock switch and ASCD clutch switch (if equipped), then remove the wiring harness from the pedal assembly.
3. Remove the snap pin and clevis pin.
4. Remove the pedal bracket bolt and then remove the clutch pedal assembly.

#### INSTALLATION

Installation is in the reverse order of removal.

#### NOTE:

Tighten the pedal stopper bolt lock nut or ASCD clutch switch lock nut to the specified torque after installing the clutch pedal assembly in the vehicle and adjusting the pedal free play.

#### Inspection

INFOID:000000006251274

#### INSPECTION AFTER REMOVAL

- Inspect the clutch pedal for bends, damage, or cracked welds. Replace if necessary.
- Make sure that the assist spring and return spring have not lost their spring. Replace if necessary.

#### CAUTION:

Do not spill brake fluid onto painted surfaces. If it spills, wipe up immediately and wash the affected area with water.

#### NOTE:

When removing components such as hoses, tubes/lines, ect., cap or plug openings to prevent fluid from spilling.

#### REMOVAL

1. Remove the snap pin and clevis pin from the clevis, and separate it from the clutch pedal.
2. Remove the hose clamp and hose from the clutch master cylinder.
3. Remove the clutch tube using suitable tool.
4. Remove the clutch master cylinder nuts, and remove the clutch master cylinder from the vehicle.

#### INSTALLATION

Installation is in the reverse order of removal.

- Before installation, check the position of the clevis and push rod. If (L) is outside standard length, adjust the position of the clevis and push rod.

#### Length (L)

QR25DE : 119.5 mm (4.70 in)

VQ40DE : 120.5 mm (4.74 in)

- After installation, inspect and adjust the clutch pedal as necessary, then bleed the clutch hydraulic system. Refer to [CL-8, "On-Vehicle Inspection and Adjustment"](#) and [CL-9, "Bleeding"](#).

#### REMOVAL

1. Remove the clutch hose and copper sealing washer from the operating cylinder.

#### CAUTION:

**Do not reuse the copper sealing washer.**

2. Remove the operating cylinder bolts, and remove the operating cylinder from the vehicle.

#### INSTALLATION

Installation is in the reverse order of removal.

- Tighten the clutch hose fitting to the specified torque.

#### CAUTION:

- **Make sure the clutch hose is not bent or twisted.**
- **Do not reuse copper sealing washers.**

INFOID:000000006251279

Carefully observe the following during clutch tube removal and installation.

#### CAUTION:

**Do not spill brake fluid onto painted surfaces. If it spills, wipe up immediately and wash the affected area with water.**

- When installing the clutch hose to the bracket, align the clutch hose metal fittings with the bracket positioning emboss, then install the lock plate to secure.

#### CAUTION:

- Do not damage the clutch hose.
- Make sure the clutch hose is not bent or twisted.
- Tighten the clutch tube and hose fittings to the specified torque.

#### CAUTION:

- Do not reuse the copper washer.
- Do not damage the clutch tube fittings or clutch tube.
- After installation, bleed the air from the clutch hydraulic system. Refer to [CL-9, "Bleeding"](#).

3. Remove the dust cover.
4. Remove the retainer spring from the withdrawal lever.
5. Remove the release bearing from release bearing sleeve using suitable tool.

#### INSTALLATION

Installation is in the reverse order of removal.

**NOTE:**

# CLUTCH RELEASE MECHANISM

## < UNIT REMOVAL AND INSTALLATION >

- Install the release bearing to release bearing sleeve using suitable tool, as shown.

- Clean old grease and abrasive materials off the grease application areas.
- Apply grease to the specified points as shown.

- Apply approximately 1 mm (0.04 in) thick coat of clutch sleeve grease to withdrawal lever and holder spring frictional surfaces.
- Apply a coat of clutch sleeve grease to ball pin contact surface of the withdrawal lever and inner slots of the release bearing. The grease surface should be level with the surrounding area.
- Apply a thin coat of clutch sleeve grease to the release bearing frictional surface. After grease application, install release bearing. Wipe off excess grease forced out during bearing installation.

### CAUTION:

- Be careful not to bring any grease into contact with the clutch disc facing, pressure plate surface, or flywheel surface.
- Before installing manual transmission to the vehicle, check that each sliding surface slides smoothly by operating withdrawal lever.

## 5M/T : Inspection

2. Install clutch disc and clutch cover. Pre-tighten the bolts and install Tool. Then tighten the clutch cover bolts evenly in two steps to the specified torque in the order shown. Refer to [CL-22, "6M/T : Exploded View"](#).

**Tool number** : ST20630000 (J-26366)

3. Install the manual transmission. Refer to [TM-71, "Removal and Installation from Vehicle \(For 2WD Models\)"](#) or [TM-73, "Removal and Installation from Vehicle \(For 4WD Models\)"](#).

## 6M/T : Inspection after Removal

INFOID:000000006251292

### INSPECTION AFTER REMOVAL

#### Clutch Disc

- Check the wear of the clutch disc facing.

**Clutch disc facing wear** : Refer to [CL-25, "Clutch Disc"](#).

# CLUTCH DISC, CLUTCH COVER

## < UNIT REMOVAL AND INSTALLATION >

- Check the runout and backlash of the clutch disc. If the measurement exceeds the specification, replace the clutch disc.

**Runout and backlash** : Refer to [CL-25, "Clutch Disc"](#).

### Clutch Cover

- Check clutch cover thrust ring for wear or damage. If wear or damage is found, replace clutch cover assembly.

#### NOTE:

- Worn thrust ring will generate a beating noise when tapped at the rivet with a hammer.
- Broken thrust ring will make a clinking sound when cover is shaken up and down.
- If a trace of burn or discoloration is found on the clutch cover pressure plate to clutch disc contact surface, repair the surface with emery paper. If surface is damaged or distorted, replace the assembly.

### Flywheel

- Check contact surface of flywheel for slight burns or discoloration. If any are found, repair flywheel with emery paper.
- Check the flywheel runout. Refer to [EM-231, "Inspection After Disassembly"](#).

## 6M/T : Adjustment after Installation

### ADJUSTMENT AFTER INSTALLATION

With the clutch cover installed on the vehicle, check the diaphragm spring toe height for unevenness. If unevenness exceeds the limit, adjust the diaphragm spring toe height using Tool.

**Uneven limit of diaphragm spring toe height** : Refer to [CL-25, "Clutch Cover"](#).

**Tool number** : ST20050240 ( — )
