# PRECAUTIONS

# PRECAUTIONS

# Caution

PFP:00001

AES000DT

- When installing rubber bushings, final tightening must be carried out under unladen condition with tires on level ground. Oil will shorten the life of rubber bushings. Be sure to wipe off any spilled oil.
- Unladen condition means that fuel, coolant, and lubricant are full. Spare tire, jack, hand tools and mats in designated positions.
- After servicing suspension parts, be sure to check wheel alignment.
- Caulking nuts are not reusable. Always use new ones when installing. Since new caulking nuts are preoiled, tighten as they are.
- Avoid burden to front cross bar.

# FRONT SUSPENSION ASSEMBLY

# FRONT SUSPENSION ASSEMBLY

## **On-Vehicle Inspection and Service**

Check that the mounting conditions (looseness, back lash) of each component and component statues (wear, damage) are normal.

## INSPECTION OF BALL JOINT END PLAY OF EACH LINK

- 1. Set front wheels in a straight-ahead position. Do not depress brake pedal.
- Check ball joint axial end play of each link. 2.

#### **CAUTION:**

Be careful not to damage ball joint boot.

#### Upper Link Ball Joint

Measure axial end play by installing and moving up/down with an iron pry bar or something similar between upper link and steering knuckle.

#### **Standard value Axial end play** : 0 mm (0 in)

Measure axial end play by installing and moving up/down with an iron pry bar or something similar between steering knuckle and wheel.

Check shock absorber for oil leakage, damage and replace if necessary.

#### Standard value Axial end play : 0 mm (0 in)

#### Wheel Alignment Inspection DESCRIPTION

• Measure wheel alignment under unladen conditions. "Unladen conditions" means that fuel, coolant, and lubricant are full. Spare tire, jack, hand tools and mats in designated positions.

#### PRELIMINARY INSPECTION

- 1. Check tires for improper air pressure and wear.
- 2. Check road wheels for runout.
- 3. Check wheel bearing axial end play.
- 4. Check ball joint axial end play of compression rod, upper link, and steering knuckle.
- 5. Check shock absorber operation.
- 6. Check each mounting point of axle and suspension for looseness and deformation.
- 7. Check each link, rod, and member for cracks, deformation and other damage.
- 8. Check vehicle posture.

#### **INSPECTION OF CAMBER, CASTER.**

- Camber, caster cannot be adjusted.
- Before inspection, mount front wheels onto turning radius gauge. Mount rear wheels onto a stand that has same height so vehicle will remain horizontal.

#### Using a CCK Gauge

- 1. Remove wheel nuts (2), and install a guide bolt (special service tool) to hub bolt.
- 2. Screw adapter (special service tool) into plate body (special service tool) until it contacts body tightly.
- 3. Screw center plate (special service tool) into plate body (special service tool).
- 4. Insert plate (special service tool) on guide bolt (special service tool). Put spring in, and then evenly screw in guide bolt nut (special service tool). When fastening guide bolt nut, do not completely compress spring.
- 5. Place the dent of alignment gauge onto the projection of center plate (special service tool) and tightly contact them to measure.

Standard value Camber, caster: Refer to <u>FSU-20, "SERVICE DATA"</u>

#### **CAUTION:**

- If camber, caster, is outside the standard, check front suspension parts for wear and damage, and replace suspect parts if necessary.
- King pin inclination angle is reference value, no inspec- <u>selaver selaver</u> tion is required. (Due to the type of suspension, the kingpin inclination angle cannot be measured correctly using a normal alignment tester).

AES000DZ

#### **Toe-In Inspection**

Measure toe-in using the following procedure.

#### WARNING:

- Always perform the following procedure on a flat surface.
- Make sure that no person is in front of vehicle before pushing it.
- 1. Bounce front of vehicle up and down to stabilize the posture.
- 2. Push vehicle straight ahead about 5 m (16 ft).
- 3. Put a mark on base line of the tread (rear side) of both tires at the same height of hub center. These are measuring points.
- 4. Measure distance "A" (rear side).
- 5. Push vehicle slowly ahead to rotate wheels 180 degrees (1/2 turn).

If wheels have rotated more than 180 degrees (1/2 turn), try the above procedure again from the beginning. Never push vehicle backward.

6. Measure distance "B" (front side).

#### Standard value

Total toe-in : Refer to FSU-20, "SERVICE DATA"

# **COIL SPRING AND SHOCK ABSORBER**

# COIL SPRING AND SHOCK ABSORBER

### Removal and Installation REMOVAL

1. Remove tire with power tool.

2. Remove harness of wheel sensor from shock absorber. Refer to <u>BRC-64, "WHEEL SENSORS"</u>. CAUTION:

#### Do not pull on wheel sensor harness.

- 3. Remove mounting nuts of brake hose from shock absorber.
- 4. Remove mounting bolt and nut between shock absorber and transverse link with power tool.
- 5. Remove mounting nuts on mounting insulator with power tool, then remove shock absorber from vehicle.

#### INSTALLATION

Refer to <u>FSU-8</u>, "Components" for tightening torque. Install in the reverse order of removal.
 CAUTION:

#### Refer to component parts location and do not reuse non-reusable parts.

 Perform final tightening of shock absorber lower side (rubber bushing) under unladen condition with tires on level ground. Check wheel alignment. Refer to <u>FSU-6</u>, "Wheel Alignment Inspection".

# Disassembly and Assembly DISASSEMBLY

#### **CAUTION:**

Make sure piston rod on shock absorber is not damaged when removing components from shock absorber.

1. Install strut attachment (special service tool) to shock absorber and fix it in a vise.

#### CAUTION:

When installing strut attachment (special service tool) to shock absorber, wrap a shop cloth around shock absorber to protect it from damage.

2. Using a spring compressor (commercial service tool), compress coil spring between spring upper seat and spring lower seat (on shock absorber) until coil spring is free.

#### CAUTION:

Be sure spring compressor (commercial service tool) is securely attached to coil spring. Compress coil spring.

3. Check that coil spring between spring upper seat and spring lower seat is free and then secure piston rod tip so that piston rod does not turn, and remove piston rod lock nut.

- 4. Remove mounting insulator, bound bumper, spring upper seat. Then remove coil spring from shock absorber.
- 5. Gradually release spring compressor (commercial service tool), and remove coil spring. **CAUTION:**

#### Loosen while marking sure coil spring attachment position does not move.

6. Remove strut attachment (special service tool) from shock absorber.

Coil Spring Inspection	
Check coil spring for cracks, wear, damage, and replace if necessary.	D
ASSEMBLY	

#### **CAUTION:**

Make sure piston rod on shock absorber is not damaged when attaching components to shock FSU absorber.

1. Install strut attachment (special service tool) to shock absorber and fix it in a vise.

#### **CAUTION:**

When installing strut attachment (special service tool) to shock absorber, wrap a shop cloth around shock absorber to protect it from damage.

2. Compress coil spring using a spring compressor (commercial service tool), and install it onto shock absorber.

#### CAUTION:

- Install coil spring as shown in the figure with large diameter side [100 mm (3.94 in] up and small diameter side [90 mm (3.54 in)] down. (Identification paint is the 4th winding point from lower side.
- Be sure spring compressor (commercial service tool) is securely attached to coil spring. Compress coil spring.

Apply soapy water to bound bumper and insert into mounting insulator.
 CAUTION:
 Do not use machine oil.

4. Attach spring upper seat and mounting insulator as shown in the figure.

#### **CAUTION:**

- Make sure coil spring is securely seated in spring mounting groove of spring upper seat.
- The bottom part of spring should be at the piston of A point of spring seat.

- 5. Secure piston rod tip so that piston rod does not turn, and tighten the specified torque on piston rod lock nut.
- 6. Gradually release spring compressor (commercial service tool), and remove coil spring. CAUTION:

Loosen while making sure coil spring attachment position does not move.

7. Remove strut attachment (special service tool) from shock absorber.

# **UPPER LINK**

# UPPER LINK

# Removal and Installation

- 1. Remove tire with power tool.
- 2. Remove shock absorber. Refer to FSU-10, "COIL SPRING AND SHOCK ABSORBER" .
- 3. Remove cotter pin of upper link ball joint, and loosen nut.
- 4. Use a ball joint remover (suitable tool) to remove upper link from steering knuckle. Be careful not to damage ball joint boot.

#### CAUTION:

# To prevent damage to threads and to prevent ball joint remover (suitable tool) from coming off, and temporarily tighten lock nuts.

- 5. Remove bolts holding upper link to body with power tool.
- 6. Remove upper link from vehicle.

#### **INSPECTION AFTER REMOVAL**

#### **Visual Inspection**

- Check upper link and bushing for deformation, cracks, or damage. If any non-standard conditions is found, replace it.
- Check boot of ball joint for cracks, or damage, and also for grease leakage. If any non-standard condition is found, replace it.

#### **Ball Joint Inspection**

• Manually move ball stud to confirm it moves smoothly with no binding.

#### **Swing Torque Inspection**

#### **CAUTION:**

#### Before measurement, move boll joint at least ten times by hand to check for smooth movement.

 Hook spring scale at cotter pin mounting hole. Confirm spring scale measurement value is within specifications when ball stud begins moving.

#### Standard value Swing torque:

Less than 2.0 N·m (0.20 kg-m, 18 in-lb)

#### Measured value of spring scale:

#### Less than 34.8 N (3.5 kg, 7.8 lb)

• If it is outside the specified range, replace upper link assembly.

#### **Rotating Torque Inspection**

 Attach mounting nut to ball stud. Check that sliding torque is within specifications with a preload gauge (special service tool).

# Standard value

#### Rotating torque:

#### Less than 2.0 N·m (0.20 kg-m, 18 in-lb)

• If it is outside the specified range, replace upper link assembly.

# **UPPER LINK**

<b>Axial End Play I</b>	nspection
-------------------------	-----------

• Move tip of ball joint in axial direction to check for looseness.

Standard value Axial end play : 0 mm (0 in)

If it is outside the specified range, replace upper link assembly.

#### INSTALLATION

Refer to <u>FSU-8, "Components"</u> for tightening torque. Install in the reverse order of removal.
 CAUTION:

Refer to component parts location and do not reuse non-reusable parts.

 Perform final tightening of installation position between upper link and body (rubber bushing) under unladen condition with tires on level ground. Check wheel alignment. Refer to <u>FSU-6</u>, "Wheel Alignment <u>Inspection"</u>.

# **COMPRESSION ROD**

#### Removal and Installation REMOVAL

- 1. Remove tire with power tool.
- 2. Remove front air spoiler.
- 3. Remove under cover with power tool.
- 4. Remove front cross bar from vehicle with power tool.
- 5. Remove cotter pin of compression rod ball joint, and loosen nut.
- 6. Use a ball joint remover (suitable tool) to remove compression rod from steering knuckle. Be careful not to damage ball joint boot.

#### CAUTION:

To prevent damage to threads and to prevent ball joint remover (suitable tool) from coming off, and temporarily tighten lock nut.

#### **INSPECTION AFTER REMOVAL**

#### Visual Inspection

- Check compression rod and bushing for deformation, cracks, or damage. If any non-standard condition is found, replace it.
- Check boot of ball joint for cracks, or damage, and also for grease leakage. If any non-standard condition is found, replace it.

#### **Ball Joint Inspection**

• Manually move ball stud to confirm it moves smoothly with no binding.

#### **Swing Torque Inspection**

#### **CAUTION:**

#### Before measurement, move ball joint at least ten times by hand to check for smooth movement.

 Hook spring scale at cotter pin mounting hole. Confirm spring scale measurement value is within specifications when ball stud begins moving.

#### Standard value

#### Swing torque:

0.147 - 2.45 N⋅m (0.02 - 0.24 kg-m, 2 - 21 in-lb)

#### Measured value of spring scale:

#### 2.37 - 39.5 N (0.24 - 4.03 kg, 0.53 - 8.88 lb)

• If it is outside the specified range, replace compression rod assembly.

#### **Rotating Torque Inspection**

• Attach mounting nut to ball stud. Check that sliding torque is within specifications with a preload gauge (special service tool).

#### Standard value Rotating torque:

#### 0.147 - 2.45 N·m (0.02 - 0.24 kg-m, 2 - 21 in-lb)

• If it is outside the specified range, replace compression rod assembly.

# STABILIZER BAR

#### Removal and Installation REMOVAL

- 1. Remove tire with power tool.
- 2. Remove front air spoiler.
- 3. Remove under cover with power tool.
- 4. Remove mounting nut on upper portion of stabilizer connecting rod with power tool.
- 5. Remove mounting bolts and nuts, then remove stabilizer clamp, stabilizer bushing, and stabilizer clamp bracket.
- 6. Remove stabilizer bar from vehicle.

#### **INSPECTION AFTER REMOVAL**

Check stabilizer bar, stabilizer connecting rod, stabilizer bushing, stabilizer clamp and stabilizer clamp bracket for deformation, cracks and damage, and replace if necessary.

#### INSTALLATION

Refer to <u>FSU-8, "Components"</u> for tightening torque. Install in the reverse order of removal.
 CAUTION:

#### Refer to component parts location and do not reuse non-reusable parts.

Tighten each bolt and nut as shown in the figure for tightening stabilizer bracket and stabilizer clamp. Tightening order is as follows. 1 (fully tighten) → 2 (temporarily tighten) → 3 (temporarily tighten) → 2 (fully tighten) → 3 (fully tighten) → 4, 5 (temporarily tighten).

 Stabilizer bar uses pillow ball type connecting rod. Position ball joint with case on pillow ball head parallel to stabilizer bar. AES000E3
