PRECAUTION PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

WARNING:

Always observe the following items for preventing accidental activation.

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see "SRS AIR BAG".
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

WARNING:

Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

Service Procedure Precautions for Models with a Pop-up Roll Bar

INFOID:000000008155437

WARNING:

Always observe the following items for preventing accidental activation.

- Risk of passenger injury or death may increase if the pop-up roll bar does not deploy during a roll over collision. In order to reduce the chance of an incident where the pop-up roll bar is inoperative, all maintenance must be performed by a NISSAN or INFINITI dealer.
- Before removing and installing the pop-up roll bar component parts and harness, always turn the ignition switch OFF, disconnect the battery negative terminal, and wait for 3 minutes or more. (The purpose of this operation is to discharge electricity that is accumulated in the auxiliary power supply circuit in the air bag diagnosis sensor unit.)
- When repairing, removing, and installing a pop-up roll bar, always refer to SRS AIR BAG and SRS AIR BAG CONTROL warnings in the Service Manual.

Precautions Necessary for Steering Wheel Rotation After Battery Disconnection

INFOID:000000008155438

CAUTION:

Comply with the following cautions to prevent any error and malfunction.

- Before removing and installing any control units, first turn the ignition switch to the LOCK position, then disconnect both battery cables.
- After finishing work, confirm that all control unit connectors are connected properly, then re-connect both battery cables.
- Always use CONSULT to perform self-diagnosis as a part of each function inspection after finishing work. If a DTC is detected, perform trouble diagnosis according to self-diagnosis results.

PRECAUTIONS

< PRECAUTION >

For vehicle with steering lock unit, if the battery is disconnected or discharged, the steering wheel will lock and cannot be turned. If turning the steering wheel is required with the battery disconnected or discharged, follow the operation pro- cedure below before starting the repair operation. OPERATION PROCEDURE 1. Connect both battery cables. NOTE: Supply power using jumper cables if battery is discharged. 2. Turn the ignition switch to ACC position. (At this time, the steering lock will be released.) 3. Disconnect both battery cables. The steering lock will remain released with both battery cables discon- nected and the steering wheel can be turned. 4. Perform the necessary repair operation. 5. When the repair work is completed, re-connect both battery cables. With the brake pedal released, turn the ignition switch is turned to LOCK position.) 6. Perform self-diagnosis check of all control units using CONSULT. Precaution for Battery Service Necessary Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interfer- ence between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected. Precaution • Disconnect air bag system line in advance. • Disconverse and the steering or disassembling any part, be careful not to damage or deform it. Protect parts, that may get in the way	< PRECAUTION >	
If turing the steering wheel is required with the battery disconnected or discharged, follow the operation pro- cedure below before starting the repair operation. OPERATION PROCEDURE 1. Connect both battery cables. NOTE: Supply power using jumper cables if battery is discharged. 2. Turn the ignition switch to ACC position. (At this time, the steering lock will be released.) 3. Disconnect both battery cables. The steering lock will remain released with both battery cables discon- nected and the steering wheel can be turned. 4. Perform the necessary repair operation. 5. When the repair work is completed, re-connect both battery cables. With the brake pedal released, turn the ignition switch from ACC position to ON position, then to LOCK position. (The steering wheel will lock when the ignition switch is turned to LOCK position.) 6. Perform self-diagnosis check of all control units using CONSULT. < SYMPTOM DIAGNOSIS >

SYMPTOM DIAGNOSIS SQUEAK AND RATTLE TROUBLE DIAGNOSES

Work Flow

CUSTOMER INTERVIEW

Interview the customer if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any customer comments. Refer to <u>IP-10</u>, "<u>Diagnostic Worksheet</u>". This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, perform a diagnosis and repair the noise that the customer is concerned about. This can be accomplished by performing a test drive with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so that the customer, service adviser, and technician use the same language when describing the noise.
- Squeak (Like tennis shoes on a clean floor)
 Squeak characteristics include the light contact / fast movement / brought on by road conditions / hard surfaces = high-pitched noise / softer surfaces = low-pitched noises / edge to surface = chirping
- Creak (Like walking on an old wooden floor)
 Creak characteristics include firm contact / slow movement/twisting with a rotational movement / pitch dependent on materials / often brought on by activity.
- Rattle (Like shaking a baby rattle) Rattle characteristics include fast repeated contact / vibration or similar movement / loose parts/missing clip or fastener / incorrect clearance.
- Knock (Like a knock on a door) Knock characteristics include hollow sounds / sometimes repeating / often brought on by driver action.
- Tick (Like a clock second hand) Tick characteristics include gentle contacting of light materials / loose components / can be caused by driver action or road conditions.
- Thump (Heavy, muffled knock noise) Thump characteristics include softer knock / dull sounds often brought on by activity.
- Buzz (Like a bumblebee) Buzz characteristics include high frequency rattle / firm contact.
- Often the degree of acceptable noise level varies depending upon the person. A noise that a technician may judge as acceptable may be very irritating to a customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

DUPLICATE THE NOISE AND TEST DRIVE

< SYMPTOM DIAGNOSIS >

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when the repair is reconfirmed.	A
If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to dupli- cate the noise with the vehicle stopped by doing one or all of the following items: 1) Close a door.	В
2) Tap or push/pull around the area where the noise appears to be coming from.3) Rev the engine.	
4) Use a floor jack to recreate vehicle "twist".	С
5) At idle, apply engine load (electrical load, half-clutch on M/T models, drive position on A/T models).6) Raise the vehicle on a hoist and hit a tire with a rubber hammer.	
 Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs. If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body. 	D
CHECK RELATED SERVICE BULLETINS	Е
After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSBs) related to the concern or symptom.	
If a TSB relates to the symptom, follow the procedure to repair the noise.	F
LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE	I
1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Chassis ear: J-39570, engine ear, and mechanics stethoscope).	G
2. Narrow down the noise to a more specific area and identify the cause of the noise by:	
 Removing the component(s) in the area that is / are suspected to be the cause of the noise. Do not use too much force when removing clips and fasteners, otherwise clips and fasteners can be broken or lost during the repair, resulting in the creation of new noise. 	Н
 Tapping or pushing/pulling the component(s) that is / are suspected to be the cause of the noise. 	
Do not tap or push/pull the component(s) with excessive force, otherwise the noise is eliminated only tempo- rarily.	
• Feeling for a vibration by hand by touching the component(s) that is / are suspected to be the cause of the	_
 Looking for loose components and contact marks. 	IP
Refer to <u>IP-8, "Inspection Procedure"</u> .	K
REPAIR THE CAUSEIf the cause is a loose component, tighten the component securely.	I.
If the cause is insufficient clearance between components:	
 Separate components by repositioning or loosening and retightening the components, if possible. Insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape, or ure- thane tape. A NISSAN Squeak and Rattle Kit (J-43980) is available through the authorized NISSAN Parts 	L
Department.	М

< SYMPTOM DIAGNOSIS >

Used to insulate where movement does not occur. Ideal for instrument panel applications.

• 68370-4B000: 15 imes 25 mm (0.591 imes 0.984 in) pad

• 68239-13E00: 5 mm (0.197 in) wide tape roll

The following materials, not found in the kit, can also be used to repair squeaks and rattles. UHMW (TEFLON) TAPE

Insulates where slight movement is present. Ideal for instrument panel applications. SILICONE GREASE Used in place of UHMW tape that is visible or does not fit. Only lasts a few months. SILICONE SPRAY Used when grease cannot be applied. DUCT TAPE Used to eliminate movement.

CONFIRM THE REPAIR

After repair is complete, test drive the vehicle to confirm that the cause of noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

Inspection Procedure

INFOID:000000008155445

Refer to Table of Contents for specific component removal and installation information.

INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

- 1. The cluster lid A and instrument panel
- 2. Acrylic lens and combination meter housing
- 3. Instrument panel to front pillar garnish
- 4. Instrument panel to windshield
- 5. Instrument panel mounting pins
- 6. Wiring harnesses behind the combination meter
- 7. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicon spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

CAUTION:

Never use silicone spray to isolate a squeak or rattle. If the area is saturated with silicone, the recheck of repair becomes impossible.

CENTER CONSOLE

Components to check include:

- 1. Shifter assembly cover to finisher
- 2. A/C control unit and cluster lid C
- 3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

DOORS

Check the following items:

- 1. Finisher and inner panel making a slapping noise
- 2. Inside handle escutcheon connection to door finisher
- 3. Wiring harnesses tapping
- 4. Door striker out of alignment causing a popping noise on starts and stops

Tapping, moving the components, or pressing on them while driving to duplicate the conditions can isolate many of these incidents. The areas can usually be insulated with felt cloth tape or insulator foam blocks from the NISSAN Squeak and Rattle Kit (J-43980) to repair the noise.

TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the customer. In addition check for the following items:

< SYMPTOM DIAGNOSIS >

1.	Trunk lid dumpers out of adjustment	
	Trunk lid striker out of adjustment	А
	Trunk lid torsion bars knocking together	
	A loose license plate or bracket	
	t of these incidents can be repaired by adjusting, securing, or insulating the item(s) or component(s) caus- he noise.	В
SUN	IROOF/HEADLINING	С
Nois	es in the sunroof / headlining area can often be traced to one of the following items:	C
1. 3	Sunroof lid, rail, linkage, or seals making a rattle or light knocking noise	
2. 3	Sunvisor shaft shaking in the holder	D
3. F	Front or rear windshield touching headlining and squeaking	
	n, pressing on the components to stop the noise while duplicating the conditions can isolate most of these ents. Repairs usually consist of insulating with felt cloth tape.	E
SEA	TS	
	n isolating seat noise it is important to note the position the seat is in and the load placed on the seat in the noise occurs. These conditions should be duplicated when verifying and isolating the cause of the e.	F
Caus	ses of seat noise include:	
1. I	Headrest rods and holder	G
2. /	A squeak between the seat pad cushion and frame	
	The rear seatback lock and bracket	
ditior	se noises can be isolated by moving or pressing on the suspected components while duplicating the con- ns under which the noise occurs. Most of these incidents can be repaired by repositioning the component oplying urethane tape to the contact area.	Η
UND	DERHOOD	
trans	e interior noise may be caused by components under the hood or on the engine wall. The noise is then smitted into the passenger compartment. ses of transmitted underhood noise include:	IP
	Any component mounted to the engine wall	
	Components that pass through the engine wall	
	Engine wall mounts and connectors	Κ
	Loose radiator mounting pins	
5. I	Hood bumpers out of adjustment	1
6. I	Hood striker out of adjustment	L
	se noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best	
	nod is to secure, move, or insulate one component at a time and test drive the vehicle. Also, engine RPM	M
	ad can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or ating the component causing the noise.

Diagnostic Worksheet

SQUEAK & RATTLE DIAGNOSTIC WORKSHEET

Dear Infiniti Customer:

We are concerned about your satisfaction with your Infiniti vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Infiniti right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service consultant or technician to ensure we confirm the noise you are hearing.

I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)

The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.

Continue to page 2 of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

INFOID:000000008155446

< SYMPTOM DIAGNOSIS >

Briefly describe the location where the n	oise occurs:	
II. WHEN DOES IT OCCUR? (please ch	neck the boxes that apply)	
🗆 anytime	after sitting out in the rain	
1st time in the morning	when it is raining or wet	
only when it is cold outside	dry or dusty conditions	
only when it is hot outside	dther:	
III. WHEN DRIVING:	IV. WHAT TYPE OF NOISE	
through driveways	squeak (like tennis shoes on a clean floor)	
through driveways over rough roads	☐ squeak (like terms shoes on a clean hoor) ☐ creak (like walking on an old wooden floor)	
over speed bumps	☐ rattle (like shaking a baby rattle)	
☐ only about mph	knock (like a knock at the door)	
on acceleration	☐ tick (like a clock second hand)	
☐ coming to a stop	thump (heavy, muffled knock noise)	
□ on turns: left, right or either (circle)	buzz (like a bumble bee)	
with passengers or cargo

[]: Number indicates step in removal procedures.

WARNING:

Before servicing, turn ignition switch OFF, disconnect battery negative terminal and wait 3 minutes or more.

CAUTION:

When removing, always use a remover tool that is made of plastic.

REMOVAL

- 1. Remove selector lever knob. Refer to TM-275, "Removal and Installation".
- 2. Remove instrument finisher E.
 - 1. Insert a remover tool (A) between instrument panel assembly and instrument finisher E, and then disengage pawls and metal clips.
 - 2. Pull back instrument finisher E.

CAUTION:

Apply protective tape (B) on the part to protect from damage.

- 3. Remove console finisher assembly.
 - 1. Remove pawls from rear of console finisher assembly, and then remove clips of front.
 - 2. Pull console finisher assembly upward to disengage from center console assembly.
 - 3. Disconnect harness connectors.

- 4. Remove console center finisher.
 - 1. Pull up console center finisher, and disengage pawls.
 - 2. Disconnect harness connectors.

< REMOVAL AND INSTALLATION >

- 5. Remove console rear finisher.
 - Pull back console rear finisher (1) by using a remover tool (A), then disengage metal clips.
 - 2. Disconnect inside key antenna connector.
 - [] : Metal clip

- 6. Remove center console assembly.
 - 1. Remove screws (B) of center console assembly front side with screw driver (A).

2. Remove center console assembly fixing screws (A).

- 3. Lift up center console assembly back side.
- 4. Disconnect harness connectors.

7. Remove cluster lid C.

- 1. Remove cluster lid C fixing screws (A).
- 2. Pull back cluster lid C (1).
- 3. Disconnect harness connectors.

8. Remove cluster lid D.

Е

< REMOVAL AND INSTALLATION >

- 1. Remove cluster lid D fixing screws (A).
- 2. Pull back cluster lid D (1).
- 3. Disconnect harness connectors.
 - کے : Pawl

- 9. Remove display unit. Refer to AV-101, "Removal and Installation".
- 10. Remove AV control unit. Refer to AV-99, "Removal and Installation".
- 11. Remove front body side welt LH. Refer to INT-15, "Removal and Installation".
- 12. Remove front pillar garnish LH. Refer to INT-15, "Removal and Installation".
- 13. Remove instrument side finisher LH.
 - 1. Insert a remover tool into lower space.
 - 2. Pull the instrument side finisher \dot{LH} (1) crosswise.
 - (]) : Clip
 - ^` : Pawl

- 14. Remove instrument lower panel LH.
 - 1. Remove hood opener mounting bolts (A). Refer to <u>DLK-223.</u> <u>"HOOD LOCK CONTROL : Removal and Installation"</u>.
 - 2. Remove data link connector fixing screws (B).
 - 3. Pull back instrument lower panel LH (1).
 - 4. Disconnect harness connectors.
 - کے : Pawl
 - [] : Metal clip
- 15. Remove instrument finisher A. Pull instrument finisher A (1) upward, and then disengage clips.

(_) : Clip

16. Remove instrument side panel LH.

< REMOVAL AND INSTALLATION >

- Remove instrument side panel fixing screws (A). 1.
- 2. Pull the instrument side panel LH (1) crosswise.
 - () : Clip
 - 八:Pawl

- 17. Remove driver air bag module. Refer to <u>SR-12, "Removal and Installation"</u>.
- Remove steering wheel. Refer to <u>ST-13, "Removal and Installation".</u>
- 19. Remove steering column covers.
 - Remove steering column front lower cover (1). 1.

(A) Column cover (with electric column)

- 2. Remove cluster lid A lower bracket (2).
- 3. Remove steering column mask (3) and screws.

(A) Column cover (with PADDLE SHIFTER)

- $\hat{\Delta}$: Pawl
- 4. Pull up steering column cover upper (4).
- 5. Remove steering column side cover RH (5). (with PADDLE SHIFTER)
- 6. Pull the steering column side cover LH (6) to the left side. (with PADDLE SHIFTER)
- 7. Disconnect ADP steering switch connector. (with ADP)
- 8. Remove steering column side cover LH (6).
- Remove screws, and then remove steering column lower cover (7). 9.
- 20. Remove spiral cable and steering angle sensor. Refer to SR-15, "Removal and Installation".
- 21. Remove combination switch. Refer to BCS-80, "Removal and Installation".
- 22. Remove paddle switch LH/RH. (with PADDLE SHIFTER) Refer to TM-278, "Removal and Installation".
