GENERAL MAINTENANCE

Explanation of General Maintenance

INFOID:000000004237882

General maintenance includes those items which should be checked during the normal day-to-day operation of the vehicle. They are essential if the vehicle is to continue operating properly. The owners can perform checks and inspections themselves or have their **INFINITI** dealers do them.

OUTSIDE THE VEHICLE

The maintenance items listed here should be performed from time to time, unless otherwise specified.

Item		Reference page
Tires	Check the pressure with a gauge often and always prior to long distance trips. Adjust the pressure in all tires, including the spare, to the pressure specified. Check carefully for damage, cuts or excessive wear.	<u>WT-103</u>
Wheel nuts	When checking the tires, make sure no nuts are missing, and check for any loose nuts. Tighten if necessary.	_
Tire rotation	Tires should be rotated every 12,000km (7,500 miles). If the vehicle is equipped with different sized tires in the front and rear, tires cannot be rotated.	<u>MA-27</u>
Tire Pressure Moni- toring System (TPMS) transmitter compo- nents	Replace the TPMS transmitter grommet seal, valve core and cap when the tires are replaced due to wear or age.	<u>WT-100</u>
Wheel alignment and balance	If the vehicle should pull to either side while driving on a straight and level road, or if you detect uneven or abnormal tire wear, there may be a need for wheel alignment. If the steering wheel or seat vibrates at normal highway speeds, wheel balancing may be needed.	<u>FSU-8</u> (2WD) <u>FSU-30</u> (AWD) <u>RSU-6</u> <u>MA-27</u>
Windshield	Clean the windshield on a regular basis. Check the windshield at least every six months for cracks or other damage. Repair as necessary.	_
Windshield wiper blades	Check for cracks or wear if they do not wipe properly.	_
Doors and engine hood	Check that all doors and the engine hood operate properly. Also make sure that all latches lock securely. Lubricate if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released. When driving in areas using road salt or other corrosive materials, check lubri- cation frequently.	<u>MA-34</u>
Lamps	Make sure that the headlamps, stop lamps, tail lamps, turn signal lamps, and other lamps are all operating properly and installed securely. Also check head- lamp aim. Clean the headlamps on a regular basis.	_

INSIDE THE VEHICLE

The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, cleaning the vehicle, etc.

Item		Reference page
Warning lamps and chimes	Make sure that all warning lamps and chimes are operating properly.	_
Windshield wiper and washer	Check that the wipers and washer operate properly and that the wipers do not streak.	—
Windshield defroster	Check that the air comes out of the defroster outlets properly and in sufficient quantity when operating the heater or air conditioner.	_
Steering wheel	Check that it has the specified play. Check for changes in the steering condi- tion, such as excessive play, hard steering or strange noises. Free play: Less than 35 mm (1.38 in)	_
Seats	Check seat position controls such as seat adjusters, seatback recliner, etc. to make sure they operate smoothly and that all latches lock securely in every position. Check that the head restrains move up and down smoothly and that the locks (if equipped) hold securely in all latched positions. Check that the latches lock securely for folding-down rear seatbacks.	

GENERAL MAINTENANCE

< PERIODIC MAINTENANCE >

Item		Reference page
Seat belts	Check that all parts of the seat belt system (e.g. buckles, anchors, adjusters and retractors) operate properly and smoothly, and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.	<u>MA-34</u>
Accelerator pedal	Check the pedal for smooth operation and make sure the pedal does not catch or require uneven effort. Keep the floor mats away from the pedal.	_
Brakes	Check that the brake does not pull the vehicle to one side when applied.	—
Brake pedal and booster	Check the pedal for smooth operation and make sure it has the proper distance under it when depressed fully. Check the brake booster function. Be sure to keep the floor mats away from the pedal.	<u>BR-7</u> <u>BR-13</u>
Clutch pedal	Make sure the pedal operates smoothly and check that it has the proper free play.	<u>CL-5</u>
Parking brake	Check that the lever or pedal has the proper travel and make sure that the vehicle is held securely on a fairly steep hill when only the parking brake is applied.	<u>PB-3</u> (PEDAL TYPE) <u>PB-4</u> (LEVER TYPE)
Automatic transmis- sion "Park" mecha- nism	Check that the lock release button on the selector lever operates properly and smoothly. On a fairly steep hill check that the vehicle is held securely with the selector lever in the P (Park) position without applying any brakes.	_

UNDER THE HOOD AND VEHICLE

Item		Reference page
Windshield washer fluid	Check that there is adequate fluid in the tank.	_
Engine coolant level	Check the coolant level when the engine is cold.	<u>CO-7</u>
Radiator and hoses	Check the front of the radiator and clean off any dirt, insects, leaves, etc., that may have accumulated. Make sure the hoses have no cracks, deformation, deterioration or loose connections.	_
Brake and clutch fluid levels	Make sure that the brake and clutch fluid levels are between the "MAX" and "MIN" lines on the reservoir(s).	<u>MA-30</u> MA-21
Battery	Check the fluid level in each cell. It should be between the "MAX" and "MIN" lines. Vehicles operated in high temperatures or under severe conditions require frequent checks of the battery fluid level.	<u>PG-3</u>
Engine drive belts	Make sure that no belt is frayed, worn, cracked or oily.	<u>MA-12</u>
Engine oil level	Check the level on the oil level gauge after parking the vehicle on a level spot and turning off the engine.	<u>LU-6</u>
Power steering fluid level and lines	Check the level on the dipstick with the engine off. Check the lines for improper attachment, leaks, cracks, etc.	<u>MA-32</u>
Exhaust system	Make sure there are no loose supports, cracks or holes. If the sound of the exhaust seems unusual or there is a smell of exhaust fumes, immediately locate the trouble and correct it.	<u>MA-20</u>
Underbody	The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these sub- stances, otherwise rust will form on the floor pan, frame, fuel lines and around the exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, being careful to clean those areas where mud and dirt can easily accumulate.	_
Fluid leaks	Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks or gasoline fumes are evident, check for the cause and correct it immediately.	_

PERIODIC MAINTENANCE

Introduction of Periodic Maintenance

INFOID:000000004237883

Two different maintenance schedules are provided, and should be used, depending upon the conditions in which the vehicle is mainly operated. After 60,000 miles (96,000 km) or 48 months, continue the periodic maintenance at the same mileage/time intervals.

Schedule 1	 Follow Periodic Maintenance Schedule 1 if the driving habits frequently include one or more of the following driving conditions: Repeated short trips of less than 5 miles (8 km). Repeated short trips of less than 10 miles (16 km) with outside temperatures remaining below freezing. Operating in hot weather in stop-and-go "rush hour" traffic. Extensive idling and/or low speed driving for long distances, such as police, taxi or door-to-door delivery use. Driving in dusty conditions. Driving on rough, muddy, or salt spread roads. Towing a trailer, using a camper or a car-top carrier. 	Emission Control Sys- tem Maintenance Chassis and Body Maintenance	<u>MA-6</u>
Schedule 2	Follow Periodic Maintenance Schedule 2 if none of driving conditions shown in Schedule 1 apply to the driving habits.	Emission Control Sys- tem Maintenance Chassis and Body Maintenance	<u>MA-8</u>

Schedule 1

NOTE:

(1) After 60,000 miles (96,000 km) or 48 months, inspect every 15,000 miles (24,000 km) or 12 months. Replace the drive belts if found damaged or if the auto belt tensioner reading reaches the maximum limit.

(2) If operating mainly in dusty conditions, more frequent maintenance may be required.

(3) Maintenance-free item. For service procedures, refer to FL section.

(4) After 60,000 miles (96,000 km) or 48 months, replace every 30,000 miles (48,000 km) or 24 months.

(5) Periodic maintenance is not required. However, if valve noise increases, inspect valve clearance.

* Maintenance items and intervals with "*" are recommended by INFINITI for reliable vehicle operation. The owner need not perform such maintenance in order to maintain the emission warranty or manufacturer recall liability. Other maintenance items and intervals are required.

Fuel recom	mendation		_	_		Refer to GI-31, "Fuel".

*1: For further details, see "Engine Oil Recommendation".

*2: NISSAN recommends Genuine NISSAN Ester Engine Oil available an INFINITI dealer.

*3: Using automatic transmission fluid other than Genuine NISSAN Matic S ATF will cause deterioration in driveability and automatic transmission durability, and may damage the automatic transmission, which is not covered by the INFINITI new vehicle limited warranty.

*4: For hot climates, viscosity SAE 90 is suitable for ambient temperatures above 0°C (32°F).

*5: See an INFINITI dealer for service for synthetic oil.

*6: Using transfer fluid other than Genuine NISSAN Matic J ATF will cause deterioration in driveability and transfer durability, and may damage the transfer, which is not covered by the INFINITI new vehicle limited warranty.

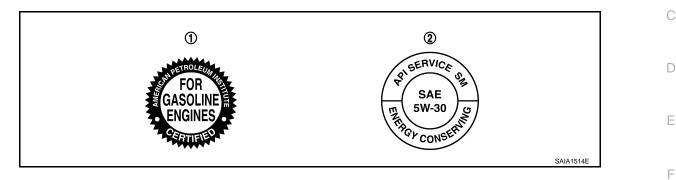

*7: DEXRON™ VI type ATF or Canada NISSAN Automatic Transmission Fluid may also be used.

*8: Available in mainland U.S.A. through an INFINITI dealer.

*9: The fluid capacity is the reference value.

Engine Oil Recommendation

NISSAN recommends the use of an energy conserving oil in order to improve fuel economy. Select only engine oils that meet the American Petroleum Institute (API) certification and International Lubricant Standardization and Approval Committee (ILSAC) certification and SAE viscosity standard. These oils have the API certification mark on the front of the container. Oils which do not have the specified quality label should not be used as they could cause engine damage.

1. API certification mark 2. API service symbol

Anti-Freeze Coolant Mixture Ratio

The engine cooling system is filled at the factory with a high-quality, year-round, anti-freeze coolant solution. The anti-freeze solution contains rust and corrosion inhibitors. Therefore, additional cooling system additives are not necessary.

CAUTION:

When adding or replacing coolant, be sure to use only Genuine NISSAN Long Life Antifreeze/ Coolant or equivalent with the proper mixture ratio of 50% anti-freeze and 50% demineralized water/distilled water.

Other types of coolant solutions may damage your cooling system.

Demineralized water or	Anti-freeze	side re down to	
distilled water		°F	°C
50%	50%	-30	-35

Drive belt

- When new drive belt is installed, the indicator (notch on fixed side) should be within the range (B) in the figure.
- Visually check the entire drive belt for wear, damage or crack.
- If the indicator (notch on fixed side) is out of the possible use range or belt is damaged, replace drive belt.

DRIVE BELT : Tension Adjustment

Refer to <u>MA-35, "DRIVE BELTS : Drive Belt"</u>. ENGINE COOLANT

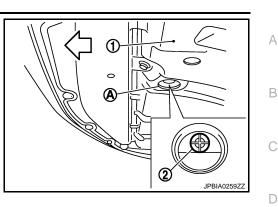

ENGINE COOLANT : Draining

WARNING:

- To avoid being scalded, never change engine coolant when the engine is hot.
- Wrap a thick cloth around radiator cap and carefully remove radiator cap. First, turn radiator cap a quarter of a turn to release built-up pressure. Then turn radiator cap all the way.

< PERIODIC MAINTENANCE >

- 1. Open radiator drain plug (2) at the bottom of radiator, and then remove radiator cap.
 - : Engine under cover 1
 - А : Radiator drain plug hole

INFOID:000000004639288

When draining all of engine coolant in the system, open water drain plugs on cylinder block. Refer to EM-79, "Setting".

- Remove reservoir tank if necessary, and drain engine coolant and clean reservoir tank before installing.
- 3. Check drained engine coolant for contaminants such as rust, corrosion or discoloration. If contaminated, flush the engine cooling system. Refer to MA-15, "ENGINE COOLANT : Flushing".

ENGINE COOLANT : Refilling

- Remove air cleaner case (LH). Refer to EM-27, "Exploded View". 1.
- Install reservoir tank if removed, and radiator drain plug. 2. **CAUTION:** Be sure to clean drain plug and install with new O-ring.

: Refer to CO-13, "Exploded View". Tightening torque

If water drain plugs on cylinder block are removed, close and tighten them. Refer to EM-122, "Disassembly and Assembly".

- Check that each hose clamp has been firmly tightened. 3.
- Remove air relief plug (2) on radiator left side. 4.
 - 1 : Reservoir tank
 - 3 : Engine cover
 - ⟨□ : Vehicle front

Κ Ø Μ JPBIA0260ZZ Ν Œ 0

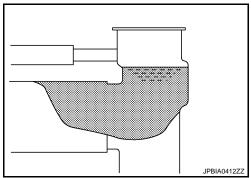

- Remove air relief plug (1) on heater hose. 5.
 - 2 : Heater hose
 - : Vehicle front

JPBIA0104Z

< PERIODIC MAINTENANCE >

- 6. Fill radiator, and reservoir tank if removed, to specified level.
 - Pour engine coolant through engine coolant filler neck slowly of less than 2ℓ (2-1/8 US qt, 1-3/4 Imp qt) a minute to allow air in system to escape.
 - Use Genuine NISSAN Long Life Antifreeze/Coolant or equivalent mixed with water (distilled or demineralized). Refer to MA-10, "Fluids and Lubricants".

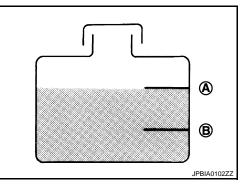

Engine coolant capacity (With reservoir tank at "MAX" level) : Refer to <u>MA-35, "EN-</u> <u>GINE COOLANT :</u> <u>Periodical Maintenance</u> <u>Specification"</u>.

Reservoir tank engine coolant capacity:Refer to MA-35, "ENGINE COOLANT :(At "MAX" level)Periodical Maintenance Specification"

- A : MAX
- B : MIN
- 7. When engine coolant overflows air relief hole on radiator, install air relief plug with new O-ring.

Tightening torque : Refer to CO-13, "Exploded View".

- 8. Repeat step 6.
- 9. When engine coolant overflows air relief hole on heater hose, install air relief plug with new O-ring. Then refill radiator with engine coolant.

• : 1.2 N·m (0.12 kg-m, 11 in-lb)

- 10. Install air cleaner case (LH). Refer to EM-27, "Exploded View".
- 11. Install radiator cap.
- 12. Warm up engine until opening thermostat. Standard for warming-up time is approximately 10 minutes at 3,000 rpm.
 - Check thermostat opening condition by touching radiator hose (lower) to see a flow of warm water. CAUTION:

Watch water temperature gauge so as not to overheat engine.

- 13. Stop the engine and cool down to less than approximately 50°C (122°F).
 - Cool down using fan to reduce the time.
 - If necessary, refill radiator up to filler neck with engine coolant.
- 14. Refill reservoir tank to "MAX" level line with engine coolant.
- 15. Repeat steps 11 through 14 two or more times with radiator cap installed until engine coolant level no longer drops.
- 16. Check cooling system for leakage with engine running.
- 17. Warm up the engine, and check for sound of engine coolant flow while running engine from idle up to 3,000 rpm with heater temperature controller set at several position between "COOL" and "WARM".
 Sound may be noticeable at heater unit.
- 18. Repeat step 17 three times.
- 19. If sound is heard, bleed air from cooling system by repeating step 6, and steps from 11 to 18 until engine coolant level no longer drops.
- 20. Check that the reservoir tank cap is tightened.

Revision: 2009 October

ENGINE COOLANT : Flushing

< PERIODIC MAINTENANCE >

Install reservoir tank if removed, and radiator drain plug. 1. CAUTION: Be sure to clean drain plug and install with new O-ring.

: Refer to CO-13, "Exploded View". **Tightening torque**

If water drain plugs on cylinder block are removed, close and tighten them. Refer to EM-121, С "Exploded View".

2. Remove air relief plug (1) on heater hose (2).

INSTALLATION Installation is the reverse order of removal.

SPARK PLUG : Inspection

INSPECTION AFTER REMOVAL Use the standard type spark plug for normal condition.

> Spark plug (Standard type) : Refer to <u>MA-35, "SPARK PLUG : Spark</u> Plug".

CAUTION:

- Never drop or shock spark plug.
- Never use a wire brush for cleaning.
- If plug tip is covered with carbon, use spark plug cleaner to clean.

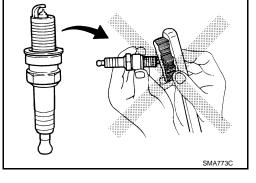

Cleaner air pressure

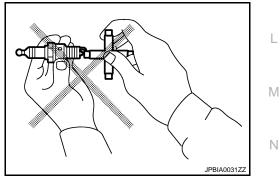

: Less than 588 kPa (6 kg/cm², 85 psi)

Cleaning time

: Less than 20 seconds

EVAP VAPOR LINES

EVAP VAPOR LINES : Inspection

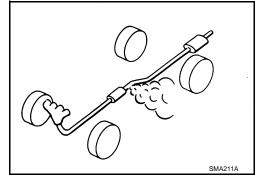

- 1. Visually inspect EVAP vapor lines for improper attachment and for cracks, damage, loose connections, MA chafing and deterioration.
- Inspect fuel tank filler cap vacuum relief valve for clogging, sticking, etc. Refer to <u>EC-615</u>, "Inspection".

CHASSIS MAINTENANCE EXHAUST SYSTEM

EXHAUST SYSTEM : Inspection

Check exhaust pipes, muffler and mounting for improper attachment, leaks, cracks, damage or deterioration.

• If anything is found, repair or replace damaged parts.

GEAR OIL

GEAR OIL : Inspection

LEAKAGE

Make sure that gear oil is not leaking from transmission or around it.

LEVEL

- 1. Remove filler plug (1).
- Check oil level from filler plug mounting hole as shown in the figure.

CAUTION: Never start engine while checking oil level.

Set a gasket on filler plug and then install it to transmission case.
 CAUTION:

Never reuse gasket.

4. Tighten filler plug to the specified torque. Refer to <u>TM-30</u>, <u>"Exploded View"</u>.

GEAR OIL : Draining

- 1. Start the engine and let it run to warm up transmission.
- 2. Stop the engine. Remove drain plug and then drain gear oil.
- 3. Set a gasket on drain plug and install it to transmission case. CAUTION:

Never reuse gasket.

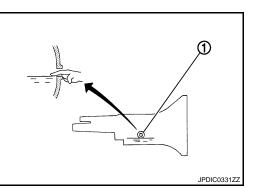

Tighten drain plug to the specified torque. Refer to <u>TM-30, "Exploded View"</u>.

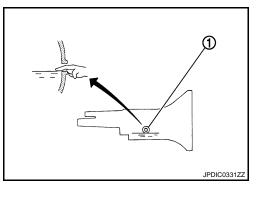

GEAR OIL : Refilling

1. Remove filler plug (1). Fill with new gear oil to transmission as shown in the figure.

Oil grade and viscosity: Refer to MA-10, "Fluids and
Lubricants".Oil capacity: Refer to TM-98, "General
Specifications".

2. After refilling gear oil, check oil level. Refer to <u>MA-20, "GEAR</u> <u>OIL : Inspection"</u>.

MA

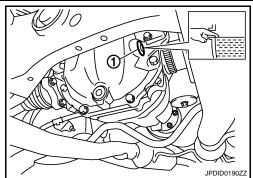

< PERIODIC MAINTENANCE >

2. When inner and outer unbalance values are shown on the tire balance machine indicator, multiply outer unbalance value by 5/3 to determine balance weight that should be used. Select the outer balance weight with a value closest to the calculated value above and install in to the designated outer position of, or at the designated angle in relation to the road wheel.

CAUTION:

- Never install the inner balance weight before installing the outer balance weight.
- Before installing the balance weight, be sure to clean the mating surface of the road wheel.
- a. Indicated un balance value \times 5/3 = balance weight to be installed

Calculation example:

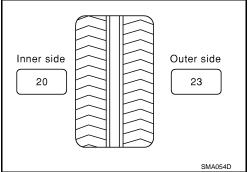

23 g (0.81 oz) \times 5/3 = 38.33 g (1.35 oz) \Rightarrow 37.5 g (1.32 oz) balance weight (closer to calculated balance weight value)

NOTE:

Note that balance weight value must be closer to the calculated balance weight value.

Example:

 $\begin{array}{c} 36.2 \Rightarrow 35 \text{ g} (1.23 \text{ oz}) \\ 36.3 \Rightarrow 37.5 \text{ g} (1.32 \text{ oz}) \end{array}$

- b. Installed balance weight in the position.
 - When installing balance weight (1) to road wheels, set it into the grooved area (A) on the inner wall of the road wheel as shown in the figure so that the balance weight center (B) is aligned with the tire balance machine indication position (angle)(C).

CAUTION:

- Always use genuine NISSAN adhesion balance weights.
- Balance weights are non-reusable; always replace with new ones.
- Never install more than three sheets of balance weight.

- Adhesion weight
 Adhesion weight
 Wheel balancer indication position (angle)
 PEIA0033E
- c. If calculated balance weight value exceeds 50 g (1.76 oz), install two balance weight sheets in line with each other as shown in the figure.
 CAUTION:

Never install one balance weight sheet on top another.

- 3. Start tire balance machine again.
- Install drive-in balance weight on inner side of road wheel in the tire balance machine indication position (angle).
 CAUTION:

Never install more than two balance weight.

- 5. Start tire balance machine. Make sure that inner and outer residual unbalance values are 5 g (0.17 oz) each or below.
- 6. If either residual unbalance value exceeds 5 g (0.17 oz), repeat installation procedures.

Safety Device Preventing from Being Incorrectly installed

FRONT BRAKE DISC ROTOR AND FRONT WHEEL

• Front and rear wheel size for this model differs, therefore special pin (1) is adopted to the front brake disc rotor (2). And a hole (3) that matches to this pin is adopted to the front wheel (4) (the rear wheel does not have this wheel). This structure prevents the rear wheel from being mistakenly installed on the front.

< PERIODIC MAINTENANCE >

 Regarding spare tire (for emergency) wheel, wrong assembly protection pin through hole (1) has been set in addition to regular bolt holes (2) in order to enable installation to front wheel.
 NOTE:

Protection pin through hole of 18 inch spare wheel is non-through type.

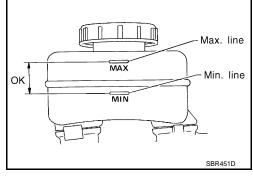

BRAKE FLUID LEVEL AND LEAKS

BRAKE FLUID LEVEL AND LEAKS : Inspection

• If fluid level is extremely low, check brake system for leaks.

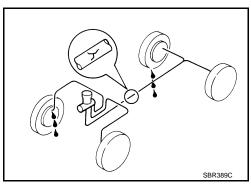

INFOID:000000004237928

BRAKE LINES AND CABLES

BRAKE LINES AND CABLES : Inspection

• Check brake fluid lines and parking brake cables for improper attachment, leaks, chafing, abrasions, deterioration, etc.

BRAKE FLUID

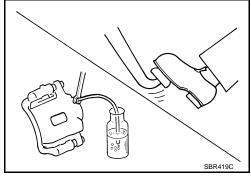

BRAKE FLUID : Changing

- 1. Drain brake fluid from each bleed valve.
- Refill until new brake fluid comes out from each bleed valve. Use same procedure as in bleeding hydraulic system to refill brake fluid.

Refer to <u>BR-11</u>, "Bleeding Brake System".

- Refill with recommended Genuine NISSAN Super Heavy Duty Brake Fluid or equivalent DOT 3 (US FMVSS No. 116). Refer to <u>MA-10, "Fluids and Lubricants"</u>.
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas.

INFOID:000000004237929

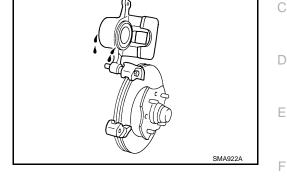

DISC BRAKE : Inspection

DISC ROTOR

Check condition, wear, and damage.

CALIPER

• Check for leakage.

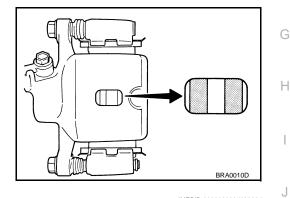

INFOID:000000004237931

А

В

BRAKE PAD

• Check for wear or damage.

DISC BRAKE : Front Disc Brake

2 PISTON TYPE

		Unit. mini (m)	
	Item	Limit

STEERING GEAR AND LINKAGE

STEERING GEAR AND LINKAGE : Inspection

STEERING GEAR

- Check gear housing and boots for looseness, damage and grease leakage.
- Check connection with steering column for looseness.

STEERING LINKAGE

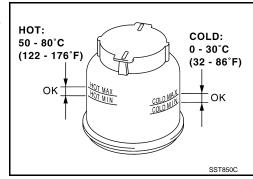

Check ball joint, dust cover and other component parts for looseness, wear, damage and grease leakage. POWER STEERING FLUID AND LINES

POWER STEERING FLUID AND LINES : Inspection

Check fluid level in reservoir tank with engine off.

Use "HOT" range at fluid temperatures of 50 to 80°C (122 to 176°F) or "COLD" range at fluid temperatures of 0 to 30°C (32 to 86°F). CAUTION:

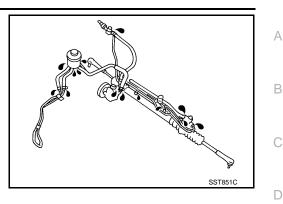

- Do not overfill.
- Recommended fluid is Genuine NISSAN PSF or equivalent. Refer to <u>MA-10, "Fluids and Lubricants"</u>.

INFOID:000000004237934

< PERIODIC MAINTENANCE >

- Check lines for improper attachment, leaks, cracks, damage, loose connections, chafing and deterioration.
- Check rack boots for accumulation of power steering fluid.

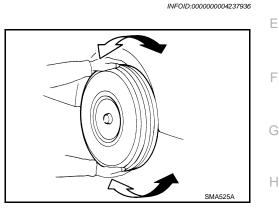

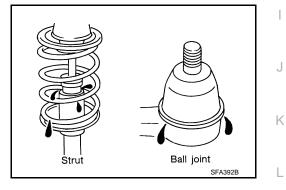

AXLE AND SUSPENSION PARTS

AXLE AND SUSPENSION PARTS : Inspection

Check front and rear axle and suspension parts for excessive play, cracks, wear or other damage.

- Shake each wheel to check for excessive play.
- Check wheel bearings for smooth operation.
- Check axle and suspension nuts and bolts for looseness.
- Check strut (shock absorber) for oil leakage or other damage.
- Check suspension ball joint for grease leakage and ball joint dust cover for cracks or other damage.

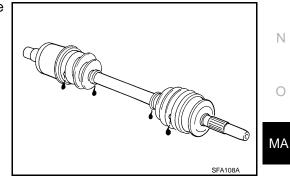

DRIVE SHAFT

DRIVE SHAFT : Inspection

Check boot and drive shaft for cracks, wear, damage and grease leakage.

Μ

BODY MAINTENANCE

LOCKS, HINGES AND HOOD LATCH

LOCKS, HINGES AND HOOD LATCH : Lubricating

INFOID:000000004237938

For hood lock illustration. Refer to <u>DLK-218, "HOOD ASSEMBLY : Exploded View"</u> and <u>DLK-221, "HOOD LOCK CONTROL : Exploded View"</u>.

For door lock illustration. Refer to <u>DLK-234, "FRONT DOOR LOCK : Exploded View"</u> and <u>DLK-237, "REAR</u> <u>DOOR LOCK : Exploded View"</u>.

For trunk lid lock illustration. Refer to DLK-243, "TRUNK LID LOCK : Exploded View".

SEAT BELT, BUCKLES, RETRACTORS, ANCHORS AND ADJUSTERS

SEAT BELT, BUCKLES, RETRACTORS, ANCHORS AND ADJUSTERS : Inspection

For front seat belt illustration. Refer to <u>SB-6, "SEAT BELT RETRACTOR : Exploded View"</u>. For rear seat belt illustration. Refer to <u>SB-11, "SEAT BELT RETRACTOR : Exploded View"</u>. CAUTION:

 After any collision, inspect all seat belt assemblies, including retractors and other attached hardwares (I.e. anchor bolt, guide rail set). Nissan recommends to replace all seat belt assemblies in use during a collision, unless not damaged and properly operating after minor collision. Also inspect seat belt assemblies not in use during a collision, and replace if damaged or improperly

Also inspect seat belt assemblies not in use during a collision, and replace if damaged or improperly operating.

Seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal collision where the driver and passenger air bags are deployed.

- If any component of seat belt assembly is questionable, do not repair. Replace as seat belt assembly.
- If webbing is cut, frayed, or damaged, replace belt assembly.
- Never oil tongue and buckle.
- Use a genuine NISSAN seat belt assembly.

For details, refer to <u>SB-4</u>, "<u>SEAT BELT RETRACTOR</u> : <u>Inspection</u>", <u>SB-9</u>, "<u>SEAT BELT RETRACTOR</u> : <u>Inspection</u>" in SB section.

- Check anchors for loose mounting
- Check belts for damage
- Check retractor for smooth operation
- · Check function of buckles and tongues when buckled and released
