< PRECAUTION > PRECAUTION PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

WARNING:

Always observe the following items for preventing accidental activation.

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see "SRS AIR BAG".
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

WARNING:

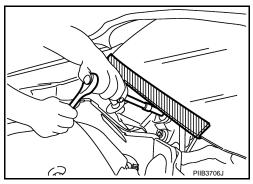

Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

Precaution for Procedure without Cowl Top Cover

INFOID:0000000010990191

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc to prevent damage to windshield.

Precautions for Suspension

- When installing rubber bushings, the final tightening must be carried out under unladen conditions with tires on ground. Spilled oil might shorten the life of rubber bushings. Be sure to wipe off any spilled oil.
- Unladen conditions mean that fuel, engine coolant and lubricant are full. Spare tire, jack, hand tools and mats are in designated positions.
- After servicing suspension parts, be sure to check wheel alignment.
- Self-lock nuts are not reusable. Always use new ones when installing. Since new self-lock nuts are pre-oiled, tighten as they are.

NOTE:

< PRECAUTION >

ECU may be active for several tens of seconds after the ignition switch is turned OFF. If the battery terminal is removed before ECU stops, then a DTC detection error or ECU data corruption may occur.

• When removing the 12V battery terminal, turn OFF the ignition

Precautions for Removing Battery Terminal

switch and wait at least 30 seconds.

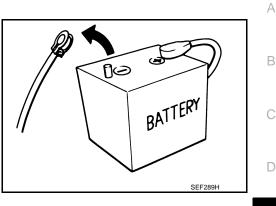

· For vehicles with the 2-batteries, be sure to connect the main battery and the sub battery before turning ON the ignition switch. NOTE:

If the ignition switch is turned ON with any one of the terminals of main battery and sub battery disconnected, then DTC may be detected.

 After installing the 12V battery, always check "Self Diagnosis Result" of all ECUs and erase DTC. NOTE:

FSU-5

The removal of 12V battery may cause a DTC detection error.

Special Service Tool

INFOID:000000010990193

The actual shapes of TechMate tools may differ from those of special service tools illustrated here.

Tool number (TenchMate No.) Tool name		Description
ST35652000 (–) Shock absorber attachment	ZZA0807D	Disassembling and assembling shock absorber
ST3127S000 (J-25765-A) Preload gauge	ZZA0806D	Measuring rotating torque of ball joint

Commercial Service Tool

Tool name		Description
Power tool		Loosening bolts and nuts
	PBIC0190E	
Spring compressor		Removing and installing coil spring
	STRATTICE STRATE	
	S-NT717	

PERIODIC MAINTENANCE FRONT SUSPENSION ASSEMBLY

Inspection

COMPONENT PART

Check the mounting conditions (looseness, backlash) of each component and component conditions (wear, damage) are normal.

Ball Joint Axial End Play

- 1. Set front wheels in a straight-ahead position.
- 2. Move axle side of transverse link and upper link in the axial direction by hand. Check there is no end play.

Standard

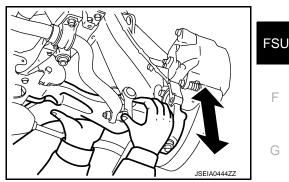

Axial end play : Refer to FSU-24, "Ball Joint".

CAUTION:

- Never depress brake pedal when measuring.
- Never perform with tires on level ground.
- Be careful not to damage ball joint boot. Never damage the installation position by applying excessive force.

SHOCK ABSORBER

Check for oil leakage, damage and replace if malfunction is detected.

< PERIODIC MAINTENANCE >

WHEEL ALIGNMENT

Inspection

DESCRIPTION

CAUTION:

- Camber, caster, kingpin inclination angles cannot be adjusted.
- If camber, caster, or kingpin inclination angle is outside the standard, check front suspension parts for wear and damage. Replace suspect parts if a malfunction is detected.
- Kingpin inclination angle is reference value, no inspection is required.
- Measure wheel alignment under unladen conditions.

NOTE:

"Unladen conditions" means that fuel, engine coolant, and lubricant are full. Spare tire, jack, hand tools and mats are in designated positions.

PRELIMINARY CHECK

Check the following:

- Tires for improper air pressure and wear. Refer to WT-52, "Tire Air Pressure".
- Road wheels for runout.
- Wheel bearing axial end play. Refer to FAX-6, "Inspection".
- Transverse link or upper link ball joint axial end play. Refer to FSU-7, "Inspection".
- Shock absorber operation.
- Each mounting part of axle and suspension for looseness and deformation.
- Each of suspension member, shock absorber, upper link and transverse link for cracks, deformation and other damage.
- Vehicle height (posture).

GENENRAL INFORMATION AND RECOMMENDATIONS

- A four-wheel thrust alignment should be performed.
- This type of alignment is recommended for any NISSAN/INFINITI vehicle.
- The four-wheel "thrust" process helps ensure that the vehicle is properly aligned and the steering wheel is centered.
- The alignment rack itself should be capable of accepting any NISSAN/INFINITI vehicle.
- The rack should be checked to ensure that it is level.
- Make sure the machine is properly calibrated.
- Your alignment equipment should be regularly calibrated in order to give correct information.
- Check with the manufacturer of your specific equipment for their recommended Service/Calibration Schedule.

ALIGNMENT PROCESS

IMPORTANT:

Use only the alignment specifications listed in this Service Manual.

- When displaying the alignment settings, many alignment machines use "indicators": (Green/red, plus or minus, Go/No Go). Never use these indicators.
- The alignment specifications programmed into your machine that operate these indicators may not be correct.
- This may result in an ERROR.
- Most camera-type alignment machines are equipped with both "Rolling Compensation" method and optional "Jacking Compensation" method to "compensate" the alignment targets or head units. "Rolling Compensation" is the preferred method.
- If using the "Rolling Compensation" method, after installing the alignment targets or head units, push or pull on the rear wheel to move the vehicle. **Do not push or pull on the vehicle body.**
- If using the "Jacking Compensation" method, after installing the alignment targets or head units, raise the vehicle and rotate the wheels 1/2 turn both ways.
 NOTE:
- Do not use the "Rolling Compensation" method if you are using sensor-type alignment equipment.
- Follow all instructions for the alignment machine you're using for more information.

Adjustment

TOE-IN

WHEEL ALIGNMENT

< PERIODIC MAINTENANCE > [2W	/D]
 Loosen the steering outer socket, and then adjust the length using steering inner socket. 	
Standard	A
Toe-in : Refer to FSU-24, "Wheel Alignment".	_
CAUTION:	В
 Always evenly adjust both toe-in alternately and adjust the difference between the left and right the standard. 	t to
 Always fix the steering inner socket when tightening the steering outer socket. 	С
 After toe-in adjustment, adjust neutral position of steering angle sensor. Refer to <u>BRC-8, "ADJUSTMENT</u> <u>STEERING ANGLE SENSOR NEUTRAL POSITION : Special Repair Requirement"</u>. 	<u>OF</u>

Stabilizer clamp 11. Stabilizer bushing 12. Stabilizer connecting rod 13. Stabilizer bar 14. Cotter pin 15. Steering knuckle 16. Upper link 17. Stopper rubber 18. Shock absorber Refer to GI-4, "Components" for symbols in the figure. Removal and Installation INFOID:000000010990199 D REMOVAL Remove tires with power tool. 2. Remove harness of the wheel sensor from shock absorber. Refer to BRC-112, "FRONT WHEEL SEN-FSU SOR : Exploded View". CAUTION: Never pull on wheel sensor harness. F Remove brake hose bracket. Refer to <u>BR-22, "FRONT : Exploded View"</u>. 4. Remove stabilizer connecting rod mounting nuts (lower side) with power tool. Remove stabilizer connecting rod mounting nuts (upper side) with power tool, and then remove stabilizer 5. connecting rod from transverse link. Separate upper link from steering knuckle. Remove mounting nuts of shock absorber mounting bracket, then remove shock absorber assembly. Н INSTALLATION Note the following, and install in the reverse order of removal. Never tap on the ball joint cap of the stabilizer connecting rod with a hammer or a similar item when inserting the stabilizer connecting rod into the transverse link. Perform final tightening of bolts and nuts at the shock absorber lower side (rubber bushing), under unladen conditions with tires on level ground. Disassembly and Assembly INFOID:000000010990200 DISASSEMBLY Κ CAUTION: Never damage shock absorber piston rod when removing components from shock absorber. Install shock absorber attachment (A) [SST: ST35652000 (L)] to shock absorber and secure it in a vise. CAUTION: When installing the shock absorber attachment to shock M absorber, wrap a shop cloth around shock absorber to protect it from damage.

JPEIA0006ZZ

Ν

< REMOVAL AND INSTALLATION >

Using a spring compressor (A) (commercial service tool), compress coil spring between rubber seat and shock absorber until coil spring with a spring compressor is free.
 CAUTION:

Be sure a spring compressor is securely attached coil spring. Compress coil spring.

- 3. Make sure coil spring with a spring compressor between rubber seat and shock absorber is free and then remove piston rod lock nut while securing the piston rod tip so that piston rod does not turn.
- 4. Remove mounting seal, shock absorber mounting bracket, rubber seat, bound bumper from shock absorber.
- Remove coil spring with a spring compressor (commercial service tool), and then gradually release a spring compressor.
 CAUTION:

Loosen while making sure coil spring attachment position does not move.

6. Remove the shock absorber attachment [SST: ST35652000 (–)] from shock absorber.

ASSEMBLY

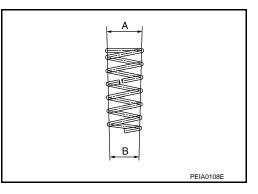

Install shock absorber attachment [SST: ST35652000 (–)] to shock absorber and secure it in a vise.
 CAUTION:

When installing the shock absorber attachment to shock absorber, wrap a shop cloth around shock absorber to protect it from damage.

2. Compress coil spring using a spring compressor (commercial service tool), and install it onto shock absorber.

CAUTION:

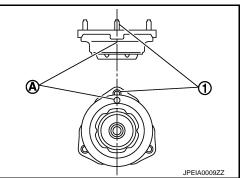

- Install with the large-diameter side (A) facing up and the small-diameter side (B) facing down.
- Be sure a spring compress or is securely attached to coil spring. Compress coil spring.

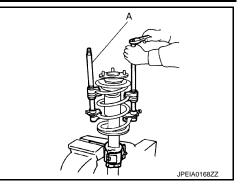

Install the shock absorber mounting bracket and rubber seat.
 CAUTION:
 Align the point mark (A) to the stud balt (1) position who

Align the paint mark (A) to the stud bolt (1) position when assembling.

 Apply soapy water to bound bumper.
 CAUTION: Never use machine oil.

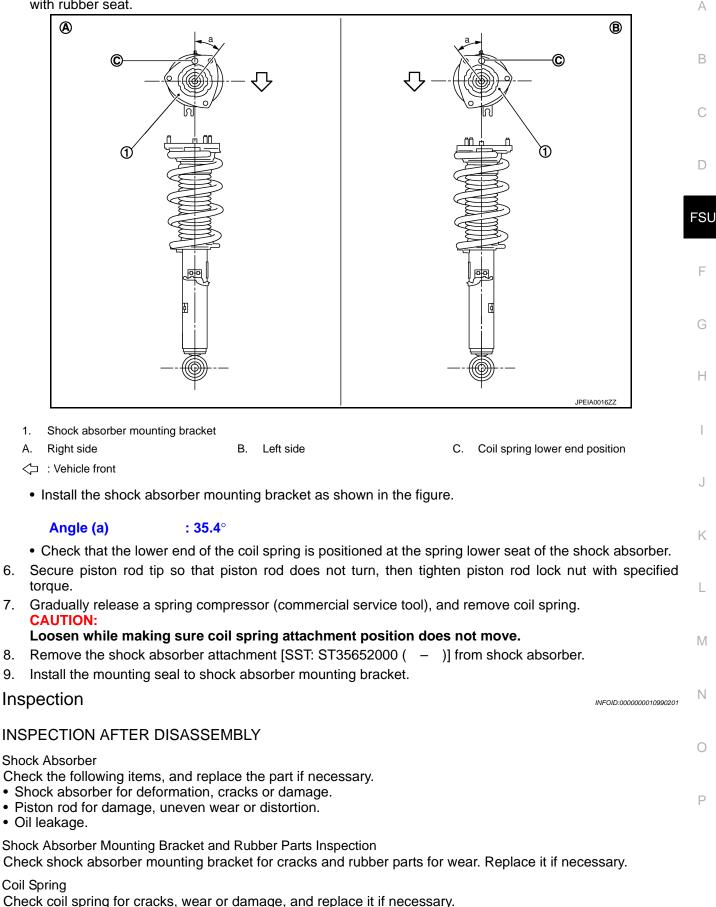

[2WD]

< REMOVAL AND INSTALLATION >

5. Insert bound bumper into shock absorber mounting bracket, and then install it to shock absorber together with rubber seat.

FSU-13

[2WD]

< REMOVAL AND INSTALLATION >

INSPECTION AFTER INSTALLATION

- Check wheel sensor harness for proper connection. Refer to <u>BRC-112, "FRONT WHEEL SENSOR :</u> <u>Exploded View"</u>.
- Check wheel alignment. Refer to FSU-8, "Inspection".
- Adjust neutral position of steering angle sensor. Refer to <u>BRC-8</u>, "ADJUSTMENT OF STEERING ANGLE <u>SENSOR NEUTRAL POSITION : Special Repair Requirement"</u>.

Disposal

INFOID:000000010990202

- 1. Set shock absorber horizontally with the piston rod fully extended.
- Drill 2 3 mm (0.08 0.12 in) hole at the position () from top as shown in the figure to release gas gradually.
 CAUTION:
 - Wear eye protection (safety glasses).
 - Wear gloves.
 - Be careful with metal chips or oil blown out by the compressed gas.

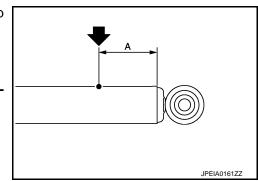

NOTE:

- Drill vertically in this direction (+).
- Directly to the outer tube avoiding brackets.
- The gas is clear, colorless, odorless, and harmless.

A : 20 – 30 mm (0.79 – 1.18 in)

3. Position the drilled hole downward and drain oil by moving the piston rod several times. CAUTION:

Dispose of drained oil according to the law and local regulations.

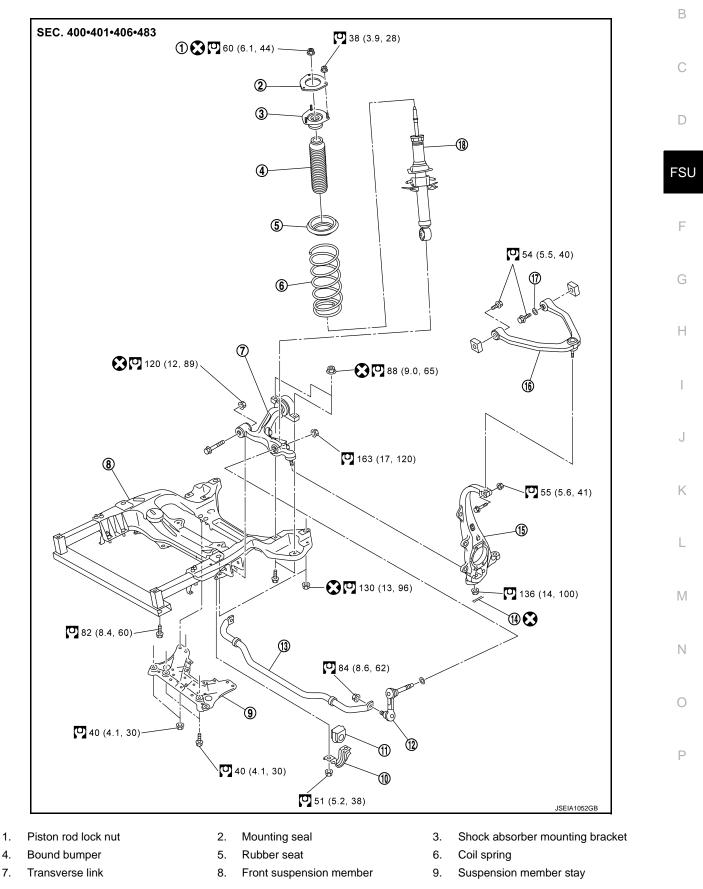

TRANSVERSE LINK

- 10. Stabilizer clamp
- 13. Stabilizer bar
- 16. Upper link

- 11. Stabilizer bushing
- 14. Cotter pin
- 17. Stopper rubber

Refer to <u>GI-4, "Components"</u> for symbols in the figure.

Removal and Installation

REMOVAL

- 1. Remove tires with power tool.
- 2. Remove under cover with power tool.
- 3. Remove shock absorber. Refer to FSU-10, "Exploded View".
- 4. Remove steering outer socket from steering knuckle. Refer to ST-21, "2WD : Exploded View".
- 5. Remove transverse link from steering knuckle.
- 6. Set suitable jack under transverse link.
- 7. Remove mounting bolts and nuts, and then remove transverse link.

INSTALLATION

Note the following, and install in the reverse order of removal.

- Never tap on the ball joint cap of the stabilizer connecting rod with a hammer or a similar item when inserting the stabilizer connecting rod into the transverse link.
- Perform final tightening of bolts and nuts at the front suspension member installation and shock absorber lower side (rubber bushing), under unladen conditions with tires on level ground.
- Never reuse cotter pin.

Inspection

INSPECTION AFTER REMOVAL

Appearance

Check the following items, and replace the part if necessary.

- Transverse link and bushing for deformation, cracks or damage.
- Ball joint boot for cracks or other damage, and also for grease leakage.

Ball Joint Inspection

Manually move ball stud to confirm it moves smoothly with no binding.

Swing Torque Inspection

NOTE:

Before measurement, move ball stud at least ten times by hand to check for smooth movement.

 Hook a spring balance (A) at cotter pin mounting hole. Confirm spring balance measurement value is within specifications when ball stud begins moving.

Standard

Swing torque

: Refer to <u>FSU-24, "Ball</u> <u>Joint"</u>.

- If it is outside the specified range, replace transverse link assembly.

Rotating Torque Inspection

Revision: 2014 June

- 12. Stabilizer connecting rod
- 15. Steering knuckle
- 18. Shock absorber

INFOID:000000010990204

INFOID-000000010990205

TRANSVERSE LINK

< REMOVAL AND INSTALLATION >

• Attach mounting nut to ball stud. Make sure that rotating torque is within specifications with a preload gauge (A) [SST: ST3127S000 (J-25765-A)].

Standard

Rotating torque : Refer to <u>FSU-24, "Ball</u> Joint".

- If it is outside the specified range, replace transverse link assembly.

Axial End Play Inspection

• Move tip of ball stud in axial direction to check for looseness.

Standard

Axial end play : Refer to FSU-24, "Ball

<u>Joint"</u>.

- If it is outside the specified range, replace transverse link assembly.

INSPECTION AFTER INSTALLATION

- Check wheel sensor harness for proper connection. Refer to <u>BRC-112, "FRONT WHEEL SENSOR :</u> <u>Exploded View"</u>.
- Check wheel alignment. Refer to FSU-8. "Inspection".
- Adjust neutral position of steering angle sensor. Refer to <u>BRC-8</u>, "ADJUSTMENT OF STEERING ANGLE <u>SENSOR NEUTRAL POSITION : Special Repair Requirement</u>".

< PRECAUTION > PRECAUTION PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

WARNING:

Always observe the following items for preventing accidental activation.

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see "SRS AIR BAG".
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

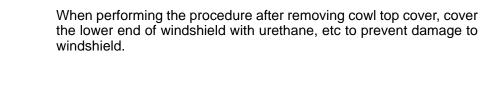

WARNING:

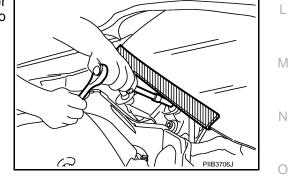

Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

Precaution for Procedure without Cowl Top Cover

INFOID:000000010990220

Precautions for Suspension

- When installing rubber bushings, the final tightening must be carried out under unladen conditions with tires on ground. Spilled oil might shorten the life of rubber bushings. Be sure to wipe off any spilled oil.
- Unladen conditions mean that fuel, engine coolant and lubricant are full. Spare tire, jack, hand tools and mats are in designated positions.
- After servicing suspension parts, be sure to check wheel alignment.
- Self-lock nuts are not reusable. Always use new ones when installing. Since new self-lock nuts are pre-oiled, tighten as they are.

А

В

FSU

Н

Κ

Precautions for Removing Battery Terminal

• When removing the 12V battery terminal, turn OFF the ignition switch and wait at least 30 seconds.

NOTE:

ECU may be active for several tens of seconds after the ignition switch is turned OFF. If the battery terminal is removed before ECU stops, then a DTC detection error or ECU data corruption may occur.

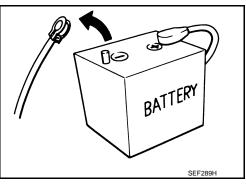

• For vehicles with the 2-batteries, be sure to connect the main battery and the sub battery before turning ON the ignition switch. **NOTE:**

If the ignition switch is turned ON with any one of the terminals of main battery and sub battery disconnected, then DTC may be detected.

After installing the 12V battery, always check "Self Diagnosis Result" of all ECUs and erase DTC.
 NOTE:

PRECAUTIONS

The removal of 12V battery may cause a DTC detection error.

PERIODIC MAINTENANCE FRONT SUSPENSION ASSEMBLY

Inspection

COMPONENT PART

Check the mounting conditions (looseness, backlash) of each component and component conditions (wear, damage) are normal.

Ball Joint Axial End Play

- 1. Set front wheels in a straight-ahead position.
- 2. Move axle side of transverse link and upper link in the axial direction by hand. Check there is no end play.

Standard

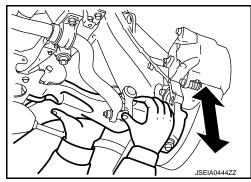

Axial end play : Refer to FSU-47, "Ball Joint".

CAUTION:

- Never depress brake pedal when measuring.
- Never perform with tires on level ground.
- Be careful not to damage ball joint boot. Never damage the installation position by applying excessive force.

SHOCK ABSORBER

Check for oil leakage, damage and replace if malfunction is detected.

< PERIODIC MAINTENANCE >

WHEEL ALIGNMENT

Inspection

DESCRIPTION

CAUTION:

- Camber, caster, kingpin inclination angles cannot be adjusted.
- If camber, caster, or kingpin inclination angle is outside the standard, check front suspension parts for wear and damage. Replace suspect parts if a malfunction is detected.
- Kingpin inclination angle is reference value, no inspection is required.
- Measure wheel alignment under unladen conditions.

NOTE:

"Unladen conditions" means that fuel, engine coolant, and lubricant are full. Spare tire, jack, hand tools and mats are in designated positions.

PRELIMINARY CHECK

Check the following:

- Tires for improper air pressure and wear. Refer to WT-52, "Tire Air Pressure".
- Road wheels for runout.
- Wheel bearing axial end play. Refer to FAX-15, "Inspection".
- Transverse link or upper link ball joint axial end play. Refer to FSU-30, "Inspection".
- Shock absorber operation.
- Each mounting part of axle and suspension for looseness and deformation.
- Each of suspension member, shock absorber, upper link and transverse link for cracks, deformation and other damage.
- Vehicle height (posture).

GENENRAL INFORMATION AND RECOMMENDATIONS

- A four-wheel thrust alignment should be performed.
- This type of alignment is recommended for any NISSAN/INFINITI vehicle.
- The four-wheel "thrust" process helps ensure that the vehicle is properly aligned and the steering wheel is centered.
- The alignment rack itself should be capable of accepting any NISSAN/INFINITI vehicle.
- The rack should be checked to ensure that it is level.
- Make sure the machine is properly calibrated.
- Your alignment equipment should be regularly calibrated in order to give correct information.
- Check with the manufacturer of your specific equipment for their recommended Service/Calibration Schedule.

ALIGNMENT PROCESS

IMPORTANT:

Use only the alignment specifications listed in this Service Manual.

- When displaying the alignment settings, many alignment machines use "indicators": (Green/red, plus or minus, Go/No Go). Never use these indicators.
- The alignment specifications programmed into your machine that operate these indicators may not be correct.
- This may result in an ERROR.
- Most camera-type alignment machines are equipped with both "Rolling Compensation" method and optional "Jacking Compensation" method to "compensate" the alignment targets or head units. "Rolling Compensation" is the preferred method.
- If using the "Rolling Compensation" method, after installing the alignment targets or head units, push or pull on the rear wheel to move the vehicle. **Do not push or pull on the vehicle body.**
- If using the "Jacking Compensation" method, after installing the alignment targets or head units, raise the vehicle and rotate the wheels 1/2 turn both ways.
 NOTE:
- Do not use the "Rolling Compensation" method if you are using sensor-type alignment equipment.
- Follow all instructions for the alignment machine you're using for more information.

WHEEL ALIGNMENT

< PERIODIC MAINTENANCE >

• Loosen the steering outer socket, and then adjust the length using steering inner socket.

Standard

Toe-in : Refer to FSU-47, "Wheel Alignment".

CAUTION:

- Always evenly adjust both toe-in alternately and adjust the difference between the left and right to the standard.
- Always fix the steering inner socket when tightening the steering outer socket.
- After toe-in adjustment, adjust neutral position of steering angle sensor. Refer to <u>BRC-8</u>, "ADJUSTMENT OF <u>STEERING ANGLE SENSOR NEUTRAL POSITION : Special Repair Requirement</u>".

Revision: 2014 June

FRONT COIL SPRING AND SHOCK ABSORBER

< REMOVAL AND INSTALLATION >

- 1. Piston rod lock nut
- 4. Bound bumper
- 7. Shock absorber
- 10. Upper link
- 13. Transverse link
- 16. Stabilizer bushing
- 19. Front suspension member

Refer to GI-4, "Components" for symbols in the figure.

2.

5.

8.

Mounting seal

Shock absorber arm

Rubber seat

11. Steering knuckle

17. Stabilizer clamp

14. Stabilizer bar

Removal and Installation

REMOVAL

- 1. Remove tires with power tool.
- 2. Remove stabilizer connecting rod mounting nuts (upper side) with power tool, and then remove stabilizer connecting rod from transverse link.
- 3. Remove shock absorber mounting bolts and nuts (lower side) with power tool, and then remove shock absorber from transverse link.
- 4. Remove drive shaft. Refer to FAX-23, "Exploded View".
- 5. Separate upper link from steering knuckle.
- 6. Remove the mounting nuts of shock absorber mounting bracket, then remove shock absorber assembly.

INSTALLATION

Note the following, and install in the reverse order of removal.

CAUTION:

Never tap on the ball joint cap of the stabilizer connecting rod with a hammer or a similar item when inserting the stabilizer connecting rod into the transverse link.

• Perform final tightening of bolts and nuts at the shock absorber lower side (rubber bushing), under unladen conditions with tires on level ground.

FSU-34

Disassembly and Assembly

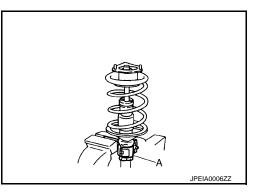

DISASSEMBLY

CAUTION:

Never damage shock absorber piston rod when removing components from shock absorber.

- 1. Remove the shock absorber arm from shock absorber.
- Install shock absorber attachment (A) [SST: ST35652000 ()] to shock absorber and secure it in a vise.
 CAUTION:

When installing the shock absorber attachment to shock absorber, wrap a shop cloth around shock absorber to protect it from damage.

- 3. Shock absorber mounting bracket
- 6. Coil spring
- 9. Stopper rubber
- 12. Cotter pin
- 15. Stabilizer connecting rod
- 18. Front cross bar

[AWD]

< REMOVAL AND INSTALLATION >

 Using a spring compressor (A) (commercial service tool), compress coil spring between rubber seat and shock absorber until coil spring with a spring compressor is free. CAUTION:

Be sure a spring compressor is securely attached coil spring. Compress coil spring

- 4. Make sure coil spring with a spring compressor between rubber seat and shock absorber is free and then remove piston rod lock nut while securing the piston rod tip so that piston rod does not turn.
- 5. Remove mounting seal, shock absorber mounting bracket, rubber seat, bound bumper from shock absorber.
- Remove coil spring with a spring compressor (commercial service tool), and then gradually release a spring compressor.
 CAUTION:

Loosen while making sure coil spring attachment position does not move.

7. Remove the shock absorber attachment [SST: ST35652000 (–)] from shock absorber.

ASSEMBLY

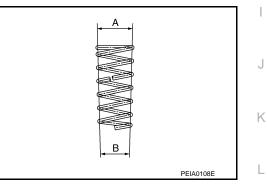

Install shock absorber attachment [SST: ST35652000 (–)] to shock absorber and secure it in a vise.
 CAUTION:

When installing the shock absorber attachment to shock absorber, wrap a shop cloth around shock absorber to protect it from damage.

2. Compress coil spring using a spring compressor (commercial service tool), and install it onto shock absorber.

CAUTION:

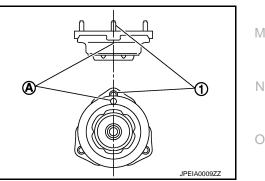

- Install with the large-diameter side (A) facing up and the small-diameter side (B) facing down.
- Be sure a spring compress or is securely attached to coil spring. Compress coil spring.

Install the shock absorber mounting bracket and rubber seat.
 CAUTION:

Align the paint mark (A) to the stud bolt (1) position when assembling.

 Apply soapy water to bound bumper.
 CAUTION: Never use machine oil.

< REMOVAL AND INSTALLATION >

5. Insert bound bumper into shock absorber mounting bracket, and then install it to shock absorber together with rubber seat.

- 1. Shock absorber mounting bracket
- A. Right side B. Left side

- \triangleleft : Vehicle front
- Install the shock absorber mounting bracket as shown in the figure.

Angle (a) : 35.4°

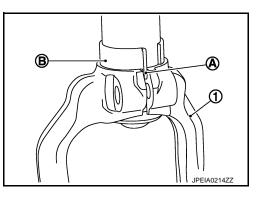

- Check that the lower end of the coil spring is positioned at the spring lower seat of the shock absorber.
- 6. Secure piston rod tip so that piston rod does not turn, then tighten piston rod lock nut with specified torque.
- 7. Gradually release a spring compressor (commercial service tool), and remove coil spring. CAUTION:

Loosen while making sure coil spring attachment position does not move.

- 8. Remove the shock absorber attachment [SST: ST35652000 ()] from shock absorber.
- 9. Install the shock absorber arm to shock absorber. CAUTION:

To install, align the shock absorber protrusion (A) with the groove of shock absorber arm (1) and press it all the way to the locating bracket (B).

10. Install the mounting seal to shock absorber mounting bracket.

TRANSVERSE LINK

< REMOVAL AND INSTALLATION >

 Attach mounting nut to ball stud. Make sure that rotating torque is within specifications with a preload gauge (A) [SST: 3127S000 (J-25765-A)].

Standard

Rotating torque : Refer to FSU-47, "Ball Joint".

- If it is outside the specified range, replace transverse link assembly.

Axial End Play Inspection

• Move tip of ball stud in axial direction to check for looseness.

Standard

Axial end play :Refer to FSU-47, "Ball Joint".

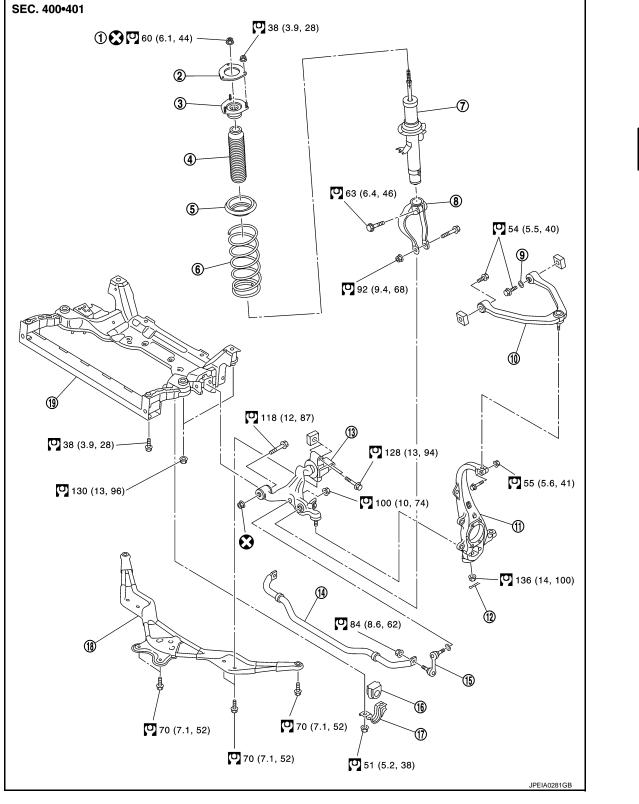

- If it is outside the specified range, replace transverse link assembly.

INSPECTION AFTER INSTALLATION

- 1. Check wheel sensor harness for proper connection. Refer to <u>BRC-112, "FRONT WHEEL SENSOR :</u> <u>Exploded View"</u>.
- 2. Check wheel alignment. Refer to FSU-31, "Inspection".
- 3. Adjust neutral position of steering angle sensor. Refer to <u>BRC-8. "ADJUSTMENT OF STEERING ANGLE</u> <u>SENSOR NEUTRAL POSITION : Special Repair Requirement"</u>.

- Stabilizer bushing
 Front suspension member

Refer to <u>GI-4, "Components"</u> for symbols in the figure.

Removal and Installation

REMOVAL

- 1. Remove tires from with power tool.
- 2. Remove shock absorber. Refer to <u>FSU-33, "Exploded View"</u>.
- 3. Remove mounting bolts and nuts with power tool, and then remove upper link from steering knuckle.
- 4. Remove mounting bolts and nuts, and then remove upper link and stopper rubber.

INSTALLATION

Note the following, and install in the reverse order of removal.

• Perform final tightening of bolts and nuts at the vehicle installation position (rubber bushing), under unladen conditions with tires on level ground.

Inspection

INSPECTION AFTER REMOVAL

Appearance

Check the following items, and replace the part if necessary.

- Upper link and bushing for deformation, cracks or damage.
- Ball joint boot for cracks or other damage, and also for grease leakage.

Ball Joint Inspection

Manually move ball stud to confirm it moves smoothly with no binding.

Swing Torque Inspection

NOTE:

Before measurement, move ball stud at least ten times by hand to check for smooth movement.

 Hook a spring balance (A) at cutout on ball stud. Confirm spring balance measurement value is within specifications when ball stud begins moving.

Standard

Swing torque

: Refer to FSU-47, "Ball Joint".

- If it is outside the specified range, replace upper link assembly.

• Move tip of ball stud in axial direction to check for looseness.

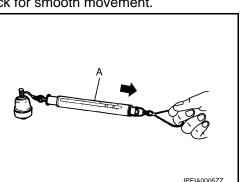

Standard

Axial end play : Refer to FSU-47, "Ball Joint".

- If it is outside the specified range, replace upper link assembly.

INSPECTION AFTER INSTALLATION

- 1. Check wheel sensor harness for proper connection. Refer to <u>BRC-112, "FRONT WHEEL SENSOR :</u> <u>Exploded View"</u>.
- 2. Check wheel alignment. Refer to FSU-31, "Inspection".
- 3. Adjust neutral position of steering angle sensor. Refer to <u>BRC-8</u>, "ADJUSTMENT OF STEERING ANGLE <u>SENSOR NEUTRAL POSITION : Special Repair Requirement</u>".

- 12. Cotter pin
- 15. Stabilizer connecting rod
- 18. Front cross bar

- 11. Steering knuckle
- 14. Stabilizer bar
- 17. Stabilizer clamp
- 19. Front suspension member

Refer to <u>GI-4, "Components"</u> for symbols in the figure.

Removal and Installation

REMOVAL

- 1. Remove tires with power tool.
- 2. Remove under cover with power tool.
- 3. Remove stabilizer connecting rod. CAUTION:

Apply a matching mark to identify the installation position.

- 4. Remove the stabilizer clamp and stabilizer bushing.
- 5. Remove stabilizer bar.

INSTALLATION

Note the following, and install in the reverse order of removal.

- Check the mounting mark when installing.
- Tighten the mounting nut to the specified torque while holding a hexagonal part of stabilizer connecting rod side.

Inspection

INSPECTION AFTER REMOVAL

Check stabilizer bar, stabilizer connecting rod, stabilizer bushing and stabilizer clamp for deformation, cracks or damage. Replace it if necessary.

- 15. Stabilizer connecting rod
- 18. Front cross bar

- 1. Piston rod lock nut
- 4. Bound bumper
- 7. Shock absorber
- 10. Upper link
- 13. Transverse link
- 16. Stabilizer bushing
- 19. Front suspension member

Refer to $\underline{\text{GI-4}, \text{"Components"}}$ for symbols in the figure.

Removal and Installation

REMOVAL

- 1. Remove tire with power tool.
- 2. Remove under cover with power tool.
- 3. Remove front cross bar.
- 4. Separate steering gear assembly and lower joint. Refer to <u>ST-19</u>, "Exploded View".

Rubber seat

11. Steering knuckle

17. Stabilizer clamp

14. Stabilizer bar

- 5. Remove steering outer socket from steering knuckle. Refer to ST-28, "AWD : Exploded View".
- 6. Remove wheel sensor from steering knuckle. Refer to <u>BRC-114</u>, "FRONT SENSOR ROTOR : Exploded <u>View"</u>.
- 7. Remove shock absorber. Refer to FSU-33. "Exploded View".
- 8. Remove front stabilizer. Refer to FSU-43, "Exploded View".
- 9. Install engine slinger, and then hoist engine. Refer to EM-75, "AWD : Removal and Installation".
- 10. Remove transverse link from front suspension member with power tool. Refer to <u>FSU-38</u>, "<u>Exploded</u> <u>View</u>".
- 11. Remove steering hydraulic piping bracket and steering gear from front suspension member. Refer to <u>ST-46, "AWD : Exploded View"</u>.
- 12. Set suitable jack front suspension member.
- 13. Remove mounting nuts between engine mounting insulator and from suspension member. Refer to <u>EM-</u> <u>74, "AWD : Exploded View"</u>.
- 14. Remove mounting bolts and nuts of front suspension member with power tool.
- 15. Gradually lower jack to remove front suspension assembly from vehicle.

INSTALLATION

Note the following, and install in the reverse order of removal.

• Perform final tightening of installation position between front suspension member and transverse links (rubber bushing) under unladen condition with tires on level ground.

Inspection

INSPECTION AFTER REMOVAL

Check the front suspension member for significant deformation, cracks, or damages. Replace if necessary.

INSPECTION AFER INSTALLATION

- 1. Check wheel sensor harness for proper connection. Refer to <u>BRC-112, "FRONT WHEEL SENSOR :</u> <u>Exploded View"</u>.
- 2. Check wheel alignment. Refer to <u>FSU-31, "Inspection"</u>.
- 3. Adjust neutral position of steering angle sensor. Refer to <u>BRC-8</u>, "ADJUSTMENT OF STEERING ANGLE <u>SENSOR NEUTRAL POSITION : Special Repair Requirement"</u>.

- 3. Shock absorber mounting bracket
- 6. Coil spring
- 9. Stopper rubber
- 12. Cotter pin
- 15. Stabilizer connecting rod
- 18. Front cross bar
