# ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT (ICC SENSOR IN-TEGRATED UNIT)

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT (ICC SENSOR INTE-GRATED UNIT) : Description

 Always perform the laser beam aiming adjustment after removing and installing or replacing the ICC sensor integrated unit.

# CAŬTION:

The system does not operate normally unless the laser beam aiming adjustment is performed. Always perform it.

• Perform the ICC system action test to check that the ICC system operates normally.

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT (ICC SENSOR INTE-GRATED UNIT) : Special Repair Requirement

# **1.**LASER BEAM AIMING ADJUSTMENT

Adjust the laser beam aiming. Refer to CCS-6. "LASER BEAM AIMING ADJUSTMENT : Description".

>> GO TO 2.

# 2.ICC SYSTEM ACTION TEST

- 1. Perform the ICC system action test. Refer to <u>CCS-12, "ACTION TEST : Description"</u>.
- 2. Check that the ICC system operates normally.

# >> INSPECTION END

# LASER BEAM AIMING ADJUSTMENT

# LASER BEAM AIMING ADJUSTMENT : Description

INFOID:000000006208379

# OUTLINE OF LASER BEAM AIMING ADJUSTMENT

Always adjust the laser beam aiming after removing and installing or replacing the ICC sensor integrated unit. **CAUTION:** 

# The system does not operate normally unless the laser beam aiming adjustment is performed. Always perform it.

- 1. Set the ICC target board [SST: KV99110100 (J-45718)] to the correct position in front of the vehicle.
- Set the laser beam aiming mode ("LASER BEAM ADJUST" on "Work support") with CONSULT-III, and then perform the adjustment according to the display. (Manually turn the up-down direction adjusting screw for vertical adjustment. ICC sensor integrated unit adjusts the automatic aiming for the horizontal direction.)

CAUTIONARY POINT FOR LASER BEAM AIMING ADJUSTMENT CAUTION:

- For laser beam aiming adjustment, choose a level location where a view can be obtained without any obstruction as far as 12 m (39 ft) or more in the forward direction.
- Adjust laser beam aiming for 5 seconds or more after starting engine.
- Adjust the laser beam aiming with CONSULT-III. (The laser beam aiming cannot be adjusted without CONSULT-III.)
- Never enter the vehicle during laser beam aiming adjustment.
- Never look directly into the laser beam source (ICC sensor integrated unit body window) during laser beam aiming adjustment.
- Laser beam aiming adjustment is performed at idle. At this time, turn the headlamps OFF.

#### [ICC] < BASIC INSPECTION > LASER BEAM AIMING ADJUSTMENT : Special Repair Requirement (Preparation) INFOID:000000006208380 А 1. ADVANCE PREPARATION FOR LASER BEAM AIMING ADJUSTMENT В 1. Adjust all tire pressure to the specified value. Empty the vehicle. (Remove any luggage from the passenger compartment, luggage room, etc.) 2. Shift the selector lever to the "P" position, and release the parking brake. 3. **CAUTION:** Apply wheel chocks or other tire blocks to the wheels to prevent the vehicle from moving. 4. Fully fill the fuel tank, and then check that the coolant and oils are filled up to correct level. 5. Clean off the ICC sensor integrated unit body window with a soft cloth. D A B Ε ന F JSOIA023677 1. ICC sensor integrated unit Normal front bumper fascia type Α В. Sport front bumper fascia type Н >> Go to CCS-7, "LASER BEAM AIMING ADJUSTMENT : Special Repair Requirement (Setting The ICC Target Board)". LASER BEAM AIMING ADJUSTMENT : Special Repair Requirement (Setting The ICC Target Board) INFOID:000000006208381 DESCRIPTION Accurate adjustment of the laser beam requires that the ICC target board be accurately positioned. Κ CAUTION: If the laser beam is adjusted with the ICC target board in the incorrect position, the ICC system does not function normally. L 1.ICC TARGET BOARD HEIGHT ADJUSTMENT 1. Attach the triangle scale (2) at 42 mm (1.65 in) (H) below the center (A) of the ICC target board (1). M ന 3 : Adjust nut : 90° h Ν A **b** н CCS 2 JPOIA0003Z Ρ

## < BASIC INSPECTION >

- Adjust the ICC target board height to the position aligning the triangle scale (1) upper side tip with the center of laser beam axis (A).
  - 2 : ICC sensor integrated unit

нŧ

#### NOTE:

• The center of laser beam axis (A) is located at 38 mm (1.5 in) (W) from the left end of ICC sensor integrated unit and 22 mm (H) (0.87 in) from above when viewed from the front of the vehicle.

B : Up-down direction adjusting screw

To identify the laser beam axis center (A) easily, prepare a piece of paper (B) cut to the size of 38 mm (1.5 in) (W) × 22 mm (0.87 in) (H) and attach it on the upper left point of the ICC sensor integrated unit (1).

>> GO TO 2.

# 2. ADJUSTING SIDE POSITION OF ICC TARGET BOARD

1. On the back of the ICC target board, attach the ruler (1) [350 mm (13.78 in) or more] or a similar tool squarely from the ICC target board center (A) in the left direction.

0

Π

#### < BASIC INSPECTION >

2. Suspend a weight from a string (1) attached to its end at the point (B) rightward from the ICC target board center (A).

W [mm (in)]

: 251 (9.88)

>> GO TO 3.

**3.**SETTING ICC TARGET BOARD

- 1. Suspend a thread with weight on tip from the center of the front and rear bumpers. Then, mark the center points on the ground as each weight point.
- Link the front and rear bumpers center points marked on the ground and extend a straight line ahead. Then mark a point 3.9 m (12.8 ft) position ahead of the front bumper. Then, adjust the position of the ICC target board so that the weight comes on the top of the marked point [3.9 m (12.8 ft) position ahead of the front bumper] and face to the vehicle.
- 3. Adjust the position of the ICC target board (1) so that the extended line (A) that links the center of the rear window glass (the center of the rear window defogger pattern) (B) and the center of the windshield (the setting part of the room mirror) (C) align with the weight suspended (2) from the ICC target board.

- 4. Remove the thread suspended to the right side of ICC target board and suspend a thread with weight on tip on the center of the ICC target board. Then mark the point of weight on the ground.
- 5. Pivot the edge of the ICC target board 25° (a) to either side.
  - 1 : ICC target board
  - 2 : String with a weight
  - C : ICC target board center marking point

NOTE: Approx. 90 mm (3.54 in) (b) shift rates the 25° (a) movement.

>> GO TO 4.  ${f 4}$  . CHECK THE ICC TARGET BOARD INSTALLATION POSITION

CCS

Ε

F

Н

Κ

L

## < BASIC INSPECTION >

#### Check that the ICC target board (1) is located as shown in the figure.

- B. Vehicle center
- W. 251 mm (9.88 in)
  a. 25°

# a.

1.

#### NOTE:

The distance between laser beam axis and ICC target board is 4.0 m (13.0 ft).

>> GO TO 5.

# **5.**CHECK THE ICC TARGET BOARD INSTALLATION AREA

Do not place anything other than ICC target board in the space shown in the figure (view from top).

- L1. 6.5 m (21.3 ft)
- L2. 4.0 m (13.0 ft)
- W. 3.5 m (11.5 ft)

#### NOTE:

In case the space shown in the figure is not available, cover the side of the ICC target board with a 1400 mm (4.6 ft)-size frosted black board or black cloth.

>> Go to <u>CCS-10. "LASER BEAM AIMING ADJUSTMENT : Special Repair Requirement (Laser</u> <u>Beam Aiming Adjustment)"</u>.

# LASER BEAM AIMING ADJUSTMENT : Special Repair Requirement (Laser Beam Aiming Adjustment)

#### DESCRIPTION

• Adjust the laser beam aiming in a vertical direction with CONSULT-III as per the following.

• The laser beam aiming adjustment in a horizontal direction is performed automatically with CONSULT-III. CAUTION:

- Never look directly into the laser beam source (ICC sensor integrated unit body window) during laser beam aiming adjustment.
- Perform all necessary work for laser beam aiming adjustment until the adjustment completes as shown in the procedure. If the procedure does not complete, the ICC system is inoperable.

 ${\sf 1.}{\sf SET}$  CONSULT-III TO THE LASER BEAM AIMING ADJUSTMENT MODE

1. Start the engine.

#### < BASIC INSPECTION >

- 2. Connect CONSULT-III and select "Work support" of "ICC/ADAS".
- 3. Select "LASER BEAM ADJUST" after the "Work support" screen is displayed.
- 4. Select "START" after the "LASER BEAM ADJUST" screen is displayed.

#### NOTE:

If the adjustment screen does not appear within approximately 10 seconds after "LASER BEAM ADJUST" is selected, the following causes are possible. • The ICC target board is not installed in the correct position.

- Adequate space is not secured around the ICC target board.
- The laser beam aiming adjustment exceeds its proper installation range.
- Deformation of vehicle body.
- Deformation of unit.
- Deformation of bracket.
- The area is not suitable for the adjustment work.
- ICC sensor integrated unit body window is not clean.
- The ICC system warning lamp illuminates.

# >> GO TO 2.

# 2.LASER BEAM AIMING ADJUSTMENT

After "ADJUST THE VERTICAL OF LASER BEAM AIMING" is displayed on CONSULT-III screen, adjust by turning the up-down direction adjusting screw until "U/D CORRECT" becomes ±4 or less. **NOTE:** 

- Turn the up-down direction adjusting screw slowly. The value change on display is slower than actual movement of the ICC sensor integrated unit. Wait for 2 seconds every time the up-down direction adjusting screw is turned half a rotation.
- Turning the up-down direction adjusting screw (A) clockwise directs the laser beam downward (B). The laser beam directs upward (C) when turning up-down direction adjusting screw counterclockwise.

# CAUTION:

Be careful not to cover the ICC sensor integrated unit body window with a hand or the other part of body of worker during adjustment.

[ICC]

А

E

F

Н

Κ

Ν

CCS

D

# >> GO TO 3.

# **3.**LASER BEAM AIMING CONFIRMATION

- When the "U/D CORRECT" value becomes ±4 or less, check that no value greater than ±4 appears when the vehicle is left with no load on the ICC sensor integrated unit (hand removed) for at least 2 seconds.
   When "COMPLETED THE VERTICAL AUMINE OF LASER REAM" display appears tough "END"
- 2. When "COMPLETED THE VERTICAL AIMING OF LASER BEAM" display appears, touch "END". CAUTION:

Always check that the value of "U/D CORRECT" remains  $\pm 4$  or less when the ICC sensor integrated unit is left alone for at least 2 seconds.

- Check that "ADJUSTING AUTOMATIC HORIZONTAL LASER BEAM AIMING" is displayed and wait for a short period of time. (The maximum: Approx 10 seconds).
- 4. Check that "Normally Completed" is displayed, and select "End" to end "LASER BEAM ADJUST". CAUTION:

Once "LASER BEAM ADJUST" is started with CONSULT-III, always continue the work until the horizontal laser beam aiming adjustment is completed successfully. If the job is stopped midway, the laser beam aiming is not adjusted and the ICC system cannot operate.

>> LASER BEAM AIMING ADJUSTMENT END ACTION TEST

< BASIC INSPECTION >

# **ACTION TEST : Description**

Always perform the ICC system action test to check that the ICC system operates normally after replacing the ICC sensor integrated unit or repairing any ICC system malfunction.

#### CAUTION:

#### Always drive safely when performing the action test.

ACTION TEST : Special Repair Requirement (Vehicle-To-Vehicle Distance Control Mode)

#### NOTE:

- When there is no vehicle ahead, drive at the set speed steadily.
- The set speed can be selected by the driver between 40 to 144 km/h (25 to 90 MPH).
- When there is a vehicle ahead, control to maintain distance from the vehicle ahead, watching its speed.
- Maintains a selected distance from the vehicle in front of own vehicle within the speed range of 40 to 144 km/h (25 to 90 MPH) up to the set speed.

#### **CAUTION:**

#### Never set the cruise speed exceeding the posted speed limit.

## **1.**CHECK FOR MAIN SWITCH

- 1. Start the engine.
- 2. Press the MAIN switch (1) (less than 1.5 seconds).

| Information display status      |   |                      |
|---------------------------------|---|----------------------|
| MAIN switch indicator (2)       | : | ON                   |
| Set distance indicator (3)      | : | Long mode            |
| Own vehicle indicator (4)       | : | ON                   |
| Set vehicle speed indicator (5) | : | ""<br>"km/h" ("MPH") |

- 3. Check the ICC system display on the information display to check that the vehicle-to-vehicle distance control mode is ready for activation.
- 4. Press the MAIN switch, and check that the ICC system display on the information display turns OFF when the ICC system is deactivated.
- 5. Check that the ICC system display on the information display turns OFF after starting the engine again.

#### >> GO TO 2.

# 2. CHECK FOR DISTANCE SWITCH

- 1. Start the engine.
- 2. Press the MAIN switch (less than 1.5 seconds).
- 3. Press the DISTANCE switch.

INFOID:000000006208383

#### < BASIC INSPECTION >

[ICC]

#### 4. Check that the set distance indicator changes display in order of: (Long)→(Middle)→(Short).

| Distance | Display     | Approximate distance at<br>100 km/h (60 MPH) [m (ft)] |             |  |
|----------|-------------|---|-------------|--|
| Long     | 100<br>km/h | 60 (200)  |             |  |
| Middle   | 100<br>km/h | 45 (150)  |             |  |
| Short    | 100<br>km/h | 30 (100)  |             |  |
|          |             |   | JPOIA0256GB |  |

#### NOTE:

When the MAIN switch is turned ON, initial setting set to (Long).

>> GO TO 3.  ${f 3.}$  CHECK FOR RESUME/ACCELERATE, SET/COAST, AND CANCEL SWITCHES Н Check that RESUME/ACCELERATE, SET/COAST, and CANCEL switches are operated smoothly. 1. 2. Check that switches come up as hand is released from the switches. >> GO TO 4. 4.SET CHECKING 1. Start the engine. Press the MAIN switch (less than 1.5 seconds) and turn the vehicle-to-vehicle distance control mode ON. 3. Drive the vehicle at 40 km/h (25 MPH) or more. Κ Push down the SET/COAST switch. 4. Check that the desired speed is set and vehicle-to-vehicle distance control mode control starts when 5. releasing SET/COAST switch. L NOTE: The set vehicle speed is indicated on the set vehicle speed indicator in the ICC system display on the information display. Μ >> GO TO 5. **5.**CHECK FOR INCREASE OF CRUISING SPEED Ν 1. Set the vehicle-to-vehicle distance control mode at desired speed. Check that the set speed increases by 1 km/h (1 MPH) as RESUME/ACCELERATE switch is pushed up. 2. NOTE: CCS The maximum set speed of the vehicle-to-vehicle distance control mode is 144 km/h (90 MPH). **CAUTION:** Never set the cruise speed exceeding the posted speed limit. Ρ >> GO TO 6. **6.**CHECK FOR DECREASE OF CRUISING SPEED

1. Set the vehicle-to-vehicle distance control mode at desired speed.

2. Check that the set speed decreases by 1 km/h (1 MPH) as SET/COAST switch is pushed down.

NOTE:

• The minimum set speed is approximately 40 km/h (25 MPH).

#### < BASIC INSPECTION >

• Cancel the control automatically when the vehicle speed is less than approximately 32 km/h (20 MPH) and when the system does not detect any vehicle ahead.

## >> GO TO 7.

# **7.**CHECK FOR CANCELLATION OF VEHICLE-TO-VEHICLE DISTANCE CONTROL MODE

Check that the vehicle-to-vehicle distance control mode is cancelled when performing the following operations.

- When the brake pedal is depressed after vehicle-to-vehicle distance control mode is set and the vehicle is driven.
- When the selector lever is in the "N" position after vehicle-to-vehicle distance control mode is set and the vehicle is driven.
- When the MAIN switch is turned OFF after vehicle-to-vehicle distance control mode is set and the vehicle is driven.
- When the CANCEL switch is pressed after vehicle-to-vehicle distance control mode is set and the vehicle is driven.

#### >> GO TO 8.

**8.**CHECK FOR RESTORING SPEED THAT IS SET BY VEHICLE-TO-VEHICLE DISTANCE CONTROL MODE BEFORE CANCELLATION

Check that the vehicle restores the previous speed kept before the system deactivation when performing the following operations.

- Drive the vehicle when the vehicle-to-vehicle distance control mode is set and depress the brake pedal to cancel the control. Check that the vehicle restores the previous vehicle speed kept before the system deactivation when pushing up the RESUME/ACCELERATE switch.
- Drive the vehicle when the vehicle-to-vehicle distance control mode is set and shift the selector lever to the "N" position to cancel the control. Check that the vehicle restores the previous vehicle speed kept before the system deactivation when shifting the selector lever to the "D" position and pushing up the RESUME/ ACCELERATE switch.
- Drive the vehicle when the vehicle-to-vehicle distance control mode is set and press the CANCEL switch to cancel the control. Check that the vehicle restores the previous vehicle speed kept before the system deactivation when pushing up the RESUME/ACCELERATE switch.

#### >> INSPECTION END

# ACTION TEST : Special Repair Requirement [Conventional (Fixed Speed) Cruise Control Mode]

#### NOTE:

• For cruising at a preset speed.

- The set speed can be selected by the driver between 40 to 144 km/h (25 to 90 MPH).

#### **CAUTION:**

#### Never set the cruise speed exceeding the posted speed limit.

- **1.**CHECK FOR MAIN SWITCH
- 1. Start the engine.
- 2. Press the MAIN switch (1) (1.5 seconds or more).

# SYSTEM DESCRIPTION ICC

System Diagram

# DESCRIPTION

А

# ICC

## < SYSTEM DESCRIPTION >

The Intelligent Cruise Control (ICC) system automatically maintains a selected distance from the vehicle traveling in front of own vehicle according to that vehicle's speed (up to the set speed), or at the set speed when the road ahead is clear.

The ICC system can be set to one of two cruise control modes:

#### CAUTION:

#### Never set the cruise speed exceeding the posted speed limit.

Vehicle-to-vehicle Distance Control Mode

For maintaining a selected distance between own vehicle and the vehicle in front of own vehicle up to the preset speed. Refer to <u>CCS-22, "System Description"</u>.

Conventional (Fixed Speed) Cruise Control Mode

For cruising at a preset speed. Refer to <u>CCS-31, "System Description"</u>.

#### NOTE:

In the Conventional (Fixed Speed) Cruise Control Mode, a warning chime will not sound to warn driver if own vehicle are too close to the vehicle ahead.

#### WARNING:

Always drive carefully and attentively when using either cruise control mode. To avoid serious injury or death, do not rely on the system to prevent accidents or to control the vehicle's speed in emergency situations. Do not use cruise control except in appropriate rode and traffic conditions.

Brake Assist (With Preview Function)

Brake Assist (With Preview Function) share the systems and components with ICC system. Refer to <u>BRC-120</u>, <u>"System Description"</u>.

#### ICC SENSOR INTEGRATED UNIT INPUT/OUTPUT SIGNAL ITEM

Input Signal Item

## < SYSTEM DESCRIPTION >

In the vehicle-to-vehicle distance control mode, the Intelligent Cruise Control (ICC) system automatically maintains a selected distance from the vehicle traveling in front of own vehicle according to that vehicle's speed (up to the set speed), or at the set speed when the road ahead is clear.

With ICC system, the driver can maintain the same speed as other vehicles without the constant need to adjust the set speed as driver would with a normal cruise control system.

The following items are controlled in the vehicle-to-vehicle distance control mode.

- When there are no vehicles traveling ahead, the vehicle-to-vehicle distance control mode maintains the speed set by the driver. The set speed range is between approximately 40 and 144 km/h (25 and 90 MPH).
- When there is a vehicle traveling ahead, the vehicle-to-vehicle distance control mode adjusts the speed to maintain the distance, selected by driver, from a vehicle ahead. The adjusting speed range is between approximately 32 km/h (20 MPH) and up to the set speed.
- When the vehicle traveling ahead has moved out from its lane of travel, the vehicle-to-vehicle distance control mode accelerates and maintains vehicle speed up to the set speed.

#### NOTE:

When the accelerator pedal is depressed, the brake operation and the warning are not performed by the ICC system.

#### **OPERATION DESCRIPTION**

Quickly push (less than 1.5seconds) and release the MAIN switch ON.

The MAIN switch indicator, set distance indicator, own vehicle indicator, and set vehicle speed indicator come on and ICC system is set to a standby state.

ICC sensor integrated unit performs the control as per the following:

| Constant speed    | Comparing the set vehicle speed with the current vehicle speed, transmit the command to ECM via CAN communication to reach the set vehicle speed, and controls the electric throttle control actuator.  |
|-------------------|---|
| Decelera-<br>tion | When a vehicle ahead (slower than driver set vehicle speed) appears or when a vehicle ahead slows down, the system controls the electric throttle control actuator into the close direction and decelerates the vehicle. If greater deceleration is necessary, the system transmits the deceleration degree commandment value signal to the ABS actuator and electric unit (control unit) via CAN communication and operates the brake. |
| Following         | The system controls the electric throttle control actuator and the brake fluid pressure to keep the proper distance between the vehicles according to the vehicle speed change of the vehicle ahead.  |
| Accelera-<br>tion | When a vehicle ahead is not detected because of it changes lanes or own vehicle changes lanes during the following driving, the system controls the electric throttle control actuator in the open direction and accelerates the vehicle to the set vehicle speed slowly.   |

#### Set Condition

Under a standby state, pushing down the SET/COAST switch will start system control.

• When vehicle speed is between approximately 40 km/h and 144 km/h (25 MPH and 90 MPH).

If the system is cancelled by conditions 1-4 below, the system will resume control at the last set cruising speed by pushing up the RESUME/ACCELERATE switch.

# NOTE:

- When the SET/COAST switch is pushed under the following conditions, the system cannot be set and the set speed indicator will blink for approximately 2 seconds.
- When traveling below 40 km/h (25 MPH).
- When the brakes are operated by the driver.
- When the selector lever is not in the "D", "DS" position or manual mode.
- When the front wipers are operating at LO or HI. (If the vehicle is equipped with a rain sensing auto-wiper, the system may cancel when the wipers are set to AUTO)

L

## < SYSTEM DESCRIPTION >

- · When the SET/COAST switch is pushed under the following conditions, the system cannot be set. A warning chime will sound and the set speed indicator and own vehicle indicator will blink.
- When the snow mode switch is ON (To use the ICC system, turn OFF the snow mode switch, push the MAIN switch to turn OFF the ICC system and reset the ICC system by pushing the MAIN switch again.)
- When the VDC is OFF (To use the ICC system, turn ON the VDC system, push the MAIN switch to turn OFF the ICC system and reset the ICC system by pushing the MAIN switch again.)
- When ABS or VDC (including the TCS) operates
- When driving into a strong light (i.e., sunlight)
- When the wheel is slipping (To use the ICC system, make sure the wheels are no longer spinning, push the MAIN switch to turn OFF the ICC system and reset the ICC system by pushing the MAIN switch again.)

#### **Cancel Conditions**

- 1. When CANCEL switch is pressed.
- 2. When brake pedal is depressed.
- 3. When the selector lever is not in the "D", "DS" position or manual mode.
- 4. When the vehicle speed falls below approximately 32 km/h (20 MPH).
- 5. When the front wipers are operating at LO or HI. (If the vehicle is equipped with a rain sensing auto-wiper, the system may cancel when the wipers are set to AUTO)
- 6. When the snow mode switch is turned ON.
- 7. When ABS or VDC (including the TCS) operates.
- 8. When the MAIN switch is turned OFF.
- 9. When a wheel slips.
- 10. When driving into a strong light (i.e., sunlight).
- 11. When the VDC is turned OFF.
- 12. When the system malfunction occurs.

#### Approach Warning Display

Κ If own vehicle comes closer to a vehicle ahead due to rapid deceleration of that vehicle or if another vehicle cuts in, the system warns the driver with the chime and ICC system display. Decelerate by depressing the brake pedal to maintain a safe vehicle distance if: L

- The chime sounds.
- The vehicle ahead detection indicator and set distance indicator blink.

| The warning chime may not sound in some cases when there is a short distance between vehicles. Some |   |
|---|---|
| examples are:   | M |

- When the vehicles are traveling at the same speed and the distance between vehicles is not changing.
- When the vehicle ahead is traveling faster and the distance between vehicles is increasing.
- When a vehicle cuts in at near own vehicle.
- Ν The warning chime will not sound when own vehicle approaches vehicles that are parked or moving slowly. The warning chime will not sound when the accelerator pedal is depressed, overriding the system.
- The approach warning chime may sound and the system display may blink when the ICC sensor detects some reflectors which are fitted on vehicles in other lanes or on the side of the road.
- This may cause the ICC system to decelerate or accelerate the vehicle.

The ICC sensor may detect these reflectors when the vehicle is driven on winding roads, hilly roads or when entering or exiting a curve.

The ICC sensor may also detect reflectors on narrow roads or in road construction zones.

In these cases driver will have to manually control the proper distance ahead of own vehicle.

Also, the sensor sensitivity can be affected by vehicle operation (steering maneuver or driving position in the lane) or traffic or vehicle condition (for example, if a vehicle is being driven with some damage).

# System Description

FUNCTION DESCRIPTION

Revision: 2011 November

INFOID:000000006208395

# CONVENTIONAL (FIXED SPEED) CRUISE CONTROL MODE FUNCTION

#### < SYSTEM DESCRIPTION >

This mode allows driving at a speed between 40 to 144 km/h (25 to 90 MPH) without keeping foot on the accelerator pedal.

#### NOTE:

In the conventional (fixed speed) cruise control mode, a warning chime does not sound to warn driver if own vehicle are too close to the vehicle ahead, as neither the presence of the vehicle ahead nor the vehicle-to-vehicle distance is detected.

#### **OPERATION DESCRIPTION**

To turn ON the conventional (fixed speed) cruise control mode, push and hold the MAIN switch for longer than approximately 1.5 seconds when ICC system is OFF.

When pushing the MAIN switch ON, the ICC system display and the MAIN switch indicator are displayed on the information display.

After hold the MAIN switch ON for longer than approximately 1.5 seconds, the ICC system display goes out. The MAIN switch indicator stays lit and brings the system to standby state.

#### NOTE:

To turn on the vehicle-to-vehicle distance control mode again, turn OFF the system and quickly push (less than 1.5 seconds) the MAIN switch.

ICC sensor integrated unit performs the control as per the following:

Constant Comparing the set vehicle speed with the current vehicle speed, transmits the command to ECM via CAN communication to reach the set vehicle speed, and controls the electronic throttle control actuator.

#### Set Condition

When the system is under a standby state and the vehicle speed is between approximately 40 to 144 km/h (25 to 90 MPH), pushing the SET/COAST switch will start system control.

If the system is cancelled by conditions 1-5 below, the system will resume control at the last set cruising speed by pushing the RESUME/ACCELERATE switch.

Cancel conditions

- 1. When CANCEL switch is pressed.
- 2. When brake pedal depressed.
- 3. When the vehicle speed falls below approximately 32 km/h (20 MPH).
- 4. When the vehicle slows down more than 13 km/h (8 MPH) below the set speed.
- 5. When the selector lever is not in the "D", "DS" position or manual mode.
- 6. When the MAIN switch is turned OFF.
- 7. When VDC (including the TCS) operates.
- 8. When a wheel slips.
- 9. When the system malfunction occurs.

# DIAGNOSIS SYSTEM (ICC SENSOR INTEGRATED UNIT)

# **Diagnosis Description**

INFOID:000000006208398

[ICC]

The DTC is displayed on the information display by operating the ICC steering switch.

# ON BOARD SELF-DIAGNOSIS SYSTEM DIAGRAM

# ON BOARD SELF-DIAGNOSIS OPERATION PROCEDURE

#### **CAUTION:**

#### Start condition of on board self-diagnosis

- MAIN switch OFF
- Vehicle speed 0 km/h (0 MPH)
- 1. Turn the ignition switch OFF.
- 2. Start the engine.
- Wait for 5 seconds after starting the engine. Push up the RESUME/ACCELERATE switch 5 times and push down the SET/COAST switch 5 times within 10 seconds.
   NOTE:

If the above operation cannot be performed within 10 seconds after waiting for 5 seconds after starting the engine, repeat the procedure from step 1.

4. The DTC is displayed on the set vehicle speed indicator (1) on the ICC system display on the information display when the on board self-diagnosis starts. Refer to <u>CCS-107</u>, "<u>DTC Index</u>".

• It displays for up to 5 minutes and then stops.

#### < SYSTEM DESCRIPTION >

• If multiple malfunctions exist, up to 3 DTCs can be stored in memory at the most, and the most recent one is displayed first.

#### WHEN THE ON BOARD SELF-DIAGNOSIS DOES NOT START

If the on board self-diagnosis does not start, check the following items.

|  | Assumed abnormal part   | Inspection item  |
|--|---|--|
|  | Combination meter malfunction   | Check that the self-diagnosis function of the combina-<br>tion meter operates. Refer to <u>MWI-36. "Diagnosis De-</u><br><u>scription"</u> .   |
| ICC system display                     | Unified meter and A/C amp. malfunction  | Check power supply and ground circuit of unified meter<br>and A/C amp. Refer to <u>MWI-51, "UNIFIED METER AND</u><br><u>A/C AMP. : Diagnosis Procedure"</u> .  |
|  | Communication error of the combination meter and the unified meter and A/C amp. | Start the self-diagnosis of the unified meter and A/C amp. and then check the self-diagnosis results. Refer to <u>MWI-107, "DTC Index"</u> .   |
| ICC steering switch mal                | function  |  |
| Harness malfunction be                 | tween ICC steering switch and ECM   | Perform the inspection for DTC "C1A06". Refer to <u>CCS-</u><br>54. "Diagnosis Procedure".   |
| ECM malfunction                        |   |  |
| ICC sensor integrated unit malfunction |   | <ul> <li>Check power supply and ground circuit of ICC sensor<br/>integrated unit. Refer to <u>CCS-96, "Diagnosis Proce-dure"</u>.</li> <li>Perform SELF-DIAGNOSIS for "ICC/ADAS" with<br/>CONSULT-III, and then check the malfunctioning<br/>parts. Refer to <u>CCS-107, "DTC Index"</u>.</li> </ul> |

#### HOW TO ERASE ON BOARD SELF-DIAGNOSIS

- 1. Turn the ignition switch OFF.
- 2. Start the engine, and then start the on board self-diagnosis.
- Press the CANCEL switch 5 times, and then press the DIS-TANCE switch 5 times under the condition that the on board self-diagnosis starts.
   NOTE:
  - Complete the operation within 10 seconds after pressing the CANCEL switch first.
  - If the operation is not completed within 10 seconds, repeat the procedure from step 1.
- DTC 55 is displayed after erasing.
   NOTE:
   DTCs for existing malfunction can not be erased.
- 5. Turn ignition switch OFF, and finish the diagnosis.

## CONSULT-III Function (ICC/ADAS)

#### DESCRIPTION

CONSULT-III performs the following functions via CAN communication using ICC sensor integrated unit.

| Diagnosis mode           | Description  | CCS |
|--------------------------|--|-----|
| Work Support             | <ul> <li>It can monitor the adjustment direction indication in order to perform the laser beam aiming operation smoothly.</li> <li>Displays causes of automatic cancellation of the ICC system.</li> </ul> | Ρ   |
| Self Diagnostic Result   | Displays malfunctioning system memorized in ICC sensor integrated unit.  |     |
| Data Monitor             | Displays real-time input/output data of ICC sensor integrated unit.  |     |
| Active Test              | Enables operation check of electrical loads by transmitting driving signal to them.  |     |
| Ecu Identification       | Displays ICC sensor integrated unit part number.   |     |
| CAN Diag Support Monitor | The results of transmit/receive diagnosis of CAN communication can be read.  |     |

#### WORK SUPPORT

| Work support items   | Description   |
|----------------------|---|
| CAUSE OF AUTO-CANCEL | Displays causes of automatic cancellation of the ICC system.                                |
| LASER BEAM ADJUST    | Outputs laser beam, calculates dislocation of the beam, and indicates adjustment direction. |

Display Items for The Cause of Automatic Cancellation **NOTE:** 

• Causes of the maximum five cancellations (system cancel) are displayed.

• The displayed cancellation causes display the number of the ignition switch ON/OFF up to 254. It is fixed to 254 if it is over 254. It returns to 0 when the same cancellation cause is detected again.

|                       |  |  | ×: Applicable   |  |
|-----------------------|--|--|---|--|
| Cause of cancellation | Vehicle-to-vehi-<br>cle distance con-<br>trol mode | Conven-<br>tional<br>(fixed<br>speed)<br>cruise<br>control<br>mode | Description   |  |
| OPERATING WIPER       | ×  |  | The wiper operates at HI or LO (it includes when the wiper is operated at LO or HI with the wiper switch AUTO position) |  |
| OPERATING ABS         | ×  |  | ABS function was operated   |  |
| OPERATING TCS         | ×  | ×  | TCS function was operated   |  |
| OPERATING VDC         | ×  | ×  | VDC function was operated   |  |
| ECM CIRCUIT           | ×  | ×  | ECM did not permit ICC operation  |  |
| OPE SW VOLT CIRC      | ×  | ×  | The ICC steering switch input voltage is not within standard range  |  |
| LASER SUNBEAM         | ×  |  | Intense light such as sunlight entered ICC sensor integrated unit light sensing part                                    |  |
| LASER TEMP            | ×  |  | Temperature around ICC sensor integrated unit became low  |  |
| OP SW DOUBLE TOUCH    | ×  | ×  | ICC steering switches were pressed at the same time   |  |
| WHL SPD ELEC NOISE    | ×  | ×  | Wheel speed sensor signal caught electromagnetic noise  |  |
| VDC/TCS OFF SW        | ×  |  | VDC OFF switch was pressed  |  |
| VHCL SPD UNMATCH      | ×  | ×  | Wheel speed became different from A/T vehicle speed   |  |
| SNOW MODE SW          | ×  |  | Snow mode switch was pressed  |  |
| TIRE SLIP             | ×  | ×  | Wheel slipped   |  |
| IGN LOW VOLT          | ×  | ×  | Power supply voltage became low   |  |
| WHEEL SPD UNMATCH     | ×  | ×  | The wheel speeds of 4 wheels are out of the specified values  |  |
| VHCL SPD DOWN         | ×  | ×  | Vehicle speed becomes 32 km/h (20 MPH) and under  |  |
| CAN COMM ERROR        | ×  | ×  | ICC sensor integrated unit received an abnormal signal with CAN com-<br>munication                                      |  |
| ABS/TCS/VDC CIRC      | ×  | ×  | An abnormal condition occurs in VDC/TCS/ABS system  |  |
| ECD CIRCUIT           | ×  |  | An abnormal condition occurs in ECD system  |  |
| ASCD VHCL SPD DTAC    |  | ×  | Vehicle speed is detached from set vehicle speed  |  |
| ASCD DOUBLE COMD      |  | ×  | Cancel switch and operation switch are detected simultaneously  |  |
| NO RECORD             | ×  | ×  | -   |  |

# < SYSTEM DESCRIPTION >

[ICC]

| Monitored item                   | MAIN   | Description  |  |
|----------------------------------|--------|--|--|
| [Unit]                           | SIGNAL |  |  |
| MAIN SW<br>[On/Off]              | ×      | Indicates [On/Off] status as judged from ICC steering switch signal (ECM transmits ICC steering switch signal through CAN communication).  |  |
| SET/COAST SW<br>[On/Off]         | ×      | Indicates [On/Off] status as judged from ICC steering switch signal (ECM transmits ICC steering switch signal through CAN communication).  |  |
| CANCEL SW<br>[On/Off]            | ×      | Indicates [On/Off] status as judged from ICC steering switch signal (ECM transmits ICC steering switch signal through CAN communication).  |  |
| RESUME/ACC SW<br>[On/Off]        | ×      | Indicates [On/Off] status as judged from ICC steering switch signal (ECM transmits ICC steering switch signal through CAN communication).  |  |
| DISTANCE SW<br>[On/Off]          |        | Indicates [On/Off] status as judged from ICC steering switch signal (ECM transmits ICC steering switch signal through CAN communication).  |  |
| CRUISE OPE<br>[On/Off]           | ×      | Indicates whether controlling or not (ON means "controlling").   |  |
| BRAKE SW<br>[On/Off]             | ×      | Indicates [On/Off] status as judged from ICC brake switch signal (ECM transmits ICC brake switch signal through CAN communication).  |  |
| STOP LAMP SW<br>[On/Off]         | ×      | Indicates [On/Off] status as judged from stop lamp switch signal (ECM transmits stop lamp switch signal through CAN communication).  |  |
| DLE SW<br>[On/Off]               |        | Indicates [On/Off] status of idle switch read from ICC sensor integrated unit through CAN communication (ECM transmits On/Off status through CAN communication).   |  |
| SET DISTANCE<br>[Short/Mid/Long] | ×      | Indicates set distance memorized in ICC sensor integrated unit.  |  |
| CRUISE LAMP<br>[On/Off]          | ×      | Indicates [On/Off] status of MAIN switch indicator output.   |  |
| OWN VHCL<br>[On/Off]             |        | Indicates [On/Off] status of own vehicle indicator output.   |  |
| VHCL AHEAD<br>[On/Off]           |        | Indicates [On/Off] status of vehicle ahead detection indicator output.   |  |
| CC WARNING<br>On/Off]            |        | Indicates [On/Off] status of ICC system warning lamp output.   |  |
| VHCL SPEED SE<br>[km/h] or [mph] | ×      | Indicates vehicle speed calculated from ICC sensor integrated unit through CAN communication [ABS actuator and electric unit (control unit) transmits vehicle speed signal (wheel speed) through CAN communication].           |  |
| SET VHCL SPD<br>[km/h] or [mph]  | ×      | Indicates set vehicle speed memorized in ICC sensor integrated unit.   |  |
| BUZZER O/P<br>[On/Off]           |        | Indicates [On/Off] status of ICC warning chime output.   |  |
| THRTL SENSOR<br>[deg]            | ×      | NOTE:<br>The item is displayed, but it is not monitored.   |  |
| ENGINE RPM<br>[rpm]              |        | Indicates engine speed read from ICC sensor integrated unit through CAN communi-<br>cation (ECM transmits engine speed through CAN communication).   |  |
| WIPER SW<br>[Off/Low/High]       |        | Indicates wiper [Off/Low/High] status (BCM transmits front wiper request signal through CAN communication).  |  |
| YAW RATE<br>deg/s]               |        | <b>NOTE:</b><br>The item is displayed, but it is not monitored.  |  |
| STP LMP DRIVE<br>[On/Off]        | ×      | Indicates [On/Off] status of ICC brake hold relay drive output.  |  |
| D RANGE SW<br>[On/Off]           |        | Indicates [On/Off] status of "D" or "DS" or "M" positions read from ICC sensor integrated unit through CAN communication; ON when position "D" or "DS" or "M" (TCM transmits shift position signal through CAN communication). |  |
| NP RANGE SW<br>[On/Off]          |        | Indicates shift position signal read from ICC sensor integrated unit through CAN com-<br>munication (TCM transmits shift position signal through CAN communication).   |  |
| PKB SW<br>[Off]                  |        | <b>NOTE:</b><br>The item is displayed, but it is not monitored.  |  |

#### < SYSTEM DESCRIPTION >

| Monitored item<br>[Unit]       | MAIN<br>SIGNAL | Description  |  |
|--------------------------------|----------------|--|--|
| PWR SUP MONI<br>[V]            | ×              | Indicates IGN voltage input by ICC sensor integrated unit.   |  |
| VHCL SPD AT<br>[km/h] or [mph] |                | Indicates vehicle speed calculated from A/T vehicle speed sensor read from ICC sensor integrated unit through CAN communication (TCM transmits A/T vehicle speed sensor signal through CAN communication). |  |
| THRTL OPENING<br>[%]           | ×              | Indicates throttle position read from ICC sensor integrated unit through CAN commu-<br>nication (ECM transmits accelerator pedal position signal through CAN communica-<br>tion).                          |  |
| GEAR<br>[1, 2, 3, 4, 5, 6, 7]  |                | Indicates A/T gear position read from ICC sensor integrated unit through CAN com-<br>munication (TCM transmits current gear position signal through CAN communica-<br>tion).                               |  |

DTC/CIRCUIT DIAGNOSIS C1A00 CONTROL UNIT

## Description

INFOID:000000006208400

[ICC]

ICC sensor integrated unit function description

- It detects the reflected light from the vehicle ahead by irradiating a laser forward. It calculates the vehicle distance from and relative speed with the vehicle ahead depending on the detected signal.
- It calculates the target vehicle distance and the target vehicle speed depending on the signals from various sensors and switches, outputs the engine torque demand to ECM via CAN communication, and outputs the deceleration degree commandment value signal to ABS actuator and electric unit (control unit) via CAN communication.

## **DTC Logic**

INFOID:000000006208401

### DTC DETECTION LOGIC

| DTC<br>(On board dis-<br>play) | Trouble diagnosis name | DTC detecting condition                              | Possible causes            |
|--------------------------------|------------------------|--|----------------------------|
| C1A00<br>(0)                   | CONTROL UNIT           | ICC sensor integrated unit internal malfunc-<br>tion | ICC sensor integrated unit |

#### DTC CONFIRMATION PROCEDURE

## **1.**PERFORM DTC CONFIRMATION PROCEDURE

- 1. Start the engine.
- 2. Perform "All DTC Reading" with CONSULT-III.
- 3. Check if the "C1A00" is detected as the current malfunction in "Self Diagnostic Result" of "ICC/ADAS".

Is "C1A00" detected as the current malfunction?

- YES >> Refer to <u>CCS-42, "Diagnosis Procedure"</u>.
- NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006208402

### **1.**CHECK SELF-DIAGNOSIS RESULTS

Check if any DTC other than "C1A00" is detected in "Self Diagnostic Result" of "ICC/ADAS". Is any DTC detected?

- YES >> Perform diagnosis on the detected DTC and repair or replace the malfunctioning parts. Refer to <u>CCS-107. "DTC Index"</u>.
- NO >> Replace the ICC sensor integrated unit. Refer to <u>CCS-125, "Exploded View"</u>.

#### Special Repair Requirement

INFOID:000000006208403

#### DESCRIPTION

Perform the action test after adjusting the laser beam aiming of ICC sensor integrated unit when the following operation is performed.

- Removal and installation of ICC sensor integrated unit
- Replacement of ICC sensor integrated unit

#### SPECIAL REPAIR REQUIREMENT

## **1.**LASER BEAM AIMING ADJUSTMENT OF ICC SENSOR INTEGRATED UNIT

Adjust the laser beam aiming of the ICC sensor integrated unit. Refer to <u>CCS-6, "LASER BEAM AIMING</u> <u>ADJUSTMENT : Description"</u>.

| DTC/CIRCUIT DIAGNOSIS >   | [ICC]                           |
|---|---------------------------------|
| CHECK ICC SYSTEM  |                                 |
| Erase the "Self Diagnostic Result", and then perform "All DTC Reading" aga test. (Refer to <u>CCS-12, "ACTION TEST : Description"</u> for action test.) | ain after performing the action |
| Check that the ICC system is normal.  |                                 |
| >> WORK END   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |
|   |                                 |

#### C1A01 POWER SUPPLY CIRCUIT 1, C1A02 POWER SUPPLY CIRCUIT 2 [ICC]

#### < DTC/CIRCUIT DIAGNOSIS >

# C1A01 POWER SUPPLY CIRCUIT 1, C1A02 POWER SUPPLY CIRCUIT 2

## Description

The ICC sensor integrated unit controls the system with the ignition power supply.

## DTC Logic

INFOID:00000006208405

INFOID:000000006208404

## DTC DETECTION LOGIC

| DTC<br>(On board dis-<br>play) | Trouble diagnosis<br>name | DTC detecting condition   | Possible causes            |
|--------------------------------|---------------------------|---|----------------------------|
| C1A01<br>(1)                   | POWER SUPPLY<br>CIR       | ICC sensor integrated unit power supply voltage is excessively low (less than 8 V).   | Connector, harness, fuse   |
| C1A02<br>(2)                   | POWER SUPPLY<br>CIR 2     | ICC sensor integrated unit power supply voltage is excessively high (more than 19 V). | ICC sensor integrated unit |

### DTC CONFIRMATION PROCEDURE

#### 1.PERFORM DTC CONFIRMATION PROCEDURE

1. Start the engine.

- Turn the MAIN switch of ICC system ON. 2.
- 3. Perform "All DTC Reading" with CONSULT-III.
- Check if the "C1A01" or "C1A02" is detected as the current malfunction in "Self Diagnostic Result" of "ICC/ 4. ADAS".

Is "C1A01" or "C1A02" detected as the current malfunction?

- YES >> Refer to CCS-44, "Diagnosis Procedure".
- NO >> Refer to GI-43, "Intermittent Incident".

## Diagnosis Procedure

INFOID:000000006208406

INFOID:000000006208407

#### 1.CHECK ICC SENSOR INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT

Check power supply and ground circuit of ICC sensor integrated unit. Refer to CCS-96, "Diagnosis Procedure".

Is the inspection result normal?

YES >> Replace the ICC sensor integrated unit. Refer to CCS-125, "Exploded View".

NO >> Repair or replace the malfunctioning parts.

### Special Repair Requirement

#### DESCRIPTION

Perform the action test after adjusting the laser beam aiming of ICC sensor integrated unit when the following operation is performed.

Removal and installation of ICC sensor integrated unit

Replacement of ICC sensor integrated unit

#### SPECIAL REPAIR REQUIREMENT

#### ${\sf 1}.$ LASER BEAM AIMING ADJUSTMENT OF ICC SENSOR INTEGRATED UNIT

Adjust the laser beam aiming of the ICC sensor integrated unit. Refer to CCS-6, "LASER BEAM AIMING ADJUSTMENT : Description".

>> GO TO 2.

2.CHECK ICC SYSTEM

Erase the "Self Diagnostic Result", and then perform "All DTC Reading" again after performing the action 1. test. (Refer to CCS-12, "ACTION TEST : Description" for action test.)

| Check that the ICC system is normal. |  |
|--------------------------------------|--|
| >> WORK END                          |  |
| >> WORR END                          |  |
|                                      |  |
|                                      |  |
|                                      |  |
|                                      |  |
|                                      |  |
|                                      |  |
|                                      |  |
|                                      |  |

# C1A03 VEHICLE SPEED SENSOR

## Description

INFOID:000000006208408

[ICC]

The ICC sensor integrated unit receives the vehicle speed signal (wheel speed) from ABS actuator and electric unit (control unit) and the A/T vehicle speed sensor signal (output shaft revolution signal) from TCM via CAN communication.

## DTC Logic

INFOID:000000006208409

## DTC DETECTION LOGIC

| DTC<br>(On board<br>display) | (On board Trouble diagnosis DTC detecting condition |   | Possible causes  |
|------------------------------|---|---|--|
| C1A03<br>(3)                 | VHCL SPEED SE<br>CIRC                               | If the vehicle speed signal (wheel speed) from<br>ABS actuator and electric unit (control unit) and<br>the A/T vehicle speed sensor signal (output<br>shaft revolution signal) from TCM, received by<br>the ICC sensor integrated unit via CAN commu-<br>nication, are inconsistent | <ul> <li>Wheel speed sensor</li> <li>ABS actuator and electric unit (control unit)</li> <li>Vehicle speed sensor A/T (output speed sensor)</li> <li>TCM</li> <li>ICC sensor integrated unit</li> </ul> |

#### NOTE:

- If DTC "C1A03" is detected along with DTC "U1000" or "C1A04", first diagnose the DTC "U1000" or "C1A04".
- Refer to <u>CCS-93, "DTC Logic"</u> for DTC "U1000".
- Refer to <u>CCS-48, "DTC Logic"</u> for DTC "C1A04".

#### DTC CONFIRMATION PROCEDURE

# 1.PERFORM DTC CONFIRMATION PROCEDURE

- 1. Start the engine.
- 2. Turn the MAIN switch of ICC system ON.
- 3. Drive the vehicle at 30 km/h (19 MPH) or more.

#### CAUTION: Always drive safely.

- 4. Stop the vehicle.
- 5. Perform "All DTC Reading" with CONSULT-III.
- 6. Check if the "C1A03" is detected as the current malfunction in "Self Diagnostic Result" of "ICC/ADAS".

#### Is "C1A03" detected as the current malfunction?

- YES >> Refer to <u>CCS-46, "Diagnosis Procedure"</u>.
- NO >> Refer to <u>GI-43, "Intermittent Incident"</u>.

#### Diagnosis Procedure

INFOID:000000006208410

#### **1.**CHECK SELF-DIAGNOSIS RESULTS

Check if "C1A04" or "U1000" is detected other than "C1A03" in "Self Diagnostic Result" of "ICC/ADAS". Is any DTC detected?

YES >> Perform diagnosis on the detected DTC and repair or replace the malfunctioning parts. Refer to <u>CCS-107, "DTC Index"</u>.

NO >> GO TO 2.

#### 2. CHECK DATA MONITOR

- 1. Start the engine.
- 2. Drive the vehicle.
- 3. Check that the value of "VHCL SPD AT" is almost the same as the value of "VHCL SPEED SE" in "DATA MONITOR" of "ICC/ADAS".

#### **CAUTION:**

#### Be careful of the vehicle speed.

#### AND VEHICLE CREED CENCOR .

## C1A04 ABS/TCS/VDC SYSTEM

#### < DTC/CIRCUIT DIAGNOSIS >

## C1A04 ABS/TCS/VDC SYSTEM

## Description

INFOID:000000006208413

[ICC]

- ABS actuator and electric unit (control unit) transmits the vehicle speed signal (wheel speed), the stop lamp switch signal and VDC/TCS/ABS system operation condition to ICC sensor integrated unit via CAN communication.
- ABS actuator and electric unit (control unit) receives the deceleration degree command value signal from the ICC sensor integrated unit with CAN communication and controls the brake fluid pressure.

### DTC Logic

INFOID:000000006208414

#### DTC DETECTION LOGIC

|   | DTC<br>(On board dis-<br>play) | Trouble diagnosis<br>name | DTC detecting condition                           | Possible causes                               |
|---|--------------------------------|---------------------------|---|---|
| - | C1A04<br>(4)                   | ABS/TCS/VDC CIRC          | If a malfunction occurs in the VDC/TCS/ABS system | ABS actuator and electric unit (control unit) |

#### NOTE:

If DTC "C1A04" is detected along with DTC "U1000", first diagnose the DTC "U1000". Refer to <u>CCS-93, "DTC Logic"</u>.

#### Diagnosis Procedure

INFOID:000000006208415

INFOID-000000006208416

#### **1.**CHECK SELF-DIAGNOSIS RESULTS

- 1. Perform "All DTC Reading" with CONSULT-III.
- 2. Check if the "U1000" is detected other than "C1A04" in "Self Diagnostic Result" of "ICC/ADAS".

#### Is "U1000" detected?

YES >> Perform the CAN communication system inspection. Repair or replace the malfunctioning parts. Refer to <u>CCS-93, "DTC Logic"</u>.

NO >> GO TO 2.

## 2.CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) SELF-DIAGNOSIS RESULTS

Check if any DTC is detected in "Self Diagnostic Result" of "ABS".

#### Is any DTC detected?

- YES >> Perform diagnosis on the detected DTC and repair or replace the malfunctioning parts. Refer to <u>BRC-100, "DTC No. Index"</u>.
- NO >> Replace the ICC sensor integrated unit. Refer to <u>CCS-125, "Exploded View"</u>.

#### Special Repair Requirement

#### DESCRIPTION

Perform the action test after adjusting the laser beam aiming of ICC sensor integrated unit when the following operation is performed.

- Removal and installation of ICC sensor integrated unit
- Replacement of ICC sensor integrated unit

#### SPECIAL REPAIR REQUIREMENT

#### $\mathsf{1}.\mathsf{LASER}$ BEAM AIMING ADJUSTMENT OF ICC SENSOR INTEGRATED UNIT

Adjust the laser beam aiming of the ICC sensor integrated unit. Refer to <u>CCS-6</u>, "LASER BEAM AIMING <u>ADJUSTMENT : Description"</u>.

Ρ

## Description

INFOID:000000006208417

[ICC]

- ICC brake switch is turned OFF and stop lamp switch is turned ON when depressing the brake pedal.
- ICC brake switch signal is input to ECM. The signal is transmitted from ECM to ICC sensor integrated unit via CAN communication.
- Stop lamp switch signal is input to ECM and ABS actuator and electric unit (control unit). These signals are
  transmitted from ECM and ABS actuator and electric unit (control unit) to ICC sensor integrated unit via CAN
  communication.

## **DTC Logic**

INFOID:000000006208418

#### DTC DETECTION LOGIC

| DTC<br>(On board dis-<br>play) | Trouble diagnosis<br>name | DTC detecting condition   | Possible causes  |
|--------------------------------|---------------------------|---|--|
| C1A05<br>(5)                   | BRAKE SW/STOP L<br>SW     | If ICC sensor integrated unit receives signals in-<br>dicating that the stop lamp switch [from ABS ac-<br>tuator and electric unit (control unit)] is ON and<br>the ICC brake switch (from ECM) is ON | <ul> <li>Stop lamp switch circuit</li> <li>ICC brake switch circuit</li> <li>Stop lamp switch</li> <li>ICC brake switch</li> <li>Incorrect stop lamp switch installation</li> <li>Incorrect ICC brake switch installation</li> <li>ECM</li> <li>ABS actuator and electric unit (control unit)</li> </ul> |

#### NOTE:

If DTC "C1A05" is detected along with DTC "U1000", "U0401", "U0415", or "U0121", first diagnose the DTC "U1000", "U0401", "U0415", or "U0121".

- DTC "U1000": Refer to CCS-93, "DTC Logic".
- DTC "U0401": Refer to CCS-87, "DTC Logic".
- DTC "U0415": Refer to <u>CCS-91, "DTC Logic"</u>.
- DTC "U0121": Refer to CCS-85, "DTC Logic".

## **Diagnosis Procedure**

INFOID:000000006208419

#### **1.**CHECK SELF-DIAGNOSIS RESULTS

- 1. Perform "All DTC Reading" with CONSULT-III.
- Check if "U1000", "U0401", "U0415", or "U0121" is detected other than "C1A05" in "Self Diagnostic Result" of "ICC/ADAS".

#### Is any DTC detected?

YES >> Perform diagnosis on the detected DTC and repair or replace the malfunctioning parts. Refer to <u>CCS-107, "DTC Index"</u>.

NO >> GO TO 2.

2. CHECK ICC BRAKE SWITCH WITH ICC DATA MONITOR

Check that "BRAKE SW" operate normally in "DATA MONITOR" of "ICC/ADAS".

Is the inspection result normal?

YES >> GO TO 3.

NO >> GO TO 4.

**3.**CHECK STOP LAMP SWITCH WITH ABS DATA MONITOR

Check that "STOP LAMP SW" operate normally in "DATA MONITOR" of "ABS".

Is the inspection result normal?

YES >> GO TO 13.

NO >> GO TO 9.

## C1A05 BRAKE SW/STOP LAMP SW

#### < DTC/CIRCUIT DIAGNOSIS >

[ICC]

# 10. CHECK STOP LAMP SWITCH

- 1. Disconnect stop lamp switch connector.
- 2. Check stop lamp switch. Refer to CCS-53, "Component Inspection (Stop Lamp Switch)".

#### Is the inspection result normal?

YES >> GO TO 11.

NO >> Replace stop lamp switch.

# 11. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

#### 1. Turn ignition switch ON.

2. Check voltage between stop lamp switch harness connector and ground.

| (·        | +)        | ()     | Voltage         |
|-----------|-----------|--------|-----------------|
| Stop lan  | np switch |        | (Approx.)       |
| Connector | Terminal  | Ground |                 |
| E110      | 3         |        | Battery voltage |

Is the inspection result normal?

YES >> GO TO 12.

NO >> Repair or replace stop lamp switch power supply circuit.

12.CHECK HARNESS BETWEEN STOP LAMP SWITCH AND ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

- 1. Turn ignition switch OFF.
- 2. Disconnect ABS actuator and electric unit (control unit) connector.
- 3. Check continuity between stop lamp switch harness connector and ABS actuator and electric unit (control unit) harness connector.

| Stop lamp switch |          |                    | ABS actuator and electric unit (control unit) |         |  |
|------------------|----------|--------------------|---|---------|--|
| Connector        | Terminal | Connector Terminal |   |         |  |
| E110             | 4        | E41                | 30  | Existed |  |

Is the inspection result normal?

YES >> GO TO 14.

NO >> Repair the harness or connectors.

 $13. {\tt perform \ self-diagnosis \ of \ ecm}$ 

- 1. Connect all connectors again if the connectors are disconnected.
- 2. Turn ignition switch ON.
- 3. Perform "All DTC Reading".
- Check if any DTC is detected in "Self Diagnostic Result" of "ENGINE". Refer to <u>EC-583, "DTC Index"</u>.

#### Is any DTC detected?

- YES >> Repair or replace the malfunctioning parts identified by the self-diagnosis result.
- NO >> GO TO 14.

# 14.PERFORM SELF-DIAGNOSIS OF ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

- 1. Connect all connectors again if the connectors are disconnected.
- 2. Turn ignition switch ON.
- 3. Perform "All DTC Reading".
- 4. Check if any DTC is detected in "Self Diagnostic Result" of "ABS". Refer to <u>BRC-100, "DTC No. Index"</u>. <u>Is any DTC detected?</u>

#### YES >> Repair or replace the malfunctioning parts identified by the self-diagnosis result.

NO >> Replace ICC sensor integrated unit. Refer to <u>CCS-125</u>, "Exploded View".

## C1A06 OPERATION SW

## Description

INFOID:000000006208425

[ICC]

- Operate the ICC system ON/OFF and vehicle speed/vehicle distance setting by the ICC steering switch.
- The ICC steering switch signal is input to the ECM. It is transmitted from ECM to ICC sensor integrated unit via CAN communication.

## DTC Logic

INFOID:000000006208426

## DTC DETECTION LOGIC

| DTC<br>(On board dis-<br>play) | Trouble diagnosis<br>name | DTC detecting condition  | Possible causes   |
|--------------------------------|---------------------------|--|---|
| C1A06<br>(6)                   | OPERATION SW<br>CIRC      | If the input signal from ICC steering switch is malfunctioning | <ul><li>ICC steering switch circuit</li><li>ICC steering switch</li><li>ECM</li></ul> |

#### NOTE:

If DTC "C1A06" is detected along with DTC "U1000", first diagnose the DTC "U1000". Refer to <u>CCS-93, "DTC</u> <u>Logic"</u>.

#### DTC CONFIRMATION PROCEDURE

# **1.**PERFORM DTC CONFIRMATION PROCEDURE

- 1. Start the engine.
- 2. Wait for approximately 5 minutes after turning the MAIN switch of ICC system ON.
- 3. Perform "All DTC Reading" with CONSULT-III.
- 4. Check if the "C1A06" is detected as the current malfunction in "Self Diagnostic Result" of "ICC/ADAS".

#### Is "C1A06" detected as the current malfunction?

- YES >> Refer to CCS-54, "Diagnosis Procedure".
- NO >> Refer to <u>GI-43</u>, "Intermittent Incident".

#### Diagnosis Procedure

INFOID:000000006208427

#### **1.**CHECK SELF-DIAGNOSIS RESULTS

Check if "U1000" is detected other than "C1A06" in "Self Diagnostic Result" of "ICC/ADAS".

#### Is "U1000" detected?

- YES >> Perform the CAN communication system inspection. Repair or replace the malfunctioning parts. Refer to <u>CCS-93, "DTC Logic"</u>.
- NO >> GO TO 2.

2. CHECK ICC STEERING SWITCH

- 1. Turn the ignition switch OFF.
- 2. Disconnect the ICC steering switch connector.
- Check the ICC steering switch. Refer to <u>CCS-55, "Component Inspection"</u>.

Is the inspection result normal?

YES >> GO TO 3.

NO >> Replace the ICC steering switch.

# $\mathbf{3}$ .check harness between spiral cable and ecm

- 1. Disconnect the ECM connector.
- 2. Check for continuity between the spiral cable harness connector and ECM harness connector.

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Replace the ICC steering switch.

## Special Repair Requirement

INFOID:000000006208429

[ICC]

#### DESCRIPTION

Perform the action test after adjusting the laser beam aiming of ICC sensor integrated unit when the following operation is performed.

- Removal and installation of ICC sensor integrated unit
- Replacement of ICC sensor integrated unit

#### SPECIAL REPAIR REQUIREMENT

**1.**LASER BEAM AIMING ADJUSTMENT OF ICC SENSOR INTEGRATED UNIT

Adjust the laser beam aiming of the ICC sensor integrated unit. Refer to <u>CCS-6</u>, "LASER BEAM AIMING <u>ADJUSTMENT : Description"</u>.

>> GO TO 2.

# 2. CHECK ICC SYSTEM

- Erase the "Self Diagnostic Result", and then perform "All DTC Reading" again after performing the action test. (Refer to <u>CCS-12, "ACTION TEST : Description"</u> for action test.)
- 2. Check that the ICC system is normal.

>> WORK END

# C1A12 LASER BEAM OFF CENTER

### Description

ICC sensor integrated unit detects the reflected light from the vehicle ahead by irradiating a laser forward. It calculates the distance from and relative speed with the vehicle ahead based on the detected signal.

## Description

The ICC brake hold relay activates the stop lamp by the ICC brake hold relay drive signal (stop lamp drive signal) outputted by the ICC sensor integrated unit.

## DTC Logic

INFOID:000000006208435

INFOID:00000006208434

## DTC DETECTION LOGIC

| DTC<br>(On board dis-<br>play) | Trouble diagnosis name | DTC detecting condition  | Possible causes  |
|--------------------------------|------------------------|--|--|
| C1A13<br>(13)                  | STOP LAMP RLY FIX      | <ul> <li>If the stop lamp is not activated even<br/>though the ICC sensor integrated unit is<br/>transmitting a ICC brake hold relay drive<br/>signal</li> <li>If the stop lamp is activated even though<br/>the ICC sensor integrated unit is not trans-<br/>mitting a ICC brake hold relay drive signal</li> </ul> | <ul> <li>Stop lamp switch circuit</li> <li>ICC brake switch circuit</li> <li>ICC brake hold relay circuit</li> <li>Stop lamp switch</li> <li>ICC brake switch</li> <li>ICC brake hold relay</li> <li>Incorrect stop lamp switch installation</li> <li>Incorrect ICC brake switch installation</li> <li>ECM</li> <li>ABS actuator and electric unit (control unit)</li> </ul> |

#### NOTE:

If DTC "C1A13" is detected along with DTC "U1000", first diagnose the DTC "U1000". Refer to <u>CCS-93. "DTC</u> <u>Logic"</u>.

### DTC CONFIRMATION PROCEDURE

**1.**PERFORM DTC CONFIRMATION PROCEDURE (1)

- 1. Start the engine.
- 2. Perform the active test item "STOP LAMP" with CONSULT-III.
- 3. Perform "All DTC Reading".
- 4. Check if the "C1A13" is detected as the current malfunction in the "Self Diagnostic Result" of "ICC/ADAS".
- Is "C1A13" detected as the current malfunction?

YES >> Refer to <u>CCS-58, "Diagnosis Procedure"</u>.

NO >> GO TO 2.

**2.** PERFORM DTC CONFIRMATION PROCEDURE (2)

1. Drive at the vehicle speed of 40 km/h (25 MPH) or more for approximately 20 seconds or more without the brake pedal depressed.

#### CAUTION: Always drive safely. NOTE:

- If it is outside the above condition, repeat step 1.
- 2. Perform "All DTC Reading".
- 3. Check if the "C1A13" is detected as the current malfunction in the "Self Diagnostic Result" of "ICC/ADAS".

Is "C1A13" detected as the current malfunction?

- YES >> Refer to <u>CCS-58, "Diagnosis Procedure"</u>.
- NO >> Refer to <u>GI-43, "Intermittent Incident"</u>.

#### Diagnosis Procedure

**1.**CHECK SELF-DIAGNOSIS RESULTS

Check if "U1000" is detected other than "C1A13" in "Self Diagnostic Result" of "ICC/ADAS". <u>Is "U1000" detected?</u>

INFOID-000000006208436

| Is the inspection result normal?  |  |    |

YES >> GO TO 9.

#### < DTC/CIRCUIT DIAGNOSIS >

[ICC]

#### NO >> Replace ICC brake hold relay.

#### **9.**PERFORM SELF-DIAGNOSIS OF ECM

- 1. Connect all connectors again if the connectors are disconnected.
- 2. Turn ignition switch ON.
- 3. Perform "All DTC Reading".
- Check if any DTC is detected in "Self Diagnostic Result" of "ENGINE". Refer to <u>EC-583</u>, "DTC Index".

#### Is any DTC detected?

- YES >> Repair or replace the malfunctioning parts identified by the self-diagnosis result.
- NO >> Replace ICC sensor integrated unit. Refer to <u>CCS-125, "Exploded View"</u>.

# 10. CHECK HARNESS BETWEEN ICC SENSOR INTEGRATED UNIT AND ICC BRAKE HOLD RELAY

- 1. Turn ignition switch OFF.
- 2. Disconnect ICC sensor integrated unit connector and ICC brake hold relay.
- Check for continuity between ICC sensor integrated unit harness connector and ICC brake hold relay harness connector.

| ICC sensor in | ntegrated unit | ICC brake hold relay |   | Continuity |  |
|---------------|----------------|----------------------|---|------------|--|
| Connector     | Terminal       | Connector Terminal   |   |            |  |
| E67           | 2              | E51                  | 2 | Existed    |  |

4. Check for continuity between ICC sensor integrated unit harness connector and ground.

| ICC sensor i       | ntegrated unit |        | Continuity  |
|--------------------|----------------|--------|-------------|
| Connector Terminal |                | Ground | Continuity  |
| E67                | 2              |        | Not existed |

Is the inspection result normal?

YES >> GO TO 11.

NO >> Repair the harnesses or connectors.

## **11.**CHECK ICC BRAKE HOLD RELAY GROUND CIRCUIT

Check for continuity between ICC brake hold relay harness connector and ground.

| ICC brake          | hold relay |        | Continuity |  |
|--------------------|------------|--------|------------|--|
| Connector Terminal |            | Ground | Continuity |  |
| E51                | 1          |        | Existed    |  |

Is the inspection result normal?

YES >> GO TO 12.

NO >> Repair the harnesses or connectors.

# 12. CHECK ICC SENSOR INTEGRATED UNIT STANDARD VOLTAGE

- 1. Connect ICC sensor integrated unit connector.
- 2. Turn ignition switch ON.
- 3. Perform "STOP LAMP" on "Active Test" of "ICC/ADAS", and then check the voltage between ICC brake hold relay harness connector and ground.

| Terminal  |            |        | Condition           |                 |           |         |

YES >> GO TO 18.

< DTC/CIRCUIT DIAGNOSIS >

NO >> Adjust stop lamp switch installation. Refer to <u>BR-7, "Inspection and Adjustment"</u>.

# **18.**CHECK STOP LAMP SWITCH

1. Disconnect stop lamp switch connector.

2. Check stop lamp switch. Refer to CCS-53. "Component Inspection (Stop Lamp Switch)".

#### Is the inspection result normal?

YES >> GO TO 19.

NO >> Replace stop lamp switch.

# **19.**CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

#### 1. Turn ignition switch ON.

2. Check voltage between stop lamp switch harness connector and ground.

| E110      | 3         |        | Battery voltage |

Is the inspection result normal?

YES >> GO TO 20.

NO >> Repair or replace stop lamp switch power supply circuit.

# 20. Check harness between stop LAMP switch and ABS actuator and electric unit (control unit)

- 1. Turn ignition switch OFF.
- 2. Disconnect ABS actuator and electric unit (control unit) connector.
- 3. Check for continuity between stop lamp switch harness connector and ABS actuator and electric unit (control unit) harness connector.

| Stop lan  | np switch | ABS actuator and electric<br>unit (control unit) |          | Continuity |
|-----------|-----------|--|----------|------------|
| Connector | Terminal  | Connector  | Terminal |            |
| E110      | 4         | E41  | 30       | Existed    |

Is the inspection result normal?

YES >> GO TO 22.

NO >> Repair the harnesses or connectors.

# 21.PERFORM SELF-DIAGNOSIS OF ECM

- 1. Connect all connectors again if the connectors are disconnected.
- 2. Turn ignition switch ON.
- 3. Perform "All DTC Reading".
- Check if any DTC is detected in "Self Diagnostic Result" of "ENGINE". Refer to <u>EC-583, "DTC Index"</u>. Is any DTC detected?

#### Is any DTC detected?

YES >> Repair or replace the malfunctioning parts identified by the self-diagnosis result.

NO >> GO TO 22.

# **22.** PERFORM SELF-DIAGNOSIS OF ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

- 1. Connect all connectors again if the connectors are disconnected.
- 2. Turn ignition switch ON.
- 3. Perform "All DTC Reading".
- Check if any DTC is detected in "Self Diagnostic Result" of "ABS". Refer to <u>BRC-100, "DTC No. Index"</u>.

#### Is any DTC detected?

- YES >> Repair or replace the malfunctioning parts identified by the self-diagnosis result.
- NO >> Replace ICC sensor integrated unit. Refer to <u>CCS-125, "Exploded View"</u>.

### **CCS-62**

#### < DTC/CIRCUIT DIAGNOSIS >

#### Component Inspection

#### **1.**CHECK ICC BRAKE HOLD RELAY

Apply battery voltage to ICC brake hold relay terminals 1 and 2, and then check for continuity under the following conditions.

| Terr | minal | Condition                               | Continuity       |
|------|-------|---|------------------|
|      |       | When the battery voltage is applied     | Existed          |
| 3    | 5     | When the battery voltage is not applied | Not exist-<br>ed |

#### Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace ICC brake hold relay.

#### Special Repair Requirement

#### DESCRIPTION

Perform the action test after adjusting the laser beam aiming of ICC sensor integrated unit when the following operation is performed.

- · Removal and installation of ICC sensor integrated unit
- · Replacement of ICC sensor integrated unit

#### SPECIAL REPAIR REQUIREMENT

#### **1.**LASER BEAM AIMING ADJUSTMENT OF ICC SENSOR INTEGRATED UNIT

Adjust the laser beam aiming of the ICC sensor integrated unit. Refer to <u>CCS-6, "LASER BEAM AIMING</u> <u>ADJUSTMENT : Description"</u>.

#### >> GO TO 2.

2. CHECK ICC SYSTEM

- Erase the "Self Diagnostic Result", and then perform "All DTC Reading" again after performing the action test. (Refer to <u>CCS-12, "ACTION TEST : Description"</u> for action test.)
- 2. Check that the ICC system is normal.

INFOID:000000006208437

## C1A14 ECM

## Description

- ECM transmits the accelerator pedal position signal, ICC brake switch signal, stop lamp switch signal, ICC steering switch signal, etc. to ICC sensor integrated unit via CAN communication.
- ECM controls the electric throttle control actuator based on the engine torque demand received from the ICC sensor integrated unit via CAN communication.

# DTC Logic

#### NOTE:

If DTC "C1A14" is detected along with DTC "U1000", first diagnose the DTC "U1000". Refer to <u>CCS-93. "DTC</u> <u>Logic"</u>.

#### 1.PERFORM DTC CONFIRMATION PROCEDURE

- 1. Start the engine.
- 2. Operate the ICC system and drive. CAUTION:

#### Always drive safely.

- 3. Stop the vehicle.
- 4. Perform "All DTC Reading" with CONSULT-III.
- 5. Check if the "C1A14" is detected as the current malfunction in "Self Diagnostic Result" of "ICC/ADAS".

#### Is "C1A14" detected as the current malfunction?

- YES >> Refer to CCS-64, "Diagnosis Procedure".
- NO >> Refer to <u>GI-43, "Intermittent Incident"</u>.

## **Diagnosis Procedure**

INFOID:000000006208441

#### **1.**CHECK SELF-DIAGNOSIS RESULTS

Check if "U1000" is detected other than "C1A14" in "Self Diagnostic Result" of "ICC/ADAS".

Is "U1000" detected?

YES >> Perform the CAN communication system inspection. Repair or replace the malfunctioning parts. Refer to <u>CCS-93, "DTC Logic"</u>.

NO >> GO TO 2.

2. PERFORM SELF-DIAGNOSIS OF ECM

Check if any DTC is detected in "Self Diagnostic Result" of "ENGINE".

#### Is any DTC detected?

- YES >> Perform diagnosis on the detected DTC and repair or replace the malfunctioning parts. Refer to <u>EC-583, "DTC Index"</u>.
- NO >> Replace the ICC sensor integrated unit. Refer to <u>CCS-125, "Exploded View"</u>.

### Special Repair Requirement

INFOID:000000006208442

#### DESCRIPTION

Perform the action test after adjusting the laser beam aiming of ICC sensor integrated unit when the following operation is performed.

- Removal and installation of ICC sensor integrated unit
- Replacement of ICC sensor integrated unit

# C1A15 GEAR POSITION

## Description

INFOID:000000006208443

[ICC]

ICC sensor integrated unit judges the gear position based on the following signals.

- Current gear position signal transmitted from TCM via CAN communication.
- Value of gear ratio calculated from input speed signal transmitted from TCM via CAN communication.
- Value of gear ratio calculated from the vehicle speed signal transmitted from ABS actuator and electric unit (control unit) via CAN communication.

### DTC Logic

INFOID:000000006208444

#### DTC DETECTION LOGIC

| DTC<br>(On board dis-<br>play) | Trouble diagnosis<br>name | DTC detecting condition  | Possible causes   |
|--------------------------------|---------------------------|--|---|
| C1A15<br>(15)                  | GEAR POSITION             | If a mismatch occurs between a current gear<br>position signal transmitted from TCM via<br>CAN communication and the gear position<br>calculated by ICC sensor integrated unit | <ul> <li>Input speed sensor</li> <li>Vehicle speed sensor A/T (output speed sensor)</li> <li>TCM</li> </ul> |

#### NOTE:

If DTC "C1A15" is detected along with DTC "U1000", "C1A03" or "C1A04", first diagnose the DTC "U1000", "C1A03" or "C1A04".

- Refer to <u>CCS-93, "DTC Logic"</u> for DTC "U1000".
- Refer to <u>CCS-46, "DTC Logic"</u> for DTC "C1A03".
- Refer to <u>CCS-48, "DTC Logic"</u> for DTC "C1A04".

#### DTC CONFIRMATION PROCEDURE

**1.**PERFORM DTC CONFIRMATION PROCEDURE

- 1. Start the engine.
- 2. Turn the MAIN switch of ICC system ON.
- 3. Drive the vehicle at 10 km/h (6 MPH) or faster for approximately 15 minutes or more. CAUTION:

#### Always drive safely.

- 4. Stop the vehicle.
- 5. Perform "All DTC Reading" with CONSULT-III.
- 6. Check if "C1A15" is detected as the current malfunction in the "Self Diagnostic Result" of "ICC/ADAS".

#### Is "C1A15" detected as the current malfunction?

- YES >> Refer to <u>CCS-66. "Diagnosis Procedure"</u>.
- NO >> Refer to GI-43, "Intermittent Incident".

#### Diagnosis Procedure

INFOID:000000006208445

#### **1.**CHECK SELF-DIAGNOSIS RESULTS

Check if "C1A03", "C1A04" or "U1000" is detected other than "C1A15" in "Self Diagnostic Result" of "ICC/ ADAS".

Is any DTC detected?

YES >> Perform diagnosis on the detected DTC and repair or replace the malfunctioning parts. Refer to <u>CCS-107, "DTC Index"</u>.

NO >> GO TO 2.

2. CHECK VEHICLE SPEED SIGNAL

Check that "VHCL SPEED SE" operates normally in "DATA MONITOR" of "ICC/ADAS".

#### **CAUTION:**

### Be careful of the vehicle speed.

Is the inspection result normal?

YES >> GO TO 3.

|  |    |
|  | C  |
| 1.LASER BEAM AIMING ADJUSTMENT OF ICC SENSOR INTEGRATED UNIT   |    |
| Adjust the laser beam aiming of the ICC sensor integrated unit. Refer to <u>CCS-6. "LASER BEAM AIMING</u>  |    |
| ADJUSTMENT : Description".   | F  |
|  |    |
| >> GO TO 2.  |    |
|  |    |

2. CHECK ICC SYSTEM

<sup>1.</sup> Erase the "Self Diagnostic Result", and then perform "All DTC Reading" again after performing the action test. (Refer to <u>CCS-12</u>, "<u>ACTION TEST</u> : <u>Description</u>" for action test.)

2. Check that the ICC system is normal.

>> WORK END

# C1A16 RADAR STAIN

### Description

ICC sensor integrated unit detects the reflected light from the vehicle ahead by irradiating a laser beam forward. It calculates the distance from and relative speed with the vehicle ahead based on the detected signal.

## DTC Logic

INFOID:000000006208448

INEOID-000000006208449

INFOID:00000006208447

### DTC DETECTION LOGIC

| DTC<br>(On board dis-<br>play) | Trouble diagnosis<br>name | DTC detecting condition                                       | Possible causes  | D |
|--------------------------------|---------------------------|---|--|---|
| C1A16<br>(16)                  | RADAR STAIN               | If any stain occurs to ICC sensor integrated unit body window | <ul> <li>Stain or foreign materials is deposited</li> <li>Cracks or scratches exist</li> </ul> | E |

#### NOTE:

DTC "C1A16" may be detected under the following conditions. (Explain to the customer about the difference between the contamination detection function and the indication when the malfunction is detected and tell them "This is not malfunction".) When contamination or foreign materials adhere to the ICC sensor integrated unit body window

- When driving while it is snowing or when frost forms on the ICC sensor integrated unit body window
- When ICC sensor integrated unit body window is temporarily fogged

## **Diagnosis** Procedure

## 1.VISUAL CHECK 1

Check ICC sensor integrated unit body window for contamination and foreign materials.

Does contamination or foreign materials adhere?

| YES | >> Wipe out the contamination and foreign materials from the ICC sensor integrated unit body win- | J |
|-----|---|---|
|     | dow.  | 0 |
| NO  | >> GO TO 2.   |   |

2. VISUAL CHECK 2

Check ICC sensor integrated unit body window for cracks and scratches.

#### Is it found?

- YES >> Replace the ICC sensor integrated unit. Refer to <u>CCS-125, "Exploded View"</u>.
- >> GO TO 3. NO

## 3.INTERVIEW

- Ask if there is any trace of contamination or foreign materials adhering to the ICC sensor integrated unit 1. body window.
- 2. Ask if ICC sensor integrated unit body window was frosted during driving or if vehicle was driven in snow.
- Ν 3. Ask if ICC sensor integrated unit body window was temporarily fogged. (Front window glass may also tend to fog, etc.)

#### Is any of above conditions seen?

- CCS YES >> Explain to the customer about the difference between the contamination detection function and the indication when the malfunction is detected and tell them "This is not malfunction". NO
  - >> Replace the ICC sensor integrated unit. Refer to CCS-125, "Exploded View".

#### Special Repair Requirement

#### DESCRIPTION

Perform the action test after adjusting the laser beam aiming of ICC sensor integrated unit when the following operation is performed.

- Removal and installation of ICC sensor integrated unit
- Replacement of ICC sensor integrated unit

### **C1A24 NP RANGE**

### < DTC/CIRCUIT DIAGNOSIS >

# C1A24 NP RANGE

### Description

ICC sensor integrated unit judges the NP position status from the shift position signal and current gear position signal received from TCM via CAN communication.

## DTC Logic

INFOID:000000006208460

INFOID:000000006208459

А

С

#### Is the inspection result normal?

- YES >> Replace the ICC sensor integrated unit. Refer to CCS-125, "Exploded View".
- NO >> GO TO 4.

**4.**PERFORM TCM SELF-DIAGNOSIS

- 1. Perform "All DTC Reading".
- 2. Check if any DTC is detected in "Self Diagnostic Result" of "TRANSMISSION".

Is any DTC detected?

- YES >> Perform diagnosis on the detected DTC and repair or replace the malfunctioning parts. Refer to <u>TM-251, "DTC Index"</u>.
- NO >> Replace the ICC sensor integrated unit. Refer to <u>CCS-125, "Exploded View"</u>.

#### Special Repair Requirement

INFOID:000000006208462

#### DESCRIPTION

Perform the action test after adjusting the laser beam aiming of ICC sensor integrated unit when the following operation is performed.

- Removal and installation of ICC sensor integrated unit
- Replacement of ICC sensor integrated unit

SPECIAL REPAIR REQUIREMENT

**1.**LASER BEAM AIMING ADJUSTMENT OF ICC SENSOR INTEGRATED UNIT

Adjust the laser beam aiming of the ICC sensor integrated unit. Refer to <u>CCS-6</u>, "LASER BEAM AIMING <u>ADJUSTMENT : Description"</u>.

>> GO TO 2.

# 2.CHECK ICC SYSTEM

- 1. Erase the "Self Diagnostic Result", and then perform "All DTC Reading" again after performing the action test. (Refer to <u>CCS-12</u>, "<u>ACTION TEST</u> : <u>Description</u>" for action test.)
- 2. Check that the ICC system is normal.

### C1A26 ECD MODE MALFUNCTION

#### < DTC/CIRCUIT DIAGNOSIS >

### C1A26 ECD MODE MALFUNCTION

### Description

#### ECD (ELECTRONICALLY CONTROLLED DECELERATION)

- Receives deceleration degree commandment value signal from ICC sensor integrated unit, and controls brake fluid pressure with the motor [built in ABS actuator and electric unit (control unit)].
- ECD control-related signals are transmitted by ABS actuator and electric unit (control unit) to ICC sensor integrated unit via CAN communication.

### DTC Logic

INFOID:000000006208464

#### DTC DETECTION LOGIC

| DTC No.<br>(On board<br>display) | Trouble diagnosis name | DTC detecting condition                         | Possible cause                                | _ |
|----------------------------------|------------------------|---|---|---|
| C1A26<br>(26)                    | ECD MODE MALF          | If an abnormal condition occurs with ECD system | ABS actuator and electric unit (control unit) | F |
| NOTE:<br>If DTC "C1              | A26" is detected along | with DTC "U1000", "U0415", or "U0121",          | first diagnose the DTC "U1000",               | G |

"U0415", or "U0121".

- DTC "U1000": Refer to <u>CCS-93, "DTC Logic"</u>.
- DTC "U0415": Refer to <u>CCS-91, "DTC Logic"</u>.
- DTC "U0121": Refer to CCS-85, "DTC Logic".

#### DTC CONFIRMATION PROCEDURE

#### **1.**PERFORM DTC CONFIRMATION PROCEDURE

- 1. Start the engine.
- 2. Wait for approximately 1 minute after turning the MAIN switch of ICC system ON.
- 3. Perform "All DTC Reading" with CONSULT-III.
- 4. Check if the "C1A26" is detected as the current malfunction in "Self Diagnostic Result" of "ICC/ADAS".

#### Is "C1A26" detected as the current malfunction?

- YES >> Refer to <u>CCS-77, "Diagnosis Procedure"</u>.
- NO >> Refer to <u>GI-43. "Intermittent Incident"</u>.

#### Diagnosis Procedure

#### 1.CHECK SELF-DIAGNOSIS RESULTS

Check if "U1000", "U0415", or "U0121" is detected other than "C1A26" in "Self Diagnostic Result" of "ICC/  $^{
m M}$  ADAS".

Is any DTC detected?

YES >> Perform diagnosis on the detected DTC and repair or replace the malfunctioning parts. Refer to <u>CCS-107, "DTC Index"</u>.

NO >> GO TO 2.

2. PERFORM SELF-DIAGNOSIS OF ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

Check if any DTC is detected in "Self Diagnostic Result" of "ABS".

#### Is any DTC detected?

- YES >> Perform diagnosis on the detected DTC and repair or replace the malfunctioning parts. Refer to <u>BRC-100, "DTC No. Index"</u>.
- NO >> Replace ICC sensor integrated unit. Refer to <u>CCS-125, "Exploded View"</u>.

## C1A26 ECD MODE MALFUNCTION

#### < DTC/CIRCUIT DIAGNOSIS >

[ICC]

Perform the action test after adjusting the laser beam aiming of ICC sensor integrated unit when the following operation is performed.

- Removal and installation of ICC sensor integrated unit
- Replacement of ICC sensor integrated unit

#### SPECIAL REPAIR REQUIREMENT

**1.**LASER BEAM AIMING ADJUSTMENT OF ICC SENSOR INTEGRATED UNIT

Adjust the laser beam aiming of the ICC sensor integrated unit. Refer to <u>CCS-6</u>, "LASER BEAM AIMING <u>ADJUSTMENT : Description</u>".

>> GO TO 2.

### 2.CHECK ICC SYSTEM

- 1. Erase the "Self Diagnostic Result", and then perform "All DTC Reading" again after performing the action test. (Refer to <u>CCS-12</u>, "<u>ACTION TEST</u> : <u>Description</u>" for action test.)
- 2. Check that the ICC system is normal.

### C1A27 ECD POWER SUPPLY CIRCUIT

#### < DTC/CIRCUIT DIAGNOSIS >

# C1A27 ECD POWER SUPPLY CIRCUIT

### Description

#### ECD (ELECTRONICALLY CONTROLLED DECELERATION)

- Receives deceleration degree commandment value signal from ICC sensor integrated unit, and controls brake fluid pressure with the motor [built in ABS actuator and electric unit (control unit)].
- ECD control-related signals are transmitted by ABS actuator and electric unit (control unit) to ICC sensor integrated unit via CAN communication.

# U1000 CAN COMM CIRCUIT

### Description

### CAN COMMUNICATION

CAN (Controller Area Network) is a serial communication line for real time applications. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicle is equipped with many electronic control units, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H, CAN-L) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads the required data only.

#### DTC Logic

### DTC DETECTION LOGIC

| DTC<br>(On board<br>display) | Trouble diagnosis name | DTC Detecting Condition  | Possible causes            | D |
|------------------------------|------------------------|--|----------------------------|---|
| U1010<br>(110)               | CONTROL UNIT (CAN)     | If ICC sensor integrated unit detects malfunc-<br>tion by CAN controller initial diagnosis | ICC sensor integrated unit | E |

### Diagnosis Procedure

# 1.PERFORM DTC CONFIRMATION PROCEDURE

1. Turn the MAIN switch of ICC system ON.

2. Perform "All DTC Reading" with CONSULT-III.

- 3. Check if the "U1010" is detected as the current malfunction in "Self Diagnostic Result" of "ICC/ADAS". Is "U1010" detected as the current malfunction?
- YES >> Replace the ICC sensor integrated unit. Refer to <u>CCS-125, "Exploded View"</u>.
- NO >> INSPECTION END

### Special Repair Requirement

#### DESCRIPTION

Perform the action test after adjusting the laser beam aiming of ICC sensor integrated unit when the following operation is performed.

- · Removal and installation of ICC sensor integrated unit
- Replacement of ICC sensor integrated unit

### SPECIAL REPAIR REQUIREMENT

### LASER BEAM AIMING ADJUSTMENT OF ICC SENSOR INTEGRATED UNIT

Adjust the laser beam aiming of the ICC sensor integrated unit. Refer to <u>CCS-6</u>, "LASER BEAM AIMING <u>ADJUSTMENT : Description"</u>.

#### >> GO TO 2.

### 2.CHECK ICC SYSTEM

 Erase the "Self Diagnostic Result", and then perform "All DTC Reading" again after performing the action test. (Refer to <u>CCS-12, "ACTION TEST : Description"</u> for action test.)

2. Check that the ICC system is normal.

### POWER SUPPLY AND GROUND CIRCUIT

#### < DTC/CIRCUIT DIAGNOSIS >

# POWER SUPPLY AND GROUND CIRCUIT

### Diagnosis Procedure

INFOID:000000006208503

[ICC]

### **1.**CHECK FUSES

Check if any of the following fuses are blown:

| Signal name           | Fuse No. |
|-----------------------|----------|
| Ignition power supply | 45       |

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace the blown fuse after repairing the affected circuit if a fuse is blown.

2.check ICC sensor integrated unit power supply circuit

1. Turn the ignition switch OFF.

2. Disconnect the ICC sensor integrated unit connector.

3. Turn the ignition switch ON.

4. Check voltage between ICC sensor integrated unit harness connector and ground.

| (1           | +)             | (-)    | Voltage         |
|--------------|----------------|--------|-----------------|
| ICC sensor i | ntegrated unit |        | (Approx.)       |
| Connector    | Terminal       | Ground |                 |
| E67          | 1              |        | Battery voltage |

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair the ICC sensor integrated unit power supply circuit.

# ${f 3.}$ CHECK ICC SENSOR INTEGRATED UNIT GROUND CIRCUIT

1. Turn the ignition switch OFF.

2. Check for continuity between ICC sensor integrated unit harness connector and ground.

| ICC sensor i | ntegrated unit  |  | Continuity |
|--------------|-----------------|--|------------|
| Connector    | nector Terminal |  | Continuity |
| E67          | 4               |  | Existed    |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Repair the ICC sensor integrated unit ground circuit.

### **DTC** Index

#### NOTE:

- The details of time display are as per the following.
- 0: The malfunctions that are detected now CAN communication system (U1000, U1010)
- 1 39: It increases like 0 → 1 → 2 ··· 38 → 39 after returning to the normal condition whenever the ignition switch OFF → ON. It returns to 0 when a malfunction is detected again in the process.
- If it is over 39, it is fixed to 39 until the self-diagnosis results are erased. Other than CAN communication system (Other than U1000, U1010)
- 1 49: It increases like  $0 \rightarrow 1 \rightarrow 2 \cdots 38 \rightarrow 49$  after returning to the normal condition whenever the ignition switch OFF  $\rightarrow$  ON. It returns to 0 when a malfunction is detected again in the process.
- If it is over 49, it is fixed to 49 until the self-diagnosis results are erased.

#### MAIN SWITCH DOES NOT TURN ON, MAIN SWITCH DOES NOT TURN OFF [ICC]

#### < SYMPTOM DIAGNOSIS >

#### MAIN SWITCH DOES NOT TURN ON, MAIN SWITCH DOES NOT TURN OFF

#### Description

INFOID:00000006208514

MAIN switch does not turn ON

ICC system display does not appear even when MAIN switch is pressed.

MAIN switch does not turn OFF

When ICC system display is ON, display does not turn OFF even if MAIN switch is pressed.

NOTE:

When ICC system warning lamp illuminates, perform the self-diagnosis of ICC system, and then repair or replace the malfunctioning parts.

#### **Diagnosis** Procedure

INFOID:000000006208515

#### **1.**MAIN SWITCH INSPECTION

Start the engine. 1.

Check that "MAIN SW" and "CRUISE LAMP" operate normally in "DATA MONITOR" of "ICC/ADAS" with 2. CONSULT-III.

Is the inspection result normal?

YES >> GO TO 2.

NO >> GO TO 4.

2.CHECK UNIFIED METER AND A/C AMP.

Check that "CRUISE IND" operates normally in "DATA MONITOR" of "METER/M&A".

Is the inspection result normal?

YES >> GO TO 3.

NO >> GO TO 4.

 ${\it 3.}$  perform self-diagnosis of unified meter and a/c amp.

Perform "Self Diagnostic Result" of "METER/M&A". 1.

Check if DTC is detected. Refer to <u>MWI-107</u>, "DTC Index".

Is any DTC detected?

YES >> Repair or replace malfunctioning parts.

NO >> GO TO 4.

4.PERFORM SELF-DIAGNOSIS RESULTS OF ICC SYSTEM

Perform "All DTC Reading". 1.

Check if the "U1000" is detected in self-diagnosis results of "ICC/ADAS".

Is "U1000" detected?

YES >> GO TO 5.

NO >> GO TO 6.

5.CAN COMMUNICATIONS INSPECTION

Check the CAN communication and repair or replace malfunctioning parts. Refer to CCS-93, "DTC Logic".

#### >> INSPECTION END

**6.**CHECK ICC STEERING SWITCH

Check the ICC steering switch. Refer to CCS-54, "Diagnosis Procedure".

#### ICC SYSTEM CANNOT BE SET (MAIN SWITCH TURNS ON/OFF)

#### [ICC] < SYMPTOM DIAGNOSIS > ICC SYSTEM CANNOT BE SET (MAIN SWITCH TURNS ON/OFF) А Description INFOID:000000006208516 The MAIN switch can be turned ON/OFF, but the ICC system cannot be set even if the SET/COAST switch is pressed. NOTE: The system cannot be set in the following case. • When the vehicle ahead is not detected below the speed of 32 km/h (20 MPH). С • When the selector lever is not in the "D", "DS" position or manual mode. When the front wipers are operating at LO or HI. (If the vehicle is equipped with a rain sensing auto-wiper, the system may cancel when the wipers are set to AUTO) D When the brake pedal is depressed. • When driving into a strong light (i.e., sunlight). • When the snow mode switch is turned ON. Е When the VDC is turned OFF. When ABS or VDC (including the TCS) operates. When a wheel slips. **Diagnosis** Procedure INEOID:000000006208517 **1.**CHECK CAUSE OF AUTOMATIC CANCELLATION Check if there is the cancellation cause in the "CAUSE OF AUTO-CANCEL" on "WORK SUPPORT" of "ICC/ ADAS" with CONSULT-III. Is it displayed? Н Not displayed>>GO TO 2. "OPE SW VOLT CIRC">>Refer to CCS-54, "DTC Logic". "VHCL SPD UNMATCH">>Refer to CCS-46, "DTC Logic". "IGN LOW VOLT">>Refer to CCS-44, "DTC Logic". "ECM CIRCUIT">>Refer to CCS-64, "DTC Logic". "CAN COMM ERROR">>Refer to CCS-93, "DTC Logic". "ABS/TCS/VDC CIRC">>Refer to CCS-48, "DTC Logic". "ECD CIRCUIT">>Refer to CCS-77, "DTC Logic". 2. PERFORM THE SELF-DIAGNOSIS Κ Perform "All DTC Reading". 1. 2. Check if any DTC is detected in "Self Diagnostic Result" of "ICC/ADAS". Refer to CCS-107. "DTC Index". Is any DTC detected? L YES >> GO TO 3. NO >> GO TO 4. ${f 3}.$ REPAIR OR REPLACE MALFUNCTIONING PARTS M Repair or replace malfunctioning parts identified by the self-diagnosis result. Ν >> GO TO 6. **4.**CHECK EACH SWITCH AND VEHICLE SPEED SIGNAL 1. Start the engine. CCS 2. Check that the following items operate normally in "DATA MONITOR" of "ICC/ADAS". "VHCL SPEED SE" "D RANGE SW" Ρ "SET/COAST SW" "BRAKE SW" "WIPER SW" Is there a malfunctioning item? All items are normal>>GO TO 5. "VHCL SPEED SE">>Refer to CCS-46, "DTC Logic". "D RANGE SW">>Refer to CCS-114, "Diagnosis Procedure".

Revision: 2011 November

"SET/COAST SW">>Refer to CCS-54, "DTC Logic".

#### **CCS-111**

#### ICC SYSTEM CANNOT BE SET (MAIN SWITCH TURNS ON/OFF)

< SYMPTOM DIAGNOSIS >

[ICC]

"BRAKE SW">>Refer to CCS-50, "DTC Logic".

"WIPER SW" (When the front wiper operation is normal)>>GO TO 5.

"WIPER SW" (When the front wiper operation is malfunctioning)>>Performs the diagnosis of the front wiper. Refer to <u>WW-90, "WITHOUT RAIN SENSOR : Symptom Table"</u>.

5. REPLACE ICC SENSOR INTEGRATED UNIT

- 1. Replace the ICC sensor integrated unit. Refer to CCS-125, "Exploded View".
- 2. Perform the laser beam aiming. Refer to CCS-6. "LASER BEAM AIMING ADJUSTMENT : Description".

>> GO TO 6.

6.CHECK ICC SYSTEM

- 1. Erase the self-diagnosis results, and then perform "All DTC Reading" again after performing the action test. (Refer to <u>CCS-12, "ACTION TEST : Description"</u> for action test.)
- 2. Check that the ICC system is normal.

#### ICC STEERING SWITCH (OTHER THAN MAIN SWITCH) DOES NOT FUNCTION < SYMPTOM DIAGNOSIS > [ICC]

# ICC STEERING SWITCH (OTHER THAN MAIN SWITCH) DOES NOT FUNCTION

| Description INFOID:000000006208518  | В      |
|---|--------|
| MAIN switch can be turned ON/OFF, but the operation of RESUME/ACCELERATE switch, CANCEL switch, and DISTANCE switch cannot be performed during ICC system operation. <b>NOTE:</b>   | _      |
| Resume is not accepted when the following condition is met.<br>• When the MAIN switch is turned OFF once.   | С      |
| Diagnosis Procedure   | D      |
| 1. CHECK EACH SWITCH  |        |
| <ol> <li>Start the engine.</li> <li>Check that each switch operates normally on "DATA MONITOR" of "ICC/ADAS" with CONSULT-III.</li> <li>"RESUME/ACC SW"</li> <li>"CANCEL SW"</li> <li>"DISTANCE SW"</li> </ol>  | E<br>F |
| Is the inspection result normal?  |        |

| <ol> <li>Erase the self-diagnosis results, and then perform "All DTC Reading" again after performing the action test. (Refer to <u>CCS-12. "ACTION TEST : Description"</u> for action test.)</li> <li>Check that the ICC system is normal.</li> </ol> | Р      |
| >> INSPECTION END   |        |

А

#### ICC SYSTEM DOES NOT CANCEL WHEN A/T SELECTOR LEVER SETS ON "N" [ICC]

< SYMPTOM DIAGNOSIS >

#### ICC SYSTEM DOES NOT CANCEL WHEN A/T SELECTOR LEVER SETS **ON** "N"

#### Description

INFOID:00000006208520

The ICC system is not cancelled even when the A/T selector lever is shifted to the N position while the ICC system is active.

#### **Diagnosis** Procedure

INFOID:000000006208521

#### CHECK D RANGE SWITCH

Check if "D RANGE SW" operates normally in "DATA MONITOR" of "ICC/ADAS" with CONSULT-III. Is the inspection result normal?

YES >> GO TO 6.

NO >> GO TO 2.

2.PERFORM ALL SELF-DIAGNOSIS ITEMS

- Perform "All DTC Reading". 1.
- 2. Check if the "U1000" is detected in "self-diagnosis results" of "ICC/ADAS".

Is "U1000" detected?

YES >> GO TO 3.

NO >> GO TO 4.

 ${
m 3.}$  CAN COMMUNICATIONS INSPECTION

Check the CAN communication and repair or replace malfunctioning parts. Refer to CCS-93. "DTC Logic".

#### >> INSPECTION END

4. CHECK POSITION SWITCH

Check if "SLCT LVR POSI" operates normally in "DATA MONITOR" of "TRANSMISSION".

Is the inspection result normal?

YES >> GO TO 6. NO >> GO TO 5.

**5.**PERFORM TCM SELF-DIAGNOSIS

Perform the "Self Diagnostic Result" of "TRANSMISSION". 1.

Repair or replace malfunctioning parts. Refer to TM-251, "DTC Index". 2.

#### >> GO TO 7.

**6.**REPLACE ICC SENSOR INTEGRATED UNIT

- 1. Replace the ICC sensor integrated unit. Refer to CCS-125, "Exploded View".
- Perform the laser beam aiming. Refer to CCS-6. "LASER BEAM AIMING ADJUSTMENT : Description". 2.

#### >> GO TO 7.

**1**.CHECK ICC SYSTEM

- Erase the self-diagnosis results, and then perform "All DTC Reading" again after performing the action test. (Refer to CCS-12, "ACTION TEST : Description" for action test.)
- 2. Check that the ICC system is normal.

#### **CHIME DOES NOT SOUND**

#### < SYMPTOM DIAGNOSIS >

### CHIME DOES NOT SOUND

#### Description

Symptom check: In the following conditions, the warning chime may not sound even if the vehicle distance is short.

- When the vehicles are traveling at the same speed and the distance between vehicles is not changing.
- When the vehicle ahead is traveling faster and the distance between vehicles is increasing.
- The warning chime will not sound when the accelerator pedal is depressed, overriding the system.
- The warning chime will not sound when own vehicle approaches vehicles that are parked or moving slowly.
- The warning chime does not sound when the system does not detect any vehicle ahead. (Diagnose the conditions under which the system is detecting the vehicle ahead and when the system is malfunctioning. If there is any malfunction in detecting the vehicle ahead, check the system following the <u>CCS-118</u>, "<u>Description</u>".)

#### Diagnosis Procedure

#### **1.**PERFORM ACTIVE TEST

Check if the warning chime sounds on the active test item "ICC BUZZER" of "ICC/ADAS" with CONSULT-III.

YES >> GO TO 2. NO >> GO TO 3.

#### 2.CHECK THE MALFUNCTION SYMPTOM DURING WARNING CHIME OPERATION

- Understand the vehicle ahead detecting condition when the malfunction occurred. If the warning chime should have sounded, replace the ICC sensor integrated unit. Refer to <u>CCS-125</u>. "Exploded View".
   Adjust the laser beam aiming. Refer to <u>CCS</u> 6. "I ASER BEAM ALMING AD IUSTMENT : Description".
- 2. Adjust the laser beam aiming. Refer to <u>CCS-6, "LASER BEAM AIMING ADJUSTMENT : Description"</u>.

>> GO TO 8.

## **3.** PERFORM THE SELF-DIAGNOSIS

1. Perform "All DTC Reading" with CONSULT-III.

2. Check if the "U1000" is detected in self-diagnosis results of "ICC/ADAS".

Is "U1000" detected?

YES >> GO TO 4.

NO >> GO TO 5.

**4.**CAN COMMUNICATIONS SYSTEM INSPECTION

Check the CAN communication system and repair or replace malfunctioning parts. Refer to <u>CCS-93, "DTC Logic"</u>.

| >> INSPECTION END   |     |
|---|-----|
| 5. PERFORM SELF-DIAGNOSIS OF UNIFIED METER AND A/C AMP.   | N   |
| <ol> <li>Perform "Self Diagnostic Result" of "METER/M&amp;A".</li> <li>Check if DTC is detected. Refer to <u>MWI-107, "DTC Index"</u>.</li> </ol> | N   |
| Is any DTC detected?  | CCS |
| YES >> Repair or replace malfunctioning parts.<br>NO >> GO TO 6.  | 000 |
| 6. CHECK COMBINATION METER CHIME OPERATION  | Р   |
| Check meter buzzer. Refer to WCS-23, "Component Function Check"   |     |
| Is the inspection result normal?  |     |
| YES >> GO TO 7.<br>NO >> Repair or replace malfunctioning parts.  |     |
| 7.REPLACE ICC SENSOR INTEGRATED UNIT  |     |
| 1. Replace the ICC sensor integrated unit. Refer to <u>CCS-125</u> , "Exploded View".   |     |

#### FREQUENTLY CANNOT DETECT THE VEHICLE AHEAD / DETECTION ZONE IS SHORT

< SYMPTOM DIAGNOSIS >

## FREQUENTLY CANNOT DETECT THE VEHICLE AHEAD / DETECTION **ZONE IS SHORT**

#### Description

INFOID:00000006208526

The detection function may become unstable in the following cases.

- When the reflector of the vehicle ahead is deficient/ not clean enough to reflect the radar.
- When driving a road with extremely sharp corners.
- When the sensor cannot detect the reflector of the vehicle ahead as the vehicle ahead is passing a hill or passing the peak.

#### **Diagnosis** Procedure

INFOID:000000006208527

#### **1.**VISUAL CHECK (1)

Check ICC sensor integrated unit body window for contamination and/or foreign materials.

Do foreign materials adhere?

YES >> GO TO 2. NO >> GO TO 3.

2. REMOVE DIRT AND FOREIGN MATERIALS

Remove the contamination and foreign materials from the ICC sensor integrated unit body window.

>> GO TO 6.

3. VISUAL CHECK (2)

Check ICC sensor integrated unit body window for cracks and scratches.

Are there any cracks or scratches?

YES >> GO TO 5. >> GO TO 4. NO

**4.**ADJUST LASER BEAM AIMING

- Adjust the laser beam aiming. Refer to <u>CCS-6, "LASER BEAM AIMING ADJUSTMENT : Description"</u>. Perform ICC system action test. Refer to <u>CCS-12, "ACTION TEST : Description"</u>. 1.
- 2.
- Check that the vehicle ahead detection performance improves. 3.

Does it improve?

YES >> INSPECTION END

NO >> GO TO 5.

**5.**REPLACE ICC SENSOR INTEGRATED UNIT

- 1. Replace the ICC sensor integrated unit. Refer to CCS-125, "Exploded View".
- Adjust the laser beam aiming. Refer to CCS-6, "LASER BEAM AIMING ADJUSTMENT : Description". 2.

#### >> GO TO 6.

6.CHECK ICC SYSTEM

1. Erase the self-diagnosis results, and then perform "All DTC Reading" again after performing the action test. (Refer to CCS-12, "ACTION TEST : Description" for action test.)

Check that the ICC system is normal. 2.

## THE SYSTEM DOES NOT DETECT THE VEHICLE AHEAD AT ALL < SYMPTOM DIAGNOSIS > [ICC]

## THE SYSTEM DOES NOT DETECT THE VEHICLE AHEAD AT ALL

#### Description

When ICC system is active, the ICC system does not perform any control even through there is a vehicle  $$_{\rm B}$$  ahead.

| Diagnosis Procedure   |                       |

INFOID:000000006208528

## NORMAL OPERATING CONDITION

#### Description

INFOID:000000006208530

## PRECAUTIONS FOR VEHICLE-TO-VEHICLE DISTANCE CONTROL MODE CAUTION:

- ICC system is only an aid to assist the driver and is not a collision warning or avoidance device. It is the driver's responsibility to stay alert, drive safely and be in control of the vehicle at all times.
- The system is primarily intended for use on straight, dry, open roads with light traffic. It is not advisable to use the system in city traffic or congested areas.
- This system will not adapt automatically to road conditions. This system should be used in evenly flowing traffic. Do not use the system on roads with sharp curves, or on icy roads, in heavy rain or in fog.
- The distance sensor will not detect under most conditions.
- Stationary and slow moving vehicles.
- Pedestrians or objects in the roadway.
- Oncoming vehicles in the some lane.
- Motorcycles traveling offset in the travel lane.
- As there is a performance limit to the distance control function, never rely solely on the ICC system. This system does not correct careless, inattentive or absent-minded driving, or overcome poor visibility in rain, fog, or other bad weather. Decelerate the vehicle speed by depressing the brake pedal, depending on the distance to the vehicle ahead and the surrounding circumstances in order to maintain a safe distance between vehicles.
- Although the brake operation is controlled by the system, the system does not automatically stop the vehicle. If the vehicle speed falls below approximately 32 km/h (20 MPH), the Intelligent Cruise Control system is automatically canceled and a warning chime sounds. (The brake control is also canceled.)
- The system may not detect the vehicle in front of the driver in certain road or weather conditions. To avoid accidents, never use the ICC system under the following conditions:
- On roads where the traffic is heavy or there are sharp curves.
- On slippery road surfaces such as on ice or snow, etc.
- During bad weather (rain, fog, snow, etc.) When the front wiper is operated at the low speed (LO) or high speed (HI) position, the ICC system is automatically canceled.
- When strong light (for example, at sunrise or sunset) is directly shining on the front of the vehicle.
- When rain, snow or dirt adhere to the system sensor.
- On steep downhill roads (the vehicle may go beyond the set vehicle speed and frequent braking may result in overheating the brakes).
- On repeated uphill and downhill roads.
- When traffic conditions make it difficult to keep a proper distance between vehicles because of frequent acceleration or deceleration.
- Do not use the ICC system if own vehicle is towing a trailer. The system may not detect a vehicle ahead.
- In some road or traffic conditions, a vehicle or object can unexpectedly come into the sensor detection zone and cause automatic braking. The driver may need to control the distance from other vehicles using the accelerator pedal. Always stay alert and avoid using the ICC system when it is not recommended in this section.
- The vehicle-to-vehicle distance control mode uses a sensor located on the front of the vehicle to detect vehicles traveling ahead. The sensor generally detects the signals returned from the reflectors on a vehicle ahead. Therefore, if the sensor cannot detect the reflector on the vehicle ahead, the ICC system may not maintain the selected distance.
- The following are some conditions in which the sensor cannot detect the signals:
- When the reflector of the vehicle ahead is positioned high on the vehicle (trailer, etc.).
- When the reflector on the vehicle ahead is missing, damaged or covered.
- When the reflector of the vehicle ahead is covered with dirt, snow and road spray.
- When the snow or road spray from traveling vehicles reduces the sensor's visibility.
- When dense exhaust or other smoke (black smoke) from vehicles reduces the sensor's visibility.
- When excessively heavy baggage is loaded in the rear seat or the luggage room of own vehicle.
- The ICC system is designed to automatically check the sensor's operation within the limitation of the system. When the sensor is covered with dirt or is obstructed, the system will automatically be canceled. If the sensor is covered with ice, a transparent or translucent vinyl bag, etc., the ICC system

#### < SYMPTOM DIAGNOSIS >

may not detect them. In these instances, the vehicle-to-vehicle distance control mode may not cancel and may not be able to maintain the selected following distance from the vehicle ahead. Be sure to check and clean the sensor regularly.

- The ICC system does not control vehicle speed or warn the driver when own vehicle approaches stationary and slow moving vehicles. The driver must pay attention to vehicle operation to maintain proper distance from vehicles ahead when approaching toll gates or traffic congestion.
- The detection zone of the ICC sensor is limited. A vehicle ahead must be in the detection zone for the vehicle-to-vehicle distance detection mode to maintain the selected distance from the vehicle ahead. A vehicle ahead may move outside of the detection zone due to its position within the same lane of travel. Motorcycles may not be detected in the same lane ahead if they are traveling offset from the center line of the lane. A vehicle that is entering the lane ahead may not be detected until the vehicle has completely moved into the lane. If this occurs, the ICC system may warn the driver by blinking the system indicator and sounding the chime. The driver may have to manually control the proper distance away from vehicle traveling ahead.
- When driving on some roads, such as winding, hilly, curved, narrow roads, or roads which are under construction, the ICC sensor may detect vehicles in a different lane, or may temporarily not detect a vehicle traveling ahead. This may cause the ICC system to decelerate or accelerate the vehicle. The detection of vehicles may also be affected by vehicle operation (steering maneuver or traveling position in the lane, etc.) or vehicle condition. If this occurs, the ICC system may warn the driver by blinking the system indicator and sounding the chime unexpectedly. The driver will have to manually control the proper distance away from the vehicle traveling ahead.

А

#### NORMAL OPERATING CONDITION

#### < SYMPTOM DIAGNOSIS >

 When driving on the freeway at a set speed and approaching a slower traveling vehicle ahead, the ICC will adjust the speed to maintain the distance, selected by the driver, from the vehicle ahead. If the vehicle ahead changes lanes or exits the freeway, the ICC system will accelerate and maintain the speed up to the set speed. Pay attention to the driving operation to maintain control of the vehicle as it accelerates to the set speed. The vehicle may not maintain the set speed on winding or hilly roads. If this occurs, the driver will have to manually control the vehicle speed.

- The sensor sensitivity can be affected by vehicle operation (steering maneuver or driving position in the lane) or traffic or vehicle condition (for example, if a vehicle is being driven with some damage).
- Normally when controlling the distance to a vehicle ahead, this system automatically accelerates or decelerates own vehicle according to the speed of the vehicle ahead. Depress the accelerator to properly accelerate own vehicle when acceleration is required for a lane change. Depress the brake pedal when deceleration is required to maintain a safe distance to the vehicle ahead due to its sudden braking or if a vehicle cuts in. Always stay alert when using the ICC system.

## PRECAUTIONS FOR CONVENTIONAL (FIXED SPEED) CRUISE CONTROL MODE CAUTION:

- In the conventional (fixed speed) cruise control mode, a warning chime does not sound to warn the driver if own vehicle is too close to the vehicle ahead, as neither the presence of the vehicle ahead nor the vehicle-to-vehicle distance is detected.
- Pay special attention to the distance between own vehicle and the vehicle ahead or a collision could occur.
- Always confirm the setting in the ICC system display.
- Do not use the conventional (fixed speed) cruise control mode when driving under the following conditions:
- when it is not possible to keep the vehicle at a set speed.
- in heavy traffic or in traffic that varies in speed.
- on winding or hilly roads.
- on slippery roads (rain, snow, ice, etc.).
- in very windy areas.
- Doing so could cause a loss of vehicle control and result in an accident.
- To avoid accidentally engaging cruise control, make sure to the MAIN switch OFF when not using ICC system.

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

#### WARNING:

Always observe the following items for preventing accidental activation.

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see "SRS AIR BAG".
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

#### PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

#### WARNING:

Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

#### ICC System Service

#### **CAUTION:**

- Never look straight into the laser beam discharger when adjusting laser beam aiming.
- Turn the MAIN switch OFF in conditions similar to driving, such as free rollers or a chassis dynamometer.
- Never use the ICC sensor integrated unit removed from vehicle. Never disassemble or remodel.
- Erase DTC when replacing parts of ICC system, then check the operation of ICC system after adjusting laser beam aiming if necessary.
