## < PRECAUTION > PRECAUTION PRECAUTIONS

#### Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

#### WARNING:

Always observe the following items for preventing accidental activation.

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see "SRS AIR BAG".
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

#### PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

#### WARNING:

Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

#### **RELAY CONTROL SYSTEM : System Description**

IPDM E/R activates the internal control circuit to perform the relay ON-OFF control according to the input signals from various sensors and the request signals received from control units via CAN communication. CAUTION:

#### IPDM E/R integrated relays cannot be removed.

#### NOTE:

BCM controls the starter relay.

#### **RELAY CONTROL SYSTEM : Fail-safe**

INFOID:000000009298870

#### CAN COMMUNICATION CONTROL

When CAN communication with ECM and BCM is impossible, IPDM E/R performs fail-safe control. After CAN communication recovers normally, it also returns to normal control.

If No CAN Communication Is Available With ECM

| Control part   | Fail-safe operation   |
|----------------|---|
| Cooling fan    | <ul> <li>Transmits the pulse duty signal (PWM signal) 100% when the ignition switch is turned ON.</li> <li>Transmits the pulse duty signal (PWM signal) 0% when the ignition switch is turned OFF.</li> </ul> |
| A/C compressor | A/C relay OFF   |
| Alternator     | Outputs the power generation command signal (PWM signal) 0%   |

If No CAN Communication Is Available With BCM

#### < SYSTEM DESCRIPTION >

| Control part  | Fail-safe operation   |
|---|---|
| Headlamp  | <ul> <li>Turns ON the headlamp low relay when the ignition switch is turned ON</li> <li>Turns OFF the headlamp low relay when the ignition switch is turned OFF</li> <li>Headlamp high relay OFF</li> </ul>   |
| <ul> <li>Parking lamp</li> <li>License plate lamp</li> <li>Illumination</li> <li>Tail lamp</li> <li>Side marker lamp</li> </ul> | <ul> <li>Turns ON the tail lamp relay when the ignition switch is turned ON</li> <li>Turns OFF the tail lamp relay when the ignition switch is turned OFF</li> </ul>  |
| Front wiper motor   | <ul> <li>The status just before activation of fail-safe control is maintained until the ignition switch is turned OFF while the front wiper is operating at LO or HI speed.</li> <li>The wiper is operated at LO speed until the ignition switch is turned OFF if the fail-safe control is activated while the front wiper is set in the INT mode and the front wiper motor is operating.</li> <li>Returns automatically wiper to stop position when ignition switch is turned ON if fail-safe control is activated while front wiper motor is operated and wiper stop in the other position than stop position.</li> <li>The status is held at service position if the fail-safe control is activated while the service position function is operating.</li> </ul> |
| Front fog lamp  | Front fog lamp relay OFF  |
| Daytime running light   | Daytime running light relay OFF   |
| Rear window defogger  | Rear window defogger relay OFF  |
| Horn  | Horn OFF  |
| Ignition relay  | The status just before activation of fail-safe is maintained.   |
| Starter motor   | Starter control relay OFF   |

#### IGNITION RELAY MALFUNCTION DETECTION FUNCTION

- IPDM E/R monitors the voltage at the contact circuit and excitation coil circuit of the ignition relay inside it.
- IPDM E/R judges the ignition relay error if the voltage differs between the contact circuit and the excitation coil circuit.
- If the ignition relay cannot turn OFF due to contact seizure, it activates the tail lamp relay for 10 minutes to alert the user to the ignition relay malfunction when the ignition switch is turned OFF.

| Voltage                        | judgment                            |                           |   |     |
|--------------------------------|-------------------------------------|---------------------------|---|-----|
| Ignition relay contact<br>side | Ignition relay excitation coil side | IPDM E/R judgment         | Operation   | Κ   |
| ON                             | ON                                  | Ignition relay ON normal  | _   |     |
| OFF                            | OFF                                 | Ignition relay OFF normal | _   | L   |
| ON                             | OFF                                 | Ignition relay ON stuck   | <ul> <li>Detects DTC "B2098: IGN RELAY ON CIRC"</li> <li>Turns ON the tail lamp relay for 10 minutes</li> </ul> |     |
| OFF                            | ON                                  | Ignition relay OFF stuck  | Detects DTC "B2099: IGN RELAY OFF CIRC"   | PCS |

#### FRONT WIPER PROTECTION FUNCTION

IPDM E/R detects front wiper stop position by a front wiper stop position signal.

When a front wiper stop position signal is in the conditions listed below, IPDM E/R stops power supply to wiper after repeating a front wiper 10 seconds activation and 20 seconds stop.

| Ignition switch  | Front wiper switch | er switch Front wiper stop position signal   |  |
|--|--------------------|--|--|
|  | OFF                | The front wiper stop position signal (stop position) cannot be input for 10 seconds. |  |
| ON ON The front wiper stop position signal does not change for 10 seconds. |                    | D  |  |

#### NOTE:

This operation status can be confirmed on the IPDM E/R "Data Monitor" that displays "BLOCK" for the item "WIP PROT" while the wiper is stopped.

#### STARTER MOTOR PROTECTION FUNCTION

IPDM E/R turns OFF the starter control relay to protect the starter motor when the starter control relay remains active for 90 seconds.

#### POWER CONTROL SYSTEM

#### [IPDM E/R (WITH I-KEY)]

#### < SYSTEM DESCRIPTION >

# POWER CONTROL SYSTEM : System Diagram

#### POWER CONTROL SYSTEM : System Description

INFOID:000000008276795

INFOID:00000008276796

#### COOLING FAN CONTROL

IPDM E/R outputs pulse duty signal (PWM signal) to the cooling fan control module according to the status of the cooling fan speed request signal received from ECM via CAN communication. Refer to <u>EC-53</u>, "COOLING FAN CONTROL : System Diagram".

#### CAUTION:

After ignition switch OFF, IPDM E/R turn the cooling fan relay ON and outputs pulse duty signal (PWM signal) to the cooling fan control module according to the request signal from ECM for cooling the engine according to the situation.

#### ALTERNATOR CONTROL

IPDM E/R outputs power generation command signal (PWM signal) to the alternator according to the status of the power generation command value signal received from ECM via CAN communication. Refer to <u>CHG-7</u>, <u>"POWER GENERATION VOLTAGE VARIABLE CONTROL SYSTEM : System Diagram"</u>.

#### SIGNAL BUFFER SYSTEM

#### SIGNAL BUFFER SYSTEM : System Diagram

#### SIGNAL BUFFER SYSTEM : System Description

INFOID:000000008276797

IPDM E/R receives the rear window defogger control signal from BCM via CAN communication and transmits the rear window defogger status signal to ECM via CAN communication. Refer to <u>DEF-6</u>, "WITH AUTO A/C : <u>System Diagram</u>".

POWER CONSUMPTION CONTROL SYSTEM

#### < SYSTEM DESCRIPTION >

#### Diagnosis Description

AUTO ACTIVE TEST

Description

In auto active test mode, the IPDM E/R sends a drive signal to the following systems to check their operation.

- Rear window defogger
- Front wiper motor
- Parking lamp
- License plate lamp
- Tail lamp
- Side marker lamp
- Front fog lamp
- Headlamp (LO, HI)
- A/C compressor (magnet clutch)
- Cooling fan

Operation Procedure

#### CAUTION:

Wiper arm interferes with hood when wiper is operated while wiper arm is in the raised position. Always perform auto active test without setting wiper arm in the raised position. Always pour water on front windshield glass in advance to auto active test so that damage on front windshield glass surface is prevented.

- 1. Turn the ignition switch OFF.
- 2. Turn the ignition switch ON, and within 20 seconds, press the driver door switch 10 times. Then turn the ignition switch OFF.

#### CAUTION:

#### Close passenger door.

3. Turn the ignition switch ON within 10 seconds. After that the horn sounds once and the auto active test starts.

CAUTION:

#### Engine starts when ignition switch is turned ON while brake pedal is depressed.

4. After a series of the following operations is repeated 3 times, auto active test is completed.

#### NOTE:

- When auto active test mode has to be cancelled halfway through test, turn the ignition switch OFF.
- When auto active test is not activated, door switch may be the cause. Check door switch. Refer to <u>DLK-71,</u> <u>"Component Function Check"</u>.

#### Inspection in Auto Active Test Mode

When auto active test mode is actuated, the following operation sequence is repeated 3 times.

| Operation sequence | Inspection location   | Operation   |
|--------------------|---|---|
| 1                  | Rear window defogger  | 10 seconds  |
| 2                  | Front wiper motor   | LO for 5 seconds $\rightarrow$ HI for 5 seconds                     |
| 3                  | <ul> <li>Parking lamp</li> <li>License plate lamp</li> <li>Tail lamp</li> <li>Side marker lamp</li> <li>Front fog lamp</li> </ul> | 10 seconds  |
| 4                  | Headlamp  | LO for 10 seconds $\rightarrow$ HI ON $\Leftrightarrow$ OFF 5 times |
| 5                  | A/C compressor (magnet clutch)  | $ON \Leftrightarrow OFF 5 times$                                    |
| 6                  | Cooling fan   | 50% duty for 5 seconds $\rightarrow$ 100% duty for 5 seconds        |

INFOID:000000008276800

#### < SYSTEM DESCRIPTION >

#### [IPDM E/R (WITH I-KEY)]

Concept of auto active test

• IPDM E/R starts the auto active test with the door switch signals transmitted by BCM via CAN communication. Therefore, the CAN communication line between IPDM E/R and BCM is considered normal if the auto active test starts successfully.

• The auto active test facilitates troubleshooting if any systems controlled by IPDM E/R cannot be operated.

Diagnosis chart in auto active test mode

#### CONSULT Function (IPDM E/R)

INFOID:000000008276801

#### APPLICATION ITEM

CONSULT performs the following functions via CAN communication with IPDM E/R.

| Diagnosis mode           | Description   |  |  |
|--------------------------|---|--|--|
| Ecu Identification       | Allows confirmation of IPDM E/R part number.  |  |  |
| Self Diagnostic Result   | Displays the diagnosis results judged by IPDM E/R.                                      |  |  |
| Data Monitor             | Displays the real-time input/output data from IPDM E/R input/output data.               |  |  |
| Active Test              | IPDM E/R can provide a drive signal to electronic components to check their operations. |  |  |
| CAN Diag Support Monitor | The results of transmit/receive diagnosis of CAN communication can be read.             |  |  |

#### SELF DIAGNOSTIC RESULT

Refer to PCS-24, "DTC Index".

#### DATA MONITOR

#### NOTE:

The following table includes information (items) inapplicable to this vehicle. For information (items) applicable to this vehicle, refer to CONSULT display items.

| Monitor Item<br>[Unit]           | MAIN<br>SIGNALS | Description   |  |
|----------------------------------|-----------------|---|--|
| RAD FAN REQ<br>[%]               | ×               | Displays the value of the cooling fan speed request signal received from ECM via CAN communication. |  |
| AC COMP REQ<br>[Off/On]          | ×               | Displays the status of the A/C compressor request signal received from ECM via CAN communication.   |  |
| TAIL&CLR REQ<br>[Off/On]         | ×               | Displays the status of the position light request signal received from BCM via CAN communication.   |  |

#### Fail-safe

#### CAN COMMUNICATION CONTROL

When CAN communication with ECM and BCM is impossible, IPDM E/R performs fail-safe control. After CAN communication recovers normally, it also returns to normal control.

#### If No CAN Communication Is Available With ECM

| Ignition relay        | The status just before activation of fail-safe is maintained.   |
| Starter motor         | Starter control relay OFF   |

#### IGNITION RELAY MALFUNCTION DETECTION FUNCTION

- IPDM E/R monitors the voltage at the contact circuit and excitation coil circuit of the ignition relay inside it.
- IPDM E/R judges the ignition relay error if the voltage differs between the contact circuit and the excitation coil circuit.
- If the ignition relay cannot turn OFF due to contact seizure, it activates the tail lamp relay for 10 minutes to alert the user to the ignition relay malfunction when the ignition switch is turned OFF.

| Voltage                     | judgment                            |                           | Operation   |  |
|-----------------------------|-------------------------------------|---------------------------|---|--|

| ON                          | OFF                                 | Ignition relay ON stuck   | <ul> <li>Detects DTC "B2098: IGN RELAY ON CIRC"</li> <li>Turns ON the tail lamp relay for 10 minutes</li> </ul> |  |
| OFF                         | ON                                  | Ignition relay OFF stuck  | Detects DTC "B2099: IGN RELAY OFF CIRC"   |  |

#### FRONT WIPER PROTECTION FUNCTION

< ECU DIAGNOSIS INFORMATION >

IPDM E/R detects front wiper stop position by a front wiper stop position signal.

When a front wiper stop position signal is in the conditions listed below, IPDM E/R stops power supply to wiper after repeating a front wiper 10 seconds activation and 20 seconds stop.

| Ignition switch | Front wiper switch | Front wiper stop position signal   |
|-----------------|--------------------|--|
| ON              | OFF                | The front wiper stop position signal (stop position) cannot be input for 10 seconds. |
| ÖN              | ON                 | The front wiper stop position signal does not change for 10 seconds.                 |

#### NOTE:

This operation status can be confirmed on the IPDM E/R "Data Monitor" that displays "BLOCK" for the item "WIP PROT" while the wiper is stopped.

#### STARTER MOTOR PROTECTION FUNCTION

IPDM E/R turns OFF the starter control relay to protect the starter motor when the starter control relay remains active for 90 seconds.

#### DTC Index

#### NOTE:

- The details of time display are as follows.
- CRNT: A malfunction is detected now.
- PAST: A malfunction was detected in the past.
- IGN counter is displayed on FFD (Freeze Frame Data).
- The number is 0 when is detected now.

INFOID:000000008276804

#### [IPDM E/R (WITH I-KEY)]

- The number increases like 1  $\rightarrow$  2  $\cdots$  38  $\rightarrow$  39 after returning to the normal condition whenever IGN OFF  $\rightarrow$  ON.

- The number is fixed to 39 until the self-diagnosis results are erased if it is over 39.

CAN (Controller Area Network) is a serial communication line for real time applications. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicle is equipped with many electronic control unit, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only. CAN Communication Signal Chart. Refer to <u>LAN-28, "CAN COMMUNICATION SYSTEM : CAN Communica-</u> tion Signal Chart".

#### DTC Logic

INFOID:000000008276807

INFOID:00000008276808

#### DTC DETECTION LOGIC

| DTC   | CONSULT display de-<br>scription | DTC Detection Condition   | Possible cause           |   |
|-------|----------------------------------|---|--------------------------|---|
| U1000 | CAN COMM CIRCUIT                 | When IPDM E/R cannot communicate CAN communi-<br>cation signal continuously for 2 seconds or more | CAN communication system | G |

#### Diagnosis Procedure

#### **1.**PERFORM SELF DIAGNOSTIC

- 1. Turn the ignition switch ON and wait for 2 seconds or more.
- 2. Check "Self Diagnostic Result" of IPDM E/R.

#### Is DTC "U1000" displayed?

- YES >> Refer to LAN-15, "Trouble Diagnosis Flow Chart".
- NO >> Refer to <u>GI-43, "Intermittent Incident"</u>.

#### **B2098 IGNITION RELAY ON STUCK**

#### < DTC/CIRCUIT DIAGNOSIS >

#### **B2098 IGNITION RELAY ON STUCK**

#### Description

- IPDM E/R operates the ignition relay when it receives an ignition switch ON signal from BCM via CAN communication.
- Turn the ignition relay OFF by pressing the push-button ignition switch once when the vehicle speed is 4 km/ h (2.5 MPH) or less.
- Turn the ignition relay OFF with the following operation when the vehicle speed is more than 4 km/h (2.5 MPH) or when an abnormal condition occurs in CAN communication from the combination meter (Emergency OFF)
- Press and hold the push-button ignition switch for 2 seconds or more.
- Press the push-button ignition switch 3 times within 1.5 seconds.

#### NOTE:

The ignition relay does not turn ON for 3 seconds after emergency OFF even if the push-button ignition switch is pressed.

#### DTC DETECTION LOGIC

| DTC   | CONSULT display description | DTC Detection Condition   | Possible causes |
|-------|-----------------------------|---|-----------------|
| B2099 | IGN RELAY OFF<br>CIRC       | The ignition relay OFF is detected for 1 second at ignition switch ON (CPU monitors the status at the contact and excitation coil circuits of the ignition relay inside it) |                 |

#### NOTE:

When IPDM E/R power supply voltage is low (Approx. 7 - 8 V for about 1 second), the "DTC: B2099" may be detected.

#### **1.**PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.

2. Check DTC in "Self Diagnostic Result" mode of "IPDM E/R" using CONSULT.

#### Is DTC detected?

- YES >> Refer to PCS-32, "Diagnosis Procedure".
- NO >> INSPECTION END.

#### Diagnosis Procedure

INFOID:000000008276814

#### 1.CHECK FUSE

Check that all of the fuses installed on the downstream of the contact point side circuit of the ignition relay in IPDM E/R are not blown.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace the blown fuse after replacing the affected circuit if a fuse is blown.

#### **2.**CHECK IGNITION RELAY CONTROL CIRCUIT VOLTAGE

- 1. Turn ignition switch ON
- 2. Check voltage between IPDM E/R harness connector and ground.

|           | (+)<br>IPDM E/R |        | Voltage<br>(Approx) |

#### POWER SUPPLY AND GROUND CIRCUIT

#### **Diagnosis** Procedure

INFOID:000000008276815

[IPDM E/R (WITH I-KEY)]

#### **1.**CHECK FUSES AND FUSIBLE LINK

Check that the following IPDM E/R fuses or fusible links are not blown.

| Signal name          | Fuses and fusible link No. |  |
|----------------------|----------------------------|--|
| Battory power supply | С                          |  |
| Battery power supply | D                          |  |

Is the fuse fusing?

YES >> Replace the blown fuse or fusible link after repairing the affected circuit if a fuse or fusible link is blown.

NO >> GO TO 2.

2. CHECK POWER SUPPLY CIRCUIT

1. Turn the ignition switch OFF.

- 2. Disconnect IPDM E/R connector.
- 3. Check voltage between IPDM E/R harness connector and the ground.

|           | (+)<br>IPDM E/R |        | Voltage<br>(Approx.)                    |
|-----------|-----------------|--------|---|
| Connector | Terminal        |        | (,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,, |
| E9        | 1               | Ground | 6 – 16 V                                |
| E9        | 2               |        |   |

#### Is the measurement value normal?

YES >> GO TO 3.

NO >> Repair the harness or connector.

#### 3. CHECK GROUND CIRCUIT

Check continuity between IPDM E/R harness connectors and the ground.

| IPDM E/R  |          |        | Continuity |
|-----------|----------|--------|------------|
| Connector | Terminal | Ground | Continuity |
| E11       | 9        | Ground | Existed    |
| E12       | 18       | †      | EXISTER    |

Does continuity exist?

YES >> INSPECTION END

NO >> Repair the harness or connector.

#### **Removal and Installation**

#### **CAUTION:**

#### IPDM E/R integrated relays are not serviceable parts, and must not be removed from the unit.

#### REMOVAL

- 1. Remove battery.
- 2. Press and expand pawls (A) on lateral side of IPDM E/R cover and remove IPDM E/R (1) from IPDM E/R Κ cover B (2).
- 3. Disconnect the harness connector and then remove the IPDM E/R.

4. Remove IPDM E/R cover B mounting nuts (A).

JMMIA0460ZZ

#### < REMOVAL AND INSTALLATION >

#### [IPDM E/R (WITH I-KEY)]

5. Insert a flat-bladed screwdriver between IPDM E/R cover A (1) and IPDM E/R cover B (2), disengage pawls, and remove IPDM E/R cover A.

6. Remove IPDM E/R cover B.

INSTALLATION

Install in the reverse order of removal.

# < PRECAUTION > PRECAUTION PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

#### WARNING:

Always observe the following items for preventing accidental activation.

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see "SRS AIR BAG".
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

#### PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

#### WARNING:

Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.
- PCS

| Starter motor        | Starter control relay OFF      |   |

#### IGNITION RELAY MALFUNCTION DETECTION FUNCTION

- IPDM E/R monitors the voltage at the contact circuit and excitation coil circuit of the ignition relay inside it.
  IPDM E/R judges the ignition relay error if the voltage differs between the contact circuit and the excitation coil circuit.
- If the ignition relay cannot turn OFF due to contact seizure, it activates the tail lamp relay for 10 minutes to alert the user to the ignition relay malfunction when the ignition switch is turned OFF.

| Voltage judgment            |                                     |                           |   | Е |
|-----------------------------|-------------------------------------|---------------------------|---|---|
| Ignition relay contact side | Ignition relay excitation coil side | IPDM E/R judgment         | Operation   |   |
| ON                          | ON                                  | Ignition relay ON normal  | —   | F |
| OFF                         | OFF                                 | Ignition relay OFF normal | _   |   |
| ON                          | OFF                                 | Ignition relay ON stuck   | <ul> <li>Detects DTC "B2098: IGN RELAY ON CIRC"</li> <li>Turns ON the tail lamp relay for 10 minutes</li> </ul> | G |
| OFF                         | ON                                  | Ignition relay OFF stuck  | Detects DTC "B2099: IGN RELAY OFF CIRC"   |   |

#### FRONT WIPER PROTECTION FUNCTION

IPDM E/R detects front wiper stop position by a front wiper stop position signal.

When a front wiper stop position signal is in the conditions listed below, IPDM E/R stops power supply to wiper after repeating a front wiper 10 seconds activation and 20 seconds stop.

| Ignition switch | Front wiper switch | Front wiper stop position signal   |
|-----------------|--------------------|--|
| ON              | OFF                | The front wiper stop position signal (stop position) cannot be input for 10 seconds. |
|                 | ON                 | The front wiper stop position signal does not change for 10 seconds.                 |

#### NOTE:

This operation status can be confirmed on the IPDM E/R "Data Monitor" that displays "BLOCK" for the item "WIP PROT" while the wiper is stopped.

#### STARTER MOTOR PROTECTION FUNCTION

IPDM E/R turns OFF the starter control relay to protect the starter motor when the starter control relay remains active for 90 seconds.

# POWER CONTROL SYSTEM

# POWER CONTROL SYSTEM : System Description

COOLING FAN CONTROL

INFOID:00000008276824

Н

#### < SYSTEM DESCRIPTION >

IPDM E/R outputs pulse duty signal (PWM signal) to the cooling fan control module according to the status of the cooling fan speed request signal received from ECM via CAN communication. Refer to <u>EC-53</u>, "COOLING FAN CONTROL : System Diagram".

#### CAUTION:

After ignition switch OFF, IPDM E/R turn the cooling fan relay ON and outputs pulse duty signal (PWM signal) to the cooling fan control module according to the request signal from ECM for cooling the engine according to the situation.

#### ALTERNATOR CONTROL

IPDM E/R outputs power generation command signal (PWM signal) to the alternator according to the status of the power generation command value signal received from ECM via CAN communication. Refer to <u>CHG-7</u>, <u>"POWER GENERATION VOLTAGE VARIABLE CONTROL SYSTEM : System Diagram"</u>.

# SIGNAL BUFFER SYSTEM

# SIGNAL BUFFER SYSTEM : System Diagram

# SIGNAL BUFFER SYSTEM : System Description

INFOID:00000008276826

INFOID:00000008276825

IPDM E/R receives the rear window defogger control signal from BCM via CAN communication and transmits the rear window defogger status signal to ECM via CAN communication. Refer to <u>DEF-6</u>. "WITHOUT AUTO A/ <u>C : System Diagram</u>".

# POWER CONSUMPTION CONTROL SYSTEM

# POWER CONSUMPTION CONTROL SYSTEM : System Diagram

# POWER CONSUMPTION CONTROL SYSTEM : System Description

INFOID:000000008276828

# OUTLINE

- IPDM E/R incorporates a power consumption control function that reduces the power consumption according to the vehicle status.
- IPDM E/R changes its status (control mode) with the sleep wake up signal received from BCM via CAN communication.

Normal mode (wake-up)

# < SYSTEM DESCRIPTION > [IPD - CAN communication is normally performed with other control units. - Individual unit control by IPDM E/R is normally performed.

Low power consumption mode (sleep)

- Low power consumption control is active.
- CAN transmission is stopped.

#### SLEEP MODE ACTIVATION

- IPDM E/R judges that the sleep-ready conditions are fulfilled when the ignition switch is OFF and none of the conditions below are present. Then it transmits a sleep-ready signal (ready) to BCM via CAN communication.
- Outputting signals to actuators
- Switches or relays operating
- Output requests are being received from control units via CAN communication.
- IPDM E/R stops CAN communication and enters the low power consumption mode when it receives a sleep wake up signal (sleep) from BCM and the sleep-ready conditions are fulfilled.

#### WAKE-UP OPERATION

• IPDM E/R changes from the low power consumption mode to the normal mode when it receives a sleep wake-up signal (wake up) from BCM or any of the following conditions is fulfilled. In addition, it transmits a sleep-ready signal (not-ready) to BCM via CAN communication to report the CAN communication start.

- Ignition switch ON

- An output request is received from a control unit via CAN communication.

# **Diagnosis Description**

AUTO ACTIVE TEST

Description

In auto active test mode, the IPDM E/R sends a drive signal to the following systems to check their operation.

- Rear window defogger
- Front wiper motor
- Parking lamp
- License plate lamp
- Tail lamp
- Side marker lamp
- Front fog lamp
- Headlamp (LO, HI)
- A/C compressor (magnet clutch)
- Cooling fan

Operation Procedure

#### CAUTION:

Wiper arm interferes with hood when wiper is operated while wiper arm is in the raised position. Always perform auto active test without setting wiper arm in the raised position. Always pour water on front windshield glass in advance to auto active test so that damage on front windshield glass surface is prevented.

- 1. Turn the ignition switch OFF.
- 2. Turn the ignition switch ON, and within 20 seconds, press the driver door switch 10 times. Then turn the ignition switch OFF.

# CAUTION:

#### Close passenger door.

3. Turn the ignition switch ON within 10 seconds. After that the horn sounds once and the auto active test starts.

CAUTION:

#### Engine starts when ignition switch is turned ON while brake pedal is depressed.

4. After a series of the following operations is repeated 3 times, auto active test is completed.

#### NOTE:

- When auto active test mode has to be cancelled halfway through test, turn the ignition switch OFF.
- When auto active test is not activated, door switch may be the cause. Check door switch. Refer to <u>DLK-202</u>, <u>"Component Function Check"</u>.

#### Inspection in Auto Active Test Mode

When auto active test mode is actuated, the following operation sequence is repeated 3 times.

| Operation sequence | Inspection location   | Operation   |
|--------------------|---|---|
| 1                  | Rear window defogger  | 10 seconds  |
| 2                  | Front wiper motor   | LO for 5 seconds $\rightarrow$ HI for 5 seconds                     |
| 3                  | <ul> <li>Parking lamp</li> <li>License plate lamp</li> <li>Tail lamp</li> <li>Side marker lamp</li> <li>Front fog lamp</li> </ul> | 10 seconds  |
| 4                  | Headlamp  | LO for 10 seconds $\rightarrow$ HI ON $\Leftrightarrow$ OFF 5 times |
| 5                  | A/C compressor (magnet clutch)  | $ON \Leftrightarrow OFF 5 times$                                    |
| 6                  | Cooling fan   | 50% duty for 5 seconds $\rightarrow$ 100% duty for 5 seconds        |

[IPDM E/R (WITHOUT I-KEY)]

#### < SYSTEM DESCRIPTION >

[IPDM E/R (WITHOUT I-KEY)]

Concept of auto active test

- IPDM E/R starts the auto active test with the door switch signals transmitted by BCM via CAN communication. Therefore, the CAN communication line between IPDM E/R and BCM is considered normal if the auto active test starts successfully.
- The auto active test facilitates troubleshooting if any systems controlled by IPDM E/R cannot be operated.

Diagnosis chart in auto active test mode

| Symptom  | Inspection contents  |     | Possible cause  |

# CONSULT Function (IPDM E/R)

INFOID:000000008276830

# APPLICATION ITEM

CONSULT performs the following functions via CAN communication with IPDM E/R.

| Diagnosis mode           | Description   |
|--------------------------|---|
| Ecu Identification       | Allows confirmation of IPDM E/R part number.  |
| Self Diagnostic Result   | Displays the diagnosis results judged by IPDM E/R.                                      |
| Data Monitor             | Displays the real-time input/output data from IPDM E/R input/output data.               |
| Active Test              | IPDM E/R can provide a drive signal to electronic components to check their operations. |
| CAN Diag Support Monitor | The results of transmit/receive diagnosis of CAN communication can be read.             |

#### SELF DIAGNOSTIC RESULT

Refer to PCS-54, "DTC Index".

# DATA MONITOR

# CAN COMMUNICATION CONTROL

When CAN communication with ECM and BCM is impossible, IPDM E/R performs fail-safe control. After CAN communication recovers normally, it also returns to normal control.

If No CAN Communication Is Available With ECM

| Control part   | Fail-safe operation   |  |
|----------------|---|--|
| Cooling fan    | <ul> <li>Transmits the pulse duty signal (PWM signal) 100% when the ignition switch is turned ON.</li> <li>Transmits the pulse duty signal (PWM signal) 0% when the ignition switch is turned OFF.</li> </ul> |  |
| A/C compressor | A/C relay OFF   |  |
| Alternator     | Outputs the power generation command signal (PWM signal) 0%   |  |

#### If No CAN Communication Is Available With BCM

| Control part  | Fail-safe operation   |     |
|---|---|-----|
| Headlamp  | <ul> <li>Turns ON the headlamp low relay when the ignition switch is turned ON</li> <li>Turns OFF the headlamp low relay when the ignition switch is turned OFF</li> <li>Headlamp high relay OFF</li> </ul>   | K   |

| Front wiper motor   | <ul> <li>The status just before activation of fail-safe control is maintained until the ignition switch is turned OFF while the front wiper is operating at LO or HI speed.</li> <li>The wiper is operated at LO speed until the ignition switch is turned OFF if the fail-safe control is activated while the front wiper is set in the INT mode and the front wiper motor is operating.</li> <li>Returns automatically wiper to stop position when ignition switch is turned ON if fail-safe control is activated while front wiper motor is operated and wiper stop in the other position than stop position.</li> <li>The status is held at service position if the fail-safe control is activated while the service position function is operating.</li> </ul> | N   |
| Front fog lamp  | Front fog lamp relay OFF  | =   |
| Rear window defogger  | Rear window defogger relay OFF  | Ρ   |
| Horn  | Horn OFF  | -   |
| Starter motor   | Starter control relay OFF   | -   |

IGNITION RELAY MALFUNCTION DETECTION FUNCTION

- IPDM E/R monitors the voltage at the contact circuit and excitation coil circuit of the ignition relay inside it.
- IPDM E/R judges the ignition relay error if the voltage differs between the contact circuit and the excitation coil circuit.

# PCS-53

#### < ECU DIAGNOSIS INFORMATION >

 If the ignition relay cannot turn OFF due to contact seizure, it activates the tail lamp relay for 10 minutes to alert the user to the ignition relay malfunction when the ignition switch is turned OFF.

| Voltage                        | judgment                            |                           | Operation   |  |
|--------------------------------|-------------------------------------|---------------------------|---|--|
| Ignition relay contact<br>side | Ignition relay excitation coil side | IPDM E/R judgment         |   |  |
| ON                             | ON                                  | Ignition relay ON normal  |   |  |
| OFF                            | OFF                                 | Ignition relay OFF normal |   |  |
| ON                             | OFF                                 | Ignition relay ON stuck   | <ul> <li>Detects DTC "B2098: IGN RELAY ON CIRC"</li> <li>Turns ON the tail lamp relay for 10 minutes</li> </ul> |  |
| OFF                            | ON                                  | Ignition relay OFF stuck  | Detects DTC "B2099: IGN RELAY OFF CIRC"   |  |

#### FRONT WIPER PROTECTION FUNCTION

IPDM E/R detects front wiper stop position by a front wiper stop position signal. When a front wiper stop position signal is in the conditions listed below, IPDM E/R stops power supply to wiper after repeating a front wiper 10 seconds activation and 20 seconds stop.

| Ignition switch | Front wiper switch Front wiper stop position signal |  |
|-----------------|---|--|
| ON              | OFF   | The front wiper stop position signal (stop position) cannot be input for 10 seconds. |
| ON              | ON  | The front wiper stop position signal does not change for 10 seconds.                 |

#### NOTE:

This operation status can be confirmed on the IPDM E/R "Data Monitor" that displays "BLOCK" for the item "WIP PROT" while the wiper is stopped.

#### STARTER MOTOR PROTECTION FUNCTION

IPDM E/R turns OFF the starter control relay to protect the starter motor when the starter control relay remains active for 90 seconds.

#### DTC Index

#### NOTE:

- The details of time display are as follows.
- CRNT: A malfunction is detected now.
- PAST: A malfunction was detected in the past.
- IGN counter is displayed on FFD (Freeze Frame Data).
- The number is 0 when is detected now.
- The number increases like 1  $\rightarrow$  2 … 38  $\rightarrow$  39 after returning to the normal condition whenever IGN OFF  $\rightarrow$  ON.
- The number is fixed to 39 until the self-diagnosis results are erased if it is over 39.

# DTC/CIRCUIT DIAGNOSIS U1000 CAN COMM CIRCUIT

# Description

INFOID:000000008276835

CAN (Controller Area Network) is a serial communication line for real time applications. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicle is equipped with many electronic control unit, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only. CAN Communication Signal Chart. Refer to <u>LAN-28, "CAN COMMUNICATION SYSTEM : CAN Communication Signal Chart"</u>.

# B2099 IGNITION RELAY OFF STUCK

# Description

The ignition relay integrated in IPDM E/R is operated with ignition switch ON signal from the ignition switch.

# DTC Logic

INFOID:000000008276842

INFOID:00000008276841

# DTC DETECTION LOGIC

| DTC   | CONSULT display<br>description | DTC Detection Condition  | Possible causes   |
|-------|--------------------------------|--|---|
| B2099 | IGN RELAY OFF<br>CIR           | The ignition relay OFF is detected for 1 second at ignition switch ON (CPU monitors the status at the contact circuits of the ignition relay inside and ignition switch status from BCM via CAN communication) | <ul> <li>IPDM E/R</li> <li>Harness or connector<br/>(Ignition relay circuit)</li> </ul> |

#### NOTE:

When IPDM E/R power supply voltage is low (Approx. 7 - 8 V for about 1 second), the "DTC: B2099" may be detected.

#### **1.**PERFORM DTC CONFIRMATION PROCEDURE

- 1. Turn ignition switch ON.
- 2. Check DTC in "Self Diagnostic Result" mode of "IPDM E/R" using CONSULT.

#### Is DTC detected?

- YES >> Refer to PCS-60, "Diagnosis Procedure".
- NO >> INSPECTION END.

# **Diagnosis Procedure**

INFOID:000000008276843

# **1.**CHECK FUSE

Check that all of the fuses installed on the downstream of the contact point side circuit of the ignition relay in IPDM E/R are not blown.

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Replace the blown fuse after replacing the affected circuit if a fuse is blown.

# **2.**CHECK IGNITION RELAY CONTROL CIRCUIT VOLTAGE

- 1. Turn ignition switch ON
- 2. Check voltage between IPDM E/R harness connector and ground.

|           | (+)<br>IPDM E/R    |        | Voltage<br>(Approx) |
|-----------|--------------------|--------|---------------------|
| Connector | Connector Terminal |        |                     |
| E15       | 48                 | Ground | 0 V                 |

Is the inspection result normal?

YES >> Replace IPDM E/R. Refer to <u>PCS-62, "Removal and Installation"</u>.

NO >> GO TO 3.

#### **3.**CHECK BATTERY VOLTAGE

#### Check battery voltage.

#### Which is the measurement result?

More than 12.4 V>>GO TO 4.

Less than 12.4 V>>Perform battery inspection. Refer to PG-88, "How to Handle Battery".

#### **4.**CHECK INTERMITTENT INCIDENT

Refer to GI-43, "Intermittent Incident".

#### >> INSPECTION END

# Removal and Installation

# **CAUTION:**

# IPDM E/R integrated relays are not serviceable parts, and must not be removed from the unit.

# REMOVAL

- 1. Remove battery.
- 2. Press and expand pawls (A) on lateral side of IPDM E/R cover and remove IPDM E/R (1) from IPDM E/R cover B (2).
- 3. Disconnect the harness connector and then remove the IPDM E/R.

4. Remove IPDM E/R cover B mounting nuts (A).

# < REMOVAL AND INSTALLATION >

5. Insert a flat-bladed screwdriver between IPDM E/R cover A (1) and IPDM E/R cover B (2), disengage pawls, and remove IPDM E/R cover A.

# [IPDM E/R (WITHOUT I-KEY)]

6. Remove IPDM E/R cover B.

INSTALLATION

Install in the reverse order of removal.

# < PRECAUTION > PRECAUTION PRECAUTIONS

# Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

#### WARNING:

Always observe the following items for preventing accidental activation.

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see "SRS AIR BAG".
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

#### PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

#### WARNING:

Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

#### Precaution for Procedure without Cowl Top Cover

INFOID:000000008276848

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc to prevent damage to windshield.

# BCM

INFOID:000000008276851

BCM controls the various electrical components and simultaneously supplies power according to the power supply position.

BCM checks the power supply position internally.

# **Ignition Relay**

INFOID:000000008276852

Ρ

BCM turns ON the following relays to supply ignition power supply or ignition switch ON signal to each ECU when the ignition switch is turned ON.

Ignition relay (fuse block)

- Ignition relay (IPDM E/R)
- Blower relay

# **COMPONENT PARTS**

# < SYSTEM DESCRIPTION >

# BCM compares following status comparing.

- Ignition relay (fuse block) control signal, and power supply position judged by BCM
- Ignition relay (IPDM E/R) control request, and Ignition relay (IPDM E/R) status

# Accessory Relay

BCM turns ON the accessory relays to supply accessory power supply or ignition switch ACC signal to each ECU when the ignition switch is turned ACC or ON.

BCM compares status of accessory relay control signal, and power supply position judged by BCM.

# Blower Relay

BCM turns ON the following relays to supply ignition power supply or ignition switch ON signal to each ECU when the ignition switch is turned ON.

- Ignition relay (fuse block)
- Ignition relay (IPDM E/R)
- Blower relay

BCM compares status of blower relay control signal, and power supply position judged by BCM.

# Push-Button Ignition Switch

BCM transmits the change in the power supply position with the push-button ignition switch to IPDM E/R via CAN communication line. IPDM E/R transmits the power supply position status via CAN communication line to BCM.

# Stop Lamp Switch

Stop lamp switch detects that brake pedal is depressed, and then transmits the signal to BCM.

# Transmission Range Switch

Transmission range switch is integrated in CVT assembly, and detects the CVT shift selector position. Transmission range switch detects selector lever position (P/N position), and transmits the P/N position signal to BCM.

# Clutch Interlock Switch

Clutch interlock switch detects that clutch pedal is depressed, and transmits ON/OFF signal to BCM.

# POWER DISTRIBUTION SYSTEM : System Description

# SYSTEM DESCRIPTION

- PDS (POWER DISTRIBUTION SYSTEM) is the system that BCM controls with the operation of the pushbutton ignition switch and performs the power distribution to each power circuit. This system is used instead of the mechanical power supply changing mechanism with the operation of the conventional key cylinder.
- The push-button ignition switch can be operated when Intelligent Key is in the following condition. Refer to Engine Start Function for details.
- Intelligent Key is in the detection area of the inside key antenna.
- Intelligent Key backside is contacted to push-button ignition switch.
- The push-button ignition switch operation is input to BCM as a signal. BCM changes the power supply position according to the status and operates the following relays to supply power to each power circuit.
- Ignition relay (IPDM E/R)
- Ignition relay (fuse block)
- ACC relay
- Blower relay

NOTE:

The push-button ignition switch operation changes due to the conditions of brake pedal, selector lever and vehicle speed.

 The power supply position can be confirmed with the lighting of ACC/ON indicator in the push-button ignition switch.

# BATTERY SAVER SYSTEM

When all the following conditions are met for 60 minutes, the battery saver system will cut off the power supply to prevent battery discharge.

- The ignition switch is in the ACC position
- All doors are closed
- Selector lever is in the P position (except M/T models)

Reset Condition of Battery Saver System

#### CVT models

In order to prevent the battery from discharging, the battery saver system will cut off the power supply when all doors are closed, the selector lever is on P position (except M/T models) and the ignition switch is left on ACC position for 60 minutes. If any of the following conditions are met the battery saver system is released and the steering will change automatically to lock position from OFF position.

- Opening any door
- Operating with request switch on door lock

Ρ

#### < SYSTEM DESCRIPTION >

#### · Operating with Intelligent Key on door lock

Press push-button ignition switch and ignition switch will change to ACC position from OFF position. **M/T models** 

If any of the conditions above is met the battery saver system is released.

#### POWER SUPPLY POSITION CHANGE TABLE BY PUSH-BUTTON IGNITION SWITCH OPERA-TION

The power supply position changing operation can be performed with the following operations.

#### NOTE:

- When an Intelligent Key is within the detection area of inside key antenna and when Intelligent Key backside is contacted to push-button ignition switch, it is equivalent to the operations below.
- When starting the engine, the BCM monitors under the engine start conditions,

#### CVT models

- Brake pedal operating condition
- Selector lever position
- Vehicle speed
- M/T models
- Clutch pedal operating condition
- Vehicle speed

Vehicle speed: less than 4 km/h (2.5 MPH)

#### REAR WIPER MOTOR PROTECTION

BCM detects the rear wiper stopping position according to the rear wiper stop position signal. When the rear wiper stop position signal does not change for more than 5 seconds while driving the rear wiper, BCM stops power supply to protect the rear wiper motor.

Condition of cancellation

- 1. More than 1 minute is passed after the rear wiper stop.
- 2. Turn rear wiper switch OFF.
- 3. Operate the rear wiper switch or rear washer switch.

FAIL-SAFE CONTROL OF COMBINATION SWITCH READING FUNCTION CAUSED BY LOW POWER SUPPLY VOLTAGE

If voltage of battery power supply lower, BCM maintains combination switch reading to the status when input voltage is less than approximately 9 V.

#### NOTE:

When voltage of battery power supply is approximately 9 V or more, combination switch reading function returns to normal operation.

|                     | ENGINE RUN      |  | Power position is "RUN" (Ignition switch ON with engine running)  |  |
|                     | CRANKING        |  | Power position is "CRANKING" (At engine cranking)   |  |
| IGN Counter         | 0 - 39          | <ul> <li>The number of times that ignition switch is turned ON after DTC is detected</li> <li>The number is 0 when a malfunction is detected now.</li> <li>The number increases like 1 → 2 → 338 → 39 after returning to the normal condition whenever ignition switch OFF → ON.</li> <li>The number is fixed to 39 until the self-diagnosis results are erased if it is over 39.</li> </ul> |   |  |

\*: Power position shifts to "LOCK" from "OFF", when ignition switch is in the OFF position, selector lever is in the P position (A/T models and CVT models), and any of the following conditions are met.

Closing door

· Opening door

· Door is locked using door request switch

• Door is locked using Intelligent Key

The power position shifts to "ACC" when the push-button ignition switch (push switch) is pushed at "LOCK".

# DATA MONITOR **NOTE**:

The following table includes information (items) inapplicable to this vehicle. For information (items) applicable to this vehicle, refer to CONSULT display items.

| Monitor Item            | Condition  |  |  |  |  |  |
|-------------------------|--|--|--|--|--|--|
| REQ SW -DR              | Indicates [On/Off] condition of door request switch (driver side)  |  |  |  |  |  |
| REQ SW -AS              | Indicates [On/Off] condition of door request switch (passenger side)   |  |  |  |  |  |
| REQ SW -BD/TR           | Indicates [On/Off] condition of back door request switch   |  |  |  |  |  |
| PUSH SW                 | Indicates [On/Off] condition of push-button ignition switch  |  |  |  |  |  |
| CLUTCH SW <sup>*1</sup> | Indicates [On/Off] condition of clutch interlock switch  |  |  |  |  |  |
| BRAKE SW 1              | Indicates [On/Off]* <sup>2</sup> condition of stop lamp switch power supply  |  |  |  |  |  |
| BRAKE SW 2              | Indicates [On/Off] condition of stop lamp switch   |  |  |  |  |  |
| DETE/CANCL SW           | Indicates [On/Off] condition of P position   |  |  |  |  |  |
| SFT PN/N SW             | Indicates [On/Off] condition of P or N position  |  |  |  |  |  |
| UNLK SEN -DR            | Indicates [On/Off] condition of driver door UNLOCK status  |  |  |  |  |  |
| PUSH SW -IPDM           | Indicates [On/Off] condition of push-button ignition switch  |  |  |  |  |  |
| IGN RLY1 -F/B           | Indicates [On/Off] condition of ignition relay 1   |  |  |  |  |  |
| DETE SW -IPDM           | Indicates [On/Off] condition of P position   |  |  |  |  |  |
| SFT PN -IPDM            | Indicates [On/Off] condition of P or N position  |  |  |  |  |  |
| SFT P -MET              | Indicates [On/Off] condition of P position   |  |  |  |  |  |
| SFT N -MET              | Indicates [On/Off] condition of N position   |  |  |  |  |  |
| ENGINE STATE            | Indicates [Stop/Stall/Crank/Run] condition of engine states  |  |  |  |  |  |
| S/L LOCK-IPDM           | <b>NOTE:</b><br>This item is displayed, but cannot be monitored  |  |  |  |  |  |
| S/L UNLK-IPDM           | NOTE:<br>This item is displayed, but cannot be monitored   |  |  |  |  |  |
| S/L RELAY-REQ           | NOTE:<br>This item is displayed, but cannot be monitored   |  |  |  |  |  |
| VEH SPEED 1             | Display the vehicle speed signal received from combination meter by numerical value [Km/h]   |  |  |  |  |  |
| VEH SPEED 2             | Display the vehicle speed signal received from ABS or VDC or TCM by numerical value [Km/h  |  |  |  |  |  |
| DOOR STAT-DR            | Indicates [LOCK/READY/UNLK] condition of driver side door status   |  |  |  |  |  |
| DOOR STAT-AS            | Indicates [LOCK/READY/UNLK] condition of passenger side door status  |  |  |  |  |  |
| ID OK FLAG              | Indicates [Set/Reset] condition of key ID  |  |  |  |  |  |
| PRMT ENG STRT           | Indicates [Set/Reset] condition of engine start possibility  |  |  |  |  |  |
| PRMT RKE STRT           | NOTE:<br>This item is displayed, but cannot be monitored   |  |  |  |  |  |
| TRNK/HAT MNTR           | NOTE:<br>This item is displayed, but cannot be monitored   |  |  |  |  |  |
| RKE-LOCK                | Indicates [On/Off] condition of LOCK signal from Intelligent Key   |  |  |  |  |  |
| RKE-UNLOCK              | Indicates [On/Off] condition of UNLOCK signal from Intelligent Key   |  |  |  |  |  |
| RKE-TR/BD               | NOTE:<br>This item is displayed, but cannot be monitored   |  |  |  |  |  |
| RKE-PANIC               | Indicates [On/Off] condition of PANIC button of Intelligent Key  |  |  |  |  |  |
| RKE-MODE CHG            | Indicates [On/Off] condition of MODE CHANGE signal from Intelligent Key  |  |  |  |  |  |
| RKE OPE COUN1           | When remote keyless entry receiver receives the signal transmitted while operating on Intelli-<br>gent Key, the numerical value start changing |  |  |  |  |  |
| RKE OPE COUN2           | NOTE:<br>This item is displayed, but cannot be monitored   |  |  |  |  |  |

# **DIAGNOSIS SYSTEM (BCM)**

**OVERALL SEQUENCE** 

### DIAGNOSIS AND REPAIR WORK FLOW

#### < BASIC INSPECTION >

| <b>1.</b> GET INFORMATION FOR SYMPTOM   | Λ   |
|---|-----|
| 1. Get detailed information from the customer about the symptom (the condition and the environment when   | А   |
| <ul><li>the incident/malfunction occurs).</li><li>Check operation condition of the function that is malfunctioning.</li></ul>   | В   |
| >> GO TO 2.   |     |
| 2. CHECK DTC  | С   |
| 1. Check DTC.   | 0   |
| <ul> <li>2. Perform the following procedure if DTC is detected.</li> <li>Record DTC and freeze frame data (Print them out using CONSULT.)</li> <li>Erase DTC.</li> </ul>  | D   |
| <ul><li>Study the relationship between the cause detected by DTC and the symptom described by the customer.</li><li>Check related service bulletins for information.</li></ul>  | Е   |
| Are any symptoms described and any DTC detected?  |     |
| Symptom is described, DTC is detected>>GO TO 3.<br>Symptom is described, DTC is not detected>>GO TO 4.<br>Symptom is not described, DTC is detected>>GO TO 5.   | F   |
| 3.CONFIRM THE SYMPTOM   |     |
| Try to confirm the symptom described by the customer.<br>Also study the normal operation and fail-safe related to the symptom.<br>Verify relation between the symptom and the condition when the symptom is detected.         | G   |
| >> GO TO 5.   |     |
| 4.CONFIRM THE SYMPTOM   |     |
| Try to confirm the symptom described by the customer.<br>Verify relation between the symptom and the condition when the symptom is detected.  | I   |
| >> GO TO 6.   | J   |
| 5. PERFORM DTC CONFIRMATION PROCEDURE   |     |
| Perform DTC CONFIRMATION PROCEDURE for the detected DTC, and then check that DTC is detected  | Κ   |
| again. At this time, always connect CONSULT to the vehicle, and check self diagnostic results in real time. If two or more DTCs are detected, refer to <u>BCS-58, "DTC Inspection Priority Chart"</u> , and determine trouble |     |
| diagnosis order.<br>NOTE:   | L   |
| Freeze frame data is useful if the DTC is not detected.     Perform Component Eulertian Check if DTC CONFIRMATION PROCEDURE is not included on Service  | PCS |
| If the result of Component Function Check is NG, it is the same as the detection of DTC by DTC CONFIR-  | Ν   |
| Is DTC detected?  |     |
| YES >> GO TO 7.<br>NO >> Check according to <u>GI-43, "Intermittent Incident"</u> .   | 0   |
| 6.DETECT MALFUNCTIONING SYSTEM BY SYMPTOM DIAGNOSIS   | 0   |
| Detect malfunctioning system according to SYMPTOM DIAGNOSIS based on the confirmed symptom in step  | Ρ   |
| <ol> <li>and determine the trouble diagnosis order based on possible causes and symptom.</li> <li>Is the symptom described?</li> </ol>  |     |
| YES >> GO TO 7.   |     |
| NO >> Monitor input data from related sensors or check voltage of related module terminals using CON-<br>SULT.  |     |

**1.**DETECT MALFUNCTIONING PART BY DIAGNOSTIC PROCEDURE

# DIAGNOSIS AND REPAIR WORK FLOW

< BASIC INSPECTION >

Inspect according to Diagnostic Procedure of the system.

Is malfunctioning part detected?

YES >> GO TO 8.

NO >> Check according to <u>GI-43, "Intermittent Incident"</u>.

 $\mathbf{8}$ . Repair or Replace the Malfunctioning Part

- 1. Repair or replace the malfunctioning part.
- Reconnect parts or connectors disconnected during Diagnostic Procedure again after repair and replacement.
- 3. Check DTC. If DTC is detected, erase it.

>> GO TO 9.

### 9.FINAL CHECK

When DTC is detected in step 2, perform DTC CONFIRMATION PROCEDURE again, and then check that the malfunction is repaired securely.

When symptom is described by the customer, refer to confirmed symptom in step 3 or 4, and check that the symptom is not detected.

Is DTC detected and does symptom remain?

- YES-1 >> DTC is detected: GO TO 7.
- YES-2 >> Symptom remains: GO TO 4.

NO >> Before returning the vehicle to the customer, always erase DTC.

| Accessory relay |        | Continuity  |
|-----------------|--------|-------------|
| Terminal        | Ground | Continuity  |
| 1               |        | Not existed |

Is the inspection result normal?

YES >> Replace BCM. Refer to <u>BCS-81, "Removal and Installation"</u>.

NO >> Repair or replace harness.

# **3.**CHECK ACCESSORY RELAY GROUND CIRCUIT

#### 1. Turn ignition switch OFF.

2. Check continuity between accessory relay harness connector and ground.

| Accessory relay |        | Continuity |
|-----------------|--------|------------|
| Terminal        | Ground | Continuity |
| 2               |        | Existed    |

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair accessory relay ground circuit.

### **4.**CHECK ACCESSORY RELAY POWER SUPPLY CIRCUIT-2

#### 1. Turn ignition switch ACC.

2. Check voltage between accessory relay harness connector and ground.

| (+)<br>Accessory relay | (-)    | Voltage (V)<br>(Approx.) |  |
|------------------------|--------|--------------------------|--|
| Terminal               |        |                          |  |
| 5                      | Ground | Battery voltage          |  |

#### Is the inspection result normal?

YES >> GO TO 5.

NO >> Check continuity open or short between accessory relay and battery.

**5.**CHECK ACCESSORY RELAY

Refer to PCS-82, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace accessory relay.

6. CHECK INTERMITTENT INCIDENT

Refer to GI-43, "Intermittent Incident".

#### >> INSPECTION END

#### Component Inspection

### 1.CHECK ACCESSORY RELAY

1. Turn ignition switch OFF.

2. Remove accessory relay.

# **B2614 ACC RELAY CIRCUIT**

#### < DTC/CIRCUIT DIAGNOSIS >

### [POWER DISTRIBUTION SYSTEM]

3. Check the continuity between accessory relay terminals.

| Terminals   | Condition  | Continuity  |  |  |  |

## **B2615 BLOWER RELAY CIRCUIT**

#### < DTC/CIRCUIT DIAGNOSIS >

# B2615 BLOWER RELAY CIRCUIT

# DTC Logic

INFOID:000000008276870

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name | DTC detecting condition  | Possible cause   |
|---------|------------------------|--|--|
| B2615   | BCM                    | <ul><li>BCM detects a difference of signal for 1 second or more between the following items.</li><li>Blower relay ON/OFF request</li><li>Blower relay feedback</li></ul> | <ul> <li>Harness or connectors<br/>(Blower relay circuit is open or<br/>shorted)</li> <li>BCM</li> <li>Blower relay</li> </ul> |

### DTC CONFIRMATION PROCEDURE

# **1.**PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON under the following conditions, and wait for 1 second or more.

- Selector lever is in the P position
- Do not depress brake pedal
- 2. Check "Self-diagnosis result" of BCM with CONSULT.

#### Is DTC detected?

YES >> Go to PCS-84, "Diagnosis Procedure".

NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000008276871

# 1.CHECK BLOWER RELAY POWER SUPPLY

- 1. Turn ignition switch OFF.
- 2. Disconnect blower relay.
- 3. Check voltage between blower relay harness connector and ground.

| (+)<br>Blower relay<br>Terminal | ()     | Condition                  |    | Voltage (V)<br>(Approx.) |
|---------------------------------|--------|----------------------------|----|--------------------------|
| 1                               | Ground | Ignition switch OFF or ACC |    | 0                        |
| I                               | Groand | Ignition Switch            | ON | Battery voltage          |

#### Is the inspection result normal?

YES >> GO TO 3.

NO >> GO TO 2.

# 2.CHECK BLOWER RELAY POWER SUPPLY CIRCUIT

#### 1. Turn ignition switch OFF.

2. Disconnect BCM connector.

3. Check continuity between blower relay harness connector and BCM harness connector.

| Blower relay | B         | CM         | Continuity |
|--------------|-----------|------------|------------|
| Terminal     | Connector | Continuity |            |
| 1            | M70       | 106        | Existed    |

#### 4. Check continuity between blower relay harness connector and ground.

|   | Blower relay |        | Continuity  |
|---|--------------|--------|-------------|
|   | Terminal     | Ground | Continuity  |
| - | 1            |        | Not existed |

## < DTC/CIRCUIT DIAGNOSIS > B2618 BCM

### NOTE:

- If DTC B2618 is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to <u>BCS-70, "DTC Logic"</u>.
- If DTC B2618 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to BCS-71, "DTC Logic".

| DTC No. | Trouble diagnosis<br>name | DTC detecting condition   | Possible cause |
|---------|---------------------------|---|----------------|
| B2618   | BCM                       | An immediate operation of ignition relay (IPDM E/R) is re-<br>quested by BCM, but there is no response for more than 1 second | ВСМ            |

## DTC CONFIRMATION PROCEDURE

# **1.**PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON under the following conditions, and wait for 1 second or more.

#### CVT models

- Selector lever is in the P or N position
- Do not depress brake pedal

#### M/T models

- Do not depress clutch pedal
- 2. Check "Self-diagnosis result" of BCM with CONSULT.

#### Is DTC detected?

- YES >> Go to PCS-88, "Diagnosis Procedure".
- NO >> INSPECTION END

## Diagnosis Procedure

# **1.**INSPECTION START

- 1. Turn ignition switch ON.
- 2. Select "Self-diagnosis result" of BCM with CONSULT.
- 3. Touch "ERASE".
- 4. Perform DTC Confirmation Procedure. See <u>PCS-88, "DTC Logic"</u>.

Is the 1st trip DTC B2618 displayed again?

- YES >> Replace BCM. Refer to <u>BCS-81, "Removal and Installation"</u>
- NO >> INSPECTION END

### B261A PUSH-BUTTON IGNITION SWITCH

# **1.**PERFORM DTC CONFIRMATION PROCEDURE

| 1. | Press the push-button ignition switch under the following conditions, and wait for 1 second or more. |
|----|--|
|    |  |

#### CVT models

D

- Selector lever is in the P or N position
- Do not depress brake pedal

#### M/T models

Do not depress clutch pedalCheck "Self-diagnosis result" of BCM with CONSULT.

#### Is DTC detected?

- YES >> Go to PCS-89, "Diagnosis Procedure".
- NO >> INSPECTION END

## **Diagnosis Procedure**

# 1. CHECK IGNITION SWITCH OUTPUT SIGNAL (PUSH-BUTTON IGNITION SWITCH)

- 1. Disconnect push-button ignition switch connector and IPDM E/R connector.
- 2. Check voltage between push-button ignition switch harness connector and ground.

|  | (+) Push-button ignition switch Connector Terminal |   |        |                          | PCS |  |
|--|--|---|--------|--------------------------|-----|--|
|  |  |   | ()     | Voltage (V)<br>(Approx.) |     |  |
|  |  |   |        |                          |     |  |
|  | M101   | 8 | Ground | 12                       | Ν   |  |

Is the inspection result normal?

YES >> GO TO 3.

NO >> GO TO 2.

# 2.check push-button ignition switch circuit (bcm)

1. Disconnect BCM connector.

2. Check continuity between BCM harness connector and push-button ignition switch harness connector.

| B         | BCM      |                    | Push-button ignition switch |            |  |

# PUSH-BUTTON IGNITION SWITCH

## Component Function Check

# **1.**CHECK FUNCTION

1. Select "PUSH SW" in "Data Monitor" mode with CONSULT.

2. Check the push-button ignition switch signal under the following conditions.

| Test item | Condition                                  | Status |
|-----------|--|--------|
| PUSH SW   | Push-button ignition switch is pressed     | ON     |
|           | Push-button ignition switch is not pressed | OFF    |

Is the indication normal?

YES >> INSPECTION END.

NO >> Go to PCS-96, "Diagnosis Procedure".

### Diagnosis Procedure

INFOID:000000008276887

INFOID:00000008276886

### **1.**CHECK PUSH-BUTTON IGNITION SWITCH OUTPUT SIGNAL 1

- 1. Turn ignition switch OFF.
- 2. Disconnect push-button ignition switch connector and IPDM E/R connector.
- 3. Check voltage between push-button ignition switch harness connector and ground.

| 1         | (+)<br>Push-button ignition switch |  | Voltage (V)<br>(Approx.)                |
|-----------|------------------------------------|--|---|
| Connector | Terminal                           |  | (,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,, |
| M101      | M101 8                             |  | 12                                      |

Is the inspection result normal?

YES >> GO TO 3.

NO >> GO TO 2.

## **2.**CHECK PUSH-BUTTON IGNITION SWITCH CIRCUIT 1

1. Disconnect BCM connector.

2. Check continuity between BCM harness connector and push-button ignition switch harness connector.

| B         | СМ       | Push-button ignition switch |          | Continuity |

# PUSH-BUTTON IGNITION SWITCH POSITION INDICATOR

### Description

Push-button ignition switch changes the power supply position. BCM maintains the power supply position status. BCM changes the power supply position with the operation of the push-button ignition switch.

## **Component Function Check**

## **1.**CHECK FUNCTION

Check push-button ignition switch ("PUSH SWITCH INDICATOR") in Active Test Mode with CONSULT.

|                       | ו   |                    | Description         |   |
|-----------------------|-----|--------------------|---------------------|---|
|                       | ON  | Position indicator | Illuminates         | E |
| PUSH SWITCH INDICATOR | OFF |                    | Does not illuminate |   |

YES >> INSPECTION END

NO >> Refer to PCS-99, "Diagnosis Procedure".

# **Diagnosis** Procedure

### **1.**CHECK PUSH-BUTTON IGNITION SWITCH INPUT SIGNAL

- 1. Turn ignition switch OFF.
- 2. Disconnect push-button ignition switch connector.
- 3. Check voltage between push-button ignition switch harness connector and ground.

|  | (+)<br>Push-button ignition switch |          |        |                          |   |
|--|------------------------------------|----------|--------|--------------------------|---|
|  |                                    |          | ()     | Voltage (V)<br>(Approx.) |   |
|  | Connector                          | Terminal |        |                          | J |
|  | M101 3                             |          | Ground | Battery voltage          |   |

Is the inspection normal?

YES >> GO TO 2.

NO-1 >> Check 10 A fuse [No.13, located in fuse block (J/B)].

NO-2 >> Check harness for open or short between push-button ignition switch and fuse.

# 2. CHECK BCM INPUT

1. Connect push-button ignition switch connector.

2. Disconnect BCM connector.

3. Check voltage between BCM connector and ground.

| (+)<br>BCM |          | (-)    | Voltage (V)<br>(Approx.) | N |
|------------|----------|--------|--------------------------|---|
| Connector  | Terminal |        |                          |   |
| M70        | 91       | Ground | Battery voltage          | 0 |

Is the inspection normal?

YES >> Replace BCM. Refer to <u>BCS-81, "Removal and Installation"</u>.

NO >> GO TO 3.

**3.**CHECK PUSH-BUTTON IGNITION SWITCH CIRCUIT

1. Disconnect push-button ignition switch connector.

2. Check continuity between BCM harness connector and push-button ignition switch harness connector.

# PUSH-BUTTON IGNITION SWITCH DOES NOT OPERATE

#### < SYMPTOM DIAGNOSIS >

# [POWER DISTRIBUTION SYSTEM]

# SYMPTOM DIAGNOSIS PUSH-BUTTON IGNITION SWITCH DOES NOT OPERATE

## Description

Check that vehicle is under the condition shown in "Conditions of vehicle" before starting diagnosis, and check each symptom.

### NOTE:

The engine start function, door lock function, power distribution system, and NATS-IVIS/NVIS in the Intelligent Key system are closely related to each other regarding control. The vehicle security function can operate only when the door lock and power distribution system are operating normally.

Conditions of Vehicle (Operating Conditions)

- "ENGINE START BY I-KEY" in "WORK SUPPORT" is ON when setting on CONSULT.
- One or more of Intelligent Keys with registered Intelligent Key ID is in the vehicle.

| Diagnosis Procedure  | 893 |
|--|-----|
| 1.PERFORM WORK SUPPORT   | F   |
| Perform "INSIDE ANT DIAGNOSIS" on Work Support of "INTELLIGENT KEY".<br>Refer to <u>DLK-28, "DOOR LOCK : CONSULT Function (BCM - DOOR LOCK)"</u> . | G   |
| >> GO TO 2.  |     |
| 2. PERFORM SELF-DIAGNOSIS RESULT   | Н   |
| Perform Self-Diagnosis Result of "BCM".  |     |

#### PUSH-BUTTON IGNITION SWITCH POSITION INDICATOR DOES NOT ILLUMI-NATE

< SYMPTOM DIAGNOSIS >

[POWER DISTRIBUTION SYSTEM]

# PUSH-BUTTON IGNITION SWITCH POSITION INDICATOR DOES NOT IL-LUMINATE

# Description

INFOID:000000008276894

- Before performing the diagnosis in the following table, check "Work Flow". Refer to PCS-78, "Work Flow".
- Check that vehicle is under the condition shown in "Conditions of vehicle" before starting diagnosis, and check each symptom.

#### Conditions of Vehicle (Operating Conditions)

- "ENGINE START BY I-KEY" in "WORK SUPPORT" is ON when setting on CONSULT.
- One or more of Intelligent Keys with registered Intelligent Key ID is in the vehicle.

# Diagnosis Procedure

INFOID:000000008276895

### **1.**CHECK PUSH-BUTTON IGNITION SWITCH INDICATOR

Check push-button ignition switch indicator. Refer to <u>PCS-99, "Component Function Check"</u>.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace the malfunctioning parts.

2.CONFIRM THE OPERATION

Confirm the operation again.

#### Is the result normal?

- YES >> Check intermittent incident. Refer to <u>GI-43, "Intermittent Incident"</u>.
- NO >> GO TO 1.
