GENERAL MAINTENANCE

< PERIODIC MAINTENANCE >

PERIODIC MAINTENANCE

GENERAL MAINTENANCE

Explanation of General Maintenance

General maintenance includes those items which should be checked during the normal day-to-day operation of the vehicle. They are essential if the vehicle is to continue operating properly. The owners can perform checks and inspections themselves or have their **NISSAN** dealers do them.

OUTSIDE THE VEHICLE

The maintenance items listed here should be performed from time to time, unless otherwise specified.

Item		Reference page		
Tires	Check the pressure with a gauge often and always prior to long distance trips. Adjust the pressure in all tires, including the spare, to the specified pressure. Check carefully for damage, cuts or excessive wear.	<u>WT-43</u>		
Wheel nuts	When checking the tires, make sure no nuts are missing, and check for any loose nuts. Tighten if necessary.	_		
Tire rotation	Tires should be rotated every 5,000 miles (8,000 km).	<u>WT-38</u>		
Tire Pressure Monitor- ing System (TPMS) transmitter compo- nents	Replace the TPMS transmitter grommet seal, valve core and cap when the tires are replaced due to wear or age.	<u>WT-40</u>		
Wheel alignment and balance If the vehicle should pull to either side while driving on a straight and level road, or if you detect uneven or abnormal tire wear, there may be a need for wheel alignment. If the steering wheel or seat vibrates at normal highway speeds, wheel balancing may be needed. For additional information regarding tires, refer to "Important Tire Safety Information" (US) or "Tire Safety Information" (Canada) in the NISSAN Warranty Information Booklet.				
Windshield	Clean the windshield on a regular basis. Check the windshield at least every six months for cracks or other damage. Repair as necessary.	_		
Windshield wiper blades	Check for cracks or wear if they do not wipe properly.	_		
Doors and engine hood	Check that all doors and the engine hood operate smoothly as well as the back door, trunk lid and back hatch. Also make sure that all latches lock securely. Lubricate if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released. When driving in areas using road salt or other corrosive materials, check lubrication frequently.	<u>MA-47</u>		
Lamps	Make sure that the headlamps, stop lamps, tail lamps, turn signal lamps, and other lamps are all operating properly and installed securely. Also check headlamp aim. Clean the headlamps on a regular basis.	_		

INSIDE THE VEHICLE

The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, cleaning the vehicle, etc.

Item		Reference page
Warning lamps and chimes	Make sure that all warning lamps and chimes are operating properly.	_
Windshield wiper and washer	Check that the wipers and washer operate properly and that the wipers do not streak.	_
Windshield defroster	Check that the air comes out of the defroster outlets properly and in sufficient quantity when operating the heater or air conditioning.	_
Steering wheel	Check that it has the specified play. Check for changes in the steering condition, such as excessive play, hard steering or strange noises. Free play: Less than 35 mm (1.38 in)	_

GENERAL MAINTENANCE

< PERIODIC MAINTENANCE >

Item		Reference page
Seats	Check seat position controls such as seat adjusters, seatback recliner, etc. to make sure they operate smoothly and that all latches lock securely in every position. Check that the head restraints move up and down smoothly and that the locks (if equipped) hold securely in all latched positions. Check that the latches lock securely for folding-down rear seatbacks.	_
Seat belts	Check that all parts of the seat belt system (e.g. buckles, anchors, adjusters and retractors) operate properly and smoothly and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.	<u>MA-47</u>
Accelerator pedal	Check the pedal for smooth operation and make sure the pedal does not catch or require uneven effort. Keep the floor mats away from the pedal.	
Brakes	Check that the brake does not pull the vehicle to one side when applied.	
Brake pedal and booster	Check the pedal for smooth operation and make sure it has the proper distance under it when depressed fully. Check the brake booster function. Be sure to keep floor mats away from the pedal.	<u>BR-9</u> <u>BR-15</u>
Clutch pedal	Make sure the pedal operates smoothly and check that it has the proper free play.	<u>CL-6</u>
Parking brake	Check that the lever or pedal has the proper travel and make sure that the vehicle is held securely on a fairly steep hill when only the parking brake is applied.	<u>PB-4</u>
CVT P (Park) position mechanism	On a fairly steep hill check that the vehicle is held securely with the selector lever in the "P" position without applying any brakes.	_

UNDER THE HOOD AND VEHICLE

The maintenance items listed here should be checked periodically (e.g. each time you check the engine oil or refuel).

Item		Reference page
Windshield washer fluid	Check that there is adequate fluid in the tank.	_
Engine coolant level	Check the coolant level when the engine is cold.	MA-16 MA-25
Radiator and hoses	Check the front of the radiator and clean off any dirt, insects, leaves, etc., that may have accumulated. Make sure the radiator hoses have no cracks, deformation, deterioration or loose connections.	<u>MA-20</u>
Brake and clutch fluid levels	Make sure that the brake and clutch fluid level(s) are(is) between the "MAX" and "MIN" lines on the reservoir(s).	MA-43 MA-38
Battery	Check the fluid level in each cell. It should be between the "MAX" and "MIN" lines. Vehicles operated in high temperatures or under severe conditions require frequent checks of the battery fluid level.	<u>PG-108</u>
Engine drive belts	Make sure that no belt is frayed, worn, cracked or oily.	MA-15 MA-25
Engine oil level	Check the level on the oil level gauge after parking the vehicle on a level spot and turning off the engine.	<u>LU-9</u> <u>LU-28</u>
Exhaust system	Make sure there are no loose supports, cracks or holes. If the sound of the exhaust seems unusual or there is a smell of exhaust fumes, immediately locate the trouble and correct it.	<u>MA-35</u>
Underbody	The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these substances, otherwise rust will form on the floor pan, frame, fuel lines and around the exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, being careful to clean those areas where mud and dirt can easily accumulate.	_
Fluid leaks	Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks or gasoline fumes are evident, check for the cause and correct it immediately.	_

PERIODIC MAINTENANCE

Introduction of Periodic Maintenance

INFOID:0000000011463944

Α

C

D

Е

The following tables show the normal maintenance schedule. Depending upon weather and atmospheric conditions, varying road surfaces, individual driving habits and vehicle usage, additional or more frequent maintenance may be required.

Periodic maintenance beyond the last period shown on the tables requires similar maintenance.

Emission Control System Maintenance

Abbreviations: R = Replace. I = Inspect. Correct or replace if necessary.

MAINTENANCE OPERATION MAINTENANCE INTERVAL										
Perform at number of miles, kilometers or months, whichever comes first.	Miles x 1,000 (km x 1,000) Months	5 (8) 6	10 (16) 12	15 (24) 18	20 (32) 24	25 (40) 30	30 (48) 36	35 (56) 42	40 (64) 48	45 (72) 54

Engine oil filter (Use genuine NISSAN engine oil filter or equivalent)		R	R	R	R	R	R	MA-22 MA-32						
Spark plugs (Iridium/platinum-tipped type)	NOTE (6)	Replace every 105,000 miles (168,000 km) MA-23 MA-33												
Intake and exhaust valve clearance*	NOTE (7)							EM-14 EM-178						

NOTE:

- (1) After 40,000 miles (64,000 km) or 48 months, inspect every 10,000 miles (16,000 km) or 12 months. Replace the drive belts if found damaged.
- (2) If operating mainly in dusty conditions, more frequent maintenance may be required.
- (3) Maintenance-free item. For service procedures, refer to the FL section.
- (4) First replacement interval is 105,000 miles (168,000 km) or 84 months. After first replacement, replace every 75,000 miles (120,000 km) or 60 months.
- (5) Use only Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent with proper mixture ratio of 50% anti-freeze and 50% demineralized or distilled water. Mixing any other type of coolant or the use of non-distilled water will reduce the life expectancy of the factory fill coolant.
- (6) Replace spark plug when the plug gap exceeds 1.1 mm (0.043 in) even if within specified periodic replacement mileage.
- (7) Periodic maintenance is not required. However, if valve noise increases, inspect valve clearance.
- * Maintenance items and intervals with "*" are recommended by NISSAN for reliable vehicle operation. The owner need not perform such maintenance in order to maintain the emission warranty or manufacturer recall liability. Other maintenance items and intervals are required.

Chassis and Body Maintenance

Abbreviations: R = Replace. I = Inspect. Correct or replace if necessary.

<u>VTL-16</u>

< PERIODIC MAINTENANCE >

NOTE:

- Maintenance items with "★" should be performed more frequently according to "Maintenance Under Severe Driving Conditions".
- (1) Use only Genuine NISSAN CVT fluid. If towing a trailer, using a camper or a car-top carrier or driving on rough or muddy roads, inspect CVT fluid deterioration at NISSAN dealer every 60,000 miles (96,000 km), then change CVT fluid if necessary. And if the inspection is not performed, change (not just inspect) CVT fluid every 60,000 miles (96,000 km). Using transmission fluid other than Genuine NISSAN CVT Fluid will damage the CVT, which is not covered by the NISSAN new vehicle limited warranty.
- (2) If towing a trailer, using a camper or car-top carrier, or driving on rough or muddy roads, change (not just inspect) oil at every 20,000 miles (32,000 km) or 24 months.
- (3) Refer to "Tire rotation" under the "GENERAL MAINTENANCE" heading earlier in this section.

MAINTENANCE UNDER SEVERE DRIVING CONDITIONS

The maintenance intervals shown on the preceding pages are for normal operating conditions. If the vehicle is mainly operated under severe driving conditions as shown below, more frequent maintenance must be performed on the following items as shown in the table.

Severe driving conditions

- Repeated short trips of less than 5 miles (8 km).
- Repeated short trips of less than 10 miles (16 km) with outside temperatures remaining below freezing.
- Operating in hot weather in stop-and-go "rush hour" traffic.
- Extensive idling and/or low speed driving for long distances, such as police, taxi or door-to-door delivery use.
- Driving in dusty conditions.
- Driving on rough, muddy, or salt spread roads.
- Towing a trailer, using a camper or a car-top carrier.

Maintenance operation: Inspect = Inspect and correct or replace as necessary.

	•		
Maintenance item	Maintenance operation	Maintenance interval	Reference page
Brake fluid	Replace	Every 10,000 miles (16,000 km) or 12 months	MA-44
Brake pads & rotors	Inspect	Every 5,000 miles (8,000 km) or 6 months	MA-44
Steering gear & linkage, axle & suspension parts	Inspect	Every 5,000 miles (8,000 km) or 6 months	MA-46 MA-46
Propeller shaft (AWD) & drive shaft boots	Inspect	Every 5,000 miles (8,000 km) or 6 months	MA-40 MA-46
Exhaust system	Inspect	Every 5,000 miles (8,000 km) or 6 months	MA-35

NISSAN recommends the use of an energy conserving oil in order to improve fuel economy. Select only engine oils that meet the American Petroleum Institute (API) certification and International Lubrication Standardization and Approval Committee (ILSAC) certification and SAE viscosity standard. These oils have the API certification mark on the front of the container. Oils which do not have the specified quality label should not be used as they could cause engine damage.

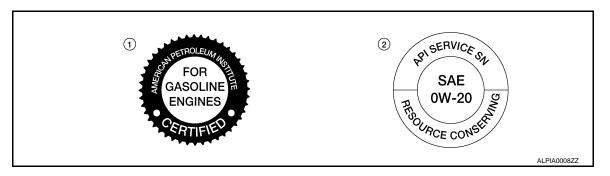

For NISMO RS models

API certification mark 1.

API service symbol

Except for NISMO RS models

Anti-Freeze Coolant Mixture Ratio

INFOID:0000000011463947

The engine cooling system is filled at the factory with a pre-diluted mixture of 50% Genuine NISSAN Long Life Antifreeze/Coolant (blue) and 50% water to provide year-round anti-freeze and coolant protection. The antifreeze solution contains rust and corrosion inhibitors. Additional engine cooling system additives are not necessary.

WARNING:

 Never remove the radiator or coolant reservoir cap when the engine is hot. Wait until the engine and radiator cool down. Serious burns could be caused by high pressure fluid escaping from the radiator.

MA-13 Revision: 2014 October 2015 JUKE

Ν

MA

< PERIODIC MAINTENANCE >

• The radiator is equipped with a pressure type radiator cap. To prevent engine damage, use only a genuine NISSAN radiator cap.

CAUTION:

- When adding or replacing coolant, be sure to use only Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent. Genuine NISSAN Long Life Antifreeze/Coolant (blue) is pre-diluted to provide antifreeze protection to -34°F (-37°C). If additional freeze protection is needed due to weather where you operate your vehicle, add Genuine NISSAN Long Life Antifreeze/Coolant (blue) concentrate following the directions on the container. If an equivalent coolant other than Genuine NISSAN Long Life Antifreeze/Coolant (blue) is used, follow the coolant manufactur's instructions to maintain minimum antifreeze protection to -34°F (-37°C). The use of other types of coolant solutions other than Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent may damage the engine cooling system.
- Mixing any other type of coolant other than Genuine NISSAN Long Life Antifreeze/Coolant (blue), including Genuine NISSAN Long Life Antifreeze/Coolant (green), or the use of non-distilled water will reduce the life expectancy of the factory-fill coolant.

- 2. Drive belt auto-tensioner
- 5. Water pump
- B. Range when new drive belt is installed
- 3. Crankshaft pulley
- 6. Drive belt
- C. Indicator

WARNING:

Perform this step when engine is stopped.

 Check that the indicator (C) (notch on fixed side) of drive belt auto-tensioner is within the possible use range (A) in the figure.

NOTE:

- Check the drive belt auto-tensioner indication when the engine is cold.
- When new drive belt is installed, the indicator (notch on fixed side) should be within the range (B) in the figure.
- Visually check entire drive belt for wear, damage or cracks.
- If the indicator (notch on fixed side) is out of the possible use range or belt is damaged, replace drive belt.

DRIVE BELT : Adjustment

INFOID:0000000011735076

Refer to : EM-138, "Drive Belt".

ENGINE COOLANT

< PERIODIC MAINTENANCE >

ENGINE COOLANT: Inspection

INFOID:0000000011735081

LEVEL

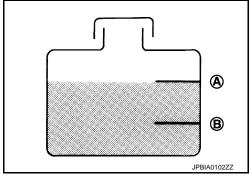

• Check that the reservoir tank engine coolant level is within the "MIN" to "MAX" when the engine is cool.

A : MAX B : MIN

Adjust the engine coolant level if necessary.

CAUTION:

Refill Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent in its quality mixed with water (distilled or demineralized). Refer to MA-11, "Fluids and Lubricants".

LEAKAGE

 To check for leakage, apply pressure to the cooling system with the radiator cap tester (commercial service tool) (A) and the radiator cap tester adapter (commercial service tool) (B).

Testing pressure: Refer to CO-27, "Radiator".

WARNING:

Never remove radiator cap when engine is hot. Serious burns may occur from high-pressure engine coolant escaping from engine cooling system.

CAUTION:

Higher test pressure than specified may cause radiator damage.

NOTE:

In a case that engine coolant decreases, replenish radiator with engine coolant.

• If anything is found, repair or replace damaged parts.

ENGINE COOLANT: Draining

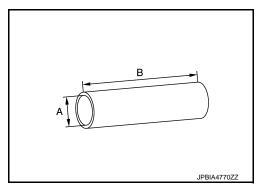

INFOID:0000000011735082

PBIC5121J

WARNING:

- Never remove radiator cap when engine is hot. Serious burns may occur from high-pressure engine coolant escaping from radiator.
- Wrap a thick cloth around the radiator cap. Slowly turn it a quarter of a turn to release built-up pressure. Then turn it all the way.
- Connect drain hose.
 - Use a genera-purpose hose with the dimensions show in the figure.

A : ϕ 8 mm (0.31 in) B : 300 mm (11.81 in)

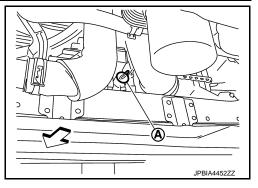

< PERIODIC MAINTENANCE >

2. Open radiator drain plug (A) at the bottom of radiator, and then remove radiator cap.

CAUTION:

Perform this step when engine is cold.

• When draining all of engine coolant in the system, open water drain plugs on cylinder block. Refer to EM-71, "Setting".

- Remove reservoir tank if necessary, and drain engine coolant and clean reservoir tank before installing. Refer to <u>CO-15</u>, "<u>Exploded View</u>".
- 4. Check drained engine coolant for contaminants such as rust, corrosion or discoloration. If contaminated, flush the engine cooling system. Refer to MA-18, "ENGINE COOLANT: Flushing".
- Disconnect drain hose.

ENGINE COOLANT: Refilling

CAUTION:

- Do not reuse O-rings.
 Do not put additive such as waterleak preventive, since it may cause cooling waterway clogging.
- When refilling use Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent in its quality mixed with water (distilled or demineralized). Refer to MA-11, "Fluids and Lubricants".
- Install reservoir tank if removed, and install radiator drain plug.

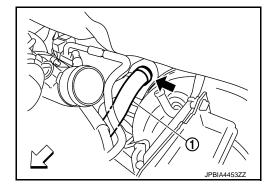

CAUTION:

Be sure to clean drain plug and install with new O-ring.

Radiator drain plug : Refer to CO-15, "Exploded View".

- If water drain plugs on cylinder block are removed, close and tighten them. Refer to EM-71, "Setting".
- 2. Check that each hose clamp has been firmly tightened.
- 3. Remove air duct (suction side). Refer to <a>EM-27, "Exploded View".
- Disconnect vacuum hose break booster side, and removal vacuum tube from clamp. Refer to <u>BR-42</u>. "Exploded View".
- 5. Disconnect heater hose (1) at position (in the figure.

• Enhance heater hose as high as possible.

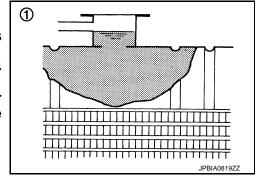

Fill radiator (1) to specified level.

CAUTION:

Never adhere the engine coolant to electronic equipments (alternator etc.).

- Pour coolant slowly of less than 2 ℓ (2-1/8 US qt, 1-3/4 lmp qt) a minute to allow air in system to escape.
- When engine coolant overflows disconnected heater hose, connect heater hose, and continue filling the engine coolant.

< PERIODIC MAINTENANCE >

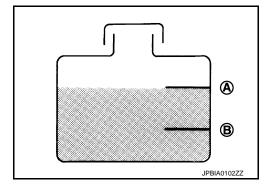

Engine coolant capacity
(With reservoir tank at "MAX" level)
Refer to CO-27, "Periodical Maintenance Specification".

7. Refill reservoir tank to "MAX" level line with engine coolant.

A : MAX B : MIN

Reservoir tank engine coolant capacity (At "MAX" level)

Refer to CO-27, "Periodical Maintenance Specification".

- 8. Install air duct (suction side). Refer to EM-27, "Exploded View".
- 9. Install radiator cap.
- 10. Warm up engine until opening thermostat. Standard for warming-up time is approximately 10 minutes at 3,000 rpm.
 - Check thermostat opening condition by touching radiator hose (lower) to see a flow of warm water.
 CAUTION:

Watch water temperature gauge so as not to overheat engine.

- 11. Stop the engine and cool down to less than approximately 50°C (122°F).
 - Cool down using fan to reduce the time.
 - If necessary, refill radiator up to filler neck with engine coolant.

CAUTION:

Never adhere the engine coolant to electronic equipments (alternator etc.).

- 12. Refill reservoir tank to "MAX" level line with engine coolant.
- 13. Repeat steps 6 through 11 two or more times with radiator cap installed until engine coolant level no longer drops.
- 14. Check cooling system for leakage with engine running.
- 15. Warm up the engine, and check for sound of engine coolant flow while running engine from idle up to 3,000 rpm with heater temperature controller set at several position between "COOL" and "WARM".
 - · Sound may be noticeable at heater unit.
- 16. Repeat step 15 three times.
- 17. If sound is heard, bleed air from cooling system by repeating step 6 through 11 until reservoir tank level no longer drops.

ENGINE COOLANT: Flushing

INFOID:0000000011735084

Install radiator drain plug.

CAUTION:

Be sure to clean drain plug and install with new O-ring.

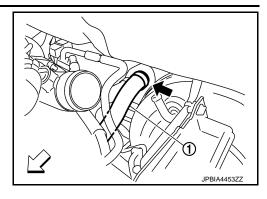

Radiator drain plug : Refer to CO-15, "Exploded View".

- If water drain plugs on cylinder block are removed, close and tighten them. Refer to EM-71, "Setting".
- Remove air duct (suction side), air cleaner cover assembly and air cleaner body assembly. Refer to EM-27, "Exploded View".
- Disconnect vacuum hose break booster side, and remove vacuum tube from clamp. Refer to .

< PERIODIC MAINTENANCE >

4. Disconnect heater hose (1) at position (←) in the figure.

• Enhance heater as high as possible.

- 5. Fill radiator and reservoir tank with water and reinstall radiator cap.
 - When engine coolant over flows disconnected heater hose, connect heater hose, and continue filling the
 engine coolant.
- 6. Connect vacuum hose, and install vacuum tube.
- 7. Install air duct (suction side), air cleaner cover assembly and air cleaner body assembly. Refer to EM-27, <a href="Exploded View".
- 8. Run the engine and warm it up to normal operating temperature.
- 9. Rev the engine two or three times under no-load.
- 10. Stop the engine and wait until it cools down.
- 11. Drain water from the system. Refer to MA-16, "ENGINE COOLANT: Draining".
- 12. Repeat steps 1 through 9 until clear water begins to drain from radiator.

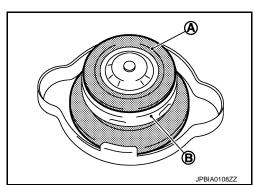

RADIATOR CAP

RADIATOR CAP: Inspection

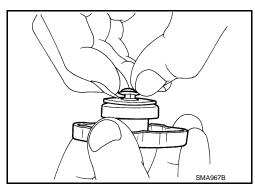

· Check valve seat (A) of radiator cap.

B : Metal plunger

- Check that valve seat is swollen to the extent that the edge of the plunger cannot be seen when watching it vertically from the top.
- Check that valve seat has no soil and damage.

- Pull negative-pressure valve to open it, and that it close completely when released.
- Check that there is no dirt or damage on the valve seat of radiator cap negative-pressure valve.
- Check that there are no unusualness in the opening and closing conditions of negative-pressure valve.

МΔ

< PERIODIC MAINTENANCE >

· Check radiator cap relief pressure.

Standard and Limit : Refer to CO-27, "Radiator".

- When connecting radiator cap to the radiator cap tester (commercial service tool) (A) and the radiator cap tester adapter (commercial service tool) (B), apply engine coolant to the cap seal surface.

· Replace radiator cap if there is an unusualness related to the above three.

CAUTION:

When installing radiator cap, thoroughly wipe out the radiator filler neck to remove any waxy residue or foreign material.

RADIATOR

RADIATOR: Inspection

INFOID:0000000011735086

Check radiator for mud or clogging. If necessary, clean radiator as follows.

CAUTION:

- Be careful not to bend or damage radiator fins.
- When radiator is cleaned without removal, remove all surrounding parts such as radiator cooling fan assembly and horns. Then tape harness and harness connectors to prevent water from entering.
- 1. Apply water by hose to the back side of the radiator core vertically downward.
- 2. Apply water again to all radiator core surfaces once per minute.
- 3. Stop washing if any stains no longer flow out from radiator.
- 4. Blow air into the back side of radiator core vertically downward.
 - Use compressed air lower than 490 kPa (4.9 bar, 5 kg/cm², 71 psi) and keep distance more than 30 cm (11.81 in).
- 5. Blow air again into all the radiator core surfaces once per minute until no water sprays out.

FUEL LINES

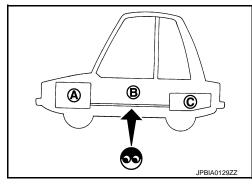

FUEL LINES: Inspection

INFOID:0000000011735505

Inspect fuel lines, fuel filler cap, and fuel tank for improper attachment, leakage, cracks, damage, loose connections, chafing or deterioration.

A : EngineB : Fuel lineC : Fuel tank

If necessary, repair or replace damaged parts.

AIR CLEANER FILTER

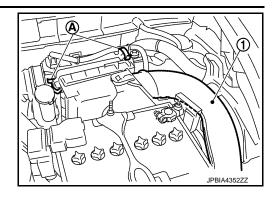

AIR CLEANER FILTER: Removal and Installation

INFOID:0000000011735077

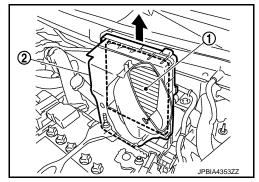

REMOVAL

< PERIODIC MAINTENANCE >

- Remove air duct inlet (upper) (1).
- Unhook the tabs (A) of both ends of the air cleaner cover.

- 3. Remove the air cleaner filter (1) and air cleaner body (2) from the air cleaner case.
- 4. Remove the air cleaner filter from the air cleaner body.

INSTALLATION

Note the following, and install in the reverse order of removal.

- Fixing clips shall be fixed after inserting air cleaner body protrusion to air cleaner case notch hole.
- Make sure that whether air cleaner body has been firmly installed by shaking it.

AIR CLEANER FILTER: Inspection (Viscous Paper Type)

INFOID:0000000011735078

Α

В

Е

Н

L

Ν

INSPECTION AFTER REMOVAL

Examine with eyes that there is no stain, clogging, or damage on air cleaner element.

- Remove dusts (such as dead leafs) on air cleaner element surface and inside cleaner case.
- If clogging or damage is observed, replace the air cleaner element.

CAUTION:

Never clean the viscous paper type air cleaner element by blowing as there is a risk of deterioration of its performance

MAINTENANCE INTERVAL

Refer to MA-7, "Introduction of Periodic Maintenance".

ENGINE OIL

INFOID:0000000011735087

ENGINE OIL: Draining

WARNING:

- Be careful not to get burned, as engine oil may be hot.
- Prolonged and repeated contact with used engine oil may cause skin cancer. Try to avoid direct skin contact with used engine oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.
- 1. Warm up the engine, and check for engine oil leakage from engine components. Refer to LU-9, "Inspec-
- 2. Stop the engine and wait for 10 minutes.
- Loosen oil filler cap.
- 4. Remove drain plug and then drain engine oil.

MA

MA-21 Revision: 2014 October 2015 JUKE

< PERIODIC MAINTENANCE >

ENGINE OIL: Refilling

INFOID:0000000011735088

Install drain plug with new drain plug washer. Refer to <u>EM-45</u>, "<u>Exploded View</u>".

CAUTION:

Be sure to clean drain plug and install with new drain plug washer.

Tightening torque : Refer to EM-45, "Exploded View".

Refill with new engine oil.

Engine oil specification and viscosity: Refer to MA-11, "Fluids and Lubricants".

Engine oil capacity : Refer to <u>LU-19</u>, "Periodical Maintenance Specification".

CAUTION:

- The refill capacity depends on the engine oil temperature and drain time. Use these specifications for reference only.
- Always use oil level gauge to determine the proper amount of engine oil in the engine.
- 3. Warm up engine and check area around drain plug and oil filter for engine oil leakage.
- 4. Stop engine and wait for 10 minutes.
- 5. Check the engine oil level. Refer to LU-9, "Inspection".

OIL FILTER

OIL FILTER: Removal and Installation

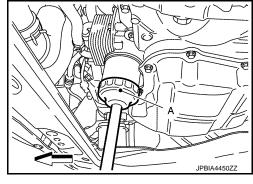

INFOID:0000000011735089

REMOVAL

- 1. Remove engine under cover.
- Using oil filter wrench [SST: KV10115801 (J-38956)] (A), remove oil filter.

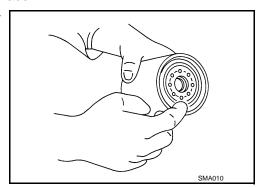

CAUTION:

- Oil filter is provided with relief valve. Use genuine NISSAN oil filter or equivalent.
- Be careful not to get burned when engine and engine oil may be hot.
- When removing, prepare a shop cloth to absorb any engine oil leakage or spillage.
- Completely wipe off any engine oil that adheres to engine and vehicle.

INSTALLATION

- 1. Remove foreign materials adhering to the oil filter installation surface.
- 2. Apply new engine oil to the oil seal contact surface of new oil filter.

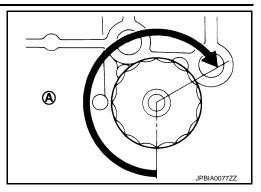

< PERIODIC MAINTENANCE >

3. Screw oil filter manually until it touches the installation surface, then tighten it by 2/3 turn (A). Or tighten to specification.

Oil filter:

(1.8 kg-m, 13 ft-lb)

OIL FILTER: Inspection

Е

F

Н

INSPECTION AFTER INSTALLATION

- 1. Check the engine oil level. Refer to LU-9, "Inspection".
- 2. Start the engine, and check that there is no leakage of engine oil.
- 3. Stop the engine and wait for 10 minutes.
- 4. Check the engine oil level, and adjust the level. Refer to LU-9, "Inspection".

SPARK PLUG

SPARK PLUG: Removal and Installation

INFOID:0000000011735079

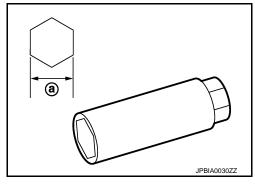

REMOVAL

- Remove engine cover. Refer to <u>EM-26, "Exploded View"</u>.
- 2. Remove air inlet tube assembly. Refer to EM-32, "Exploded View".
- 3. Remove ignition coil.
- 4. Remove spark plug with a spark plug wrench (commercial service tool).

a : 14 mm (0.55 in)

CAUTION:

Never drop or shock spark plug.

INSTALLATION

Install in the reverse order of removal.

SPARK PLUG : Inspection

INFOID:0000000011735080

INSPECTION AFTER REMOVAL

Use the standard type spark plug for normal condition.

Spark plug (Standard type) : Refer to EM-138, "Spark Plug".

CAUTION:

MA

M

Ν

Revision: 2014 October MA-23 2015 JUKE

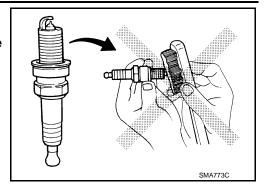

< PERIODIC MAINTENANCE >

- Never drop or shock spark plug.
- Never use a wire brush for cleaning.
- If plug tip is covered with carbon, spark plug cleaner may be used.

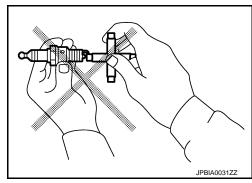

Cleaner air pressure : Less than 588 kPa (6 kg/cm²,

85 psi)

Cleaning time : Less than 20 seconds

- Spark plug gap adjustment is not required between replacement intervals.
- Measure spark plug gap. when it exceeds the limit, replace spark plug even if it is with in the specified replacement mileage. Refer to <u>EM-138</u>, "Spark Plug".

EVAP VAPOR LINES

EVAP VAPOR LINES: Inspection

INFOID:0000000011463966

- Visually inspect EVAP vapor lines for improper attachment and for cracks, damage, loose connections, chafing and deterioration. Refer to <u>EC-575</u>. "Inspection".
- 2. Inspect fuel tank filler cap vacuum relief valve for clogging, sticking, etc. Refer to EC-388, "Component Inspection".

- 2. Drive belt auto tensioner
- 5. Water pump
- B. Range when new drive belt is installed
- Crankshaft pulley
- 6. Drive belt
- C. Indicator

WARNING:

Perform this step when engine is stopped.

• Check that the indicator (C) (notch on fixed side) of drive belt auto-tensioner is within the possible use range (A) in the figure.

NOTE:

- Check the drive belt auto-tensioner indication when the engine is cold.
- When new drive belt is installed, the indicator (notch on fixed side) should be within the range (B) in the figure.
- Visually check entire drive belt for wear, damage or cracks.
- If the indicator (notch on fixed side) is out of the possible use range or belt is damaged, replace drive belt.

ENGINE COOLANT

ENGINE COOLANT: Inspection

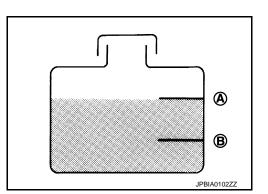

INFOID:0000000011735091

LEVEL

- Check that the reservoir tank engine coolant level is within the "MIN" to "MAX" when the engine is cool.
 - A : MAX B : MIN
- Adjust the engine coolant level if necessary.

CAUTION:

Refill Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent in its quality mixed with water (distilled or demineralized). Refer to MA-11, "Fluids and Lubricants".

LEAKAGE

MA

< PERIODIC MAINTENANCE >

 To check for leakage, apply pressure to the cooling system with the radiator cap tester (commercial service tool) (A) and the radiator cap tester adapter (commercial service tool) (B).

Testing pressure: Refer to CO-27, "Radiator".

WARNING:

Never remove radiator cap when engine is hot. Serious burns may occur from high-pressure engine coolant escaping from engine cooling system.

CAUTION:

Higher test pressure than specified may cause radiator damage.

NOTE:

If a case that engine coolant decreases, replenish radiator with engine coolant.

If anything is found, repair or replace damaged parts.

ENGINE COOLANT: Draining and Filling

INFOID:0000000011735092

CAUTION:

- Never apply additive agent like anti-leakage sealant. Doing so may cause coolant passage clog.
- When refilling use Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent in its quality mixed with water (distilled or demineralized). Refer to MA-11, "Fluids and Lubricants".
- Never dilute using water.

DRAINING

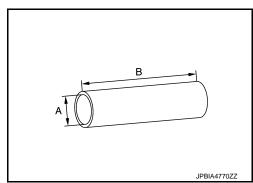

WARNING:

Never open the radiator cap or drain plug when the engine is hot. Hot liquid may spray out, causing serious injury.

CAUTION:

- · Never spill coolant on the drive belt while working.
- Be sure to perform this operation when coolant temperature is cold.
- 1. Turn the ignition switch ON, wait for 10 seconds or more, and then turn it OFF again.
- 2. Connect drain hose.
 - Use a general-purpose hose with the dimensions show in the figure.

A : φ 8 mm (0.31 in)
B : 300 mm (11.81 in)

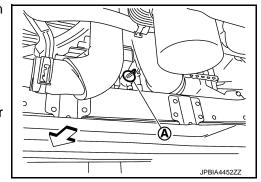

3. Open radiator drain plug (A) at the bottom of radiator, and then remove radiator cap.

CAUTION:

Perform this step when engine is cold.

 When draining all of engine coolant in the system, open water drain plugs on cylinder block. Refer to <u>EM-71</u>, "<u>Setting</u>".

4. Remove reservoir tank if necessary, and drain engine coolant and clean reservoir tank before installing. Refer to CO-15, "Exploded View".

< PERIODIC MAINTENANCE >

- 5. Check drained engine coolant for contaminants such as rust, corrosion or discoloration. If contaminated, flush the engine cooling system. Refer to MA-29, "ENGINE COOLANT: Flushing".
- Disconnect drain hose.

REFILLING

- Install reservoir tank. Refer to <u>CO-45, "Exploded View"</u>.
- 2. Install the radiator drain plug.
 - Replace the drain plug O-ring with a new one.

CAUTION:

Be sure to clean drain plug and install with new O-ring.

Radiator drain plug : Refer to CO-15, "Exploded View".

- If water drain plugs on cylinder block are removed, close and tighten them. Refer to EM-71, "Setting".
- 3. Check that each hose clamp is firmly tightened.
- 4. Remove the cowl top extension. Refer to EXT-30, "Removal and Installation".
- 5. Perform the following procedure for draining the air from piping.

(I) If using CONSULT

1. Turn the ignition switch ON again and use CONSULT "WORK SUPPORT" mode to perform "ENGINE COOLANT BYPASS VALVE". Refer to <u>EC-656</u>, "CONSULT Function".

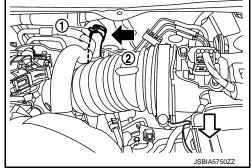

CAUTION:

Never start engine.

NOTE:

CONSULT can be used to open the bypass valve on the multi-way control valve.

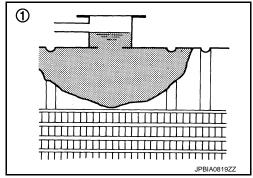

Separate the hose clamp (1) and heater hose (2) at the position shown in the figure (←), and hold the end of the hose at the same height.

 Fill with coolant at a speed of 3 L/min or less (like pouring water with a kettle) until it fills the radiator cap (1) neck.
 If coolant comes out from the heater hose when filling with coolant, connect the heater hose and continue filling with coolant.

CAUTION:

- Filling with coolant at a high speed may allow air to mix with coolant. Be sure to fill with coolant slowly, observing the above speed.
- Never spill coolant on any electrical equipment (such as the alternator) during the operation.

When not using CONSULT

< PERIODIC MAINTENANCE >

Separate the hose clamp (1) and heater hose (2) at the position as shown in the figure (←), and hold the end of the hose at the same height.

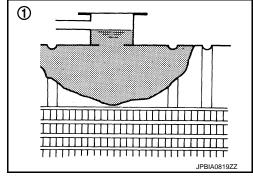

: Vehicle front

- 2. Fill with coolant at a speed of 3 L/min or less (like pouring water with a kettle) until it fills the radiator cap (1) neck.
- If coolant comes out from the heater hose while adding coolant, connect the heater hose and continue adding coolant.

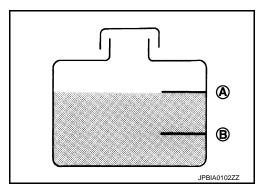

CAUTION:

- Filling with coolant at a high speed may allow air to mix with coolant. Be sure to fill with coolant slowly, observing the above speed.
- Never spill coolant on any electrical equipment (such as the alternator) during the operation.

6. Fill with coolant to "MAX" line of reservoir tank.

A : MAX B : MIN

- 7. Install the cowl top extension. Refer to EXT-30, "Removal and Installation".
- 8. Install the radiator cap.
- 9. Perform the following operation for warming up the engine.

(P) When using CONSULT

- Start the engine, and set the heater control temperature to "FULL HOT".
- 2. Use CONSULT "WORK SUPPORT" mode to perform "ENGINE COOLANT BYPASS VALVE". Refer to EC-656, "CONSULT Function".

NOTE:

CONSULT can be used to open the bypass valve on the multi-way control valve.

- Check that there is no coolant leakage from the drain plug and heater hose connections.

When not using CONSULT

- 1. Start the engine and set the heater control temperature to "FULL HOT".
- 2. Warm up the engine until the bypass valve on the multi-way control valve opens. The warm-up time should be approximately 10 minutes at 3,000 rpm.
- Check that the bypass valve on the multi-way control valve is open by touching the radiator hose (lower) with a hand and checking that warm water is flowing.

CAUTION:

Be careful that coolant does not overheat.

- Check that there is no coolant leakage from the drain plug and heater hose connections.
- 10. Stop the engine.

< PERIODIC MAINTENANCE >

11. When the engine is cold (approximately 50°C or less), remove the radiator cap and check the coolant level. If the level is low, fill with coolant again until it fills the radiator cap neck, and then repeat operation from step 7.

CAUTION:

Never spill coolant on any electrical equipment (such as the alternator) during the operation.

12. When the coolant level stabilizes, fill with coolant up to the "MAX" line of reservoir tank.

CHECK WATER FLOW SOUND

CAUTION:

Prior to check, be sure to close windows, doors, and hood, and turn off radio and other electrical loads.

- 1. Allow the engine to cool (to approximately 50°C or less).
- 2. Set the temperature of the heater control to "FULL HOT".
- Start engine. Perform the following cycle three times. Keep the engine speed at 1,000 rpm for approxi-3. mately 30 seconds and then increase it gradually to 3,000 rpm.
- 4. During the operation described above in step 3, check for water flow sound from heater core.
- 5. If water flow sounds are heard, fill with coolant to the radiator cap neck at a speed of 3 L/min or less (like pouring water with a kettle), and then repeat the operations from step 7 of "Filling Engine Coolant" to step 4 of "How to Check Water Flow Sound".

CAUTION:

- Filling with coolant at a high speed may allow air to mix with coolant. Be sure to fill with coolant slowly, observing the speed specified above.
- Never spill coolant on any electrical equipment (such as the alternator) during the operation.

ENGINE COOLANT: Flushing

Install radiator drain plug.

CAUTION:

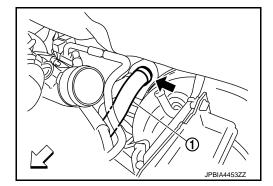

Be sure to clean drain plug and install with new O-ring.

: Refer to CO-15, "Exploded View". Radiator drain plug

- If water drain plugs on cylinder block are removed, close and tighten them. Refer to EM-71, "Setting".
- 2. Remove air duct (suction side), air cleaner cover assembly and air cleaner body assembly. Refer to EM-27, "Exploded View".
- Disconnect vacuum hose break booster side, and remove vacuum tube from clamp.
- Disconnect heater hose (1) at position (in the figure.

: Vehicle front

Enhance heater as high as possible.

- Fill radiator and reservoir tank with water and reinstall radiator cap.
 - When engine coolant overflows disconnected heater hose, connect heater hose, and continue filling the engine coolant.
- 6. Connect vacuum hose, and install vacuum tube.
- 7. Install air duct (suction side), air cleaner cover assembly and air cleaner body assembly. Refer to EM-27, "Exploded View".
- 8. Run the engine and warm it up to normal operating temperature.
- Rev the engine two or three times under no-load.
- 10. Stop the engine and wait until it cools down.
- 11. Drain water from the system. Refer to MA-26, "ENGINE COOLANT: Draining and Filling".

Е

REMOVAL

- 1. Remove the inlet air duct (upper) (1).
- Unhook the tabs (A) of both ends of the air cleaner cover.

- 3. Remove the air cleaner filter (1) and air cleaner body (2) from the air cleaner case.
- 4. Remove the air cleaner filter from the air cleaner body.

INSTALLATION

Note the following, and install in the reverse order of removal.

- Fixing clips shall be fixed after inserting air cleaner body protrusion to air cleaner case notch hole.
- Make sure that whether air cleaner body has been firmly installed by shaking it.

ENGINE OIL

ENGINE OIL: Draining

INFOID:0000000011735508

INFOID:0000000011735509

WARNING:

- Be careful not to get burned, as engine oil may be hot.
- Prolonged and repeated contact with used engine oil may cause skin cancer. Try to avoid direct skin contact with used engine oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.
- Warm up the engine, and check for engine oil leakage from engine components. Refer to LU-9, "Inspec-1.
- 2. Stop the engine and wait for 10 minutes.
- Loosen oil filler cap.
- Remove drain plug and then drain engine oil.

ENGINE OIL : Refilling

Install drain plug with new drain plug washer. Refer to EM-45. "Exploded View".

Be sure to clean drain plug and install with new drain plug washer.

Tightening torque: Refer to EM-45, "Exploded View".

2. Refill with new engine oil.

Engine oil specification and viscosity: Refer to MA-11, "Fluids and Lubricants".

MA-31 Revision: 2014 October 2015 JUKE

Ν

< PERIODIC MAINTENANCE >

Engine oil capacity: Refer to LU-19, "Periodical Maintenance Specification".

CAUTION:

- The refill capacity depends on the engine oil temperature and drain time. Use these specifications for reference only.
- Always use oil level gauge to determine the proper amount of engine oil in the engine.
- 3. Warm up engine and check area around drain plug and oil filter for engine oil leakage.
- 4. Stop engine and wait for 10 minutes.
- 5. Check the engine oil level. Refer to <u>LU-9</u>, "Inspection".

OIL FILTER

OIL FILTER: Removal and Installation

INFOID:0000000011739362

REMOVAL

 Remove oil filter using an oil filter wrench [SST: KV10115801] (A).

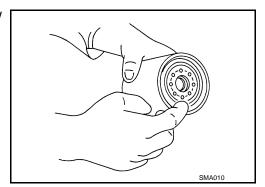

CAUTION:

- · Never get burned when engine or engine oil is heated.
- Use a shop cloth to absorb engine oil leakage when removing.
- Never spill engine oil on the drive belt.
- Completely wipe away any engine oil spilled on the engine and vehicle.

JPBIA4450ZZ

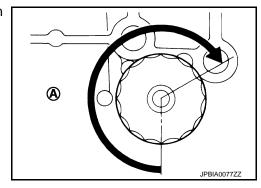

INSTALLATION

- Eliminate foreign materials on the oil filter mounting surface.
- Apply engine oil to the full circumference of the oil seal on a new oil filter.

 Screw in oil filter by hand until it contacts mounting surface on the engine, and then screw in another 2/3 of a turn (A).

Tightening torque is 17.7 N·m (1.8 kg-m).

OIL FILTER: Inspection

INFOID:0000000011739363

INSPECTION AFTER INSTALLATION

1. Use the oil level gauge and check that the oil level is within the standard. Refer to <u>LU-28</u>. "Inspection".

< PERIODIC MAINTENANCE >

- 2. Start the engine. Check for fuel leakage.
- 3. Stop the engine. After stopping it, leave it for 10 minutes or more.
- 4. Check the engine oil level again. Fill with engine oil to adjust oil level if necessary. Refer to <u>LU-28</u>, <u>"Inspection"</u>.

CHECKING CVT FLUID

The fluid level should be checked with the fluid warmed up to 50 to 80°C (122 to 176°F). The fluid level check procedure is as follows:

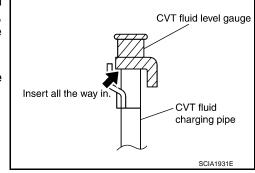

- 1. Check for fluid leakage.
- With the engine warmed up, drive the vehicle in an urban area. When ambient temperature is 20°C (68°F), it takes about 10 minutes for the CVT fluid to warm up to 50 to 80°C (122 to 176°F).
- 3. Park the vehicle on a level surface.
- 4. Apply parking brake firmly.
- 5. With engine at idle, while depressing brake pedal, move shift selector throughout the entire shift range.
- 6. Pull out the CVT fluid level gauge from the CVT fluid charging pipe after pressing the tab on the CVT fluid level gauge to release the lock.

7. Wipe fluid off the CVT fluid level gauge. Insert the CVT fluid level gauge rotating 180° from the originally installed position, then securely push the CVT fluid level gauge until it meets the top end of the CVT fluid charging pipe.
CAUTION:

When wiping away the CVT fluid level gauge, always use lint-free paper, not a cloth rag.

MA

M

Ν

Revision: 2014 October MA-35 2015 JUKE

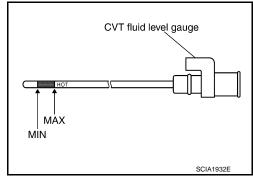

CHASSIS MAINTENANCE

< PERIODIC MAINTENANCE >

8. Place the selector lever in "P" or "N" and check that the fluid level is within the specified range.

CAUTION:

When reinstalling CVT fluid level gauge, insert it into the CVT fluid charging pipe and rotate it to the original installation position until securely locked.

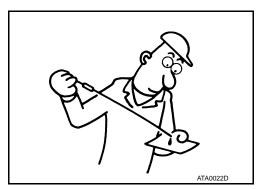

CVT FLUID CONDITION

Check CVT fluid condition.

- If CVT fluid is very dark or smells burned, check operation of CVT. Flush cooling system after repair of CVT.
- If CVT fluid contains frictional material (clutches, brakes, etc.), replace radiator and flush cooler line using cleaning solvent and compressed air after repair of CVT. Refer to <u>TM-220</u>, "Cleaning".

Fluid status	Conceivable cause	Required operation					
Varnished (viscous varnish state)	CVT fluid become degraded due to high temperatures.	Replace the CVT fluid and check the CVT main unit and the vehicle for malfunctions (wire harnesses, cooler pipes, etc.)					
Milky white or cloudy	Water in the fluid	Replace the CVT fluid and check for places where water is getting in.					
Large amount of metal powder mixed in	Unusual wear of sliding parts within CVT	Replace the CVT fluid and check for improper operation of the CVT.					

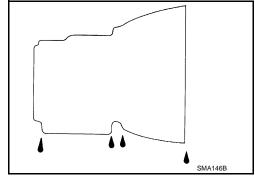

CVT FLUID (RE0F10D)

CVT FLUID (RE0F10D): Inspection

INFOID:0000000011735673

FLUID LEAKAGE

- Check transaxle surrounding area (oil seal and plug etc.) for fluid leakage.

TRANSFER OIL: Refilling

INFOID:0000000011735753

Remove filler plug (1) and gasket. Then fill oil up to mounting hole for the filler plug.

⟨
□: Vehicle front

: Refer to MA-11, "Fluids Oil and viscosity

and Lubricants".

Oil capacity : Refer to DLN-120, "Gen-

eral Specifications".

Carefully fill the oil. (Fill up for approximately 3 minutes.)

- 2. Leave the vehicle for 3 minutes, and check the oil level again.
- 3. Before installing filler plug, set a new gasket. Install filler plug on transfer and tighten to the specified torque. Refer to <u>DLN-116</u>, "Exploded View". **CAUTION:**

Never reuse gasket.

REAR PROPELLER SHAFT

REAR PROPELLER SHAFT: Inspection

INFOID:0000000011735754

APPEARANCE AND NOISE

- Check the propeller shaft tube surface for dents or cracks. If damaged, replace propeller shaft assembly.
- If center bearing is noisy or damaged, replace propeller shaft assembly.

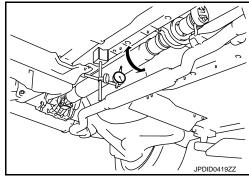

VIBRATION

If vibration is present at high speed, inspect propeller shaft runout first.

With a dial indicator, measure propeller shaft runout at runout measuring points by rotating final drive companion flange with hands.

Propeller shaft runout

: Refer to DLN-128, "Propeller Shaft Runout".

Propeller shaft runout measuring point (Point "△")

⟨
⇒ : Front

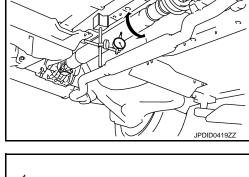

Dimension A: 542 mm (21.34 in)

B: 516.5 mm (20.33 in)

If runout still exceeds specifications, separate propeller shaft at final drive companion flange or transfer companion flange; then change the phase between companion flange and propeller shaft by the one bolt hole at a time and install propeller shaft.

- 3. Check runout again. If runout still exceeds specifications, replace propeller shaft assembly.
- 4. Check the vibration by driving vehicle.

OIL LEAKAGE

Check rear final drive surrounding area (oil seal, drain plug, filler plug, and gear carrier, etc.) for oil leakage.

OIL LEVEL

1. Remove filler plug (1) and check oil level from filler plug mounting hole as shown in the figure.

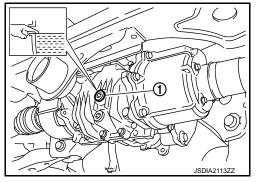

CAUTION:

Never start engine while checking oil level.

2. Set a new gasket on filler plug and install it on final drive assembly. Refer to <u>DLN-157</u>, "Exploded View".

CAUTION:

Never reuse gasket.

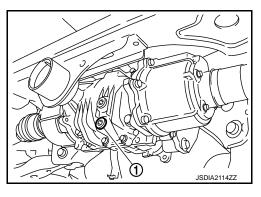

REAR DIFFERENTIAL GEAR OIL: Draining

- 1. Stop engine.
- 2. Remove drain plug (1) and drain gear oil.
- Set a new gasket on drain plug and install it to final drive assembly and tighten to the specified torque. Refer to <u>DLN-157</u>. "Exploded View".

CAUTION:

Never reuse gasket.

REAR DIFFERENTIAL GEAR OIL: Refilling

1. Remove filler plug (1). Fill with new gear oil until oil level reaches the specified level near filler plug mounting hole.

Oil grade and viscosity : Refer to MA-11, "Fluids

and Lubricants".

Oil capacity : Refer to <u>DLN-174, "Gen-</u>

eral Specification".

 After refilling oil, check oil level. Set a new gasket to filler plug, then install it to final drive assembly. Refer to <u>DLN-157</u>, <u>"Exploded View"</u>.

Never reuse gasket.

WHEELS (BONDING WEIGHT TYPE)

WHEELS (BONDING WEIGHT TYPE): Wheel Balance Adjustment

JSDIA2113ZZ

INFOID:0000000011735758

PREPARATION BEFORE ADJUSTMENT

Using releasing agent, remove double-faced adhesive tape from the road wheel. **CAUTION:**

- Be careful not to scratch the road wheel during removal.
- After removing double-faced adhesive tape, wipe clean traces of releasing agent from the road wheel.

JSDIA2113ZZ

Revision: 2014 October MA-41 2015 JUKE

MA

M

Ν

< PERIODIC MAINTENANCE >

ADJUSTMENT

- The details of the adjustment procedure are different for each model of wheel balancer. Therefore, refer to each instruction manual.
- If a tire balance machine has adhesion balance weight mode settings and drive-in weight mode setting, select and adjust a drive-in weight mode suitable for aluminum wheels.
- 1. Set road wheel on tire balance machine using the center hole as a guide. Start the tire balance machine.
- 2. When inner and outer unbalance values are shown on the tire balance machine indicator, multiply outer unbalance value by 5/3 to determine balance weight that should be used. Select the outer balance weight with a value closest to the calculated value above and install to the designated outer position of, or at the designated angle in relation to the road wheel.

CAUTION:

- Never install the inner balance weight before installing the outer balance weight.
- Before installing the balance weight, always to clean the mating surface of the road wheel.
- a. Indicated unbalance value \times 5/3 = balance weight to be installed **Calculation example:**

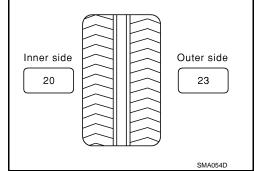

23 g (0.81 oz) \times 5/3 = 38.33 g (1.35 oz) \Rightarrow 40 g (1.41 oz) balance weight (closer to calculated balance weight value)

NOTE:

Note that balance weight value must be closer to the calculated balance weight value.

Example:

 $37.4 \Rightarrow 35 \text{ g } (1.23 \text{ oz})$ $37.5 \Rightarrow 40 \text{ g } (1.41 \text{ oz})$

- b. Installed balance weight in the position.
 - When installing balance weight (1) to road wheels, set it into the grooved area (A) on the inner wall of the road wheel as shown in the figure so that the balance weight center (B) is aligned with the tire balance machine indication position (angle) (C).

CAUTION:

- Always use genuine NISSAN balance weights.
- Balance weights are non-reusable; always replace with new ones.
- Never install three or more sheets of balance weight.

< PERIODIC MAINTENANCE >

If calculated balance weight value exceeds 50 g (1.76 oz), install two balance weight sheets in line with each other as shown in the figure.

CAUTION:

Never install one balance weight sheet on top of another.

- Start the tire balance machine again.
- 4. Install drive-in balance weight on inner side of road wheel in the tire balance machine indication position (angle).

CAUTION:

Never install three or more balance weight.

5. Start the tire balance machine. Check that the inner and outer residual unbalance value is within the allowable unbalance value.

CAUTION:

If either residual unbalance value exceeds limit, repeat installation procedures.

Allowable unbalance value

Dynamic (At flange) : Refer to WT-43, "Road Wheel". Static (At flange) : Refer to WT-43, "Road Wheel".

WHEELS (BONDING WEIGHT TYPE): Tire Rotation

- Follow the maintenance schedule for tire rotation service intervals. Refer to MA-5, "Explanation of General Maintenance".
- · When installing the wheel, tighten wheel nuts to the specified torque. Refer to WT-39, "Exploded View".

CAUTION:

- Never include the T-type spare tire when rotating the tires.
- When installing wheels, tighten them diagonally by dividing the work two to three times in order to prevent the wheels from developing any distortion.
- Be careful not to tighten wheel nut at torque exceeding the criteria.
- Use NISSAN genuine wheel nut.
- Perform the ID registration, after tire rotation. Refer to WT-20, "Work Procedure".

STEERING GEAR AND LINKAGE: Inspection

INFOID:0000000011463992

STEERING GEAR

- Check gear housing and boots for looseness, damage and grease leakage.
- Check connection with steering column for looseness.

STEERING LINKAGE

Check ball joint, dust cover and other component parts for looseness, wear, damage and grease leakage.

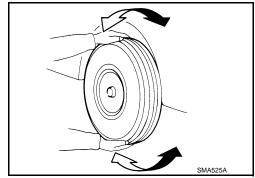

AXLE AND SUSPENSION PARTS

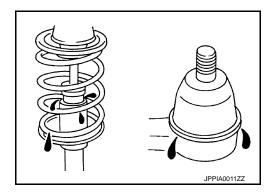

AXLE AND SUSPENSION PARTS: Inspection

INFOID:0000000011463993

Check front and rear axle and suspension parts for excessive play, cracks, wear or other damage.

- Shake each wheel to check for excessive play.
- Check wheel bearings for smooth operation.
- Check axle and suspension nuts and bolts for looseness.
- Check strut (shock absorber) for oil leakage or other damage.
- Check suspension ball joint for grease leakage and ball joint dust cover for cracks or other damage.

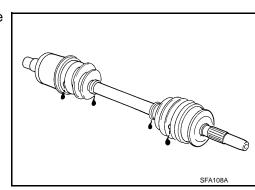

DRIVE SHAFT

DRIVE SHAFT: Inspection

INFOID:0000000011463994

Check boot and drive shaft for cracks, wear, damage and grease leakage.

BODY MAINTENANCE

< PERIODIC MAINTENANCE >

BODY MAINTENANCE Α LOCKS, HINGES AND HOOD LATCH LOCKS, HINGES AND HOOD LATCH: Lubricating INFOID:0000000011463995 В For hood and hood lock illustration. Hood: Refer to <u>DLK-125</u>, "Exploded View". Hood lock: Refer to <u>DLK-155</u>, "Exploded View". For door and door lock illustration. Front door: Refer to DLK-136, "Exploded View". • Front door lock: Refer to DLK-158, "Exploded View". D Rear door: Refer to <u>DLK-141</u>, "<u>Exploded View</u>". Rear door lock: Refer to <u>DLK-162, "Exploded View"</u>. For back door and back door lock illustration. Back door: Refer to DLK-146, "Exploded View". Е Back door lock: Refer to <u>DLK-165</u>, "Exploded View". SEAT BELT, BUCKLES, RETRACTORS, ANCHORS AND ADJUSTERS SEAT BELT, BUCKLES, RETRACTORS, ANCHORS AND ADJUSTERS: Inspection INFOID:0000000011463996 For front seat belt illustration. Refer to SB-4, "Exploded View". For rear seat belt illustration. Refer to SB-10, "Exploded View". **CAUTION:** After any collision, inspect all seat belt assemblies, including retractors and other attached hardwares (I.e. anchor bolt, quide rail set). Nissan recommends to replace all seat belt assemblies in use during a collision, unless not damaged and properly operating after minor collision. Also inspect seat belt assemblies not in use during a collision, and replace if damaged or improperly operating. Seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal collision where the driver and passenger air bags are deployed. If any component of seat belt assembly is questionable, do not repair. Replace as seat belt assembly. If webbing is cut, frayed, or damaged, replace belt assembly. Never oil tongue and buckle. Use a genuine NISSAN seat belt assembly. For details, refer to SB-6, "SEAT BELT RETRACTOR: Inspection", SB-13, "SEAT BELT RETRACTOR: <u>Inspection</u> in SB section. Check anchors for loose mounting Check belts for damage Check retractor for smooth operation Check function of buckles and tongues when buckled and released Ν

ENGINE COOLANT (MR FOR NISMO RS MODELS)

ENGINE COOLANT (MR FOR NISMO RS MODELS): Periodical Maintenance Specification

ENGINE COOLANT CAPACITY (APPROXIMATE)

Unit: ℓ (US qt, Imp qt)

Engine coolant capacity (With reservoir tank at "MAX" level)	M/T models	7.9 (8- 3/8, 7)
Lingilie coolant capacity (with reservoir talik at WAX level)	CVT models	8.1 (8- 1/2, 7-1/8)
Reservoir tank engine coolant capacity (At "MAX" level)		0.6 (5/8, 1/2)

ENGINE COOLANT (MR EXCEPT FOR NISMO RS MODELS)

ENGINE COOLANT (MR EXCEPT FOR NISMO RS MODELS): Periodical Maintenance Specification

ENGINE COOLANT CAPACITY (APPROXIMATE)

Unit: ℓ (US qt, Imp qt)

Engine coolant capacity (With reservoir tank at "MAX" level)	M/T models	8.5 (9, 7-1/2)
Engine coolant capacity (with reservoir tank at wind level)	CVT models	nodels 8.7 (9-2/8, 7-5/8)
Reservoir tank engine coolant capacity (At "MAX" level)		0.6 (5/8, 1/2)

ENGINE OIL (MR FOR NISMO RS MODELS)

ENGINE OIL (MR FOR NISMO RS MODELS): Periodical Maintenance Specification

INFOID:0000000011736838

ENGINE OIL CAPACITY (APPROXIMATE)

Unit: ℓ (US qt, Imp qt)

Drain and refill	With oil filter change	4.5 (4-6/8, 4)
Drain and reini	Without oil filter change	4.3 (4-4/8, 3-6/8)
Dry engine (Overhaul)		5.4 (5-6/8, 4-6/8)
