## PRECAUTIONS

< PRECAUTION >

# PRECAUTION

## PRECAUTIONS

### Precaution for Technicians Using Medical Electric

INFOID:000000007635379

A

#### OPERATION PROHIBITION

##### **WARNING:**

- Parts with strong magnet is used in this vehicle.
- Technicians using a medical electric device such as pacemaker must never perform operation on the vehicle, as magnetic field can affect the device function by approaching to such parts.

B

#### NORMAL CHARGE PRECAUTION

##### **WARNING:**

- If a technician uses a medical electric device such as an implantable cardiac pacemaker or an implantable cardioverter defibrillator, the possible effects on the devices must be checked with the device manufacturer before starting the charge operation.
- As radiated electromagnetic wave generated by on board charger at normal charge operation may effect medical electric devices, a technician using a medical electric device such as implantable cardiac pacemaker or an implantable cardioverter defibrillator must not enter the vehicle compartment (including luggage room) during normal charge operation.

C

#### PRECAUTION AT TELEMATICS SYSTEM OPERATION

##### **WARNING:**

- If a technician uses implantable cardiac pacemaker or implantable cardioverter defibrillator (ICD), avoid the device implanted part from approaching within approximately 220 mm (8.66 in) from interior/exterior antenna.
- The electromagnetic wave of TCU might affect the function of the implantable cardiac pacemaker or the implantable cardioverter defibrillator (ICD), when using the service, etc.
- If a technician uses other medical electric devices than implantable cardiac pacemaker or implantable cardioverter defibrillator (ICD), the electromagnetic wave of TCU might affect the function of the device. The possible effects on the devices must be checked with the device manufacturer before TCU use.

D

#### PRECAUTION AT INTELLIGENT KEY SYSTEM OPERATION

##### **WARNING:**

- If a technician uses implantable cardiac pacemaker or implantable cardioverter defibrillator (ICD), avoid the device implanted part from approaching within approximately 220 mm (8.66 in) from interior/exterior antenna.
- The electromagnetic wave of Intelligent Key might affect the function of the implantable cardiac pacemaker or the implantable cardioverter defibrillator (ICD), at door operation, at each request switch operation, or at engine starting.
- If a technician uses other medical electric devices than implantable cardiac pacemaker or implantable cardioverter defibrillator (ICD), the electromagnetic wave of Intelligent Key might affect the function of the device. The possible effects on the devices must be checked with the device manufacturer before Intelligent Key use.

E

#### Point to Be Checked Before Starting Maintenance Work

INFOID:000000007635380

F

The high voltage system may starts automatically. It is required to check that the timer air conditioner and timer charge (during EVSE connection) are not set before starting maintenance work.

G

##### **NOTE:**

If the timer air conditioner or timer charge (during EVSE connection) is set, the high voltage system starts automatically even when the power switch is in OFF state.

K

L

M

N

O

P

# PRECAUTIONS

< PRECAUTION >

## Precautions for Removing Battery Terminal

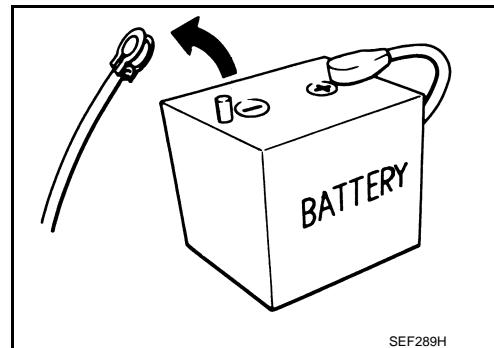

INFOID:0000000007635381

- When removing the 12V battery terminal, turn OFF the power switch and wait at least 5 minutes.

**NOTE:**

ECU may be active for several minutes after the power switch is turned OFF. If the battery terminal is removed before ECU stops, then a DTC detection error or ECU data corruption may occur.

- Always disconnect the battery terminal within 60 minutes after turning OFF the power switch. Even when the power switch is OFF, the 12V battery automatic charge control may automatically start after a lapse of 60 minutes from power switch OFF.
- Disconnect 12V battery terminal according to the following steps.

SEF289H

## WORK PROCEDURE

- Check that EVSE is not connected.

**NOTE:**

If EVSE is connected, the air conditioning system may be automatically activated by the timer A/C function.

- Turn the power switch OFF → ON → OFF. Get out of the vehicle. Close all doors (including back door).

- Check that the charge status indicator lamp does not blink and wait for 5 minutes or more.

**NOTE:**

If the battery is removed within 5 minutes after the power switch is turned OFF, plural DTCs may be detected.

- Remove 12V battery terminal within 60 minutes after turning the power switch OFF → ON → OFF.

**CAUTION:**

- After all doors (including back door) are closed, if a door (including back door) is opened before battery terminals are disconnected, start over from Step 1.
- After turning the power switch OFF, if "Remote A/C" is activated by user operation, stop the air conditioner and start over from Step 1.

**NOTE:**

Once the power switch is turned ON → OFF, the 12V battery automatic charge control does not start for approximately 1 hour.

- For vehicles with the 2-batteries, be sure to connect the main battery and the sub battery before turning ON the power switch.

**NOTE:**

If the power switch is turned ON with any one of the terminals of main battery and sub battery disconnected, then DTC may be detected.

- After installing the 12V battery, always check "Self Diagnosis Result" of all ECUs and erase DTC.

**NOTE:**

The removal of 12V battery may cause a DTC detection error.

## Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000007635382

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.

Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

**WARNING:**

Always observe the following items for preventing accidental activation.

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.

## PRECAUTIONS

### < PRECAUTION >

- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see "SRS AIR BAG".
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

### PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

#### **WARNING:**

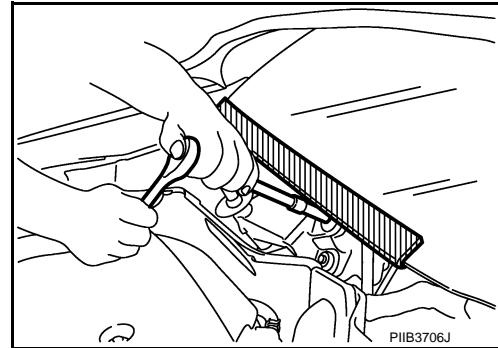

Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the power switch ON, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the power switch OFF, disconnect the 12V battery, and wait at least 3 minutes before performing any service.

### Precaution for Procedure without Cowl Top Cover

INFOID:0000000007635383

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc to prevent damage to windshield.

# COMPONENT PARTS

< SYSTEM DESCRIPTION >

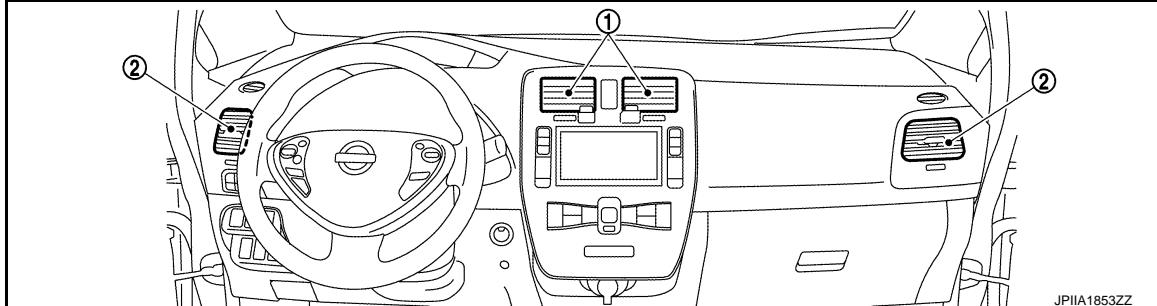

## COMPONENT PARTS

### Outlets and Drafters

INFOID:0000000007635386

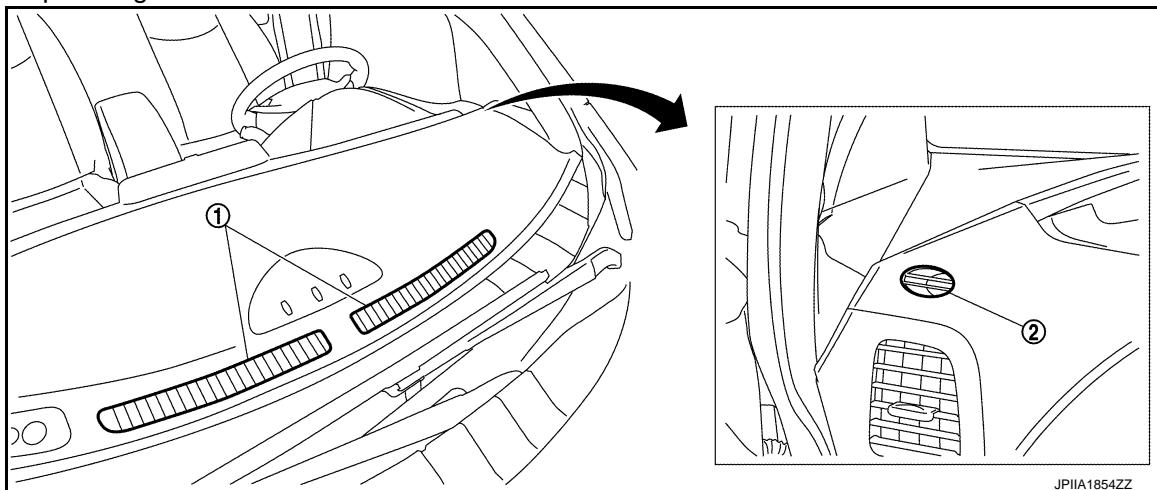

#### VENTILATORS

A grille with shutter is installed on the center ventilators (1) and side ventilators (2). The air direction can be adjusted by opening and closing the grille.

#### DEFROSTERS

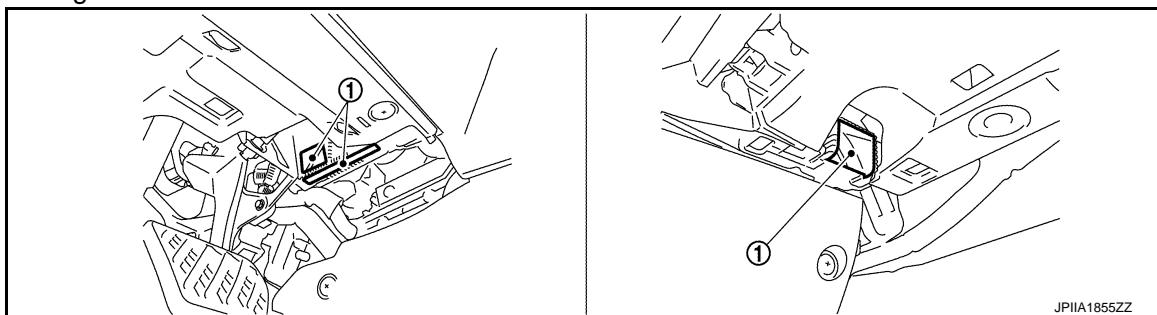

A front defroster (1) is used for defogging the front window and side defrosters (2) are used for defogging the driver and passenger seat door windows.

#### FOOT OUTLET

##### Front

Outlets (1) are installed in order to equalize the distribution of temperatures at the foot area of the front seats during heating.

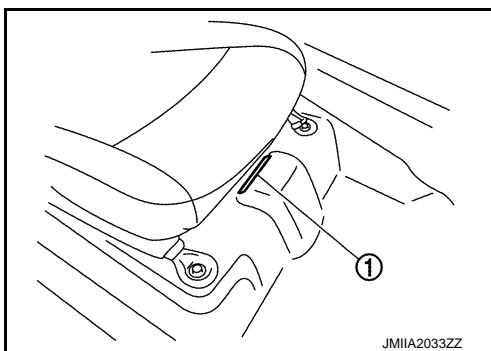

Rear (With rear foot duct)

# COMPONENT PARTS

## < SYSTEM DESCRIPTION >

Outlets (1) are installed in order to equalize the distribution of temperatures at the foot area of the front seats and to improve the feeling of warmth for rear seat occupants during heating.

## DRAFTERS

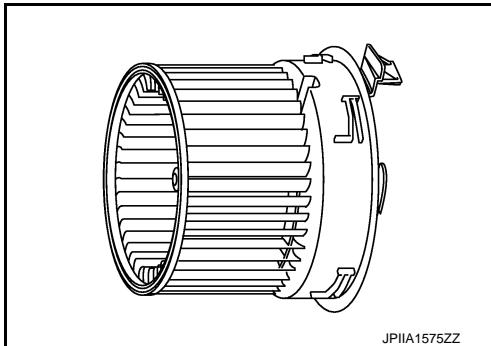

Drafters (1) are installed on the rear of the vehicle body (reverse side of rear bumper).

JPIIA1856ZZ

## Blower Motor

- The blower motor is installed on the right side of the A/C unit.
- It uses a one-touch structure that does not require screws for installation.

## In-cabin Microfilter

### COMPONENT DESCRIPTION

- For improving visibility during work to replace the in-cabin microfilter, a glove box mask (1) is adopted inside the glove box.

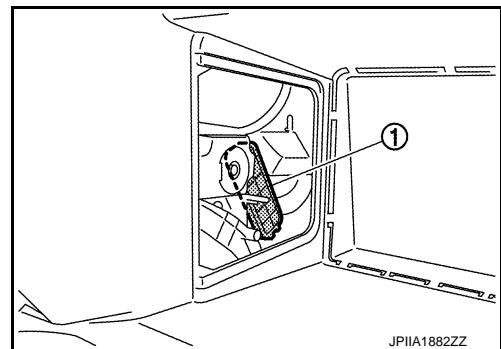

JPIIA1857ZZ

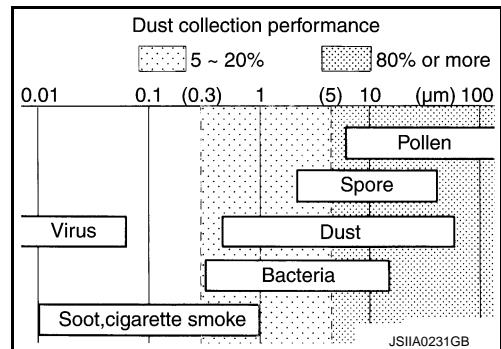

## COMPONENT PARTS

### < SYSTEM DESCRIPTION >

- The A/C unit utilizes a filter cover (1) and in-cabin microfilter.

- The in-cabin microfilter used can remove dust, pollen, and dirt that is approximately 0.3 micrometers in size or larger.

- The in-cabin microfilter is replaced regularly at the following times. However, the filter lifetime may be lower depending on the region of use and how often the A/C is used. If the discharged air flow significantly decreases or glass fogging occur more often when the A/C is used, the filter needs to be replaced.

**Replacement Interval** : Refer to [MA-8, "FOR NORTH AMERICA : Schedule 1"](#) and [MA-9, "FOR NORTH AMERICA : Schedule 2"](#).
