| Spark plug wrench (—) 16 (0.0 | Removing and installing spark plug |
| Belt tension gauge (BT3373-F) | Checking drive belt tension (VQ35DE) |

GENERAL MAINTENANCE

GENERAL MAINTENANCE

Explanation of General Maintenance

General maintenance includes those items which should be checked during the normal day-to-day operation of the vehicle. They are essential if the vehicle is to continue operating properly. The owners can perform checks and inspections themselves or they can have their **INFINITI** dealers do them.

OUTSIDE THE VEHICLE

The maintenance items listed here should be performed from time to time, unless otherwise specified.

| Item | | Reference page |
|-----------------------------|--|---|
| Tires | Check the pressure with a gauge, including the spare, at least once a month and always prior to a long distance trips. Adjust to the specified pressure if necessary. Check carefully for damage, cuts or excessive wear. | — |
| Wheel nuts | When checking the tires, make sure no nuts are missing, and check for any loose nuts. Tighten if necessary. | _ |
| Windshield | Clean the windshield on a regular basis. Check the windshield at least every six months for cracks or other damage. Repair as necessary. | — |
| Tire rotation | Tires should be rotated every 12,000 km (7,500 miles). | <u>MA-35</u> |
| Wheel alignment and balance | If the vehicle pulls to either side while driving on a straight and level road, or if you detect uneven or abnormal tire wear, there may be a need for wheel alignment. If the steering wheel or seat vibrates at normal highway speeds, wheel balancing may be needed. | <u>MA-33,</u> <u>FSU-6</u> (2WD), <u>FSU-24</u> (AWD) |
| Windshield wiper blades | Check for cracks or wear if they do not wipe properly. | _ |
| Doors and engine hood | Check that all doors and the engine hood operate smoothly as well as the trunk lid. Also make sure that all latches lock securely. Lubricate if necessary. Make sure that the secondary latch keeps the hood from opening when the pri- mary latch is released. When driving in areas using road salt or other corrosive materials, check lubri- cation frequently. | <u>MA-38</u> |
| Lamps | Make sure that the headlamps, stop lamps, tail lamps, turn signal lamps, and other lamps are all operating properly and installed securely. Also check head-lamp aim. Clean the headlamps on a regular basis. | _ |

PFP:00000

GENERAL MAINTENANCE

INSIDE THE VEHICLE

The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, cleaning the A vehicle, etc.

| Item | | Reference page |
|---|--|--------------------|
| Warning lamps and chimes | Make sure that all warning lamps and chimes are operating properly. | _ |
| Windshield wiper and washer | Check that the wipers and washer operate properly and that the wipers do not streak. | _ |
| Windshield defroster | Check that the air comes out of the defroster outlets properly and in sufficient quantity when operating the heater or air conditioner. | _ |
| Steering wheel | Check that it has the specified play. Be sure to check for changes in the steer- ing condition, such as excessive play, hard steering or strange noises. Free play: Less than 35 mm (1.38 in) | _ |
| Seats | Check seat position controls such as seat adjusters, seatback recliner, etc. to make sure they operate smoothly and that all latches lock securely in every position. Check that the head restrains move up and down smoothly and that the locks (if equipped) hold securely in all latched positions. Check that the latches lock securely for folding-down rear seatbacks. | _ |
| Seat belts | Check that all parts of the seat belt system (e.g. buckles, anchors, adjusters and retractors) operate properly and smoothly, and are installed securely. Check the belt webbing for cuts, fraying, wear or damage. | <u>MA-39</u> |
| Accelerator pedal | Check the pedal for smooth operation and make sure the pedal does not catch or require uneven effort. Keep the floor mats away from the pedal. | — |
| Brakes | Check that the brake does not pull the vehicle to one side when applied. | — |
| Brake pedal and booster | Check the pedal for smooth operation and make sure it has the proper dis- tance under it when depressed fully. Check the brake booster function. Be sure to keep the floor mats away from the pedal. | <u>BR-6, BR-17</u> |
| Parking brake | Check that the pedal has the proper travel and make sure that the vehicle is held securely on a fairly steep hill when only the parking brake is applied. | <u>PB-3</u> |
| Automatic transmis- sion "Park" mecha- nism | Check that the lock release button on the selector lever operates properly and smoothly. On a fairly steep hill check that the vehicle is held securely with the selector lever in the P (Park) position without applying any brakes. | _ |

UNDER THE HOOD AND VEHICLE

The maintenance items listed here should be checked periodically (e.g. each time you check the engine oil or refuel).

Item Reference page Windshield washer Check that there is adequate fluid in the tank. MA fluid Engine coolant level Check the coolant level when the engine is cold. MA-15, MA-22 Radiator and hoses Check the front of the radiator and clean off any dirt, insects, leaves, etc., that Μ may have accumulated. Make sure the hoses have no cracks, deformation, deterioration or loose connections. Brake fluid level Make sure that the brake fluid level is between the "MAX" and "MIN" lines on <u>MA-35</u> the reservoir. Battery Check the fluid level in each cell. It should be between the "MAX" and "MIN" lines. Vehicles operated in high temperatures or under severe conditions <u>SC-4</u> require frequent checks of the battery fluid level. **Engine drive belts** Make sure that no belt is frayed, worn, cracked or oily. MA-14, MA-22 **Engine oil level** Check the level on the oil level gauge after parking the vehicle on a level spot MA-18, MA-25 and turning off the engine. Power steering fluid Check the level on the dipstick with the engine off. Check the lines for improper MA-37 level and lines attachment, leaks, cracks, etc. Make sure there are no loose supports, cracks or holes. If the sound of the Exhaust system exhaust seems unusual or there is a smell of exhaust fumes, immediately <u>MA-29</u> locate the trouble and correct it.

Κ

GENERAL MAINTENANCE

| Item | Item | | | | | | |
|-------------|---|---|--|--|--|--|--|
| Underbody | The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these sub- stances, otherwise rust will form on the floor pan, frame, fuel lines and around the exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, being careful to clean those areas where mud and dirt can easily accumulate. | _ | | | | | |
| Fluid leaks | Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks or gasoline fumes are evident, check for the cause and correct it immediately. | _ | | | | | |

PERIODIC MAINTENANCE

Introduction of Periodic Maintenance

Two different maintenance schedules are provided, and should be used, depending upon the conditions in which the vehicle is mainly operated. After 60,000 miles (96,000 km) or 48 months, continue the periodic maintenance at the same mileage/time intervals.

| | Follow Periodic Maintenance Schedule 1 if the driving habits frequently include one or more of the following driving conditions: | Emission Control Sys- tem Maintenance | | С |
|------------|--|--|--------------|---|
| | Repeated short trips of less than 5 miles (8 km). | | MAO | 0 |
| | • Repeated short trips of less than 10 miles (16 km) with outside temperatures remaining below freezing. | | <u>MA-8</u> | D |
| Schedule 1 | Operating in hot weather in stop-and-go "rush hour" traffic. | | | D |
| | • Extensive idling and/or low speed driving for long distances, such as police, taxi or door-to-door delivery use. | Chassis and Body Maintenance | | E |
| | Driving in dusty conditions. | | <u>MA-9</u> | |
| | Driving on rough, muddy, or salt spread roads. | | | |
| | Towing a trailer, using a camper or a car-top carrier. | | | F |
| Schedule 2 | Follow Periodic Maintenance Schedule 2 if none of driving conditions shown in Schedule 1 apply to the driving habits. | Emission Control Sys- tem Maintenance | <u>MA-10</u> | - |
| Schedule 2 | | Chassis and Body Maintenance | <u>MA-10</u> | G |

| Intake & exhaust valve clear- ance* | NOTE (5) | | | | | | | | | <u>EM-94,</u> EM-224 |

NOTE:

(1) After 60,000 miles (96,000 km) or 48 months, inspect every 15,000 miles (24,000 km) or 12 months. Replace the drive belts if found damaged or if the auto belt tensioner reading (only for VK45DE engine) reaches the maximum limit.

(2) If operating mainly in dusty conditions, more frequent maintenance may be required.

(3) Maintenance-free item. For service procedures, refer to FL section.

(4) After 60,000 miles (96,000 km) or 48 months, replace every 30,000 miles (48,000 km) or 24 months.

(5) If valve noise increases, inspect valve clearance.

* Maintenance items and intervals with "*" are recommended by INFINITI for reliable vehicle operation. The owner need not perform such maintenance in order to maintain the emission warranty or manufacturer recall liability. Other maintenance items and intervals are required.

*1: For further details, see "Engine Oil Recommendation".

*2: Using automatic transmission fluid other than genuine NISSAN Matic J ATF will cause deterioration in driveability and automatic transmission durability, and may damage the automatic transmission, which is not covered by the INFINITI new vehicle limited warranty.

*3: For hot climates, viscosity SAE 90 is suitable for ambient temperatures above 0°C (32°F).

*4: Canada NISSAN Automatic Transmission Fluid or DEXRONTM VI type ATF may also be used.

*5: Available in mainland U.S.A. through your INFINITI dealer.

RECOMMENDED FLUIDS AND LUBRICANTS

Engine Oil Recommendation

A NISSAN recommends the use of an energy conserving oil in order to improve fuel economy. Select only engine oils that meet the American Petroleum Institute (API) certification and International Lubricant Standardization and Approval Committee (ILSAC) certification and SAE viscosity standard. These oils have the API certification mark on the front of the container. Oils which do not have the specified quality label should not be used as they could cause engine damage.

1. API certification mark

2. API service symbol

Anti-Freeze Coolant Mixture Ratio

The engine cooling system is filled at the factory with a high-quality, year-round, anti-freeze coolant solution. The anti-freeze solution contains rust and corrosion inhibitors. Therefore, additional cooling system additives are not necessary.

CAUTION:

When adding or replacing coolant, be sure to use only genuine NISSAN Long Life Antifreeze/ Coolant or equivalent with the proper mixture ratio of 50% anti-freeze and 50% demineralized water/distilled water.

Other types of coolant solutions may damage your cooling system.

| Outside temperature dow | n to | Anti-freeze | Demineralized water or |
|----------------------------|------|-------------|---------------------------|
| °C °F | | | distilled water |
| -35 -30 | C | 50% | 50% |

ENGINE MAINTENANCE (VQ35DE ENGINE)

Checking Drive Belts

WARNING:

Be sure to perform when engine is stopped.

- 1. Inspect belts for cracks, fraying, wear and oil. If necessary, replace.
- Inspect drive belt deflection or tension at a point on belt midway between pulleys.
 - 1 : Power steering oil pump
 - 2 : Alternator
 - 3 : Idler pulley 2
 - 4 : Crankshaft pulley
 - 5 : Idler pulley 3
 - 6 : A/C compressor
 - 7 : Idler pulley 1
 - A : With idler pulley 1
 - B : Without idler pulley 1
 - Inspection should be done only when engine is cold, or over 30 minutes after engine is stopped.
 - Measure the belt tension with belt tension gauge (Commercial service tool: BT3373-F or equivalent) at points marked ▼ shown in the figure.
 - When measuring the deflection, apply 98 N (10 kg, 22 lb) at the ▼ marked point.
 - Adjust if the belt deflection exceeds the limit or if the belt tension is not within specifications.

- When checking the belt deflection or the tension immediately after installation, first adjust it to the specified value. Then, after turning crankshaft two turns or more, re-adjust to the specified value to avoid variation in deflection between pulleys.
- Tighten idler pulley lock nut by hand and measure the deflection or the tension without looseness.

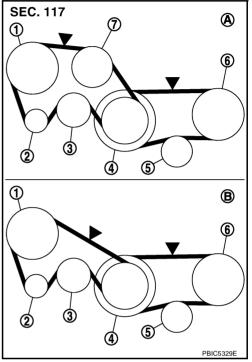

| | | Deflection adjustment | | Unit: mm (in) | Tension adjustment* | | Unit: N (kg, lb) | |
|-------------------------------|-----------------------------|-----------------------|-------------------------|------------------------------|---------------------|--|--------------------------------------|--|
| Items | | ι | Jsed belt | New belt | Us | New belt | | |
| | | Limit | After adjustment | New Delt | Limit | After adjustment | | |
| Alternator and power steering | With idler pulley 1 | 7 (0.28) | 4 - 5 (0.16 - 0.20) | 3.5 - 4.5 (0.138 - 0.177) | 294 (30, 66) | 730 - 818 (74.5 - 83.4, | 838 - 926 (85.5 - 94.5, | |
| oil pump belt | Without idler pul- ley 1 | 12 (0.47) | 7 - 8 (0.28 - 0.31) | 6 - 7 (0.24 - 0.28) | 294 (30, 00) | 164 - 184) | 188 - 208) | |
| A/C compressor | rbelt | 12 (0.47) | 9 - 10 (0.35 - 0.39) | 8 - 9 (0.31 - 0.35) | 196 (20, 44) | 348 - 436 (35.5 - 44.5, 78 - 98) | 470 - 559 (48 - 57, 106 - 126) | |
| Applied pushing | force | | 98 N (10 kg, 22 | lb) | | | | |

Belt Deflection and Tension

*: If belt tension gauge cannot be installed at check points shown, check drive belt tension at different location on belt.

Tension Adjustment

| Portion | Belt tightening method for adjustment |
|---|---------------------------------------|
| Alternator and power steering oil pump belt | Adjusting bolt on idler pulley |
| A/C compressor belt | Adjusting bolt on idler pulley |

NLS0009Z

PFP:10001

NLS0009Y

CAUTION:

- When belt is replaced with a new one, adjust it to value for "New belt" to accommodate for insuffi-А cient adaptability with pulley grooves.
- When deflection or tension of belt being used exceeds "Limit", adjust it to value for "After adjustment".
- When checking belt deflection or tension immediately after installation, first adjust it to the specified value. Then, after turning crankshaft two turns or more, re-adjust to the specified value to avoid variation in deflection between pulleys.
- When installing belt, make sure that it is correctly engaged with pulley grooves.
- Keep engine oil, working fluid and engine coolant away from belt and pulley grooves.
- Do not twist or bend belt excessively.

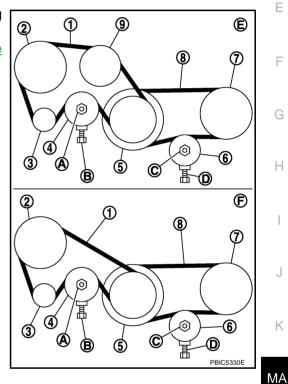

ALTERNATOR AND POWER STEERING OIL PUMP BELT

- Remove front engine undercover with power tool. 1
- 2. Loosen idler pulley lock nut (A) and adjust tension by turning adjusting bolt (B).
 - For the specified belt tension, refer to MA-14, "Checking Drive Belts" .
 - 1 : Alternator and power steering oil pump belt
 - 2 : Power steering oil pump
 - 3 : Alternator
 - 4 : Idler pulley 2
 - 5 : Crankshaft pulley
 - 6 : Idler pulley 3
 - 7 : A/C compressor
 - 8 : A/C compressor belt
 - 9 : Idler pulley 1
 - F : With idler pulley 1
- Tighten nut (A).

O: 34.8 N⋅m (3.5 kg-m, 26 ft-lb)

- F : Without idler pulley 2
- 3.

A/C COMPRESSOR BELT

- Remove front engine undercover with power tool. 1.
- 2. Loosen idler pulley lock nut (C) and adjust tension by turning adjusting bolt (D).
 - For the specified belt tension, refer to MA-14, "Checking Drive Belts".
- 3. Tighten nut (C).

O: 34.8 N·m (3.5 kg-m, 26 ft-lb)

Changing Engine Coolant

WARNING:

- To avoid being scalded, do not change engine coolant when the engine is hot.
- Wrap a thick cloth around radiator cap and carefully remove radiator cap. First, turn radiator cap a quarter of a turn to release built-up pressure. Then turn radiator cap all the way.
- Be careful not to allow engine coolant to contact drive belts.

DRAINING ENGINE COOLANT

- 1. Remove engine room cover (RH and LH). Refer to EM-15, "ENGINE ROOM COVER".
- 2. Remove air duct (inlet). Refer to EM-19, "AIR CLEANER AND AIR DUCT" .
- 3. Open radiator drain plug at the bottom of radiator, and then remove radiator cap.

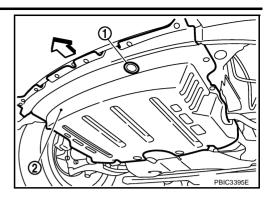

MA-15

Μ

В

D

- 1 : Radiator drain plug hole
- 2 : Front engine under cover

When draining all of engine coolant in the system, open water drain plugs on cylinder block. Refer to <u>EM-125, "DISASSEMBLY"</u>.

- 4. Remove reservoir tank as necessary, and drain engine coolant and clean reservoir tank before installing.
- Check drained engine coolant for contaminants such as rust, corrosion or discoloration. If contaminated, flush the engine cooling system. Refer to <u>CO-13, "FLUSHING COOLING SYSTEM"</u>.

REFILLING ENGINE COOLANT

- 1. Install reservoir tank if removed, and radiator drain plug.
 - CAUTION:

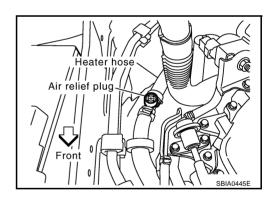

Be sure to clean drain plug and install with new O-ring.

Radiator drain plug:

(: 1.2 N·m (0.12 kg-m, 11 in-lb)

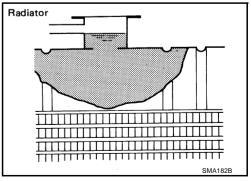

If water drain plugs on cylinder block are removed, close and tighten them. Refer to <u>EM-129,</u> <u>"ASSEMBLY"</u>.

- 2. Make sure that each hose clamp has been firmly tightened.
- 3. Remove air relief plug on heater hose.

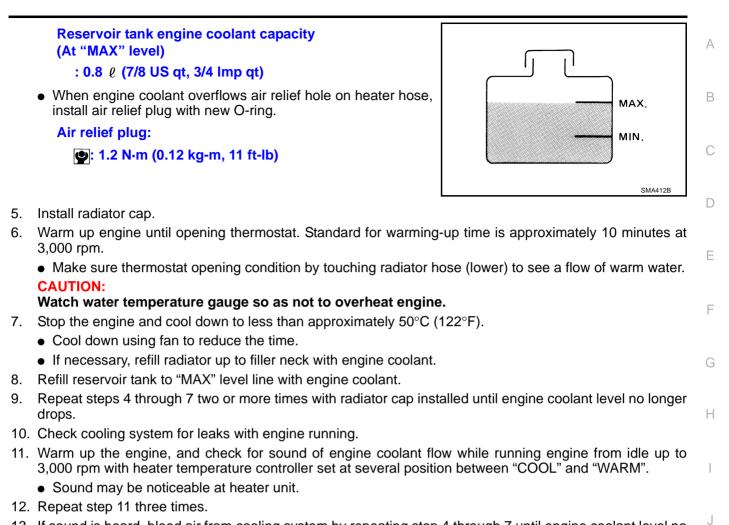

- 4. Fill radiator, and reservoir tank if removed, to specified level.
 - Pour engine coolant through engine coolant filler neck slowly of less than 2 $\ell\,$ (2-1/8 US qt, 1-3/4 Imp qt) a minute to allow air in system to escape.
 - Use genuine NISSAN Long Life Antifreeze/Coolant or equivalent mixed with water (distilled or demineralized). Refer to <u>MA-12</u>, <u>"RECOMMENDED FLUIDS AND LUBRI-CANTS"</u>.

Engine coolant capacity (With reservoir tank at "MAX" level) : Approximately 8.9 ℓ (9-3/8 US qt, 7-7/8 Imp qt)

ENGINE MAINTENANCE (VQ35DE ENGINE)

 If sound is heard, bleed air from cooling system by repeating step 4 through 7 until engine coolant level no longer drops.

FLUSHING COOLING SYSTEM

1. Install reservoir tank if removed, and radiator drain plug.

CAUTION:

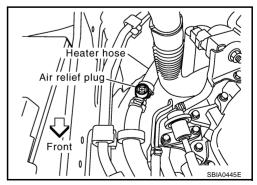

Be sure to clean drain plug and install with new O-ring.

Radiator drain plug:

P: 1.2 N·m (0.12 kg-m, 11 in-lb)

If water drain plugs on cylinder block are removed, close and tighten them. Refer to <u>EM-129</u>, <u>"ASSEMBLY"</u>.

2. Remove air relief plug on heater hose.

3. Fill radiator with water until water spills from the air relief hole, then close air relief plug. Fill radiator and reservoir tank with water and reinstall radiator cap.

Κ

MA

Μ

Air relief plug:

•: 1.2 N·m (0.12 kg-m, 11 ft-lb)

- 4. Run the engine and warm it up to normal operating temperature.
- 5. Rev the engine two or three times under no-load.
- 6. Stop the engine and wait until it cools down.
- 7. Drain water from the system. Refer to CO-11, "DRAINING ENGINE COOLANT" .
- 8. Repeat steps 1 through 7 until clear water begins to drain from radiator.

Checking Fuel Lines

Inspect fuel lines, filler cap and tank for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration. If necessary, repair or replace damaged parts.

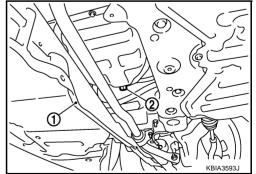

Changing Air Cleaner Filter VISCOUS PAPER TYPE

The viscous paper type filter does not need cleaning between replacement intervals. Refer to <u>MA-7</u>, <u>"PERIODIC MAINTENANCE"</u>.

Changing Engine Oil

WARNING:

- Be careful not to burn yourself, as engine oil may be hot.
- Prolonged and repeated contact with used engine oil may cause skin cancer; try to avoid direct skin contact with used engine oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.
- 1. Warm up the engine, and check for engine oil leakage from engine components. Refer to <u>LU-7, "ENGINE</u> <u>OIL LEAKAGE"</u>.
- 2. Stop the engine and wait for 10 minutes.
- 3. Loosen oil filler cap.
- 4. Remove mounting bolts, and then pull down the rear of front engine under cover (1) and secure it using clip.
- 5. Remove drain plug (2) and then drain engine oil.

Engine

Fuel line

6. Install drain plug with new washer. Refer to <u>EM-31, "OIL PAN AND OIL STRAINER"</u>. CAUTION:

Be sure to clean drain plug and install with new washer.

Oil pan drain plug:

^O: 34.3 N·m (3.5 kg-m, 25 ft-lb)

7. Refill with new engine oil.

SMA803A

Fuel tank

NI S0007K

NLS0007L

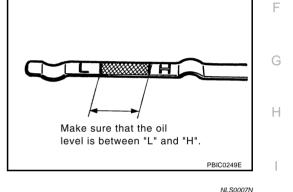

Engine oil specification and viscosity: Refer to <u>MA-12, "RECOMMENDED FLUIDS AND LUBRICANTS"</u>.

Engine oil capacity (Approximate):

| | | Unit: ℓ (US qt, Imp qt) | D |
|-----------------------|---------------------------|------------------------------|---|
| Drain and refill | With oil filter change | 4.7 (5, 4-1/8) | D |
| Drain and renii | Without oil filter change | 4.4 (4-5/8, 3-7/8) | |
| Dry engine (Overhaul) | I | 5.4 (5-3/4, 4-3/4) | С |

CAUTION:

- When filling engine oil, do not pull out oil level gauge.
- The refill capacity depends on the engine oil temperature and drain time. Use these specifications for reference only.
- Always use oil level gauge to determine the proper amount of engine oil in engine.
- 8. Warm up the engine and check area around drain plug and oil filter for engine oil leakage.
- 9. Stop the engine and wait for 10 minutes.
- 10. Check the engine oil level.

Changing Oil Filter REMOVAL

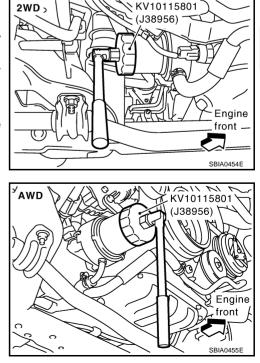

WARNING:

Be careful not to get burned when the engine and engine oil may be hot.

- 1. Remove front engine undercover with power tool.
- 2. Using oil filter wrench [SST], remove oil filter.

CAUTION:

- Oil filter is provided with relief valve. Use genuine NIS-SAN engine oil filter or equivalent.
- When removing, prepare a shop cloth to absorb any engine oil leakage or spillage.
- Do not allow engine oil to adhere to drive belts.
- Completely wipe off any engine oil that adheres to engine and vehicle.

K

MA

Μ

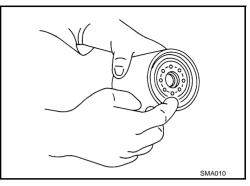

А

D

F

INSTALLATION

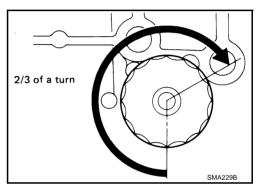

- 1. Remove foreign materials adhering to oil filter installation surface.
- 2. Apply engine oil to the oil seal contact surface of new oil filter.

3. Screw oil filter manually until it touches the installation surface, then tighten it by 2/3 turn. Or tighten to the specification.

Oil filter:

^O: 17.7 N·m (1.8 kg-m, 13 ft-lb)

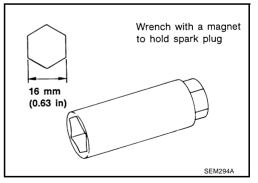

INSPECTION AFTER INSTALLATION

- 1. Check the engine oil level. Refer to MA-18, "Changing Engine Oil" .
- 2. Start the engine, and check there is no leak of engine oil.
- 3. Stop the engine and wait for 10 minutes.
- 4. Check the engine oil level, and adjust the level. Refer to MA-18, "Changing Engine Oil" .

Changing Spark Plugs (Platinum-Tipped Type) REMOVAL

- 1. Remove engine cover with power tool. Refer to EM-21, "INTAKE MANIFOLD COLLECTOR" .
- 2. Remove ignition coil. Refer to EM-44, "IGNITION COIL" .
- 3. Remove spark plug with a spark plug wrench (commercial service tool).

NLS00070

INSPECTION AFTER REMOVAL

Use the standard type spark plug for normal condition.

The hot type spark plug is suitable when fouling occurs with the standard type spark plug under conditions such as:

- Frequent engine starts
- Low ambient temperatures

The cold type spark plug is suitable when spark knock occurs with the standard type spark plug under conditions such as:

- Extended highway driving
- Frequent high engine revolution

| Make | NGK | |
|---------------|-----------|---|
| Standard type | PLFR5A-11 | |
| Hot type | PLFR4A-11 | E |
| Cold type | PLFR6A-11 | |

Gap (Nominal) : 1.1 mm (0.043 in)

CAUTION:

- Do not drop or shock spark plug.
- Do not use a wire brush for cleaning.
- If plug tip is covered with carbon, spark plug cleaner may be used.

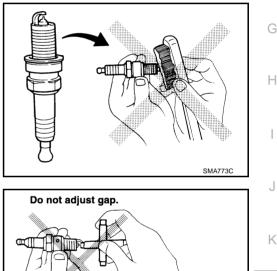

Cleaner air pressure:

Less than 588 kPa (6 kg/cm², 85 psi)

Cleaning time:

Less than 20 seconds

• Checking and adjusting plug gap is not required between change intervals.

INSTALLATION

Install in the reverse order of removal.

O: 24.5 N·m (2.5 kg-m, 18 ft-lb)

Checking EVAP Vapor Lines

SMA806CA

А

В

F

MA

Μ

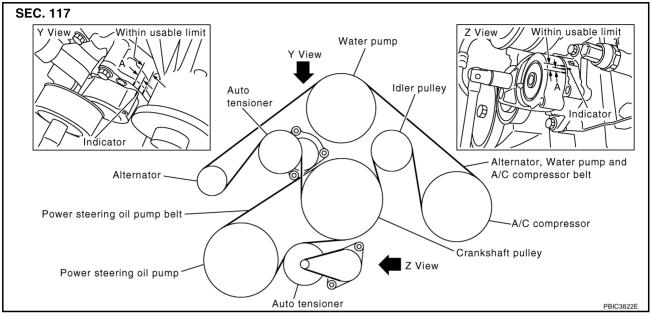

- 1. Visually inspect EVAP vapor lines for improper attachment and for cracks, damage, loose connections, chafing and deterioration.
- 2. Inspect fuel tank filler cap vacuum relief valve for clogging, sticking, etc. **Refer to <u>EC-39</u>**, "EVAPORATIVE EMISSION SYSTEM".

ENGINE MAINTENANCE (VK45DE ENGINE)

Checking Drive Belts

PFP:10001

NLS0007Q

WARNING:

Be sure to perform when the engine is stopped.

- Remove air duct (inlet) when inspecting drive belt for alternator, water pump and A/C compressor.
- Remove front engine undercover with power tool when inspecting power steering oil pump belt.
- Make sure that indicator (single line notch) of each auto tensioner is within the allowable working range (between three line notches).

NOTE:

- Check auto tensioner indication when engine is cold.
- When new drive belt is installed, the range should be "A".
- The indicator notch is located on the moving side of the tensioner for alternator, water pump and A/C compressor belt, while it is found on the fixed side for power steering oil pump belt.
- Visually check entire belt for wear, damage or cracks.
- If the indicator is out of allowable working range or belt is damaged, replace belt.

Tension Adjustment

Belt tensioning is not necessary, as it is automatically adjusted by auto tensioner.

Changing Engine Coolant

WARNING:

- To avoid being scalded, do not change engine coolant when engine is hot.
- Wrap a thick cloth around radiator cap and carefully remove radiator cap. First, turn radiator cap a quarter of a turn to release built-up pressure. Then turn radiator cap all the way.
- Be careful not to allow engine coolant to contact drive belts.

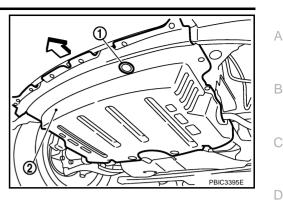

DRAINING ENGINE COOLANT

- 1. Remove engine room cover (RH and LH) Refer to EM-173, "ENGINE ROOM COVER" .
- 2. Remove engine cover with power tool. Refer to EM-179, "INTAKE MANIFOLD" .
- 3. Open radiator drain plug at the bottom of radiator, and then remove radiator cap.

NLS0007R

NI \$0007\$

- 2 : Front engine undercover

F

F

Н

When draining all of engine coolant in the system, open water drain plugs on cylinder block. Refer to <u>EM-253, "DISASSEMBLY"</u>.

- 4. Remove reservoir tank as necessary, and drain engine coolant and clean reservoir tank before installing.
- Check drained engine coolant for contaminants such as rust, corrosion or discoloration. If contaminated, flush the engine cooling system. Refer to <u>MA-24, "FLUSHING COOLING SYSTEM"</u>.

REFILLING ENGINE COOLANT

1. Install reservoir tank if removed, and radiator drain plug.

CAUTION:

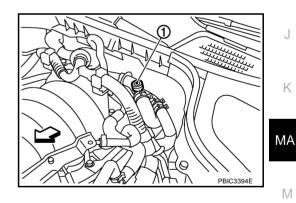

Be sure to clean radiator drain plug and install with new O-ring.

Radiator drain plug:

(: 1.2 N·m (0.12 kg-m, 11 in-lb)

If water drain plugs on cylinder block are removed, close and tighten them. Refer to <u>EM-257</u>, <u>"ASSEMBLY"</u>.

- 2. Make sure that each hose clamp has been firmly tightened.
- 3. Remove air relief plug (1) on heater hose.

- 4. Fill thermostat housing and reservoir tank to specified level.
 - Refill engine coolant up to filler neck of thermostat housing.
 - Pour engine coolant through engine coolant filler neck slowly of less than 2 ℓ (2-1/8 US qt, 1-3/4 Imp qt) a minute to allow air in system to escape.
 - Use genuine NISSAN Long Life Antifreeze/Coolant or equivalent mixed with water (distilled or demineralized). Refer to <u>MA-12, "RECOMMENDED FLUIDS AND LUBRICANTS"</u>.

Engine coolant capacity (With reservoir tank at "MAX" level): Approx. 10.4 ℓ (11 US qt, 9-1/8 lmp qt)

ENGINE MAINTENANCE (VK45DE ENGINE)

- 5. Install radiator cap.
- 6. Warm up until opening thermostat. Standard for warming-up time is approximately 10 minutes at 3,000 rpm.

• Make sure thermostat opening condition by touching radiator hose (lower) to see a flow of warm water. **CAUTION:**

Watch water temperature gauge so as not to overheat engine.

- 7. Stop engine and cool down to less than approximately 50°C (122°F).
 - Cool down using a fan to reduce the time.
 - If necessary, refill engine coolant up to filler neck of thermostat housing.
- 8. Refill reservoir tank to "MAX" level line with engine coolant.
- 9. Repeat steps 4 through 7 two or more times with radiator cap installed until engine coolant level no longer drops.
- 10. Check cooling system for leaks with engine running.
- 11. Warm up engine, and check for sound of engine coolant flow while running engine from idle up to 3,000 rpm with heater temperature controller set at several position between "COOL" and "WARM".
 - Sound may be noticeable at heater unit.
- 12. Repeat step 11 three times.
- 13. If sound is heard, bleed air from cooling system by repeating steps 4 through 7 until engine coolant level no longer drops.

FLUSHING COOLING SYSTEM

1. Install reservoir tank, and radiator drain plug.

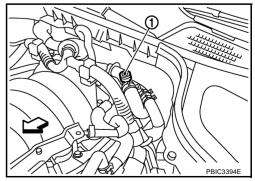

CAUTION:

Be sure to clean drain plug and install with new O-ring.

Radiator drain plug:

P: 1.2 N·m (0.12 kg-m, 11 in-lb)

- If water drain plugs on cylinder block are removed, close and tighten them. Refer to <u>EM-257.</u> <u>"ASSEMBLY"</u>.

Μ

NI \$0007X

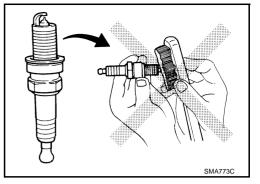

- Do not use wire brush for cleaning.
- If plug tip is covered with carbon, spark plug cleaner may be used.

Cleaner air pressure:

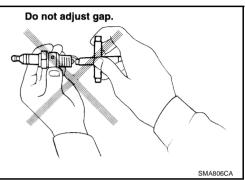

Less than 588 kPa (6 kg/cm² , 85 psi)

Cleaning time:

Less than 20 seconds

• Checking and adjusting plug gap is not required between change intervals.

INSTALLATION

Install in the reverse order of removal.

Spark plug:

◯: 24.6 N·m (2.5 kg-m, 18 ft-lb)

Checking EVAP Vapor Lines

NLS0007Y

- 1. Visually inspect EVAP vapor lines for improper attachment and for cracks, damage, loose connections, chafing and deterioration.
- 2. Inspect fuel tank filler cap vacuum relief valve for clogging, sticking, etc.

Refer to EC-741, "EVAPORATIVE EMISSION SYSTEM".

Checking Exhaust System

Check exhaust pipes, muffler and mounting for improper attachment, leaks, cracks, damage, chafing or deterioration.

• If anything is found, repair or replace damaged parts.

- 1. Warm up engine.
- 2. Check for A/T fluid leakage.
- 3. Loosen the level gauge bolt.
- Before driving, A/T fluid level can be checked at A/T fluid temperatures of 30 to 50°C (86 to 122°F) using "COLD" range on A/ T fluid level gauge as follows.
- a. Park vehicle on level surface and set parking brake.
- b. Start engine and move selector lever through each gear position. Leave selector lever in "P" position.
- c. Check A/T fluid level with engine idling.
- d. Remove A/T fluid level gauge and wipe clean with lint-free paper.

CAUTION:

When wiping away the A/T fluid level gauge, always use lint-free paper, not a cloth one.

e. Re-insert A/T fluid level gauge into A/T fluid charging pipe as far as it will go. **CAUTION:**

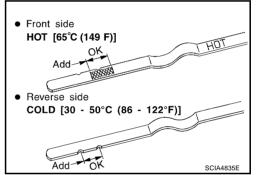

To check A/T fluid level, insert the A/T fluid level gauge until the cap contacts the end of the A/T fluid charging pipe, with the A/T fluid level gauge reversed from the normal attachment conditions.

f. Remove A/T fluid level gauge and note reading. If reading is at low side of range, add ATF to the A/T fluid charging pipe.

CAUTION:

Do not overfill.

- 5. Drive vehicle for approximately 5 minutes in urban areas.
- 6. Make the A/T fluid temperature approximately $65^{\circ}C$ (149°F).

Μ

PFP:00100

SMA211A

NI SOOORO

А

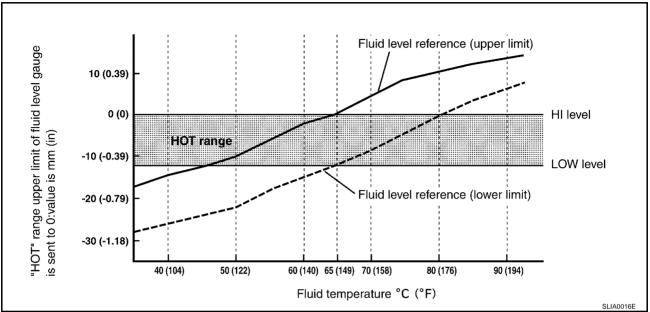

F

F

Н

NOTE:

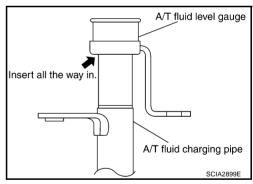

- a. Connect CONSULT-II to data link connector. Refer to AT-92, "CONSULT-II SETTING PROCEDURE" .
- b. Select "MAIN SIGNALS" in "DATA MONITOR" mode for "A/T" with CONSULT-II.
- c. Read out the value of "ATF TEMP 1".
- Re-check A/T fluid level at A/T fluid temperatures of approximately 65°C (149°F) using "HOT" range on A/ T fluid level gauge.

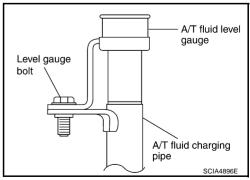

CAUTION:

- When wiping away the A/T fluid level gauge, always use lint-free paper, not a cloth one.
- To check A/T fluid level, insert the A/T fluid level gauge until the cap contacts the end of the A/T fluid charging pipe, with the A/T fluid level gauge reversed from the normal attachment conditions as shown.
- 8. Check A/T fluid condition.
 - If ATF is very dark or smells burned, check operation of A/T. Flush cooling system after repair of A/T.
 - If A/T fluid contains frictional material (clutches, bands, etc.), replace radiator and flush cooler line using cleaning solvent and compressed air after repair of A/T. Refer to <u>CO-14</u>, <u>"RADIATOR"</u> (for VQ35DE engine), <u>CO-43</u>, <u>"RADIATOR"</u> (for VK45DE engine) and <u>AT-14</u>, <u>"A/T Fluid Cooler Cleaning"</u>.
- Install the removed A/T fluid level gauge in the A/T fluid charging pipe.
- 10. Tighten level gauge bolt.

Level gauge bolt

: 5.1 N·m (0.52 kg-m, 45 in-lb)

Changing A/T Fluid

- 1. Warm up ATF.
- 2. Stop engine.
- 3. Loosen the level gauge bolt.
- 4. Drain ATF from drain plug and refill with new ATF. Always refill same volume with drained ATF.
 - To replace the ATF, pour in new ATF at the A/T fluid charging pipe with the engine idling and at the same time drain the old ATF from the radiator cooler hose return side.
 - When the color of the ATF coming out is about the same as the color of the new ATF, the replacement is complete. The amount of new ATF to use should be 30 to 50% increase of the stipulated amount.

CAUTION:

- Use only genuine NISSAN Matic J ATF. Do not mix with other ATF.
- Using ATF other than genuine NISSAN Matic J ATF will cause deterioration in driveability and automatic transmission durability, and may damage the automatic transmission, which is not G covered by the warranty.
- When filling ATF, take care not to scatter heat generating parts such as exhaust.
- Do not reuse drain plug gasket.

- 5. Run engine at idle speed for 5 minutes.
- Check A/T fluid level and condition. Refer to <u>AT-13, "Checking A/T Fluid"</u>. If ATF is still dirty, repeat step 2. through 5.
- 7. Install the removed A/T fluid level gauge into A/T fluid charging pipe.
- 8. Tighten the level gauge bolt.

Level gauge bolt

• : 5.1 N·m (0.52 kg-m, 45 in-lb)

Checking Transfer Fluid

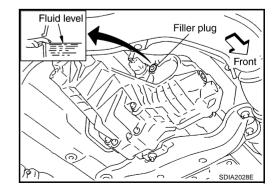

Check for fluid leakage and fluid level. (For details, refer to <u>TF-9</u>, "Inspection" .)

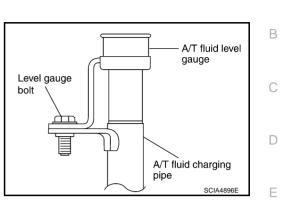

CAUTION:

Never start engine while checking fluid level.

Filler plug:

• 35 N·m (3.6 kg-m, 26 ft-lb)

Changing Transfer Fluid

CAUTION:

When draining fluid, protect exhaust tube flange with cover.

- Drain fluid from drain plug and refill with new gear fluid. (For details, refer to <u>TF-9</u>, "<u>Replacement</u>".)
- 2. Check fluid level.

CAUTION:

Carefully fill the fluid. (Fill up for Approx. 3 minutes.)

Fluid grade:

Genuine NISSAN Matic D ATF (Continental U.S. and Alaska) or Canada NISSAN Automatic Transmission Fluid or equivalent (if available) Refer to <u>MA-12</u>, "<u>RECOMMENDED FLUIDS AND</u> <u>LUBRICANTS</u>".

Fluid capacity:

: Approx. 1.25 ℓ (2-5/8 US pt, 2-1/4 Imp pt)

Drain plug:

29.4 N·m (3.0 kg-m, 22 ft-lb)

Filler plug:

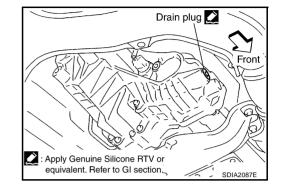

¹: 35 N·m (3.6 kg-m, 26 ft-lb)

Checking Propeller Shaft

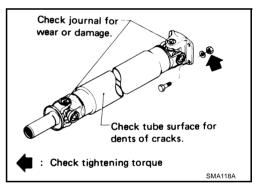

Check propeller shaft for damage, looseness or grease leakage.

Tightening torque:

Refer to PR-6, "REAR PROPELLER SHAFT"

NLS00084

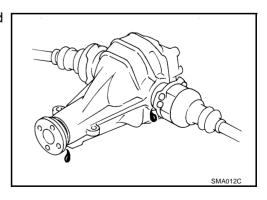

NLS00085

Checking Differential Gear Oil

Check for oil leakage.

(For details, refer to FFD-8, "Checking Differential Gear Oil" and RFD-9, "Checking Differential Gear Oil".)

NLS00083

Changing Differential Gear Oil

- 1. Drain oil from drain plug and refill with new gear oil. (For details, refer to FFD-8, "Changing Differential Gear Oil" and RFD-9, "Changing Differential Gear Oil" .)
- ماد منا امتدما Che 2.

| 2. Check oil level. | | В |

| Balancing Wheels (Bonding Weight Type) | NLS00087 | J |

REMOVAL

1. Remove inner and outer balance weights from the road wheel. **CAUTION:**

Be careful not to scratch the road wheel during removal.

- 2. Using releasing agent, remove double-faced adhesive tape from the road wheel. **CAUTION:**
 - Be careful not to scratch the road wheel during removal.
 - Μ After removing double-faced adhesive tape, wipe clean traces of releasing agent from the road wheel.

WHEEL BALANCE ADJUSTMENT

- If a tire balance machine has adhesion balance weight mode settings and drive-in weight mode setting, select and adjust a drive-in weight mode suitable for road wheels.
- Set road wheel on tire balance machine using the center hole as a guide. Start the tire balance machine. 1.
- 2. When inner and outer unbalance values are shown on the tire balance machine indicator, multiply outer unbalance value by 5/3 to determine balance weight that should be used. Select the outer balance weight with a value closest to the calculated value above and install it to the designated outer position of, or at the designated angle in relation to the road wheel.

CAUTION:

Do not install the inner balance weight before installing the outer balance weight.

NLS00086

А

Κ

MA

 Before installing the balance weight, be sure to clean the mating surface of the road wheel.

Indicated unbalance value \times 5/3 = balance weight to be installed **Calculation example:**

23 g (0.81 oz) \times 5/3 = 38.33 g (1.35 oz) \Rightarrow 40 g (1.41 oz) balance weight (closer to calculated balance weight value)

Note that balance weight value must be closer to the calculated balance weight value.

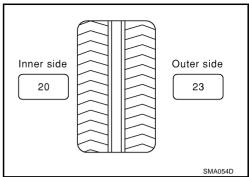

Example:

 $\begin{array}{l} 37.4 \Rightarrow 35 \text{ g} (1.23 \text{ oz}) \\ 37.5 \Rightarrow 40 \text{ g} (1.41 \text{ oz}) \end{array}$

- a. Install balance weight in the position shown in the figure.
- b. When installing balance weight to road wheels, set it into the grooved area on the inner wall of the road wheel as shown in the figure so that the balance weight center is aligned with the tire balance machine indication position (angle).

CAUTION:

- Always use genuine NISSAN adhesion balance weights.
- Balance weights are unreusable; always replace with new ones.
- Do not install more than three sheets of balance weight.

c. If calculated balance weight value exceeds 50 g (1.76 oz), install two balance weight sheets in line with each other as shown in the figure.

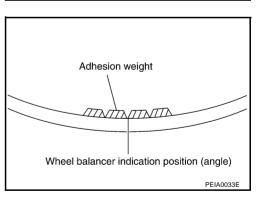

CAUTION:

Do not install one balance weight sheet on top of another.

- 3. Start tire balance machine again.
- 4. Install drive-in balance weight on inner side of road wheel in the tire balance machine indication position (angle).

CAUTION: Do not install more than two balance weights.

- 5. Start tire balance machine. Make sure that inner and outer residual unbalance values are 7 g (0.25 oz) each or below.
 - If either residual unbalance value exceeds 7 g (0.25 oz), repeat installation procedures.

| Maximum allowable | Dynamic (At rim flange) | Less than 7 g (0.25 oz) (one side) |
|-------------------|-------------------------|------------------------------------|
| unbalance | Static (At rim flange) | Less than 14 g (0.49 oz) |

Rotation

- Follow the maintenance schedule for tire rotation service intervals. Refer to MA-4, "GENERAL MAINTENANCE" .
- Do not include the spare tire when rotating the tires.

CAUTION:

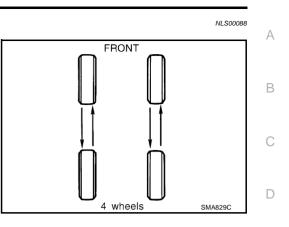

- When installing wheels, tighten them diagonally by dividing the work two to three times in order to prevent the wheels from developing any distortion.
- Be careful not to tighten wheel nut at torque exceeding the criteria for preventing strain of disc rotor.
- Use NISSAN genuine wheel nuts for aluminum wheels.

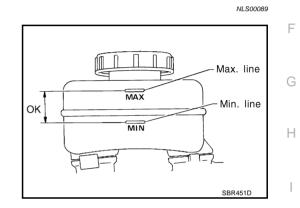

Tightening torque of wheel nut

U : 108 N·m (11 kg-m, 80 ft-lb)

Checking Brake Fluid Level and Leaks

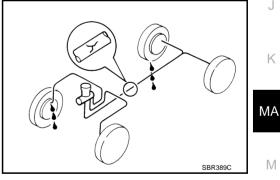

If fluid level is extremely low, check brake system for leaks.

Checking Brake Lines and Cables

Check brake fluid lines and parking brake cables for improper attachment, leaks, chafing, abrasions, deterioration, etc.

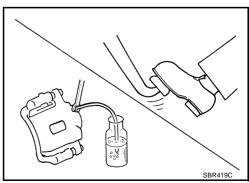

Changing Brake Fluid

- 1. Drain brake fluid from each bleed valve.
- 2. Refill until new brake fluid comes out from each bleed valve. Use same procedure as in bleeding hydraulic system to refill brake fluid.

Refer to BR-10, "Bleeding Brake System".

- Refill with recommended genuine Nissan Super Heavy Duty Brake Fluid or equivalent DOT 3 (US FMVSS No. 116). Refer to MA-12, "RECOMMENDED FLUIDS AND LUBRI-CANTS".
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas.

Checking Steering Gear and Linkage STEERING GEAR

- Check gear housing and boots for looseness, damage and grease leakage.
- Check connection with steering column for looseness.

STEERING LINKAGE

Check ball joint, dust cover and other component parts for looseness, wear, damage and grease leakage.

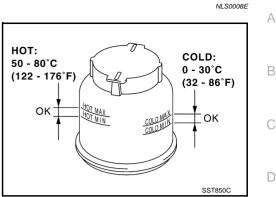

| Rear | |
|------|--|

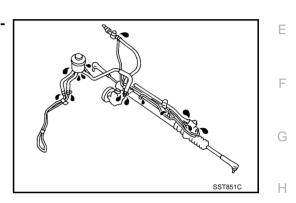

NLS0008D

Checking Power Steering Fluid and Lines

Check fluid level in reservoir tank with engine off. Use "HOT" range at fluid temperatures of 50 to 80°C (122 to 176°F) or "COLD" range at fluid temperatures of 0 to 30°C (32 to 86°F).

- CAUTION:
- Do not overfill.
- Recommended fluid is genuine NISSAN PSF or equivalent. Refer to <u>MA-12, "RECOMMENDED FLUIDS AND LUBRI-CANTS"</u>.
- Check lines for improper attachment, leaks, cracks, damage, loose connections, chafing and deterioration.
- Check rack boots for accumulation of power steering fluid.

Axle and Suspension Parts

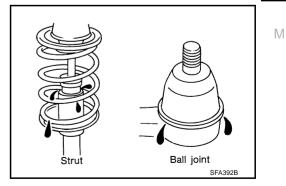

Revision: 2007 April

Check front and rear axle and suspension parts for excessive play, cracks, wear or other damage.

- Shake each wheel to check for excessive play.
- Check wheel bearings for smooth operation.
- Check axle and suspension nuts and bolts for looseness.
- Check strut (shock absorber) for oil leakage or other damage.
- Check suspension ball joint for grease leakage and ball joint dust cover for cracks or other damage.

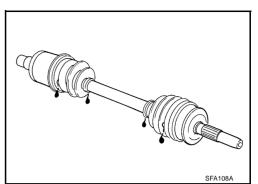

J K SMA525A

NI \$0008F

Drive Shaft

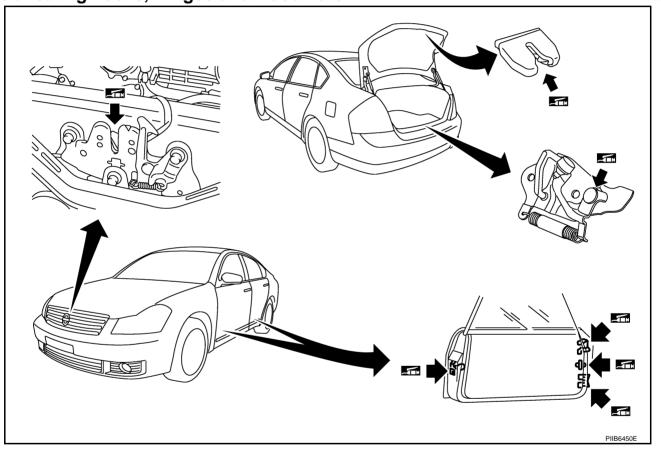

Check boot and drive shaft for cracks, wear, damage and grease leakage.

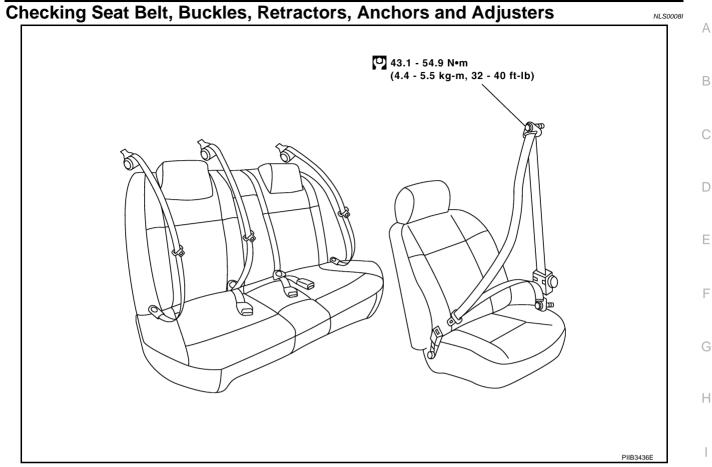

Lubricating Locks, Hinges and Hood Latch

NLS0008G

CAUTION:

 After any collision, inspect all seat belt assemblies, including retractors and other attached hardwares (I.e. anchor bolt, guide rail set). Nissan recommends to replace all seat belt assemblies in use during a collision, unless not damaged and properly operating after minor collision. Also inspect seat belt assemblies not in use during a collision, and replace if damaged or improperly operating. Seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal col-

lision where the driver and passenger air bags are deployed.

- If any component of seat belt assembly is questionable, do not repair. Replace as seat belt assembly.
- If webbing is cut, frayed, or damaged, replace belt assembly.
- Never oil tongue and buckle.
- Use a genuine NISSAN seat belt assembly.

For details, refer to <u>SB-32, "Seat Belt Inspection"</u> in SB section.

- Check anchors for loose mounting
- Check belts for damage
- Check retractor for smooth operation
- Check function of buckles and tongues when buckled and released
