BASIC INSPECTION DIAGNOSIS AND REPAIR WORK FLOW

Work Flow

INFOID:000000005350125

OVERALL SEQUENCE

Without Navigation

- Reference 1... Refer to <u>AV-55, "WITHOUT NAVIGATION : CONSULT-III Function (MULTI AV)</u>".
- Reference 2... Refer to AV-176, "WITHOUT NAVIGATION : DTC Index".
- Reference 3--- Refer to AV-461, "WITHOUT NAVIGATION : Symptom Table".

With Navigation

- Reference 1... Refer to <u>AV-72, "WITH NAVIGATION : CONSULT-III Function (MULTI AV)"</u>.
- Reference 2... Refer to <u>AV-220, "WITH NAVIGATION : DTC Index"</u>.
- Reference 3... Refer to AV-464, "WITH NAVIGATION : Symptom Table".

DETAILED FLOW

1.INTERVIEW AND SYMPTOM CONFIRMATION

Check the malfunction symptoms by performing the following items.

- Interview the customer to obtain the malfunction information (conditions and environment when the malfunction occurred).
- Check the symptom.

DIAGNOSIS AND REPAIR WORK FLOW

[WITHOUT MOBILE ENTERTAINMENT SYSTEM]

Is the occurred symptom malfunction?	
YES >> GO TO 2. NO >> INSPECTION END	А
2. DIAGNOSIS WITH CONSULT-III	
 Connect CONSULT-III and perform a self-diagnosis for "MULTI AV". Refer to <u>AV-55, "WITHOUT NAVIGATION : CONSULT-III Function (MULTI AV)"</u>. (without navigation) Refer to <u>AV-72, "WITH NAVIGATION : CONSULT-III Function (MULTI AV)"</u>. (with navigation) NOTE: Skip to step 4 of the diagnosis procedure if "MULTI AV" is not displayed. 	B
 Check if any DTC is displayed in the self-diagnosis results. 	
Is DTC displayed?	D
YES >> GO TO 3. NO >> GO TO 4.	
3. TROUBLE DIAGNOSIS FOR DTC	Е
 Check the DTC indicated in the self-diagnosis results. Perform the relevant diagnosis referring to the DTC Index. Refer to <u>AV-176, "WITHOUT NAVIGATION : DTC Index"</u>. (without navigation) Refer to <u>AV-220, "WITH NAVIGATION : DTC Index"</u>. (with navigation) 	F
>> GO TO 5.	G
4. TROUBLE DIAGNOSIS FOR SYMPTOMS	
Perform the relevant diagnosis referring to the diagnosis chart by symptom. Refer to <u>AV-461, "WITHOUT NAVIGATION : Symptom Table"</u> . (without navigation) Refer to <u>AV-464, "WITH NAVIGATION : Symptom Table"</u> . (with navigation)	Η
>> GO TO 5.	
5. ERROR PART REPAIR	J
 Repair or replace the identified malfunctioning parts. Perform a self-diagnosis for "MULTI AV" with CONSULT-III. 	
 NOTE: Erase the stored self-diagnosis results after repairing or replacing the relevant components if any DTC has been indicated in the self-diagnosis results. Check that the symptom does not occur. 	AV
Does the symptom occur?	L
YES >> GO TO 1. NO >> INSPECTION END

INSPECTION AND ADJUSTMENT ADDITIONAL SERVICE WHEN REMOVING BATTERY NEGATIVE TERMINAL

ADDITIONAL SERVICE WHEN REMOVING BATTERY NEGATIVE TERMINAL : Description INFOID:000000005350126

Always correct the center position of the rear view monitor's possible route line after disconnecting the battery negative terminal.

ADDITIONAL SERVICE WHEN REMOVING BATTERY NEGATIVE TERMINAL : Special Repair Requirement INFOID:000000005350127

1.CORRECTION OF CENTER POSITION OF REAR VIEW MONITOR'S POSSIBLE ROUTE LINE

Refer to the following for details.

>> Refer to AV-14, "REAR VIEW MONITOR POSSIBLE ROUTE LINE CENTER POSITION ADJUSTMENT : Special Repair Requirement". ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description

INFOID:000000005350128

When camera control unit is replaced, the center position of rear view monitor possible route line is corrected.

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement INFOID:000000005350129

1.CORRECTION OF CENTER POSITION OF REAR VIEW MONITOR'S POSSIBLE ROUTE LINE

Refer to the following for details.

>> Refer to AV-14, "REAR VIEW MONITOR POSSIBLE ROUTE LINE CENTER POSITION ADJUSTMENT : Special Repair Requirement".

REAR VIEW MONITOR POSSIBLE ROUTE LINE CENTER POSITION ADJUST-MENT

REAR VIEW MONITOR POSSIBLE ROUTE LINE CENTER POSITION ADJUST-**MENT** : Description INFOID:000000005350130

Adjust the center position of the possible route line of the rear view monitor if it is shifted.

REAR VIEW MONITOR POSSIBLE ROUTE LINE CENTER POSITION ADJUST-**MENT : Special Repair Requirement**

INFOID:000000005350131

1.STEERING OPERATION

Steer the steering wheel to the leftmost and rightmost ends.

>> GO TO 2

2.DRIVING

Drive the vehicle straight ahead 100 m (328.1 ft) or more at a speed of 30 km/h (18.6 MPH) or more.

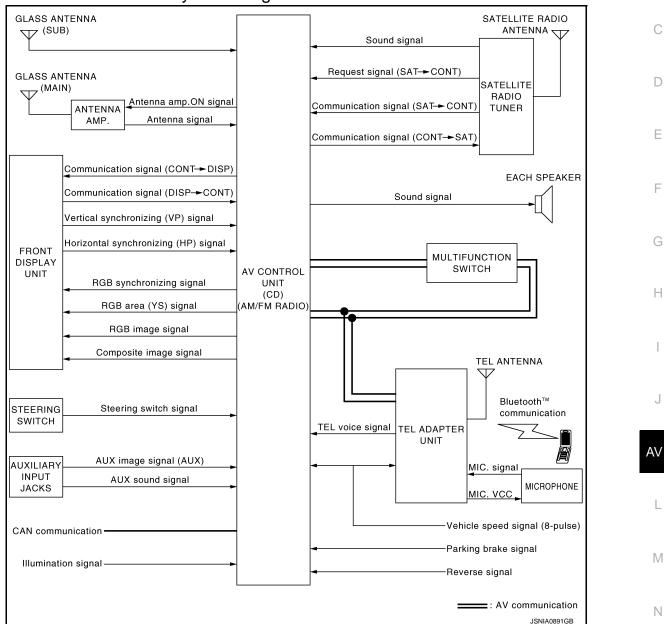

>> END

MULTI AV SYSTEM

[WITHOUT MOBILE ENTERTAINMENT SYSTEM]

System name	System explanation
VEHICLE INFORMATION SYSTEM	 Status of audio, climate control system, fuel economy, maintenance and navigation is displayed. AV control unit displays the fuel consumption status while receiving data signal through CAN communication from ECM, unified meter and A/C amp. and BCM.
AUXILIARY INPUT SYSTEM	Refer to the following "AUXILIARY INPUT SYSTEM".

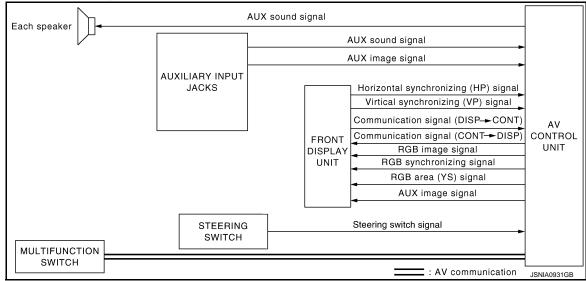

- AV control unit function by transmitting/receiving data one by one with each unit (slave unit) that configures them completely as a master unit by connecting between units that configure MULTI AV system with two AV communication lines (H, L).
- Two AV communication lines (H, L) adopt a twisted pair line that is resistant to noise.
- AV control unit is connected by CAN communication, and it receives data signal from ECM, unified meter and A/C amp. It computes and displays fuel economy information value with the obtained information. Transmitting/receiving of data signal is performed by BCM. Also, it transmits the required signal of vehicle setting and receives the response signal.
- AV control unit is connected with front display unit via serial communication, and it transmits the required signal of display and display control and receives the response signal from display. Also, it is connected with satellite radio by serial communication, and it transmits the operating signal and receives the display signal. **NOTE:**

AV control unit can perform CONSULT-III self-operating function and on board self-diagnosis.

- CONSULT-III self diagnosis: Refer to AV-55, "WITHOUT NAVIGATION : CONSULT-III Function (MULTI AV)".
- On board self diagnosis: Refer to AV-48, "WITHOUT NAVIGATION : Diagnosis Description".

AUXILIARY INPUT SYSTEM

- Image and sound can be output from an external device by connecting a device with auxiliary input jacks.
- Operation can be performed with multifunction switch and steering switch. Multifunction switch transmits operation signal to AV control unit by AV communication.
- The AUX image signal is input from the auxiliary input jacks to the AV control unit. The AV control unit outputs AUX image signal to the front display unit.
- The AUX sound signal is input from the auxiliary input jacks to the AV control unit. The AV control unit outputs the AUX sound signal to each speaker.

MULTI AV SYSTEM [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

WITHOUT NAVIGATION : Component Description

INFOID:000000005350135

Part name	Description
AV CONTROL UNIT	 It is the master unit of the MULTI AV system, and it is connected to each control unit by communication. It operates each system according to communication signals from the AV control unit. It is connected to ECM and unified meter and A/C amp. via CAN communication to obtain necessary information for the vehicle information function. It is connected to BCM via CAN communication transmitting/receiving for the vehicle settings function. It inputs the illumination signals that are required for the display dimming control. It inputs the signals for driving status recognition (vehicle speed, reverse and parking brake). Auxiliary image and sound signal are input from the auxiliary input jacks.
FRONT DISPLAY UNIT	 Front display image is controlled by the serial communication from AV control unit. RGB image signal is input from AV control unit (RGB, RGB area and RGB synchronizing). Synchronize signal (HP, VP) is output to AV control unit. Auxiliary image signal is input from AV control unit.
FRONT DOOR SPEAKER	Outputs sound signal from AV control unit.Outputs high, mid and low range sounds.
REAR DOOR SPEAKER	Outputs sound signal from AV control unit.Outputs high, mid and low range sounds.
TWEETER	Outputs sound signal from AV control unit.Outputs high range sound.
MULTIFUNCTION SWITCH	 Operation panel is equipped with the centralized switch where audio, auxiliary input, vehicle information and vehicle settings operations are integrated. The multifunction switch is connected via AV communication, and it transmits the operation signals of the multifunction switch and preset switch.
PRESET SWITCH	 Operation panel is equipped with the centralized switch where audio and air conditioner operations are integrated. The preset switch is connected to the multifunction switch by hard-wire, and it transmits the operation signal to the multifunction switch.
STEERING SWITCH	Operations such as audio and hands-free phone are possible.Steering switch signal (operation signal) is output to AV control unit.
MICROPHONE	 Used only when hands-free phone is operated. Outputs Mic. signal (TEL voice signal) to the TEL adapter unit. The power (Mic. VCC) is supplied from TEL adapter unit.
AUXILIARY INPUT JACKS	Auxiliary input jacks Image and sound signal are transmitted to AV control unit.
ANTENNA AMP.	 Radio signal received by glass antenna is amplified and transmitted to AV con trol unit. Power (antenna amp. ON signal) is supplied from AV control unit.
TEL ADAPTER UNIT	 It is connected with the AV control unit via AV communication and controlled with the AV control unit. Inputs the TEL voice signal from TEL antenna and outputs it to the AV control unit.
TEL ANTENNA	Receives the TEL voice signal and outputs it to the TEL adapter unit.
SATELLITE RADIO TUNER	 It is controlled with the AV control unit and serial communication (communication signal and request signal). Inputs the satellite radio signal from satellite radio antenna and outputs the satellite radio sound signal to the AV control unit.
SATELLITE RADIO ANTENNA	Satellite radio wave is received and transmitted to satellite radio tuner.

WITH NAVIGATION : Component Description

INFOID:000000005350139

Part name	Description
AV CONTROL UNIT	 Integrates hard disk drive (HDD) allowing map data and music data to be stored. It is the master unit of the MULTI AV system, and it is connected to each control unit by communication. It operates each system according to communication signals from the AV control unit. The AV control unit includes the audio, hands-free phone, voice control, navigation, satellite radio, and vehicle information functions. It is connected to ECM and unified meter and A/C amp. via CAN communication to obtain necessary information for the vehicle information function. It is connected to BCM via CAN communication transmitting/receiving for the vehicle settings function. It is connected to the steering angle sensor and receives the steering angle signal via CAN communication. It also transmits the steering angle signal to camera control unit via AV communication. It inputs the illumination signals that are required for the display dimming control. It is the signals for driving status recognition (vehicle speed, reverse and parking brake). Update of map data is performed with the CONSULT-III and the applicable cable. It includes the TEL adapter and Bluetooth[™] function.
FRONT DISPLAY UNIT	 Front display image is controlled by the serial communication from AV control unit. Synchronize signal (HP, VP) is output to AV control unit. Touch panel function can be operated for each system by touching a display directly. RGB image signal is input from AV control unit (RGB, RGB area and RGB synchronizing). Camera image signal is input from camera control unit. Auxiliary image signal and DVD image signal are input from the DVD player (with DVD player models). Auxiliary image signal is input from the auxiliary input jacks. (without DVD player models)

MULTI AV SYSTEM

[WITHOUT MOBILE ENTERTAINMENT SYSTEM]

Part name	Description
	 It is connected via AV communication and controlled by the AV control unit. It receives the voice guidance signal from AV control unit and output it to the front speaker. It controls sound volume of each speaker when outputting TEL voice and voice guidance.
BOSE AMP.	 It subjects to AudioPilot[®] processing when receiving sound signal from micro- phone for AudioPilot[®].
	BOSE 2ch system (without DVD player models)It amplifies the sound signal from the AV control unit and output it to each speaker.
	 BOSE surround audio 5.1ch system (with DVD player models) It amplifies the sound signal from the AV control unit and the DVD sound signal from DVD player, and then output them to each speaker. It subjects to Centerpoint[®] processing.
WOOFER	Outputs sound signal from BOSE amp. Outputs low-pitched sound.
FRONT DOOR SPEAKER	Outputs sound signal from BOSE amp.Outputs high, mid and low range sounds.
TWEETER	Outputs sound signal from BOSE amp.Outputs high range sound.
REAR DOOR SPEAKER	Outputs sound signal from BOSE amp.Outputs high, mid and low range sounds.
CENTER SPEAKER	Outputs sound signal from BOSE amp.Outputs high and mid range sounds.
SEAT SPEAKER	Outputs sound signal from BOSE amp.Outputs high and mid range sounds.
REAR SURROUND SPEAKER	Outputs sound signal from BOSE amp.Outputs high and mid range sounds.
MULTIFUNCTION SWITCH	 Operation panel is equipped with the centralized switch where audio, auxiliary input and navigation operations are integrated. The multifunction switch is connected via AV communication, and it transmits the operation signals of the multifunction switch and preset switch.
PRESET SWITCH	 Operation panel is equipped with the centralized switch where audio and air conditioner operations are integrated. The preset switch is connected to the multifunction switch by hard-wire, and it transmits the operation signal to the multifunction switch.
DVD PLAYER	 It transmits the playback DVD image signal and the input AUX image signal to the front display unit. It also transmits the input AUX sound signal to the AV control unit. It transmits the playback DVD sound signal to the BOSE amp.
CAMERA CONTROL UNIT	 Camera image signal is input from rear view camera. Camera image signal output to front display unit. Power (camera ON signal) is transmitted to rear view camera. AV control unit recognizes the presence of camera system with camera connection recognition signal. Camera control unit is connected via AV communication, and it receives the control signal and steering angle signal from the AV control unit.
REAR VIEW CAMERA	 The image of vehicle rear view is transmitted to camera control unit. It receives the power (camera ON signal) from the camera control unit and operates.
STEERING SWITCH	 Operations for audio, hands-free phone, audio response and navigation, etc. are possible. Steering switch signal (operation signal) is output to AV control unit.
MICROPHONE	 Used for hands-free phone operation and voice recognition. Mic. signal is transmitted to AV control unit. Power (Mic. VCC) is supplied from AV control unit.

MULTI AV SYSTEM

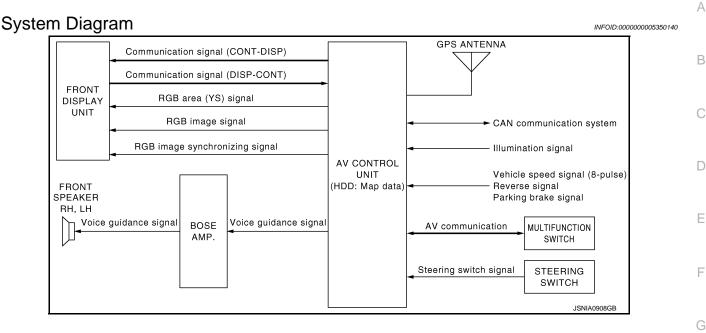

< FUNCTION DIAGNOSIS >

[WITHOUT MOBILE ENTERTAINMENT SYSTEM]

Part name	Description
AUXILIARY INPUT JACKS	 Without DVD player models Image signal of auxiliary input is transmitted to front display unit, and auxiliary sound signal is transmitted to AV control unit. With DVD player models Image and sound signal of auxiliary input is transmitted to DVD player.
GPS ANTENNA	GPS signal is received and transmitted to AV control unit.
ANTENNA AMP.	 Radio signal received by glass antenna is amplified and transmitted to AV control unit. Power (antenna amp ON signal) is supplied from AV control unit.
SATELLITE RADIO ANTENNA	Satellite radio wave is received and transmitted to AV control unit.
iPod ADAPTER	 Inputs iPod sound signal from iPod[®], and outputs iPod sound signal to AV control unit. Receiving/transmitting of iPod[®] operation signals are performed as follows: between AV control unit and iPod adapter: AV communication. between iPod[®] and iPod adapter: serial communication.
STEERING ANGLE SENSOR	It is connected to the AV control unit and transmits the steering angle signal via CAN communication.
MICROPHONE (for AudioPilot [®])	 Used for AudioPilot[®]. Mic. signal is transmitted to BOSE amp.

NAVIGATION SYSTEM [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

NAVIGATION SYSTEM

System Description

INFOID:000000005350141

DESCRIPTION

- The AV control unit controls navigation function while GPS tuner has built-in map data, GYRO (angle speed sensor), on the HDD (Hard Disk Drive).
- The AV control unit inputs operation signal with communication signal, through display (touch panel) and multifunction switch and steering switch.
- Guide sound is output to front speaker through BOSE amp. from AV control unit when operating navigation system.
- A vehicle position is calculated with the GYRO (angle speed sensor), vehicle sensor, signal from GPS satellite and map data stored on HDD (Hard Disk Drive), and transmits the map image signal (RGB image, RGB area, RGB image synchronizing) to the display.

POSITION DETECTION PRINCIPLE

The navigation system periodically calculates the current vehicle position according to the following three types of signals.

- Travel distance of the vehicle as determined by the vehicle speed sensor
- Vehicle turning angle determined by the gyroscope (angular speed sensor)
- The travel direction of the vehicle determined by the GPS antenna (GPS information)

The current position of the vehicle is then identified by comparing the calculated vehicle position with map data, which is stored in the HDD (Hard Disk Drive) (map-matching), and indicated on the screen with a current location mark. More accurate data is used by comparing position detection results from GPS to the map-matching.

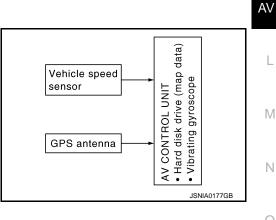

The current position is calculated by detecting the travel distance from the previous calculation point, and its direction change.

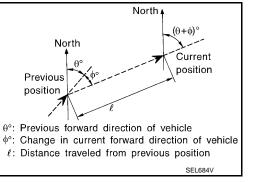

Travel distance

The travel distance is generated from the vehicle speed sensor input signal. The automatic distance correction function is adopted for preventing a miss-detection of the travel distance because of tire wear etc.

Travel direction

The gyroscope (angular velocity sensor) and GPS antenna (GPS information) generate the change of the travel direction. Both have advantages and disadvantages as per the following descriptions.

Н

J

Revision: 2009 June

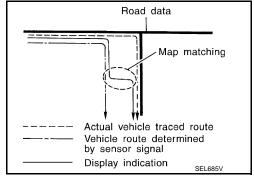

2010 M35/M45

Туре	Advantage	Disadvantage
Gyroscope (angular velocity sensor)	The turning angle is precisely detected.	Errors are accumulated when driving a long dis- tance without stopping.
GPS antenna (GPS informa- tion)	The travel direction (North/South/East/West) is detected.	The travel direction is not precisely detected when driving slowly.

Input signals are prioritized in each situation. However, this order of priority may change in accordance with more detailed travel conditions so that the travel direction is detected more accurately.

MAP-MATCHING

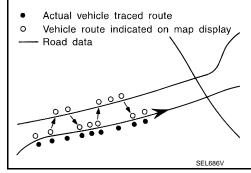

Map-matching repositions the vehicle on the road map when a new location is judged to be more accurate. This is done by comparing the current vehicle position (calculated by the normal position detection method) from the map data stored in the HDD (Hard Disk Drive).

There is a possibility that the vehicle position may not be corrected in the following case, and when vehicle is driven over a certain distance or time in which GPS information is hard to receive. Correct manually the current location mark on the screen.

 In map-matching, several alternative routes are prepared and prioritized in addition to the road judged as currently driving on. Therefore, due to errors in the distance and/or direction, an incorrect road may be prioritized, and the current location mark may be repositioned to the incorrect road.

If two roads are running in parallel, they are of the same priority. Therefore, the current location mark may appear on either of them alternately, depending on maneuvering of the steering wheel and configuration of the road, etc.

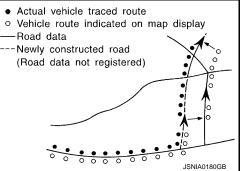

Map-matching does not function correctly when road on which the vehicle is driving is new, etc. and not recorded in the map data. Also, map-matching does not function correctly when road pattern stored in the map data and the actual road pattern are different due to repair, etc.

Therefore, the map-matching function judges other road as a currently driving road if the road is not in the map, and displays the current location mark on it. Later, the current location mark may be repositioned to the road if the correct road is detected.

• Effective range for comparing the vehicle position and travel direction calculated by the distance and direction with the road data is limited. Therefore, correction by map-matching is not possible

when there is an excessive gap between current vehicle position and the position on the map.

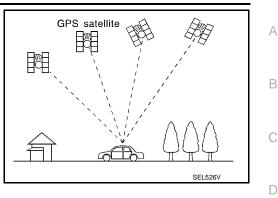

GPS (GLOBAL POSITIONING SYSTEM)

NAVIGATION SYSTEM [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

GPS (Global Positioning System) is developed for and is controlled by the US Department of Defense. The system utilizes GPS satellites (NAVSTAR), transmitting out radio waves while flying on an orbit around the earth at an altitude of approximately 21,000 km.

The receiver calculates the travel position in three dimensions (latitude/longitude/altitude) according to the time lag of the radio waves that four or more GPS satellites transmit (three-dimensional positioning). The GPS receiver calculates the travel position in two dimensions (latitude/longitude) with the previous altitude data if the GPS receiver receives only three radio waves (two-dimensional positioning). GPS position correction is not performed while stopping the vehicle.

Accuracy of the GPS will deteriorate under the following conditions:

• In two-dimensional positioning, GPS accuracy will deteriorate when altitude of the vehicle position changes.

- The position of GPS satellite affects GPS detection precision. The position detection may not be precisely performed.
- The position detection is not performed if GPS receiver does not receive radio waves from GPS satellites. (Inside a tunnel, parking in a building, under an elevated highway etc.) GPS receiver may not receive radio waves from GPS satellites if any object is placed on the GPS antenna.

NOTE:

- The detection result has an error of approximately 10 m even with a high-precision three dimensional positioning.
- There may be cases when the accuracy is lowered and radio waves are stopped intentionally because the GPS satellite signal is controlled by the US trace control center.

REAR VIEW MONITOR SYSTEM

System Diagram

System Description

INFOID:000000005350145

CAMERA IMAGE OPERATION PRINCIPLE

- Power is supplied to rear view camera from camera control unit and outputs camera image signal to camera control unit when selector lever is set to R position and the reverse signal on camera control unit is input.
- Camera control unit synthesizes guide lines and possible route lines with camera image signal from rear view camera, and transmits camera image signal to the front display unit. In this case, since the reverse signal is also input to AV control unit, the AV control unit recognizes the selector lever as in R position, and it switches serial communication signal between AV control unit and front display unit, and image that is displayed on the front display unit by RGB image signal with rear view monitor image. In addition, possible route lines are controlled by original sensor signal from steering angle sensor.
- The AV control unit determines whether rear view camera is equipped or not, based on the presence of camera connection recognition signal. It switches to rear view monitor image at the time of reverse signal input when it is equipped.
- Warning message under the rear view monitor display is described by AV control unit.
- AV control unit is connected in communication with camera control unit and front display unit, and it controls
 operation of rear view monitor system.

- Component Description

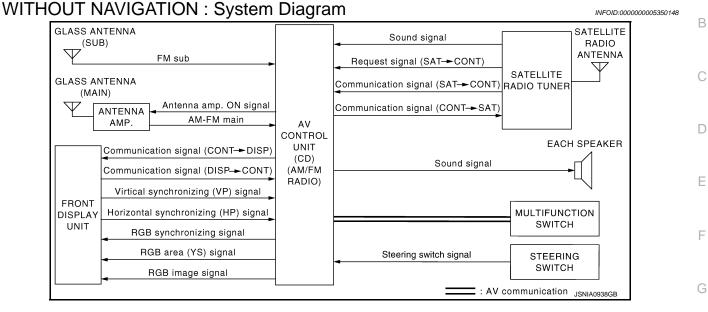

INFOID:000000005350147

Part name	Description
AV CONTROL UNIT	 Image on display is changed to rear view monitor image with serial communication between AV control unit and front display unit. It is connected to the steering angle sensor and receives the steering angle signal via CAN communication. It also transmits the steering angle signal to camera control unit via AV communication. Warning displayed in rear view monitor image is illustrated.
FRONT DISPLAY UNIT	 Camera image signal is transmitted from camera control unit, and RGB image signal for warning display is transmitted from AV control unit. Rear view monitor image is changed with the communication for AV control unit.
CAMERA CONTROL UNIT	 Camera image signal is input from rear view camera, and camera image is indicated on the front display unit. Power (camera ON signal) is transmitted to rear view camera. Camera control unit is connected via AV communication, and it receives the control signal and steering angle signal from the AV control unit. AV control unit recognizes the presence of camera system with camera connection recognition signal.
REAR VIEW CAMERA	 The image of vehicle rear view is transmitted to camera control unit. It receives the power (camera ON signal) from the camera control unit and operates.
STEERING ANGLE SENSOR	It is connected to the AV control unit and transmits the steering angle signal via CAN communication.

< FUNCTION DIAGNOSIS > AUDIO SYSTEM

А

WITHOUT NAVIGATION

WITHOUT NAVIGATION : System Description

The audio system is equipped with the following functions. Each function is operated with multifunction switch, preset switch or steering switch. It indicates the operation status of AUDIO to the front display.

FUNCTION DESCRIPTION

Function
AM/FM radio
Satellite radio
CD
AUX

Operating Signal

• Audio system operation can be performed with multifunction switch, preset switch, and steering switch.

- Operating signal is transmitted to AV control unit with AV communication when it is operated by multifunction switch or preset switch.
- Operating signal is transmitted to AV control unit with steering switch signal when it is operated by steering switch.

Screen Front Display

- Switching of front display is performed with serial communication between front display unit and AV control unit.
- The image signal to front display operating condition is performed with RGB image signal, RGB area signal and RGB image synchronizing signal.

AM/FM Radio Mode

- AM/FM radio tuner is built into AV control unit.
- Audio signal is received by glass antenna, next it is amplified by antenna amp., and finally it is input to AV control unit. AV control unit outputs the audio signal to each speaker.

Satellite Radio Mode

- Satellite radio tuner is controlled by serial communication and request signal with AV control unit.
- Audio signal (satellite radio) is received by satellite radio antenna, and it is input to satellite radio tuner. Satellite radio tuner outputs audio signal to AV control unit. The sound signal is also outputted to each speaker.

Part name	Description
REAR DOOR SPEAKER	Outputs sound signal from AV control unit.Outputs high, mid and low range sounds.
TWEETER	Outputs sound signal from AV control unit.Outputs high range sound.
MULTIFUNCTION SWITCH	 Each audio operation can be operated. The multifunction switch is connected via AV communication, and it transmits the operation signals of the multifunction switch and preset switch.
PRESET SWITCH	 Each audio operation can be operated. The preset switch is connected to the multifunction switch by hard-wire, and it transmits the operation signal to the multifunction switch.
STEERING SWITCH	Each audio operation can be operated.Steering switch signal (operation signal) is output to AV control unit.
ANTENNA AMP.	 Radio signal received by glass antenna is amplified and transmitted to AV control unit. Power (antenna amp. ON signal) is supplied from AV control unit.
SATELLITE RADIO TUNER	 It is controlled with the AV control unit and serial communication (communication signal and request signal). Inputs the satellite radio signal from satellite radio antenna and outputs the satellite radio sound signal to the AV control unit.
SATELLITE RADIO ANTENNA	Satellite radio wave is received and transmitted to satellite radio tuner.

WITH NAVIGATION

WITH NAVIGATION : System Description

The audio system is equipped with the following functions. Each function is operated with multifunction switch, preset switch, touch panel, steering switch or audio recognition. Operation status of AUDIO is indicated at front display.

FUNCTION DESCRIPTION

INFOID:000000005350153

AUDIO SYSTEM [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

The audio system is equipped with the following functions. Each function is operated with multifunction switch, preset switch, touch panel, steering switch or audio recognition. Operation status of AUDIO is indicated at front display unit.

Function
AM/FM radio
Satellite radio
CD
Music Box (Hard Disk Drive)
CF (Compact Flash)
iPod connection
Audiopilot [®]
Centerpoint [®] (with DVD player models)
DVD (with DVD player models)
AUX

Operating Signal

Audio system operation can be performed with multifunction switch, preset switch, steering switch, touch panel function or voice recognition function.

- Operating signal is transmitted to AV control unit with AV communication when it is operated by multifunction switch or preset switch.
- Operating signal is transmitted to AV control unit with steering switch signal when it is operated by steering switch.
- Audio system operation can be performed with multifunction switch, preset switch, steering switch, touch panel function or voice recognition function.
- Refer to <u>AV-20, "WITH NAVIGATION : System Description"</u> for explanation of voice recognition function and touch panel function.

Screen Front Display

- Switching of front display is performed with serial communication between front display unit and AV control unit.
- The image signal to front display operating condition is performed with RGB image signal, RGB area signal and RGB image synchronizing signal.

AM/FM Radio Mode

- AM/FM radio tuner is built into AV control unit.
- Audio signal is received by glass antenna, next it is amplified by antenna amp., and finally it is input to AV control unit. Audio signal is input to BOSE amp. and BOSE amp. outputs to each speaker for AV control unit.

Satellite Radio Mode

- Satellite radio tuner is built into AV control unit.
- Audio signal (satellite radio) is received by satellite radio antenna, and it is input to AV control unit. AV control unit outputs audio signal to BOSE amp. The sound signal is also outputted from BOSE amp. to each speaker.

CD Mode

- CD function is built into AV control unit.
- AV control unit outputs audio signal to BOSE amp. and BOSE amp. outputs to each speaker when CD is inserted to AV control unit.

Music Box Mode

- Music CD data is stored on HDD that is built into AV control unit, and it can be played.
- AV control unit outputs music (audio signal) that is stored on HDD to BOSE amp., and BOSE amp. outputs to each speaker.

CF Mode

- AV control unit has built in CF replay function.
- Music (audio signal) that is stored in CF outputs to BOSE amp., and BOSE amp. outputs to each speaker when CF is inserted into AV control unit.

iPod Connection

 Connect iPod[®] and iPod adapter with wire harness and iPod adapter input iPod sound signal from iPod[®]. А When iPod mode is selected, iPod adapter output iPod sound signal to AV control unit. AV control unit output sound signal to BOSE amp., and BOSE amp. output sound signal to each speaker. Receiving/transmitting of iPod[®] operation signals are performed as follows:
 between AV control unit and iPod adapter: AV communication. В - between iPod[®] and iPod adapter: serial communication. • The iPod[®] connection status can be recognized whether iPod adapter receives iPod connection recognition С signal. The iPod adapter is possible to charge iPod[®]. D Audiopilot[®] Audiopilot[®] is the sound improving system that picks up any noises and the sound of music coming into the vehicle by a microphone under the steering, and that the BOSE amp. revises the frequency feature of music at Е real time in response to the frequency feature of the noise while driving and listening to music. If low frequency area noise from vehicle is loud, it adjusts low frequency element of music to be bigger than vehicle noise. If high frequency area noise from vehicle is loud, it adjusts all frequency element of music to be bigger than F vehicle noise. Centerpoint[®] (with DVD player models) CD and 2ch DVD stereo sound played at audio unit and DVD player are subjected to signal processing in BOSE amp. It can play the surround sound with presence. DVD Mode (with DVD player models) Н The DVD player is connected to the AV control unit via AV communication and is controlled by the AV control unit. The DVD player sound signal is output to the BOSE amp. The BOSE amp. outputs it to each speaker. The DVD image signal is output to the front display unit. AUX Mode

Refer to AV-20, "WITH NAVIGATION : System Description".

INFOID:000000005350155

Part name	Description		
AV CONTROL UNIT	 Receiving function of AM/FM/satellite radio, replaying function of CD, replaying/saving function of music box (HDD), replaying function of CF and voice recognition function are integrated. It transmits the sound signal to the BOSE amp. with hard wire, and then transmits the control signals of AudioPilot[®] and Centerpoint[®] with AV communication. 		
FRONT DISPLAY UNIT	 Display image is controlled by the serial communication from AV control unit. RGB image signal (audio operation condition) is input from AV control unit. Touch panel function can be operated for each system by touching a display directly. 		
	 It is connected via AV communication and controlled by the AV control unit. It receives the sound signal from AV control unit and output it to the each speaker. It subjects to AudioPilot[®] processing when receiving sound signal from microphone for AudioPilot[®]. 		
BOSE AMP.	BOSE 2ch system (without DVD player models)It amplifies the sound signal from the AV control unit and output it to each speaker.		
	 BOSE surround audio 5.1ch system (with DVD player models) It amplifies the sound signal from the AV control unit and the DVD sound signal from DVD player, and then output them to each speaker. It subjects to Centerpoint[®] processing. 		
WOOFER	Outputs sound signal from BOSE amp.Outputs low-pitched sound.		
FRONT DOOR SPEAKER	Outputs sound signal from BOSE amp.Outputs high, mid and low range sounds.		
TWEETER	Outputs sound signal from BOSE amp.Outputs high range sound.		
REAR DOOR SPEAKER	Outputs sound signal from BOSE amp.Outputs high, mid and low range sounds.		
CENTER SPEAKER	Outputs sound signal from BOSE amp.Outputs high and mid range sounds.		
SEAT SPEAKER	Outputs sound signal from BOSE amp.Outputs high and mid range sounds.		
REAR SURROUND SPEAKER	Outputs sound signal from BOSE amp.Outputs high and mid range sounds.		
MULTIFUNCTION SWITCH	 Operation panel is equipped with the centralized switch where audio, auxiliary input and navigation operations are integrated. The multifunction switch is connected via AV communication, and it transmits the operation signals of the multifunction switch and preset switch. 		

AUDIO SYSTEM

< FUNCTION DIAGNOSIS >

[WITHOUT MOBILE ENTERTAINMENT SYSTEM]

Part name	Description	
PRESET SWITCH	 Operation panel is equipped with the centralized switch where audio and air conditioner operations are integrated. The preset switch is connected to the multifunction switch by hard-wire, and it transmits the operation signal to the multifunction switch. 	
STEERING SWITCH	Each audio operation can be operated.Steering switch signal (operation signal) is output to AV control unit.	
MICROPHONE	 Used for hands-free phone operation and voice recognition. Mic signal is transmitted to AV control unit. Power (Mic. VCC) is supplied from AV control unit. 	
ANTENNA AMP.	 Radio signal received by glass antenna is amplified and transmitted to AV control unit. Power (antenna amp. ON signal) is supplied from AV control unit. 	
SATELLITE RADIO ANTENNA	Satellite radio wave is received and output to AV control unit.	
iPod ADAPTER	 Inputs iPod sound signal from iPod[®], and outputs iPod sound signal to AV control unit. Receiving/transmitting of iPod[®] operation signals are performed as follows: between AV control unit and iPod adapter: AV communication. between iPod[®] and iPod adapter: serial communication. 	
DVD PLAYER	 It transmits the playback DVD image signal and the input AUX image signal to the front display unit. It also transmits the input AUX sound signal to the AV control unit. It transmits the playback DVD sound signal to the BOSE amp. 	
MICROPHONE (for AudioPilot [®])	 Used for AudioPilot[®]. Mic signal is transmitted to BOSE amp.

WITHOUT NAVIGATION : System Description

- TEL adapter unit is controlled with AV communication from AV control unit.
- The connection between portable telephone and TEL adapter unit is performed with Bluetooth[™] communication.
- The voice guidance signal is input from the TEL adapter unit to the AV control unit and output to the front speaker when operating the cellular phone.
- TEL adapter unit has the on board self-diagnosis function. Refer to AV-76, "Diagnosis Description".

WHEN RECEIVING A CALL

TEL voice signal received with the portable telephone is input from TEL antenna via TEL adapter unit to AV control unit with Bluetooth[™] communication and output to the front speaker. The operation is performed with the steering switch or voice recognition function (TEL operation only).

WHEN A CALL IS TRANSMITTED

Speech sound (TEL voice signal) is input from the microphone to the TEL adapter unit. It is input from the TEL antenna via BluetoothTM communication to the portable telephone. It is transmitted to the phone on the other side. The operation is performed with the steering switch or voice recognition function (TEL operation only).

Revision: 2009 June

HANDS-FREE PHONE SYSTEM [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

Part name	Description	
STEERING SWITCH	The hands-free phone system can be operated.Steering switch signal (operation signal) is output to AV control unit.	
MICROPHONE	 Uses when operating the hands-free phone. Outputs Mic. signal (TEL voice signal) to the TEL adapter unit. The power (Mic. power supply) is supplied from the TEL adapter unit. 	
TEL ADAPTER UNIT	 Receives the steering switch signal (operation signal) from the steering switch. Inputs the TEL voice signal from TEL antenna during reception and outputs it to the AV control unit. Inputs the TEL voice signal from microphone during speech recognition and outputs it to the TEL antenna. Controlled by AV communication transmitted from AV control unit. 	
TEL ANTENNA	Connects with the portable telephone via Bluetooth [™] communication and com- municates the TEL voice signal.	

WITH NAVIGATION

WITH NAVIGATION : System Diagram

WITH NAVIGATION : System Description

- AV control unit includes hands-free phone function.
- Hands-free communication can be operated by connecting using Bluetooth[™] communication with cellular phone.
- Operation is performed by steering switch, and operating condition is indicated on front display.
- Guide sound that is heard during operation is input from AV control unit to BOSE amp., and is output from front speaker.

WHEN A CALL IS ORIGINATED

Spoken voice sound output from the microphone (MIC. signal) is input to AV control unit. AV control unit outputs to cellular phone with Bluetooth[™] communication as a TEL voice signal. Voice sound is then heard at the other party.

WHEN RECEIVING A CALL

Voice sound is input to own cellular phone from the other party. TEL voice signal is output to front speaker, and the signal is input to BOSE amp. via AV control unit by establishing Bluetooth[™] communication from cellular phone.

DIAGNOSIS SYSTEM (AV CONTROL UNIT) WITHOUT NAVIGATION

WITHOUT NAVIGATION : Diagnosis Description

INFOID:000000005350164

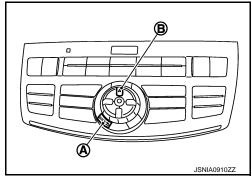

MULTIFUNCTION SWITCH AND PRESET SWITCH SELF-DIAGNOSIS FUNCTION

The ON/OFF operation (continuity) of each switch in the multifunction switch and preset switch can be checked.

Self-Diagnosis Mode

- Press the "BACK (A)" switch and the "
 (B)" switch of the 8-direction switches within 10 seconds after turning the ignition switch from OFF to ACC and hold them for 3 seconds or more. Then the buzzer sounds, all indicators of the preset switch illuminate, and the self-diagnosis mode starts.
- The continuity of each switch at the ON position can be checked by pressing the switch. The buzzer sounds if the switch is normal. **NOTE:**

The hazard switch and CD eject switch cannot be checked.

Finishing Self-Diagnosis Mode

Self-diagnosis mode is canceled when turning the ignition switch OFF.

MULTI AV SYSTEM ON BOARD DIAGNOSIS FUNCTION

- The AV control unit diagnosis function starts up with multifunction switch operation and the AV control unit performs a diagnosis for each unit in the system during the on board diagnosis.
- Perform a CONSULT-III diagnosis if the on board diagnosis does not start, e.g., the screen does not display anything, the multifunction switch does not function, etc.

ON BOARD DIAGNOSIS

Description

- The trouble diagnosis function has a self-diagnosis mode for conducting trouble diagnosis automatically and a confirmation/adjustment mode for operating manually.
- Self-diagnosis mode performs the AV control unit diagnosis and the connection diagnosis between each of the units that make up the system, and it indicates the results to the display.
- The confirmation/adjustment mode allows the technician to check, modify or adjust the vehicle signals and set values, as well as to monitor the system error records and system communication status. The checking, modifying or adjusting actions generally require human intervention and judgment (the system cannot make judgment automatically).

On Board Diagnosis Item

Mode	Description	
Self-Diagnosis	AV control unit diagnosis.Perform the connection diagnosis between each of the units.	

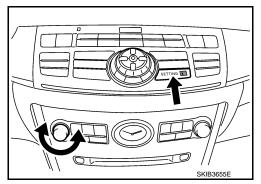

DIAGNOSIS SYSTEM (AV CONTROL UNIT) < FUNCTION DIAGNOSIS > [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

Mode		Description	
	Display Diagnosis	The confirmations of the tint with the color spectrum bar display and shading of color with the gradation bar display can be performed.	
	Vehicle Signals	Diagnosis of signals can be performed for vehicle speed, parking brake, lights, ignition switch, and reverse.	
	Speaker Test	The connection of a speaker can be confirmed by test tone.	
Climate Control		Start auto air conditioner system self-diagnosis.	
Confirmation/ Adjustment	Error History	The system malfunction and the frequency when occurring in the past are displayed. When the malfunctioning item is selected, the time and place that the selected malfunction last occurred are displayed.	
	Vehicle CAN Diagnosis	The transmitting/receiving of CAN communication can be monitored.	
	AV COMM Diagnosis	The communication condition of each unit of Multi AV system can be monitored.	
	Delete Unit Connection Log	Erase the connection history of unit and error history.	
	Initialize Settings	Initializes the AV control unit memory.	

STARTING PROCEDURE

- 1. Start the engine.
- 2. Turn the audio system OFF.
- 3. While pressing the "SETTING" button, turn the volume control dial clockwise or counterclockwise for 40 clicks or more. (When the self-diagnosis mode is started, a short beep will be heard.)
 - Shifting from current screen to previous screen is performed by pressing "BACK" button.

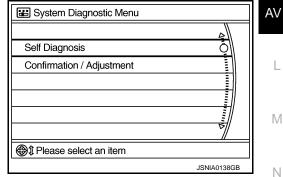

F

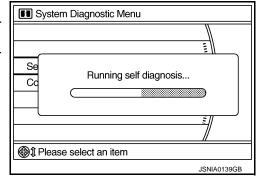

Н

Ρ

SELF-DIAGNOSIS MODE

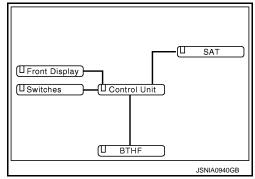

- 1. Start the self-diagnosis function and select "Self-diagnosis".
- Self-diagnosis subdivision screen is displayed, and the selfdiagnosis mode starts.
- The bar graph visible on the center of the self-diagnosis subdivision screen indicates progress of the trouble diagnosis.

DIAGNOSIS SYSTEM (AV CONTROL UNIT) < FUNCTION DIAGNOSIS > [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

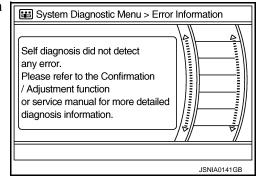

2. Diagnosis results are displayed after the self-diagnosis is completed. The unit names and the connection lines are color-coded according to the diagnostic results.

Diagnosis results	Unit	Con- nection line
Normal	Green	Green
Connection malfunction	Gray	Yellow
Unit malfunction Note	Red	Green

NOTE:

- Only the control unit (AV control unit) is displayed in red.
- Replace AV control unit if "Self-Diagnosis did not run because of a control unit malfunction" is indicated. The symptom is AV control unit internal error.
- If multiple errors occur at the same time for a single unit, the screen switch colors are determined according to the following order of priority: red > gray.
- The comments of the self-diagnosis results can be viewed with a component in the diagnosis result screen.

SELF-DIAGNOSIS RESULTS

Check the applicable display at the following table, and then repair the malfunctioning parts.

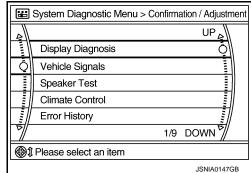

Diagnosis results	Detection logic	Possible malfunction location / Action to take	
Control Unit • unit: red NOTE: When a control unit malfunction is detected (red in unit display), connection malfunctions with other connection unit may be displayed.	Malfunction is detected in AV control unit power supply and ground circuits.	Check AV control unit power supply and ground circuits. When detectiong no malfunction in those components, replace AV control unit.	
"Self-Diagnosis did not run because of a control unit malfunction"			
Front Display • unit: gray • connection line: yellow	 When either one of the following items is detected: serial communication circuits between AV control unit and front display unit are malfunctioning. serial communication signal between AV control unit and front display unit is malfunctioning. 	Serial communication circuits between AV control unit and front display unit.	

DIAGNOSIS SYSTEM (AV CONTROL UNIT) [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

Diagnosis results	Detection logic	Possible malfunction location / Action to take	A
SAT • unit: gray • connection line: yellow	 When either one of the following items is detected: satellite radio tuner power supply and ground circuits are malfunctioning. serial communication circuits between AV control unit and satellite radio tuner are malfunctioning. serial communication or request signal between AV control unit and satellite radio tuner is malfunctioning. request signal circuit between AV control unit and satellite radio tuner is malfunctioning. 	 Satellite radio tuner power supply and ground circuits. Serial communication circuits be- tween AV control unit and satellite ra- dio tuner. Request signal circuit between AV control unit and satellite radio tuner. 	E
BTHF • unit: gray • connection line: yellow	 When either one of the following items is detected: TEL adapter unit power supply and ground circuits are malfunctioning. AV communication circuits between multifunction switch and TEL adapter unit are malfunctioning. AV communication signal between AV control unit and TEL adapter unit is malfunctioning. 	 TEL adapter unit power supply and ground circuits. AV communication circuits between multifunction switch and TEL adapter unit. 	F

CONFIRMATION/ADJUSTMENT MODE

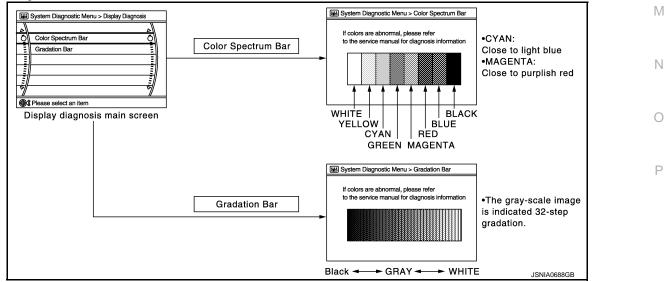

- Start the diagnosis function and select "Confirmation/Adjustment". The confirmation/adjustment mode 1. indicates where each item can be checked or adjusted.
- Select each switch on the "Inspection & Adjustment Mode" 2. screen to display the relevant trouble diagnosis screen. Press the "RETURN" switch to return to the initial Inspection & Adjustment Mode screen.

Н

AV

Display Diagnosis

DIAGNOSIS SYSTEM (AV CONTROL UNIT) [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

The tint of the color bar indication is as per the following list if RGB signal error is detected.

- R (red) signal error : Light blue (Cyan) tint
- G (green) signal error : Purple (Magenta) tint
- B (blue) signal error : Yellow tint

Vehicle Signals

A comparison check can be made of each actual vehicle signal and the signals recognized by the system.

E System Diagnostic M	enu > Vehicle	Signals
	055]

Parking brake	ON	
Lights	OFF	
Ignition	ON	
Reverse	OFF	
		JSNIA0149GB

Diagnosis item	Display	Vehicle status	Remarks	
Vahiala apaad	ON	Vehicle speed > 0 km/h (0 MPH)		
Vehicle speed	OFF	Vehicle speed = 0 km/h (0 MPH)	Changes in indication may be delayed. This is normal.	
Parking brake	ON	Parking brake is applied.	Changes in indication may be delayed. This is normal.	
Faiking blake	OFF	Parking brake is released.		
Lights	ON	Light switch ON.		
Lights	OFF	Light switch OFF.		
Ignition	ON	Ignition switch ON.		
Ignition	OFF	Ignition switch in ACC position.		
Reverse	ON	Shift the selector lever to "R" position.	Changes in indication may be delayed. This is normal.	
IVENELSE	OFF	Shift the selector lever other than "R" position.	Changes in indication may be delayed. This is formal.	

Speaker Test

Select "SPEAKER DIAGNOSIS" to display the Speaker Diagnosis screen. Press "START and NEXT" to generate a test tone in a speaker. Press "Start" to generate a test tone in the next speaker. Press "End" to stop the test tones.

NOTE:

The frequency of test tone emitted from each speaker is as follows.

Front Tweeter	: 3 kHz
Front speaker	: 300 Hz
Rear speaker	: 1 kHz

E System Diagnostic Menu > Spe	eaker Test
Speaker Testing Front Left Tweeter Speaker Settings –	AmmuOpmining
(i) Push start to test next speaker	
	JSNIA0150GB

Climate Control

Refer to "HEATER & AIR CONDITIONING CONTROL SYSTEM" for details.

Error History

The self-diagnosis results are judged depending on whether any error occurs from when "Self-diagnosis" is selected until the self-diagnosis results are displayed.

However, the diagnosis results are judged normal if an error has occurred before the ignition SW is turned ON and then no error has occurred until the self-diagnosis start. Check the "Error Record" to detect any error that may have occurred before the self-diagnosis start because of this situation. Count up method A

DIAGNOSIS SYSTEM (AV CONTROL UNIT) [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

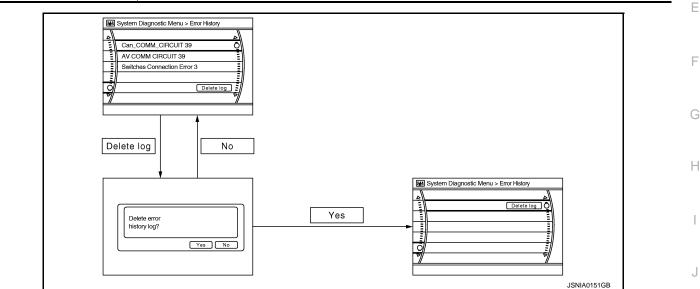

< FUNCTION DIAGNOSIS >

- The counter resets to 0 if an error occurs when IGN switch is turned ON. The counter increases by 1 if the condition is normal at a next IGN ON cycle.
- The counter upper limit is 39. Any counts exceeding 39 are ignored. The counter can be reset (no error record display) with the "Delete log" switch or CONSULT-III.

Count up method B

- The counter increases by 1 if an error occurs when IGN switch is ON. The counter will not decrease even if the condition is normal at the next IGN ON cycle.
- The counter upper limit is 50. Any counts exceeding 50 are ignored. The counter can be reset (no error record display) with the "Delete log" switch or CONSULT-III.

Display type of occur- rence frequency	Error history display item	D

CONSULT-III FUNCTIONS

CONSULT-III performs the following functions via the communication with the AV control unit.

Diagnosis mode	Description
Ecu Identification	The part number of AV control unit can be checked.
Self Diagnostic Result	Performs a diagnosis on the AV control unit and a connection diagnosis for the communication circuit of the Multi AV system, and displays the current and past malfunctions collectively.
Data Monitor	The diagnosis of vehicle signal that is input to the AV control unit can be performed.

AV COMMUNICATION

When "AV communication" of "CAN Diag Support Monitor" is selected, the following function will be performed.

AV communication	AV&NAVI C/U	Displays the communication status from AV control unit to each unit as well as the error counter.
	AUDIO	Displays the AV control unit communication status and the error counter.

DIAGNOSIS SYSTEM (AV CONTROL UNIT) SIS > [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

< FUNCTION DIAGNOSIS >

ECU IDENTIFICATION

The part number of AV control unit is displayed.

SELF DIAGNOSIS RESULT

- In CONSULT-III self-diagnosis, self-diagnosis results and error history are displayed collectively.
- The current malfunction indicates "CRNT". The past malfunction indicates "PAST".
- The timing is displayed as "0" if any of the error codes [U1000], [U1010], [U1300] and [U1310] is detected. The counter increases by 1 if the condition is normal at the next ignition switch ON cycle.

Self-Diagnosis Results Display Item

Error item	Description	Possible malfunction factor/Action to take	
CAN COMM CIRCUIT [U1000]	CAN communication malfunction is detect- ed.	Perform diagnosis with CONSULT-III, and then repair the malfunctioning parts accord- ing to the diagnosis results. Refer to <u>AV-78</u> , "Diagnosis Procedure".	
CONTROL UNIT (CAN) [U1010]	CAN initial diagnosis malfunction is detected.

DIAGNOSIS SYSTEM (AV CONTROL UNIT) (WITHOUT MOBILE ENTERTAINMENT SYSTEM)

The ON/OFF operation (continuity) of each switch in the multifunction switch and preset switch can be checked.

Self-Diagnosis Mode

- Press the "BACK (A)" switch and the "
 (B)" switch of the 8-direction switches within 10 seconds after turning the ignition switch from OFF to ACC and hold them for 3 seconds or more. Then the buzzer sounds, all indicators of the preset switch illuminate, and the self-diagnosis mode starts.
- The continuity of each switch at the ON position can be checked by pressing the switch. The buzzer sounds if the switch is normal. **NOTE:**

The hazard switch and CD eject switch cannot be checked.

Finishing Self-Diagnosis Mode

Self-diagnosis mode is canceled when turning the ignition switch OFF.

MULTI AV SYSTEM ON BOARD DIAGNOSIS FUNCTION

- The AV control unit diagnosis function starts up with multifunction switch operation and the AV control unit performs a diagnosis for each unit in the system during the on board diagnosis.
- Perform a CONSULT-III diagnosis if the on board diagnosis does not start, e.g., the screen does not display anything, the multifunction switch does not function, etc.

ON BOARD DIAGNOSIS

Description

- The trouble diagnosis function has a self-diagnosis mode for conducting trouble diagnosis automatically and a confirmation/adjustment mode for operating manually.
- The self-diagnosis mode performs diagnoses on the AV control unit, connections between system components as well as connections between AV control unit and GPS antenna and between AV control unit and satellite radio antenna. Then it displays the diagnosis results on the display.
- The confirmation/adjustment mode allows the technician to check, modify or adjust the vehicle signals and set values, as well as to monitor the system error records and system communication status. The checking, modifying or adjusting generally require human intervention and judgment (the system cannot make judgment automatically).

On board diagnosis item

Mode	Description	
Self-Diagnosis	 AV control unit diagnosis. Diagnoses the connections across system components, between AV control unit and GPS antenna and between AV control unit and satellite radio antenna. 	

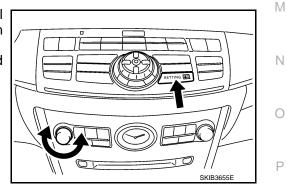

DIAGNOSIS SYSTEM (AV CONTROL UNIT) SIS > [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

< FUNCTION DIAGNOSIS > [WITHOUT MOBILE ENTERT/

Mode			Description	
	Display Diagnosis		The following check functions are available: color tone check by color bar display, light and shade check by gray scale display and touch panel calibration response check.	
	Vehicle Signals		Diagnosis of signals can be performed for vehicle speed, parking brake, lights, ignition switch, and reverse.	
	Speaker Test		The connection of a speaker can be confirmed by test tone.	
	Climate Control		Start auto air conditioner system self-diagnosis.	
		Steering Angle Ad- justment	When there is a difference between the actual turning angle and the vehicle mark turning angle, it can be adjusted.	
	Navigation	Speed Calibration	When there is a difference between the current location mark and the ac- tual location, it can be adjusted.	
		XM SAT Subscrip- tion Status	The XM NavTraffic subscription status can be checked.	
Confirmation/	Error History		The system malfunction and the frequency when occurring in the past are displayed. When the malfunctioning item is selected, the time and place that the selected malfunction last occurred are displayed.	
Adjustment	Vehicle CAN Diagno	osis	The transmitting/receiving of CAN communication can be monitored.	
	AV COMM Diagnosis		The communication condition of each unit of Multi AV system can be monitored.	
	Handsfree Phone		The received volume adjustment of hands-free phone, microphone speaker check, and erase memory can be performed.	
	Camera Cont.		The signal connected to camera control unit can be checked and the guiding line position that overlaps rear view camera image can be adjusted.	
	Bluetooth		The passkey and the device name can be checked and changed.	
	SAT Change Channel ID		Any necessary channels required to receive traffic information from the satellite radio system can be set.	
			Any application ID's required to receive traffic information from the satel- lite radio system can be set.	
		Diag	Not used.	
	Delete Unit Connec	tion Log	Erase the connection history of unit and error history.	
	Initialize Settings		Initializes the AV control unit memory.	

STARTING PROCEDURE

- 1. Start the engine.
- 2. Turn the audio system OFF.
- 3. While pressing the "SETTING" button, turn the volume control dial clockwise or counterclockwise for 40 clicks or more. (When the self-diagnosis mode is started, a short beep will be heard.)
 - Shifting from current screen to previous screen is performed by pressing "BACK" button.

L

DIAGNOSIS SYSTEM (AV CONTROL UNIT) [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

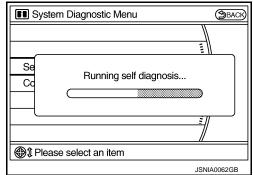

< FUNCTION DIAGNOSIS >

4. The trouble diagnosis initial screen is displayed, and then the items of "Self Diagnosis" and "Confirmation/Adjustment" can be selected.

System Diagnostic Menu	Эваск
Self Diagnosis	Ō
Confirmation / Adjustment	
	//
Please select an item	
	JSNIA0061GB

SELF-DIAGNOSIS MODE

- 1. Start the self-diagnosis function and select "Self Diagnosis".
- Self-diagnosis subdivision screen is displayed, and the selfdiagnosis mode starts.
- The bar graph visible on the center of the self-diagnosis subdivision screen indicates progress of the trouble diagnosis.

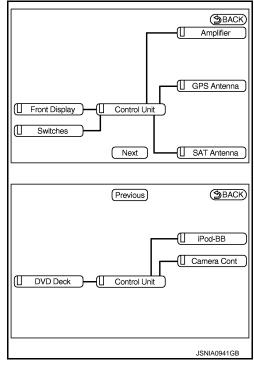

2. Diagnosis results are displayed after the self-diagnosis is completed. The unit names and the connection lines are color-coded according to the diagnostic results.

Diagnosis results	Unit	Con- nection line
Normal	Green	Green
Connection malfunction	Gray	Yellow
Unit malfunction Note	Red	Green

NOTE:

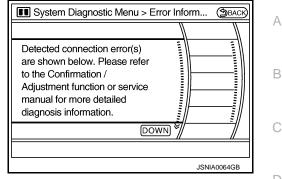

- Only the control unit (AV control unit) is displayed in red.
- Replace AV control unit if "Self-Diagnosis did not run because of a control unit malfunction" is indicated. The symptom is AV control unit internal error. Refer to <u>AV-482</u>, "Exploded View".
- If multiple errors occur at the same time for a single unit, the screen switch colors are determined according to the following order of priority: red > gray.

DIAGNOSIS SYSTEM (AV CONTROL UNIT) SIS > [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

< FUNCTION DIAGNOSIS >

- The comments of the self-diagnosis results can be viewed with a component in the diagnosis result screen.

SELF-DIAGNOSIS RESULTS

Check the applicable display at the following table, and then repair the malfunctioning parts.

Diagnosis results	Detection logic	Possible malfunction location / Action to take Check AV control unit power supply and ground circuits. When detecting no malfunction in those components, replace AV control unit.	
Control unit • unit: red NOTE: When a control unit malfunction is detected (red in unit display), connection malfunctions with other connection unit may be displayed. "Self-Diagnosis did not run because of a control unit malfunction"	Malfunction is detected in AV control unit power supply and ground circuits.		
Front Display • unit: gray • connection line: yellow	 When either one of the following items is detected: serial communication circuits between AV control unit and front display unit are malfunctioning. serial communication signal between AV control unit and front display unit is malfunctioning. XM SAT SUBSCRIPTION STATUS

The XM NavTraffic subscription status can be checked.

Error History

The self-diagnosis results are judged depending on whether any error occurs from when "Self-diagnosis" is selected until the self-diagnosis results are displayed.

However, the diagnosis results are judged normal if an error has occurred before the ignition SW is turned ON and then no error has occurred until the self-diagnosis start. Check the "Error Record" to detect any error that may have occurred before the self-diagnosis start because of this situation.

The error record displays the time and place of the most recent occurrence of that error. However, take note of the following points.

- If there is a malfunction with the GPS antenna circuit board in the AV control unit, the correct date and time of occurrence may not be able to be displayed.
- Place of the error occurrence is represented by the position of the current location mark at the time an error occurred. If current location mark has deviated from the correct position, then the place of the error occurrence cannot be located correctly.
- The frequency of occurrence is displayed in a count up manner. The actual count up method differs depending on the error item.

Count up method A

- The counter resets to 0 if an error occurs when IGN switch is turned ON. The counter increases by 1 if the condition is normal at a next IGN ON cycle.
- The counter upper limit is 39. Any counts exceeding 39 are ignored." The counter can be reset (no error record display) with the "Delete log" switch or CONSULT-III.

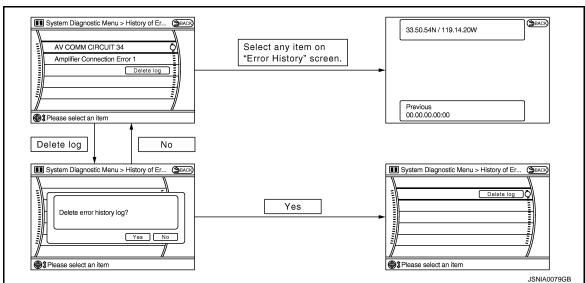

Count up method B

- The counter increases by 1 if an error occurs when IGN switch is ON. The counter will not decrease even if the condition is normal at the next IGN ON cycle.
- The counter upper limit is 50. Any counts exceeding 50 are ignored. "The counter can be reset (no error record display) with the "Delete log" switch or CONSULT-III.

AV COMM Diagnosis

- Displays the communication status between AV control unit (master unit) and each unit.
- The error counter displays "OK" if any malfunction was not detected in the past and displays "0" if a malfunction is detected. It increases by 1 if the condition is normal at the next ignition switch ON cycle. The upper limit of the counter is 39.
- The error counter is erased if "Reset" is pressed.

WITH NAVIGATION : CONSULT-III Function (MULTI AV)

INFOID:000000005350167

CONSULT-III FUNCTIONS

CONSULT-III performs the following functions via the communication with the AV control unit.

Diagnosis mode	Description	
Ecu Identification	The part number of AV control unit can be checked.	
Self Diagnostic Result	Performs a diagnosis on the AV control unit and a connection diagnosis for the communication circuit of the Multi AV system, and displays the current and past malfunctions collectively.	
Data Monitor	The diagnosis of vehicle signal that is input to the AV control unit can be performed.	

AV COMMUNICATION

When "AV communication" of "CAN Diag Support Monitor" is selected, the following function will be performed.

AV communication	AV&NAVI C/U	Displays the communication status from AV control unit to each unit as well as the error counter.
	AUDIO	Displays the AV control unit communication status and the error counter.

ECU IDENTIFICATION

The part number of AV control unit is displayed.

SELF DIAGNOSIS RESULT

- In CONSULT-III self-diagnosis, self-diagnosis results and error history are displayed collectively.
- The current malfunction indicates "CRNT". The past malfunction indicates "PAST".
- The timing is displayed as "0" if any of the error codes [U1000], [U1010], [U1300] and [U1310] is detected. The counter increases by 1 if the condition is normal at the next ignition switch ON cycle.

Self-diagnosis results display item

DIAGNOSIS SYSTEM (TEL ADAPTER UNIT) SIS > [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

< FUNCTION DIAGNOSIS >

DIAGNOSIS SYSTEM (TEL ADAPTER UNIT)

Diagnosis Description

HANDS-FREE PHONE SYSTEM ON BOARD DIAGNOSIS

During on board diagnosis the diagnosis function of TEL adapter unit starts with the operation of the steering switch and performs the diagnosis when ignition switch ACC.

ON BOARD DIAGNOSIS ITEM

The on board diagnosis has 3 modes: the self-diagnosis mode that performs the trouble diagnosis, the speaker adaptation data deleting mode and the hands-free phone system initialization mode.

CAUTION:

- Perform the diagnosis with the vehicle stopped.
- Perform STEP2 if necessary.

STEP	MODE	Description
STEP1	Self-diagnosis	The self-diagnosis mode performs the microphone test and the diagnosis of TEL adapter unit, TEL antenna and steering unit, and then reads out the results with the sound and indi- cates them on the display.
STEP2	Speaker adaptation data deleting	The speaker adaptation data deleting mode can delete the speaker adaptation data.
	Hands-free phone system initialization	Hands-free phone system initialization mode can perform the initialization of hands-free phone system.

SELF-DIAGNOSIS RESULTS

Self-diagnosis mode reads out the self-diagnosis results and indicates DTC on the display. **NOTE:**

- Error count is read out simultaneously when reading out the DTC name.
- The errors are read out continuously when some errors occur at the same time. The DTC displays are combined and displayed. For example, DTC 01100 is displayed when DTC 01000 and DTC 00100 are indicated at the same time.

DTC	DTC name	Possible causes
DTC 10000	INTERNAL FAILURE	TEL adapter unit
DTC 01000	ANT. SHORT TO BATT OR OPEN	TEL antenna
DTC 00100	ANT. SHORT TO GROUND	
DTC 00010	STEERING REMOTE BUTTON STUCK A	Steering switch
DTC 00001	STEERING REMOTE BUTTON STUCK B	Sieening Switch
DTC 00000	THERE ARE NO FAILURE RECORDS TO REPORT	_

The details of error count

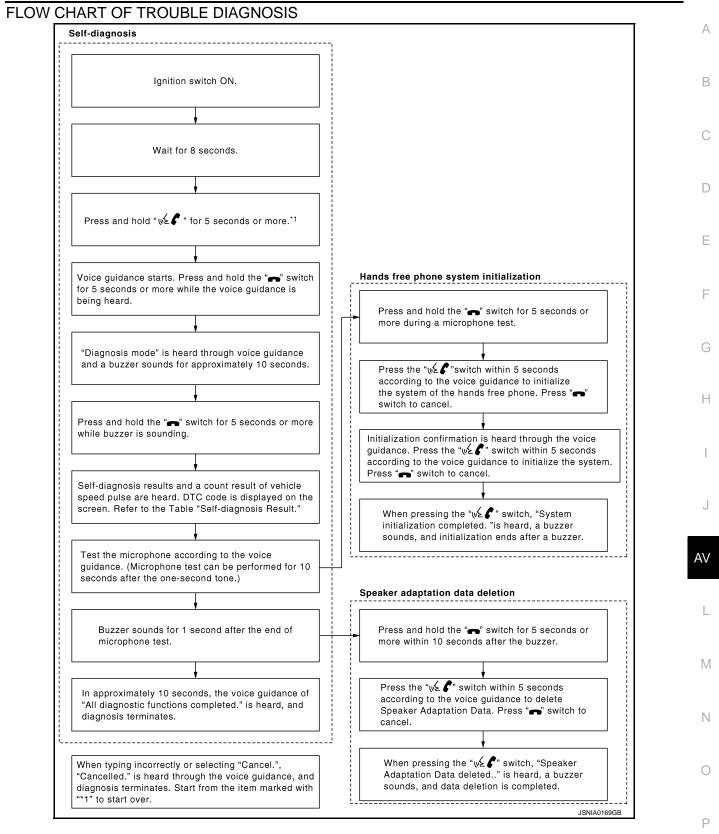

Salf-diagnosis results

The error count guides "0" when the error occurs. The next time it counts up "1" if it is normal with the ignition switch ON. It continues the count up unless the initialization of hands-free phone system is performed.

COMPONENT DIAGNOSIS U1000 CAN COMM CIRCUIT

Description

INFOID:000000005350169

CAN (Controller Area Network) is a serial communication line for real-time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independently). In CAN communication, control units are connected with 2 communication lines (CAN-H, CAN-L) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Signal Chart. Refer to LAN-29, "CAN Communication Signal Chart".

DTC Logic

U1218 AV CONTROL UNIT [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

< COMPONENT DIAGNOSIS >

U1218 AV CONTROL UNIT

Description

INFOID:000000005350191

Replace the AV control unit if this DTC is displayed. Refer to AV-482, "Exploded View".

Part name	Description
AV CONTROL UNIT	 Integrates hard disk drive (HDD) allowing map data and music data to be stored. It is the master unit of the MULTI AV system, and it is connected to each contro unit by communication. It operates each system according to communication signals from the AV control unit. The AV control unit includes the audio, hands-free phone, voice control, navigation, satellite radio, and vehicle information functions. It is connected to ECM and unified meter and A/C amp. via CAN communication to obtain necessary information for the vehicle information function. It is connected to BCM via CAN communication transmitting/receiving for the vehicle settings function. It is connected to the steering angle sensor and receives the steering angle signal via CAN communication. It inputs the illumination signals that are required for the front display dimming control. It inputs the signals for driving status recognition (vehicle speed, reverse and parking brake). Update of map data is performed with the CONSULT-III and the applicable ca ble. It includes the TEL adapter and Bluetooth[™] function.

DTC Logic

YES >> GO TO 2.

NO

>> Repair harness or connector.

2. CHECK AV CONTROL UNIT VOLTAGE

- 1. Connect AV control unit connector.
- 2. Turn ignition switch ON.
- 3. Check voltage between AV control unit harness connector terminal 40 and ground.

40 - Ground

: Approx. 5 V

Is the inspection result normal?

- YES >> Replace camera control unit.
- NO >> Replace AV control unit.

COMPONENT DIAGNOSIS > [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

U1255 SATELLITE RADIO TUNER

Description

INFOID:000000005350234

Part name SATELLITE RADIO TUNER		Description	
		 Inputs the satellite radio signal from satellite radio antenna and outputs it to the AV control unit. It is controlled with the communication (communication signal, request signal) from AV control unit. 	
DTC L	ogic	INFOID:00000005350238	i
DTC	Display contents of CONSULT-III	DTC Detection Condition Possible causes	I
U1255	SAT CONN [U1255]	 When either one of the following items is detected: satellite radio tuner power supply and ground circuits are malfunctioning. serial communication circuits between AV control unit and satellite radio tuner are malfunctioning. serial communication or request signal between AV control unit and satellite radio tuner is malfunctioning. request signal circuit between AV control unit and satellite radio tuner is malfunctioning. request signal circuit between AV control unit and satellite radio tuner is malfunctioning.

U1300 AV COMM CIRCUIT WITHOUT NAVIGATION

WITHOUT NAVIGATION : Description

INFOID:000000005350240

U1300 is indicated when malfunction occurs in communication signal of multi AV system. Indicated simultaneously, without fail, with the malfunction of control units connected to AV control unit with communication line. Determine the possible malfunction cause from the table below.

SELF-DIAGNOSIS RESULTS DISPLAY ITEM

DTC	Display contents of CONSULT-III	DTC Detection Condition	Possible causes
U1300 U1240	 AV COMM CIRCUIT [U1300] SWITCH CONN [U1240] 	 When either one of the following items is detected: multifunction switch power supply and ground circuits are malfunctioning. AV communication signal between AV control unit and multifunction switch is malfunctioning. 	Multifunction switch power supply and ground circuits.
U1300 U1256	 AV COMM CIRCUIT [U1300] HAND FREE CONN [U1256] 	 When either one of the following items is detected: TEL adapter unit power supply and ground circuits are malfunctioning. AV communication circuits between AV control unit and TEL adapter unit are malfunctioning. AV communication signal between AV control unit and TEL adapter unit is malfunctioning. 	 TEL adapter unit power supply and ground circuits. AV communication circuits between multifunction switch and TEL adapter unit.
U1300 U1240 U1256	 AV COMM CIRCUIT [U1300] SWITCH CONN [U1240] HAND FREE CONN [U1256] 	Malfunction is detected in AV communication circuits.	 AV communication circuits be- tween AV control unit and multi- function switch. Check and repair the short circuit in AV communication circuits.

WITH NAVIGATION

WITH NAVIGATION : Description

INFOID:000000005350241

U1300 is indicated when malfunction occurs in communication signal of multi AV system. Indicated simultaneously, without fail, with the malfunction of control units connected to AV control unit with communication line. Determine the possible malfunction cause from the table below.

SELF-DIAGNOSIS RESULTS DISPLAY ITEM

DTC	Display contents of CONSULT-III	Description	Possible malfunction factor/Action to take
U1300 U121F	 AV COMM CIRCUIT [U1300] INTERNAL COMM [U121F] 	Malfunction is detected in AV control unit power supply and ground circuits.	Check AV control unit power supply and ground circuits. When detecting no malfunction in those components, re- place AV control unit.
U1300 U1240	 AV COMM CIRCUIT [U1300] SWITCH CONN [U1240] 	 When either one of the following items is detected: multifunction switch power supply and ground circuits are malfunctioning. AV communication signal between AV control unit and multifunction switch is malfunctioning. 	Multifunction switch power supply and ground circuits.
U1300 U1248	 AV COMM CIRCUIT [U1300] DVD DECK CONN [U1248] 	When either one of the following items is detected:DVD player power supply and ground circuits.AV communication signal between AV control unit and DVD player.	DVD player power supply and ground circuits.

< COMPONENT DIAGNOSIS >

U1300 AV COMM CIRCUIT [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

DTC	Display contents of CONSULT-III	Description	Possible malfunction factor/Action to take
U1300 U124E	 AV COMM CIRCUIT [U1300] AMP CONN [U124E] 	 When either one of the following items is detected: BOSE amp. power supply and ground circuits are malfunctioning. AV communication signal between AV control unit and BOSE amp. is malfunctioning. 	BOSE amp. power supply and ground circuits.
U1300 U1252	 AV COMM CIRCUIT [U1300] REAR CAMERA LAN CONN [U1252] 	 When either one of the following items is detected: camera control unit power supply and ground circuits are malfunctioning. AV communication signal between AV control unit and camera control unit is malfunctioning. 	Camera control unit power supply and ground circuits.
U1300 U1254	 AV COMM CIRCUIT [U1300] IPod CONN [U1254] 	 When either one of the following items is detected: iPod adapter power supply and ground circuits are malfunctioning. AV communication circuits between camera control unit and iPod adapter are malfunctioning. AV communication signal between AV control unit and iPod adapter is malfunctioning. 	 iPod adapter power supply and ground circuits. AV communication circuits between camera control unit and iPod adapter.
U1300 U1252 U1254	 AV COMM CIRCUIT [U1300] REAR CAMERA LAN CONN [U1252] IPod CONN [U1254] 	Malfunction is detected in AV communication circuits be- tween BOSE amp. and camera control unit.	AV communication circuits between BOSE amp. and camera control unit.
U1300 U124E U1252 U1254	 AV COMM CIRCUIT [U1300] AMP CONN [U124E] REAR CAMERA LAN CONN [U1252] IPod CONN [U1254] 	 Without DVD player models Malfunction is detected in AV communication circuits between multifunction switch and BOSE amp. are malfunctioning. With DVD player models Malfunction is detected in AV communication circuits between DVD player and BOSE amp. are malfunctioning. 	 Without DVD player models AV communication circuits between multifunction switch and BOSE amp. With DVD player models AV communication circuits between DVD player and BOSE amp.
U1300 U1248 U124E U1252 U1254	 AV COMM CIRCUIT [U1300] DVD DECK CONN [U1248] AMP CONN [U124E] REAR CAMERA LAN CONN [U1252] IPod CONN [U1254] 	Malfunction is detected in AV communication circuits be- tween multifunction switch and DVD player.	AV communication circuits between multifunction switch and DVD player.
U1300 U124E U1252 U1254	Without DVD player models • AV COMM CIRCUIT [U1300] • SWITCH CONN [U1240] • AMP CONN [U124E] • REAR CAMERA LAN CONN [U1252] • IPod CONN [U1254]		
U1300 U1240 U1248 U124E U1252 U1254	With DVD player models • AV COMM CIRCUIT [U1300] • SWITCH CONN [U1240] • DVD DECK CONN [U1248] • AMP CONN [U124E] • REAR CAMERA LAN CONN [U1252] • IPod CONN [U1254]	Malfunction is detected in AV communication circuits be- tween AV control unit and multifunction switch.	AV communication circuits between AV control unit and multifunction switch.

RGB (R: RED) SIGNAL CIRCUIT (AV CONTROL UNIT TO FRONT DISPLAY UNIT)

< COMPONENT DIAGNOSIS >

[WITHOUT MOBILE ENTERTAINMENT SYSTEM]

RGB (R: RED) SIGNAL CIRCUIT (AV CONTROL UNIT TO FRONT DISPLAY UNIT)

WITHOUT NAVIGATION

WITHOUT NAVIGATION : Description

INFOID:000000005350251

Transmit the image displayed with AV control unit with RGB image signal to the front display unit.

WITHOUT NAVIGATION : Diagnosis Procedure

INFOID:000000005350252

1.CHECK CONTINUITY RGB (R: RED) SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect front display unit connector and AV control unit connector.
- 3. Check continuity between front display unit harness connector terminal 17 and AV control unit harness connector terminal 40.

17 - 40

: Continuity should exist.

4. Check continuity between front display unit harness connector terminal 17 and ground.

17 - Ground

: Continuity should not exist.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair harness or connector.

2.CHECK RGB (R: RED) SIGNAL

1. Connect front display unit connector and AV control unit connector.

2. Turn ignition switch ON.

3. Check signal between front display unit harness connector terminal 17 and ground.

Terminal		Condition	Reference value
17 - Ground	Ignition switch ON	Start confirmation/adjustment mode, and then display color bar by selecting "Color Spectrum Bar" on DISPLAY DIAGNOSIS screen.	$ \begin{pmatrix} (V) \\ 0, 4 \\ 0 \\ -0, 4 \\ \hline \\$

Is the inspection result normal?

YES >> Replace display unit.

NO >> Replace AV control unit.

WITH NAVIGATION

WITH NAVIGATION : Description

INFOID:000000005350253

Transmit the image displayed with AV control unit with RGB image signal to the front display unit.

WITH NAVIGATION : Diagnosis Procedure

INFOID:000000005350254

1.CHECK CONTINUITY RGB (R: RED) SIGNAL CIRCUIT

1. Turn ignition switch OFF.

3. Check continuity between front display unit harness connector terminal 17 and AV control unit harness connector terminal 93.

: Continuity should exist.

^{2.} Disconnect front display unit connector and AV control unit connector.

RGB (R: RED) SIGNAL CIRCUIT (AV CONTROL UNIT TO FRONT DISPLAY UNIT)

< COMPONENT DIAGNOSIS >

[WITHOUT MOBILE ENTERTAINMENT SYSTEM]

4. Check continuity between front display unit harness connector terminal 17 and ground.

17 - Ground

: Continuity should not exist.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair harness or connector.

2.CHECK RGB (R: RED) SIGNAL

1. Connect front display unit connector and AV control unit connector.

2. Turn ignition switch ON.

3. Check signal between front display unit harness connector terminal 17 and ground.

Terminal		Condition	Reference value	
17 - Ground	Ignition switch ON	Start confirmation/adjustment mode, and then display color bar by selecting "Color Spectrum Bar" on DISPLAY DIAGNOSIS screen.	$\begin{pmatrix} V \\ 0.8 \\ 0.4 \\ 0 \\ \hline \\ 0 \\ \hline \\ 0 \\ \hline \\ \\ \\ \\ \\ \\ \\ \\$	

Is the inspection result normal?

YES >> Replace front display unit.

NO >> Replace AV control unit.

RGB (G: GREEN) SIGNAL CIRCUIT (AV CONTROL UNIT TO FRONT DISPLAY UNIT)

< COMPONENT DIAGNOSIS >

[WITHOUT MOBILE ENTERTAINMENT SYSTEM]

RGB (G: GREEN) SIGNAL CIRCUIT (AV CONTROL UNIT TO FRONT DIS-PLAY UNIT) WITHOUT NAVIGATION

WITHOUT NAVIGATION

WITHOUT NAVIGATION : Description

INFOID:000000005350255

Transmit the image displayed with AV control unit with RGB image signal to the front display unit.

WITHOUT NAVIGATION : Diagnosis Procedure

INFOID:000000005350256

1.CHECK CONTINUITY RGB (G: GREEN) SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect front display unit connector and AV control unit connector.
- 3. Check continuity between front display unit harness connector terminal 6 and AV control unit harness connector terminal 39.

6 - 39

: Continuity should exist.

4. Check continuity between front display unit harness connector terminal 6 and ground.

6 - Ground

: Continuity should not exist.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair harness or connector.

2.CHECK RGB (G: GREEN) SIGNAL

1. Connect front display unit connector and AV control unit connector.

- 2. Turn ignition switch ON.
- 3. Check signal between front display unit harness connector terminal 6 and ground.

Terminal		Condition	Reference value
6 - Ground	Ignition switch ON	Start confirmation/adjustment mode, and then display color bar by selecting "Color Spectrum Bar" on DISPLAY DIAGNOSIS screen.	(V) 0.4 0 -0.4 (V) 0 0 0 0 0 0 0 0 0 0 0 0 0

Is the inspection result normal?

YES >> Replace front display unit.

NO >> Replace AV control unit.

WITH NAVIGATION

WITH NAVIGATION : Description

INFOID:000000005350257

Transmit the image displayed with AV control unit with RGB image signal to the front display unit.

WITH NAVIGATION : Diagnosis Procedure

INFOID:000000005350258

1.CHECK CONTINUITY RGB (G: GREEN) SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect front display unit connector and AV control unit connector.
- 3. Check continuity between front display unit harness connector terminal 6 and AV control unit harness connector terminal 94.

: Continuity should exist.

RGB (G: GREEN) SIGNAL CIRCUIT (AV CONTROL UNIT TO FRONT DISPLAY UNIT)

< COMPONENT DIAGNOSIS >

[WITHOUT MOBILE ENTERTAINMENT SYSTEM]

4. Check continuity between front display unit harness connector terminal 6 and ground.

6 - Ground

: Continuity should not exist.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair harness or connector.

2.CHECK RGB (G: GREEN) SIGNAL

1. Connect front display unit connector and AV control unit connector.

2. Turn ignition switch ON.

3. Check signal between front display unit harness connector terminal 6 and ground.

Terminal		Condition	Reference value
6 - Ground	lgnition switch ON	Start confirmation/adjustment mode, and then display color bar by selecting "Color Spectrum Bar" on DISPLAY DIAGNOSIS screen.	$\begin{pmatrix} V \\ 0.8 \\ 0.4 \\ 0 \\ \hline \bullet \bullet \bullet 40 \\ \mu S \\ JSNIA1030ZZ \\ \end{bmatrix}$

Is the inspection result normal?

YES >> Replace front display unit.

NO >> Replace AV control unit.

RGB (B: BLUE) SIGNAL CIRCUIT (AV CONTROL UNIT TO FRONT DISPLAY UNIT)

< COMPONENT DIAGNOSIS >

[WITHOUT MOBILE ENTERTAINMENT SYSTEM]

RGB (B: BLUE) SIGNAL CIRCUIT (AV CONTROL UNIT TO FRONT DIS-PLAY UNIT) WITHOUT NAVIGATION

WITHOUT NAVIGATION : Description

INFOID:000000005350259

Transmit the image displayed with AV control unit with RGB image signal to the front display unit.

WITHOUT NAVIGATION : Diagnosis Procedure

INFOID:000000005350260

1.CHECK CONTINUITY RGB (B: BLUE) SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect front display unit connector and AV control unit connector.
- 3. Check continuity between front display unit harness connector terminal 18 and AV control unit harness connector terminal 38.

18 - 38

: Continuity should exist.

4. Check continuity between front display unit harness connector terminal 18 and ground.

18 - Ground

: Continuity should not exist.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair harness or connector.

2.CHECK RGB (B: BLUE) SIGNAL

1. Connect front display unit connector and AV control unit connector.

2. Turn ignition switch ON.

3. Check signal between front display unit harness connector terminal 18 and ground.

Terminal		Condition	Reference value
18 - Ground	Ignition switch ON	Start confirmation/adjustment mode, and then display color bar by selecting "Color Spectrum Bar" on DISPLAY DIAGNOSIS screen.	(V) 0.4 0 -0.4 (V) 0 0 0 0 0 0 0 0 0 0 0 0 0

Is the inspection result normal?

MICROPHONE SIGNAL CIRCUIT

< COMPONENT DIAGNOSIS >

MICROPHONE SIGNAL CIRCUIT WITHOUT NAVIGATION

WITHOUT NAVIGATION : Description

Supply power from TEL adapter unit to microphone. The microphone transmits the sound/voice to the microphone.

WITHOUT NAVIGATION : Diagnosis Procedure

INFOID:000000005350286

INFOID-000000005350285

1. CHECK CONTINUITY BETWEEN TEL ADAPTER UNIT AND MICROPHONE CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect TEL adapter unit connector and microphone connector.
- 3. Check continuity between TEL adapter unit harness connector terminals 7, 8, 29 and microphone harness connector terminals 1, 2, 4.

7 - 1	: Continuity should exist.
8 - 2	: Continuity should exist.
29 - 4	: Continuity should exist.

4. Check continuity between TEL adapter unit harness connector terminals 7, 29 and ground.

7, 29 - Ground

: Continuity should not exist.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair harness or connector.

2. CHECK VOLTAGE MICROPHONE VCC

- 1. Connect TEL adapter unit connector.
- 2. Turn ignition switch ON.
- 3. Check voltage between TEL adapter unit harness connector terminal 29 and 8.

29 - 8 : Approx. 5 V

Is the inspection result normal?

YES >> GO TO 3.

NO >> Replace TEL adapter unit.

 ${\it 3.}$ CHECK MICROPHONE SIGNAL

1. Connect microphone connector.

2. Check signal between TEL adapter unit harness connector terminals 7 and 8.

Terminal		Condition	Reference value	
7 - 8	Ignition switch Giv ON	e a voice.	(V) 2.5 2.0 1.5 1.0 0.5 0 • • 2ms PKiB5037J	

Is the inspection result normal?

YES >> Replace TEL adapter unit.

NO >> Replace microphone.

AUDIOPILOT® MICROPHONE

< COMPONENT DIAGNOSIS >

AUDIOPILOT® MICROPHONE

BOSE AUDIO 2CH SYSTEM

BOSE AUDIO 2CH SYSTEM : Description

The microphone transmits the microphone signal to the BOSE amp.

BOSE AUDIO 2CH SYSTEM : Diagnosis Procedure

1.CHECK CONTINUITY BETWEEN BOSE AMP. AND AUDIOPILOT[®] MICROPHONE CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect BOSE amp. connector and AudioPilot[®]microphone connector.
- 3. Check continuity between BOSE amp. harness connector terminals 25, 26 and AudioPilot[®]microphone harness connector terminals 1, 2.

25 - 1	: Continuity should exist.
26 - 2	: Continuity should exist.

4. Check continuity between BOSE amp. harness connector terminals 25, 26 and ground.

25, 26 - Ground

: Continuity should not exist.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair harness or connector.

2. CHECK VOLTAGE MICROPHONE VCC

- 1. Connect BOSE amp. connector.
- 2. Turn ignition switch ON.
- 3. Check voltage between BOSE amp. harness connector terminals 25 and ground.

25 - Ground

: Approx. 5 V

Is the inspection result normal?

YES >> GO TO 3.

NO >> Replace BOSE amp.

3.CHECK MICROPHONE SIGNAL

- 1. Turn ignition switch OFF.
- 2. Connect AudioPilot[®]microphone connector.
- 3. Turn ignition switch ON.
- 4. Check signal between BOSE amp. harness connector terminals 25 and 26.

Terminal		Condition	Reference value	
25 - 26	Ignition switch ON	When inputting noise.	(V) 4 0 + 2ms (reference value) PKIA2104E	

Is the inspection result normal?

YES >> Replace BOSE amp.

NO >> Replace AudioPilot[®]microphone.

CAMERA ON SIGNAL CIRCUIT

< COMPONENT DIAGNOSIS >

CAMERA ON SIGNAL CIRCUIT

Description

- Camera control unit outputs camera ON signal to rear view camera and inputs rear view camera image signal from rear view camera when the reverse signal is input.
- The camera control unit that inputs the camera image signal transmits the camera image signal to the front display unit.

Diagnosis Procedure

INFOID:000000005350298

INFOID:000000005350297

[WITHOUT MOBILE ENTERTAINMENT SYSTEM]

1. CHECK CONTINUITY CAMERA ON SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect camera control unit connector and rear view camera connector.
- 3. Check continuity between camera control unit harness connector terminal 8 and rear view camera harness connector terminal 1.

8 - 1 : Continuity should exist.

4. Check continuity between camera control unit harness connector terminal 8 and ground.

8 - Ground

: Continuity should not exist.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair harness or connector.

2. CHECK VOLTAGE CAMERA ON SIGNAL

- 1. Connect camera control unit connector and rear view camera connector.
- 2. Turn ignition switch ON.
- 3. Check signal between camera control unit harness connector terminal 8 and ground.

8 - Ground

Shift the selector lever to "R" position : Approx. 6 V

Is the inspection result normal?

- YES >> Replace rear view camera.
- NO >> Replace camera control unit.

WITH NAVIGATION : Fail-Safe

INFOID:000000005350328

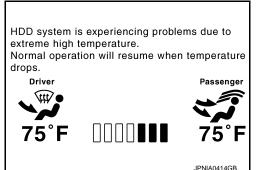

When the ambiance temperature becomes extremely low or extremely high, or when HDD is malfunctioning, AV control unit displays the message and limits the AV control unit function.

FAIL-SAFE CONDITIONS

- When the ambiance temperature is -20°C (-4°F) or lower, or when it is 70°C (158°F) or higher
- When HDD is malfunctioning

AV-218

The messages displayed on fail-safe conditions are as shown below:

А

В

D

Fail-safe mode	Display (display of the fail-safe condition)	E
When HDD temperature is low	HDD system is experiencing problems due to extreme low temperature. Normal operation will resume when temperature rises.	
When HDD temperature is high	HDD system is experiencing problems due to extreme high temperature. Normal operation will resume when temperature drops.	F
When HDD is malfunctioning	HDD system is not functioning. Please contact your dealer for assistance.	G

DESCRIPTION OF CONTROLS

Function		When Fail-safe Function is activated	н		
	Operation	Only multifunction switch (preset switch) can be operated.			
Air conditioner Display		LED of multifunction switch (preset switch) illuminates. Aimed temperature, blow angle, and flow rate are displayed in simplified mode.			
Audio	Operation	Only ON/OFF and volume control operations by multifunction switch (preset switch) are possible.			
Audio	Display	lo display ("Fail-safe mode" is displayed)			
Camera	Operation	Image tone cannot be controlled.			
Camera	Display	Cannot be superimposed. (warning display, tone control display)			
Hands-free phone Operation		Cannot be operated.	AV		
Navigation Operation C		Cannot be operated.	-		
Self diagnosis		The display in simplified mode of fail-safe condition	L		
CONSULT-III diagnosis		Cannot be operated.			

Ability Operation Mode

There is an ability operation mode for Fail-safes due to low or high ambiance temperature. If HDD data can be read, fail-safe is shown, then normal displays are displayed only for functions which can be operated.

RELEASE CONDITIONS OF FAIL-SAFE

Fail-safe is released on following conditions and normal mode is restored.

When the temperature of HDD is low or high

If the ambient temperature becomes out of fail-safe condition range, normal mode is restored.

When HDD is malfunctioning

If the malfunction disappears, normal mode is restored.

NOTE:

- If fail-safe mode due to HDD malfunction is seen continuously, replace AV control unit.
- If fail-safe mode due to HDD malfunction is seen temporarily, check the "Error History" of Confirmation/ Adjustment mode. If this is normal, then continue the normal operation, observing the function. (It might be a temporary malfunction of HDD.)

SYMPTOM DIAGNOSIS MULTI AV SYSTEM SYMPTOMS WITHOUT NAVIGATION

< SYMPTOM DIAGNOSIS >

WITHOUT NAVIGATION : Symptom Table

OPERATION

Symptoms	Check items	Possible malfunction location / Action to take
	 All switches cannot be operated. "MULTI AV" is displayed on system selection screen when the CON-SULT-III is started. 	 Multifunction switch power supply and ground circuit. AV communication circuit between AV control unit and multifunction switch. Perform CONSULT-III self-diagnosis. Refer to AV-55, "WITHOUT NAVIGATION : CONSULT- III Function (MULTI AV)".
Multifunction switch and preset switch operation does not work.	 All switches cannot be operated. "MULTI AV" is not displayed on system selection screen when the CON- SULT-III is started. 	AV control unit power supply and ground circuit malfunc- tion. Refer to <u>AV-113</u> , " <u>AV CONTROL UNIT : Diagnosis</u> <u>Procedure</u> ".
	Only specified switch cannot be operat- ed.	Multifunction switch or preset switch malfunction. Per- form multifunction switch and preset switch self-diagno- sis function. Refer to <u>AV-48</u> , "WITHOUT NAVIGATION : <u>Diagnosis Description</u> ".

RELATED TO HANDS-FREE PHONE

Basic Inspection

- Check that the cellular phone is corresponding type (Bluetooth[™] correspond) when the hands-free related malfunction vehicle is in service before performing a diagnosis.
- There is a case that malfunction occurs due to the version change of the phone type, etc. even though it is a corresponding type. Therefore, confirm it by changing the cellular phone to another corresponding type phone, and check that it operates normally. It is necessary to distinguish whether the cause is the vehicle or cellular phone.

Simple check for Bluetooth[™] communication

- If cellular phone and AV control unit cannot be connected with Bluetooth[™] communication, following procedure allows the technician to judge which device has malfunction.
- 1. Turn on a cellular phone, not connecting Bluetooth[™] communication.
- 2. Start CONSULT-III, then start Windows[®].
- 3. Set CONSULT-III near a cellular phone.
- 4. When operated Bluetooth[™] registration by cellular phone, check if CONSULT-III^{*} would be displayed on the device name. (If other Bluetooth[™] device is located near cellular phone, a name of the device would be displayed also.)
 NOTE:

*:displayed Device Name Is "NISSAN-*********.

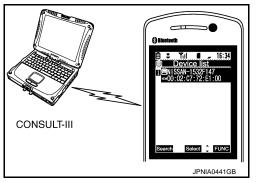

- If no device name is displayed, cellular phone is malfunctioning. Repair the cellular phone first, then perform diagnosis.
- If CONSULT-III is displayed on device name, cellular phone is normal. Perform diagnosis as per the following table.

On board self-diagnosis of hands-free phone system

Always perform the on board self-diagnosis at first after completing the basic inspection when the malfunction is detected on the hands-free phone system. Refer to <u>AV-76. "Diagnosis Description"</u>.

Narrow down possible causes using the Diagnosis Chart if there is no malfunction in the on board self-diagnosis.

NORMAL OPERATING CONDITION WITHOUT NAVIGATION

WITHOUT NAVIGATION : Description

INFOID:000000005350367

BASIC OPERATIONS

< SYMPTOM DIAGNOSIS >

Symptom	Possible cause	Possible solution
	The brightness is at the lowest setting.	Adjust the brightness of the display.
No image is displayed.	The system is in the video mode.	Push <disc></disc> to change the mode.
	The display is turned off.	Push <day night=""></day> to turn on the display.
The screen is too dim. The move- ment is slow.	The temperature in the interior of the vehicle is low.	Wait until the interior of the vehicle has warmed up.
Some pixels in the display are darker or brighter than others.	This condition is an inherent characteristic of liquid crystal displays.	This is not a malfunction.
Some menu items cannot be se- lected.	Some menu items become unavailable while the vehicle is driven.	Park the vehicle in a safe location, and then operate the multi AV system.

RELATED TO VOICE RECOGNITION

Related to telephone

The system should respond correctly to all voice commands without difficulty. If problems are encountered, try the following solutions.

Where the solutions are listed by number, try each solution in turn, starting with number 1, until the problem is resolves.

Symptom	Solution
System fails to interpret the com- mand correctly.	1. Ensure that the command is valid.
	2. Ensure that the command is spoken after the tone.
	3. Speak clearly without pausing between words and at level appropriate to the ambient noise level in the vehicle.
	 4. Ensure that the ambient noise level is not excessive (for example, windows open or defroster on). NOTE: If it is too noisy to use the phone, it is likely that the voice commands will be recognized.
	5. If more than one command was said at a time, try saying the commands separately.
	6. If the system consistently fails to recognize commands, the voice training procedure should be carried out to improve the recognition response for the speaker. See "Speaker adaptation (SA) mode" earlier in this section. Refer to "OWNER'S MANUAL".
The system consistently selects the wrong voicetag	1. Ensure that the phone book entry name requested matches what was originally stored. This can be confirmed by using the "List Names" command.
	2. Replace one of the names being confused with a new name.

RELATED TO AUDIO

- The majority of the audio malfunctions are the result of outside causes (bad CD/cassette, electromagnetic interference, etc.). Check the symptoms below to diagnose the malfunction.
- The vehicle itself can be a source of noise if noise prevention parts or electrical equipment is malfunctioning. Check if noise is caused and/or changed by engine speed, ignition switch turned to each position, and operation of each piece of electrical equipment, and then determine the cause. NOTE:
- CD-R is not guaranteed to play because they can contain compressed audio (MP3, WMA) or could be incorrectly mastered by the customer on a computer.
- Check if the CDs carry the Compact Disc Logo. If not, the disc is not mastered to the "red book" Compact Disc Standard and may not play.

NORMAL OPERATING CONDITION [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

Symptom	Cause and Counter measure	
	Check if the CD was inserted correctly.	
	Check if the CD is scratched or dirty.	
	Check if there is condensation inside the player, and if there is, wait until the condensation is gone (about 1 hour) before using the player.	
	If there is a temperature increase error, the player will play correctly after it returns to the normal temperature.	
Cannot play	If there is a mixture of music CD files (CD-DA data) and MP3/WMA files on a CD, only the music CD files (CD-DA data) will be played.	
	Files with extensions other than ".MP3", ".WMA", ".mp3", or ".wma" cannot be played. In addition, the character codes and number of characters for folder names and file names should be in compliance with the specifications.	
	Check if the disc or the file is generated in an irregular format, This may occur depending on the variation or the setting of MP3/WMA writing applications or other text editing applications.	
	Check if the finalization process, such as session close and disc close, is done for the disc.	
	Check if the CD is protected by copyright.	
Poor sound quality	Check if the CD is scratched or dirty.	
It takes a relatively long time before the music starts playing.	If there are many folder or file levels on the MP3/WMA CD, or if it is a multisession disc, some time may be required before the music starts playing.	
Music cuts off or skips	The writing software and hardware combination might not match, or the writing speed, writing depth, writing width might not match the specifications. Try using the slowest writing speed.	
Skipping with high bit rate files	Skipping may occur with large quantities if data such as for high bit rate data.	
Move immediately to the next song when playing	When a non-MP3/WMA file has been given an extension of ".MP3", ".WMA", ".mp3", or ".wma", or when play is prohibited by copyright protection, the player will skip to the next song.	
The songs do not play back in the desired order.	The playback order is the order in which the files were written by the software, so the files might not play in the desired order.	

Noise resulting from variations in field strength, such as fading noise and multi-path noise, or external noise from trains and other sources, is not a malfunction.

NOTE:

- Fading noise: This noise occurs because of variations in the field strength in a narrow range due to mountains or buildings blocking the signal.
- Multi-path noise: This noise results from a time difference between the broadcast waves directly from the station arriving at the antenna and the waves reflected by mountains or buildings.

WITH NAVIGATION

WITH NAVIGATION : Description

NOTE:

For Navigation system operation information, refer to Navigation system Owner's Manual.

BASIC OPERATIONS

Symptom	Possible cause	Possible solution
	The brightness is at the lowest setting.	Adjust the brightness of the display.
No image is displayed.	The systems in the video mode.	Push <disc-aux></disc-aux> to change the mode.
	The display is turned off.	Push <day night=""></day> to turn on the display.
	The volume is not set correctly, or it is turned off.	Adjust the volume of voice guidance.
No voice guidance is available. Or The volume is too high or too low.	Voice guidance is not provided for certain streets (roads displayed in gray).	This is not a malfunction.
No map is displayed on the screen.	A screen other than map screen is displayed.	Push <map></map> .
The screen is too dim. The move- ment is slow.	The temperature in the interior of the vehicle is low.	Wait until the interior of the vehicle has warmed up.

J

INFOID:000000005350368

L

NORMAL OPERATING CONDITION [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

Symptom	Possible cause	Possible solution
Some pixels in the display are darker or brighter than others.	This condition is an inherent characteristic of liquid crystal displays.	This is not a malfunction.
Some menu items cannot be se- lected.	Some menu items become unavailable while the vehicle is driven.	Park the vehicle in a safe location, and then operate the navigation system.

NOTE:

Locations stored in the Address Book and other memory functions may be lost if the vehicle's battery is disconnected or becomes discharged. If this occurs, service the vehicle's battery as necessary and re-enter the information in the Address Book.

RELATED TO VOICE RECOGNITION

Related to basic operation

Symptom	Possible cause	Possible solution
	The interior of the vehicle is too noisy.	Close the windows or have other occupants quiet.
	The volume of your voice is too low.	Speak louder.
	The volume if your voice is too loud.	Speak softer.
	Your pronunciation is unclear.	Speak clearly.
The system does not recognize your com- mand. or The system recognizes your command incor- rectly	You are speaking before the voice recognition is ready	Push and release " $\sqrt{2}$ \checkmark " switch on the steering switch, and speak a command after the tone sounds.
	8 seconds or more have passed after you pushed and released " $\sqrt{2}$ (") switch on the steering switch.	Make sure to speak a command within 8 sec- onds after you push and release " 🜿 🌾 " switch on the steering switch.
	Only a limited range of voice commands is usable for each screen.	Use a correct voice command appropriate for the current screen.
	The fan of the air conditioner is too loud.	If the air conditioner is set to "Auto", the fan speed is automatically lowered and voice com- mands can be recognized more easily. Lower the fan speed as necessary or set the air conditioner to "Auto".

Related to item choice

The system should respond correctly to all voice commands without difficulty. If problems are encountered, follow the solutions given in this guide for the appropriate error.

Where the solutions are listed by number, try each solution in turn, starting with number one, until the problem is resolved.

Symptom/ error message	Solution
	1. Ensure that the command format is valid.
Displays "COMMAND NOT REC- OGNIZED" or the system fails to interpret the command correctly.	2. Speak clearly without pausing between words and at a level appropriate to the ambient noise level.
	 3. Ensure that the ambient noise level is not excessive, for example, windows open or defrost on. NOTE: If it is too noisy to use the phone, it is likely that voice commands will not be recognized.
	4. If optional words of the command have been omitted, then command should be tried with these in place.
The system consistently selects the wrong voicetag	1. Ensure that the voicetag requested matches what was originally stored. This can be con- firmed by giving the "Addressbook" Directory or Phone Directory command.
	2. Replace one of the voicetags being confused with a different voicetag.

RELATED TO AUDIO

- The majority of the audio malfunctions are the result of outside causes (bad CD/cassette, electromagnetic interference, etc.). Check the symptoms below to diagnose the malfunction.
- The vehicle itself can be a source of noise if noise prevention parts or electrical equipment is malfunctioning.
 H Check if noise is caused and/or changed by engine speed, ignition switch turned to each position, and operation of each piece of electrical equipment, and then determine the cause.
 NOTE:
- CD-R is not guaranteed to play because they can contain compressed audio (MP3, WMA) or could be incorrectly mastered by the customer on a computer.
- Check if the CDs carry the Compact Disc Logo. If not, the disc is not mastered to the "red book" Compact Disc Standard and may not play.

Symptom	Cause and Counter measure
	Check if the CD/CF was inserted correctly.
	Check if the CD/CF is scratched or dirty.
	Check if there is condensation inside the player, and if there is, wait until the condensation is gone (about 1 hour) before using the player.
	If there is a temperature increase error, the player will play correctly after it returns to the normal temperature.
Cannot play	If there is a mixture of music CD files (CD-DA data) and MP3/WMA files on a CD, only the music CD files (CD-DA data) will be played.
	Files with extensions other than ".MP3", ".WMA", ".mp3", or ".wma" cannot be played. In addi- tion, the character codes and number of characters for folder names and file names should be in compliance with the specifications.
	Check if the disc or the file is generated in an irregular format, This may occur depending on the variation or the setting of MP3/WMA writing applications or other text editing applications.
	Check if the finalization process, such as session close and disc close, is done for the disc.
	Check if the CD/CF is protected by copyright.
Poor sound quality	Check if the CD/CF is scratched or dirty.
It takes a relatively long time be- fore the music starts playing.	If there are many folder or file levels on the MP3/WMA CD/CF, or if it is a multisession disc, some time may be required before the music starts playing.
Music cuts off or skips	The writing software and hardware combination might not match, or the writing speed, writing depth, writing width might not match the specifications. Try using the slowest writing speed.
Skipping with high bit rate files	Skipping may occur with large quantities if data such as for high bit rate data.

NORMAL OPERATING CONDITION [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

Symptom	Cause and Counter measure
Move immediately to the next song when playing	When a non-MP3/WMA file has been given an extension of ".MP3", ".WMA", ".mp3", or ".wma", or when play is prohibited by copyright protection, the player will skip to the next song.
The songs do not play back in the desired order.	The playback order is the order in which the files were written by the software, so the files might not play in the desired order.

Noise resulting from variations in field strength, such as fading noise and multi-path noise, or external noise from trains and other sources, is not a malfunction.

NOTE:

- Fading noise: This noise occurs because of variations in the field strength in a narrow range due to mountains or buildings blocking the signal.
- Multi-path noise: This noise results from a time difference between the broadcast waves directly from the station arriving at the antenna and the waves reflected by mountains or buildings.

RELATED TO VEHICLE ICON

Symptom	Possible cause	Possible solution
Names of roads differ between Plan View and Birdview [™] .	This is because the quantity of the displayed information is reduced so that the screen does not become too crowded. There is also a chance that names of the roads may be dis- played multiple times, and the names appear- ing on the screen may be different because of a processing procedure.	This is not a malfunction.
The vehicle icon is not displayed in	The vehicle was transported after the ignition switch was pushed off, for example, by a ferry or car transporter.	Drive the vehicle for a while on a road where GPS signals can be received.
the correct position.	The position and direction of the vehicle icon may be incorrect depending on the driving en- vironments and the levels of positioning accu- racy of the navigation system.	This is not a malfunction. Drive the vehicle for a while to automatically correct the posi- tion and direction of the vehicle icon.
When the vehicle is traveling on a new road, the vehicle icon is located on another road nearby.	Because the new road is not stored in the map data, the system automatically places the ve- hicle icon on the nearest road available.	Updated road information will be included in the next version of the map data.
The screen does not switch to the night screen even after turning on the headlights.	The daytime screen was set the last time the headlights were turned on.	Set the screen to the night screen mode us- ing <day night=""> when you turn on the head- lights.</day>
The map does not scroll even when the vehicle is moving.	The current location map screen is not displayed.	Push <map></map> .
The vehicle icon is not displayed.	The current location map screen is not displayed.	Push <map></map> .
The location of the vehicle icon is misaligned from the actual position.	When using tire chains or replacing the tires, speed calculations based on the speed sensor may be incorrect.	Drive the vehicle for a while (at approximate- ly 19 MPH for about 30 minutes) to automat- ically correct the vehicle icon position. If this does not correct the vehicle icon posi- tion, contact an INFINITI dealer.
	The map data has a mistake or is incomplete (the vehicle icon position is always misaligned in the same area).	Updated road information will be included in the next version of the map data.

RELATED TO ROUTE CALCULATION AND VISUAL GUIDANCE

Symptom	Possible cause	Possible solution
Waypoints are not included in the auto reroute calculation.	Waypoints that you have already passed are not included in the auto reroute calculation.	If you want to go to that waypoint again, you need to edit the route.

NORMAL OPERATING CONDITION

[WITHOUT MOBILE ENTERTAINMENT SYSTEM]

Symptom	Possible cause	Possible solution
	Route calculation has not yet been performed.	Set the destination and perform route calculation.
Route information is not dis-	You are not driving on the suggested route.	Drive on the suggested route.
played.	Route guidance is set to off.	Turn on route guidance.
	Route information is not provided for certain types of roads (roads displayed in gray).	This is not a malfunction.
The auto reroute calculation (or detour calculation) sug- gests the same route as the one previously suggested.	Route calculations took priority conditions into consider- ation, but the same route was calculated.	This is not a malfunction.
A waypoint cannot be added.	Five waypoints are already set on the route, including ones that you have already passed.	A maximum of 5 waypoints can be set on the route. If you want to go to 6 or more waypoints, perform route calculations multiple times as neces- sary.
	Roads near the destination cannot be calculated.	Reset the destination to a main or or- dinary road, and recalculate the route.
	The starting point and destination are too close.	Set a more distant destination.
The suggested route is not dis- played.	The starting point and destination are too far away.	Divide your trip by selecting one or two intermediate destinations, and perform route calculations multiple times.
	There are time restricted roads (by the day of the week, by time) near the current vehicle location or destination.	Set [Use Time Restricted Roads] to off.
The part of the route that you have already passed is deleted.	A route is managed by sections between waypoints. If you passed the first waypoint, the section between the starting point and the waypoint is deleted. (It may not be deleted depending on the area.)	This is not a malfunction.
An indirect route is suggested	If there are restrictions (such as one-way streets) on roads close to the starting point or destination, the system may suggest an indirect route.	Adjust the location of the starting of the starting point or destination.
An indirect route is suggested.	The system may suggest an indirect route because route calculation does not take into consideration some areas such as narrow streets (gray roads.)	Reset the destination to a main or or- dinary road, and recalculate the route.
The landmark information does not correspond to the ac- tual information.	This may be caused by insufficient or incorrect map data.	Updated information will be included in the next version of the data.
The suggested route does not exactly connect to the starting point, waypoints, or destina- tion.	There is no data for route calculation closes to these loca- tions.	Set the starting point, waypoints and destination on a main road, and per- form route calculation.

RELATED TO VOICE GUIDANCE

Symptom	Possible cause	Possible solution
	Voice guidance is only available at certain intersections marked with? In some case, voice guidance is not available even when the vehicle should make a turn.	This is not a malfunction.
Voice guidance is not available	The vehicle has deviated from the suggested route.	Go back to the suggested route or request route calculation again
	Voice guide is set to off.	Turn on voice guidance.
	Route guidance is set to off.	Turn on voice guidance.
The guidance contact does not correspond to the actual condition.	The contact of voice guidance may vary, depending on the types of intersections at which turn are made.	Follow all traffic rules and regulations.

NORMAL OPERATING CONDITION [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

RELATED TO TRAFFIC INFORMATION

Symptom	Possible cause	Possible solution
	The traffic information is not set to on.	Set the traffic information to on.
The traffic information is not displayed	You are in an area where traffic information is not available	Scroll to an area where traffic information is available
	You have not subscribed to XM NavTraffic or, your sub- scription to XM NavTraffic has expired.	Check your subscription status of XM NavTraffic.
	The map scale is set at a level where the display of icons is impossible.	Check that the map scale is set at a level in which the display of icons is possible.
With the automatic de- tour route search ON, no detour route is set to avoid congested areas.	There is no faster route compared to the current route, based on the road network and traffic information.	The automatic detour search is not intended for avoiding traffic jams. It searches for the fastest route taking into consideration such things as traffic jams.
The route does not avoid road section with traffic information stat- ing it is closed due to road construction.	The navigation system is designed not to avoid this event because the actual period of closure may differ from the declared roadwork period.	Observe the actual road condition and follow the instructions on road for detour when necessary. If the road closure is for certain, use detour function and set the detour distance to avoid the closed road section.
Traffic information dis- played differs from in- formation from other media (e.g. radio).	Other media may use different information sources.	Observe the actual road conditions and regula- tions. Always observe safe driving practices and follow all traffic regulations.

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SUPPLEMENTAL RESTRAINT SYS-TEM" and "SEAT BELTS" of this Service Manual.

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the "SUPPLEMENTAL RESTRAINT SYSTEM".
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

WARNING:

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

Precaution for SRS "AIR BAG" and "SEAT BELT PRE-TENSIONER" Service

INFOID:000000005350370 AV

- Do not use electrical test equipment to check SRS circuits unless instructed to in this Service Manual.
- Before servicing the SRS, turn ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.

For approximately 3 minutes after the cables are removed, it is still possible for the air bag and seat belt pretensioner to deploy. Therefore, do not work on any SRS connectors or wires until at least 3 minutes have passed.

- Diagnosis sensor unit must always be installed with their arrow marks "
 —" pointing towards the front of the vehicle for proper operation. Also check diagnosis sensor unit for cracks, deformities or rust before installation and replace as required.
- The spiral cable must be aligned with the neutral position since its rotations are limited. Do not turn steering wheel and column after removal of steering gear.
- Handle air bag module carefully. Always place driver and front passenger air bag modules with the pad side facing upward and seat mounted front side air bag module standing with the stud bolt side facing down.
- Conduct self-diagnosis to check entire SRS for proper function after replacing any components.
- After air bag inflates, the front instrument panel assembly should be replaced if damaged.
- Always replace instrument panel pad following front passenger air bag deployment.

Precaution for Trouble Diagnosis

AV COMMUNICATION SYSTEM

- Do not apply voltage of 7.0 V or higher to the measurement terminals.
- Use the tester with its open terminal voltage being 7.0 V or less.
- Be sure to turn ignition switch OFF and disconnect the battery cable from the negative terminal before checking the circuit.

AV-479

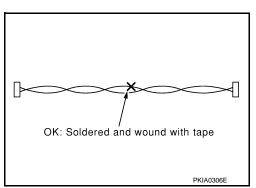

INFOID:000000005350371

PRECAUTIONS [WITHOUT MOBILE ENTERTAINMENT SYSTEM]

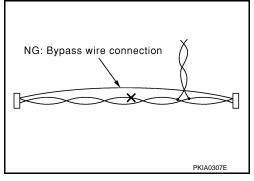

Precaution for Harness Repair

INFOID:000000005350372

- AV COMMUNICATION SYSTEM
- Solder the repaired parts, and wrap with tape. [Frays of twisted line must be within 110 mm (4.33 in).]

• Do not perform bypass wire connections for the repair parts. (The spliced wire will become separated and the characteristics of twisted line will be lost.)

FUNCTION DIAGNOSIS MULTI AV SYSTEM

System Diagram

NOTE:

The name MULTIFUNCTION SWITCH indicates the integration of PRESET SWITCH and MULTIFUNCTION SWITCH virtually.

System Description

INFOID:000000005350440

Multi AV system means that the following systems are integrated.

[WITH MOBILE ENTERTAINMENT SYSTEM]

System name	System explanation	А
NAVIGATION SYSTEM	AV-525, "System Description"	
AUDIO SYSTEM	AV-533, "System Description"	
REAR VIEW MONITOR SYSTEM	AV-530, "System Diagram"	В
HANDS-FREE PHONE SYSTEM	AV-538, "System Diagram"	
MOBILE ENTERTAINMENT SYSTEM	AV-541, "System Description"	С
VEHICLE INFORMATION SYSTEM	 Status of audio, climate control system, fuel economy, maintenance and navigation is displayed. AV control unit displays the fuel consumption status while receiving data signal through CAN communication from ECM, unified meter and A/C amp. and BCM. 	D
AUXILIARY INPUT SYSTEM	Refer to the following "AUXILIARY INPUT SYSTEM".	_
VOICE RECOGNITION SYSTEM	Refer to the following "VOICE RECOGNITION SYSTEM".	E
TOUCH PANEL SYSTEM	Refer to the following "TOUCH PANEL SYSTEM".	

• AV control unit function by transmitting/receiving data one by one with each unit (slave unit) that configures them completely as a master unit by connecting between units that configure MULTI AV system with two AV communication lines (H, L).

- Two AV communication lines (H, L) adopt a twisted pair line that is resistant to noise.
- AV control unit is connected by CAN communication, and it receives data signal from ECM, unified meter and A/C amp. It computes and displays fuel economy information value with the obtained information. Transmitting/receiving of data signal is performed by BCM. Also, it transmits the required signal of vehicle setting and receives the response signal.
- The AV control unit receives the steering angle sensor signal via CAN communication from the steering angle sensor and transmits the steering angle sensor signal via AV communication to the camera control unit.
- AV control unit is connected with front display and serial communication, and it transmits the required signal of display and display control and receives the response signal from front display.
 NOTE:

AV control unit can perform CONSULT-III self-operating function and on board self-diagnosis.

- CONSULT-III self diagnosis: Refer to <u>AV-560, "CONSULT-III Function (MULTI AV)"</u>.
- On board self diagnosis: Refer to <u>AV-545, "Diagnosis Description"</u>.

AUXILIARY INPUT SYSTEM

- The AUX sound signal input from the external input device is transmitted from auxiliary input jacks to DVD player. DVD player transmits it to AV control unit. AV control unit transmits the AUX sound signal to BOSE amp.
- The AUX image signal input from the external input device is transmitted to the video distributor. The video distributor transmits the AUX image signal to the front display unit and rear display unit.

Part name	Description				
AV CONTROL UNIT	 Integrates hard disk drive (HDD) allowing map data and music data to be stored. It is the master unit of the MULTI AV system, and it is connected to each control unit by communication. It operates each system according to communication signals from the AV control unit. The AV control unit includes the audio, hands-free phone, voice control, navigation, satellite radio, and vehicle information functions. It is connected to ECM and unified meter and A/C amp. via CAN communication to obtain necessary information for the vehicle information function. It is connected to BCM via CAN communication transmitting/receiving for the vehicle settings function. It is connected to the steering angle sensor and receives the steering angle signal via CAN communication. It also transmits the steering angle signal to camera control unit via AV communication. It inputs the illumination signals that are required for the display dimming control. It inputs the signals for driving status recognition (vehicle speed, reverse and parking brake). Update of map data is performed with the CONSULT-III and the applicable cable. It includes the TEL adapter and Bluetooth[™] function. 				
VIDEO DISTRIBUTOR	 It receives the image signal from the DVD player, and auxiliary input jack, and then transmits it to the front display unit and rear display unit. It supplies the power to the remote control receiver, and then receives the operation signal from the remote control receiver. Composite synchronize signal is output to rear display unit. It transmits ON signal to headphone amp. 				
FRONT DISPLAY UNIT	 Front display image is controlled by the serial communication from AV control unit. RGB image signal is input from AV control unit (RGB, RGB area and RGB synchronizing). Composite image signal (auxiliary and DVD images) is input from the video distributor. Camera image signal is input from camera control unit. Synchronize signal (HP, VP) is output to AV control unit. Touch panel function can be operated for each system by touching a display directly. 				
REAR DISPLAY UNIT	 Rear display image is controlled by the serial communication from video distributor. RGB image signal is input from video distributor (RGB image and RGB area). Composite image signal (DVD and auxiliary images) is input from the video distributor. Synchronize signal (HP, VP) is output to video distributor. 				

< FUNCTION DIAGNOSIS >

[WITH MOBILE ENTERTAINMENT SYSTEM]

Part name	Description				
	 It is connected via AV communication and controlled by the AV control unit. It receives the voice guidance signal from AV control unit and output it to the front speaker. It controls sound volume of each speaker when outputting TEL voice and voice guidance. 				
	 It subjects to AudioPilot[®] processing when receiving sound signal from micro- phone for AudioPilot[®]. 				
BOSE AMP.	BOSE 2ch systemIt amplifies the sound signal from the AV control unit and output it to each speaker.				
	 BOSE surround audio 5.1ch system It amplifies the sound signal from the AV control unit and the DVD sound signal from DVD player, and then output them to each speaker. 				
	It subjects to Centerpoint [®] processing.				
WOOFER	Outputs sound signal from BOSE amp.Outputs low-pitched sound.				
FRONT DOOR SPEAKER	Outputs sound signal from BOSE amp.Outputs high, mid and low range sounds.				
TWEETER	Outputs sound signal from BOSE amp.Outputs high range sound.				
REAR DOOR SPEAKER	Outputs sound signal from BOSE amp.Outputs high, mid and low range sounds.				
CENTER SPEAKER	Outputs sound signal from BOSE amp.Outputs high and mid range sounds.				
SEAT SPEAKER	Outputs sound signal from BOSE amp.Outputs high and mid range sounds.				
REAR SURROUND SPEAKER	Outputs sound signal from BOSE amp.Outputs high and mid range sounds.				
MULTIFUNCTION SWITCH	 Operation panel is equipped with the centralized switch where audio, auxiliary input and navigation operations are integrated. The multifunction switch is connected via AV communication, and it transmits the operation signals of the multifunction switch and preset switch. 				
PRESET SWITCH	 Operation panel is equipped with the centralized switch where audio and air conditioner operations are integrated. The preset switch is connected to the multifunction switch by hard-wire, and it transmits the operation signal to the multifunction switch. 				
DVD PLAYER	 It transmits the playback DVD image signal to the video distributor. It also transmits the input AUX sound signal to the AV control unit. BOSE 2ch system It transmits the playback DVD sound signal to the AV control unit. BOSE surround audio 5.1ch system 				
CAMERA CONTROL UNIT	 It transmits the playback DVD sound signal to the BOSE amp. Camera image signal is input from rear view camera. Camera image signal output to front display unit. Power (camera ON signal) is transmitted to rear view camera. AV control unit recognizes the presence of camera system with camera connection recognition signal. Camera control unit is connected via AV communication, and it receives the control signal and steering angle signal from the AV control unit. 				
REAR VIEW CAMERA	 The image of vehicle rear view is transmitted to camera control unit. It receives the power (camera ON signal) from the camera control unit and operates. 				
STEERING SWITCH	 Operations for audio, hands-free phone, audio response and navigation, etc. are possible. Steering switch signal (operation signal) is output to AV control unit. 				

< FUNCTION DIAGNOSIS >

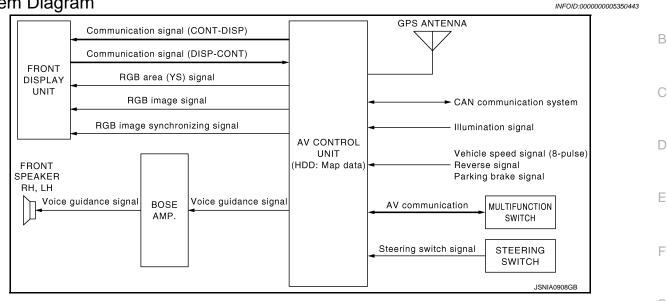

[WITH MOBILE ENTERTAINMENT SYSTEM]

Part name	Description
MICROPHONE	 Used for hands-free phone operation and voice recognition. Mic signal is transmitted to AV control unit. Power (Mic. VCC) is supplied from AV control unit.
AUXILIARY INPUT JACKS	Image signal of auxiliary input is transmitted to video distributor, and sound signal is transmitted to DVD player.
GPS ANTENNA	GPS signal is received and transmitted to AV control unit.
ANTENNA AMP.	 Radio signal received by glass antenna is amplified and transmitted to AV control unit. Power (antenna amp. ON signal) is supplied from AV control unit.
SATELLITE RADIO ANTENNA	Satellite radio wave is received and transmitted to AV control unit.
iPod ADAPTER	 Inputs iPod sound signal from iPod[®], and outputs iPod sound signal to AV control unit. Receiving/transmitting of iPod[®] operation signals are performed as follows: between AV control unit and iPod adapter: AV communication. between iPod[®] and iPod adapter: serial communication.
STEERING ANGLE SENSOR	It is connected to the AV control unit and transmits the steering angle signal via CAN communication.
REAR CONTROL SWITCH	 Operations for audio, etc. are possible. The rear control switch is connected via AV communication, and it transmits the operation signals of the rear control switch.
MICROPHONE (for AudioPilot [®])	 Used for AudioPilot[®]. Mic signal is transmitted to BOSE amp.

NAVIGATION SYSTEM [WITH MOBILE ENTERTAINMENT SYSTEM]

NAVIGATION SYSTEM

System Diagram

System Description

INFOID:000000005350444

DESCRIPTION

- The AV control unit controls navigation function while GPS tuner has built-in map data, GYRO (angle speed sensor), on the HDD (Hard Disk Drive).
- The AV control unit inputs operation signal with communication signal, through display (touch panel) and multifunction switch and steering switch.
- Guide sound is output to front speaker through BOSE amp. from AV control unit when operating navigation system.
- A vehicle position is calculated with the GYRO (angle speed sensor), vehicle sensor, signal from GPS satellite and map data stored on HDD (Hard Disk Drive), and transmits the map image signal (RGB image, RGB area, RGB image synchronizing) to the display. AV

POSITION DETECTION PRINCIPLE

The navigation system periodically calculates the current vehicle position according to the following three types of signals.

- Travel distance of the vehicle as determined by the vehicle speed sensor
- Vehicle turning angle determined by the gyroscope (angular speed) sensor)
- The travel direction of the vehicle determined by the GPS antenna (GPS information)

The current position of the vehicle is then identified by comparing the calculated vehicle position with map data, which is stored in the HDD (Hard Disk Drive) (map-matching), and indicated on the screen with a current location mark. More accurate data is used by comparing position detection results from GPS to the map-matching.

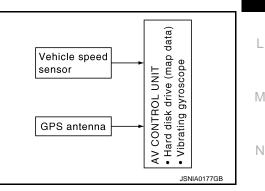

The current position is calculated by detecting the travel distance from the previous calculation point, and its direction change.

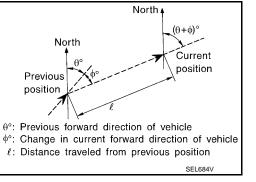

Travel distance

The travel distance is generated from the vehicle speed sensor input signal. The automatic distance correction function is adopted for preventing a miss-detection of the travel distance because of tire wear etc.

Travel direction

The gyroscope (angular velocity sensor) and GPS antenna (GPS information) generate the change of the travel direction. Both have advantages and disadvantages as per the following descriptions.

2010 M35/M45

J

Н

А

Ν

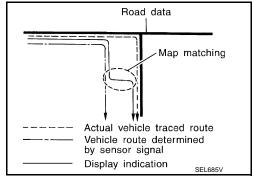

NAVIGATION SYSTEM [WITH MOBILE ENTERTAINMENT SYSTEM]

Туре	Advantage	Disadvantage		
Gyroscope (angular velocity sensor)	The turning angle is precisely detected.	Errors are accumulated when driving a long dis- tance without stopping.		
GPS antenna (GPS informa- tion)	The travel direction (North/South/East/West) is detected.	The travel direction is not precisely detected when driving slowly.		

Input signals are prioritized in each situation. However, this order of priority may change in accordance with more detailed travel conditions so that the travel direction is detected more accurately.

MAP-MATCHING

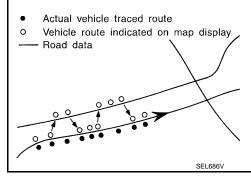

Map-matching repositions the vehicle on the road map when a new location is judged to be more accurate. This is done by comparing the current vehicle position (calculated by the normal position detection method) from the map data stored in the HDD (Hard Disk Drive).

There is a possibility that the vehicle position may not be corrected in the following case, and when vehicle is driven over a certain distance or time in which GPS information is hard to receive. Correct manually the current location mark on the screen.

 In map-matching, several alternative routes are prepared and prioritized in addition to the road judged as currently driving on. Therefore, due to errors in the distance and/or direction, an incorrect road may be prioritized, and the current location mark may be repositioned to the incorrect road.

If two roads are running in parallel, they are of the same priority. Therefore, the current location mark may appear on either of them alternately, depending on maneuvering of the steering wheel and configuration of the road, etc.

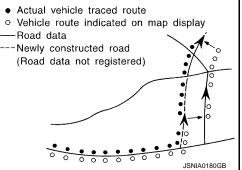

Map-matching does not function correctly when road on which the vehicle is driving is new, etc. and not recorded in the map data. Also, map-matching does not function correctly when road pattern stored in the map data and the actual road pattern are different due to repair, etc.

Therefore, the map-matching function judges other road as a currently driving road if the road is not in the map, and displays the current location mark on it. Later, the current location mark may be repositioned to the road if the correct road is detected.

• Effective range for comparing the vehicle position and travel direction calculated by the distance and direction with the road data is limited. Therefore, correction by map-matching is not possible

when there is an excessive gap between current vehicle position and the position on the map.

GPS (GLOBAL POSITIONING SYSTEM)

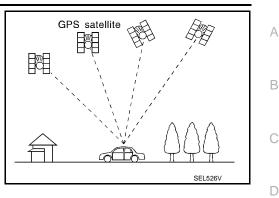

< FUNCTION DIAGNOSIS >

NAVIGATION SYSTEM [WITH MOBILE ENTERTAINMENT SYSTEM]

GPS (Global Positioning System) is developed for and is controlled by the US Department of Defense. The system utilizes GPS satellites (NAVSTAR), transmitting out radio waves while flying on an orbit around the earth at an altitude of approximately 21,000 km.

The receiver calculates the travel position in three dimensions (latitude/longitude/altitude) according to the time lag of the radio waves that four or more GPS satellites transmit (three-dimensional positioning). The GPS receiver calculates the travel position in two dimensions (latitude/longitude) with the previous altitude data if the GPS receiver receives only three radio waves (two-dimensional positioning). GPS position correction is not performed while stopping the vehicle.

Accuracy of the GPS will deteriorate under the following conditions:

• In two-dimensional positioning, GPS accuracy will deteriorate when altitude of the vehicle position changes.

- The position of GPS satellite affects GPS detection precision. The position detection may not be precisely performed.
- The position detection is not performed if GPS receiver does not receive radio waves from GPS satellites. (Inside a tunnel, parking in a building, under an elevated highway etc.) GPS receiver may not receive radio waves from GPS satellites if any object is placed on the GPS antenna.

NOTE:

- The detection result has an error of approximately 10 m even with a high-precision three dimensional positioning.
- There may be cases when the accuracy is lowered and radio waves are stopped intentionally because the GPS satellite signal is controlled by the US trace control center.

REAR VIEW MONITOR SYSTEM [WITH MOBILE ENTERTAINMENT SYSTEM]

REAR VIEW MONITOR SYSTEM

System Diagram

System Description

INFOID:000000005350448

CAMERA IMAGE OPERATION PRINCIPLE

- Power is supplied to rear view camera from camera control unit and outputs camera image signal to camera control unit when selector lever is set to R position and the reverse signal on camera control unit is input.
- Camera control unit synthesizes guide lines and possible route lines with camera image signal from rear view camera, and transmits camera image signal to the front display unit. In this case, since the reverse signal is also input to AV control unit, the AV control unit recognizes the selector lever as in R position, and it switches serial communication signal between AV control unit and front display unit, and image that is displayed on the front display unit by RGB image signal with rear view monitor image. In addition, possible route lines are controlled by original sensor signal from steering angle sensor.
- The AV control unit determines whether rear view camera is equipped or not, based on the presence of camera connection recognition signal. It switches to rear view monitor image at the time of reverse signal input when it is equipped.
- Warning message under the rear view monitor display is described by AV control unit.
- AV control unit is connected in communication with camera control unit and front display unit, and it controls
 operation of rear view monitor system.

AUDIO SYSTEM

System Description

The audio system is equipped with the following functions. Each function is operated with multifunction switch, preset switch, touch panel, steering switch or audio recognition. Operation status of AUDIO is indicated at front display.

Function
AM/FM radio
Satellite radio
CD
Music Box (Hard Disk Drive)
CF (Compact Flash)
iPod connection
AudioPilot®
Centerpoint [®] (for BOSE surround audio 5.1ch system)

FUNCTION DESCRIPTION

Operating Signal

Audio system operation can be performed with multifunction switch, preset switch, steering switch, touch panel function or voice recognition function.

- Operating signal is transmitted to AV control unit with AV communication when it is operated by multifunction switch or preset switch.
- Operating signal is transmitted to AV control unit with steering switch signal when it is operated by steering switch.
- Refer to <u>AV-518. "System Description"</u> for explanation of voice recognition function and touch panel function.

Screen Front Display

AV-533

AUDIO SYSTEM

< FUNCTION DIAGNOSIS >

[WITH MOBILE ENTERTAINMENT SYSTEM]

Switching of display is performed with serial communication between front display unit and AV control unit.
The image signal to front display operating condition is performed with RGB image signal, RGB area signal and RGB synchronizing signal.

AM/FM Radio Mode

- AM/FM radio tuner is built into AV control unit.
- Audio signal is received by glass antenna, next it is amplified by antenna amp., and finally it is input to AV control unit. Audio signal is input to BOSE amp. and BOSE amp. outputs to each speaker for AV control unit.

Satellite Radio Mode

- Satellite radio tuner is built into AV control unit.
- Audio signal (satellite radio) is received by satellite radio antenna, and it is input to AV control unit. AV control unit outputs audio signal to BOSE amp. The signal is also outputted from BOSE amp. to each speaker.

CD Mode

- CD function is built into AV control unit.
- AV control unit outputs audio signal to BOSE amp. and BOSE amp. outputs to each speaker when CD is inserted to AV control unit.

Music Box Mode

- Music CD data is stored on HDD that is built into AV control unit, and it can be played.
- AV control unit outputs music (audio signal) that is stored on HDD to BOSE amp., and BOSE amp. outputs to each speaker.

CF Mode

- AV control unit has built in CF replay function.
- Music (audio signal) that is stored in CF outputs to BOSE amp., and BOSE amp. outputs to each speaker when CF is inserted into AV control unit.

iPod Connection

- Connect iPod[®] and iPod adapter with wire harness and iPod adapter input iPod sound signal from iPod[®]. When iPod mode is selected, iPod adapter output iPod sound signal to AV control unit. AV control unit output sound signal to BOSE amp., and BOSE amp. output sound signal to each speaker.
- Receiving/transmitting of iPod[®] operation signals are performed as follows:
- between AV control unit and iPod adapter: AV communication.
- between iPod[®] and iPod adapter: serial communication.
- The iPod[®] connection status can be recognized whether iPod adapter receives iPod connection recognition signal.
- The iPod adapter is possible to charge iPod[®].

AudioPilot[®]

AudioPilot[®] is the sound improving system that picks up any noises and the sound of music coming into the vehicle by a microphone under the steering, and that the BOSE amp. revises the frequency feature of music at real time in response to the frequency feature of the noise while driving and listening to music.

- If low frequency area noise from vehicle is loud, it adjusts low frequency element of music to be bigger than vehicle noise.
- If high frequency area noise from vehicle is loud, it adjusts all frequency element of music to be bigger than vehicle noise.

Centerpoint[®] (For BOSE surround audio 5.1ch system)

CD and 2ch DVD stereo sound played at audio unit and DVD player are subjected to signal processing in BOSE amp. It can play the surround sound with presence.

HANDS-FREE PHONE SYSTEM

< FUNCTION DIAGNOSIS >

HANDS-FREE PHONE SYSTEM

[WITH MOBILE ENTERTAINMENT SYSTEM]

System Description

INFOID:000000005350456

- AV control unit includes hands-free phone function.
- Hands-free communication can be operated by connecting using Bluetooth[™] communication with cellular phone.
- Operation is performed by steering switch, and operating condition is indicated on front display.
- Guide sound that is heard during operation is input from AV control unit to BOSE amp., and is output from front speaker.

WHEN A CALL IS ORIGINATED

Spoken voice sound output from the microphone (MIC. signal) is input to AV control unit. AV control unit outputs to cellular phone with Bluetooth[™] communication as a TEL voice signal. Voice sound is then heard at the other party.

WHEN RECEIVING A CALL

Voice sound is input to own cellular phone from the other party. TEL voice signal is output to front speaker, and the signal is input to BOSE amp. via AV control unit by establishing Bluetooth[™] communication from cellular phone.

Component Description

INFOID:000000005350458

Part name	Description
AV CONTROL UNIT	 It includes the TEL adapter and Bluetooth[™] function. It outputs the TEL voice signal and voice guidance sound signal to the BOSE amp.
FRONT DISPLAY UNIT	 Display image is controlled by the serial communication from AV control unit. Inputs RGB image signal (RGB, RGB area and RGB synchronizing) from AV control unit and displays the status of hands free phone system.
BOSE AMP.	Inputs TEL voice signal or voice guidance signal from AV control unit and outputs it to front speaker.
FRONT DOOR SPEAKER	Outputs the TEL voice signal or voice guidance signal from BOSE amp.
PRESET SWITCH	 Adjust the sound when using TEL. The operation signal is transmitted to the AV control unit via AV communication.
STEERING SWITCH	The hands free-phone system can be operated.Steering switch signal (operation signal) is output to AV control unit.
MICROPHONE	 Uses when operating the hands-free phone. Outputs Mic. signal (TEL voice signal) to the AV control unit. The power (Mic. power supply) is supplied from the AV control unit.

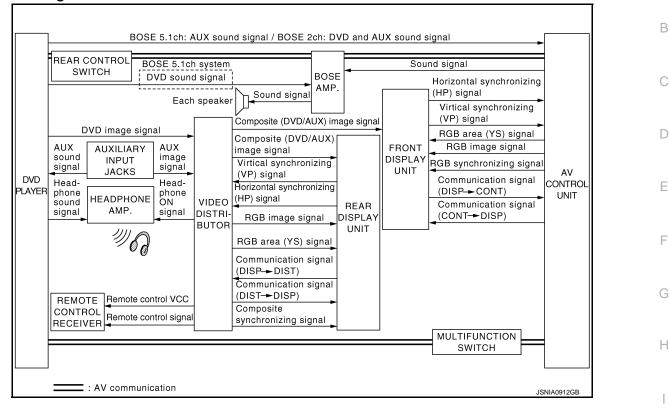

MOBILE ENTERTAINMENT SYSTEM

< FUNCTION DIAGNOSIS >

[WITH MOBILE ENTERTAINMENT SYSTEM]

MOBILE ENTERTAINMENT SYSTEM

System Diagram

System Description

The passengers can enjoy watching DVD in the rear seat with the rear display unit. They can also listen to a DVD and AUX in the rear seat independently by cordless headphones.

FUNCTION DESCRIPTION

Operating Signal

The mobile entertainment system can be controlled by the rear seat remote controller.

It receives the operation signal of the rear seat remote controller by the remote control receiver and rear display unit, and then transmits it to the video distributor.

Screen Rear Display

- Switching of display is performed with serial communication between rear display unit and video distributor.
- The rear display unit receives the DVD/AUX image signal and RGB image signal from the video distributor.

Screen Front Display

- Switching of display is performed with serial communication between front display unit and AV control unit.
- The front display unit receives the DVD/AUX image signal from the video distributor.
- The front display unit receives the RGB image signal from the AV control unit.

DVD Mode

- The DVD player is connected to the AV control unit via AV communication and controlled by the AV control unit.
- The DVD player sound signal is output to the BOSE amp. The BOSE amp. outputs it to each speaker. (BOSE surround audio 5.1ch system models)
- The DVD player sound signal is output to the AV control unit. The AV control unit outputs DVD player sound signal to BOSE amp. The BOSE amp. outputs it to each speaker. (BOSE 2ch system models)
- The DVD image signal is output to the video distributor. The video distributor outputs it to front display unit and rear display unit.

AUX Mode Refer to <u>AV-518, "System Diagram"</u>.

Component Description

INFOID:000000005350462

Ε

Part name	Description
VIDEO DISTRIBUTOR	 It receives the image signal from the DVD player, and auxiliary input jack, and then transmits it to the front display and rear display. It supplies the power to the remote control receiver, and then receives the operation signal from the remote control receiver. Composite synchronize signal is output to rear display unit. It transmits ON signal to headphone amp. Power (remote control receiver VCC) is transmitted to remote control receiver.
REAR DISPLAY UNIT	 Rear Display image is controlled by the serial communication from video distributor. RGB image signal is input from video distributor (RGB image and RGB area). Composite image signal (DVD and auxiliary images) is input from the video distributor. Synchronize signal (HP, VP) is output to video distributor.
	 It is connected via AV communication and controlled by the AV control unit. It receives the voice guidance signal from AV control unit and output it to the front speaker. It controls sound volume of each speaker when outputting TEL voice and voice guidance. It controls a Audia Dilat[®] processing when a provision according to the provision of the provision of
BOSE AMP.	 It subjects to AudioPilot[®] processing when receiving sound signal from microphone for AudioPilot[®]. BOSE 2ch system It amplifies the sound signal from the AV control unit and output it to each speaker. BOSE surround audio 5.1ch system It amplifies the sound signal from the AV control unit and the DVD sound signal from DVD player, and then output them to each speaker.
	It subjects to Centerpoint [®] processing.
DVD PLAYER	 It transmits the playback DVD image signal to the video distributor. It also transmits the input AUX sound signal to the AV control unit. BOSE 2ch system It transmits the playback DVD sound signal to the AV control unit. BOSE surround audio 5.1ch system It transmits the playback DVD sound signal to the BOSE amp.
REMOTE CONTROL RECEIVER	 The power is supplied from the video distributor. It receives the operation signal of the remote controller, and then transmits the operation signal to the video distributor.
HEADPHONE AMP.	 It receives the DVD/AUX sound signal from the DVD player, and then transmits it to the headphones. It operates by receiving the headphone ON signal from the video distributor.
WOOFER	Outputs sound signal from BOSE amp.Outputs low-pitched sound.

FRONT DOOR SPEAKER	Outputs sound signal from BOSE amp.Outputs high, mid and low range sounds.
TWEETER	Outputs sound signal from BOSE amp.Outputs high range sound.
REAR DOOR SPEAKER	Outputs sound signal from BOSE amp.Outputs high, mid and low range sounds.
CENTER SPEAKER	Outputs sound signal from BOSE amp.Outputs high and mid range sounds.
SEAT SPEAKER	Outputs sound signal from BOSE amp.Outputs high and mid range sounds.
REAR SURROUND SPEAKER	Outputs sound signal from BOSE amp.Outputs high and mid range sounds.

DIAGNOSIS SYSTEM (AV CONTROL UNIT) INS S [WITH MOBILE ENTERTAINMENT SYSTEM]

< FUNCTION DIAGNOSIS > [WF DIAGNOSIS SYSTEM (AV CONTROL UNIT)

Diagnosis Description

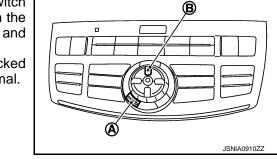

MULTIFUNCTION SWITCH AND PRESET SWITCH SELF-DIAGNOSIS FUNCTION

The ON/OFF operation (continuity) of each switch in the multifunction switch and preset switch can be checked.

Self-Diagnosis Mode

- Press the "BACK (A)" switch and the "
 (B)" switch of the 8-direction switches within 10 seconds after turning the ignition switch from OFF to ACC and hold them for 3 seconds or more. Then the buzzer sounds, all indicators of the preset switch illuminate, and the self-diagnosis mode starts.
- The continuity of each switch at the ON position can be checked by pressing the switch. The buzzer sounds if the switch is normal. **NOTE:**

The hazard switch and CD eject switch cannot be checked.

Finishing Self-Diagnosis Mode

Self-diagnosis mode is canceled when turning the ignition switch OFF.

MULTI AV SYSTEM ON BOARD DIAGNOSIS FUNCTION

- The AV control unit diagnosis function starts up with multifunction switch operation and the AV control unit performs a diagnosis for each unit in the system during the on board diagnosis.
- Perform a CONSULT-III diagnosis if the on board diagnosis does not start, e.g., the screen does not display anything, the multifunction switch does not function, etc.

ON BOARD DIAGNOSIS

Description

- The trouble diagnosis function has a self-diagnosis mode for conducting trouble diagnosis automatically and a confirmation/adjustment mode for operating manually.
- The self-diagnosis mode performs diagnoses on the AV control unit, connections between system components as well as connections between AV control unit and GPS antenna and between AV control unit and satellite radio antenna. Then it displays the diagnosis results on the display.
- The confirmation/adjustment mode allows the technician to check, modify or adjust the vehicle signals and set values, as well as to monitor the system error records and system communication status. The checking, modifying or adjusting generally require human intervention and judgment (the system cannot make judgment automatically).

On Board Diagnosis Item

Mode	Description	
Self-Diagnosis	 AV control unit diagnosis Diagnoses the connections across system components, between AV control unit and GPS antenna and between AV control unit and satellite radio antenna. 	Ν

DIAGNOSIS SYSTEM (AV CONTROL UNIT) < FUNCTION DIAGNOSIS > [WITH MOBILE ENTERTAINMENT SYSTEM]

Mode Description The following check functions are available: color tone check by color **Display Diagnosis** bar display, light and shade check by gray scale display and touch panel calibration response check. Diagnosis of signals can be performed for vehicle speed, parking brake, Vehicle Signals lights, ignition switch, and reverse. Speaker Test The connection of a speaker can be confirmed by test tone. Climate Control Start auto air conditioner system self-diagnosis. Steering Angle Ad-When there is a difference between the actual turning angle and the vejustment hicle mark turning angle, it can be adjusted. When there is a difference between the current location mark and the ac-Navigation Speed Calibration tual location, it can be adjusted. XM SAT Subscrip-The XM NavTraffic subscription status can be checked. tion Status The system malfunction and the frequency when occurring in the past Error History are displayed. When the malfunctioning item is selected, the time and Confirmation/ place that the selected malfunction last occurred are displayed. Adjustment Vehicle CAN Diagnosis The transmitting/receiving of CAN communication can be monitored. The communication condition of each unit of Multi AV system can be AV COMM Diagnosis monitored. The received volume adjustment of hands-free phone, microphone Handsfree Phone speaker check, and erase memory can be performed. The signal connected to camera control unit can be checked and the Camera Cont. guiding line position that overlaps rear view camera image can be adjusted. Bluetooth The passkey and the device name can be checked and changed. Any necessary channels required to receive traffic information from the **Change Channel** satellite radio system can be set. SAT Any application ID's required to receive traffic information from the satel-Change Application lite radio system can be set. ID Diag Not used. **Delete Unit Connection Log** Erase the connection history of unit and error history.

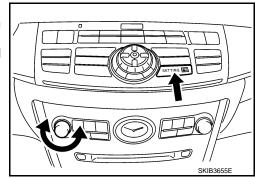

Initializes the AV control unit memory.

STARTING PROCEDURE

- 1. Start the engine.
- 2. Turn the audio system OFF.

Initialize Settings

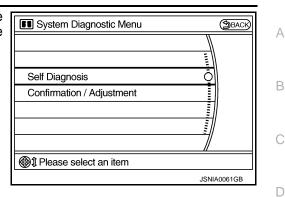

- 3. While pressing the "SETTING" button, turn the volume control dial clockwise or counterclockwise for 40 clicks or more. (When the self-diagnosis mode is started, a short beep will be heard.)
 - Shifting from current screen to previous screen is performed by pressing "BACK" button.

DIAGNOSIS SYSTEM (AV CONTROL UNIT) [WITH MOBILE ENTERTAINMENT SYSTEM]

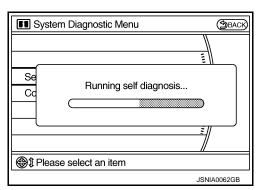

< FUNCTION DIAGNOSIS >

The trouble diagnosis initial screen is displayed, and then the 4 items of "Self Diagnosis" and "Confirmation/Adjustment" can be selected.

SELF-DIAGNOSIS MODE

- Start the self-diagnosis function and select "Self Diagnosis". 1.
- Self-diagnosis subdivision screen is displayed, and the selfdiagnosis mode starts.
- The bar graph visible on the center of the self-diagnosis subdivision screen indicates progress of the trouble diagnosis.

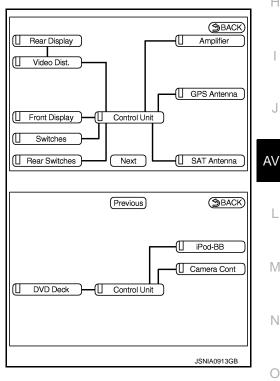

Diagnosis results are displayed after the self-diagnosis is com-2. pleted. The unit names and the connection lines are color-coded according to the diagnostic results.

Diagnosis results	Unit	Con- nection line
Normal	Green	Green
Connection malfunction	Gray	Yellow
Unit malfunction Note	Red	Green

NOTE:

- Only the control unit (AV control unit) is displayed in red.
- Replace AV control unit if "Self-Diagnosis did not run because of a control unit malfunction" is indicated. The symptom is AV control unit internal error. Refer to AV-1064, "Exploded View".
- If multiple errors occur at the same time for a single unit, the screen switch colors are determined according to the following order of priority: red > gray.

J

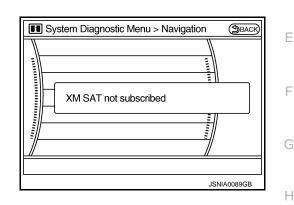

Μ

Ν

Ρ

XM SAT SUBSCRIPTION STATUS

The XM NavTraffic subscription status can be checked.

Error History

The self-diagnosis results are judged depending on whether any error occurs from when "Self-diagnosis" is selected until the self-diagnosis results are displayed.

However, the diagnosis results are judged normal if an error has occurred before the ignition SW is turned ON and then no error has occurred until the self-diagnosis start. Check the "Error Record" to detect any error that may have occurred before the self-diagnosis start because of this situation.

The error record displays the time and place of the most recent occurrence of that error. However, take note of the following points.

- If there is a malfunction with the GPS antenna circuit board in the AV control unit, the correct date and time of occurrence may not be able to be displayed.
- Place of the error occurrence is represented by the position of the current location mark at the time an error occurred. If current location mark has deviated from the correct position, then the place of the error occurrence cannot be located correctly.
- The frequency of occurrence is displayed in a count up manner. The actual count up method differs depending on the error item.

Count up method A

- The counter resets to 0 if an error occurs when IGN switch is turned ON. The counter increases by 1 if the condition is normal at a next IGN ON cycle.
- The counter upper limit is 39. Any counts exceeding 39 are ignored." The counter can be reset (no error record display) with the "Delete log" switch or CONSULT-III.

Count up method B

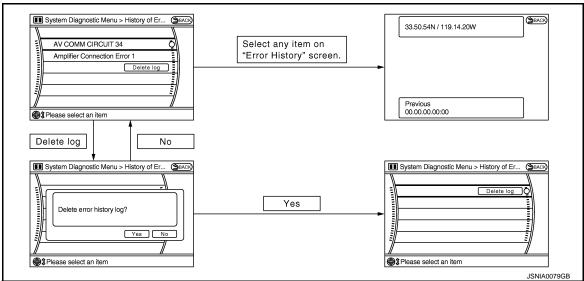

- The counter increases by 1 if an error occurs when IGN switch is ON. The counter will not decrease even if the condition is normal at the next IGN ON cycle.
- The counter upper limit is 50. Any counts exceeding 50 are ignored. "The counter can be reset (no error record display) with the "Delete log" switch or CONSULT-III.

Display type of occur- rence frequency	Error history display item
Count up method A	CAN communication line, control unit (CAN), AV communication line, control unit (AV communication)

Vehicle CAN Diagnosis

- CAN communication status and error counter is displayed.
- The error counter displays "OK" if any malfunction was not detected in the past and displays "0" if a malfunction is detected. It increases by 1 if the condition is normal at the next ignition switch ON cycle. The upper limit of the counter is 39.
- The error counter is erased if "Reset" is pressed.

Items	Display (Current)	Malfunction counter (Past)
Tx (HVAC)	OK / UNKWN	OK / 0 – 39
Rx (ECM)	OK / UNKWN	OK / 0 – 39
Rx (Cluster)	OK / UNKWN	OK / 0 – 39
Rx (BCM)	OK / UNKWN	OK / 0 – 39

CONSULT-III Function (MULTI AV)

CONSULT-III FUNCTIONS

CONSULT-III performs the following functions via the communication with the AV control unit.

DIAGNOSIS SYSTEM (AV CONTROL UNIT)

< FUNCTION DIAGNOSIS >

[WITH MOBILE ENTERTAINMENT SYSTEM]

С

Ε

F

Diagnosis mode	Description	А
Ecu Identification	The part number of AV control unit can be checked.	
Self Diagnostic Result	Performs a diagnosis on the AV control unit and a connection diagnosis for the communication circuit of the Multi AV system, and displays the current and past malfunctions collectively.	В
Data Monitor	The diagnosis of vehicle signal that is input to the AV control unit can be performed.	

AV COMMUNICATION

When "AV communication" of "CAN Diag Support Monitor" is selected, the following function will be performed.

AV communication	AV&NAVI C/U	Displays the communication status from AV control unit to each unit as well as the error counter.	D
	AUDIO	Displays the AV control unit communication status and the error counter.	

ECU IDENTIFICATION

The part number of AV control unit is displayed.

SELF DIAGNOSIS RESULT

- In CONSULT-III self-diagnosis, self-diagnosis results and error history are displayed collectively.
- The current malfunction indicates "CRNT". The past malfunction indicates "PAST".
- The timing is displayed as "0" if any of the error codes [U1000], [U1010], [U1300] and [U1310] is detected. The counter increases by 1 if the condition is normal at the next ignition switch ON cycle.

Self-diagnosis results display item

Н

CAN (Controller Area Network) is a serial communication line for real-time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independently). In CAN communication, control units are connected with 2 communication lines (CAN-H, CAN-L) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

DTC Logic

DTC DETECTION LOGIC

DTC	Display contents of CON- SULT-III	Diagnostic item is detected when	Probable malfunction location	F
U1000	CAN COMM CIRCUIT	AV control unit is not transmitting or receiving CAN communication signal for 2 seconds or more.	CAN communication system.	G

Diagnosis Procedure

1.PERFORM SELF-DIAGNOSTIC

- 1. Turn ignition switch ON and wait for 2 seconds or more.
- 2. Check "Self Diagnostic Result" of "MULTI AV".

Is "CAN COMM CIRCUIT" displayed?

YES >> Refer to "LAN system". Refer to LAN-20, "Trouble Diagnosis Flow Chart".

NO >> Refer to GI section. Refer to <u>GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"</u>.

U1310 AV CONTROL UNIT

Description

INFOID:000000005350471

Part name	Description
AV CONTROL UNIT	 Integrates hard disk drive (HDD) allowing map data and music data to be stored. It is the master unit of the MULTI AV system, and it is connected to each control unit by communication. It operates each system according to communication signals from the AV control unit. The AV control unit includes the audio, hands-free phone, voice control, navigation, satellite radio, and vehicle information functions. It is connected to ECM and unified meter and A/C amp. via CAN communication to obtain necessary information for the vehicle information function. It is connected to BCM via CAN communication transmitting/receiving for the vehicle settings function. It is connected to the steering angle sensor and receives the steering angle signal via CAN communication. It inputs the illumination signals that are required for the display dimming control. It inputs the signals for driving status recognition (vehicle speed, reverse and parking brake). Update of map data is performed with the CONSULT-III and the applicable cable. It includes the TEL adapter and Bluetooth[™] function.

Part name	Description	
AV CONTROL UNIT	 Integrates hard disk drive (HDD) allowing map data and music data to be stored. It is the master unit of the MULTI AV system, and it is connected to each control unit by communication. It operates each system according to communication signals from the AV control unit. The AV control unit includes the audio, hands-free phone, voice control, navigation, satellite radio, and vehicle information functions. It is connected to ECM and unified meter and A/C amp. via CAN communication to obtain necessary information for the vehicle information function. It is connected to BCM via CAN communication transmitting/receiving for the vehicle settings function. It is connected to the steering angle sensor and receives the steering angle signal via CAN communication. It is put the illumination signals that are required for the display dimming control. It inputs the signals for driving status recognition (vehicle speed, reverse and parking brake). Update of map data is performed with the CONSULT-III and the applicable cable. It includes the TEL adapter and Bluetooth[™] function.

U1300 AV COMM CIRCUIT

Description

INFOID:000000005350527

U1300 is indicated when malfunction occurs in communication signal of multi AV system. Indicated simultaneously, without fail, with the malfunction of control units connected to AV control unit with communication line. Determine the possible malfunction cause from the table below.

SELF-DIAGNOSIS RESULTS DISPLAY ITEM

DTC	Display contents of Description		Possible malfunction factor/Action to take
U1300	AV COMM CIRCUIT [U1300]	 When either one of the following items is detected: Rear control switch power supply and ground circuits are malfunctioning. AV communication signal between AV control unit and rear control switch is malfunctioning. 	Rear control switch power supply and ground circuits.
U1300 U121F	 AV COMM CIRCUIT [U1300] INTERNAL COMM [U121F] 	Malfunction is detected in AV control unit power supply and ground circuits.	Check AV control unit power supply and ground circuits. When detecting no malfunction in those components, re- place AV control unit.
U1300 U1240	 AV COMM CIRCUIT [U1300] SWITCH CONN [U1240] 	 When either one of the following items is detected: Multifunction switch power supply and ground circuits are malfunctioning. AV communication signal between AV control unit and multifunction switch is malfunctioning. 	Multifunction switch power supply and ground circuits.
U1300 U1246	 AV COMM CIRCUIT [U1300] VIDEO DIST CONN [U1246] 	 When either one of the following items is detected: video distributor power supply and ground circuits are malfunctioning. AV communication signal between AV control unit and video distributor is malfunctioning. 	Video distributor power supply and ground circuits.
U1300 U1248	 AV COMM CIRCUIT [U1300] DVD DECK CONN [U1248] 	 When either one of the following items is detected: DVD player power supply and ground circuits are malfunctioning. AV communication signal between AV control unit and DVD player is malfunctioning. 	DVD player power supply and ground circuits.
U1300 U124E	 AV COMM CIRCUIT [U1300] AMP CONN [U124E] 	 When either one of the following items is detected: BOSE amp. power supply and ground circuits are malfunctioning. AV communication signal between AV control unit and BOSE amp is malfunctioning. 	BOSE amp. power supply and ground circuits.
U1300 U1252	 AV COMM CIRCUIT [U1300] REAR CAMERA LAN CONN [U1252] 	 When either one of the following items is detected: camera control unit power supply and ground circuits are malfunctioning. AV communication signal between AV control unit and camera control unit is malfunctioning. 	Camera control unit power supply and ground circuits.
U1300 U1254	 AV COMM CIRCUIT [U1300] IPod CONN [U1254] 	 When either one of the following items is detected: iPod adapter power supply and ground circuits are malfunctioning. AV communication circuits between camera control unit and iPod adapter are malfunctioning. AV communication signal between AV control unit and iPod adapter is malfunctioning. 	 iPod adapter power supply and ground circuits. AV communication circuits between camera control unit and iPod adapter.
U1300 U1252 U1254	 AV COMM CIRCUIT [U1300] REAR CAMERA LAN CONN [U1252] IPod CONN [U1254] 	Malfunction is detected in AV communication circuits be- tween BOSE amp. and camera control unit.	AV communication circuits between BOSE amp. and camera control unit.

U1300 U124E U1252 U1254	 AV COMM CIRCUIT [U1300] AMP CONN [U124E] REAR CAMERA LAN CONN [U1252] IPod CONN [U1254] 	 When either one of the following items is detected: AV communication circuits between DVD player and BOSE amp.are malfunctioning. (without rear control switch models) AV communication circuits between rear control switch and BOSE amp. are malfunctioning (with rear control switch models) AV communication circuits between rear control switch and BOSE amp. are malfunctioning (with rear control switch models) AV communication circuits between rear control switch and DVD player are malfunctioning (with rear control switch models) 	 AV communication circuits between DVD player and BOSE amp. (with- out rear control switch models) AV communication circuits between rear control switch and BOSE amp.
U1300 U1248 U124E U1252 U1254	 AV COMM CIRCUIT [U1300] DVD DECK CONN [U1248] AMP CONN [U124E] REAR CAMERA LAN CONN [U1252] IPod CONN [U1254] 	Malfunction is detected in AV communication circuits be- tween video distributor and DVD player.	AV communication circuits between video distributor and DVD player.
U1300 U1246 U1248 U124E U1252 U1254	 AV COMM CIRCUIT [U1300] VIDEO DIST CONN [U1246] DVD DECK CONN [U1248] AMP CONN [U124E] REAR CAMERA LAN CONN [U1252] IPod CONN [U1254] 	Malfunction is detected in AV communication circuits be- tween multifunction switch and video distributor.	AV communication circuits between multifunction switch and video distribu- tor.
U1300 U1240 U1246 U1248 U124E U1252 U1254	 AV COMM CIRCUIT [U1300] SWITCH CONN [U1240] VIDEO DIST CONN [U1246] DVD DECK CONN [U1248] AMP CONN [U124E] REAR CAMERA LAN CONN [U1252] IPod CONN [U1254] 	Malfunction is detected in AV communication circuits be- tween AV control unit and multifunction switch.	AV communication circuits between AV control unit and multifunction switch.
U1300 U121F U1240 U1246 U1248 U124E U1252 U1254	 AV COMM CIRCUIT [U1300] INTERNAL COMM [U121F] SWITCH CONN [U1240] VIDEO DIST CONN [U1246] DVD DECK CONN [U1248] AMP CONN [U124E] REAR CAMERA LAN CONN [U1252] IPod CONN [U1254] 	Malfunction is detected in AV communication circuits.	Check and repair the short circuit in AV communication circuits.

POWER SUPPLY AND GROUND CIRCUIT

< COMPONENT DIAGNOSIS >

[WITH MOBILE ENTERTAINMENT SYSTEM]

POWER SUPPLY AND GROUND CIRCUIT AV CONTROL UNIT

AV CONTROL UNIT : Diagnosis Procedure

INFOID:000000005350528

1.CHECK FUSE

Check for blown fuses.

Power source	Fuse No.
Battery	37
Ignition switch ACC or ON	6
Ignition switch ON or START	12

Is the inspection result normal?

YES >> GO TO 2.

NO >> Be sure to eliminate cause of malfunction before installing new fuse.

2. CHECK POWER SUPPLY CIRCUIT

Check voltage between AV control unit harness connectors and ground.

Signal name	Connector No.	Terminal No.	Ignition switch position	Value (Approx.)
	M76	19		
Battery power supply	M78	22	OFF	Battery voltage
	IVI78	24		
100 a sura sura h	M76	7	ACC	Dottory valtage
ACC power supply	M78	25	ACC	Battery voltage
Ignition signal	M78	35	ON	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.

NO >> Check harness between AV control unit and fuse.

3.CHECK GROUND CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect AV control unit connectors.

3. Check continuity between AV control unit harness connectors and ground.

Signal name	Connector No.	Terminal No.	Ignition switch position	Continuity
Ground	M78 21		OFF	Existed
Ground	NH O	23		Existed

Is the inspection result normal?

YES >> INSPECTION END

NO >> Repair harness or connector.

FRONT DISPLAY UNIT

FRONT DISPLAY UNIT : Diagnosis Procedure

INFOID:000000005350529

1.CHECK FUSE

Check for blown fuses.

Power source	Fuse No.
Battery	37
Ignition switch ACC or ON	6

POWER SUPPLY AND GROUND CIRCUIT

RGB SYNCHRONIZING SIGNAL CIRCUIT

< COMPONENT DIAGNOSIS >

RGB SYNCHRONIZING SIGNAL CIRCUIT

Description

Transmit the RGB synchronizing signal to the front display unit so as to synchronize the RGB image displayed with AV control unit.

Diagnosis Procedure

INFOID:000000005350544

INFOID:000000005350543

1. CHECK CONTINUITY RGB SYNCHRONIZING SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect front display unit connector and AV control unit connector.
- 3. Check continuity between front display unit harness connector terminal 19 and AV control unit harness connector terminal 97.

19 - 97 : Co

: Continuity should exist.

4. Check continuity between front display unit harness connector terminal 19 and ground.

19 - Ground

: Continuity should not exist.

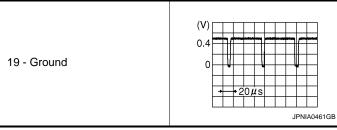

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Repair harness or connector.

2. CHECK RGB SYNCHRONIZING SIGNAL

1. Connect front display unit connector and AV control unit connector.

- 2. Turn ignition switch ON.
- 3. Check signal between front display unit harness connector terminal 19 and ground.

Is the inspection result normal?

- YES >> Replace front display unit.
- NO >> Replace AV control unit.

HP SIGNAL CIRCUIT (FRONT DISPLAY UNIT TO AV CONTROL UNIT) < COMPONENT DIAGNOSIS > [WITH MOBILE ENTERTAINMENT SYSTEM]

HP SIGNAL CIRCUIT (FRONT DISPLAY UNIT TO AV CONTROL UNIT)

Description

INFOID:000000005350547

In composite image (DVD and AUX images, camera image), transmit the vertical synchronizing (VP) signal and horizontal synchronizing (HP) signal from front display unit to AV control unit so as to synchronize the RGB images displayed with AV control unit such as the image quality adjusting menu, etc.

Diagnosis Procedure

INFOID:000000005350548

1. CHECK CONTINUITY HORIZONTAL SYNCHRONIZING (HP) SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect front display unit connector and AV control unit connector.
- 3. Check continuity between front display unit harness connector terminal 8 and AV control unit harness connector terminal 100.

8 - 100

: Continuity should exist.

4. Check continuity between front display unit harness connector terminal 8 and ground.

8 - Ground

: Continuity should not exist.

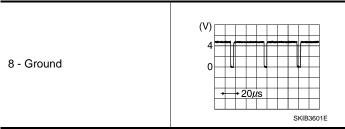

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair harness or connector.

2. CHECK HORIZONTAL SYNCHRONIZING (HP) SIGNAL

- 1. Connect front display unit connector and AV control unit connector.
- 2. Turn ignition switch ON.
- 3. Check signal between front display unit harness connector terminal 8 and ground.

Is the inspection result normal?

YES >> Replace AV control unit.

NO >> Replace front display unit.

VP SIGNAL CIRCUIT (FRONT DISPLAY UNIT TO AV CONTROL UNIT)

< COMPONENT DIAGNOSIS >

[WITH MOBILE ENTERTAINMENT SYSTEM]

COMPOSITE IMAGE SIGNAL CIRCUIT (VIDEO DISTRIBUTOR TO FRONT DIS-PLAY UNIT)

< COMPONENT DIAGNOSIS >

[WITH MOBILE ENTERTAINMENT SYSTEM]

COMPOSITE IMAGE SIGNAL CIRCUIT (VIDEO DISTRIBUTOR TO FRONT DISPLAY UNIT)

Description

INFOID:000000005350551

Video distributor receives the image signal from the DVD player, and auxiliary input jack, and then transmits it to the front display unit and rear display unit.

Diagnosis Procedure

INFOID:000000005350552

1. CHECK CONTINUITY COMPOSITE IMAGE SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect video distributor connector and front display unit connector.
- 3. Check continuity between video distributor harness connector terminal 8 and front display unit harness connector terminal 15.

8 - 15

: Continuity should exist.

4. Check continuity between video distributor harness connector terminal 6 and front display unit harness connector terminal 5.

6 - 5

: Continuity should exist.

5. Check continuity between front display unit harness connector terminal 15 and ground.

15 - Ground

: Continuity should not exist.

6. Check continuity between front display unit harness connector terminal 5 and ground.

5 - Ground

: Continuity should not exist.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair harness or connector.

2. CHECK COMPOSITE IMAGE SIGNAL

- 1. Connect video distributor connector and front display unit connector.
- 2. Turn ignition switch ON.
- 3. Check signal between front display unit harness connector terminal 15 and 5.

Terminal		Condition	Reference value
15 - 5	Ignition switch ON	When AUX or DVD image is displayed on front display unit.	$ \begin{array}{c} (V)\\ 0.4\\ 0\\ -0.4\\ \hline + 40\mu s\\ \end{array} $ SKIB2251J

Is the inspection result normal?

- YES >> Replace front display unit.
- NO >> Replace video distributor.

CAMERA IMAGE SIGNAL CIRCUIT (REAR VIEW CAMERA TO CAMERA CON-TROL UNIT)

< COMPONENT DIAGNOSIS >

[WITH MOBILE ENTERTAINMENT SYSTEM]

CAMERA IMAGE SIGNAL CIRCUIT (REAR VIEW CAMERA TO CAMERA CONTROL UNIT)

Description

INFOID:000000005350579

- Camera control unit outputs camera ON signal to rear view camera and inputs rear view camera image signal from rear view camera when the reverse signal is input.
- The camera control unit that inputs the camera image signal transmits the camera image signal to the front display unit.

Diagnosis Procedure

INFOID:000000005350580

1. CHECK CONTINUITY CAMERA IMAGE SIGNAL CIRCUIT

1. Turn ignition switch OFF.

- 2. Disconnect camera control unit connector and rear view camera connector.
- 3. Check continuity between camera control unit harness connector terminal 6 and rear view camera harness connector terminal 3.

6 - 3 : Continuity should exist.

4. Check continuity between camera control unit harness connector terminal 6 and ground.

6 - Ground

: Continuity should not exist.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair harness or connector.

2. CHECK CAMERA IMAGE SIGNAL

1. Connect camera control unit connector and rear view camera connector.

2. Turn ignition switch ON.

3. Check signal between camera control unit harness connector terminal 6 and ground.

Terminal		Condition	Reference value
6 - Ground	Ignition switch ON	When rear view camera image is displayed.	(V) 0.4 -0.4 -0.4 SKIB2251J

Is the inspection result normal?

YES >> Replace camera control unit.

- The camera control unit that inputs the camera image signal transmits the camera image signal to the front display unit.

Diagnosis Procedure

INFOID:000000005350584

1. CHECK CONTINUITY CAMERA IMAGE SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect camera control unit connector and front display unit connector.
- 3. Check continuity between camera control unit harness connector terminal 12 and front display unit harness connector terminal 12.

12 - 12 : Continuity should exist.

4. Check continuity between camera control unit harness connector terminal 12 and ground.

12 - Ground

: Continuity should not exist.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair harness or connector.

2.CHECK CAMERA IMAGE SIGNAL

1. Connect camera control unit connector and front display unit connector.

- 2. Turn ignition switch ON.
- 3. Check signal between camera control unit harness connector terminal 12 and ground.

Terminal		Condition	Reference value	
12 - Ground	Ignition switch ON	When rear view camera image is displayed.	$ \begin{array}{c} (V)\\ 0.4\\ 0\\ -0.4\\ \hline + 40\mu s\\ \end{array} $ SKIB2251J	

Is the inspection result normal?

YES >> Replace display unit.

NO >> Replace camera control unit.

STEERING SWITCH SIGNAL A CIRCUIT

< COMPONENT DIAGNOSIS >	[WITH MOBILE ENTERTAINMENT SYSTEM]
STEERING SWITCH SIGNAL A CIRCL	ЛТ
Description	INFOID:00000005350585
Transmits the steering switch signal to AV control unit.	
Diagnosis Procedure	INF0ID:000000005350586
1. CHECK STEERING SWITCH SIGNAL A CIRCUIT	
 Turn ignition switch OFF. Disconnect AV control unit connector and spiral cabl Check continuity between AV control unit harness contor terminal 33. 	le connector. onnector terminal 6 and spiral cable harness connec-
6 - 33 : Continuity should	exist.
4. Check continuity between AV control unit harness co	onnector terminals 6 and ground.
6 - Ground : Continuity should	not exist.
Is the inspection result normal?YES>> GO TO 2.NO>> Repair harness or connector.	
2.CHECK SPIRAL CABLE	
Check spiral cable. <u>Is the inspection result normal?</u>	
YES >> GO TO 3. NO >> Replace spiral cable. 3. CHECK AV CONTROL UNIT VOLTAGE	
 Connect AV control unit connector and spiral cable of Turn ignition switch ON. Check voltage between AV control unit harness contr	
6 - 15 : Approx. 5 V	
Is the inspection result normal? YES >> GO TO 4. NO >> Replace AV control unit.	
4.CHECK STEERING SWITCH	
 Turn ignition switch OFF. Check steering switch. Refer to <u>AV-625</u>, "Component" 	it Inspection".
Is the inspection result normal? YES >> INSPECTION END NO >> Replace steering switch.	
Component Inspection	INFOID:000000005350587
Measure the resistance between the steering switch con	nector terminals 20 to 17 and 19 to 17.

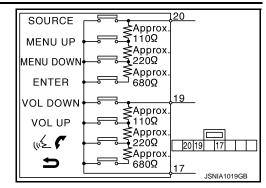

STEERING SWITCH SIGNAL A CIRCUIT

< COMPONENT DIAGNOSIS >

[WITH MOBILE ENTERTAINMENT SYSTEM]

Standard

Between terminals 20 and 17						
ENTER switch ON	: 990 – 1030 Ω					
MENU DOWN switch ON	: 323 – 337 Ω					
MENU UP switch ON	: 108 – 112 Ω					
SOURCE switch ON	: 0 Ω					
Between terminals 19 and 17						
Switch ON	: 990 – 1030 Ω					
🔬 🌈 switch ON	: 323 – 337 Ω					
VOL UP switch ON	: 108 – 112 Ω					
VOL DOWN switch ON	: 0 Ω					

STEERING SWITCH SIGNAL B CIRCUIT

< COMPONENT DIAGNOSIS >	[WITH MOBILE ENTERTAINMENT SYSTEM]
STEERING SWITCH SIGNAL B CIRCU	
Description	INF0ID:00000005350588
Transmits the steering switch signal to AV control unit.	
Diagnosis Procedure	INFOID:00000005350589
1. CHECK STEERING SWITCH SIGNAL B CIRCUIT	
 Turn ignition switch OFF. Disconnect AV control unit connector and spiral cab Check continuity between AV control unit harness contor terminals 32. 	le connector. onnector terminal 16 and spiral cable harness connec-
16 - 32 : Continuity should	exist.
4. Check continuity between AV control unit harness co	onnector terminal 16 and ground.
16 - Ground : Continuity should	not exist.
Is the inspection result normal? YES >> GO TO 2. NO >> Repair harness or connector. 2.CHECK SPIRAL CABLE	
Check spiral cable.	
Is the inspection result normal?YES>> GO TO 3.NO>> Replace spiral cable.	
3.CHECK AV CONTROL UNIT VOLTAGE	
 Connect AV control unit connector and spiral cable of Turn ignition switch ON. Check voltage between AV control unit harness con 	
16 - 15 : Approx. 5 V	A
Is the inspection result normal? YES >> GO TO 4. NO >> Replace AV control unit.	
4.CHECK STEERING SWITCH	
 Turn ignition switch OFF. Check steering switch. Refer to <u>AV-627. "Componer</u> 	nt Inspection".
Is the inspection result normal? YES >> INSPECTION END NO >> Replace steering switch.	
Component Inspection	INF0ID:00000005350590
Measure the resistance between the steering switch con	nnector terminals 20 to 17 and 19 to 17.

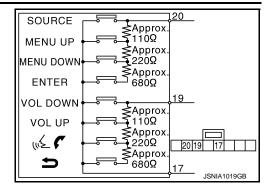

STEERING SWITCH SIGNAL B CIRCUIT

< COMPONENT DIAGNOSIS >

[WITH MOBILE ENTERTAINMENT SYSTEM]

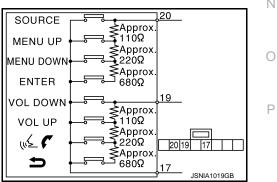

Standard

Between terminals 20 and 17						
ENTER switch ON	: 990 – 1030 Ω					
MENU DOWN switch ON	: 323 – 337 Ω					
MENU UP switch ON	: 108 – 112 Ω					
SOURCE switch ON	: 0 Ω					
Between terminals 19 and 17						
Switch ON	: 990 – 1030 Ω					
🔬 🌈 switch ON	: 323 – 337 Ω					
VOL UP switch ON	: 108 – 112 Ω					
VOL DOWN switch ON	: 0 Ω					

STEERING SWITCH SIGNAL GND CIRCUIT < COMPONENT DIAGNOSIS > [WITH MOBILE ENTERTAINMENT SYSTEM]	
< COMPONENT DIAGNOSIS > [WITH MOBILE ENTERTAINMENT SYSTEM] STEERING SWITCH SIGNAL GND CIRCUIT	
Description	А
Transmits the steering switch signal to AV control unit.	
Diagnosis Procedure	В
	0
1. CHECK STEERING SWITCH SIGNAL GND CIRCUIT	С
 Disconnect AV control unit connector and spiral cable connector. Check continuity between AV control unit harness connector terminal 15 and spiral cable harness connector terminal 27. 	D
15 - 27 : Continuity should exist.	
Is the inspection result normal?	E
YES >> GO TO 2. NO >> Repair harness or connector.	
2. CHECK SPIRAL CABLE	F
Check spiral cable.	
<u>Is the inspection result normal?</u> YES >> GO TO 3.	G
NO >> Replace spiral cable.	
3. CHECK GROUND CIRCUIT	Η
 Connect AV control unit connector. Check continuity between AV control unit harness connector terminal 15 and ground. 	Ι
15 - Ground : Continuity should exist.	
Is the inspection result normal?	J
YES >> GO TO 4. NO >> Replace AV control unit.	
4. CHECK STEERING SWITCH	AV
1. Turn ignition switch OFF.	
 Check steering switch. Refer to <u>AV-629, "Component Inspection"</u>. <u>Is the inspection result normal?</u> 	L
YES >> INSPECTION END	
NO >> Replace steering switch.	M
Component Inspection	
Measure the resistance between the steering switch connector terminals 20 to 17 and 19 to 17.	Ν
Standard Between terminals 20 and 17	

Between terminals 20 and 17						
ENTER switch ON	: 990 – 1030 Ω					
MENU DOWN switch ON	: 323 – 337 Ω					
MENU UP switch ON	: 108 – 112 Ω

AV-AV-86

AV-AV-87

When the ambiance temperature becomes extremely low or extremely high, or when HDD is malfunctioning, AV control unit displays the message and limits the AV control unit function.

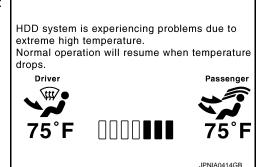

FAIL-SAFE CONDITIONS

- When the ambiance temperature is -20°C (-4°F) or lower, or when it is 70°C (158°F) or higher
- When HDD is malfunctioning

AV-683

Display

The messages displayed on fail-safe conditions are as shown below:

Fail-safe mode	Display (display of the fail-safe condition)
When HDD temperature is low	HDD system is experiencing problems due to extreme low temperature. Normal operation will resume when temperature rises.
When HDD temperature is high	HDD system is experiencing problems due to extreme high temperature. Normal operation will resume when temperature drops.
When HDD is malfunctioning	HDD system is not functioning. Please contact your dealer for assistance.

DESCRIPTION OF CONTROLS

Function		When Fail-safe Function is activated	
Air conditioner	Operation	Only multifunction switch (preset switch) can be operated.	
	Display	 LED of multifunction switch (preset switch) illuminates. Aimed temperature, blow angle, and flow rate are displayed in simplified mode. 	
Audio Operatio	Operation	Only ON/OFF and volume control operations by multifunction switch (preset switch) are possible.	
	Display	No display ("Fail-safe mode" is displayed)	
Camera	Operation	Image tone cannot be controlled.	
	Display	Cannot be superimposed. (warning display, tone control display)	
Hands-free phone	Operation	Cannot be operated.	
Navigation	Operation	Cannot be operated.	
Self diagnosis		The display in simplified mode of fail-safe condition	
CONSULT-III diagnosis		Cannot be operated.	

Ability Operation Mode

There is an ability operation mode for Fail-safes due to low or high ambiance temperature.

If HDD data can be read, fail-safe is shown, then normal displays are displayed only for functions which can be operated.

RELEASE CONDITIONS OF FAIL-SAFE

Fail-safe is released on following conditions and normal mode is restored.

When the temperature of HDD is low or high

If the ambient temperature becomes out of fail-safe condition range, normal mode is restored.

When HDD is malfunctioning

If the malfunction disappears, normal mode is restored.

NOTE:

- If fail-safe mode due to HDD malfunction is seen continuously, replace AV control unit.
- If fail-safe mode due to HDD malfunction is seen temporarily, check the "Error History" of Confirmation/ Adjustment mode. If this is normal, then continue the normal operation, observing the function. (It might be a temporary malfunction of HDD.)

MULTI AV SYSTEM SYMPTOMS [WITH MOBILE ENTERTAINMENT SYSTEM]

SYMPTOM DIAGNOSIS MULTI AV SYSTEM SYMPTOMS

Symptom Table

INFOID:000000005350637

RELATED TO NAVIGATION

Trouble diagnosis chart by symptom

Symptoms	Check items	Possible malfunction location / Action to take
Multifunction switch and preset switch operation does not work.	 All switches cannot be operated. "MULTI AV" is displayed on system selection screen when the CON-SULT-III is started. 	 Multifunction switch power supply and ground circuit. AV communication circuit between AV control unit and multifunction switch. Perform CONSULT-III self-diagnosis. Refer to <u>AV-560</u>, <u>"CONSULT-III Function (MULTI AV)"</u>.
	 All switches cannot be operated. "MULTI AV" is not displayed on system selection screen when the CON-SULT-III is initialized. 	AV control unit power supply and ground circuit malfunc- tion. Refer to AV-594, "AV CONTROL UNIT : Diagnosis Procedure".
	Only specified switch cannot be operated.	Multifunction switch or preset switch malfunction. Perform multifunction switch and preset switch self-di- agnosis function. Refer to <u>AV-545</u> , "Diagnosis Descrip- tion".
Rear control switch operation dose not work.	There is malfunction in the on board-diagnosis result.	Perform on board-diagnosis. Refer to <u>AV-545</u> , "Diagnosis Description".
	Only specified switch cannot be operated.	Rear control switch malfunction. Replace rear control switch. Refer to <u>AV-1080</u> , "Remov- al and Installation".
	There is malfunction in the CONSULT- III self-diagnosis result.	Perform detected DTC self-diagnosis. Refer to <u>AV-560, "CONSULT-III Function (MULTI AV)"</u> .
Fuel economy display, vehicle set- ting operation is abnormal.	There is no malfunction in the self-diag- nosis results.	AV control unit Ignition signal circuit malfunction. Refer to <u>AV-594</u> , " <u>AV CONTROL UNIT</u> : <u>Diagnosis Pro-</u> <u>cedure</u> ".
Guide sound is not heard.	On the setting display select "system sound (guide sound volume, etc.)," and confirm that guide sound is ON.	AV control unit malfunction. Replace AV control unit. Refer to <u>AV-1064</u> , "Exploded <u>View</u> ".

RELATED TO HANDS-FREE PHONE

- Check that the cellular phone is corresponding type (Bluetooth[™] correspond) when the hands-free related malfunction vehicle is in service before performing a diagnosis.
- There is a case that malfunction occurs due to the version change of the phone type, etc. even though it is a corresponding type. Therefore, confirm it by changing the cellular phone to another corresponding type phone, and check that it operates normally. It is necessary to distinguish whether the cause is the vehicle or cellular phone.

Simple check for $\mathsf{Bluetooth}^{^{\mathsf{TM}}}$ communication

If cellular phone and AV control unit cannot be connected with Bluetooth[™] communication, following procedure allows the technician to judge which device has malfunction.

- 1. Turn on a cellular phone, not connecting Bluetooth[™] communication.
- 2. Start CONSULT-III, then start Windows[®].
- 3. Set CONSULT-III near a cellular phone.

MULTI AV SYSTEM SYMPTOMS

< SYMPTOM DIAGNOSIS >

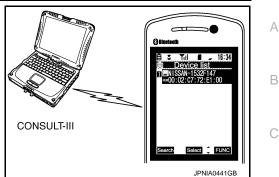

[WITH MOBILE ENTERTAINMENT SYSTEM]

When operated Bluetooth[™] registration by cellular phone, check 4. if CONSULT-III* would be displayed on the device name. (If other Bluetooth[™] device is located near cellular phone, a name of the device would be displayed also.) NOTE:

*:Displayed device name is "NISSAN-********.".

- If no device name is displayed, cellular phone is malfunctioning. Repair the cellular phone first, then perform diagnosis.
- If CONSULT-III is displayed on device name, cellular phone is normal. Perform diagnosis as per the following table.

Trouble diagnosis chart by symptom

Symptoms	Check items	Probable malfunction location	-
Does not recognize cellular phone connection. (no connec- tion is displayed on the display at the guide.)	Repeat the registration of cellular phone.	AV control unit malfunction. Replace AV control unit. Refer to <u>AV-1064, "Exploded</u> <u>View"</u> .	F
Hands-free phone cannot be established.	 Hands-free phone operation can be made, but the communication cannot be established. Hands-free phone operation can be performed, however, voice between each other cannot be heard during the conversation. 	AV control unit malfunction. Replace AV control unit. Refer to <u>AV-1064, "Exploded</u> <u>View"</u> .	- F
The other party's voice cannot be heard by hands-free phone.	Check the "microphone speaker" in In- spection & Adjustment Mode if sound is heard.	AV control unit malfunction. Replace AV control unit. Refer to <u>AV-1064</u> , "Exploded <u>View</u> ".	-
	Check the "microphone speaker" in In- spection & Adjustment Mode if sound is not heard.	AV control unit malfunction. Replace AV control unit. Refer to <u>AV-1064</u> , "Exploded <u>View</u> ".	J
Originating sound is not heard by the other party with hands- free phone communication.	Sound operation function is normal.	AV control unit malfunction. Replace AV control unit. Refer to <u>AV-1064</u> , "Exploded <u>View</u> ".	AV
	Sound operation function does not work.	Microphone signal circuit malfunction. Refer to AV-619, "Diagnosis Procedure".	-

RELATED TO CAMERA

Trouble diagnosis chart by symptom

Symptoms	Check items	Probable malfunction location
Camera image is not displayed (displayed in black and nothing can be displayed).	For front display unit, AUX and DVD im- age are not displayed.	 Horizontal synchronizing (HP) signal circuit malfunction between AV control unit and front display unit. Refer to <u>AV-606</u>, "Diagnosis Procedure". Vertical synchronizing (VP) signal circuit malfunction between AV control unit and front display unit. Refer to <u>AV-607</u>, "Diagnosis Procedure".
Camera image is not shown. (Vehicle width and possible route line is displayed.)	_	 Camera image signal circuit between camera control unit and rear view camera. Refer to <u>AV-622, "Diagnosis Procedure"</u>. Rear view camera ON signal circuit. Refer to <u>AV-623, "Diagnosis Procedure"</u>.

Revision: 2009 June

MULTI AV SYSTEM SYMPTOMS [WITH MOBILE ENTERTAINMENT SYSTEM]

Symptoms	Check items	Probable malfunction location
Camera image is not displayed.	There is malfunction in the CONSULT-III self-diagnosis result.	Perform detected DTC self-diagnosis. Refer to <u>AV-560, "CONSULT-III Function (MULTI AV)"</u> .
	For front display unit, AUX and DVD image are normal.	Camera image signal circuit malfunction between camera control unit and front display unit. Refer to <u>AV-624</u> , "Diagnosis <u>Procedure</u> ".
(Only warning message under area is displayed.)	For front display unit, AUX and DVD im- age are not displayed.	RGB area (YS) signal circuit malfunction between AV control unit and front display unit. Refer to <u>AV-605</u> , "Diagnosis Procedure".
	Select "Camera Cont." of Confirmation/ Adjustment mode, Reverse Sensor is not turned ON at "Connection Confirmation".	Reverse signal circuit malfunction (camera control unit).
Camera image is rolling.	For front display unit, AUX and DVD im- age are also rolling.	 Horizontal synchronizing (HP) signal circuit malfunction between AV control unit and front display unit. Refer to <u>AV-606, "Diagnosis Procedure"</u>. Vertical synchronizing (VP) signal circuit malfunction between AV control unit and front display unit. Refer to <u>AV-607, "Diagnosis Procedure"</u>.
Camera image does not switch.	Malfunction of self-diagnosis result is indicated.	Camera-connection recognition signal circuit malfunc- tion between AV control unit and camera control unit. Refer to <u>AV-590</u> , "Diagnosis Procedure".
	Malfunction of self-diagnosis result is not indicated.	Reverse signal circuit malfunction (AV control unit).
Possible route line is indicated abnormally when camera im- age is displayed.	There is malfunction in the CONSULT-III self-diagnosis result.	Perform detected DTC self-diagnosis. Refer to AV-560, "CONSULT-III Function (MULTI AV)".

RELATED TO RGB IMAGE (FRONT DISPLAY UNIT)

Trouble diagnosis chart by symptom

Symptoms	Check items	Possible malfunction location / Action to take
RGB image is not shown.	 All RGB images are not shown. "MULTI AV" is displayed on system selection screen when the CONSULT-III is started. 	Perform CONSULT-III self-diagnosis. Refer to <u>AV-560, "CONSULT-III Function (MULTI AV)"</u> .
	 All RGB images are not shown. "MULTI AV" is not displayed on system selection screen when the CONSULT- III is started. 	AV control unit power supply and ground circuit malfunc- tion. Refer to <u>AV-594, "AV CONTROL UNIT : Diagnosis Proce- dure"</u> .
Color of RGB image is not proper.	Light blue (Cyan) tint.	RGB signal (R: red) circuit malfunction between AV con- trol unit and front display unit. Refer to <u>AV-601, "Diagnosis Procedure"</u> .
	Purple (Magenta) tint.	RGB signal (G: green) circuit malfunction between AV control unit and front display unit. Refer to <u>AV-602</u> , " <u>Diagnosis Procedure</u> ".
	Screen looks yellowish.	RGB signal (B: blue) circuit malfunction between AV con- trol unit and front display unit. Refer to AV-603, "Diagnosis Procedure".
RGB screen is rolling.	Front display unit, AUX and DVD image are normal.	RGB synchronizing signal circuit malfunction between AV control unit and front display unit. Refer to <u>AV-604</u> , " <u>Diagnosis Procedure</u> ".

RELATED TO REAR DISPLAY

MULTI AV SYSTEM SYMPTOMS [WITH MOBILE ENTERTAINMENT SYSTEM]

Symptoms	Check items	Possible malfunction location / Action to take
The menu screen is not dis- played.	For rear display unit, AUX and DVD im- age are normal.	 Vertical synchronizing (VP) signal circuit malfunction between video distributor and rear display unit. Refer to <u>AV-614</u>, "<u>Diagnosis Procedure</u>". Horizontal synchronizing (HP) signal circuit malfunction between video distributor and rear display unit. Refer to <u>AV-615</u>, "<u>Diagnosis Procedure</u>". RGB area (YS) signal circuit malfunction between vid- eo distributor and rear display unit. Refer to <u>AV-616</u>, "<u>Diagnosis Procedure</u>".
Color of RGB image (menu dis- play screen) is not proper.	Light blue (Cyan) tint.	RGB signal (R: red) circuit malfunction between video dis- tributor and rear display unit. Refer to <u>AV-610</u> , " <u>Diagnosis Procedure</u> ".
	Purple (Magenta) tint.	RGB signal (G: green) circuit malfunction between video distributor and rear display unit. Refer to <u>AV-611</u> , "Diagnosis Procedure".
	Screen looks yellowish.	RGB signal (B: blue) circuit malfunction between video distributor and rear display unit. Refer to AV-612, "Diagnosis Procedure".
ALLY and DVD image are not	Also, front display unit is not displayed.	Perform CONSULT-III self-diagnosis. Refer to <u>AV-560, "CONSULT-III Function (MULTI AV)"</u> .
AUX and DVD image are not displayed.	Front display unit is normal.	Composite image signal circuit malfunction between vid- eo distributor and rear display unit. Refer to <u>AV-609</u> , " <u>Diagnosis Procedure</u> ".
AUX and DVD image are roll- ing.	Front display unit displayed, AUX and DVD image are not rolling.	Composite synchronizing signal circuit malfunction be- tween video distributor and rear display unit. Refer to <u>AV-613</u> , " <u>Diagnosis Procedure</u> ".
Rear display unit does not open.	For front display unit, AUX and DVD im- age are not displayed.	Video distributor power supply and ground circuits mal- function. Refer to AV-596, "VIDEO DISTRIBUTOR : Diagnosis Pro- cedure".
	For front display unit, AUX image displayed.	Perform detected DTC self-diagnosis. Refer to <u>AV-560, "CONSULT-III Function (MULTI AV)"</u> .

RELATED TO VOICE CONTROL

Symptoms	Check items	Probable malfunction location
The voice cannot be controlled even if the voice control screen is displayed.	Voice sounds at "Voice Microphone Test" of Confirmation/Adjustment mode.	AV control unit malfunction. Replace AV control unit. Refer to <u>AV-1064</u> , "Exploded <u>View</u> ".
	Voice does not sound at "Voice Micro- phone Test" of Confirmation/Adjustment mode.	Microphone circuit malfunction. Refer to AV-619, "Diagnosis Procedure".
The voice cannot be controlled (Voice control screen is not dis- played).	Steering switch's "VOL DOWN", "VOL UP", "➔" switch works, but "⊷ ♥" it does not work.	Steering switch malfunction. Replace steering switch. Refer to <u>AV-1079, "Exploded</u> <u>View"</u> .
	Steering switch's "VOL DOWN", "VOL UP", "➔", "ڛ≨ ✔" switches do not work.	Steering switch signal B circuit malfunction. Refer to AV-625, "Diagnosis Procedure".
	All steering switches do not work.	Steering switch signal GND circuit malfunction. Refer to <u>AV-629</u> , "Diagnosis Procedure".

RELATED TO AUDIO

AV

MULTI AV SYSTEM SYMPTOMS [WITH MOBILE ENTERTAINMENT SYSTEM]

Trouble diagnosis chart by sympton	1	
Symptoms	Check items	Possible malfunction location / Action to take
The CD cannot be removed.	Check the mechanical operation of eject switch.	Perform CONSULT-III self-diagnosis. When detecting no malfunction in those components, replace AV control unit. Refer to <u>AV-560</u> , "CONSULT-III Function (MULTI AV)".
Audio sound is not heard.	No sound from all speakers.	Perform CONSULT-III self-diagnosis. Refer to <u>AV-560, "CONSULT-III Function (MULTI AV)"</u> .
There is no sound from speaker on the right or left side.	_	Sound signal circuit malfunction between AV control unit and BOSE amp. at the side where there is no sound.
There is no sound from front door and tweeter on the right or left side.		Sound signal circuits malfunction between BOSE amp. and speaker on the side where there is no sound.
There is no sound from one of speakers.	_	Sound signal circuit malfunction between BOSE amp. and speaker on the side where there is no sound.
AudioPilot [®] does not work.		 AudioPilot[®] Microphone circuits malfunction between BOSE amp. and AudioPilot[®] Microphone. BOSE 2ch system refer to <u>AV-620, "BOSE AUDIO 2CH</u> <u>SYSTEM : Diagnosis Procedure"</u>. BOSE surround audio 5.1ch system refer to <u>AV-621, "BOSE SURROUND AUDIO 5.1CH SYSTEM : Diagnosis Procedure"</u>
	There is malfunction in the CONSULT-III self-diagnosis result.	Perform CONSULT-III self-diagnosis. Refer to AV-560, "CONSULT-III Function (MULTI AV)".
Satellite radio is not received.	There is no malfunction in the CON- SULT-III self-diagnosis result.	 Perform the following inspection procedure. 1. Check satellite radio antenna mounting nut for looseness. NOTE: Tightening torque: 6.5 N·m (0.66 kg-m, 58 in-lb) 2. Visually check for satellite radio antenna feeder. 3. Replace the satellite radio antenna. Refer to <u>AV-1091, "Exploded View"</u>. 4. Replace the AV control unit. Refer to <u>AV-1064, "Exploded View"</u>.
AM/FM radio is not received.	Other audio sounds are normal.	Antenna amp. ON signal circuit.Antenna feeder.

$\mathsf{RELATED} \ \mathsf{TO} \ \mathsf{iPod}^{\circledast}$

Connect another iPod[®] and check if the symptom is reproduced or not. If the symptom is reproduced, diagnose the vehicle. If no malfunction is detected, replace the iPod harness. **NOTE:**

It is unable to check that between $iPod^{(R)}$ and iPod harness.

Trouble diagnosis chart by symptom

Symptoms	Check items	Possible malfunction location / Action to take
The sound of iPod [®] is not heard.	Other audio sounds are normal.	 iPod sound signal circuit between AV control unit and iPod adapter. iPod sound signal circuit between iPod[®] and iPod adapter.
It does not change to iPod mode.	There is malfunction in the CONSULT-III self-diagnosis.	Perform CONSULT-III self-diagnosis. Refer to <u>AV-560, "CONSULT-III Function (MULTI AV)"</u> .
"iPod is not connected" is dis- played when it comes to iPod mode.	Connected to iPod [®] .	iPod connection recognition signal circuit between iPod [®] and iPod adapter.
iPod [®] cannot charge the bat- tery.	_	iPod battery charge circuit between iPod [®] and iPod adapter.

MULTI AV SYSTEM SYMPTOMS [WITH MOBILE ENTERTAINMENT SYSTEM]

< SYMPTOM DIAGNOSIS >

Symptoms	Check items	Possible malfunction location / Action to take	_
The title of music file in the iP- od [®] is not indicated.		Serial communication circuit between iPod [®] and iPod	A
Accessing the iPod [®] is unavailable from the vehicle.	—	adapter.	В

RELATED TO STEERING SWITCH

Trouble diagnosis chart by symptom

Symptoms	Probable malfunction location	
None of the steering switch operations work.	Steering switch signal GND circuit malfunction. Refer to <u>AV-629</u> , " <u>Diagnosis Procedure</u> ".	D
Only specified switch (1) cannot be operated.	Steering switch malfunction. Refer to <u>AV-1079, "Exploded View"</u> .	_
Steering switch's "SOURCE", "MENU UP", "MENU", "DOWN", "ENTER" switches do not work.	Steering switch signal A circuit malfunction. Refer to <u>AV-625, "Diagnosis Procedure"</u> .	— E
Steering switch's "", "VOL UP", "VOL DOWN", "	Steering switch signal B circuit malfunction. Refer to <u>AV-627, "Diagnosis Procedure"</u> .	F

RELATED TO AUXILIARY INPUT **NOTE:**

Check that there is no malfunction of AUX equipment main body before performing a diagnosis.

Trouble diagnosis chart by symptom

Symptoms	Check items	Probable malfunction location	Н
Front display unit and rear display unit, AUX image is not displayed.	Also, DVD image is not displayed.	Perform CONSULT-III self-diagnosis. Refer to <u>AV-560, "CONSULT-III Function (MULTI AV)"</u> .	I
	DVD image is normal.	AUX image signal circuit malfunction between auxiliary input jacks and video distributor.	I
For front display unit, AUX im- age is not displayed (Menu dis- play is normal).		Perform CONSULT-III self-diagnosis. Refer to <u>AV-560</u> , <u>"CONSULT-III Function (MULTI AV)"</u> . When detecting no malfunction in those components, the following items are a possible cause.	J
	Also, DVD image is not displayed (Menu display is normal).	 Composite image signal circuits malfunction between video distributor and front display unit. Refer to <u>AV-608</u>, "<u>Diagnosis Procedure</u>". 	AV
		 RGB area (YS) signal circuit malfunction between AV control unit and front display unit. Refer to <u>AV-605</u>, "<u>Diagnosis Procedure</u>". 	L
For front display unit, AUX im- age is not displayed (Menu dis- play is not displayed, too).	Also, DVD image is not displayed (Also, menu display is not displayed).	 Horizontal synchronizing (HP) signal circuit malfunction between AV control unit and front display unit. Refer to <u>AV-606, "Diagnosis Procedure"</u>. Vertical synchronizing (VP) signal circuit malfunction between AV control unit and front display unit. 	M
		Refer to AV-607, "Diagnosis Procedure".	Ν
For front display unit, AUX im- age is rolling.	DVD image is rolling.	 Horizontal synchronizing (HP) signal circuit malfunction between AV control unit and front display unit. Refer to <u>AV-606, "Diagnosis Procedure"</u>. Vertical synchronizing (VP) signal circuit malfunction between AV control unit and front display unit. Refer to <u>AV-607, "Diagnosis Procedure"</u>. 	0
For rear display unit, AUX im- age is not displayed (Menu dis- play is normal).	Also, DVD image is not displayed (Menu display is normal).	Composite image signal circuits malfunction between video distributor and rear display unit. Refer to <u>AV-609</u> , " <u>Diagnosis Procedure</u> ".	Ρ

MULTI AV SYSTEM SYMPTOMS

[WITH MOBILE ENTERTAINMENT SYSTEM]

Symptoms	Check items	Probable malfunction location
At AUX of rear display, menu display is not displayed.	AUX image is normal.	 Vertical synchronizing (VP) signal circuit malfunction between video distributor and rear display unit. Refer to <u>AV-614</u>, "<u>Diagnosis Procedure</u>". Horizontal synchronizing (HP) signal circuit malfunction between video distributor and rear display unit. Refer to <u>AV-615</u>, "<u>Diagnosis Procedure</u>". RGB area (YS) signal circuit malfunction between video distributor and rear display unit. Refer to <u>AV-616</u>, "<u>Diagnosis Procedure</u>".
For rear display unit, AUX and DVD image are rolling.	Front display unit displayed, AUX and DVD image are not rolling.	Composite synchronizing signal circuit malfunction be- tween video distributor and rear display unit. Refer to <u>AV-613</u> , " <u>Diagnosis Procedure</u> ".
There is no AUX sound.	_	Perform CONSULT-III self-diagnosis. Refer to <u>AV-560, "CONSULT-III Function (MULTI AV)"</u> .
	BOSE 2ch models. • DVD sound is not normal, neither.	 BOSE 2ch models. DVD and AUX sound signal circuit malfunction between DVD player and AV control unit at the side where there is no sound.
There is no AUX sound from speaker on the right or left side.		 BOSE 2ch models. AUX sound signal circuit malfunction between auxiliary input jacks and DVD player at the side where there is no sound.
	The sound other than AUX sound is nor- mal.	 BOSE surround audio 5.1ch models. AUX sound signal circuit malfunction between auxiliary input jacks and DVD player at the side where there is no sound. AUX sound signal circuit malfunction between AV control unit and DVD player at the side where there is no sound.
It does not change to AUX mode.	There is malfunction in the CONSULT-III self-diagnosis result.	Perform CONSULT-III self-diagnosis. Refer to AV-560, "CONSULT-III Function (MULTI AV)".

RELATED TO DVD MODE

Trouble diagnosis of	chart by symptom
----------------------	------------------

Symptoms	Check items	Probable malfunction location
Front display unit and rear display unit, DVD image is not displayed.	Also, AUX image is not displayed.	Perform CONSULT-III self-diagnosis. Refer to <u>AV-560, "CONSULT-III Function (MULTI AV)"</u> .
For front display unit, DVD im- age is not displayed (Menu dis- play is normal).	Also, AUX image is not displayed (Menu display is normal).	 Perform CONSULT-III self-diagnosis. Refer to <u>AV-560</u>, <u>"CONSULT-III Function (MULTI AV)"</u>. When detecting no malfunction in those components, the following items are a possible cause. Composite image signal circuits malfunction between video distributor and front display unit. Refer to <u>AV-608</u>, "<u>Diagnosis Procedure</u>". RGB area (YS) signal circuit malfunction between AV control unit and front display unit. Refer to <u>AV-605</u>, "<u>Diagnosis Procedure</u>".
For front display unit, DVD im- age is not displayed (Also, menu display is not displayed).	Also, AUX image is not displayed (Also, menu display is not displayed).	 Horizontal synchronizing (HP) signal circuit malfunction between AV control unit and front display unit. Refer to <u>AV-606, "Diagnosis Procedure"</u>. Vertical synchronizing (VP) signal circuit malfunction between AV control unit and front display unit. Refer to <u>AV-607, "Diagnosis Procedure"</u>.
For front display, DVD image is rolling.	AUX image is rolling.	 Horizontal synchronizing (HP) signal circuit malfunction between AV control unit and front display unit. Refer to <u>AV-606, "Diagnosis Procedure"</u>. Vertical synchronizing (VP) signal circuit malfunction between AV control unit and front display unit. Refer to <u>AV-607, "Diagnosis Procedure"</u>.

MULTI AV SYSTEM SYMPTOMS [WITH MOBILE ENTERTAINMENT SYSTEM]

Symptoms	Check items	Probable malfunction location
For rear display, DVD image is not displayed (Menu display is normal).	Also, AUX image is not displayed (Menu display is normal).	Composite image signal circuits malfunction between video distributor and rear display unit. Refer to <u>AV-609</u> , "Diagnosis Procedure".
At DVD of rear display unit, menu display is not displayed.	DVD image is normal.	 Vertical synchronizing (VP) signal circuit malfunction between video distributor and rear display unit. Refer to <u>AV-614</u>, "<u>Diagnosis Procedure</u>". Horizontal synchronizing (HP) signal circuit malfunc- tion between video distributor and rear display unit. Refer to <u>AV-615</u>, "<u>Diagnosis Procedure</u>". RGB area (YS) signal circuit malfunction between vid- eo distributor and rear display unit. Refer to <u>AV-616</u>, "<u>Diagnosis Procedure</u>".
For rear display unit, DVD and AUX image are rolling.	Front display unit displayed, DVD and AUX image are not rolling.	Composite synchronizing signal circuit malfunction be- tween video distributor and rear display unit. Refer to <u>AV-613</u> , " <u>Diagnosis Procedure</u> ".
There is no DVD sound.		Perform CONSULT-III self-diagnosis. Refer to <u>AV-560, "CONSULT-III Function (MULTI AV)"</u> .
There is no DVD sound from one of speakers.	BOSE surround audio 5.1ch models. • Other audio sounds are normal.	BOSE 5.1ch models.Sound signal circuit malfunction between BOSE amp. and DVD player on the side where there is no sound.
There is no DVD sound from speaker on the right or left side.	BOSE 2ch models. • AUX sound is not normal, neither.	 BOSE 2ch models. DVD and AUX sound signal circuit malfunction between DVD player and AV control unit at the side where there is no sound.
It does not change to DVD mode.	There is malfunction in the CONSULT-III self-diagnosis result.	Perform CONSULT-III self-diagnosis. Refer to AV-560, "CONSULT-III Function (MULTI AV)".

NORMAL OPERATING CONDITION

Description

INFOID:000000005350638

[WITH MOBILE ENTERTAINMENT SYSTEM]

NOTE:

For Navigation system operation information, refer to Navigation system Owner's Manual.

BASIC OPERATIONS

Symptom	Possible cause	Possible solution
	The brightness is at the lowest setting.	Adjust the brightness of the display.
No image is displayed.	The systems in the video mode.	Push <disc-aux></disc-aux> to change the mode.
	The display is turned off.	Push <day night=""></day> to turn on the display.
No voico guidanco is ovoilablo. Or	The volume is not set correctly, or it is turned off.	Adjust the volume of voice guidance.
No voice guidance is available. Or The volume is too high or too low.	Voice guidance is not provided for certain streets (roads displayed in gray).	This is not a malfunction.
No map is displayed on the screen.	A screen other than map screen is displayed.	Push <map></map> .
The screen is too dim. The move- ment is slow.	The temperature in the interior of the vehicle is low.	Wait until the interior of the vehicle has warmed up.
Some pixels in the display are darker or brighter than others.	This condition is an inherent characteristic of liquid crystal displays.	This is not a malfunction.
Some menu items cannot be se- lected.	Some menu items become unavailable while the vehicle is driven.	Park the vehicle in a safe location, and then operate the navigation system.

NORMAL OPERATING CONDITION

NOTE:

Locations stored in the Address Book and other memory functions may be lost if the vehicle's battery is disconnected or becomes discharged. If this occurs, service the vehicle's battery as necessary and re-enter the information in the Address Book.

RELATED TO VOICE RECOGNITION

Related to basic operation

Symptom	Possible cause	Possible solution
	The interior of the vehicle is too noisy.	Close the windows or have other occupants quiet.
-	The volume of your voice is too low.	Speak louder.
	The volume if your voice is too loud.	Speak softer.
	Your pronunciation is unclear.	Speak clearly.
The system does not recognize your com- mand.	You are speaking before the voice recognition is ready	Push and release " 🖋 🌈 " switch on the steering switch, and speak a command after the tone sounds.
or The system recognizes your command incor- rectly	8 seconds or more have passed after you pushed and released " $\sqrt{2}$ (") switch on the steering switch.	Make sure to speak a command within 8 sec- onds after you push and release " 🜿 🌾 " switch on the steering switch.
	Only a limited range of voice commands is usable for each screen.	Use a correct voice command appropriate for the current screen.
	The fan of the air conditioner is too loud.	If the air conditioner is set to "Auto", the fan speed is automatically lowered and voice com- mands can be recognized more easily. Lower the fan speed as necessary or set the air conditioner to "Auto".

Related to item choice

The system should respond correctly to all voice commands without difficulty. If problems are encountered, follow the solutions given in this guide for the appropriate error.

AV-1056

NORMAL OPERATING CONDITION

[WITH MOBILE ENTERTAINMENT SYSTEM]

А

F

Ν

Where the solutions are listed by number, try each solution in turn, starting with number one, until the problem is resolved.

Symptom/ error message	Solution
	1. Ensure that the command format is valid.
	2. Speak clearly without pausing between words and at a level appropriate to the ambient noise level.
Displays "COMMAND NOT REC- DGNIZED" or the system fails to interpret the command correctly.	 3. Ensure that the ambient noise level is not excessive, for example, windows open or defrost on. NOTE: If it is too noisy to use the phone, it is likely that voice commands will not be recognized.
	4. If optional words of the command have been omitted, then command should be tried with these in place.
The system consistently selects	1. Ensure that the voicetag requested matches what was originally stored. This can be con- firmed by giving the "Addressbook" Directory or Phone Directory command.
the wrong voicetag	2. Replace one of the voicetags being confused with a different voicetag.

Related to telephone

The system should respond correctly to all voice commands without difficulty. If problems are encountered, try the following solutions.

Where the solutions are listed by number, try each solution in turn, starting with number 1, until the problem is resolved.

Symptom	Solution
	1. Ensure that the command is valid.
	2. Ensure that the command is spoken after the tone.
	3. Speak clearly without pausing between words and at level appropriate to the ambient noise level in the vehicle.
System fails to interpret the com- mand correctly.	 4. Ensure that the ambient noise level is not excessive (for example, windows open or defroster on). NOTE: If it is too noisy to use the phone, it is likely that the voice commands will not be recognized.
	5. If more than one command was said at a time, try saying the commands separately.
	6. If the system consistently fails to recognize commands, the voice training procedure should be carried out to improve the recognition response for the speaker. See "Speaker adaptation (SA) mode" earlier in this section. Refer to "OWNER'S MANUAL".
The system consistently selects	1. Ensure that the phone book entry name requested matches what was originally stored. This can be confirmed by using the "List Names" command.
the wrong voicetag	2. Replace one of the names being confused with a new name.

RELATED TO AUDIO

- The majority of the audio malfunctions are the result of outside causes (bad CD/cassette, electromagnetic interference, etc.). Check the symptoms below to diagnose the malfunction.
- The vehicle itself can be a source of noise if noise prevention parts or electrical equipment is malfunctioning. Check if noise is caused and/or changed by engine speed, ignition switch turned to each position, and operation of each piece of electrical equipment, and then determine the cause.

NOTE:

- CD-R is not guaranteed to play because they can contain compressed audio (MP3, WMA) or could be incorrectly mastered by the customer on a computer.
- Check if the CDs carry the Compact Disc Logo. If not, the disc is not mastered to the "red book" Compact Ρ Disc Standard and may not play.

NORMAL OPERATING CONDITION

[WITH MOBILE ENTERTAINMENT SYSTEM]

Symptom	Cause and Counter measure	
	Check if the CD/CF was inserted correctly.	
	Check if the CD/CF is scratched or dirty.	
	Check if there is condensation inside the player, and if there is, wait until the condensation is gone (about 1 hour) before using the player.	
	If there is a temperature increase error, the player will play correctly after it returns to the normal temperature.	
Cannot play	If there is a mixture of music CD files (CD-DA data) and MP3/WMA files on a CD, only the music CD files (CD-DA data) will be played.	
	Files with extensions other than ".MP3", ".WMA", ".mp3", or ".wma" cannot be played. In addi- tion, the character codes and number of characters for folder names and file names should be in compliance with the specifications.	
	Check if the disc or the file is generated in an irregular format, This may occur depending on the variation or the setting of MP3/WMA writing applications or other text editing applications.	
	Check if the finalization process, such as session close and disc close, is done for the disc.	
	Check if the CD/CF is protected by copyright.	
Poor sound quality	Check if the CD/CF is scratched or dirty.	
It takes a relatively long time be- fore the music starts playing.	If there are many folder or file levels on the MP3/WMA CD/CF, or if it is a multisession disc, some time may be required before the music starts playing.	
Music cuts off or skips	The writing software and hardware combination might not match, or the writing speed, writing depth, writing width might not match the specifications. Try using the slowest writing speed.	
Skipping with high bit rate files	Skipping may occur with large quantities if data such as for high bit rate data.	
Move immediately to the next song when playing	When a non-MP3/WMA file has been given an extension of ".MP3", ".WMA", ".mp3", or ".wma", or when play is prohibited by copyright protection, the player will skip to the next song.	
The songs do not play back in the desired order.	The playback order is the order in which the files were written by the software, so the files might not play in the desired order.	

Noise resulting from variations in field strength, such as fading noise and multi-path noise, or external noise from trains and other sources, is not a malfunction.

NOTE:

- Fading noise: This noise occurs because of variations in the field strength in a narrow range due to mountains or buildings blocking the signal.
- Multi-path noise: This noise results from a time difference between the broadcast waves directly from the station arriving at the antenna and the waves reflected by mountains or buildings.

RELATED TO VEHICLE ICON

Symptom	Possible cause	Possible solution
Names of roads differ between Plan View and Birdview [®] .	This is because the quantity of the displayed information is reduced so that the screen does not become too crowded. There is also a chance that names of the roads may be dis- played multiple times, and the names appear- ing on the screen may be different because of a processing procedure.	This is not a malfunction.
-	The vehicle was transported after the ignition switch was pushed off, for example, by a ferry or car transporter.	Drive the vehicle for a while on a road where GPS signals can be received.
The vehicle icon is not displayed in the correct position.	The position and direction of the vehicle icon may be incorrect depending on the driving en- vironments and the levels of positioning accu- racy of the navigation system.	This is not a malfunction. Drive the vehicle for a while to automatically correct the posi- tion and direction of the vehicle icon.
When the vehicle is traveling on a new road, the vehicle icon is located on another road nearby.	Because the new road is not stored in the map data, the system automatically places the ve- hicle icon on the nearest road available.	Updated road information will be included in the next version of the map data.

NORMAL OPERATING CONDITION [WITH MOBILE ENTERTAINMENT SYSTEM]

Symptom	Possible cause	Possible solution
The screen does not switch to the night screen even after turning on the headlights.	The daytime screen was set the last time the headlights were turned on.	Set the screen to the night screen mode us- ing <day night=""> when you turn on the head- lights.</day>
The map does not scroll even when the vehicle is moving.	The current location map screen is not displayed.	Push <map></map> .
The vehicle icon is not displayed.	The current location map screen is not displayed.	Push <map></map> .
The location of the vehicle icon is misaligned from the actual position.	When using tire chains or replacing the tires, speed calculations based on the speed sensor may be incorrect.	Drive the vehicle for a while (at approximate- ly 19 MPH for about 30 minutes) to automat- ically correct the vehicle icon position. If this does not correct the vehicle icon posi- tion, contact an INFINITI dealer.
	The map data has a mistake or is incomplete (the vehicle icon position is always misaligned in the same area).	Updated road information will be included in the next version of the map data.

RELATED TO ROUTE CALCULATION AND VISUAL GUIDANCE

Symptom	Possible cause	Possible solution
Waypoints are not included in the auto reroute calculation.	Waypoints that you have already passed are not included in the auto reroute calculation.	If you want to go to that waypoint again, you need to edit the route.
	Route calculation has not yet been performed.	Set the destination and perform route calculation.
Route information is not dis-	You are not driving on the suggested route.	Drive on the suggested route.
played.	Route guidance is set to off.	Turn on route guidance.
	Route information is not provided for certain types of roads (roads displayed in gray).	This is not a malfunction.
The auto reroute calculation (or detour calculation) sug- gests the same route as the one previously suggested.	Route calculations took priority conditions into consider- ation, but the same route was calculated.	This is not a malfunction.
A waypoint cannot be added.	Five waypoints are already set on the route, including ones that you have already passed.	A maximum of 5 waypoints can be set on the route. If you want to go to 6 or more waypoints, perform route calculations multiple times as neces- sary.
The suggested route is not dis- played.	Roads near the destination cannot be calculated.	Reset the destination to a main or or- dinary road, and recalculate the route.
	The starting point and destination are too close.	Set a more distant destination.
	The starting point and destination are too far away.	Divide your trip by selecting one or two intermediate destinations, and perform route calculations multiple times.
	There are time restricted roads (by the day of the week, by time) near the current vehicle location or destination.	Set [Use Time Restricted Roads] to off.
The part of the route that you have already passed is deleted.	A route is managed by sections between waypoints. If you passed the first waypoint, the section between the starting point and the waypoint is deleted. (It may not be deleted depending on the area.)	This is not a malfunction.
An indirect route is suggested.	If there are restrictions (such as one-way streets) on roads close to the starting point or destination, the system may suggest an indirect route.	Adjust the location of the starting of the starting point or destination.
	The system may suggest an indirect route because route calculation does not take into consideration some areas such as narrow streets (gray roads.)	Reset the destination to a main or or- dinary road, and recalculate the route.

F

NORMAL OPERATING CONDITION

[WITH MOBILE ENTERTAINMENT SYSTEM]

Symptom	Possible cause	Possible solution
The landmark information does not correspond to the actual information.	This may be caused by insufficient or incorrect map data.	Updated information will be included in the next version of the data.
The suggested route does not exactly connect to the starting point, waypoints, or destina- tion.	There is no data for route calculation closes to these loca- tions.	Set the starting point, waypoints and destination on a main road, and per- form route calculation.

RELATED TO VOICE GUIDANCE

Symptom	Possible cause	Possible solution
Voice guidance is not available	Voice guidance is only available at certain intersections marked with? In some case, voice guidance is not available even when the vehicle should make a turn.	This is not a malfunction.
	The vehicle has deviated from the suggested route.	Go back to the suggested route or request route calculation again
	Voice guide is set to off.	Turn on voice guidance.
	Route guidance is set to off.	Turn on voice guidance.
The guidance contact does not correspond to the actual condition.	The contact of voice guidance may vary, depending on the types of intersections at which turn are made.	Follow all traffic rules and regulations.

RELATED TO TRAFFIC INFORMATION

Symptom	Possible cause	Possible solution
The traffic information is not displayed	The traffic information is not set to on.	Set the traffic information to on.
	You are in an area where traffic information is not available	Scroll to an area where traffic information is available
	You have not subscribed to XM NavTraffic or, your sub- scription to XM NavTraffic has expired.	Check your subscription status of XM NavTraffic.
	The map scale is set at a level where the display of icons is impossible.	Check that the map scale is set at a level in which the display of icons is possible.
With the automatic de- tour route search ON, no detour route is set to avoid congested areas.	There is no faster route compared to the current route, based on the road network and traffic information.	The automatic detour search is not intended for avoiding traffic jams. It searches for the fastest route taking into consideration such things as traffic jams.
The route does not avoid road section with traffic information stat- ing it is closed due to road construction.	The navigation system is designed not to avoid this event because the actual period of closure may differ from the declared roadwork period.	Observe the actual road condition and follow the instructions on road for detour when necessary. If the road closure is for certain, use detour function and set the detour distance to avoid the closed road section.
Traffic information dis- played differs from in- formation from other media (e.g. radio).	Other media may use different information sources.	Observe the actual road conditions and regula- tions. Always observe safe driving practices and follow all traffic regulations.

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SUPPLEMENTAL RESTRAINT SYS-TEM" and "SEAT BELTS" of this Service Manual.

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the "SUPPLEMENTAL RESTRAINT SYSTEM".
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

WARNING:

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

Precaution for SRS "AIR BAG" and "SEAT BELT PRE-TENSIONER" Service

INFOID:000000005350640 AV

- Do not use electrical test equipment to check SRS circuits unless instructed to in this Service Manual.
- Before servicing the SRS, turn ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.

For approximately 3 minutes after the cables are removed, it is still possible for the air bag and seat belt pretensioner to deploy. Therefore, do not work on any SRS connectors or wires until at least 3 minutes have passed.

- Diagnosis sensor unit must always be installed with their arrow marks "←" pointing towards the front of the vehicle for proper operation. Also check diagnosis sensor unit for cracks, deformities or rust before installation and replace as required.
- The spiral cable must be aligned with the neutral position since its rotations are limited. Do not turn steering wheel and column after removal of steering gear.
- Handle air bag module carefully. Always place driver and front passenger air bag modules with the pad side facing upward and seat mounted front side air bag module standing with the stud bolt side facing down.
- Conduct self-diagnosis to check entire SRS for proper function after replacing any components.
- After air bag inflates, the front instrument panel assembly should be replaced if damaged.
- Always replace instrument panel pad following front passenger air bag deployment.

Precaution for Trouble Diagnosis

AV COMMUNICATION SYSTEM

- Do not apply voltage of 7.0 V or higher to the measurement terminals.
- Use the tester with its open terminal voltage being 7.0 V or less.
- Be sure to turn ignition switch OFF and disconnect the battery cable from the negative terminal before checking the circuit.

AV-1061

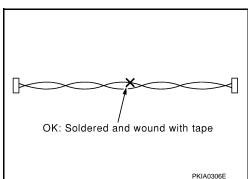

INFOID:000000005350641

PRECAUTIONS [WITH MOBILE ENTERTAINMENT SYSTEM]

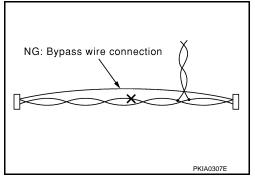

Precaution for Harness Repair

AV COMMUNICATION SYSTEM

• Solder the repaired parts, and wrap with tape. [Frays of twisted line must be within 110 mm (4.33 in).]

• Do not perform bypass wire connections for the repair parts. (The spliced wire will become separated and the characteristics of twisted line will be lost.)

REAR VIEW CAMERA

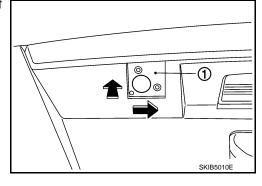

Exploded View

Refer to EI-67, "Component Parts Location".

Removal and Installation

REMOVAL

- 1. Remove trunk lid finisher inner. Refer to EI-67, "Removal and Installation".
- 2. Remove screws attaching camera and camera bracket.
- 3. Remove connector and connector clip.
- 4. Remove camera bracket (1) while pushing right direction of vehicle.

[WITH MOBILE ENTERTAINMENT SYSTEM]

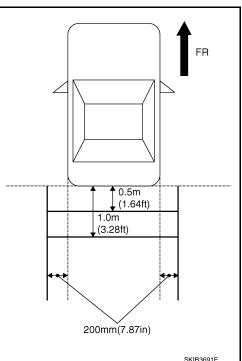

INSTALLATION

- 1. Install rear view camera and camera bracket while pressing to trunk room side.
- 2. Install connector and connector clip.
- 3. Install trunk lid finisher inner.

Adjustment

Adjust the guide line position if the guide line position is shifted after installing the rear view camera.

- 1. Draw lines on rearward area of the vehicle passing through the following points: 200 mm (7.87 in) from both sides of the vehicle, and 0.5 m (1.64 ft), 1.0 m (3.28 ft) from the rear end of the bumper.
- 2. Set into "Adjust offset of rear view camera" mode of Confirmation / Adjustment mode.

INFOID:000000005350690

INFOID:000000005350691

REAR VIEW CAMERA [WITH MOBILE ENTERTAINMENT SYSTEM]

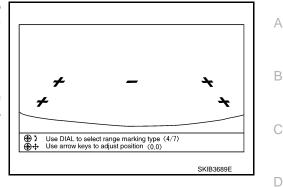

3. Rotate the center dial, and then select the guiding line pattern so that its angle is aligned with the correction line of the rear of the vehicle.

Selected pattern

4. Make fine adjustment to the correction line of the rear of the vehicle with up/down/left/right switches so that its position is aligned with the guiding line. Press ""

:7

Up/Down adjustment range	: – 20 – 20
Left/Right adjustment range	: -20 - 20

CAUTION:

Never operate other function such as pressing BACK while writing index data.

If Confirmation/Adjustment mode does not function in the above procedure, perform one of the \Box following service to adjust the index again.

- Remove battery for five min. Then reconnect battery.
- Remove camera control unit connector for five min. Then reconnect camera control unit connector.

SATELLITE RADIO ANTENNA [WITH MOBILE ENTERTAINMENT SYSTEM]

SATELLITE RADIO ANTENNA

∠⊐: Vehicle front

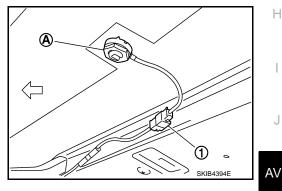

1. Satellite radio antenna

Removal and Installation

REMOVAL

- 1. Remove headlining assembly (rear) to secure work space between vehicle and headlining. Refer to <u>EI-62</u>, <u>"Removal and Installation"</u> [with normal roof] <u>EI-62</u>, "<u>Removal and Installation</u>" [with sunroof].
- 2. Remove nuts (A), and then disconnect connector (1).
- 3. Remove satellite radio antenna from roof panel.

∠: Vehicle front

INSTALLATION Install in the reverse order of removal.

Satellite radio antenna	
mounting nut	

P: 6.5 N·m (0.66 kg-m, 58 in-lb)

CAUTION:

Be careful about tightening torque. Antenna sensitivity becomes poor, and when it is excessive, roof panel may be deformed, when satellite radio antenna mounting nut tightening torque is loose.
