INFOID:000000005347260

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SUPPLEMENTAL RESTRAINT SYS-TEM" and "SEAT BELTS" of this Service Manual.

#### WARNING

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the "SUPPLEMENTAL RESTRAINT SYSTEM".
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

#### PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

#### WARNING:

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

#### Precautions For Xenon Headlamp Service

#### WARNING:

Comply with the following warnings to prevent any serious accident.

- Disconnect the battery cable (negative terminal) or the power supply fuse before installing, removing, or touching the xenon headlamp (bulb included). The xenon headlamp contains high-voltage generated parts.
- Never work with wet hands.
- Check the xenon headlamp ON-OFF status after assembling it to the vehicle. Never turn the xenon headlamp ON in other conditions. Connect the power supply to the vehicle-side connector. (Turning it ON outside the lamp case may cause fire or visual impairments.)
- Never touch the bulb glass immediately after turning it OFF. It is extremely hot.

#### CAUTION:

Comply with the following cautions to prevent any error and malfunction.

- Ν Install the xenon bulb securely. (Insufficient bulb socket installation may melt the bulb, the connector, the housing, etc. by high-voltage leakage or corona discharge.)
- Never perform HID circuit inspection with a tester.
- Never touch the xenon bulb glass with hands. Never put oil and grease on it.
- Dispose of the used xenon bulb after packing it in thick vinyl without breaking it.
- Never wipe out dirt and contamination with organic solvent (thinner, gasoline, etc.).

INFOID:000000005347262

The control of the headlamp system operation is dependent upon the position of the combination switch (lighting switch). When the lighting switch is placed in the 2ND position, the BCM (body control module) receives input signal requesting the headlamps (and tail lamps) illuminate. This input signal is communicated to the IPDM E/R (intelligent power distribution module engine room) across the CAN communication lines. The CPU (central processing unit) located in the IPDM E/R controls the headlamp high and headlamp low relay coils. These relays, when energized, direct power to the respective headlamps, which then illuminate.

#### OUTLINE

Power is supplied at all times

- to headlamp high relay, located in IPDM E/R and
- to headlamp low relay, located in IPDM E/R, from battery direct,
- through 15Å fuse (No. 71, located in IPDM E/R)
- to CPU, located in IPDM E/R,
- through 15A fuse (No. 78, located in IPDM E/R)

| High Beam Operation/Flash-to-Pass Operation<br>With the lighting switch in 2ND position and placed in HIGH or PASS position, the BCM receives input signal   |          |
| requesting the headlamp high beams and low beams to illuminate. This input signal is communicated to the   | 0        |
| IPDM E/R across the CAN communication lines. The CPU located in the IPDM E/R controls the headlamp   |          |
| high relay coil and low relay coil, which when energized, directs power  |          |
| <ul> <li>through 15A fuse (No. 76, located in IPDM E/R)</li> <li>through IPDM E/R terminal 20</li> </ul>   | Ρ        |
| • to front combination lamp RH terminal 8,   |          |
| <ul> <li>through 15A fuse (No. 86, located in IPDM E/R)</li> </ul>   |          |
| through IPDM E/R terminal 30   |          |
| • to front combination Jamp I H terminal 8   |          |

- to front combination lamp LH terminal 8,
  through 10A fuse (No. 72, located in IPDM E/R)
  through IPDM E/R terminal 27

#### < SERVICE INFORMATION >

- to front combination lamp RH terminal 6,
- through 10A fuse (No. 74, located in IPDM E/R)
- through IPDM E/R terminal 28
- to front combination lamp LH terminal 6.

Ground is supplied

- to front combination lamp RH terminal 4
- to front combination lamp LH terminal 4
- to front combination lamp RH terminal 2
- to front combination lamp LH terminal 2
- through grounds E22 and E43.

With power and ground supplied, the high beam and low beam headlamps illuminate.

The unified meter and A/C amp. that received the high beam request signal by BCM across the CAN communication makes a high beam indicator lamp turn on in the combination meter.

COMBINATION SWITCH READING FUNCTION

Refer to BCS-4, "System Description".

#### EXTERIOR LAMP BATTERY SAVER CONTROL

When the combination switch (lighting switch) is in the 2ND position (ON), and the ignition switch is turned from ON or ACC to OFF, the battery saver control function is activated.

Under this condition, the headlamps remain illuminated for 5 minutes, then the headlamps are turned off. Exterior lamp battery saver control mode can be changed by the function setting of CONSULT-III.

#### AUTO LIGHT OPERATION

Refer to LT-65, "System Description".

#### XENON HEADLAMP

Xenon type lamps are used for to the low beam headlamps. Xenon bulbs do not use a filament. Instead, they produce light when a high voltage current is passed between two tungsten electrodes through a mixture of xenon (an inert gas) and certain other metal halides. In addition to strong lighting power, electronic control of the power supply gives the headlamps stable quality and tone color.

Followings are some advantages of the xenon type headlamp.

- The light produced by the headlamps is white color similar to sunlight that is easy to the eyes.
- Light output is nearly double that of halogen headlamps, affording increased area of illumination.
- Counter-reflected luminance increases and the contrast enhances on the wet road in the rain. That makes visibility go up more than the increase of the light volume.
- Power consumption is approximately 25 percent less than halogen headlamps, reducing battery load.

# CAN Communication System Description

INFOID:000000005347263

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

# **CAN Communication Unit**

INFOID:000000005347264

Refer to LAN-11, "System Description".

#### **CAUTION:**

- Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF not to be fluctuated by overloaded.
- Turn wiper dial position to 4 except when checking waveform or voltage of wiper dial position. Wiper dial position can be confirmed on CONSULT-III. Refer to <u>LT-174, "CONSULT-III Functions (BCM COMB SW)"</u>.

# How to Perform Trouble Diagnosis

- 1. Confirm the symptom or customer complaint.
- 2. Understand operation description and function description. Refer to LT-6. "System Description".
- 3. Perform the Preliminary Check. Refer to LT-18, "Preliminary Check".
- 4. Check symptom and repair or replace the cause of malfunction.
- 5. Does the headlamp operate normally? If YES, GO TO 6. If NO, GO TO 4.
- 6. INSPECTION END

#### Preliminary Check

# CHECK POWER SUPPLY AND GROUND CIRCUIT

# 1. CHECK FUSES AND FUSIBLE LINK

#### Check for blown fuses and fusible link.

| PASSING SW        | "On/Off" | Displays status (flash-to-passing switch: ON/others: OFF) of flash-to-passing switch judged from lighting switch signal.                     |
| FR FOG SW         | "On/Off" | Displays status (front fog lamp switch: ON/others: OFF) of front fog lamp switch judged from lighting switch signal.                         |
| DOOR SW - DR      | "On/Off" | Displays status of the driver door as judged from the driver door switch signal. (door is open: ON/door is closed: OFF)                      |
| DOOR SW - AS      | "On/Off" | Displays status of the passenger door as judged from the passenger door switch signal. (door is open: ON/door is closed: OFF)                |
| DOOR SW - RR      | "On/Off" | Displays status of the rear door as judged from the rear door switch (RH) signal. (door is open: ON/door is closed: OFF)                     |
| DOOR SW - RL      | "On/Off" | Displays status of the rear door as judged from the rear door switch (LH) signal. (door is open: ON/door is closed: OFF)                     |
| BACK DOOR SW NOTE | "Off"    | _  |
| I - KEY LOCK      | "On/Off" | Displays "locked (ON)/other (OFF)" status, determined from lock signal.  |
| OPTICAL SENSOR    | "0 - 5V" | Displays "outside brightness (close to 5 V when light/close to 0 V when dark)" judged from op-<br>tical sensor signal.                       |
| VEHICLE SPEED     | "km/h"   | Displays vehicle speed as judged from vehicle speed signal.  |

#### NOTE:

This item is displayed, but cannot be monitored.

#### ACTIVE TEST

#### **Display Item List**

| Test item                 | Description   |
|---------------------------|---|
| TAIL LAMP                 | Allows tail lamp relay to operate by switching ON-OFF.      |
| FR FOG LAMP               | Allows front fog lamp relay to operate by switching ON-OFF. |
| DAYTIME RUNNING LIGHTNOTE | _   |
| HEAD LAMP (HI, LO)        | Allows headlamp relay to operate by switching ON-OFF.       |

#### NOTE:

This item is displayed, but cannot be tested.

# CONSULT-III Functions (IPDM E/R)

INFOID:000000005347272

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

#### < SERVICE INFORMATION >

| Diagnosis Mode           | Description  | А   |
|--------------------------|--|-----|
| Self-Diagnostic Results  | Refer to PG-20, "CONSULT-III Function (IPDM E/R)".                               |     |
| Data Monitor             | The input/output data of IPDM E/R is displayed in real time.                     |     |
| Can Diag Support Monitor | The result of transmit/receive diagnosis of CAN communication can be read.       | — В |
| Active Test              | IPDM E/R sends a drive signal to electronic components to check their operation. |     |

#### DATA MONITOR

С

#### < SERVICE INFORMATION >

#### **©IPDM E/R AUTO ACTIVE TEST**

- 1. Activate auto active test. Refer to PG-22, "Auto Active Test".
- 2. Make sure headlamp high beam operation.

#### Headlamp high beam should operate.

#### OK or NG

OK >> GO TO 3. NG >> GO TO 4.

**3.**CHECK IPDM E/R

#### ©CONSULT-III DATA MONITOR

- 1. Select "HL LO REQ" and "HL HI REQ" of IPDM E/R data monitor item.
- 2. With operating the lighting switch is in HI position, check the monitor status.

# When lighting switch is HIGH position

: HL LO REQ ON : HL HI REQ ON

#### OK or NG

- OK >> Replace IPDM E/R. Refer to PG-27, "Removal and Installation of IPDM E/R".
- NG >> Replace BCM. Refer to <u>BCS-14, "Removal and Installation of BCM"</u>.

**4.**CHECK HEADLAMP INPUT SIGNAL

#### (D)CONSULT-III ACTIVE TEST

- 1. Turn ignition switch OFF.
- 2. Disconnect front combination lamp RH and LH connector.
- 3. Select "LAMPS" of IPDM E/R active test item.
- 4. Touch "HI" screen.
- 5. With operating the test item, check voltage between front combination lamp (RH and LH) harness connector and ground. (Headlamp high beam repeats ON-OFF every 1 second.)

|    | Voltage (Ap-           |          |        |                 |  |
|----|------------------------|----------|--------|-----------------|--|

OK >> GO TO 2.

#### < SERVICE INFORMATION >

NG >> Check combination switch (lighting switch). Refer to LT-175, "Combination Switch Inspection".

# 2.HEADLAMP ACTIVE TEST

#### CONSULT-III ACTIVE TEST

- 1. Select "LAMPS" of IPDM E/R active test item.
- 2. With operating the test item, check the headlamp low beam operation.
  - LO : Headlamp low beam ON

#### Off : Headlamp low beam OFF

#### **©IPDM E/R AUTO ACTIVE TEST**

- 1. Activate auto active test. Refer to PG-22, "Auto Active Test".
- 2. Make sure headlamp low beam operation.

#### Headlamp low beam should operate.

#### <u>OK or NG</u>

OK >> GO TO 3. NG >> GO TO 4.

**3.**CHECK IPDM E/R

#### CONSULT-III DATA MONITOR

- 1. Select "HL LO REQ" of IPDM E/R data monitor item.
- 2. With operating the lighting switch is in 2ND position, check the monitor status.

# When lighting switch is 2ND : HL LO REQ ON position

#### <u>OK or NG</u>

- OK >> Replace IPDM E/R. Refer to PG-27, "Removal and Installation of IPDM E/R".
- NG >> Replace BCM. Refer to <u>BCS-14. "Removal and Installation of BCM"</u>.

#### **4.**CHECK HEADLAMP INPUT SIGNAL

#### CONSULT-III ACTIVE TEST

- 1. Turn ignition switch OFF.
- 2. Disconnect front combination lamp RH and LH connector.
- 3. Select "LAMPS" of IPDM E/R active test item.
- 4. Touch "LO" screen.
- 5. With operating the test item, check voltage between front combination lamp (RH and LH) harness connector and ground.

|    | (+)                                 |   |        | Voltage (Ap-    |

< SERVICE INFORMATION >

#### <u>OK or NG</u>

- OK >> GO TO 2.
- NG >> Repair malfunctioning part.

**2.**CHECK HEADLAMP INPUT SIGNAL

#### CONSULT-III ACTIVE TEST

- 1. Turn ignition switch OFF.
- 2. Disconnect front combination lamp RH or LH connector.
- 3. Select "LAMPS" of IPDM E/R active test item.
- 4. Touch "LO" screen.
- 5. With operating the test item, check voltage between front combination lamp RH or LH harness connector and ground.

|    | Terminal                         |   |              |                 |  |  |
|----|----------------------------------|---|--------------|-----------------|--|--|
|    | (+)                              |   | Voltage (Ap- |                 |  |  |
|    | Front combination lamp connector |   | (-)          | prox.)          |  |  |
| RH | E47                              | 8 | Ground       | Battery voltage |  |  |

|    |                                  |              |              |                 |

#### <u>OK or NG</u>

OK >> GO TO 3.

NG >> GO TO 4.

# **3.**CHECK HEADLAMP GROUND

- 1. Turn ignition switch OFF.
- 2. Check continuity between front combination lamp RH or LH harness connector and ground.

| Front combination lamp connector |     | Terminal |        | Continuity |
|----------------------------------|-----|----------|--------|------------|
| RH                               | E47 | 4        | Ground | Yes        |
| LH                               | E54 | 4        |        | 163        |

#### OK or NG

- OK >> Check headlamp harness and connectors.
- NG >> Repair harness or connector.

#### **4.**CHECK CIRCUIT BETWEEN IPDM E/R AND FRONT COMBINATION LAMP

- 1. Turn ignition switch OFF.
- 2. Disconnect IPDM E/R connector.

#### < SERVICE INFORMATION >

 Check continuity between IPDM E/R harness connector (A) and front combination lamp RH or LH harness connector (B).

| Circuit | А         |          |           | В        | Continuity |
|---------|-----------|----------|-----------|----------|------------|
| Circuit | Connector | Terminal | Connector | Terminal | Continuity |
| RH      | E7        | 20       | E47       | 8        | Yes        |
| LH      | E7        | 30       | E54       | 8        | 165        |

 Check continuity between IPDM E/R harness connector (A) and ground.

| A         |    |          |        | Continuity |
|-----------|----|----------|--------|------------|
| Connector |    | Terminal | Ground | Continuity |
| RH        | E7 | 20       | Giouna | No         |
| LH        | E7 | 30       |        | NO         |

#### OK or NG

- OK >> Replace IPDM E/R. Refer to PG-27, "Removal and Installation of IPDM E/R".
- NG >> Repair harness or connector.

# Headlamps Do Not Turn OFF

## **1.**CHECK HEADLAMP TURN OFF

Make sure that lighting switch is OFF. And make sure headlamp turns off when ignition switch is turned OFF.  $\overset{ ext{H}}{ ext{OK or NG}}$ 

| OK | >> GO TO 3. |
|----|-------------|
| NG | >> GO TO 2. |

2. CHECK COMBINATION SWITCH INPUT SIGNAL

#### CONSULT-III DATA MONITOR

- 1. Select "HEAD LAMP SW 2" of BCM (HEAD LAMP) data monitor item.
- 2. With operating the lighting switch, check the monitor status.

| When lighting switch is OFF | : HEAD LAMP SW 1 OFF |
|-----------------------------|----------------------|
| position                    | : HEAD LAMP SW 2 OFF |

#### <u>OK or NG</u>

# General Information for Xenon Headlamp Trouble Diagnosis

In most cases, malfunction of xenon headlamp - "does not illuminate", "flickers" or "dark" - is caused by a malfunctioning xenon bulb. A HID control unit or lamp housing, however, may be a cause of malfunction. Be sure to perform trouble diagnosis following the steps described below.

#### Caution:

• Installation or removal of connector must be done with lighting switch OFF.

Disconnect the battery cable from the negative terminal or remove power fuse.

LT

#### < SERVICE INFORMATION >

- When the lamp is illuminated (when lighting switch is ON), never touch harness, HID control unit, inside of lamp, or lamp metal parts.
- To check illumination, temporarily install lamp in vehicle. Be sure to connect power at vehicle side connector.
- If error can be traced directly to electrical system, first check for items such as blown fuses and fusible links, broken wires or loose connectors, dislocated terminals, and improper connections.
- Never work with wet hands.
- Using a tester for HID control unit circuit trouble diagnosis is prohibited.
- Disassembling HID control unit or harnesses (bulb socket harness, ECM harness) is prohibited.
- Immediately after illumination, light intensity and color will fluctuate, but there is nothing wrong.
- When bulb has come to end of its life, brightness will drop significantly, it will flash repeatedly, or light color will turn reddish.

# Xenon Headlamp Trouble Diagnosis

INFOID:000000005347281

INFOID:000000005347282

#### **1.**CHECK 1: XENON HEADLAMP LIGHTING

Install normal xenon bulb to corresponding xenon bulb headlamp, and check if lamp lights up.

#### OK or NG

OK >> Replace xenon bulb.

NG >> GO TO 2.

## **2.**CHECK 2: XENON HEADLAMP LIGHTING

Install normal HID control unit to corresponding xenon headlamp, and check if lamp lights up.

#### OK or NG

OK >> Replace HID control unit.

NG >> GO TO 3.

 $\mathbf{3.}$ CHECK 3: XENON HEADLAMP LIGHTING

Install normal xenon lamp housing assembly to corresponding xenon headlamp, and check if lamp lights up. OK or NG

- OK >> Replace xenon headlamp housing assembly.
- NG >> INSPECTION END (Check the headlamp control system.)

# Aiming Adjustment

#### < SERVICE INFORMATION >

#### PREPARATION BEFORE ADJUSTING

For details, refer to the regulations in your own country.

Before performing aiming adjustment, check the following.

- 1. Keep all tires inflated to correct pressures.
- 2. Place vehicle on flat surface.
- 3. Set that there is no-load in vehicle other than the driver (or equivalent weight placed in driver's position). Coolant, engine oil filled up to correct level and full fuel tank.

#### LOW BEAM AND HIGH BEAM

- 1. Turn headlamp low beam ON.
- 2. Use adjusting screws to perform aiming adjustment.

#### ADJUSTMENT USING AN ADJUSTMENT SCREEN (LIGHT/DARK BORDERLINE)

If the vehicle front body has been repaired and/or the headlamp assembly has been replaced, check aiming. Use the aiming chart shown in the figure.

• Basic illumination area for adjustment should be within the range shown on the aiming chart. Adjust headlamp accordingly.

#### Bulb Replacement

#### **CAUTION:**

- Disconnect the battery negative terminal or remove the fuse.
- Never touch the glass of bulb directly by hand. Keep grease and other oily matters away from it.
   Never touch bulb by hand while it is lit or right after being turned off.
- Never leave bulb out of lamp reflector for a long time because dust, moisture smoke, etc. may affect the performance of lamp. When replacing bulb, be sure to replace it with new one.

#### HEADLAMP (INNER) HIGH BEAM

- Remove air cleaner case when replacing bulb LH. Refer to <u>EM-17, "Removal and Installation"</u> (VQ35HR) or <u>EM-172, "Removal and Installation"</u> (VK45DE).
- Remove washer tank inlet when replacing bulb RH. Refer to <u>WW-35, "Removal and Installation of Washer Tank"</u>.
- 3. Turn plastic cap counterclockwise and unlock it.

# System Description

DAYTIME LIGHT SYSTEM turns on daytime light lamps while driving. Daytime light lamps are not turned on if engine is activated with parking brake on. Take off parking brake to turn on daytime light lamps. The lamps turn off when lighting switch is in the 2ND position or AUTO position (Head lamp is "ON") and when lighting switch is in the PASSING position. (Daytime light lamps are not turned off only by parking brake itself.) A parking brake signal and engine run or stop signal are sent to BCM (body control module) by CAN communication line, and control daytime light system.

#### OUTLINE

Power is supplied at all times

- to headlamp high relay, located in IPDM E/R (intelligent power distribution module engine room) and
- to headlamp low relay, located in IPDM E/R, from battery direct,
- through 15Å fuse (No. 71, located in IPDM E/R)
- to CPU (central processing unit), located in IPDM E/R,
- through 15A fuse (No. 78, located in IPDM E/R)

INFOID:000000005347287

Ν

Ρ

# HEADLAMP (FOR CANADA) - DAYTIME LIGHT SYSTEM -

< SERVICE INFORMATION >

- to CPU, located in IPDM E/R,
- through 50A fusible link (letter F, located in fuse and fusible link block)
- to BCM terminal 55,
- through 10A fuse [No. 21, located in fuse block (J/B)]
- to BCM terminal 42 and
- to combination meter terminal 23,
- through 10A fuse (No. 32, located in IPDM E/R)
- to daytime light relay terminals 2 and 5,
- through 10A fuse [No. 19, located in fuse block (J/B)]
- to unified meter and A/C amp. terminal 54,
- through 10A fuse [No. 22, located in fuse block (J/B)]
- to key slot terminal 1.
- When the ignition switch is in ON or START position, power is supplied
- to CPU, located in IPDM E/R,
- through 15A fuse [No. 1, located in fuse block (J/B)]
- to BCM terminal 38,
- through 10A fuse [No. 14, located in fuse block (J/B)]
- to combination meter terminal 12,
- through 10A fuse [No. 12, located in fuse block (J/B)]
- to unified meter and A/C amp. terminal 53.

Ground is supplied

- to BCM terminal 52
- to combination meter terminals 9, 10, and 11
- to unified meter and A/C amp. terminal 55 and 71
- to push-button ignition switch (push switch) terminal 1
- to key slot terminal 8
- through grounds M16 and M70,
- to IPDM E/R terminals 38 and 51
- through grounds E22 and E43.

#### HEADLAMP OPERATION

#### Low Beam Operation

With the lighting switch in 2ND position, the BCM receives input signal requesting the headlamps to illuminate. This input signal is communicated to IPDM E/R across the CAN communication lines. The CPU located in the IPDM E/R controls the headlamp low relay coil, which when energized, directs power

- through 15A fuse (No. 76, located in IPDM E/R)
- through IPDM E/R terminal 20
- to front combination lamp RH terminal 8,
- through 15A fuse (No. 86, located in IPDM E/R)
- through IPDM E/R terminal 30
- to front combination lamp LH terminal 8.

Ground is supplied

- to front combination lamp RH terminal 4
- to front combination lamp LH terminal 4
- through grounds E22 and E43.

With power and ground supplied, low beam headlamps illuminate.

High Beam Operation (When Daytime Light Does Not Operate)/Flash-to-Pass Operation

With the lighting switch in 2ND position and placed in HIGH BEAM or PASSING position, the BCM receives input signal requesting headlamp high beams to illuminate. High beam request signal is communicated to the IPDM E/R across the CAN communication lines. The CPU located in the IPDM E/R controls headlamp high relay coil and low relay coil, which when energized, directs power

- through 10A fuse (No. 72, located in IPDM E/R)
- through IPDM E/R terminal 27
- through front combination lamp RH terminals 6 and 2
- to daytime light relay terminal 3,
- through 10A fuse (No. 74, located in IPDM E/R)
- through IPDM E/R terminal 28
- to front combination lamp LH terminal 6,
- through 15A fuse (No. 76, located in IPDM E/R)
- through IPDM E/R terminal 20

| CAN Communication System Description  | L  |
| CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle mul-  |    |
| tiplex communication line with high data communication speed and excellent error detection ability. Many elec-<br>tronic control units are equipped onto a vehicle, and each control unit shares information and links with other   | M  |

tronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

### CAN Communication Unit

## How to Perform Trouble Diagnosis

- 1. Confirm the symptom or customer complaint.
- 2. Understand operation description and function description. Refer to <u>LT-35, "System Description"</u>.
- 3. Perform the Preliminary Check. Refer to LT-47, "Preliminary Check".
- 4. Check symptom and repair or replace the cause of malfunction.
- 5. Does the headlamp operate normally? If YES: GO TO 6. If NO: GO TO 4.
- 6. INSPECTION END

## **Preliminary Check**

## INSPECTION FOR POWER SUPPLY AND GROUND CIRCUIT

## **1.**CHECK FUSES AND FUSIBLE LINK

Check for blown fuses and fusible link.

| Unit                                   | Power source                         | Fuse No. |  |
|--|--------------------------------------|----------|--|
|  | Detterri                             | F<br>21  |  |
| BCM                                    | Battery                              |          |  |
|  | Ignition switch ON or START position | 1        |  |
| Daytime light relay                    | Battery                              | 32       |  |
| Refer to LT-39, "Wiring Diagram - DTRL |                                      |          |  |
| <u> OK or NG</u>                       |                                      |          |  |
| OK >> GO TO 2.                         |                                      |          |  |

NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to  $\underline{PG}$ -<u>4</u>.

2. CHECK POWER SUPPLY CIRCUIT

Н

INFOID:000000005347295 J

INFOID:000000005347294

LT

Ρ

### < SERVICE INFORMATION >

- 1. Disconnect BCM connector.
- 2. Check voltage between BCM harness connector and ground.

|                  | Terminals | Ignition swi | tch position    |                 |
|------------------|-----------|--------------|-----------------|-----------------|
|                  | (+)       |              |                 |                 |
| BCM<br>connector | Terminal  | (-)          | OFF             | ON              |
| M1               | 38        |              | Approx. 0 V     | Battery voltage |
| M2               | 42        | Ground       | Battery voltage | Battery voltage |
|                  | 55        |              | Battery voltage | Battery voltage |

### OK or NG

OK >> GO TO 3.

- NG >> Repair harness or connector.
- **3.**CHECK GROUND CIRCUIT

Check continuity between BCM harness connector and ground.

| BCM connector | Terminal | Ground | Continuity |
|---------------|----------|--------|------------|
| M2            | 52       | Ground | Yes        |

### OK or NG

OK >> INSPECTION END.

NG >> Repair harness or connector.

## INSPECTION FOR PARKING BRAKE SWITCH CIRCUIT

## **1.**CHECK BRAKE INDICATOR

- 1. Turn ignition switch ON.
- 2. When parking brake is switched ON/OFF, it checks whether the brake indicator lamp of combination meter lights up / puts out the light.

OK or NG

OK >> INSPECTION END

NG >> GO TO 2.

2. CHECK PARKING BRAKE SWITCH SIGNAL

- 1. Turn ignition switch OFF.
- 2. Disconnect parking brake switch connector.
- 3. Turn ignition switch ON.
- 4. Check voltage between parking brake switch harness connector and ground.

| Termi                          |          |                        |                 |
|--------------------------------|----------|------------------------|-----------------|
| (+)                            | ()       | Voltage (Ap-<br>prox.) |                 |
| Parking brake switch connector | Terminal |                        |                 |
| E110                           | 1        | Ground                 | Battery voltage |

### <u>OK or NG</u>

OK >> Replace parking brake switch.

NG >> GO TO 3.

 ${f 3.}$  CHECK PARKING BRAKE SWITCH CIRCUIT

2. Disconnect combination meter connector.

<sup>1.</sup> Turn ignition switch OFF.

### < SERVICE INFORMATION >

 Check continuity between combination meter harness connector (A) and parking brake switch harness connector (B).

|           | Ą        |           | Continuity |            |
|-----------|----------|-----------|------------|------------|
| Connector | Terminal | Connector | Terminal   | Continuity |
| M52       | 5        | E110      | 1          | Yes        |

### OK or NG

OK >> Replace combination meter.

NG >> Repair harness or connector.

## CONSULT-III Functions (BCM - HEAD LAMP)

INFOID:000000005347296

Ε

Н

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

| Diagnosis mode           | Description   |  |
|--------------------------|---|--|
| Work Support             | Changes the setting for each function. <sup>NOTE</sup>                        |  |
| Data Monitor             | Displays BCM input data in real time.   |  |
| Active Test              | Operation of electrical loads can be checked by sending drive signal to them. |  |
| Self-Diag Results        | BCM performs self-diagnosis of CAN communication.                             |  |
| Can Diag Support Monitor | The result of transmit/receive diagnosis of CAN communication can be read.    |  |

### NOTE:

Cannot change setting for headlamp.

### DATA MONITOR

**Display Item List** 

| Monitor iter   | m        | Contents   | I  |
|----------------|----------|--|----|
| IGN ON SW      | "On/Off" | Displays "IGN position (ON)/OFF, ACC position (OFF)" judged from the ignition switch signal.   | J  |
| ACC ON SW      | "On/Off" | Displays "ACC (ON)/OFF, Ignition OFF (OFF)" status judged from ignition switch signal.   |    |
| KEY ON SW      | "On/Off" | Displays "Intelligent Key inserted into key slot (ON)/Intelligent Key removed from key slot (OFF)" status judged from the key switch signal. | LT |
| TURN SIGNAL R  | "On/Off" | Displays status (turn right: ON/others: OFF) as judged from lighting switch signal.  |    |
| TURN SIGNAL L  | "On/Off" | Displays status (turn left: ON/others: OFF) as judged from lighting switch signal.   | L  |
| HI BEAM SW     | "On/Off" | Displays status (high beam switch: ON/others: OFF) of high beam switch judged from lighting switch signal.                                   |    |
| HEAD LAMP SW 1 | "On/Off" | Displays status (headlamp switch 1: ON/others: OFF) of headlamp switch 1 judged from light-<br>ing switch signal.                            | M  |
| HEAD LAMP SW 2 | "On/Off" | Displays status (headlamp switch 2: ON/others: OFF) of headlamp switch 2 judged from light-<br>ing switch signal.                            | N  |
| TAIL LAMP SW   | "On/Off" | Displays status (lighting switch 1ST or 2ND position: ON/others: OFF) of lighting switch judged from lighting switch signal.                 |    |
| AUTO LIGHT SW  | "On/Off" | Displays status of the lighting switch as judged from the lighting switch signal. (AUTO position: ON/other than AUTO position: OFF)          | 0  |
| PASSING SW     | "On/Off" | Displays status (flash-to-passing switch: ON/others: OFF) of flash-to-passing switch judged from lighting switch signal.                     | P  |
| FR FOG SW      | "On/Off" | Displays status (front fog lamp switch: ON/others: OFF) of front fog lamp switch judged from lighting switch signal.                         | F  |
| DOOR SW - DR   | "On/Off" | Displays status of the driver door as judged from the driver door switch signal. (door is open: ON/door is closed: OFF)                      |    |
| DOOR SW - AS   | "On/Off" | Displays status of the passenger door as judged from the passenger door switch signal. (door is open: ON/door is closed: OFF)                |    |

### < SERVICE INFORMATION >

| Monitor item      |          | Contents  |
|-------------------|----------|---|
| DOOR SW - RR      | "On/Off" | Displays status of the rear door as judged from the rear door switch (RH) signal. (door is open: ON/door is closed: OFF)                  |
| DOOR SW - RL      | "On/Off" | Displays status of the rear door as judged from the rear door switch (LH) signal. (door is open: ON/door is closed: OFF)                  |
| BACK DOOR SW NOTE | "Off"    | —   |
| PKB SW            | "On/Off" | Displays status (parking brake released: ON/ parking brake applied: OFF) of parking brake switch judged from parking brake switch signal. |
| ENGINE RUN        | "On/Off" | Displays status (engine running: ON/ engine stopped: OFF) of engine judged from engine run signal.  |
| I - KEY LOCK      | "On/Off" | Displays "locked (ON)/other (OFF)" status, determined from lock signal.   |
| OPTICAL SENSOR    | "0 - 5V" | Displays "outside brightness (close to 5 V when light/close to 0 V when dark)" judged from op-<br>tical sensor signal.                    |
| VEHICLE SPEED     | "km/h"   | Displays vehicle speed as judged from vehicle speed signal.   |

### NOTE:

This item is displayed, but cannot be monitored.

### ACTIVE TEST

### **Display Item List**

| Test item             | Description   |
|-----------------------|---|
| TAIL LAMP             | Allows tail lamp relay to operate by switching ON-OFF.      |
| FR FOG LAMP           | Allows front fog lamp relay to operate by switching ON-OFF. |
| DAYTIME RUNNING LIGHT | Allows daytime relay to operate by switching ON-OFF.        |
| HEAD LAMP (HI, LO)    | Allows headlamp relay to operate by switching ON-OFF.       |

## CONSULT-III Functions (IPDM E/R)

INFOID:000000005347297

### CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

| Diagnosis Mode           | Description  |
|--------------------------|--|
| SELF-DIAGNOSTIC RESULTS  | Refer to PG-20, "CONSULT-III Function (IPDM E/R)".                               |
| DATA MONITOR             | The input/output data of IPDM E/R is displayed in real time.                     |
| CAN DIAG SUPPORT Monitor | The result of transmit/receive diagnosis of CAN communication can be read.       |
| ACTIVE TEST              | IPDM E/R sends a drive signal to electronic components to check their operation. |

### NOTE:

Perform monitoring of IPDM E/R data with the ignition switch ON. When the ignition switch is at ACC, the display may not be correct.

### ACTIVE TEST

### < SERVICE INFORMATION >

| Test item  | CONSULT-III<br>screen display   | Description   |
|--|---|---|
| Tail lamp relay output   | TAIL LAMP   | Allows tail lamp relay to operate by switching operation ON-OFF at your option.   |
| Headlamp relay (HI, LO) output   |   | Allows headlamp relay (HI, LO) to operate by switching operation (OFF, HI ON, LO ON) at your option (Headlamp high beam repeats ON-OFF every 1 second).   |
| Front fog lamp relay output  |   | Allows fog lamp relay to operate by switching operation ON-OFF at your option.  |

### OK or NG

OK >> GO TO 5.

NG >> Repair harness or connector.

### **5.**CHECK DAYTIME LIGHT RELAY

Check continuity between daytime light relay terminals.

| Daytime light relay terminals |  | Condition   | Continuity |
|-------------------------------|--|---|------------|
|                               |  | Applying battery voltage to between daytime light relay terminals 1 and 2 | Yes        |
|                               |  | No battery voltage  | No         |

### OK or NG

OK >> GO TO 6.

NG >> Replace daytime light relay.

### 6.CHECK CIRCUIT BETWEEN DAYTIME LIGHT RELAY AND IPDM E/R

### 1. Disconnect IPDM E/R connector.

 Check continuity between IPDM E/R harness connector (A) and daytime light relay harness connector (B).

|           | A        |           | Continuity |            |
|-----------|----------|-----------|------------|------------|
| Connector | Terminal | Connector | Terminal   | Continuity |
| E9        | 58       | E34       | 1          | Yes        |

Ω

SKIB4671E

FUSE

## OK or NG

OK >> GO TO 7.

NG >> Repair harness or connector.

## **7.**CHECK DAYTIME LIGHT RELAY SIGNAL

- 1. Connect IPDM E/R connector.
- 2. Install daytime light relay.
- 3. Turn ignition switch ON.
- 4. Applied parking brake.
- Check voltage between IPDM E/R harness connector and ground.

| Tern               |                             |                        |                 |

### CONSULT-III DATA MONITOR

1. Select "HL LO REQ" and "HL HI REQ" of IPDM E/R data monitor item.

2. With operating the lighting switch is in HIGH BEAM position, check the monitor status.

### < SERVICE INFORMATION >

### When lighting switch is : HL LO REQ ON **HIGH BEAM position** : HL HI REQ ON

### OK or NG

- >> Replace IPDM E/R. Refer to PG-27, "Removal and Installation of IPDM E/R". OK
- >> Replace BCM. Refer to BCS-14, "Removal and Installation of BCM". NG

**4.**CHECK HEADLAMP INPUT SIGNAL

### **(D)CONSULT-III ACTIVE TEST**

- 1. Turn ignition switch OFF.
- Disconnect front combination lamp RH and LH connector. 2.
- 3. Select "LAMPS" of IPDM E/R active test item.
- Touch "HI" screen. 4.
- With operating the test item, check voltage between front combi-5. nation lamp (RH and LH) harness connector and ground. (Headlamp high beam repeats ON-OFF every 1 second.)

| LH | E54   | 4 | -      | Tes        |

<u>OK or NG</u>

- OK >> Check headlamp harness, connectors, ballasts (HID control unit), and xenon bulbs. Refer to <u>LT-63, "Xenon</u> Headlamp Trouble Diagnosis".
- NG >> Repair harness or connector.

### $\mathbf{6}$ .CHECK CIRCUIT BETWEEN IPDM E/R AND FRONT COMBINATION LAMP

- 1. Turn ignition switch OFF.
- 2. Disconnect IPDM E/R connector.

### < SERVICE INFORMATION >

Check continuity between IPDM E/R harness connector (A) and 3. front combination lamp (RH and LH) harness connector (B).

Headlamps Do Not Turn OFF

## **1.**CHECK HEADLAMP TURN OFF

Make sure that lighting switch is OFF. And make sure is headlamp turns off when ignition switch is turned OFF. OK or NG

OK >> GO TO 3.

### LT-62

INFOID:000000005347304

< SERVICE INFORMATION > NG >> GO TO 2. А 2. CHECK COMBINATION SWITCH INPUT SIGNAL (P)CONSULT-III DATA MONITOR 1. Select "HEAD LAMP SW 1" and "HEAD LAMP SW 2" of BCM (HEAD LAMP) data monitor item. В With operating the lighting switch, check the monitor status. When lighting switch is OFF : HEAD LAMP SW 1 OFF position : HEAD LAMP SW 2 OFF OK or NG OK >> Replace IPDM E/R. Refer to PG-27, "Removal and Installation of IPDM E/R". NG >> Check lighting switch. Refer to LT-175, "Combination Switch Inspection". 3.CHECK CAN COMMUNICATIONS BETWEEN BCM AND IPDM E/R Ε (P)CONSULT-III SELF-DIAGNOSIS Perform self-diagnosis for "BCM". Display of self-diagnosis results NO DTC>> Replace IPDM E/R. Refer to PG-27, "Removal and Installation of IPDM E/R". CAN COMM CIRCUIT>> Refer to LAN-17, "CAN Diagnosis with CONSULT-III". General Information for Xenon Headlamp Trouble Diagnosis INFOID:000000005347305 In most cases, malfunction of xenon headlamp - "does not illuminate", "flickers" or "dark" - is caused by a malfunctioning xenon bulb. A HID control unit or lamp housing, however, may be a cause of malfunction. Be sure Н to perform trouble diagnosis following the steps described below. Caution INFOID:000000005347306 Installation or removal of connector must be done with lighting switch OFF. When lamp is illuminated (when lighting switch is ON), do not touch harness, HID control unit, inside of lamp, or lamp metal parts. To check illumination, temporarily install lamp in the vehicle. Be sure to connect power at the vehicle-side connector. If the error can be traced directly to the electrical system, first check for items such as burned-out fuses and fusible links, broken wires or loose connectors, pulled-out terminals, and improper connections. LT Do not work with wet hands. • Using a tester for HID control unit circuit trouble diagnosis is prohibited. Disassembling the HID control unit or harnesses (bulb socket harness, ECM harness) is prohibited. Immediately after illumination, the light intensity and color will fluctuate, but there is nothing wrong. When the bulb has reached the end of its lifetime, the brightness may drop significantly, it may flash repeatedly, or the light may turn a reddish color. Xenon Headlamp Trouble Diagnosis Μ INFOID:000000005347307 **1.**CHECK 1: XENON HEADLAMP LIGHTING Ν Install normal xenon bulb to corresponding xenon bulb headlamp, and check if lamp lights up. OK or NG OK >> Replace xenon bulb. NG >> GO TO 2. 2. CHECK 2: XENON HEADLAMP LIGHTING Ρ Install normal HID control unit to corresponding xenon headlamp, and check if lamp lights up. OK or NG OK >> Replace HID control unit.

NG >> GO TO 3.

**3.**CHECK 3: XENON HEADLAMP LIGHTING

Install normal xenon lamp housing assembly to corresponding xenon headlamp, and check if lamp lights up.

Refer to LT-33. "Disassembly and Assembly" in "HEADLAMP -XENON TYPE-".

### < SERVICE INFORMATION > AUTO LIGHT SYSTEM

Automatically turns ON/OFF the parking lamps and the headlamps in accordance with ambient light. Timing for when lamps turn ON/OFF can be selected using four modes.

### OUTLINE

The auto light control system has an optical sensor inside it that detects outside brightness. When the lighting switch is in AUTO position, it automatically turns ON/OFF the parking lamps and the headlamps in accordance with ambient light. Sensitivity can be adjusted in four steps. For the details of the setting, Refer to <u>LT-75, "Preliminary Check"</u>. Optical sensor, power is supplied

- from BCM (body control module) terminal 17
- to optical sensor terminal 1.
- Optical sensor, ground is supplied
- to optical sensor terminal 3
- through BCM terminal 18.

When ignition switch is turn to ON position, and

When outside brightness is darker than prescribed level, input is supplied

- from optical sensor terminal 2
- to BCM terminal 14.

The headlamps will then illuminate. For a description of headlamp operation, Refer to "System Description".

COMBINATION SWITCH READING FUNCTION Refer to <u>BCS-4, "System Description"</u>.

### EXTERIOR LAMP BATTERY SAVER CONTROL

When the combination switch (lighting switch) is in the 2ND position (or if auto light system is activated), and the ignition switch is turned from ON or ACC to OFF, the battery saver control function is activated.

## LT-65

Ν

### < SERVICE INFORMATION >

Under this condition, the headlamps remain illuminated for 5 minutes, then the headlamps are turned off. Exterior lamp battery saver control mode can be changed by the function setting of CONSULT-III.

### DELAY TIMER FUNCTION

Delay timer function carries out a function that BCM activates the timer and controls lights out of headlamps by door switch signal and lightning switch signal when turning the Ignition switch OFF while it is ON and headlamps are ON by the auto light function.

Timer types are a 5 minutes timer and a 45 seconds timer

- When opening any door (door switch is ON), the 5 minutes timer starts and then headlamps go out five minutes later
- When all the doors are closed (from door switch ON to OFF), the 45 second timer starts and then headlamps go out 45 seconds later. If any door is opened (door switch ON) while the 45 seconds timer is in operation, the 5 minutes timer starts again
- The timer stops when turning on the ignition switch or turning off the auto light switch under the above conditions.

Delay timer control mode can be changed by the function setting of CONSULT-III.

### CAN Communication System Description

INFOID:000000005347314

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing the high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

### **CAN Communication Unit**

Refer to LAN-11, "System Description".

### Major Component and Functions

INFOID:000000005347316

INFOID:000000005347315

| Components     | Functions   |
|----------------|---|
| BCM            | • Turns on/off circuits of tail light and headlamp according to signals from optical sensor, lighting switch (AU-<br>TO), driver door switch, passenger door switch, rear door switch, and ignition switch (ON, OFF). |
| Optical sensor | Converts outside brightness (lux) to voltage, and sends it to BCM. (Detects brightness of 50 to 1,300 lux)  |

#### How to Perform Trouble Diagnosis

1. Confirm the symptom or customer complaint.

- 2. Understand operation description and function description. Refer to LT-65, "System Description".
- 3. Perform the Preliminary Check. Refer to LT-75, "Preliminary Check".
- 4. Check symptom and repair or replace the cause of malfunction. Refer to LT-78, "Symptom Chart".
- 5. Does the auto light system operate normally? If YES, GO TO 6. If NO, GO TO 4.
- 6. INSPECTION END.

# Preliminary Check

#### SETTING CHANGE FUNCTIONS

 Sensitivity of auto light system can be adjusted using CONSULT-III. Refer to <u>LT-76</u>, "<u>CONSULT-III Functions</u> (<u>BCM - HEAD LAMP</u>)".

#### CHECK POWER SUPPLY AND GROUND CIRCUIT

#### **1.**CHECK FUSE AND FUSIBLE LINK

Check for blown fuses and fusible link.

| Unit | Power source                         | Fuse and fusible link No. | - |  |
|------|--------------------------------------|---------------------------|---|--|
|      | Potton/                              | F                         |   |  |
| BCM  | Battery                              | 21                        |   |  |
| BCIM | Ignition switch ON or START position | 1                         | - |  |
|      | Ignition switch ACC or ON position   | 6                         | Ρ |  |

Refer to LT-68, "Wiring Diagram - AUTO/L -".

#### <u>OK or NG</u>

OK >> GO TO 2.

NG >> If fuse or fusible link is blown, be sure to eliminate cause of malfunction before installing new fuse or fusible link. Refer to <u>PG-4</u>.

2. CHECK POWER SUPPLY CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect BCM connector.
- 3. Check voltage between BCM harness connector and ground.

|                  | Terminal |          |                 | ion switch po   | sition          |

# < SERVICE INFORMATION >

# ACTIVE AFS

# System Description

INFOID:000000005347329

AFS control unit controls AFS and headlamp auto aiming.

The following signals are input to AFS control unit via CAN communication:

- Steering angle sensor signal
- A/T position indicator signal
- Low beam status signal
- Vehicle speed signal

Engine speed signal

- Other signals are input as follows:
- AFS switch signal from AFS switch connected to AFS control unit
- · Height sensor signal from height sensor connected to AFS control unit
- Swivel position sensor signal from swivel position sensor built into both right and left swivel actuators connected to AFS control unit

#### < SERVICE INFORMATION >

In response to the state of control, AFS control unit switches commands of AFS off indicator signal sent to unified meter and A/C amp. via CAN communication; and then turns on/off or blinks AFS off indicator lamp built in the combination meter.

#### AFS (ADAPTIVE FRONT-LIGHTING SYSTEM)

AFS increases viewability of cornering direction by changing light axis automatically to the direction of travel <sup>B</sup> with low beam headlamps during vehicle's cornering.

AFS switch allows AFS function to be stopped.

AFS control unit determines the current vehicle conditions by each received signals, and sends commands to the low beam headlamp to swivel. With the headlamps (HIGH/LOW) illuminated, the AFS switch on, engine running and the A/T select lever in any position but range P or range R, the low beam headlamps are operative by AFS control unit commands.

As the steering wheel is turned to the left (right), the left (right) low beam headlamp will automatically swivel angle in accordance with the steering angle and vehicle speed, and stop the operation when the steering wheel is returned to the straight-ahead position.

Swivel operation allows drive signal to be sent to the swivel actuator on the side that AFS control unit is actuated. Step motor built in swivel actuator adjusts low beam projector of headlamp to swivel angle that matches drive signal. Swivel position sensor built in swivel actuator detects swivel angle and transmits a swivel position sensor signal to the AFS control unit. AFS control unit monitors if swivel operation is performed normally via swivel position sensor signal.

| • | Swivel | operation |
|---|--------|-----------|
|---|--------|-----------|

|            | Low beam<br>status | A/T selector le-<br>ver position | Vehicle speed         | AFS switch | Engine speed                          | Low beam<br>headlamp LH<br>(swivel) | Low beam<br>headlamp RH<br>(swivel) | G |
|------------|--------------------|----------------------------------|-----------------------|------------|---------------------------------------|-------------------------------------|-------------------------------------|---|
| Left turn  | Illuminated*1      | Except P, R                      | Running* <sup>2</sup> | ON         | While engine<br>running* <sup>3</sup> | ×                                   |                                     | Н |
| Right turn | Illuminated*1      | Except P, R                      | Irrespective          | ON         | While engine<br>running* <sup>3</sup> |                                     | ×                                   | 1 |

\*1: Included high beam illuminated.

\*2: The swivel operates when running at approx. 25 km/h (15.5 MPH). When swivel operation is started, it works on until vehicle stops.

\*3: The low beam headlamps perform small movements when AFS control unit detects start of the engine. This is normal with initialization of swivel actuator by AFS control unit.

| HEADLAMP | AUTO AIMING |
|----------|-------------|
|----------|-------------|

| Operating range | With 18-inch wheel (Reference value) | With 19-inch wheel (Reference value) | Vehicle height            | N |
|-----------------|--------------------------------------|--------------------------------------|---------------------------|---|
| A               | 0 mm (Standard position)             | 0 mm (Standard position)             | Unloaded vehicle position |   |
| В               | Approx. 200 mm (7.9 in)              | Approx.180 mm (7.1 in)               | Low                       | 0 |

Headlamp auto aiming control automatically corrects vertical deviation of light axis that is brought by the change of vehicle height with changing number of passenger and laden weight, and relieves dazzle to oncoming vehicles.

AFS control unit determines the current vehicle conditions by each received signals, and sends commands to the low beam headlamps to auto aiming. With the headlamps (HIGH/LOW) illuminated and engine running, the low beam headlamps are operative by AFS control unit commands.

The height sensor is located on the left side of the rear suspension member and detects rear vehicle height change by sensing the displacement of the rear suspension arm. And transmits a height sensor signal to the AFS control unit.

Revision: 2009 June

J

А

#### < SERVICE INFORMATION >

With reference to the rear vehicle height under the empty condition, light axis of low beam with low rear vehicle height is relatively higher than that with the empty condition. AFS control unit switches drive signal corrects height of low beam axis to maintain height of light axis with empty condition.

Light axis of low beam with high rear vehicle height is relatively lower than that with empty condition. Light axis of low beam with empty condition is set as upper limit of headlamp auto aiming control operation. Control to correct deviation is not performed when light axis of low beam gets relatively higher than that with empty condition. Timing of control is switched in accordance with driving conditions.

Headlamp auto aiming operation

| Low beam status | Vehicle speed                          | Engine speed         | AFS switch                 |
|-----------------|--|----------------------|----------------------------|
| Illuminated*1   | Control switch by driving conditions*2 | While engine running | Irrespective* <sup>3</sup> |

\*1: Included high beam illuminated

\*2: Control timing of drive signal is switched by vehicle speed and accelerating/decelerating vehicle.

\*3: Control is performed without regard to the condition of AFS switch. Headlamp auto aiming control function cannot be cancelled.

#### OUTLINE

#### Power is supplied

When the ignition switch is ON or START position, power is supplied

- through 10A fuse [No.12, located in fuse block (J/B)]
- to AFS control unit terminal 1
- to front combination lamp LH and RH terminal 13
- to AFS switch terminal 1
- to unified meter and A/C amp. terminal 53.
- Ground is supplied
- to AFS control unit terminal 25
- through grounds M16 and M70,
- to front combination lamp LH and RH terminal 11
- through grounds E22 and E43.

#### AFS OPERATION

When The Steering Wheel Is Turned To The Left

Swivel motor driving signal (1-phase) is transmitted when the steering wheel is turned to left approximately more than 10\* degrees (predetermined), with vehicle speed at approximately 25 km/h (15.5 MPH) or more, headlamps (HIGH/LOW) illuminated, AFS switch ON and the engine running and the A/T select lever in any position except range P or R.

\*: Slightly different from the case when it is turned to the right.

- Swivel motor driving signal (1-phase) is sent
- to front combination lamp LH terminal 17
- through AFS control unit terminal 15,
- to AFS control unit terminal 38
- through front combination lamp LH terminal 21.
- And swivel motor driving signal (2-phase) is sent:
- to front combination lamp LH terminal 16
- through AFS control unit terminal 17,
- to AFS control unit terminal 36
- through front combination lamp LH terminal 20.

Swivel position sensor detects swivel angle during ignition switch ON, and transmits swivel position sensor signals to the AFS control unit:

When ignition switch is turn to ON position, power is supplied

- to front combination lamp LH terminal 15
- through AFS control unit terminal 24.

When ignition switch is turn to ON position, swivel position sensor signal input is supplied

- to AFS control unit terminal 29
- through front combination lamp LH terminal 14.

Ground is supplied

- to front combination lamp LH terminal 19
- through AFS control unit terminal 27.

The low beam headlamp LH starts to swivel to the left.

## LT-84

#### < SERVICE INFORMATION >

The swivel motor driving signals are blocked and the swivel motion stops when the steering angle reaches approximately more than 80 degrees (predetermined). The low beam headlamp will not swivel any further no matter how further left. As the steering wheel is turned back to the right, the swivel motor driving signals (both 1-phase and 2-phase) will be reversed, causing low beam headlamp LH to start swiveling to the right. When steering angle becomes smaller than predetermined value, the low beam headlamp is set in the straightahead position, swivel motor driving signals are blocked and low beam headlamps stop swiveling.

#### When The Steering Wheel Is Turned To The Right

Swivel motor driving signal (1-phase) is transmitted when the steering wheel is turned to right approximately more than 10\* degrees (predetermined), with headlamps (HIGH/LOW) illuminated, AFS switch ON, the engine running and the A/T select lever in any position except range P or R.

\*: Slightly different from the case when it is turned to the left.

Swivel motor driving signal (1-phase) is sent

to front combination lamp RH terminal 16

- through AFS control unit terminal 34,
- to AFS control unit terminal 11
- through front combination lamp RH terminal 20.
- And swivel motor driving signal (2-phase) is sent
- to front combination lamp RH terminal 17
- through AFS control unit terminal 32,
- to AFS control unit terminal 13
- through front combination lamp RH terminal 21.

Swivel position sensor detects swivel angle during ignition switch ON, and transmits swivel position sensor signals to the AFS control unit:

When ignition switch is turn to ON position, power is supplied

- to front combination lamp RH terminal 15
- through AFS control unit terminal 4.

When ignition switch is turn to ON position, swivel position sensor input signal is supplied

- to AFS control unit terminal 9
- through front combination lamp RH terminal 14.
- Ground is supplied
- to front combination lamp RH terminal 19

through AFS control unit terminal 2.

The low beam headlamp RH starts to swivel to the right.

The swivel motor driving signals are blocked and the swivel motion stops when the steering angle reaches LT approximately more than 80 degrees (predetermined). The low beam headlamp will not swivel any further no matter how further right. As the steering wheel is turned back to the left, the swivel motor driving signals (both 1-phase and 2-phase) will be reversed, causing low beam headlamp RH to start swiveling to the left. When steering angle becomes smaller than predetermined value, the low beam headlamp is set in the straightahead position, swivel motor driving signals are blocked and low beam headlamps stop swiveling.

#### AFS OFF INDICATOR OPERATION

In response to the state of control, AFS control unit switches commands of AFS off indicator signal sent to unified meter and A/C amp. via CAN communication; and then turns on/off or blinks AFS off indicator lamp built in the combination meter depending on the following condition.

Bulb check operation

AFS off indicator lamp is turned off after illuminating for one second as a bulb check for AFS off indicator lamp when turn ignition switch ON is detected.

#### NOTE:

AFS off indicator lamp is turned off without a lapse of one second when start of the engine is detected.

AFS switch operation

AFS off indicator lamp is illuminated while AFS switch is OFF. AFS off indicator lamp is turned off while AFS switch is ON.

System warning operation

А

В

Н

- L
- Ν

#### < SERVICE INFORMATION >

AFS off indicator lamp illuminates at intervals of approximately one second when AFS control unit detects any specific DTC (diagnosis trouble code), or when unified meter and A/C amp. cannot receive AFS off indicator signals.

#### NOTE:

Unified meter and A/C amp. transmits a command to combination meter to blink AFS off indicator lamp when they cannot receive AFS off indicator signal.

#### SWIVEL ACTUATOR INITIALIZATION

AFS control unit performs swivel operation to initialize swivel actuator when start of the engine is detected. Straight-ahead position of low beam headlamps is adjusted by turning low beam headlamps to outside vehicle with specified swivel angle after turning it to the center of vehicle and making sure that it reaches the stopper. Swivel actuator initialization shall be performed every time when start of the engine is detected.

#### HEADLAMP AUTO AIMING OPERATION

The height sensor detects a change in height of rear vehicle with ignition switch ON, and transmits signals to the AFS control unit:

When ignition switch is turn to ON position, power is supplied

- to height sensor terminal 1
- through AFS control unit terminal 6.

When ignition switch is turned to ON position, height sensor input signal is supplied

- to AFS control unit terminal 28
- through height sensor terminal 2.

Ground is supplied

- to height sensor terminal 3
- through AFS control unit terminal 8.

Aiming motor driving signal (voltage signal that corresponds to the vehicle height) is transmitted depending on the height sensor signal at the start of the engine

- to front combination lamp LH (aiming motor) terminal 12
- through AFS control unit terminal 40,
- to front combination lamp RH (aiming motor) terminal 12
- through AFS control unit terminal 19.

Output of aiming motor driving signal is maintained unless headlamp (HIGH/LOW) illuminate detected.

Auto aiming control operation starts when headlamps (HIGH/LOW) illuminate detected.

When headlamps (HIGH/LOW) illuminate, output of aiming motor driving signal is changed according to the height sensor signal. After the change, it is changed according to height sensor signals with predetermined timing based on driving condition while headlamps are ON.

#### Auto Aiming Operation

AFS control unit starts outputting aiming motor drive signal when the engine starts, and continues to output it until the engine stops. Aiming motor drive signal changes output when the specified conditions described below are met.

Headlamp aiming motors set the low beam projectors according to aiming motor drive signals received from AFS control unit, both headlamp aiming motors cause the low beam projectors to move to the position commanded by the signal.

The aiming motor drive signal level retains when the following conditions are not met.

- AFS control unit operation when the vehicle is stopped (low beam headlamps illuminated) Headlamp aiming motor drive signal is changed when vehicle height is stabilized with a parked condition, depending on the height sensor signal detected with height sensor signal by AFS control unit.
- AFS control unit operation when the vehicle is running (low beam headlamps illuminated) When vehicle is running, headlamp aiming motor drive signal is changed depending on the height sensor signal which is detected when AFS control unit detects constant steady speed of vehicle. When the vehicle is accelerating or decelerating, AFS control unit keeps headlamp aiming motor drive signal

voltage level rather than changing it, so that the low beam projectors of both headlamps do not operate.

#### CAN COMMUNICATION SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

#### CAN COMMUNICATION UNIT

#### < SERVICE INFORMATION >

#### Refer to LAN-11, "System Description".

# Component Parts Description

**AFS CONTROL UNIT** 

AFS control unit determines current vehicle conditions by received signals and controls AFS and headlamp auto aiming.

#### SWIVEL ACTUATOR

Swivel actuator is configured with swivel motor and swivel position sensor and is built in headlamps.

Swivel motor (step motor)

Swivel motor is a two-phase step motor. It is driven according to drive signals from AFS control unit when two drive windings are energized in set sequences, and adjusts low beam projector of headlamp. The direction of actuator rotation can be changed as desired by selecting appropriate energizing sequences.

 Swivel position sensor Swivel position sensor detects swivel angle and transmits a swivel position sensor signal to the AFS control unit.

#### AIMING MOTOR

Aiming motor is installed outside the headlamps. Headlamp aiming motors set the low beam projectors according to headlamp aiming motor drive signals received from AFS control unit.

#### < SERVICE INFORMATION >

#### AFS SWITCH

AFS switch transmits state of ON/OFF as AFS switch signals to AFS control unit.

- AFS control unit performs AFS operation when AFS switch is ON and turns off AFS off indicator lamp.
- AFS control unit does not perform AFS operation when AFS switch is OFF, and turns on AFS off indicator lamp.

#### HEIGHT SENSOR

The height sensor is located on the left side of the rear suspension member and detects rear vehicle height change by sensing the displacement of the rear suspension arm. And transmits a height sensor signal to the AFS control unit.

|   | Sensor angle                                 | Vehicle height                         |
|---|--|--|
| А | Approx. –103 $^{\circ}$ (Link stopper angle) | Low side                               |
| В | 0° (Standard position)                       | Approx. unloaded ve-<br>hicle position |
| С | Approx. 46° (Link stopper angle)             | High side                              |

#### STEERING ANGLE SENSOR

The steering angle sensor is located combination switch and detects steering angle. And transmits a steering angle sensor signal to the AFS control unit.

#### IPDM E/R

IPDM E/R detects ON/OFF state of low beam headlamps. It transmits a low beam state signal to the AFS control unit.

#### ECM

ECM transmits an engine speed signal to the AFS control unit.

#### тсм

TCM transmits an A/T position indicator signal to the AFS control unit.

#### UNIFIED METER AND A/C AMP.

- Unified meter and A/C amp. transmits vehicle speed signals to the AFS control unit.
- Unified meter and A/C amp. transmits AFS off indicator signals received from the AFS control unit to the combination meter.

#### COMBINATION METER

Combination meter turns on/off or blinks built-in AFS off indicator lamp depending on AFS off indicator signal received from unified meter and A/C amp.

# How to Proceed with Trouble Diagnosis

INFOID:000000005347334

- 1. Confirm the symptom or customer complaint.
- 2. Understand operation description and function description. Refer to LT-82, "System Description".
- 3. Perform the preliminary check. Refer to LT-98, "Preliminary Check".
- 4. Perform self-diagnosis by CONSULT-III. Refer to LT-99. "CONSULT-III Function (ADAPTIVE LIGHT)".
- 5. Check symptom and repair or replace the cause of malfunction.
- 6. Does the AFS operate normally? If YES: GO TO 7. If NO: GO TO 4.
- 7. INSPECTION END

# **Preliminary Check**

**1.**CHECK FUSES AND FUSIBLE LINK

Check for blown fuses and fusible link.

INFOID:000000005347335

# WORK SUPPORT (STEERING ANGLE SENSOR ADJUSTMENT)

#### Work Support Item List

| Item                  | Description   |
|-----------------------|---|
| ST ANG SEN ADJUSTMENT | Adjust steering angle sensor neutral point (straight-ahead position). |

#### < SERVICE INFORMATION >

#### CAUTION:

#### Never use this function but on VDC side.

Notes on Steering Angle Sensor (Neutral Point) Adjustment

- Be sure to adjust steering angle sensor neutral point before driving if any of the following has been removed/ installed or replaced: Steering angle sensor; Steering system part, Suspension system part.
- On vehicle with VDC, perform steering angle sensor neutral point adjustment only on VDC side. Never perform the adjustment on ADAPTIVE LIGHT side as this may lead to VDC malfunctions. If the adjustment has been performed on AFS side, readjust on VDC side. For steering angle sensor neutral point adjustment procedures on VDC side, refer to <u>BRC-8</u>, "Adjustment of Steering Angle Sensor Neutral Position" in "ON-VEHI-CLE SERVICE".
- When replaced steering angle sensor, AFS control unit detects "DTC C1026 ST ANG SEN SIG". Delete the malfunction history after adjust steering angle sensor on VDC side.
- Steering angle sensor neutral point adjustment should be performed using CONSULT-III. (The adjustment will not be possible without CONSULT-III.)

Operation Procedure Refer to <u>BRC-8, "Adjustment of Steering Angle Sensor Neutral Position"</u>.

WORK SUPPORT (LEVELIZER ADJUSTMENT)

Work Support Item List

| ltem                 | Description  |
|----------------------|--|
| LEVELIZER ADJUSTMENT | Adjust the height sensor signal value at unloaded vehicle position recognized by AFS control unit. |

#### **CAUTION:**

When "CAN NOT BE TESTED" is displayed, AFS control unit stops levelizer adjustment as it detected the change of height sensor signal. AFS control unit detects "DTC B2519 LEVELIZER CALIB". Turn ignition switch OFF not to change the vehicle height. Then turn ignition switch ON and perform

- evelizer adjustment again.
   When "ADJUSTMENT COMPLETE" is displayed, and "NO DTC IS DETECTED" is displayed on selfdiagnosis results, levelizer adjustment is completed.
- When "ADJUSTMENT COMPLETE" is displayed, and "B2514 HI SEN UNUSUAL" is displayed on selfdiagnosis results, refer to LT-117, "DTC B2514 HI SEN UNUSUAL RR".

#### SELF-DIAG RESULTS

#### CAUTION:

DTC B2503 and B2504 cannot be detected before the swivel operation. Thus, perform swivel operation first, and then check the display in self-diagnostic results.

Description of DTC and Solutions after Detection

CONSULT-III can detect DTC (Diagnosis trouble code). The descriptions and solutions of DTC are listed below.

• If DTC relating to CAN communication [U1000] and other components are displayed at the same time, diagnose CAN communication first.

 Make sure of the normal operation after the parts (except AFS control unit) replacement according to the self-diagnosis results. Delete the malfunction history. Display Results

• 0: There is malfunction now.

1 – 39: Displays when it is normal at present and finds malfunction in the past. It increases in order of 0→1→2...38→39 after returning to the normal condition whenever IGN OFF→ON. If it is over 39, it is fixed to 39 until the self-diagnostic results are erased. It returns to 0 when malfunction is detected again in the process.

#### CAUTION:

\*: The value can be slightly different between that is displayed on "SWVL SEN RH/LH" and that on "SWVL ANGLE RH/LH".

#### ACTIVE TEST

#### **CAUTION:**

Can be tested only when swivel actuator initialization is completed. If initialization is not completed, "RETRY COMMAND" is displayed and cannot be tested.

 LOW BEAM TEST RIGHT Low beam headlamp (right) can be operated to swivel angle 0° by touching "ORIGIN", and to maximum angle by "PEAK".

| Test Item          | Swivel Speed             | Mode             |
|--------------------|--------------------------|------------------|
| ORIGIN/PEAK - FAST | Three times fast as SLOW | Normal operation |
| ORIGIN/PEAK - SLOW | —                        | Initialization   |

#### • LOW BEAM TEST LEFT

Low beam headlamp (left) can be operated to swivel angle 0° by touching "ORIGIN", and to maximum angle by "PEAK".

#### LT-104

#### < SERVICE INFORMATION >

| Test Item          | Swivel Speed             | Mode             |
|--------------------|--------------------------|------------------|
| ORIGIN/PEAK - FAST | Three times fast as SLOW | Normal operation |
| ORIGIN/PEAK - SLOW | _                        | Initialization   |

#### • LEVELIZER TEST

Aiming motor drive signal can be changed to approx. 85% (ratio to IGN power supply) by touching "ORI-GIN", and to approx. 15% by "PEAK". That angles headlamp LO up and down.

|           | Aiming Moto               | Light Axis     |   |
|-----------|---------------------------|----------------|---|
| Test Item | Ratio to IGN power supply | Voltage        | (Reference Value)   |

#### UN OF ING

OK >> GO TO 13.

NG >> Replace front combination lamp LH (swivel motor malfunction). Refer to LT-132, "Removal and Installation of Front Combination Lamp".

13. CHECK SWIVEL MOTOR CIRCUIT 1

- Connect front combination lamp LH connector. 1.
- 2. Turn ignition switch ON.

Revision: 2009 June

#### < SERVICE INFORMATION >

3. Check voltage between AFS control unit harness connector and ground.

OK >> GO TO 14.

NG >> GO TO 16.

14. CHECK DIAGNOSIS RESULT 1

Select "ADAPTIVE LIGHT" on CONSULT-III. Select "SELF-DIAG RESULTS" on "SELECT DIAG MODE" screen.

#### Is DTC of present malfunction detected?

- >> If detect DTC B2503 and B2504, refer to "DTC B2504 SWIVEL ACTUATOR LH". YES
  - If detect DTC B2504 only, replace AFS control unit. Refer to LT-132, "Removal and Installation of AFS Control Unit".
    - If detect any DTC except B2503 and B2504, refer to LT-99, "CONSULT-III Function (ADAPTIVE LIGHT)".

NO >> GO TO 15.

15. CHECK DIAGNOSIS RESULT 2

Select "ADAPTIVE LIGHT" on CONSULT-III, check "SELF-DIAG RESULTS" with steering turning 180° or more to left under swivel operative condition to keep more than 2 seconds.

Is DTC B2504 of present malfunction detected?

- YES >> Replace front combination lamp LH (swivel actuator malfunction). Refer to LT-132, "Removal and Installation of Front Combination Lamp".
- NO >> The swivel actuator system LH is normal at present.

16. CHECK SWIVEL MOTOR CIRCUIT 2

- Turn ignition switch OFF. 1.
- Disconnect AFS control unit connector and front combination lamp LH connector. 2.
- Check continuity between AFS control unit harness connector 3. (A) and front combination lamp LH harness connector (B).

4. Check continuity between AFS control unit harness connector (A) and ground.

#### 2. CHECK SENSOR SIGNAL

Check voltage between AFS control unit harness connector and ground.

| (+)                           |          |        | Voltago (Ap-           |
|-------------------------------|----------|--------|------------------------|
| AFS control unit<br>connector | Terminal | (–)    | Voltage (Ap-<br>prox.) |
|                               | 9        |        |                        |
| F110                          | 28       | Ground | 0.25 - 4.75 V          |
|                               | 29       | †      |                        |

#### OK or NG

- OK >> Replace AFS control unit. Refer to LT-132, "Removal and Installation of AFS Control Unit".
- NG >> If voltage is less than approx. 0.25 V, GO TO 5.
  - >> If voltage is more than approx. 4.75 V, GO TO 6.

#### **3.**CHECK SENSOR POWER SUPPLY CIRCUIT (GROUND SHORT CIRCUIT)

- 1. Turn ignition switch OFF.
- 2. Disconnect AFS control unit connector.
- 3. Check continuity between AFS control unit harness connector and ground.

#### <u>OK or NG</u>

OK >> Replace AFS control unit. Refer to <u>LT-132, "Removal</u> and Installation of AFS Control Unit".

NG >> GO TO 7.

**4.**CHECK SENSOR POWER SUPPLY CIRCUIT (IGN POWER SUPPLY SHORT CIRCUIT)

1. Turn ignition switch OFF.

- 2. Disconnect AFS control unit connector.
- 3. Turn ignition switch ON.

#### < SERVICE INFORMATION >

4. Check voltage between AFS control unit harness connector and ground.

| (+)                           |          |        | Voltage (Ap-           |

|                               | 29       |        |              |

#### <u>OK or NG</u>

| OK<br>NG | >> Replace AFS control unit. Refer to <u>LT-132, "Removal and Installation of AFS Control Unit"</u> . >> GO TO 8. |  |
|----------|---|--|
| 7        |   |  |

**I**.CHECK SENSOR SIGNAL AND POWER SUPPLY CIRCUIT (GROUND SHORT CIRCUIT)

1. Disconnect height sensor connector, front combination lamp LH and RH connector.

#### < SERVICE INFORMATION >

2. Check continuity between AFS control unit harness connector and ground.

| AFS control unit<br>connector | Terminal |  | Continuity |
|-------------------------------|----------|--|------------|
|                               | 4        |  |            |
|                               | 6        |  |            |
| F110                          | 9 Ground |  | No         |
| FIIU                          | 24       |  | NO         |
|                               | 28       |  |            |
| 29                            |          |  |            |

#### <u>OK or NG</u>

- OK >> Replace height sensor, front combination lamp LH or RH with malfunction at the preceding process 3 or 5. Refer to <u>LT-133, "Removal and Installation of Height Sensor"</u> or <u>LT-132, "Removal and Installation of Front Combination Lamp"</u>.
- NG >> Repair harness or connector.

**8.**CHECK SENSOR SIGNAL AND POWER SUPPLY CIRCUIT (IGN POWER SUPPLY SHORT CIRCUIT)

- 1. Turn ignition switch OFF.
- 2. Disconnect height sensor connector, front combination lamp LH and RH connector.
- 3. Turn ignition switch ON.
- Check voltage between AFS control unit harness connector and ground.

#### <u>OK or NG</u>

- OK >> Replace height sensor, front combination lamp LH or RH with malfunction at the preceding process 4 or 6. Refer to <u>LT-133</u>, "Removal and Installation of Height Sensor" or <u>LT-132</u>, "Removal and Installation of Front Combination Lamp".
- NG >> Repair harness or connector.

#### AFS Operation Check (Function Test)

INFOID:000000005347349

#### **1.**CHECK SWIVEL ACTUATOR

CONSULT-III ACTIVE TEST

- 1. Start engine and turn lighting switch to 2ND position.
- 2. Select "LOW BEAM TEST RIGHT" or "LOW BEAM TEST LEFT" of ADAPTIVE LIGHT active test item.
- 3. Touch "ORIGIN-FAST/SLOW" and "PEAK-FAST/SLOW" screen.
- 4. Make sure of swivel operation.

| TEST ITEM           | ORIGIN          | PEAK                      | Light axis range at 10 m (394.7 in) off<br>(Reference value) |
|---------------------|-----------------|---------------------------|--|
| LOW BEAM TEST RIGHT | Swivel angle 0° | Swivel angle 7° to 13° $$ | Approx. 1.200 to 2.300 mm (47 to 91 in)                      |
| LOW BEAM TEST LEFT  | Swivel angle 0° | Swivel angle 17° to 23°   | Approx. 3.000 to 4.200 mm (118 to 165 in)                    |

#### < SERVICE INFORMATION >

OK >> GO TO 2.

NG

- >> When interference or poor fitment is found, perform aiming adjustment. Refer to <u>LT-30</u>, "Aiming Adjustment". If it is normal, replace headlamp. Refer to <u>LT-132</u>, "Removal and Installation of <u>Front Combination Lamp"</u>.
  - When the operation range is irregular, perform aiming adjustment. Refer to <u>LT-30, "Aiming</u> <u>Adjustment"</u>. If it is normal, GO TO 3.

#### 2.CHECK STEERING ANGLE SENSOR

#### CONSULT-III DATA MONITOR

Check "STR ANGLE SIG" in "Data Monitor" when driving straight and steering turn 90° to right or left.

| Steering condition | STR ANGLE SIG<br>(Data monitor) |
|--------------------|---------------------------------|
| Driving straight   | – 5.0 ° to + 5.0°               |
| Turn 90° to right  | Approx. + 90°                   |
| Turn 90° to left   | Approx. – 90°                   |

#### OK or NG

- OK >> GO TO 3.
- NG >> When steering is out of range while driving straight, perform steering angle sensor adjustment. Refer to <u>BRC-8. "Adjustment of Steering Angle Sensor Neutral Position"</u> in "ON-VEHICLE SER-VICE".
  - When the function is normal while driving straight but the displayed value is different from actual steering position with turning to right or left, replace steering angle sensor. Refer to <u>LT-132</u>, <u>H</u> <u>"Removal and Installation of Steering Angle Sensor"</u>.

#### 3.CHECK SWIVEL ACTUATOR AND AFS CONTROL UNIT

#### CONSULT-III DATA MONITOR

Check "SWVL SEN RH/LH" and "SWVL ANGLE RH/LH" in "Data Monitor" with steering turning to right or left under swivel operative condition.

| TEST ITEM   | Turn 180° or more to left    | Turn 180° or more to right |
|---|------------------------------|----------------------------|
| <ul><li>SWVL SEN RH</li><li>SWVL ANGLE RH</li></ul> | Approx. 0°                   | 7° to 13°                  |
| SWVL SEN LH     SWVL ANGLE LH                       | $17^{\circ}$ to $23^{\circ}$ | Approx. 0°                 |

#### NOTE:

The angle can be slightly different between the displayed value on "SWVL SEN" and that on "SWVL ANGLE" even when AFS operation is normal.

#### <u>OK or NG</u>

- OK >> AFS function is normal.
- NG >>• When the difference is 4.5° or more between the displayed value on "SWVL ANGLE" and that on "SWVL SEN", replace headlamp.
  - When the displayed angle on "SWVL ANGLE" is irregular, replace AFS control unit.

#### Auto Aiming Operation Check (Function Test)

#### INFOID:000000005347350

Μ

P

D

E

#### **1.**CHECK AIMING MOTOR

#### CONSULT-III ACTIVE TEST

- 1. Start engine and turn lighting switch to 2ND position.
- 2. Select "LEVELIZER TEST" of ADAPTIVE LIGHT active test item.
- 3. Touch "ORIGIN" and "PEAK" screen.
- 4. Make sure of auto aiming operation.

| TEST ITEM      | ORIGIN              | PEAK (Reference value)                 | Light axis range at 10 m (393.7 in) off<br>(Reference value) |
|----------------|---------------------|--|--|
| LEVELIZER TEST | Light axis angle 0° | Light axis angle approx. $2.5^{\circ}$ | Approx. 450 mm (17.7 in)                                     |

#### <u>OK or NG</u>

OK >> GO TO 2.

- NG >>• When interference or poor fitment is found, perform aiming adjustment. Refer to <u>LT-30</u>, "Aiming <u>Adjustment</u>". If it is normal, replace headlamp. Refer to <u>LT-132</u>, "Removal and Installation of <u>Front Combination Lamp</u>".
  - When the operation range is irregular, perform aiming adjustment. Refer to <u>LT-30</u>, "Aiming <u>Adjustment"</u>. If it is normal, GO TO 4.

#### 2. PERFORM STATE LEVELIZER ADJUSTMENT 1

#### OCNSULT-III DATA MONITOR

Check "LEV ACTR VLTG" in "Data Monitor" with unloaded vehicle position. (Remove all loads in driver, passenger and trunk rooms.)

| TEST ITEM     | Unloaded vehicle position |
|---------------|---------------------------|
| LEV ACTR VLTG | Approx. 70%               |

#### OK or NG

OK >> GO TO 3.

NG >> Perform LEVELIZER ADJUSTMENT. Refer to <u>LT-99, "CONSULT-III Function (ADAPTIVE LIGHT)"</u>.

**3.**PERFORM STATE LEVELIZER ADJUSTMENT 2

#### CONSULT-III DATA MONITOR

Check if "LEV ACTR VLTG" changes approx. 3 seconds after lowering vehicle height as low as approx. –0.5V from the value of "HI SEN OTP RR" in "Data Monitor" at unloaded vehicle position. (Remove all loads in driver, passenger and trunk rooms.)

#### OK or NG

- OK >> GO TO 4.
- NG >> Perform LEVELIZER ADJUSTMENT. Refer to <u>LT-99, "CONSULT-III Function (ADAPTIVE LIGHT)"</u>.

**4.**CHECK HEIGHT SENSOR SIGNAL AND AIMING MOTOR DRIVE SIGNAL

#### CONSULT-III DATA MONITOR

Remove height sensor link bracket mounting nuts (rear stabilizer side). For details, refer to <u>LT-133, "Removal</u> and <u>Installation of Height Sensor"</u>. Change sensor angle from the basic point of sensor angle 0° (standard position) and check "HI SEN OTP RR" and "LEV ACTR VLTG" of "Data Monitor".

|   | Sensor angle                               | Vehicle height            |
|---|--|---------------------------|
| А | Approx. –103° (Link stopper angle)         | Low side                  |
| В | 0° (Standard position)                     | Unloaded vehicle position |
| С | Approx. 46 $^{\circ}$ (Link stopper angle) | High side                 |

#### < SERVICE INFORMATION >

#### With 18-inch wheel

|  | Sensor angle          | "HI SEN OTP RR"                | "LEV ACTR VLTG" | Light axis range at<br>10 m (393.7 in) off<br>(Reference value) | A |
|--|-----------------------|--------------------------------|-----------------|---|---|
| Limit value of vehicle height (high side)  | Approx. $45^{\circ}$  | Approx. 4.5 V                  | Approx. 70.0%   | —   | В |
| Maximum angle of auto aiming operation <sup>NOTE1</sup><br>(Unloaded vehicle position) | Approx. 0°            | Approx. 2.5 V                  | Approx. 70.0%   | 0   |   |
| Minimum angle of auto aiming operation <sup>NOTE1</sup><br>(Maximum laden condition)   | Approx. –35°          | Approx. 1.0 V <sup>NOTE2</sup> | Approx. 38.0%   | Approx. 200 mm<br>(7.9 in)                                      | С |
| Limit value of vehicle height (low side)   | Approx. $-45^{\circ}$ | Approx. 0.5 V                  | Approx. 38.0%   | —   | D |

#### NOTE:

1. Reference value. The value can be different from that of sensor angle and HI SEN OTP RR of maximum/minimum angle of auto aiming operation depending on LEVELIZER ADJUSTMENT state.

2. Reference value. Approx. -1.5 V from the LEVELIZER ADJUSTMENT value.

#### With 19-inch wheel

|  | Sensor angle          | "HI SEN OTP RR"   | "LEV ACTR VLTG" | Light axis range at 10<br>m (393.7 in) off<br>(Reference value) | I |
|--|-----------------------|-------------------|-----------------|---|---|
| Limit value of vehicle height (high side)  | Approx. 45°           | Approx. 4.5 V     | Approx. 70.0%   | —   | ( |
| Maximum angle of auto aiming operation <sup>NOTE1</sup><br>(Unloaded vehicle position) | Approx. 0°            | Approx. 2.5 V     | Approx. 70.0%   | 0   |   |
| Minimum angle of auto aiming operation <sup>NOTE1</sup> (Maximum laden condition)      | Approx. –27°          | Approx. 1.3 NOTE2 | Approx. 41.8%   | Approx. 180 mm<br>(7.1 in)                                      | ŀ |
| Limit value of vehicle height (low side)   | Approx. $-45^{\circ}$ | Approx. 0.5 V     | Approx. 41.8%   | —   |   |

#### NOTE:

1. Reference value. The value can be different from that of sensor angle and HI SEN OTP RR of maximum/minimum angle of auto aiming operation depending on LEVELIZER ADJUSTMENT state.

2. Reference value. Approx. –1.2 V from LEVELIZER ADJUSTMENT value.

#### <u>OK or NG</u>

NG

- OK >> Auto aiming operation function is normal.
  - >> When approx. 4.5 V or 0.5 V is not displayed on "HI SEN OTP RR" screen with sensor angle approx. 45° or –45°, check connector for connection, bend and loose fit. If it is normal, replace height sensor. Refer to LT-133, "Removal and Installation of Height Sensor".
    - When "HI SEN OTP RR" value is normal but "LEV ACTR VLTG" value differs from maximum/ minimum angle of auto aiming operation, replace AFS control unit. Refer to <u>LT-132</u>, "<u>Removal</u> and Installation of AFS Control Unit".
    - When "LEV ACTR VLTG" value is normal but operation range is irregular, check aiming motor system circuit. Refer to <u>LT-129</u>, "Auto Aiming Does Not Operate (Check Aiming Motor System <u>Circuit)</u>".

#### AFS Switch Does Not Operate

#### **1.**CHECK AFS SWITCH SIGNAL 1

- CONSULT-III DATA MONITOR
- 1. Turn ignition switch ON.
- 2. Select "AFS SW" of ADAPTIVE LIGHT data monitor item.
- 3. With operating the AFS switch, check the monitor status.

#### OK or NG

- OK >> Replace AFS control unit. Refer to <u>LT-132</u>, "Removal and Installation of AFS Control Unit". NG >> GO TO 2.
- 2. CHECK AFS SWITCH
- 1. Turn ignition switch OFF.
- 2. Disconnect AFS switch connector.

< SERVICE INFORMATION >

#### OK or NG

OK >> Replace AFS control unit. Refer to LT-132, "Removal and Installation of AFS Control Unit".

NG >> Repair harness or connector.

#### AFS OFF Indicator Does Not Operate

INFOID:000000005347353

**1.**CHECK DIAGNOSIS RESULT (AFS CONTROL UNIT)

Select "ADAPTIVE LIGHT" on CONSULT-III. Select "SELF-DIAG RESULTS" on "SELECT DIAG MODE" screen.

#### Is DTC detected?

YES >> Refer to <u>LT-99, "CONSULT-III Function (ADAPTIVE LIGHT)"</u>.

NO >> GO TO 2.

**2.**CHECK DIAGNOSIS RESULT (UNIFIED METER AND A/C AMP.)

Select "METER A/C AMP" on CONSULT-III. Select "SELF-DIAG RESULTS" on "SELECT DIAG MODE" screen.

Is DTC detected?

YES >> Refer to <u>DI-28, "CONSULT-III Function (METER/M&A)"</u>.

NO >> GO TO 3.

**3.**CHECK AFS OFF INDICATOR SIGNAL (UNIFIED METER AND A/C AMP.)

#### CONSULT-III DATA MONITOR

- 1. Select "AFS OFF IND" of METER A/C AMP data monitor item.
- 2. With operating the AFS switch, check the monitor status.

| Condition          | "AFS OFF IND" |
|--------------------|---------------|
| AFS switch is OFF. | On            |
| AFS switch is ON.  | Off           |

#### OK or NG

OK >> Replace combination meter.

NG >> Replace unified meter and A/C amp.

Removal and Installation of Steering Angle Sensor

Refer to BRC-64.

Removal and Installation of Front Combination Lamp

Refer to LT-33, "Removal and Installation".

Removal and Installation of AFS Control Unit

#### REMOVAL

- 1. Remove dash side finisher RH. Refer to EI-48.
- 2. Remove screw (A).
- 3. Disconnect AFS control unit connector.
- 4. Remove AFS control unit (1).

#### INSTALLATION

Installation is the reverse order of removal.

Revision: 2009 June

#### < SERVICE INFORMATION >

:Vehicle front

Refer to GI-9, "Component" for symbols in the figure.

#### INSTALLATION

Installation is the reverse order of removal.

#### **CAUTION:**

Tighten the bracket while pushing onto rear stabilizer when installing the installation nut of height sensor link bracket (stabilizer side).

#### NOTE:

Adjust levelizer when replacing height sensor. For details, refer to LT-99, "CONSULT-III Function (ADAPTIVE LIGHT)".

#### < SERVICE INFORMATION >

#### System Description

The control of the fog lamps is dependent upon the position of the combination switch (lighting switch). The lighting switch must be in the 2ND position or AUTO position (headlamp is ON) for front fog lamp operation. When the lighting switch is placed in fog lamp position, the BCM (body control module) receives input signal requesting the fog lamps to illuminate. When the headlamps are illuminated, this input signal is communicated to the IPDM E/R (intelligent power distribution module engine room) across the CAN communication lines. The CPU (central processing unit) located in the IPDM E/R controls the front fog lamp relay coil. When activated, this relay directs power to the front fog lamps.

#### OUTLINE

Power is supplied at all times

- through 15A fuse (No. 88, located in IPDM E/R)
- to front fog lamp relay, located in IPDM E/R,
- through 15A fuse (No. 78, located in IPDM E/R)
- to CPU, located in IPDM E/R,

INFOID:000000005347360

#### < SERVICE INFORMATION >

- through 15A fuse (No. 71, located in IPDM E/R)
- to CPU, located in IPDM E/R,
- through 50A fusible link (letter F, located in fuse fusible link and relay block)
- to BCM terminal 55,
- through 10A fuse [No. 21, located in fuse block (J/B)]
- to BCM terminal 42, and
- to combination meter terminal 23,
- through 10A fuse [No. 19, located in fuse block (J/B)]
- to unified meter and A/C amp. terminal 54,
- through 10A fuse [No. 22, located in fuse block (J/B)]
- to key slot terminal 1.

#### With the ignition switch in the ON or START position, power is supplied

- to CPU, located in IPDM E/R,
- through 15A fuse [No. 1, located in fuse block (J/B)]
- to BCM terminal 38,
- through 10A fuse [No. 14, located in fuse block (J/B)]
- to combination meter terminal 12,
- through 10A fuse [No. 12, located in fuse block (J/B)]
- to unified meter and A/C amp. terminal 53.
- With the ignition switch in the ACC or ON position, power is supplied
- through 10A fuse [No. 6, located in fuse block (J/B)]
- to BCM terminal 11.
- Ground is supplied
- to BCM terminal 52
- to combination meter terminals 9, 10 and 11
- to unified meter and A/C amp. terminals 55 and 71
- to push-button ignition switch (push switch) terminal 1
- to key slot terminal 8
- through grounds M16 and M70,
- to IPDM E/R terminals 38 and 51
- through grounds E22 and E43.

#### FOG LAMP OPERATION

The fog lamp switch is built in combination switch. The lighting switch must be in 2ND position or AUTO position (headlamp is ON) and fog lamp switch must be ON for fog lamp operation.

With the fog lamp switch in the ON position, the CPU located in IPDM E/R grounds coil side of the fog lamp relay. Fog lamp relay then directs power

- through IPDM E/R terminal 37
- to front fog lamp RH terminal 1,
- through IPDM E/R terminal 36
- to front fog lamp LH terminal 1.
- Ground is supplied
- to front fog lamp RH terminal 2
- through grounds E22 and E43,
- to front fog lamp LH terminal 2
- through grounds E22 and E43.

With power and grounds supplied, the front fog lamps illuminate.

The unified meter and A/C amp. that received the front fog lamp request signal by BCM across the CAN communication makes a front fog lamp indicator lamp turn on in combination meter.

#### COMBINATION SWITCH READING FUNCTION

Refer to BCS-4, "System Description".

#### EXTERIOR LAMP BATTERY SAVER CONTROL

When the combination switch (lighting switch) is in the 2ND position (ON), and the ignition switch is turned from ON or ACC to OFF, the battery saver control function is activated.

Under this condition, the headlamps remain illuminated for 5 minutes, then the headlamps are turned off. Exterior lamp battery saver control mode can be changed by the function setting of CONSULT-III.

#### CAN Communication System Description

INFOID:000000005347361

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many elec-

#### < SERVICE INFORMATION >

tronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

#### **CAN Communication Unit**

Refer to LAN-11, "System Description".

#### How to Perform Trouble Diagnosis

- 1. Confirm the symptom or customer complaint.
- 2. Understand operation description and function description. Refer to <u>LT-135, "System Description"</u>.
- 3. Perform the Preliminary Check. Refer to LT-143, "Preliminary Check".
- 4. Check symptom and repair or replace the cause of malfunction.
- 5. Does the front fog lamp operate normally? If YES, GO TO 6. If NO, GO TO 4.
- 6. INSPECTION END

#### **Preliminary Check**

#### CHECK POWER SUPPLY AND GROUND CIRCUIT

#### **1.**CHECK FUSES AND FUSIBLE LINK

Check for blown fuses and fusible link.

| Unit     | Power source                         | Fuse and fusible link No. |   |
|----------|--------------------------------------|---------------------------|---|
|          |                                      | F                         |   |
| DOM      | Battery                              | 21                        | L |
| BCM      | Ignition switch ON or START position | 1                         |   |
|          | Ignition switch ACC or ON position   | 6                         | M |
|          |                                      | 71                        |   |
| IPDM E/R | Battery                              | 88                        |   |
|          |                                      | 78                        | N |

Refer to LT-138, "Wiring Diagram - F/FOG -".

#### <u>OK or NG</u>

OK >> GO TO 2.

NG >> If fuse or fusible link is blown, be sure to eliminate cause of malfunction before installing new fuse or fusible link. Refer to <u>PG-4</u>.

#### 2. CHECK POWER SUPPLY CIRCUIT

Revision: 2009 June

#### < SERVICE INFORMATION >

#### 1. Turn ignition switch OFF.

- 2. Disconnect BCM connector.
- Check voltage between BCM harness connector and ground. 3.

| Terminal         |          |        | Ignition switch position |                 |                 |
|------------------|----------|--------|--------------------------|-----------------|-----------------|
|                  | (+)      |        |                          |                 |                 |
| BCM<br>connector | Terminal | (–)    | OFF                      | ACC             | ON              |

| M1               | 38       |        | Approx.<br>0 V           | Approx.<br>0 V  | Battery voltage |
| M2               | 42       |        | Battery voltage          | Battery voltage | Battery voltage |
| IVIZ             | 55       |        | Battery voltage          | Battery voltage | Battery voltage |

#### OK or NG

OK >> GO TO 3.

NG >> Check harness for open or short between BCM and fuse.

#### ${f 3.}$ CHECK GROUND CIRCUIT

Check continuity between BCM harness connector and ground.

| BCM connector | Terminal | Ground  | Continuity |  |
|---------------|----------|---------|------------|--|
| M2            | 52       | Giodila | Yes        |  |

#### OK or NG

OK >> INSPECTION END

NG >> Check harness ground circuit.

### BCM connector 42 PKIA5204E

E COFF (GCC) (CON)

BCM connector

((師)

CONSULT-III Functions (BCM - HEAD LAMP)

Refer to LT-19, "CONSULT-III Functions (BCM - HEAD LAMP)" in HEADLAMP (FOR USA) -XENON TYPE-. Refer to LT-49, "CONSULT-III Functions (BCM - HEAD LAMP)" in HEADLAMP (FOR CANADA).

#### CONSULT-III Functions (IPDM E/R)

Refer to LT-20, "CONSULT-III Functions (IPDM E/R)" in HEADLAMP (FOR USA) -XENON TYPE-. Refer to LT-50, "CONSULT-III Functions (IPDM E/R)" in HEADLAMP (FOR CANADA).

Front Fog Lamps Do Not Illuminate (Both Sides)

1. CHECK COMBINATION SWITCH INPUT SIGNAL

**(D)CONSULT-III DATA MONITOR** 

1. Select "FR FOG SW" of BCM (HEAD LAMP) data monitor item.

With operating the front fog lamp switch, check the monitor status. 2.

#### When fog lamp switch is ON : FR FOG SW ON

CHECK THE COMBINATION SWITCH Refer to LT-175, "Combination Switch Inspection". OK or NG

OK >> GO TO 2.

#### OK or NG

OK >> GO TO 3. NG >> GO TO 4.

#### 3.CHECK FRONT FOG LAMP GROUND CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Check continuity between front fog lamp RH or LH harness connector and ground.

| Front fog lamp connector |     | Terminal |        | Continuity |
|--------------------------|-----|----------|--------|------------|
| RH                       | E45 | 2        | Ground | Vac        |
| LH                       | E60 | 2        |        | Yes        |

#### OK or NG

- OK >> Check connecting condition front fog lamp harness connector.
- NG >> Repair harness or connector.
- 4.CHECK FOG LAMP CIRCUIT
- Turn ignition switch OFF. 1.
- Disconnect IPDM E/R connector. 2.
- Check continuity between IPDM E/R harness connector (A) and 3. front fog lamp RH or LH harness connector (B).

| Circuit |           | 4        |           | В        | Continuity |
|---------|-----------|----------|-----------|----------|------------|
|         | Connector | Terminal | Connector | Terminal | Continuity |
| RH      | E8        | 37       | E45       | 1        | Yes        |
| LH      | E8        | 36       | E60       | 1        | 163        |

Ω

4. Check continuity between IPDM E/R harness connector (A) and ground.

| А         |    |          |        | Continuity |
|-----------|----|----------|--------|------------|
| Connector |    | Terminal | Ground | Continuity |
| RH        | E8 | 37       | Giouna | No         |
| LH        |    | 36       |        | No         |

#### OK or NG

>> Replace IPDM E/R. Refer to PG-27, "Removal and Installation of IPDM E/R". OK

NG >> Repair harness or connector.

### Front Fog Lamps Do Not Turn OFF

### 1.CHECK FRONT FOG LAMP TURN OFF

Make sure that lighting switch is OFF. And make sure front fog lamp turns off when ignition switch is turned OFF.

OK or NG

### LT-147

< SERVICE INFORMATION >

OK >> GO TO 3.

NG >> GO TO 2.

**2.**CHECK COMBINATION SWITCH INPUT SIGNAL

CONSULT-III DATA MONITOR

1. Select "FR FOG SW" of BCM (HEAD LAMP) data monitor item.

2. With operating the front fog lamp switch, check the monitor status.

# When fog lamp switch is : FR FOG SW OFF OFF position

<u>OK or NG</u>

OK >> Replace IPDM E/R. Refer to PG-27, "Removal and Installation of IPDM E/R".

NG >> Check combination switch (lighting switch). Refer to LT-175, "Combination Switch Inspection".

**3.**CHECK CAN COMMUNICATIONS BETWEEN BCM AND IPDM E/R

CONSULT-III SELF-DIAGNOSIS

Perform self-diagnosis for "BCM" on CONSULT-III.

Display of self-diagnosis results

NO DTC>> Replace IPDM E/R. Refer to <u>PG-27, "Removal and Installation of IPDM E/R"</u>. CAN COMM CIRCUIT>> Refer to <u>LAN-17, "CAN Diagnosis with CONSULT-III"</u>.

### Aiming Adjustment

INFOID:000000005347374

The fog lamp is a semi-sealed beam type which uses a replaceable halogen bulb. Before performing aiming adjustment, make sure of the following.

• Keep all tires inflated to correct pressure.

• Place vehicle on level ground.

Adjust aiming in the vertical direction by turning the adjusting screw.

#### < SERVICE INFORMATION >

- 1. Set the distance between the screen and the center of fog lamp lens as shown.
- 2. Turn front fog lamps ON.
- Adjust front fog lamps using adjusting screw so that the top edge of the high intensity zone is in the figure.
   When performing adjustment, if necessary, cover the headlamps and opposite fog lamp.

#### **Bulb Replacement**

#### INFOID:000000005347375

Н

#### **CAUTION:**

- Disconnect the battery negative terminal or remove the fuse.
- Never touch the glass of bulb directly by hand. Keep grease and other oily matters away from it. Never touch bulb by hand while it is lit or right after being turned off.
- Never leave bulb out of lamp reflector for a long time because dust, moisture smoke, etc. may affect the performance of lamp. When replacing bulb, be sure to replace it with new one.
- 1. Remove fender protector (front). Refer to El-31.
- 2. Turn bulb (1) counterclockwise and unlock it.
- 3. Disconnect connector (2), and remove bulb (1).

Front fog lamp : 12V - 55W (H11)

### System Description

INFOID:000000005347379

### TURN SIGNAL OPERATION

With the ignition switch is in the ON or START position, power is supplied

- through 15A fuse [No. 1, located in fuse block (J/B)]
- to BCM (body control module) terminal 38,
- through 10A fuse [No. 14, located in fuse block (J/B)]
- to combination meter terminal 12,
- through 10A fuse [No. 12, located in fuse block (J/B)]
- to unified meter and A/C amp. terminal 53.
- Ground is supplied
- to BCM terminal 52
- to combination meter terminals 9, 10 and 11
- to unified meter and A/C amp. terminals 55 and 71
- through grounds M16 and M70.

#### LH Turn Signal Lamp

When turn signal switch is moved to left position, BCM receives input signal requesting left turn signals to flash. BCM then supplies power

- through BCM terminal 45
- to front combination lamp LH (turn signal) terminal 10
- to side turn signal lamp LH terminal 1, and
- to rear combination lamp LH (turn signal) terminal 3. Ground is supplied
- to front combination lamp LH (turn signal) terminal 9
- to side turn signal lamp LH terminal 2
- through grounds E22 and E43,

### LT-152

#### < SERVICE INFORMATION >

| <ul> <li>to rear combination lamp LH (turn signal) terminal 4</li> </ul>   |    |
|--|----|
| • through grounds B5, B40 and B131.  | А  |
| The BCM also supplies input to unified meter and A/C amp. terminals 56 and 72 across the CAN communica-<br>tion lines.                         |    |
| The unified meter and A/C amp. which received the turn indicator signal makes the left turn signal indicator                                   | _  |
| turn on in combination meter.  | В  |
| With power and input supplied, the BCM controls the flashing of the LH turn signal lamps.  |    |
| RH Turn Signal Lamp  |    |
| When turn signal switch is moved to right position, BCM receives input signal requesting right turn signals to                                 | С  |
| flash. BCM then supplies power   |    |
| through BCM terminal 46  |    |
| <ul> <li>to front combination lamp RH (turn signal) terminal 10</li> </ul>   | D  |

#### < SERVICE INFORMATION >

• through grounds B5, B40 and B131.

The BCM also supplies input to unified meter and A/C amp. terminals 56 and 72 across the CAN communication lines.

The unified meter and A/C amp. which received the turn indicator signal makes the left and right turn signal indicator turn on in combination meter.

With power and input supplied, the BCM controls the flashing of the hazard warning lamps.

COMBINATION SWITCH READING FUNCTION

Refer to BCS-4, "System Description".

#### CAN Communication System Description

INFOID:000000005347380

INFOID:000000005347381

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

#### CAN Communication Unit

Refer to LAN-11, "System Description".

### How to Perform Trouble Diagnosis

- 1. Confirm the symptom or customer complaint.
- 2. Understand operation description and function description. Refer to LT-152, "System Description".
- Perform the Preliminary Check. Refer to <u>LT-161, "Preliminary Check"</u>.
- 4. Check symptom and repair or replace the cause of malfunction.
- 5. Do turn signal and hazard warning lamps operate normally? If YES, GO TO 6. If NO, GO TO 4.
- 6. INSPECTION END

### **Preliminary Check**

#### CHECK POWER SUPPLY AND GROUND CIRCUIT

#### **1.**CHECK FUSES AND FUSIBLE LINK

Check for blown fuses and fusible link.

| Unit                       | Power source                         | Fuse and fusible link No. |  |
|----------------------------|--------------------------------------|---------------------------|--|
|                            | Dutte                                |                           |  |
| BCM                        | Battery                              | 21                        |  |
|                            | Ignition switch ON or START position | 1                         |  |
| Combination motor          | Battery                              | 21                        |  |
| Combination meter          | Ignition switch ON or START position | 14                        |  |
|                            | Battery                              | 19                        |  |
| Unified meter and A/C amp. | Ignition switch ON or START position | 12                        |  |

Refer to LT-156, "Wiring Diagram - TURN -".

#### <u>OK or NG</u>

OK >> GO TO 2.

NG >> If fuse or fusible link is blown, be sure to eliminate cause of malfunction before installing new fuse or fusible link. Refer to <u>PG-4</u>.

### CONSULT-III Functions (BCM - FLASHER)

INFOID:000000005347387

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

| Diagnosis mode | Description   |
|----------------|---|
| DATA MONITOR   | Displays BCM input data in real time.   |
| ACTIVE TEST    | Operation of electrical loads can be checked by sending driving signal to them. |

#### DATA MONITOR

Display Item List

| Monitor it    | em       | Contents   |
|---------------|----------|--|
| IGN ON SW     | "On/Off" | Displays "IGN position (ON)/OFF, ACC position (OFF)" judged from the ignition switch signal. |
| HAZARD SW     | "On/Off" | Displays "hazard ON (ON)/hazard OFF (OFF)" status, determined from hazard switch signal.     |
| TURN SIGNAL R | "On/Off" | Displays "turn right (ON)/other (OFF)" status, determined from lighting switch signal.       |
| TURN SIGNAL L | "On/Off" | Displays "turn left (ON)/other (OFF)" status, determined from lighting switch signal.        |

#### ACTIVE TEST

**Display Item List** 

| Test item       | Description  |
|-----------------|--|
| FLASHER (RIGHT) | Turn signal lamp (right) can be operated by any ON-OFF operations. |
| FLASHER (LEFT)  | Turn signal lamp (left) can be operated by any ON-OFF operations.  |

### LIGHTING AND TURN SIGNAL SWITCH

#### < SERVICE INFORMATION >

### LIGHTING AND TURN SIGNAL SWITCH

#### Removal and Installation

#### REMOVAL

- 1. Remove steering column lower cover. Refer to <u>IP-11</u>.
- 2. While pressing pawls (A) in direction as shown in the figure, pull lighting and turn signal switch (1) toward driver door and disconnect from the base.

INSTALLATION Installation is the reverse order of removal.

Switch Circuit Inspection

INFOID:000000005347398

Refer to LT-175, "Combination Switch Inspection".

INFOID:000000005347397

#### **CAUTION:**

- Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF not to be fluctuated by overloaded.
- Turn wiper dial position to 4 except when checking waveform or voltage of wiper dial position. Wiper dial position can be confirmed on CONSULT-III. Refer to <u>LT-174, "CONSULT-III Functions (BCM COMB SW)"</u>.

# CONSULT-III Functions (BCM - COMB SW)

INFOID:000000005347403

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

| Diagnosis mode | Description                           |  |  |
|----------------|---------------------------------------|--|--|
| DATA MONITOR   | Displays BCM input data in real time. |  |  |

#### DATA MONITOR

**Display Item List** 

#### < SERVICE INFORMATION >

| Monitor item name  |          | Contents   |  |  |  |  |
|--|----------|--|--|--|--|--|
| TURN SIGNAL R  | "On/Off" | Displays "turn right (ON)/other (OFF)" status, determined from lighting switch signal.                                     |  |  |  |  |
| TURN SIGNAL L  | "On/Off" | Displays "turn left (ON)/other (OFF)" status, determined from lighting switch signal.                                      |  |  |  |  |
| HI BEAM SW   | "On/Off" | Displays status (high beam switch: ON/others: OFF) of high beam switch judged from lighting switch signal.                 |  |  |  |  |
| HEAD LAMP SW 1 "On/Off" Displays status (headlamp switch 1: ON/others: OFF) of headlamp switch 1 judged from live switch signal. |          | Displays status (headlamp switch 1: ON/others: OFF) of headlamp switch 1 judged from lighting switch signal.               |  |  |  |  |
| HEAD LAMP SW 2   | "On/Off" | Displays status (headlamp switch 2: ON/others: OFF) of headlamp switch 2 judged from lighting switch signal.               |  |  |  |  |
| TAIL LAMP SW   | "On/Off" | Displays status (lighting switch 1ST or 2ND position: ON/others: OFF) of lighting switch judged fr lighting switch signal. |  |  |  |  |
| PASSING SW   | "On/Off" | Displays status (flash-to-pass switch: ON/others: OFF) of flash-to-pass switch judged from lighting switch signal.         |  |  |  |  |
| AUTO LIGHT SW  | "On/Off" | Displays "auto light switch (ON)/other (OFF)" status, determined from lighting switch signal.                              |  |  |  |  |
| FR FOG SW  | "On/Off" | Displays "front fog lamp switch (ON)/other (OFF)" status, determined from lighting switch signal.                          |  |  |  |  |
| FR WIPER HI  | "On/Off" | Displays "front wiper HI (ON)/other (OFF)" status, determined from wiper switch signal.                                    |  |  |  |  |
| FR WIPER LOW   | "On/Off" | Displays "front wiper LOW (ON)/other (OFF)" status, determined from wiper switch signal.                                   |  |  |  |  |
| FR WIPER INT   | "On/Off" | Displays "front wiper INT (ON)/other (OFF)" status, determined from wiper switch signal.                                   |  |  |  |  |
| FR WASHER SW   | "On/Off" | Displays "front washer switch (ON)/other (OFF)" status, determined from wiper switch signal.                               |  |  |  |  |
| INT VOLUME   | "1 - 7"  | Displays intermittent operation knob setting (1 - 7), determined from wiper switch signal.                                 |  |  |  |  |

### **Combination Switch Inspection**

INFOID:000000005347404

Н

Μ

Ν

### 1.SYSTEM CHECK

Referring to table below, check the system to which malfunctioning switch belongs.

| Systen   | n 1   | System 2     | System 3     | System 4   | System 5     | J |
|----------|-------|--------------|--------------|------------|--------------|---|
|          |       | FR WASHER    | FR WIPER LO  | TURN LH    | TURN RH      |   |
| FR WIPE  | R HI  | —            | FR WIPER INT | PASSING    | HEAD LAMP1   |   |
| INT VOLU | JME 1 | —            | —            | HEAD LAMP2 | HI BEAM      |   |
|          |       | INT VOLUME 3 | AUTO LIGHT   | —          | LIGHT SW 1ST |   |
| INT VOLU | JME 2 | _            | —            | FR FOG     | _            | L |

>> Check the system to which malfunctioning switch belongs, and then GO TO 2.

### 2.SYSTEM CHECK

#### CONSULT-III DATA MONITOR

1. Select COMB SW data monitor item.

 Confirm that other switches in malfunctioning system operate normally. Example: When the HI BEAM switch is malfunctioning, confirm that "TURN RH", "HEAD LAMP 1" and "TAIL LAMP SW" in System 5, to which the HI BEAM switch belongs, turn ON-OFF normally.

#### SYSTEM CHECK

Operating combination switch, and confirm that other switches in malfunctioning system operate normally. Example: When the HI BEAM switch is malfunctioning, confirm that "TURN RH", "HEAD LAMP 1" and "TAIL P LAMP SW" in System 5, to which HI BEAM switch belongs, turn ON-OFF normally.

#### Check results

Other switches in malfunctioning system operate normally.>>Replace lighting switch or wiper switch. Other switches in malfunctioning system do not operate normally.>>GO TO 3.

### **3.**CHECK HARNESS

1. Turn ignition switch OFF.

#### < SERVICE INFORMATION >

- 2. Disconnect BCM and combination switch connectors.
- 3. Check for continuity between BCM harness connector (A) of the suspect system and the corresponding combination switch connector (B).

| Sus-           |           | А        |       | I         |          |         |  |

| 4              |                  | Input 4  | 3  |        |  |
|                |                  | Output 4 | 33 |        |  |
| 5              |                  | Input 5  | 2  |        |  |
|                |                  | Output 5 | 32 |        |  |

#### OK or NG

- OK >> GO TO 4.
- NG >> Check harness between BCM and combination switch for open or short circuit.

### **4.**CHECK BCM OUTPUT TERMINAL

- 1. Connect BCM and combination switch connectors.
- 2. Turn ignition switch ON.
- 3. Turn lighting switch and wiper switch into OFF.
- 4. Set wiper dial position 4.
- 5. Check BCM output terminal voltage waveform of suspect malfunctioning system.

#### < SERVICE INFORMATION >

| Suspect |                                      | Terminal |        |  |   |  |

BULB REPLACEMENT Refer to <u>LT-200. "Bulb Replacement"</u>. REMOVAL AND INSTALLATION Refer to <u>LT-200, "Removal and Installation"</u>.

### < SERVICE INFORMATION >

## **Bulb Replacement**

INFOID:000000005347410

#### **CAUTION:**

• Disconnect the battery negative terminal or remove the fuse.

# **BACK-UP LAMP**

#### < SERVICE INFORMATION >

- Never touch the glass of bulb directly by hand. Keep grease and other oily matters away from it. Never touch bulb by hand while it is lit or right after being turned off.
- Never leave bulb out of lamp reflector for a long time because dust, moisture smoke, etc. may affect the performance of lamp. When replacing bulb, be sure to replace it with new one.
- Remove trunk lid finisher inner. Refer to EI-44. 1.
- 2. Turn bulb socket (1) counterclockwise and unlock it.
- 3. Remove bulb (2) from its socket.

**Back-up lamp** 

: 12V - 16W

Removal and Installation

INFOID:000000005347411

4. Two-sided tape

2. 5. Trunk lid finisher outer 3. Back up lamp

REMOVAL

#### **CAUTION:**

1.

#### Disconnect the battery negative terminal or remove the fuse.

1. Remove trunk lid finisher inner. Refer to EI-44.

Refer to GI-9, "Component" for symbols in the figure.

- 2. Disconnect back up lamp and trunk lid request switch connector.
- Remove trunk lid finisher outer. Refer to <u>EI-44</u>.
- 4. Remove screws and clip, and then remove back up lamp.
- Remove seal packing from back up lamp. 5.

#### INSTALLATION

Installation is the reverse order of removal. Install a new seal packing to the back up lamp. **CAUTION:** 

#### Seal packing cannot be reused.

# LT-182

# System Description

LT The control of the parking, license plate and tail lamp operation is dependent upon the position of the lighting switch (combination switch). When the lighting switch is placed in the 1ST position, the BCM (body control module) receives input signal requesting the parking, license plate and tail lamps to illuminate. This input signal is communicated to the IPDM E/R (intelligent power distribution module engine room) across the CAN communication lines. The CPU (central processing unit) located in the IPDM E/R controls the tail lamp relay coil. This relay, when energized, directs power to parking, license plate and tail lamps, which then illuminate.

#### OUTLINE

Power is supplied at all times

- through 15A fuse (No. 71, located in IPDM E/R)
- to CPU located in IPDM E/R, and
- to tail lamp relay located in IPDM E/R.
- through 15A fuse (No. 78, located in IPDM E/R)
- to CPU located in IPDM E/R,
- through 50A fusible link (letter F, located in fuse, fusible link and relay block)
- to BCM terminal 55,
- through 10A fuse [No. 21, located in fuse block (J/B)]
- to BCM terminal 42,
- through 10A fuse [No. 22, located in fuse block (J/B)]
- to key slot terminal 1.
- With the ignition switch in the ON or START position, power is supplied
- to CPU located in IPDM E/R,
- through 15A fuse [No. 1, located in fuse block (J/B)]
- to BCM terminal 38.

With the ignition switch in the ACC or ON position, power is supplied

# LT-183

INFOID:000000005347413

Ν

L

M

- Ρ

#### < SERVICE INFORMATION >

- through 10A fuse [No. 6, located in fuse block (J/B)]
- to BCM terminal 11.
- Ground is supplied
- to BCM terminal 52
- through grounds M16 and M70,
- to IPDM E/R terminals 38 and 51
- through grounds E22 and E43.

#### **OPERATION BY LIGHTING SWITCH**

With the lighting switch in the 1ST or 2ND position (or if the auto light system is activated), the BCM receives input signal requesting the parking, license plate and tail lamps to illuminate. This input signal is communicated to the IPDM E/R across the CAN communication lines. The CPU located in the IPDM E/R controls the tail lamp relay coil, which when energized, directs power

- through IPDM E/R terminal 21
- to front combination lamp LH and RH terminals 5 (parking)
- to front combination lamp LH and RH terminals 7 (side marker)
- to rear combination lamp LH and RH terminals 1 (tail and side marker)
- to license plate lamp LH and RH terminals 1.

Ground is supplied at all times

- to front combination lamp LH and RH terminals 1 (parking and side marker)
- through grounds E22 and E43,
- to rear combination lamp LH and RH terminals 4 (tail and side marker)
- through grounds B5, B40 and B131.
- to license plate lamp LH and RH terminals 2
- through grounds B402 and B405.

With power and ground supplied, the parking, license plate and tail lamps illuminate.

The unified meter and A/C amp. that received the position light request signal by BCM across the CAN communication makes a tail lamp indicator lamp turn on in the combination meter.

#### COMBINATION SWITCH READING FUNCTION

Refer to BCS-4, "System Description".

#### EXTERIOR LAMP BATTERY SAVER CONTROL

When the combination switch (lighting switch) is in the 1ST (or 2ND) position, and ignition switch is turned from ON or ACC to OFF, battery saver control feature is activated.

Under this condition, parking, license plate, side marker and tail lamps remain illuminated for 5 minutes, then the parking, license plate, side marker and tail lamps are turned off.

Exterior lamp battery saver control mode can be changed by the function setting of CONSULT-III.

#### CAN Communication System Description

INFOID:000000005347414

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

INFOID:000000005347415

Refer to LAN-11, "System Description".

### How to Perform Trouble Diagnosis

- 1. Confirm the symptom or customer complaint.
- 2. Understand operation description and function description. Refer to LT-183. "System Description".
- Carry out the Preliminary Check. Refer to <u>LT-193, "Preliminary Check"</u>.
- 4. Check symptom and repair or replace the cause of malfunction.
- 5. Do the parking, license plate and tail lamps operate normally? If YES, GO TO 6. If NO, GO TO 4.
- 6. INSPECTION END

#### Preliminary Check

#### CHECK POWER SUPPLY AND GROUND CIRCUIT

### **1.**CHECK FUSES AND FUSIBLE LINK

#### Check for blown fuses and fusible link.

| Unit     | Power source                         | Fuse and fusible link No. | — н |

# BULB REPLACEMENT

#### CAUTION:

- Disconnect the battery negative terminal or remove the fuse.
- Never touch the glass of bulb directly by hand. Keep grease and other oily matters away from it. Never touch bulb by hand while it is lit or right after being turned off.
- Never leave bulb out of lamp reflector for a long time because dust, moisture smoke, etc. may affect the performance of lamp. When replacing bulb, be sure to replace it with new one.
- 1. Remove trunk lid finisher inner. Refer to EI-65, "Component Parts Location".
- 2. Turn bulb socket (1) counterclockwise and unlock it.
- 3. Remove bulb (2) from its socket.

License plate lamp : 12V - 5W

# INTERIOR ROOM LAMP

# System Description

INFOID:000000005347432

BCM (body control module) controls interior lamp, room lamp timer and interior lamp battery saver. The following signals are input to BCM:

- Door lock/unlock trunk open request signal from the Intelligent Key unit via CAN communication
- Key cylinder switch status signal from power window main switch via power window serial link
- Door switch signal from door switches (driver side, passenger side, rear LH and RH)
- IGN power supply (signal) from PDU (power distribution unit)
- ACC power supply (signal) from PDU

#### ROOM LAMP TIMER BASIC OPERATION

#### Applicable lamps

- Room lamp system: map lamp, foot lamp (driver side and passenger side) and personal lamp (rear LH and rear RH).
- 1. When getting on the vehicle
  - Lamps illuminate by timer operation when driver side door or passenger side door is unlocked.\*
  - Lamps illuminate by timer operation after any door is open and then all doors are closed.\*
  - Timer operation stops and lamps are OFF, when driver side door is locked or the push-button ignition switch (push switch) is turned to ACC or ON from OFF.

\*: This setting can be changed by CONSULT-III. Refer to <u>LT-218</u>, "CONSULT-III Functions (BCM - INT <u>LAMP)"</u>.

- 2. When getting off the vehicle
  - Lamps illuminate by timer operation when the push-button ignition switch (push switch) is turned OFF.\*

| <ul> <li>through BCM terminal 47.</li> </ul>  |     |
| With power and ground supplied, the interior lamps illuminate.  |     |
|   |     |

SWITCH OPERATION

# LT-203

#### < SERVICE INFORMATION >

- When any front door switch is ON (door is opened), ground is supplied
- to step lamp (driver side, passenger side, rear LH and RH) terminals 2
- to kicking plate illumination (driver side and passenger side) terminals 2
- through BCM terminal 47.

And power is supplied

- through BCM terminal 41
- to step lamp (driver side, passenger side, rear LH and RH) terminals 1

• to kicking plate illumination (driver side and passenger side) terminals 1.

When any door switch is ON (door is opened) and personal lamp and map lamp is DOOR position, ground is supplied

- to personal lamp LH and RH terminal 1
- to map lamp terminals 2 and 5
- through BCM terminal 48.
- And power is supplied
- through BCM terminal 41
- to personal lamp LH and RH terminals 3
- to map lamp terminal 3.

When map lamp switch is ON, ground is supplied

• to map lamp terminal 1

through grounds M16 and M70.

And power is supplied

through BCM terminal 41

• to map lamp terminal 3.

- When personal lamp LH and RH switch is ON, ground is supplied
- to personal lamp LH and RH terminals 2
- through grounds M16 and M70.
- And power is supplied
- through BCM terminal 41
- to personal lamp LH and RH terminals 3.
- When trunk lid lock assembly (trunk room lamp switch) is ON, ground is supplied
- to trunk room lamp (upper and lower) terminals 2
- through trunk lid lock assembly (trunk room lamp switch) terminals 1 and 2
- through grounds B405 and B402.

And power is supplied

- through BCM terminal 41
- to trunk room lamp (upper and lower) terminals 1.
- When vanity mirror lamp LH and RH switch is ON, ground is supplied
- to vanity mirror lamp LH and RH terminals 2
- through grounds M16 and M70.
- And power is supplied
- through BCM terminal 41
- to vanity mirror lamp (LH and RH) terminals 1.

#### ROOM LAMP TIMER OPERATION

BCM controls applicable lamps to illuminate for 15 seconds (can be set maximum 30 seconds) by timer operation under following conditions. BCM also controls applicable lamps to brighten for 1 second (can be set maximum 5 seconds) when turned ON, or to dim for 3 seconds (can be set maximum 5 seconds) when turned OFF. (Timer operating time and dimming/brightening time can be changed with CONSULT-III. Refer to <u>LT-218</u>, <u>"CONSULT-III Functions (BCM - INT LAMP)"</u>.) This control operates as follows.

Applicable lamps

• Room lamp system: map lamp, foot lamp (driver side and passenger side) and personal lamp (rear LH and rear RH).

BCM controls room lamp timer operation under following condition.

- Condition 1: Door lock state changes.\*
- BCM judges as the door lock is unlocked under either case below.
- The Intelligent Key unit sends door lock/unlock trunk open request signal (driver side unlock or passenger side unlock) to BCM through CAN communication line by unlock operation of intelligent key, outside key antenna and front door request switch (driver side) or outside key antenna and front door request switch (passenger side).

#### < SERVICE INFORMATION >

| - Key cylinder switch state (unlock) signal is sent to BCM through power window serial link when front door lock assembly (driver side) (key cylinder switch) is unlocked (ON) by power window main switch unlock operation.   | А  |
|--|----|
| And fulfills all the conditions below.<br>- The engine switch (push switch) is OFF.<br>- All the doors are closed.   | В  |
| <ul> <li>*: This setting can be changed by CONSULT-III. Refer to <u>LT-218</u>, <u>"CONSULT-III Functions (BCM - INT LAMP)"</u>.</li> <li>• Condition 2: Any door switch state changes.*</li> </ul>  | С  |
| The BCM terminal value of operated door switch is changed when any door is opened and then closed. From that BCM judges as the door is opened and then closed.   | D  |
| <ul> <li>And fulfills all the conditions below.</li> <li>The engine switch (push switch) is OFF.</li> <li>All the doors are closed.</li> </ul>   | Е  |
| <ul> <li>*: This setting can be changed by CONSULT-III. Refer to <u>LT-218, "CONSULT-III Functions (BCM - INT LAMP)"</u>.</li> <li>• Condition 3: Engine switch (push switch) state changes.*</li> </ul>   | L  |
| The Intelligent Key unit judges as the engine switch (push switch) is OFF and sends push-button ignition switch (push switch) signal to PDU (power distribution unit) when push-button ignition switch (push switch) turned OFF. Then PDU (power distribution unit) turns OFF, IGN power supply and ACC power supply.                    | F  |
| And fulfills the conditions below.<br>- All the doors are closed.<br>*:This setting can be changed by CONSULT-III. Refer to <u>LT-218, "CONSULT-III Functions (BCM - INT LAMP)"</u> .  | G  |
| NOTE:<br>When timer operation signal is input during former timer operation, BCM goes for latter timer operation.  | Н  |

| INTERIOR ROOM LAMP BATTERY SAVER FUNCTION  |    |

Applicable lamps

- Room lamp system: map lamp, foot lamp (driver side and passenger side) and personal lamp (rear LH and rear RH).
- Step lamp system: step lamp (driver side, passenger side, rear LH and rear RH) and kicking plate illumination (driver side and passenger side).

# LT-205

#### < SERVICE INFORMATION >

• Vanity mirror lamp LH and RH.

• Trunk room lamp (lower) and trunk room lamp (upper).

If the any applicable lamp is left illuminated, BCM turns OFF the battery saver output power supply 30 or 60 minutes to prevent run down of the battery. (Factory setting time is 30 minutes. And timer setting can be changed by CONSULT-III. Refer to <u>LT-218</u>, <u>"CONSULT-III Functions (BCM - INT LAMP)"</u>.)

- When the push-button ignition switch (push switch) is turned from ON to OFF, the timer is activated.
- If any of the following door switch signal condition is changed with the push-button ignition switch (push switch) in OFF position, the timer is activated when the change is occurred.

Door switch signals (driver side, passenger side, rear LH and RH), front door lock assembly (driver side) (key cylinder switch) signal and Intelligent Key unlock signal.

### How to Perform Trouble Diagnosis

INFOID:000000005347436

INFOID:000000005347437

J

LT

Μ

Ν

- 1. Confirm the symptom or customer complaint.
- 2. Understand operation description and function description. Refer to LT-202, "System Description".
- 3. Perform the Preliminary Check. Refer to LT-217, "Preliminary Check".
- 4. Check symptom and repair or replace the cause of malfunction.
- 5. Does the interior room lamp operate normally? If YES, GO TO 6. If NO, GO TO 4.
- 6. INSPECTION END

### **Preliminary Check**

### CHECK POWER SUPPLY AND GROUND CIRCUIT

### **1.**CHECK FUSES AND FUSIBLE LINK

Check for blown fuses and fusible link.

| Unit     | Power source                         | Fuse or fusible link No. |  |  |
|----------|--------------------------------------|--------------------------|--|--|
|          | Dottor:                              | F                        |  |  |
| BCM      | Battery                              | 21                       |  |  |
| BCIM     | Ignition switch ON or START position | 1                        |  |  |
|          | Ignition switch ACC or ON position   | 6                        |  |  |
| Key slot | Battery                              | 22                       |  |  |

Refer to LT-209, "Wiring Diagram - ROOM/L -".

#### OK or NG

OK >> GO TO 2.

#### < SERVICE INFORMATION >

NG >> If fuse or fusible link is blown, be sure to eliminate cause of malfunction before installing new fuse or fusible link. Refer to PG-4.

## 2. CHECK POWER SUPPLY CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect BCM connector.
- 3. Check voltage between BCM harness connector and ground.

|                  | Terminal |        | Ignition switch position |                 |                 |
|------------------|----------|--------|--------------------------|-----------------|-----------------|
| (                | (+)      |        |                          |                 |                 |
| BCM<br>connector | Terminal | (–)    | OFF                      | ACC             | ON              |

### ILLUMINATION

### System Description

INFOID:000000005347449

Control of the illumination lamps operation is dependent upon the position of the lighting switch (combination switch). When the lighting switch is placed in the 1ST or 2ND position (or if the auto light system is activated) the BCM (body control module) receives input signal requesting the illumination lamps to illuminate. This input signal is communicated to the IPDM E/R (intelligent power distribution module engine room) across the CAN communication lines. The CPU (central processing unit) located in the IPDM E/R controls the tail lamp relay coil. This relay, when energized, directs power to the illumination lamps, which then illuminate.

#### OUTLINE

Power is supplied at all times

- through 15A fuse (No. 71, located in IPDM E/R)
- to tail lamp relay, located in IPDM E/R, and
- to CPU located in IPDM E/R,
- through 15A fuse (No. 78, located in IPDM E/R)
- to CPU located in IPDM E/R,
- through 50A fusible link (letter F, located in fuse, fusible link and relay block)
- to BCM terminal 55,
- through 10A fuse [No. 21, located in fuse block (J/B)]
- to BCM terminal 42 and
- to combination meter terminal 23,
- through 10A fuse [No. 19, located in fuse block (J/B)]
- to unified meter and A/C amp. terminal 54,
- through 10A fuse [No. 22, located in fuse block (J/B)]
- to intelligent key unit terminals 1, 41 and 57.

With the ignition switch in the ON or START position, power is supplied

- through 15A fuse [No. 1, located in fuse block (J/B)]
- to BCM terminal 38,
- through 10A fuse [No. 14, located in fuse block (J/B)]
- to combination meter terminal 12,
- through 10A fuse [No. 12, located in fuse block (J/B)]
- to unified meter and A/C amp. terminal 53 and
- to rear sunshade cancel relay terminal 1.
- With the ignition switch in the ACC or ON position, power is supplied
- through 10A fuse [No. 6, located in fuse block (J/B)]
- to BCM terminal 11
- to unified meter and A/C amp. terminal 41 and
- to combination meter terminal 2.

Ground is supplied

- to BCM terminal 52
- to unified meter and A/C amp. terminals 55 and 71
- to combination meter terminals 9, 10, and 11
- to Intelligent Key unit terminals 20, 40, 56 and 72, and
- to illumination control switch terminal 3
- through grounds M16 and M70,
- to IPDM E/R terminals 38 and 51
- through grounds E22 and E43.

#### ILLUMINATION OPERATION BY LIGHTING SWITCH

With the lighting switch in the 1ST or 2ND position (or if the auto light system is activated), the BCM receives input signal requesting the illumination lamps to illuminate. This input signal is communicated to the IPDM E/R across the CAN communication lines. The CPU located in the IPDM E/R controls the tail lamp relay coil, which, when energized, directs power

- through IPDM E/R terminal 21
- to combination meter terminal 13
- to LDW switch (illumination) terminal 5 (with lane departure prevention)
- to VDC off switch (illumination) terminal 3
- to trunk lid opener switch (illumination) terminal 3
- to combination switch (spiral cable) terminal 25
- to door mirror remote control switch (illumination) terminal 16

#### < SERVICE INFORMATION >

#### • through grounds B5, B40 and B131,

- to automatic return cancel switch (illumination) terminal 2 (with rear control switch)
- to rear power seat switch LH (illumination) terminal 3 (with rear control switch)
- to rear heated seat switch LH (illumination) terminal 8 (with rear control switch)
- through grounds B5, B40 and B131,
- to rear sunshade cancel relay terminal 7(with rear control switch)
- to rear sunshade rear switch (illumination) terminal 5 (with rear control switch)
- to rear control switch terminal 4 (with rear control switch)
- through grounds B5, B40, B131 and B559.
- to rear power seat switch RH (illumination) terminal 3 (with rear control switch)
- to rear heated seat switch RH (illumination) terminal 8 (with rear control switch)
- through grounds B5, B40, B131 and B559.

With power and ground supplied, illumination lamps illuminate.

#### EXTERIOR LAMP BATTERY SAVER CONTROL

BCM activates the exterior lamp battery saver control function and turns off the exterior lamps to prevent battery from over discharge when the combination switch (lighting switch) is in 1ST or 2ND position and/or the front fog lamp switch ON and the door lock operation is performed by keyless entry system.

### CAN Communication System Description

INFOID:000000005347450

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

#### CAN Communication Unit

INFOID:000000005347451

Refer to LAN-11, "System Description".
