| <b>SYSTEM DESCRIPTION</b> .....  | <b>38</b> |
| <b>COMPONENT PARTS</b> .....   | <b>38</b> |
| <b>ENGINE CONTROL SYSTEM</b> .....   | <b>38</b> |
| ENGINE CONTROL SYSTEM : Component Parts Location .....   | 38        |
| ENGINE CONTROL SYSTEM : Component Description .....  | 41        |
| <b>INFINITI DRIVE MODE SELECTOR</b> .....  | <b>42</b> |
| Infiniti Drive Mode Selector : Component Parts Location .....                                    | 43        |
| Infiniti Drive Mode Selector : Component Description .....                                       | 43        |
| Accelerator Pedal Position Sensor .....  | 44        |
| Air Fuel Ratio Sensor 1 .....  | 44        |
| Air Fuel Ratio Sensor 1 Heater .....   | 44        |
| ASCD Brake Switch .....  | 45        |
| ASCD Indicator .....   | 45        |
| ASCD Steering Switch .....   | 45        |
| Battery Current Sensor (With Battery Temperature Sensor) .....                                   | 45        |
| Brake Switch .....   | 46        |
| Camshaft Position Sensor (PHASE) .....   | 46        |
| Cooling Fan .....  | 46        |
| Crankshaft Position Sensor (POS) .....   | 47        |
| ECM .....  | 47        |
| Electric Throttle Control Actuator .....   | 47        |
| Engine Coolant Temperature Sensor .....  | 47        |
| Engine Oil Temperature Sensor .....  | 48        |
| EVAP Canister Purge Volume Control Solenoid Valve .....  | 48        |
| EVAP Canister Vent Control Valve .....   | 49        |
| EVAP Control System Pressure Sensor .....  | 49        |
| Fuel Injector .....  | 49        |
| Fuel Level Sensor .....  | 49        |
| Fuel Pump .....  | 49        |
| Fuel Tank Temperature Sensor .....   | 50        |
| Heated Oxygen Sensor 2 .....   | 50        |
| Heated Oxygen Sensor 2 Heater .....  | 50        |
| Ignition Coil .....  | 51        |
| Intake Air Temperature Sensor .....  | 51        |
| Intake Valve Timing Control Solenoid Valve .....   | 51        |
| ICC Brake Switch .....   | 51        |
| ICC Steering Switch .....  | 52        |
| Knock Sensor .....   | 52        |
| Manifold Absolute Pressure Sensor .....  | 52        |
| Malfunction Indicator Lamp .....   | 52        |
| Mass Air Flow Sensor .....   | 52        |
| Power Steering Pressure Sensor .....   | 52        |
| Refrigerant Pressure Sensor .....  | 53        |
| Throttle Control Motor .....   | 53        |
| Throttle Control Motor Relay .....   | 53        |
| Throttle Position Sensor .....   | 53        |
| VVEL Actuator Motor .....  | 53        |
| VVEL Actuator Motor Relay .....  | 53        |
| VVEL Control Module .....  | 54        |
| VVEL Control Position Sensor .....   | 54        |
| <b>STRUCTURE AND OPERATION</b> .....   | <b>55</b> |
| Positive Crankcase Ventilation .....   | 55        |

|   |           |   |            |
|---|-----------|---|------------|

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:000000006882729

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

**WARNING:**

Always observe the following items for preventing accidental activation.

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see "SRS AIR BAG".
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

**WARNING:**

Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

Precaution for Procedure without Cowl Top Cover

INFOID:000000006882730

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.

Precautions For Xenon Headlamp Service

INFOID:000000006882731

**WARNING:**

Comply with the following warnings to prevent any serious accident.

- Disconnect the battery cable (negative terminal) or the power supply fuse before installing, removing, or touching the xenon headlamp (bulb included). The xenon headlamp contains high-voltage generated parts.
- Never work with wet hands.
- Check the xenon headlamp ON-OFF status after assembling it to the vehicle. Never turn the xenon headlamp ON in other conditions. Connect the power supply to the vehicle-side connector.

# PRECAUTIONS

[VQ37VHR FOR USA AND CANADA]

## < PRECAUTION >

(Turning it ON outside the lamp case may cause fire or visual impairments.)

- Never touch the bulb glass immediately after turning it OFF. It is extremely hot.

### CAUTION:

Comply with the following cautions to prevent any error and malfunction.

- Install the xenon bulb securely. (Insufficient bulb socket installation may melt the bulb, the connector, the housing, etc. by high-voltage leakage or corona discharge.)
- Never perform HID circuit inspection with a tester.
- Never touch the xenon bulb glass with hands. Never put oil and grease on it.
- Dispose of the used xenon bulb after packing it in thick vinyl without breaking it.
- Never wipe out dirt and contamination with organic solvent (thinner, gasoline, etc.).

## On Board Diagnostic (OBD) System of Engine and A/T

INFOID:000000006882732

The ECM has an on board diagnostic system. It will illuminate the malfunction indicator lamp (MIL) to warn the driver of a malfunction causing emission deterioration.

### CAUTION:

- Always turn the ignition switch OFF and disconnect the negative battery cable before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MIL to illuminate.
- Always connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MIL to illuminate due to the open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)
- Certain systems and components, especially those related to OBD, may use a new style slide-locking type harness connector. For description and how to disconnect, refer to [PG-5, "Harness Connector"](#).
- Always route and secure the harnesses properly after work. The interference of the harness with a bracket, etc. may cause the MIL to illuminate due to the short circuit.
- Always connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MIL to illuminate due to the malfunction of the EVAP system or fuel injection system, etc.
- Always erase the unnecessary malfunction information (repairs completed) from the ECM and TCM (Transmission control module) before returning the vehicle to the customer.

## General Precautions

INFOID:000000006882733

- Always use a 12 volt battery as power source.
- Never attempt to disconnect battery cables while engine is running.
- Before connecting or disconnecting the ECM harness connector, turn ignition switch OFF and disconnect negative battery cable. Failure to do so may damage the ECM because battery voltage is applied to ECM even if ignition switch is turned OFF.
- Before removing parts, turn ignition switch OFF and then disconnect negative battery cable.

- Never disassemble ECM.
- If a battery cable is disconnected, the memory will return to the ECM value.  
The ECM will now start to self-control at its initial value. Thus, engine operation can vary slightly in this case. However, this is not an indication of a malfunction. Never replace parts because of a slight variation.
- If the battery is disconnected, the following emission-related diagnostic information will be cleared within 24 hours.
  - Diagnostic trouble codes
  - 1st trip diagnostic trouble codes
  - Freeze frame data
  - 1st trip freeze frame data
  - System readiness test (SRT) codes
  - Test values

# PRECAUTIONS

[VQ37VHR FOR USA AND CANADA]

## < PRECAUTION >

- When connecting ECM harness connector (A), fasten (B) it securely with a lever as far as it will go as shown in the figure.
  - 1 : ECM
  - C : Loosen

- When connecting or disconnecting pin connectors into or from ECM, never damage pin terminals (bends or break). Make sure that there are not any bends or breaks on ECM pin terminal, when connecting pin connectors.
- Securely connect ECM harness connectors. A poor connection can cause an extremely high (surge) voltage to develop in coil and condenser, thus resulting in damage to ICs.
- Keep engine control system harness at least 10 cm (4 in) away from adjacent harness, to prevent engine control system malfunctions due to receiving external noise, degraded operation of ICs, etc.
- Keep engine control system parts and harness dry.
- Before replacing ECM, perform ECM Terminals and Reference Value inspection and make sure ECM functions properly. Refer to [EC-98. "Reference Value"](#).
- Handle mass air flow sensor carefully to avoid damage.
- Never clean mass air flow sensor with any type of detergent.
- Never disassemble electric throttle control actuator.
- Even a slight leak in the air intake system can cause serious incidents.
- Never shock or jar the camshaft position sensor (PHASE), crankshaft position sensor (POS).

- After performing each TROUBLE DIAGNOSIS, perform DTC Confirmation Procedure or Component Function Check. The DTC should not be displayed in the DTC Confirmation Procedure if the repair is completed. The Component Function Check should be a good result if the repair is completed.

## PRECAUTIONS

[VQ37VHR FOR USA AND CANADA]

### < PRECAUTION >

- When measuring ECM signals with a circuit tester, never allow the two tester probes to contact. Accidental contact of probes will cause a short circuit and damage the ECM power transistor.

- B1 indicates bank 1, B2 indicates bank 2 as shown in the figure.
- Never operate fuel pump when there is no fuel in lines.
- Tighten fuel hose clamps to the specified torque.

- Never depress accelerator pedal when starting.
- Immediately after starting, never rev up engine unnecessarily.
- Never rev up engine just prior to shutdown.

## PRECAUTIONS

[VQ37VHR FOR USA AND CANADA]

### < PRECAUTION >

- When installing C.B. ham radio or a mobile phone, be sure to observe the following as it may adversely affect electronic control systems depending on installation location.
- Keep the antenna as far as possible from the electronic control units.
- Keep the antenna feeder line more than 20 cm (8 in) away from the harness of electronic controls.  
Never let them run parallel for a long distance.
- Adjust the antenna and feeder line so that the standing-wave ratio can be kept smaller.
- Be sure to ground the radio to vehicle body.

## Infiniti Drive Mode Selector : Component Description

INFOID:000000006882739

| Part name                | Description   |
|--------------------------|---|
| Drive mode select switch | Transmits an ON/OFF state signal of STANDARD, SPORT, ECO, or SNOW mode to the A/C auto amp.   |
| A/C auto amp.            | Transmits an input signal (ON/OFF state of each mode) received from the drive mode select switch to the TCM, combination meter, 4WAS main control unit, and ADAS control unit via CAN communication.  |
| AV control unit          | Transmits an ECO pedal* reaction force setting signal (Standard/Soft/OFF) to ECM via CAN communication. This signal determines reaction force of the accelerator pedal.   |
| TCM                      | Transmits a state of a mode received from the A/C auto amp. to ECM.   |
| ECM                      | <ul style="list-style-type: none"> <li>• Receives a ECO mode signal from TCM and controls throttle angle characteristics and torque.</li> <li>• Determines reaction force in accordance with the accelerator pedal operation when in ECO mode and transmits an ECO pedal* reaction force control signal to the ADAS control unit. When receiving the ECO pedal* reaction force setting signal (Standard/Soft/OFF) from the AV control unit, ECM updates ECO pedal* reaction force. Furthermore, ECM sends back the received signal to the AV control unit for confirmation.</li> <li>• Controls the ECO drive indicator when in ECO mode. The ECO drive indicator turns ON or blinks (with ECO pedal*) according to accelerator pedal operation.</li> </ul> |
| Combination meter        | <ul style="list-style-type: none"> <li>• Indicates a mode state on the vehicle information display, based on a mode state signal received from the A/C auto amp.</li> <li>• Turns ON or blinks (with ECO pedal*) the ECO drive indicator according to a request from ECM when in ECO mode.</li> </ul>   |

# COMPONENT PARTS

< SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

| Part name                  | Description   |
|----------------------------|---|
| ADAS control unit          | Controls accelerator pedal reaction force of the accelerator pedal actuator when in ECO mode, based on an ECO pedal* reaction force control signal received from ECM. |
| Accelerator pedal actuator | Applies reaction force to the accelerator pedal when in ECO mode, based on an accelerator pedal reaction force control signal received from the ADAS control unit.    |

\*: ECO pedal control is only for vehicles with intelligent pedal (distance control assist).

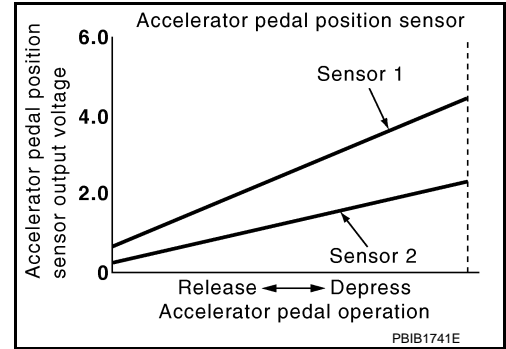

## Accelerator Pedal Position Sensor

INFOID:000000006882740

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator pedal position and sends a signal to the ECM.

Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometer which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.

Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for engine operations such as fuel cut.

## Air Fuel Ratio Sensor 1

INFOID:000000006882741

The air fuel ratio (A/F) sensor 1 is a planar one-cell limit current sensor. The sensor element of the A/F sensor 1 is composed an electrode layer, which transports ions. It has a heater in the element.

The sensor is capable of precise measurement  $\lambda = 1$ , but also in the lean and rich range. Together with its control electronics, the sensor outputs a clear, continuous signal throughout a wide  $\lambda$  range.

The exhaust gas components diffuse through the diffusion layer at the sensor cell. An electrode layer is applied voltage, and this current relative oxygen density in lean. Also this current relative hydrocarbon density in rich.

Therefore, the A/F sensor 1 is able to indicate air fuel ratio by this electrode layer of current. In addition, a heater is integrated in the sensor to ensure the required operating temperature of about 800°C (1,472°F).

## Air Fuel Ratio Sensor 1 Heater

INFOID:000000006882742

### SYSTEM DESCRIPTION

| Sensor   | Input Signal to ECM  | ECM function                                    | Actuator                                |
|--|----------------------|---|---|
| Camshaft position sensor (PHASE)<br>Crankshaft position sensor (POS) | Engine speed         | Air fuel ratio (A/F) sensor 1<br>heater control | Air fuel ratio (A/F) sensor 1<br>heater |
| Mass air flow sensor   | Amount of intake air |   |   |

The ECM performs ON/OFF duty control of the A/F sensor 1 heater corresponding to the engine operating condition to keep the temperature of A/F sensor 1 element at the specified range.

### ASCD Brake Switch

INFOID:000000006882743

When the brake pedal is depressed, ASCD brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by those two types of input (ON/OFF signal). Refer to [EC-63. "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\) : System Description"](#) for the ASCD function.

### ASCD Indicator

INFOID:000000006882744

ASCD operation status is indicated by two indicators (CRUISE and SET) and CRUISE lamp in combination meter.

CRUISE indicator is displayed to indicated that ASCD system is ready for operation when MAIN switch on ASCD steering switch is turned ON.

SET indicator is displayed when the following conditions are met.

- CRUISE indicator is displayed.
- SET/COAST switch on ASCD steering switch is turned ON while vehicle speed is within the range of the ASCD setting.

SET indicator is displayed during ASCD control.

Refer to [EC-63. "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\) : System Description"](#) for the ASCD function.

### ASCD Steering Switch

INFOID:000000006882745

ASCD steering switch has variant values of electrical resistance for each button. ECM reads voltage variation of switch, and determines which button is operated.

Refer to [EC-63. "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\) : System Description"](#) for the ASCD function.

### Battery Current Sensor (With Battery Temperature Sensor)

INFOID:000000006882746

#### OUTLINE

The power generation voltage variable control enables fuel consumption to be decreased by reducing the engine load which is caused by the power generation of the generator.

Based on sensor signals, ECM judges whether or not the power generation voltage variable control is performed. When performing the power generation voltage variable control, ECM calculates the target power generation voltage based on the sensor signal. And ECM sends the calculated value as the power generation command value to IPDM E/R. For the details of the power generation voltage variable control, refer to [CHG-8. "POWER GENERATION VOLTAGE VARIABLE CONTROL SYSTEM : System Description"](#).

#### CAUTION:

**Never connect the electrical component or the ground wire directly to the battery terminal. The connection causes the malfunction of the power generation voltage variable control, and then the battery discharge may occur.**

#### BATTERY CURRENT SENSOR

The battery current sensor is installed to the battery negative cable. The sensor measures the charging/discharging current of the battery.

#### BATTERY TEMPERATURE SENSOR

JSBIA0483ZZ

# COMPONENT PARTS

## < SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

Battery temperature sensor is integrated in battery current sensor. The sensor measures temperature around the battery. The electrical resistance of the thermistor decreases as temperature increases.

### <Reference data>

| Temperature [°C (°F)] | Voltage* (V) | Resistance (kΩ) |
|-----------------------|--------------|-----------------|
| 25 (77)               | 3.333        | 1.9 - 2.1       |
| 90 (194)              | 0.969        | 0.222 - 0.258   |

\*: These data are reference values and are measured between battery temperature sensor signal terminal and sensor ground.

## Brake Switch

INFOID:000000006882747

Brake switch signal is applied to the ECM through the stop lamp switch when the brake pedal is depressed. This signal is used mainly to decrease the engine speed when the vehicle is being driven.

## Camshaft Position Sensor (PHASE)

INFOID:000000006882748

The camshaft position sensor (PHASE) senses the retraction of camshaft (INT) to identify a particular cylinder. The camshaft position sensor (PHASE) senses the piston position.

When the crankshaft position sensor (POS) system becomes inoperative, the camshaft position sensor (PHASE) provides various controls of engine parts instead, utilizing timing of cylinder identification signals.

The sensor consists of a permanent magnet and Hall IC.

When engine is running, the high and low parts of the teeth cause the gap with the sensor to change.

The changing gap causes the magnetic field near the sensor to change.

Due to the changing magnetic field, the voltage from the sensor changes.

ECM receives the signals as shown in the figure.

## Cooling Fan

INFOID:000000006882749

### COOLING FAN CONTROL MODULE

Cooling fan control module receives ON/OFF pulse duty signal from IPDM E/R. Corresponding to this ON/OFF pulse duty signal, cooling fan control module sends cooling fan motor operating voltage to cooling fan motor. The revolution speed of cooling fan motor is controlled by duty cycle of the voltage.

### COOLING FAN MOTOR

Cooling fan motor receives cooling fan motor operating voltage from cooling fan control module. The revolution speed of cooling fan motor is controlled by duty cycle of the voltage.

# COMPONENT PARTS

< SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

## Crankshaft Position Sensor (POS)

INFOID:000000006882751

The crankshaft position sensor (POS) is located on the cylinder block facing the gear teeth (cogs) of the signal plate. It detects the fluctuation of the engine revolution.

The sensor consists of a permanent magnet and Hall IC.

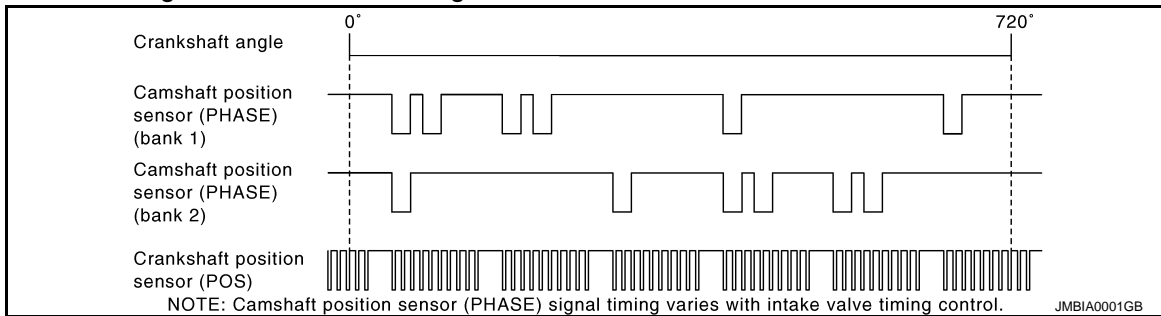

When the engine is running, the high and low parts of the teeth cause the gap with the sensor to change.

The changing gap causes the magnetic field near the sensor to change.

Due to the changing magnetic field, the voltage from the sensor changes.

The ECM receives the voltage signal and detects the fluctuation of the engine revolution.

ECM receives the signals as shown in the figure.

## ECM

INFOID:000000006882751

The ECM consists of a microcomputer and connectors for signal input and output and for power supply. The ECM controls the engine.

## Electric Throttle Control Actuator

INFOID:000000006882752

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc.

The throttle control motor is operated by the ECM and it opens and closes the throttle valve.

The throttle position sensor detects the throttle valve position and feeds the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and controls the throttle valve opening angle properly in response to driving condition via the throttle control motor.

## Engine Coolant Temperature Sensor

INFOID:000000006882753

The engine coolant temperature sensor is used to detect the engine coolant temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine coolant temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

## <Reference data>

| Engine coolant temperature [°C (°F)] | Voltage* (V) | Resistance (kΩ) |
|--------------------------------------|--------------|-----------------|
| -10 (14)                             | 4.4          | 7.0 - 11.4      |
| 20 (68)                              | 3.5          | 2.10 - 2.90     |
| 50 (122)                             | 2.2          | 0.68 - 1.00     |
| 90 (194)                             | 0.9          | 0.236 - 0.260   |

\*: These data are reference values and are measured between ECM terminals 71 (Engine coolant temperature sensor) and 84 (Sensor ground).

## Engine Oil Temperature Sensor

The engine oil temperature sensor is used to detect the engine oil temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine oil temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

INFOID:000000006882754

## <Reference data>

| Engine oil temperature [°C (°F)] | Voltage* (V) | Resistance (kΩ) |
|----------------------------------|--------------|-----------------|
| -10 (14)                         | 4.4          | 7.0 - 11.4      |
| 20 (68)                          | 3.5          | 2.10 - 2.90     |
| 50 (122)                         | 2.2          | 0.68 - 1.00     |
| 90 (194)                         | 0.9          | 0.236 - 0.260   |
| 110 (230)                        | 0.6          | 0.143 - 0.153   |

\*: These data are reference values and are measured between ECM terminals 78 (Engine oil temperature sensor) and 84 (Sensor ground).

## EVAP Canister Purge Volume Control Solenoid Valve

The EVAP canister purge volume control solenoid valve is used to control the flow rate of fuel vapor from the EVAP canister. The EVAP canister purge volume control solenoid valve is moved by ON/OFF pulses from the ECM. The longer the ON pulse, the greater the amount of fuel vapor that will flow through the valve.

INFOID:000000006882755

# COMPONENT PARTS

< SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

## EVAP Canister Vent Control Valve

INFOID:000000006882758

The EVAP canister vent control valve is located on the EVAP canister and is used to seal the canister vent.

This solenoid valve responds to signals from the ECM. When the ECM sends an ON signal, the coil in the solenoid valve is energized. A plunger will then move to seal the canister vent. The ability to seal the vent is necessary for the on board diagnosis of other evaporative emission control system components.

This solenoid valve is used only for diagnosis, and usually remains opened.

When the vent is closed, under normal purge conditions, the evaporative emission control system is depressurized and allows "EVAP Control System" diagnosis.

## EVAP Control System Pressure Sensor

INFOID:000000006882757

The EVAP control system pressure sensor detects pressure in the purge line. The sensor output voltage to the ECM increases as pressure increases.

## Fuel Injector

INFOID:000000006882759

The fuel injector is a small, precise solenoid valve. When the ECM supplies a ground to the fuel injector circuit, the coil in the fuel injector is energized. The energized coil pulls the ball valve back and allows fuel to flow through the fuel injector into the intake manifold. The amount of fuel injected depends upon the injection pulse duration. Pulse duration is the length of time the fuel injector remains open. The ECM controls the injection pulse duration based on engine fuel needs.

## Fuel Level Sensor

INFOID:000000006882759

The fuel level sensor is mounted in the fuel level sensor unit.

The sensor detects a fuel level in the fuel tank and transmits a signal to the "A/C auto amp.". The "A/C auto amp." sends the fuel level sensor signal to the ECM via the CAN communication line.

It consists of two parts, one is mechanical float and the other is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

## Fuel Pump

INFOID:000000006882760

| Sensor   | Input signal to ECM | ECM Function      | Actuator        |
|--|---------------------|-------------------|-----------------|
| Crankshaft position sensor (POS)<br>Camshaft position sensor (PHASE) | Engine speed*       | Fuel pump control | Fuel pump relay |
| Battery  | Battery voltage*    |                   | ↓<br>Fuel pump  |

\*: ECM determines the start signal status by the signals of engine speed and battery voltage.

The ECM activates the fuel pump for several seconds after the ignition switch is turned ON to improve engine startability. If the ECM receives a engine speed signal from the camshaft position sensor (PHASE), it knows

# COMPONENT PARTS

## < SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

that the engine is rotating, and causes the pump to operate. If the engine speed signal is not received when the ignition switch is ON, the engine stalls. The ECM stops pump operation and prevents battery discharging, thereby improving safety. The ECM does not directly drive the fuel pump. It controls the ON/OFF fuel pump relay, which in turn controls the fuel pump.

| Condition                        | Fuel pump operation    |
|----------------------------------|------------------------|
| Ignition switch is turned to ON. | Operates for 1 second. |
| Engine running and cranking      | Operates.              |
| When engine is stopped           | Stops in 1.5 seconds.  |
| Except as shown above            | Stops.                 |

## Fuel Tank Temperature Sensor

INFOID:000000006882761

The fuel tank temperature sensor is used to detect the fuel temperature inside the fuel tank. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the fuel temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

### <Reference data>

| Fluid temperature [°C (°F)] | Voltage* (V) | Resistance (kΩ) |
|-----------------------------|--------------|-----------------|
| 20 (68)                     | 3.5          | 2.3 - 2.7       |
| 50 (122)                    | 2.2          | 0.79 - 0.90     |

\*: These data are reference values and are measured between ECM terminals 106 (Fuel tank temperature sensor) and 128 (ECM ground).

## Heated Oxygen Sensor 2

INFOID:000000006882762

The heated oxygen sensor 2, after three way catalyst 1, monitors the oxygen level in the exhaust gas on each bank. Even if switching characteristics of the air fuel ratio (A/F) sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2. This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1 V in richer conditions to 0 V in leaner conditions. Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

## Heated Oxygen Sensor 2 Heater

INFOID:000000006882763

### SYSTEM DESCRIPTION

| Sensor   | Input signal to ECM        | ECM function                          | Actuator                      |
|--|----------------------------|---------------------------------------|-------------------------------|
| Camshaft position sensor (PHASE)<br>Crankshaft position sensor (POS) | Engine speed               | Heated oxygen sensor 2 heater control | Heated oxygen sensor 2 heater |
| Engine coolant temperature sensor                                    | Engine coolant temperature |                                       |                               |
| Mass air flow sensor   | Amount of intake air       |                                       |                               |

The ECM performs ON/OFF control of the heated oxygen sensor 2 heater corresponding to the engine speed, amount of intake air and engine coolant temperature.

## Ignition Coil

INFOID:000000006882764

The ignition signal from the ECM is sent to and amplified by the power transistor. The power transistor turns ON and OFF the ignition coil primary circuit. This ON/OFF operation induces the proper high voltage in the coil secondary circuit.

## Intake Air Temperature Sensor

INFOID:000000006882765

The intake air temperature sensor is built-into the mass air flow sensor (1). The sensor detects intake air temperature and transmits a signal to the ECM.

The temperature sensing unit uses a thermistor which is sensitive to the change in temperature. Electrical resistance of the thermistor decreases in response to the rise in temperature.

### <Reference data>

| Intake air temperature [°C (°F)] | Voltage* (V) | Resistance (kΩ) |
|----------------------------------|--------------|-----------------|
| 25 (77)                          | 3.3          | 1.800 - 2.200   |
| 80 (176)                         | 1.2          | 0.283 - 0.359   |

\*: These data are reference values and are measured between ECM terminals 67 (Intake air temperature sensor) and 68 (Sensor ground).

## Intake Valve Timing Control Solenoid Valve

INFOID:000000006882766

Intake valve timing control solenoid valve is activated by ON/OFF pulse duty (ratio) signals from the ECM.

The intake valve timing control solenoid valve changes the oil amount and direction of flow through intake valve timing control unit or stops oil flow.

The longer pulse width advances valve angle.

The shorter pulse width retards valve angle.

When ON and OFF pulse widths become equal, the solenoid valve stops oil pressure flow to fix the intake valve angle at the control position.

## ICC Brake Switch

INFOID:000000006882767

When the brake pedal is depressed, ICC brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by those two types of input (ON/OFF signal).

Refer to [CCS-13, "System Description"](#) for the ICC function.

## ICC Steering Switch

INFOID:000000006882768

ICC steering switch has variant values of electrical resistance for each button. ECM reads voltage variation of switch, and determines which button is operated. Refer to [CCS-13, "System Description"](#) for the ICC function.

## Knock Sensor

INFOID:000000006882769

The knock sensor is attached to the cylinder block. It senses engine knocking using a piezoelectric element. A knocking vibration from the cylinder block is sensed as vibrational pressure. This pressure is converted into a voltage signal and sent to the ECM.

## Manifold Absolute Pressure Sensor

INFOID:000000006882770

The manifold absolute pressure (MAP) sensor is placed at intake manifold collector. It detects intake manifold pressure and sends the voltage signal to the ECM.

The sensor uses a silicon diaphragm which is sensitive to the change in pressure. As the pressure increases, the voltage rises.

## Malfunction Indicator Lamp

INFOID:000000006882771

The Malfunction Indicator Lamp (MIL) is located on the combination meter.

The MIL will illuminate when the ignition switch is turned ON without the engine running. This is a bulb check.

When the engine is started, the MIL should turn off. If the MIL remains illuminated, the on board diagnostic system has detected an engine system malfunction.

For details, refer to [EC-77, "Diagnosis Description"](#).

## Mass Air Flow Sensor

INFOID:000000006882772

The mass air flow sensor (1) is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. The mass air flow sensor controls the temperature of the hot wire to a certain amount. The heat generated by the hot wire is reduced as the intake air flows around it. The greater air flow, the greater the heat loss.

Therefore, the electric current supplied to hot wire is changed to maintain the temperature of the hot wire as air flow increases. The ECM detects the air flow by means of this current change.

## Power Steering Pressure Sensor

INFOID:000000006882773

Power steering pressure (PSP) sensor is installed to the power steering high-pressure tube and detects a power steering load.

This sensor is a potentiometer which transforms the power steering load into output voltage, and emits the voltage signal to the ECM. The ECM controls the electric throttle control actuator and adjusts the throttle valve opening angle to increase the engine speed and adjusts the idle speed for the increased load.

# COMPONENT PARTS

< SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

## Refrigerant Pressure Sensor

INFOID:000000006882774

The refrigerant pressure sensor is installed at the condenser of the air conditioner system. The sensor uses an electrostatic volume pressure transducer to convert refrigerant pressure to voltage. The voltage signal is sent to ECM, and ECM controls cooling fan system.

## Throttle Control Motor

INFOID:000000006882775

The throttle control motor is operated by the ECM and it opens and closes the throttle valve. The current opening angle of the throttle valve is detected by the throttle position sensor and it provides feedback to the ECM to control the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

## Throttle Control Motor Relay

INFOID:000000006882776

Power supply for the throttle control motor is provided to the ECM via throttle control motor relay. The throttle control motor relay is ON/OFF controlled by the ECM. When the ignition switch is turned ON, the ECM sends an ON signal to throttle control motor relay and battery voltage is provided to the ECM. When the ignition switch is turned OFF, the ECM sends an OFF signal to throttle control motor relay and battery voltage is not provided to the ECM.

## Throttle Position Sensor

INFOID:000000006882777

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has two sensors. These sensors are a kind of potentiometer which transform the throttle valve position into output voltage, and emit the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and controls the throttle valve opening angle properly in response to driving condition via the throttle control motor.

## VVEL Actuator Motor

INFOID:000000006882778

The VVEL actuator motor rotates the control shaft according to the control signal from the VVEL control module. The VVEL control module judges whether the VVEL actuator motor controls the angle properly by the VVEL control shaft position sensor signal.

## VVEL Actuator Motor Relay

INFOID:000000006882779

Power supply for the VVEL actuator motor is provided to the VVEL control module via VVEL actuator motor relay. VVEL actuator motor relay is ON/OFF controlled by the VVEL control module. In addition, when the VVEL actuator motor relay cannot be controlled by the VVEL control module for some reason, it ON/OFF controlled by ECM.

< SYSTEM DESCRIPTION >

### VVEL Control Module

INFOID:000000006882780

The VVEL control module consists of a microcomputer and connectors for signal input and output and for power supply. The VVEL control module controls VVEL system.

### VVEL Control Position Sensor

INFOID:000000006882781

VVEL control shaft position sensor (1) is placed on VVEL actuator sub assembly and detects the control shaft position angle. A magnet is pressed into the arm on the edge of control shaft. The magnetic field changes as the magnet rotates together with the arm resulting in the output voltage change of the sensor. VVEL control module detects the actual position angle through the voltage change and sends the signal to ECM.

# STRUCTURE AND OPERATION

< SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

## STRUCTURE AND OPERATION

### Positive Crankcase Ventilation

INFOID:000000006882782

- 1. PCV valve
  - 2. Electric throttle control actuator
  - 3. Mass air flow sensor
- A. Normal condition      B. Hi-load condition

⇐: Fresh air  
 ←: Blow-by air

This system returns blow-by gas to the intake manifold.

The positive crankcase ventilation (PCV) valve is provided to conduct crankcase blow-by gas to the intake manifold.

During partial throttle operation of the engine, the intake manifold sucks the blow-by gas through the PCV valve.

Normally, the capacity of the valve is sufficient to handle any blow-by and a small amount of ventilating air. The ventilating air is drawn from the air inlet tubes into the crankcase. In this process the air passes through the hose connecting air inlet tubes to rocker cover.

Under full-throttle condition, the manifold vacuum is insufficient to draw the blow-by flow through the valve. The flow goes through the hose connection in the reverse direction.

On vehicles with an excessively high blow-by, the valve does not meet the requirement. This is because some of the flow will go through the hose connection to the air inlet tubes under all conditions.

# STRUCTURE AND OPERATION

< SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

## On Board Refueling Vapor Recovery (ORVR)

INFOID:000000006882783

From the beginning of refueling, the air and vapor inside the fuel tank go through refueling EVAP vapor cut valve and EVAP/ORVR line to the EVAP canister. The vapor is absorbed by the EVAP canister and the air is released to the atmosphere.

When the refueling has reached the full level of the fuel tank, the refueling EVAP vapor cut valve is closed and refueling is stopped because of auto shut-off. The vapor which was absorbed by the EVAP canister is purged during driving.

### **WARNING:**

When conducting inspections below, be sure to observe the following:

- Put a “CAUTION: FLAMMABLE” sign in workshop.
- Never smoke while servicing fuel system. Keep open flames and sparks away from work area.
- Always furnish the workshop with a CO<sub>2</sub> fire extinguisher.

### **CAUTION:**

- Before removing fuel line parts, carry out the following procedures:
  - Put drained fuel in an explosion-proof container and put lid on securely.
  - Release fuel pressure from fuel line. Refer to [EC-158. "Work Procedure"](#).
  - Disconnect battery ground cable.
- Always replace O-ring when the fuel gauge retainer is removed.
- Never kink or twist hose and tube when they are installed.
- Never tighten hose and clamps excessively to avoid damaging hoses.
- After installation, run engine and check for fuel leaks at connections.
- Never attempt to top off the fuel tank after the fuel pump nozzle shuts off automatically. Continued refueling may cause fuel overflow, resulting in fuel spray and possibly a fire.

\*1: This sensor is not used to control the engine system under normal conditions.

\*2: This signal is sent to the ECM via the CAN communication line.

\*3: ECM determines the start signal status by the signals of engine speed and battery voltage.

## SYSTEM DESCRIPTION

The amount of fuel injected from the fuel injector is determined by the ECM. The ECM controls the length of time the valve remains open (injection pulse duration). The amount of fuel injected is a program value in the ECM memory. The program value is preset by engine operating conditions. These conditions are determined by input signals (for engine speed and intake air) from the crankshaft position sensor (POS), camshaft position sensor (PHASE) and the mass air flow sensor.

## VARIOUS FUEL INJECTION INCREASE/DECREASE COMPENSATION

In addition, the amount of fuel injected is compensated to improve engine performance under various operating conditions as listed below.

<Fuel increase>

- During warm-up
- When starting the engine
- During acceleration
- Hot-engine operation
- When selector lever is changed from N to D
- High-load, high-speed operation

<Fuel decrease>

- During deceleration
- During high engine speed operation

## MIXTURE RATIO FEEDBACK CONTROL (CLOSED LOOP CONTROL)

# SYSTEM

## < SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

The mixture ratio feedback system provides the best air-fuel mixture ratio for driveability and emission control. The three way catalyst 1 can better reduce CO, HC and NOx emissions. This system uses A/F sensor 1 in the exhaust manifold to monitor whether the engine operation is rich or lean. The ECM adjusts the injection pulse width according to the sensor voltage signal. For more information about A/F sensor 1, refer to [EC-44, "Air Fuel Ratio Sensor 1"](#). This maintains the mixture ratio within the range of stoichiometric (ideal air-fuel mixture). This stage is referred to as the closed loop control condition.

Heated oxygen sensor 2 is located downstream of the three way catalyst 1. Even if the switching characteristics of A/F sensor 1 shift, the air-fuel ratio is controlled to stoichiometric by the signal from heated oxygen sensor 2.

### • Open Loop Control

The open loop system condition refers to when the ECM detects any of the following conditions. Feedback control stops in order to maintain stabilized fuel combustion.

- Deceleration and acceleration
- High-load, high-speed operation
- Malfunction of A/F sensor 1 or its circuit
- Insufficient activation of A/F sensor 1 at low engine coolant temperature
- High engine coolant temperature
- During warm-up
- After shifting from N to D
- When starting the engine

## MIXTURE RATIO SELF-LEARNING CONTROL

The mixture ratio feedback control system monitors the mixture ratio signal transmitted from A/F sensor 1. This feedback signal is then sent to the ECM. The ECM controls the basic mixture ratio as close to the theoretical mixture ratio as possible. However, the basic mixture ratio is not necessarily controlled as originally designed. Both manufacturing differences (i.e., mass air flow sensor hot wire) and characteristic changes during operation (i.e., fuel injector clogging) directly affect mixture ratio.

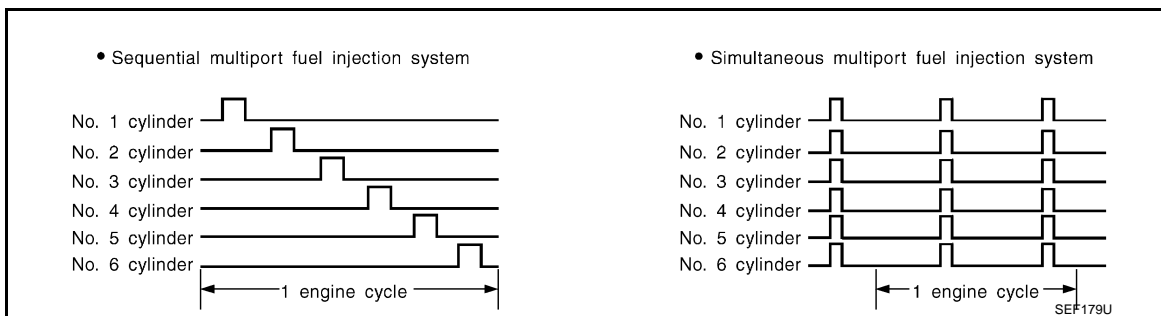

Accordingly, the difference between the basic and theoretical mixture ratios is monitored in this system. This is then computed in terms of "injection pulse duration" to automatically compensate for the difference between the two ratios.

"Fuel trim" refers to the feedback compensation value compared against the basic injection duration. Fuel trim includes short-term fuel trim and long-term fuel trim.

"Short-term fuel trim" is the short-term fuel compensation used to maintain the mixture ratio at its theoretical value. The signal from A/F sensor 1 indicates whether the mixture ratio is RICH or LEAN compared to the theoretical value. The signal then triggers a reduction in fuel volume if the mixture ratio is rich, and an increase in fuel volume if it is lean.

"Long-term fuel trim" is overall fuel compensation carried out over time to compensate for continual deviation of the short-term fuel trim from the central value. Continual deviation will occur due to individual engine differences, wear over time and changes in the usage environment.

## FUEL INJECTION TIMING

Two types of systems are used.

### • Sequential Multiport Fuel Injection System

Fuel is injected into each cylinder during each engine cycle according to the firing order. This system is used when the engine is running.

### • Simultaneous Multiport Fuel Injection System

Fuel is injected simultaneously into all six cylinders twice each engine cycle. In other words, pulse signals of the same width are simultaneously transmitted from the ECM.

The six injectors will then receive the signals two times for each engine cycle.

This system is used when the engine is being started and/or if the fail-safe system (CPU) is operating.

## FUEL SHUT-OFF

# SYSTEM

< SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

Fuel to each cylinder is cut off during deceleration, operation of the engine at excessively high speeds or operation of the vehicle at excessively high speeds.

\*1: This signal is sent to the ECM via the CAN communication line.

\*2: ECM determines the start signal status by the signals of engine speed and battery voltage.

#### SYSTEM DESCRIPTION

Ignition order: 1 - 2 - 3 - 4 - 5 - 6

The ignition timing is controlled by the ECM to maintain the best air-fuel ratio for every running condition of the engine. The ignition timing data is stored in the ECM.

The ECM receives information such as the injection pulse width and camshaft position sensor (PHASE) signal. Computing this information, ignition signals are transmitted to the power transistor.

During the following conditions, the ignition timing is revised by the ECM according to the other data stored in the ECM.

- At starting
- During warm-up
- At idle
- At low battery voltage
- During acceleration

# SYSTEM

< SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

The knock sensor retard system is designed only for emergencies. The basic ignition timing is programmed within the anti-knocking zone, if recommended fuel is used under dry conditions. The retard system does not operate under normal driving conditions. If engine knocking occurs, the knock sensor monitors the condition. The signal is transmitted to the ECM. The ECM retards the ignition timing to eliminate the knocking condition.

\*1: This signal is sent to the ECM via the CAN communication line.

\*2: ECM determines the start signal status by the signals of engine speed and battery voltage.

#### SYSTEM DESCRIPTION

This system improves engine operation when the air conditioner is used. Under the following conditions, the air conditioner is turned off.

- When the accelerator pedal is fully depressed.
- When cranking the engine.
- At high engine speeds.
- When the engine coolant temperature becomes excessively high.
- When operating power steering during low engine speed or low vehicle speed.
- When engine speed is excessively low.
- When refrigerant pressure is excessively low or high.

\*: This signal is sent to the ECM via the CAN communication line

### BASIC ASCD SYSTEM

Refer to Owner's Manual for ASCD operating instructions.

Automatic Speed Control Device (ASCD) allows a driver to keep vehicle at predetermined constant speed without depressing accelerator pedal. Driver can set vehicle speed in advance between approximately 40 km/h (25 MPH) and 144 km/h (89 MPH).

ECM controls throttle angle of electric throttle control actuator to regulate engine speed.

Operation status of ASCD is indicated by CRUISE indicator and SET indicator in combination meter. If any malfunction occurs in the ASCD system, it automatically deactivates control.

#### NOTE:

**Always drive vehicle in a safe manner according to traffic conditions and obey all traffic laws.**

### SET OPERATION

Press MAIN switch. (The CRUISE indicator in combination meter illuminates.)

When vehicle speed reaches a desired speed between approximately 40 km/h (25 MPH) and 144 km/h (89 MPH), press SET/COAST switch. (Then SET lamp in combination meter illuminates.)

### ACCELERATE OPERATION

If the RESUME/ACCELERATE switch is pressed during cruise control driving, increase the vehicle speed until the switch is released or vehicle speed reaches maximum speed controlled by the system.

And then ASCD will maintain the new set speed.

### CANCEL OPERATION

When any of following conditions exist, cruise operation will be canceled.

- CANCEL switch is pressed
- More than 2 switches at ASCD steering switch are pressed at the same time (Set speed will be cleared)
- Brake pedal is depressed
- Selector lever is in the N, P, R position
- Vehicle speed decreased to 13 km/h (8 MPH) lower than the set speed

## < SYSTEM DESCRIPTION >

- TCS system is operated

When the ECM detects any of the following conditions, the ECM will cancel the cruise operation and inform the driver by blinking indicator lamp.

- Engine coolant temperature is slightly higher than the normal operating temperature, CRUISE lamp may blink slowly.

When the engine coolant temperature decreases to the normal operating temperature, CRUISE lamp will stop blinking and the cruise operation will be able to work by pressing SET/COAST switch or RESUME/ACCELERATE switch.

- Malfunction for some self-diagnoses regarding ASCD control: SET indicator will blink quickly.

If MAIN switch is turned to OFF while ASCD is activated, all of ASCD operations will be canceled and vehicle speed memory will be erased.

### COAST OPERATION

When the SET/COAST switch is pressed during cruise control driving, decrease vehicle set speed until the switch is released. And then ASCD will maintain the new set speed.

### RESUME OPERATION

When the RESUME/ACCELERATE switch is pressed after cancel operation other than pressing MAIN switch is performed, vehicle speed will return to last set speed. To resume vehicle set speed, vehicle condition must meet following conditions.

- Brake pedal is released
- A/T selector lever is in the P and N positions
- Vehicle speed is greater than 40 km/h (25 MPH) and less than 144 km/h (89 MPH)

## CAN COMMUNICATION

### CAN COMMUNICATION : System Description

INFOID:000000006882794

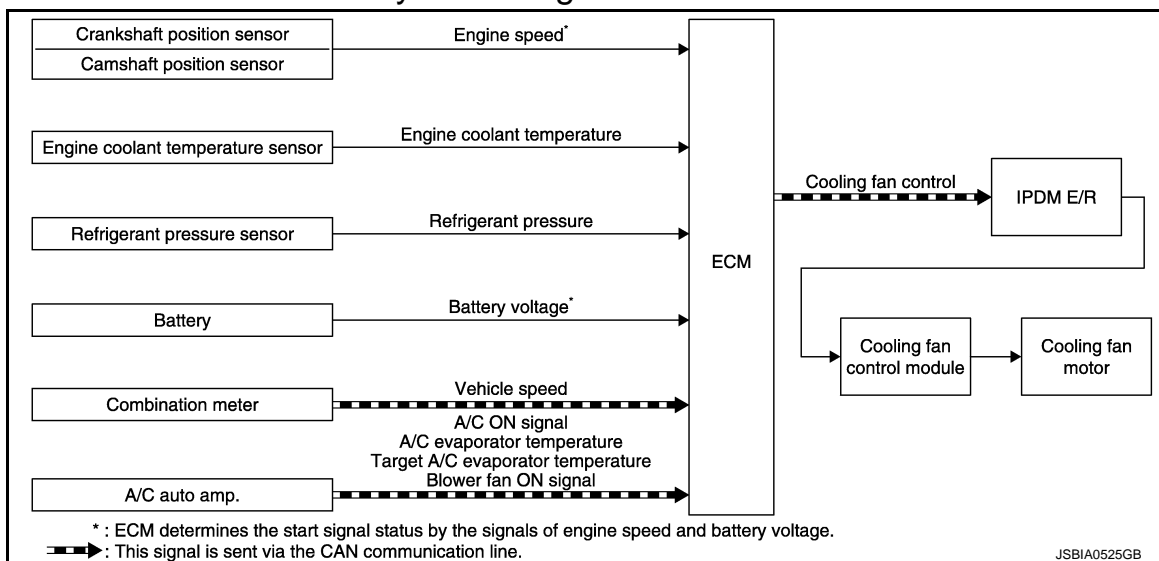

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

Refer to [LAN-17. "CAN COMMUNICATION SYSTEM : CAN Communication Control Circuit"](#), about CAN communication for detail.

\*1: The ECM determines the start signal status by the signals of engine speed and battery voltage.

\*2: This signal is sent to ECM via the CAN communication line.

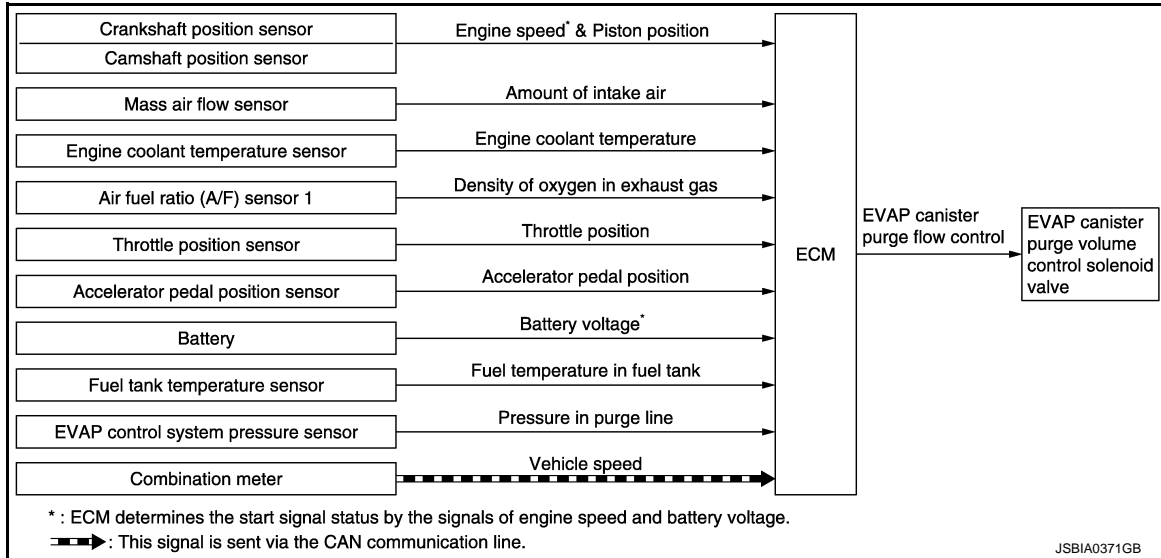

## SYSTEM DESCRIPTION

ECM controls cooling fan speed corresponding to vehicle speed, engine coolant temperature, air conditioner ON signal, refrigerant pressure, target A/C evaporator temperature and A/C evaporator temperature. Cooling fan control signal is sent to IPDM E/R from ECM by CAN communication line. Then, IPDM E/R sends ON/OFF pulse duty signal to cooling fan control module. Corresponding to this ON/OFF pulse duty signal, cooling fan control module gives cooling fan motor operating voltage to cooling fan motors. Cooling fan speed is controlled by duty cycle of cooling fan motor operating voltage sent from cooling fan control module.

\*1: ECM determines the start signal status by the signals of engine speed and battery voltage.

\*2: This signal is sent to the ECM via the CAN communication line.

## SYSTEM DESCRIPTION

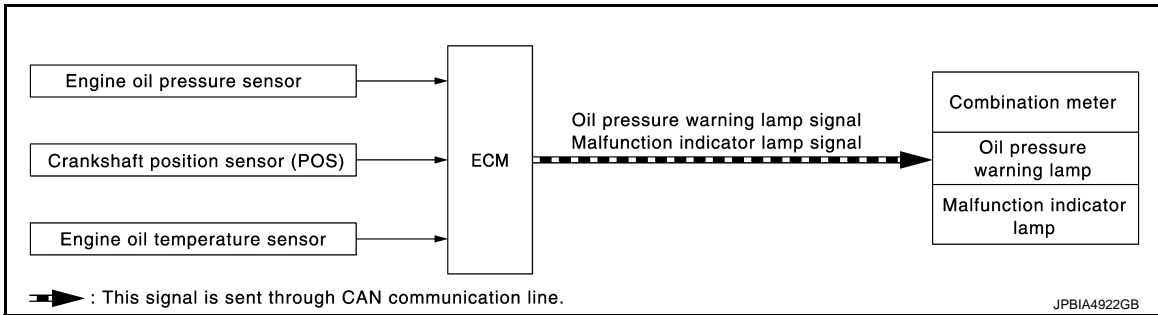

The evaporative emission system is used to reduce hydrocarbons emitted into the atmosphere from the fuel system. This reduction of hydrocarbons is accomplished by activated charcoals in the EVAP canister. The fuel vapor in the sealed fuel tank is led into the EVAP canister which contains activated carbon and the vapor is stored there when the engine is not operating or when refueling to the fuel tank. The vapor in the EVAP canister is purged by the air through the purge line to the intake manifold when the engine is operating. EVAP canister purge volume control solenoid valve is controlled by ECM. When the engine operates, the flow rate of vapor controlled by EVAP canister purge volume control solenoid valve is proportionally regulated as the air flow increases. EVAP canister purge volume control solenoid valve also shuts off the vapor purge line during decelerating and idling.

## ENGINE PROTECTION CONTROL AT LOW ENGINE OIL PRESSURE

gram

INFOID:000000007768313

## ENGINE PROTECTION CONTROL AT LOW ENGINE OIL PRESSURE : System Description

INFOID:000000007768314

### INPUT/OUTPUT SIGNAL CHART

| Sensor                           | Input signal to ECM    | ECM function  | Actuator   |
|----------------------------------|------------------------|---|--|
| Engine oil pressure sensor       | Engine pressure        | Engine protection control<br>• Oil pressure warning lamp signal<br>• FUEl cut control | Combination meter<br>• Oil pressure warning lamp |
| Crankshaft position sensor (POS) | Engine speed           |   |  |
| Engine oil temperature sensor    | Engine oil temperature |   |  |

### SYSTEM DESCRIPTION

- The engine protection control at low engine oil pressure warns the driver of a decrease in engine oil pressure by the oil pressure warning lamp a before the engine becomes damaged.
- When detecting a decrease in engine oil pressure at an engine speed less than 1,000 rpm, ECM transmits an oil pressure warning lamp signal to the combination meter. The combination meter turns ON the oil pressure warning lamp, according to the signal.

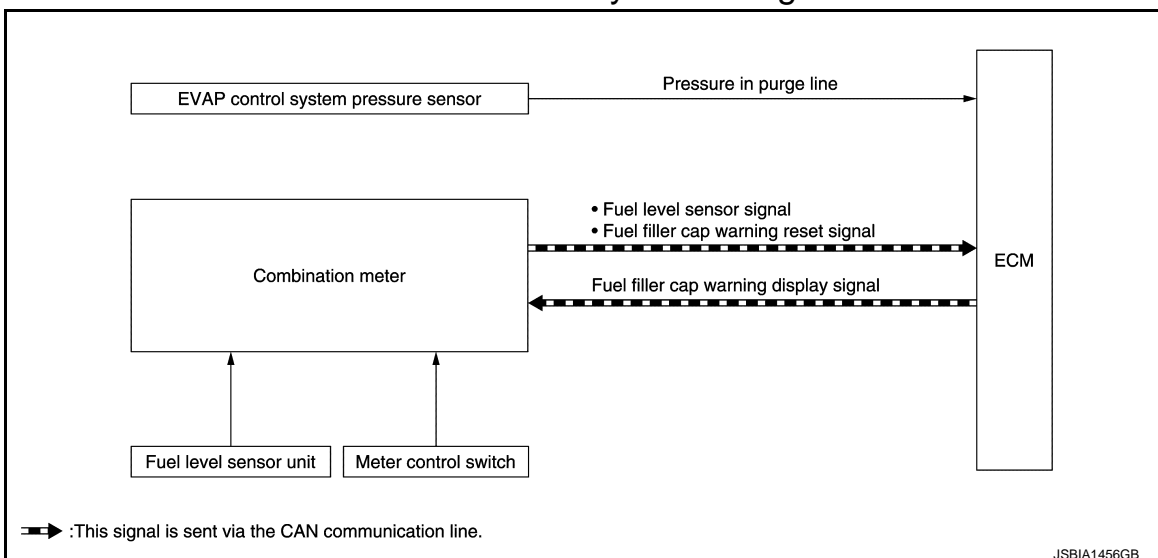

| Decrease in engine oil pressure | Engine speed        | Combination meter         |
|---------------------------------|---------------------|---------------------------|
|                                 |                     | Oil pressure warning lamp |
| Detection                       | Less than 1,000 rpm | ON*                       |
|                                 | 1,000 rpm or more   | ON                        |

\*: When detecting a normal engine oil pressure, ECM turns OFF the oil pressure warning lamp.

|                                     | Fuel filler cap warning reset signal* |                                 |

\*: This signal is sent to the ECM via the CAN communication line.

Output

| Unit | Output signal                           | Actuator          |
|------|---|-------------------|
| ECM  | Fuel filler cap warning display signal* | Combination meter |

\*: This signal is sent to the combination meter via the CAN communication line.

### SYSTEM DESCRIPTION

The fuel filler cap warning system alerts the driver to the prevention of the fuel filler being left uncapped and malfunction occurrences after refueling, by turning ON the fuel filler cap warning display on the combination meter.

ECM judges a refueled state, based on a fuel level signal transmitted from the combination meter.

When a very small leak is detected through the EVAP leak diagnosis performed after judging the refueled state, ECM transmits a fuel filler cap warning display signal (request for display ON) to the combination meter via CAN communication.

When receiving the signal, the combination meter turns ON the fuel filler cap warning display.

#### CAUTION:

**Check fuel filler cap installation condition when the fuel filler cap warning display turns ON.**

#### Reset Operation

The fuel filler cap warning lamp turns OFF, according to any condition listed below:

- Reset operation is performed by operating the meter control switch on the combination meter. Refer to [MWI-19. "INFORMATION DISPLAY : System Description"](#).
- When the reset operation is performed, the combination meter transmits a fuel filler cap warning reset signal to ECM via CAN communication. ECM transmits a fuel filler cap warning display signal (request for display OFF) to the combination meter via CAN communication. When receiving the signal, the combination meter turns OFF the fuel filler cap warning display.
- EVAP leak diagnosis result is normal.
- Fuel refilled.
- DTC erased by using CONSULT.

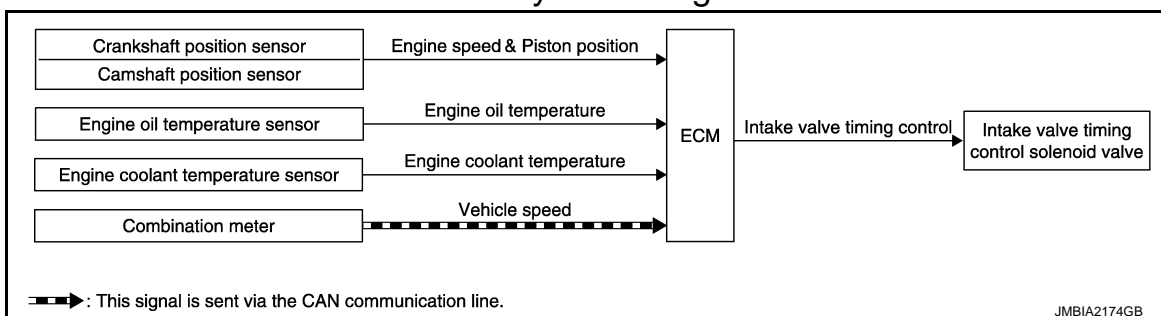

#### NOTE:

MIL turns ON if a malfunction is detected in leak diagnosis results again at the trip after the fuel filler cap warning display turns ON/OFF.

\*: This signal is sent to the ECM via the CAN communication line

## SYSTEM DESCRIPTION

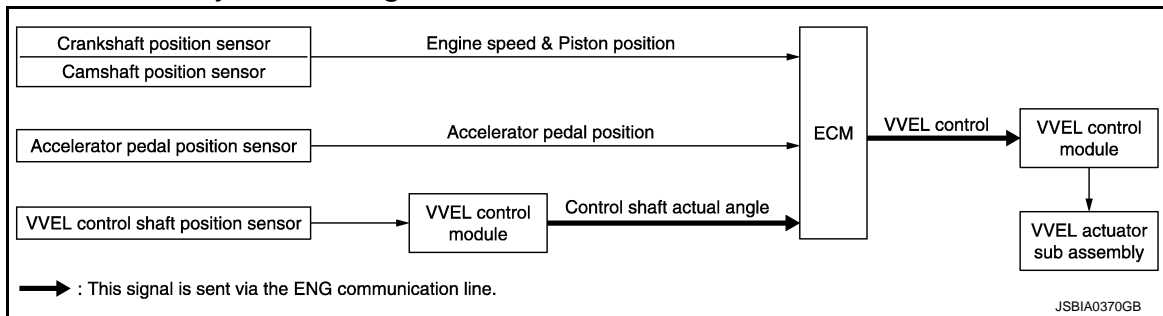

This mechanism hydraulically controls cam phases continuously with the fixed operating angle of the intake valve.

The ECM receives signals such as crankshaft position, camshaft position, engine speed, and engine coolant temperature. Then, the ECM sends ON/OFF pulse duty signals to the intake valve timing (IVT) control solenoid valve depending on driving status. This makes it possible to control the shut/open timing of the intake valve to increase engine torque in low/mid speed range and output in high-speed range.

VVEL (Variable Valve Event & Lift) is a system that controls valve event and valve lift continuously. Rotational movement of the drive shaft equipped with eccentric cam is transmitted to output cam via the rocker arm and two kinds of links to depress the intake valve. ECM decides the target valve lift according to the driving condition and sends the command signal to the VVEL control module. The VVEL control module controls the rotation of the control shaft using the VVEL actuator motor and changes the movement of the output cam by shifting the link supporting point. As a result, valve lift changes continuously to improve engine output and response.

## Infiniti Drive Mode Selector

## Infiniti Drive Mode Selector : System Description

INFOID:000000006882803

### System Diagram

#### NOTE:

- This section provides descriptions only about the control by ECM.  
For overall control, refer to [DMS-5, "Infiniti Drive Mode Selector : System Description"](#).
- ECO pedal control is only for vehicles with intelligent pedal (distance control assist).

#### Infiniti drive mode selector

- A/C auto amp. receives an operation state signal of the drive mode select switch and transmits a mode signal (see below) to TCM via CAN communication.
  - STANDARD: ON/OFF
  - SPORT: ON/OFF
  - ECO: ON/OFF
  - SNOW: ON/OFF
- TCM transmits a mode state signal to ECM via CAN communication, based on a ECO mode signal received from the A/C auto amp.
- ECM controls throttle angle characteristics and torque appropriate to each mode, based on a ECO mode signal received from TCM via CAN communication.
- The combination meter turns ON or blinks (with ECO pedal) the ECO drive indicator when in ECO mode, based on a ECO drive indicator control signal received from ECM via CAN communication.

#### ECO pedal control

- The AV control unit transmits an ECO pedal reaction force setting signal (Standard/Soft/OFF) to ECM via CAN communication.

#### NOTE:

- An ECO pedal reaction force setting signal which determines reaction force of the accelerator pedal can be selected on the settings screen of the Multi AV system.
- ECM transmits an ECO pedal reaction force control signal to the ADAS control unit via CAN communication, based on a ECO mode signal received from TCM via CAN communication and an ECO pedal reaction force setting signal received from the AV control unit via CAN communication.
- ECM sends back an ECO pedal reaction force setting signal received from the AV control unit to the AV control unit for confirmation.
- The ADAS control unit controls pedal reaction force of the accelerator pedal actuator via ITS communication, based on an ECO pedal reaction force control signal received from the ADAS control unit.

#### Control

- With the drive mode selector, a drive mode select switch installed at the top of the center console switches a vehicle drive mode, changes throttle angle characteristics, and controls torque and ECO pedal.
- Vehicle characteristics are controlled in the following modes, on the basis of STANDARD mode ("●" position of the drive mode select switch).
  - SPORT: Changing throttle angle characteristics allows to use a high engine performance range and increases driving performance.
  - ECO: Changing throttle angle characteristics and controlling torque, ECO drive indicator, and ECO pedal enhance fuel economy in actual traffic.

# SYSTEM

## < SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

- SNOW: Changing throttle angle characteristics enhances driving performance on roads with a low coefficient of friction.

| ECO pedal* <sup>2</sup> |                    | ×   |      | Controls ECO pedal (Accelerator pedal reaction force control).                                       |

\*1: Torque control and the ECO drive indicator is available only when in ECO mode.

\*2: ECO pedal control is only for vehicles with an intelligent pedal (distance control assist).

### ECO drive indicator control

- ECO drive indicator turns ON or blinks (with ECO pedal) when in ECO mode, according to the operation of the accelerator pedal.
- For vehicles with ECO pedal, the blinking timing of the ECO drive indicator (green) synchronizes to the generation timing of ECO pedal reaction force.

| ECO drive indicator                      | Driving condition   |
|--|---|
| ON (Green)                               | Within the ECO drive range.   |
| Blink (Green) (if so equipped ECO pedal) | Likely over the ECO drive range.  |
| ON (Orange)                              | Over the ECO drive range.   |
| OFF                                      | Low-speed range [approx. 3 MPH (4.8 km/h) or less] and high-speed range [approx. 90 MPH (144 km/h) or more] |

### NOTE:

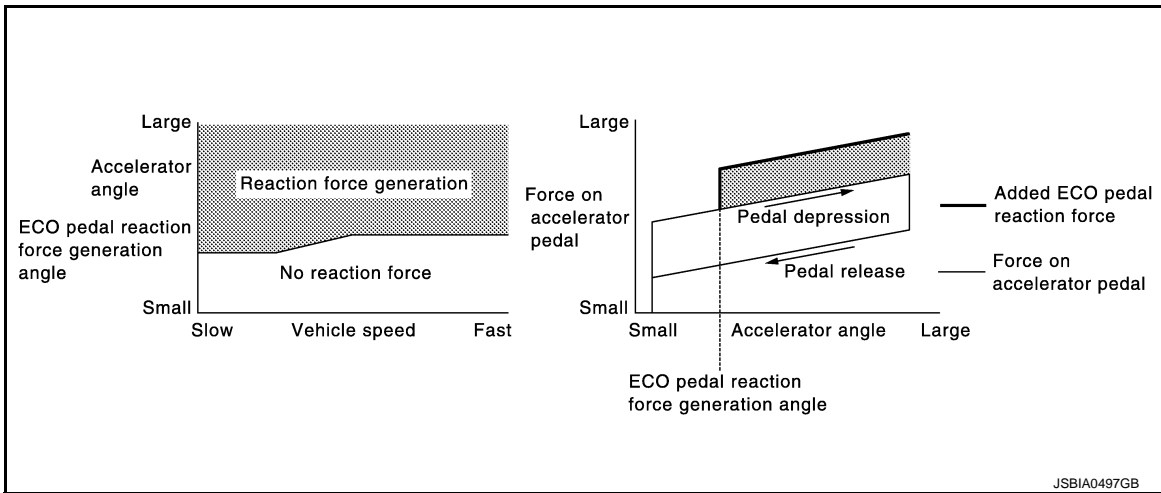

ECO drive indicator turns OFF under the following conditions.

- Intelligent cruise control in operation.
- Selector lever is in R range.

### ECO pedal control

- Increasing reaction force of the accelerator pedal supports ECO driving in accordance with the accelerator pedal operation when in ECO mode.
- The level of reaction force to the accelerator pedal can be changed among Standard/Soft/OFF on the navigation screen. ECO pedal reaction force can be turned OFF even when in ECO mode.
- The generation timing of ECO pedal reaction force synchronizes to the blinking timing of the ECO drive indicator (Green).

**NOTE:**

- When switching from ECO mode to the other mode by operating the drive mode select switch, ECO pedal reaction force is generated in common with ECO mode until the accelerator pedal is released.
- ECO pedal reaction force is not generated under the following conditions.
  - Intelligent cruise control is in operation.
  - Accelerator pedal is depressed quickly.
  - Selector lever is in N or R range.

# OPERATION

< SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

## OPERATION

### AUTMATIC SPEED CONTROL DEVICE (ASCD)

### AUTMATIC SPEED CONTROL DEVICE (ASCD) : Switch Name and Function

INFOID:000000006882804

#### SWITCHES AND INDICATORS

- |                     |                     |  |
|---------------------|---------------------|--|
| 1. CRUISE indicator | 2. SET indicator    | 3. CANCEL switch                           |
| 4. ASCD MAIN switch | 5. COAST/SET switch | 6. ACCEL/RES switch<br>(ACCELERATE/RESUME) |

- A. On the combination meter (Information display)  
 B. On the steering wheel

#### SET SPEED RANGE

ASCD system can be set the following vehicle speed.

| Minimum speed (Approx.) | Maximum speed (Approx.) |
|-------------------------|-------------------------|
| 40 km/h (25 MPH)        | 144 km/h (89 MPH)       |

#### SWITCH OPERATION

| Item                                  | Function   |
|---------------------------------------|--|
| CANCEL switch                         | Cancels the cruise control driving.  |
| RES / + switch<br>(RESUME/ACCELERATE) | <ul style="list-style-type: none"> <li>• Resumes the set speed.</li> <li>• Increases speed incrementally during cruise control driving.</li> </ul>     |
| SET / - switch<br>(SET/COAST)         | <ul style="list-style-type: none"> <li>• Sets desired cruise speed.</li> <li>• Decreases speed incrementally during cruise control driving.</li> </ul> |
| ASCD MAIN switch                      | Master switch to activate the ASCD system.   |

#### CANCEL OPERATION

When any of following conditions exist, cruise operation will be canceled.

- CANCEL switch is pressed
- ASCD MAIN switch pressed (Set speed is cleared)
- More than 2 switches at ASCD steering switch are pressed at the same time (Set speed will be cleared)
- Brake pedal is depressed
- Selector lever position is changed to N, P or R
- Vehicle speed decreased to 13 km/h (8 MPH) lower than the set speed
- TCS system is operated

When the ECM detects any of the following conditions, the ECM will cancel the cruise operation and inform the driver by blinking indicator.

- Engine coolant temperature is slightly higher than the normal operating temperature, CRUISE indicator may blink slowly.  
 When the engine coolant temperature decreases to the normal operating temperature, CRUISE indicator will stop blinking and the cruise operation will be able to work by pressing SET/COAST switch or RESUME/ACCELERATE switch.
- Malfunction for some self-diagnoses regarding ASCD control: SET indicator will blink quickly.

# OPERATION

[VQ37VHR FOR USA AND CANADA]

< SYSTEM DESCRIPTION >

If MAIN switch is turned to OFF during ASCD is activated, all of ASCD operations will be canceled and vehicle speed memory will be erased.

# HANDLING PRECAUTION

< SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

## HANDLING PRECAUTION

### Infiniti Drive Mode Selector

INFOID:000000006882805

#### ECO DRIVE INDICATOR LAMP CONTROL

- ECO drive indicator turns OFF under the following conditions.
  - While driving at low speeds [3 MPH (4.8 km/h) or less] or high speeds [90 MPH (144 km/h) or more].
  - Intelligent cruise control is in operation.
  - Selector lever is in R range.

#### ECO PEDAL CONTROL

- When switching from ECO mode to the other mode by operating the drive mode select switch, ECO pedal reaction force is generated in common with ECO mode until the accelerator pedal is released.
- ECO pedal reaction force is not generated under the following conditions.
  - Intelligent cruise control is in operation.
  - Accelerator pedal is depressed quickly.
  - Selector lever is in N or R range.
  - ECO pedal reaction force setting is OFF.

#### NOTE:

ECO pedal control is only for vehicles with an intelligent pedal (distance control assist).

#### ENGINE OUTPUT CHARACTERISTICS AFTER SWITCHING MODE

- Engine output characteristics after switching mode by operating the drive mode select switch are as follows.
  - After switching mode to a mode that engine output increase, engine output characteristics are changed by releasing the accelerator pedal.
  - After switching mode to a mode that engine output decreases, engine output characteristics are changed immediately.
- When an accelerator angle is constant, engine output characteristics are as follows.
  - SPORT > STANDARD > ECO > SNOW

Output characteristics of each mode

| Control mode | Engine output                           |
|--------------|---|
| SPORT        | Increase                                |
| STANDARD     | Normal                                  |
| ECO          | Decrease                                |
| SNOW         | Decrease (More reduction than ECO mode) |

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

< SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

## ON BOARD DIAGNOSTIC (OBD) SYSTEM

### Diagnosis Description

INFOID:000000006882806

This system is an on board diagnostic system that records exhaust emission-related diagnostic information and detects a sensors/actuator-related malfunction. A malfunction is indicated by the malfunction indicator lamp (MIL) and stored in ECU memory as a DTC. The diagnostic information can be obtained with the diagnostic tool (GST: Generic Scan Tool).

### GST (Generic Scan Tool)

INFOID:000000006882807

When GST is connected with a data link connector equipped on the vehicle side, it will communicate with the control unit equipped in the vehicle and then enable various kinds of diagnostic tests. Refer to [EC-77. "Diagnosis Description"](#).

#### NOTE:

Service \$0A is not applied for regions where it is not mandated.

# DIAGNOSIS SYSTEM (ECM)

[VQ37VHR FOR USA AND CANADA]

< SYSTEM DESCRIPTION >

## DIAGNOSIS SYSTEM (ECM)

### DIAGNOSIS DESCRIPTION

#### DIAGNOSIS DESCRIPTION : 1st Trip Detection Logic and Two Trip Detection Logic

INFOID:000000006882808

When a malfunction is detected for the first time, 1st trip DTC and 1st trip Freeze Frame data are stored in the ECM memory. The MIL will not illuminate at this stage. <1st trip>

If the same malfunction is detected again during the next drive, the DTC and Freeze Frame data are stored in the ECM memory, and the MIL illuminates. The MIL illuminates at the same time when the DTC is stored. <2nd trip> The "trip" in the "Two Trip Detection Logic" means a driving mode in which self-diagnosis is performed during vehicle operation. Specific on board diagnostic items will cause the ECM to illuminate or blink the MIL, and store DTC and Freeze Frame data, even in the 1st trip, as shown below.

×: Applicable —: Not applicable

| Items   | MIL      |            |          |            | DTC                 |                     | 1st trip DTC        |                     |
|---|----------|------------|----------|------------|---------------------|---------------------|---------------------|---------------------|
|   | 1st trip |            | 2nd trip |            | 1st trip displaying | 2nd trip displaying | 1st trip displaying | 2nd trip displaying |
|   | Blinking | Illuminate | Blinking | Illuminate |                     |                     |                     |                     |
| Misfire (Possible three way catalyst damage) — DTC: P0300 - P0308 is being detected | ×        | —          | —        | —          | —                   | —                   | ×                   | —                   |
| Misfire (Possible three way catalyst damage) — DTC: P0300 - P0308 is being detected | —        | —          | ×        | —          | —                   | ×                   | —                   | —                   |
| One trip detection diagnoses (Refer to <a href="#">EC-117, "DTC Index."</a> )       | —        | ×          | —        | —          | ×                   | —                   | —                   | —                   |
| Except above  | —        | —          | —        | ×          | —                   | ×                   | ×                   | —                   |

#### DIAGNOSIS DESCRIPTION : DTC and Freeze Frame Data

INFOID:000000006882809

#### DTC AND 1ST TRIP DTC

The 1st trip DTC (whose number is the same as the DTC number) is displayed for the latest self-diagnostic result obtained. If the ECM memory was cleared previously, and the 1st trip DTC did not recur, the 1st trip DTC will not be displayed.

If a malfunction is detected during the 1st trip, the 1st trip DTC is saved in the ECM memory. The MIL will not light up (two trip detection logic). If the same malfunction is not detected in the 2nd trip (meeting the required driving pattern), the 1st trip DTC is cleared from the ECM memory. If the same malfunction is detected in the 2nd trip, both the 1st trip DTC and DTC are saved in the ECM memory and the MIL lights up. In other words, the DTC is stored in the ECM memory and the MIL lights up when the same malfunction occurs in two consecutive trips. If a 1st trip DTC is stored and a non-diagnostic operation is performed between the 1st and 2nd trips, only the 1st trip DTC will continue to be stored. For malfunctions that blink or light up the MIL during the 1st trip, the DTC and 1st trip DTC are stored in the ECM memory.

For malfunctions in which 1st trip DTCs are displayed, refer to [EC-117, "DTC Index."](#) These items are required by legal regulations to continuously monitor the system/component. In addition, the items monitored non-continuously are also displayed on CONSULT.

1st trip DTC is specified in Service \$07 of SAE J1979/ISO 15031-5. 1st trip DTC detection occurs without illuminating the MIL and therefore does not warn the driver of a malfunction.

When a 1st trip DTC is detected, check, print out or write down and erase (1st trip) DTC and Freeze Frame data as specified in Work Flow procedure Step 2, refer to [EC-139, "Work Flow."](#) Then perform DTC Confirmation Procedure or Component Function Check to try to duplicate the malfunction. If the malfunction is duplicated, the item requires repair.

#### FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA

The ECM records the driving conditions such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed, vehicle speed, absolute throttle position, base fuel schedule and intake air temperature at the moment a malfunction is detected.

Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data. The data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT or GST. The 1st trip freeze frame data can only be displayed on the CONSULT screen.

# DIAGNOSIS SYSTEM (ECM)

[VQ37VHR FOR USA AND CANADA]

## < SYSTEM DESCRIPTION >

Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MIL on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. The ECM has the following priorities to update the data.

| Priority | Items                      |  |
|----------|----------------------------|--|
| 1        | Freeze frame data          | Misfire — DTC: P0300 - P0308<br>Fuel Injection System Function — DTC: P0171, P0172, P0174, P0175 |
| 2        |                            | Except the above items   |
| 3        | 1st trip freeze frame data |  |

For example, the EGR malfunction (Priority: 2) was detected and the freeze frame data was saved in the 2nd trip. After that when the misfire (Priority: 1) is detected in another trip, the freeze frame data will be updated from the EGR malfunction to the misfire. The 1st trip freeze frame data is updated each time a different malfunction is detected. There is no priority for 1st trip freeze frame data. However, once freeze frame data is stored in the ECM memory, 1st trip freeze data is no longer stored (because only one freeze frame data or 1st trip freeze frame data can be stored in the ECM). If freeze frame data is stored in the ECM memory and freeze frame data with the same priority occurs later, the first (original) freeze frame data remains unchanged in the ECM memory.

Both 1st trip freeze frame data and freeze frame data (along with the DTCs) are cleared when the ECM memory is erased.

## DIAGNOSIS DESCRIPTION : Counter System

INFOID:000000007202376

### RELATIONSHIP BETWEEN MIL, 1ST TRIP DTC, DTC, AND DETECTABLE ITEMS

- When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data are stored in the ECM memory.
- When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data are stored in the ECM memory, and the MIL will come on.
- The MIL will turn OFF after the vehicle is driven 3 times (driving pattern B) with no malfunction. The drive is counted only when the recorded driving pattern is met (as stored in the ECM). If another malfunction occurs while counting, the counter will reset.
- The DTC and the freeze frame data will be stored until the vehicle is driven 40 times (driving pattern A) without the same malfunction recurring (except for Misfire and Fuel Injection System). For Misfire and Fuel Injection System, the DTC and freeze frame data will be stored until the vehicle is driven 80 times (driving pattern C) without the same malfunction recurring. The "TIME" in "SELF-DIAGNOSTIC RESULTS" mode of CONSULT will count the number of times the vehicle is driven.
- The 1st trip DTC is not displayed when the self-diagnosis results in OK for the 2nd trip.

### COUNTER SYSTEM CHART

| Items                               | Fuel Injection System | Misfire           | Other          |
|-------------------------------------|-----------------------|-------------------|----------------|
| MIL (turns OFF)                     | 3 (pattern B)         | 3 (pattern B)     | 3 (pattern B)  |
| DTC, Freeze Frame Data (no display) | 80 (pattern C)        | 80 (pattern C)    | 40 (pattern A) |
| 1st Trip DTC (clear)                | 1 (pattern C), *1     | 1 (pattern C), *1 | 1 (pattern B)  |
| 1st Trip Freeze Frame Data (clear)  | *1, *2                | *1, *2            | 1 (pattern B)  |

For details about patterns B and C under "Fuel Injection System" and "Misfire", see "EXPLANATION FOR DRIVING PATTERNS FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM".

For details about patterns A and B under Other, see "EXPLANATION FOR DRIVING PATTERNS FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM".

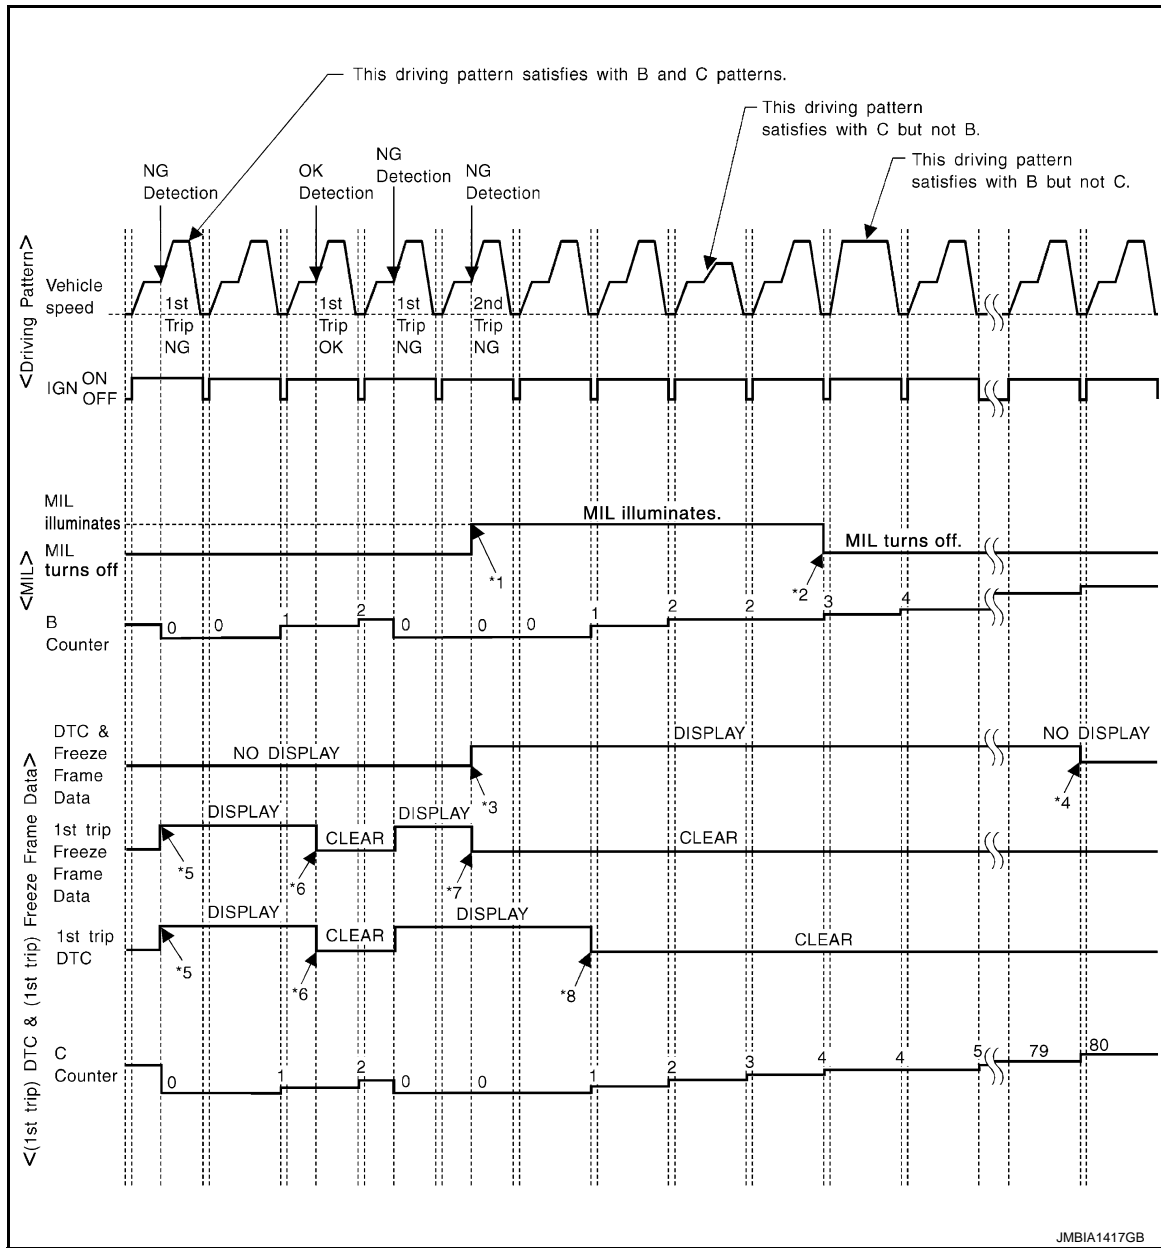

- \*1: Clear timing is at the moment OK is detected.
- \*2: Clear timing is when the same malfunction is detected in the 2nd trip.

Relationship Between MIL, DTC, 1st Trip DTC and Driving Patterns for "Misfire <Exhaust Quality Deterioration>", "Fuel Injection System"

# DIAGNOSIS SYSTEM (ECM)

[VQ37VHR FOR USA AND CANADA]

< SYSTEM DESCRIPTION >

JMBIA1417GB

- \*1: When the same malfunction is detected in two consecutive trips, MIL will light up.
- \*2: MIL will turn OFF after vehicle is driven 3 times (pattern B) without any malfunctions.
- \*3: When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data will be stored in ECM.
- \*4: The DTC and the freeze frame data will not be displayed any longer after vehicle is driven 80 times (pattern C) without the same malfunction. (The DTC and the freeze frame data still remain in ECM.)
- \*5: When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data will be cleared at the moment OK is detected.
- \*6: The 1st trip DTC and the 1st trip freeze frame data will be cleared at the moment OK is detected.
- \*7: When the same malfunction is detected in the 2nd trip, the 1st trip freeze frame data will be cleared.
- \*8: 1st trip DTC will be cleared when vehicle is driven once (pattern C) without the same malfunction after DTC is stored in ECM.

Explanation for Driving Patterns for "Misfire <Exhaust Quality Deterioration>", "Fuel Injection System"

Driving Pattern B

Refer to [EC-82. "DIAGNOSIS DESCRIPTION : Driving Pattern"](#).

# DIAGNOSIS SYSTEM (ECM)

[VQ37VHR FOR USA AND CANADA]

## < SYSTEM DESCRIPTION >

### Driving Pattern C

Refer to [EC-82. "DIAGNOSIS DESCRIPTION : Driving Pattern"](#).

Example:

If the stored freeze frame data is as per the following:

Engine speed: 850 rpm, Calculated load value: 30%, Engine coolant temperature: 80°C (176°F)

To be satisfied with driving pattern C, the vehicle should run under the following conditions:

Engine speed: 475 – 1,225 rpm, Calculated load value: 27 – 33%, Engine coolant temperature: more than 70°C (158°F)

Relationship Between MIL, DTC, 1st Trip DTC and Driving Patterns Except For “Misfire <Exhaust Quality Deterioration>”, “Fuel Injection System”

JMBIA1418GB

# DIAGNOSIS SYSTEM (ECM)

[VQ37VHR FOR USA AND CANADA]

## < SYSTEM DESCRIPTION >

Driving Pattern B

Refer to [EC-82, "DIAGNOSIS DESCRIPTION : Driving Pattern"](#).

## DIAGNOSIS DESCRIPTION : Driving Pattern

INFOID:000000007202377

### **CAUTION:**

**Always drive at a safe speed.**

### DRIVING PATTERN A

Driving pattern A means a trip satisfying the following conditions.

- Engine speed reaches 400 rpm or more.
- Engine coolant temperature rises by 20°C (32°F) or more after starting the engine.
- Engine coolant temperature reaches 70°C (158°F) or more.
- The ignition switch is turned from ON to OFF.

#### **NOTE:**

- When the same malfunction is detected regardless of driving conditions, reset the counter of driving pattern A.
- When the above conditions are satisfied without detecting the same malfunction, reset the counter of driving pattern A.

### DRIVING PATTERN B

Driving pattern B means a trip satisfying the following conditions.

- Engine speed reaches 400 rpm or more.
- Engine coolant temperature reaches 70°C (158°F) or more.
- Vehicle speed of 70 – 120 km/h (44 – 75 MPH) is maintained for 60 seconds or more under the control of closed loop.
- Vehicle speed of 30 – 60 km/h (19 – 37 MPH) is maintained for 10 seconds or more under the control of closed loop.
- Under the closed loop control condition, the following state reaches 12 seconds or more in total: Vehicle speed of 4 km/h (2 MPH) or less with idling condition.
- The state of driving at 10 km/h (7 MPH) or more reaches 10 minutes or more in total.
- A lapse of 22 minutes or more after engine start.

#### **NOTE:**

- Drive the vehicle at a constant velocity.
- When the same malfunction is detected regardless of driving conditions, reset the counter of driving pattern B.
- When the above conditions are satisfied without detecting the same malfunction, reset the counter of driving pattern B.

### DRIVING PATTERN C

Driving pattern C means operating vehicle as per the following:

The following conditions should be satisfied at the same time:

Engine speed: (Engine speed in the freeze frame data)  $\pm 375$  rpm

# DIAGNOSIS SYSTEM (ECM)

[VQ37VHR FOR USA AND CANADA]

## < SYSTEM DESCRIPTION >

Calculated load value: (Calculated load value in the freeze frame data) x (1±0.1) [%]

Engine coolant temperature condition:

- When the freeze frame data shows lower than 70°C (158°F), engine coolant temperature should be lower than 70°C (158°F).
- When the freeze frame data shows higher than or equal to 70°C (158°F), engine coolant temperature should be higher than or equal to 70°C (158°F).

### NOTE:

- When the same malfunction is detected regardless of the above vehicle conditions, reset the counter of driving pattern C.
- When the above conditions are satisfied without detecting the same malfunction, reset the counter of driving pattern C.
- The 1st trip DTC will be cleared when C counter is counted once without the same malfunction after DTC is stored in ECM.

## DRIVING PATTERN D

Driving pattern D means a trip satisfying the following conditions.

- The state of driving at 40 km/h (25 MPH) reaches 300 seconds or more in total.
- Idle speed lasts 30 seconds or more.
- A lapse of 600 seconds or more after engine start.

### NOTE:

- When the same malfunction is detected regardless of driving conditions, reset the counter of driving pattern D.
- When the above conditions are satisfied without detecting the same malfunction, reset the counter of driving pattern D.

## DIAGNOSIS DESCRIPTION : System Readiness Test (SRT) Code

INFOID:000000007202378

System Readiness Test (SRT) code is specified in Service \$01 of SAE J1979/ISO 15031-5.

As part of an enhanced emissions test for Inspection & Maintenance (I/M), certain states require the status of SRT be used to indicate whether the ECM has completed self-diagnosis of major emission systems and components. Completion must be verified in order for the emissions inspection to proceed.

If a vehicle is rejected for a State emissions inspection due to one or more SRT items indicating "INCMP", use the information in this Service Manual to set the SRT to "CMPLT".

In most cases the ECM will automatically complete its self-diagnosis cycle during normal usage, and the SRT status will indicate "CMPLT" for each application system. Once set as "CMPLT", the SRT status remains "CMPLT" until the self-diagnosis memory is erased.

Occasionally, certain portions of the self-diagnostic test may not be completed as a result of the customer's normal driving pattern; the SRT will indicate "INCMP" for these items.

### NOTE:

The SRT will also indicate "INCMP" if the self-diagnosis memory is erased for any reason or if the ECM memory power supply is interrupted for several hours.

If, during the state emissions inspection, the SRT indicates "CMPLT" for all test items, the inspector will continue with the emissions test. However, if the SRT indicates "INCMP" for one or more of the SRT items the vehicle is returned to the customer untested.

### NOTE:

If permanent DTC is stored or MIL illuminates during the state emissions inspection, the vehicle is also returned to the customer untested even though the SRT indicates "CMPLT" for all test items. Therefore, it is important to check SRT ("CMPLT"), DTC (No DTCs) and permanent DTC (NO permanent DTCs) before the inspection.

## SRT SET TIMING

SRT is set as "CMPLT" after self-diagnosis has been performed one or more times. Completion of SRT is done regardless of whether the result is OK or NG. The set timing is different between OK and NG results and is shown in the table below.

# DIAGNOSIS SYSTEM (ECM)

< SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

| Self-diagnosis result |        | Example           |                |         |              |                        |        |     |
|-----------------------|--------|-------------------|----------------|---------|--------------|------------------------|--------|-----|

|                       |        | SRT of EGR        | “INCMP”        | “INCMP” | “CMPLT”      | “CMPLT”                |        |     |
| NG exists             | Case 3 | P0400             | OK             | OK      | —            | —                      |        |     |
|                       |        | P0402             | —              | —       | —            | —                      |        |     |
|                       |        | P1402             | NG             | —       | NG           | NG<br>(Consecutive NG) |        |     |
|                       |        | (1st trip)<br>DTC | 1st trip DTC   | —       | 1st trip DTC | DTC<br>(= MIL ON)      |        |     |
|                       |        | SRT of EGR        | “INCMP”        | “INCMP” | “INCMP”      | “CMPLT”                |        |     |

OK: Self-diagnosis is carried out and the result is OK.

NG: Self-diagnosis is carried out and the result is NG.

—: Self-diagnosis is not carried out.

When all SRT related self-diagnoses show OK results in a single cycle (Ignition OFF-ON-OFF), the SRT will indicate “CMPLT”. → Case 1 above

When all SRT related self-diagnoses show OK results through several different cycles, the SRT will indicate “CMPLT” at the time the respective self-diagnoses have at least one OK result. → Case 2 above

If one or more SRT related self-diagnoses show NG results in 2 consecutive cycles, the SRT will also indicate “CMPLT”. → Case 3 above

The table above shows that the minimum number of cycles for setting SRT as “INCMP” is the number one (1) for each self-diagnosis (Case 1 & 2) or the number two (2) for one of self-diagnoses (Case 3). However, in preparation for the state emissions inspection, it is unnecessary for each self-diagnosis to be executed twice (Case 3) for the following reasons:

- The SRT will indicate “CMPLT” at the time the respective self-diagnoses have one (1) OK result.
- The emissions inspection requires “CMPLT” of the SRT only with OK self-diagnosis results.
- During SRT driving pattern, the 1st trip DTC (NG) is detected prior to “CMPLT” of SRT and the self-diagnosis memory must be erased from the ECM after repair.
- If the 1st trip DTC is erased, all the SRT will indicate “INCMP”.

**NOTE:**

SRT can be set as “CMPLT” together with the DTC(s). Therefore, DTC check must always be carried out prior to the state emission inspection even though the SRT indicates “CMPLT”.

## DIAGNOSIS DESCRIPTION : Permanent Diagnostic Trouble Code (Permanent DTC)

INFOID:000000007202115

Permanent DTC is defined in SAE J1979/ISO 15031-5 Service \$0A.

ECM stores a DTC issuing a command of turning on MIL as a permanent DTC and keeps storing the DTC as a permanent DTC until ECM judges that there is no presence of malfunction.

Permanent DTCs cannot be erased by using the Erase function of CONSULT or Generic Scan Tool (GST) and by disconnecting the battery to shut off power to ECM. This prevents a vehicle from passing the state emission inspection without repairing a malfunctioning part.

When not passing the state emission inspection due to more than one permanent DTC, permanent DTCs should be erased, referring to this manual.

**NOTE:**

- The important items in state emission inspection are that MIL is not ON, SRT test items are set, and permanent DTCs are not included.
- Permanent DTCs do not apply for regions that permanent DTCs are not regulated by law.

# DIAGNOSIS SYSTEM (ECM)

[VQ37VHR FOR USA AND CANADA]

< SYSTEM DESCRIPTION >

## PERMANENT DTC SET TIMING

The setting timing of permanent DTC is stored in ECM with the lighting of MIL when a DTC is confirmed.

## DIAGNOSIS DESCRIPTION : Malfunction Indicator Lamp (MIL)

INFOID:000000006882813

When emission related ECU detects a malfunction in the emission control systems components and/or the powertrain control components (which affect vehicle emissions), it turns on/blinks MIL to inform the driver that a malfunction has been detected.

1. The MIL illuminates when ignition switch is turned ON (engine is not running).

### NOTE:

Check the MIL circuit if MIL does not illuminate. Refer to [EC-524, "Component Function Check"](#).

2. When the engine is started, the MIL should go off.

### NOTE:

If MIL continues to illuminate/blink, perform self-diagnoses and inspect/repair accordingly because an emission related ECU has detected a malfunction in the emission control systems components and/or the powertrain control components (which affect vehicle emissions).

## On Board Diagnosis Function

INFOID:000000006882814

### ON BOARD DIAGNOSIS ITEM

The on board diagnostic system has the following functions.

| Diagnostic test mode                          | Function   |
|---|--|
| Bulb check                                    | MIL can be checked.  |
| SRT status                                    | ECM can read if SRT codes are set.   |
| Malfunction warning                           | If ECM detects a malfunction, it illuminates or blinks MIL to inform the driver that a malfunction has been detected.            |
| Self-diagnostic results                       | DTCs or 1st trip DTCs stored in ECM can be read.   |
| Accelerator pedal released position learning  | ECM can learn the accelerator pedal released position. Refer to <a href="#">EC-147, "Description"</a> .                          |
| Throttle valve closed position learning       | ECM can learn the throttle valve closed position. Refer to <a href="#">EC-147, "Description"</a> .                               |
| Idle air volume learning                      | ECM can learn the idle air volume. Refer to <a href="#">EC-149, "Description"</a> .  |
| VVEL control shaft position sensor adjustment | The initial position of the VVEL control shaft position sensor can be adjusted. Refer to <a href="#">EC-151, "Description"</a> . |

## BLUB CHECK MODE

### Description

This function allows damage inspection in the MIL bulb (blown, open circuit, etc.).

### Operation Procedure

1. Turn ignition switch ON.
2. The MIL on the instrument panel should stay ON.  
If it remains OFF, check MIL circuit. Refer to [EC-524, "Diagnosis Procedure"](#).

## SRT STATUS MODE

### Description

This function allows to read if ECM has completed the self-diagnoses of major emission control systems and components. For SRT, refer to [EC-83, "DIAGNOSIS DESCRIPTION : System Readiness Test \(SRT\) Code"](#).

### Operation Procedure

1. Turn ignition switch ON and wait 20 seconds.
2. SRT status is indicated as shown blow.
  - ECM continues to illuminate MIL if all SRT codes are set.

# DIAGNOSIS SYSTEM (ECM)

[VQ37VHR FOR USA AND CANADA]

## < SYSTEM DESCRIPTION >

- ECM blinks MIL for about 10 seconds if all SRT codes are not set.

## MALFUNCTION WARNING MODE

### Description

In this function ECM turns on or blinks MIL when it detects a malfunction in the emission control system components and/or the powertrain control components (which affect vehicle emissions) to inform the driver that a malfunction has been detected.

### Operation Procedure

1. Turn ignition switch ON.
2. Check that MIL illuminates.  
If it remains OFF, check MIL circuit. Refer to [EC-524, "Diagnosis Procedure"](#).
3. Start engine and let it idle.
  - For two trip detection logic diagnoses, ECM turns on MIL when it detects the same malfunction twice in the two consecutive driving cycles.
  - For 1st trip detection logic diagnoses, ECM turns on MIL when it detects a malfunction in one driving cycle.
  - ECM blinks MIL when it detects a malfunction that may damage the three way catalyst (misfire).

## SELF-DIAGNOSTIC RESULTS MODE

### Description

This function allows to indicate DTCs or 1st trip DTCs stored in ECM according to the number of times MIL is blinking.

### How to Set Self-diagnostic Results Mode

#### NOTE:

- It is better to count the time accurately with a clock.
  - It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.
  - After ignition switch is turned off, ECM is always released from the "self-diagnostic results" mode.
1. Confirm that accelerator pedal is fully released, turn ignition switch ON and wait 3 seconds.
  2. Repeat the following procedure quickly five times within 5 seconds.
    - Fully depress the accelerator pedal.
    - Fully release the accelerator pedal.
  3. Wait 7 seconds, fully depress the accelerator pedal and keep it depressed for approx. 10 seconds until the MIL starts blinking.

#### NOTE:

Do not release the accelerator pedal for 10 seconds if MIL starts blinking during this period. This blinking is displaying SRT status and is continued for another 10 seconds.

4. Fully release the accelerator pedal.  
ECM has entered to self-diagnostic results mode.

# DIAGNOSIS SYSTEM (ECM)

[VQ37VHR FOR USA AND CANADA]

## < SYSTEM DESCRIPTION >

### NOTE:

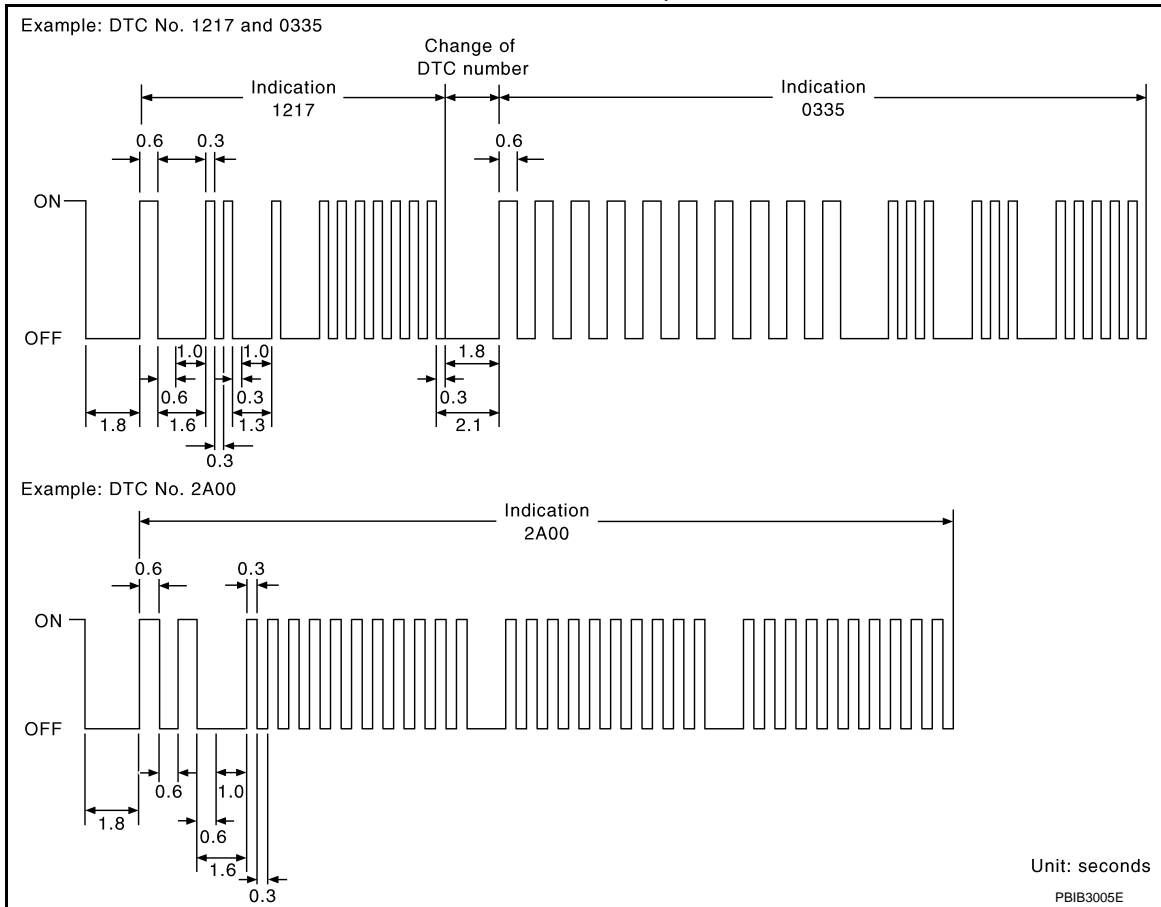

Wait until the same DTC (or 1st trip DTC) appears to completely confirm all DTCs.

### How to Read Self-diagnostic Results

The DTC and 1st trip DTC are indicated by the number of blinks of the MIL as shown below.

The DTC and 1st trip DTC are displayed at the same time. If the MIL does not illuminate in diagnostic test mode I (Malfunction warning), all displayed items are 1st trip DTCs. If only one code is displayed when the MIL illuminates in "malfunction warning" mode, it is a DTC; if two or more codes are displayed, they may be either DTCs or 1st trip DTCs. DTC No. is same as that of 1st trip DTC. These unidentified codes can be identified by using the CONSULT or GST. A DTC will be used as an example for how to read a code.

A particular trouble code can be identified by the number of four-digit numeral flashes per the following.

| Number  | 0  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | A  | B  | C  | D  | E  | F  |
|---------|----|---|---|---|---|---|---|---|---|---|----|----|----|----|----|----|
| Flashes | 10 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 11 | 12 | 13 | 14 | 15 | 16 |

The length of time the 1,000th-digit numeral flashes on and off is 1.2 seconds consisting of an ON (0.6-seconds) - OFF (0.6-seconds) cycle.

The 100th-digit numeral and lower digit numerals consist of a 0.3-seconds ON and 0.3-seconds OFF cycle.

A change from one digit numeral to another occurs at an interval of 1.0-second OFF. In other words, the later numeral appears on the display 1.3 seconds after the former numeral has disappeared.

A change from one trouble code to another occurs at an interval of 1.8-seconds OFF.

# DIAGNOSIS SYSTEM (ECM)

[VQ37VHR FOR USA AND CANADA]

## < SYSTEM DESCRIPTION >

In this way, all the detected malfunctions are classified by their DTC numbers. The DTC 0000 refers to no malfunction. Refer to [EC-117, "DTC Index"](#).

### How to Erase Self-diagnostic Results

By performing this procedure, ECM memory is erased and the following diagnostic information is erased as well.

- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values

#### **NOTE:**

Also, if a battery terminal is disconnected, ECM memory is erased and the diagnostic information as listed above is erased. (The amount of time required for erasing may vary from a few seconds to several hours.)

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Set ECM in self-diagnostic results.
6. The diagnostic information has been erased from the backup memory in the ECM.  
Fully depress the accelerator pedal and keep it depressed for more than 10 seconds.
7. Fully release the accelerator pedal, and confirm the DTC 0000 is displayed.

## CONSULT Function

INFOID:000000006882815

### FUNCTION

| Diagnostic test mode           | Function  |
|--------------------------------|---|
| Work support                   | This mode enables a technician to adjust some devices faster and more accurately by following the indications on the CONSULT unit.      |
| Self-diagnostic results        | Self-diagnostic results such as 1st trip DTC, DTCs and 1st trip freeze frame data or freeze frame data can be read and erased quickly.* |
| Data monitor                   | Input/Output data in the ECM can be read.   |
| CAN diagnostic support monitor | The results of transmit/receive diagnosis of CAN communication can be read.   |
| Active test                    | Diagnostic Test Mode in which CONSULT drives some actuators apart from the ECMs and also shifts some parameters in a specified range.   |
| DTC & SRT confirmation         | The status of system monitoring tests and the self-diagnosis status/results can be confirmed.   |
| Function test                  | This mode is used to inform customers when their vehicle requires periodic maintenance.   |
| ECU part number                | ECM part number can be read.  |

\*: The following emission-related diagnostic information is cleared when the ECM memory is erased.

- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values

### WORK SUPPORT MODE

Work Item

# DIAGNOSIS SYSTEM (ECM)

< SYSTEM DESCRIPTION >

[VQ37VHR FOR USA AND CANADA]

| WORK ITEM             | CONDITION  | USAGE   |

| VVEL POS SEN ADJ PREP | <ul style="list-style-type: none"> <li>Use this item only when replacing VVEL actuator sub assembly.</li> <li>Ignition on and engine stopped.</li> </ul>   | When adjusting VVEL control shaft position sensor |

\*: This function is not necessary in the usual service procedure.

## SELF-DIAG RESULTS MODE

### Self Diagnostic Item

Regarding items of DTC and 1st trip DTC, refer to [EC-117, "DTC Index"](#).

### How to Read DTC and 1st Trip DTC

DTCs and 1st trip DTCs related to the malfunction are displayed in "Self-diag results".

- When ECM detects a 1st trip DTC, "1t" is displayed for "TIME".
- When ECM has detected a current DTC, "0" is displayed for "TIME".
- If "TIME" is neither "0" nor "1t", the DTC occurred in the past and ECM shows the number of times the vehicle has been driven since the last detection of the DTC.

### How to Erase DTC and 1st Trip DTC

#### NOTE:

- If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
- If the DTC is not for A/T related items (see [EC-117, "DTC Index"](#)), skip step 1.
  - Erase DTC in TCM. Refer to [TM-59, "Diagnosis Description"](#).
  - Select "ENGINE" with CONSULT.
  - Select "SELF-DIAG RESULTS".
  - Touch "ERASE". (DTC in ECM will be erased.)

### Freeze Frame Data and 1st Trip Freeze Frame Data

| Freeze frame data item*   | Description   |
|---------------------------|---|
| DIAG TROUBLE CODE [PXXXX] | <ul style="list-style-type: none"> <li>The engine control component part/control system has a trouble code that is displayed as PXXXX. (Refer to <a href="#">EC-117, "DTC Index"</a>.)</li> </ul> |
| CAL/LD VALUE [%]          | <ul style="list-style-type: none"> <li>The calculated load value at the moment a malfunction is detected is displayed.</li> </ul>   |

# DIAGNOSIS SYSTEM (ECM)

## DTC & SRT CONFIRMATION MODE

### SRT STATUS Mode

- For items whose SRT codes are set, "CMPLT" is displayed on the CONSULT screen; for items whose SRT codes are not set, "INCMP" is displayed.
- "SRT STATUS" provides the presence or absence of permanent DTCs stored in ECM memory.

### PERMANENT DTC STATUS Mode

#### How to Display Permanent DTC Status

- Turn ignition switch OFF and wait at 10 seconds.
- Turn ignition switch ON.
- Turn ignition switch OFF and wait at 10 seconds.

# DIAGNOSIS SYSTEM (ECM)

[VQ37VHR FOR USA AND CANADA]

## < SYSTEM DESCRIPTION >

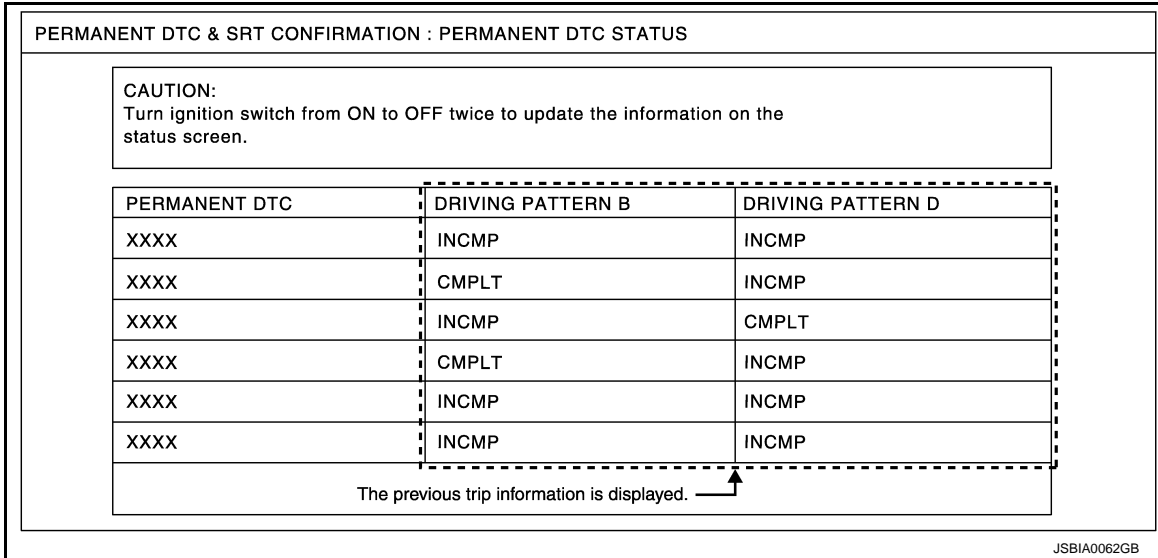

4. Turn ignition switch ON.
5. Select "PERMANENT DTC STATUS" in "DTC & SRT CONFIRMATION" mode with CONSULT.

**NOTE:**

Permanent DTCs stored in ECM memory are displayed on the CONSULT screen to show if a driving pattern required for erasing permanent DTCs is complete (CMPLT) or incomplete (INCMP).

**CAUTION:**

Since the "PERMANENT DTC STATUS" screen displays the previous trip information, repeat the following twice to update the information: "Ignition switch OFF", "Wait for more than 10 seconds" and "Ignition switch ON".

**NOTE:**

This mode is not used in regions that permanent DTCs are not regulated by law.

**SRT WORK SUPPORT Mode**

This mode enables a technician to drive a vehicle to set the SRT while monitoring the SRT status.

**PERMANENT DTC WORK SUPPORT Mode**

This mode enables a technician to drive a vehicle to complete the driving pattern that is required for erasing permanent DTC.

**NOTE:**

This mode is not used in regions that permanent DTCs are not regulated by law.

**DTC WORK SUPPORT Mode**

# ECU DIAGNOSIS INFORMATION

## ECM

### Reference Value

INFOID:000000006882816

### VALUES ON THE DIAGNOSIS TOOL

#### NOTE:

- Specification data are reference values.
- Specification data are output/input values which are detected or supplied by the ECM at the connector.
  - \* Specification data may not be directly related to their components signals/values/operations.
    - i.e. Adjust ignition timing with a timing light before monitoring IGN TIMING, because the monitor may show the specification data in spite of the ignition timing not being adjusted to the specification data. This IGN TIMING monitors the data calculated by the ECM according to the signals input from the camshaft position sensor and other ignition timing related sensors.

#### CONSULT MONITOR ITEM

| Monitor Item    | Condition  |                                       | Values/Status                                      |
|-----------------|--|---------------------------------------|--|
| ENG SPEED       | • Run engine and compare CONSULT value with the tachometer indication.   |                                       | Almost the same speed as the tachometer indication |
| MAS A/F SE-B1   | See <a href="#">EC-172, "Description"</a> .  |                                       |  |
| MAS A/F SE-B2   | See <a href="#">EC-172, "Description"</a> .  |                                       |  |
| B/FUEL SCHDL    | See <a href="#">EC-172, "Description"</a> .  |                                       |  |
| A/F ALPHA-B1    | See <a href="#">EC-172, "Description"</a> .  |                                       |  |
| A/F ALPHA-B2    | See <a href="#">EC-172, "Description"</a> .  |                                       |  |
| COOLAN TEMP/S   | • Ignition switch: ON  |                                       | Indicates engine coolant temperature               |
| A/F SEN1 (B1)   | • Engine: After warming up   | Maintaining engine speed at 2,000 rpm | Fluctuates around 2.2 V                            |
| A/F SEN1 (B2)   | • Engine: After warming up   | Maintaining engine speed at 2,000 rpm | Fluctuates around 2.2 V                            |
| HO2S2 (B1)      | <ul style="list-style-type: none"> <li>• Revving engine from idle up to 3,000 rpm quickly after the following conditions are met.</li> <li>- Engine: After warming up</li> <li>- After keeping engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load</li> </ul> |                                       | 0 - 0.3 V ↔ Approx. 0.6 - 1.0 V                    |
| HO2S2 (B2)      | <ul style="list-style-type: none"> <li>• Revving engine from idle up to 3,000 rpm quickly after the following conditions are met.</li> <li>- Engine: After warming up</li> <li>- After keeping engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load</li> </ul> |                                       | 0 - 0.3 V ↔ Approx. 0.6 - 1.0 V                    |
| HO2S2 MNTR (B1) | <ul style="list-style-type: none"> <li>• Revving engine from idle up to 3,000 rpm quickly after the following conditions are met.</li> <li>- Engine: After warming up</li> <li>- After keeping engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load</li> </ul> |                                       | LEAN ↔ RICH  |
| HO2S2 MNTR (B2) | <ul style="list-style-type: none"> <li>• Revving engine from idle up to 3,000 rpm quickly after the following conditions are met.</li> <li>- Engine: After warming up</li> <li>- After keeping engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load</li> </ul> |                                       | LEAN ↔ RICH  |
| VHCL SPEED SE   | • Turn drive wheels and compare CONSULT value with the speedometer indication.   |                                       | Almost the same speed as speedometer indication    |
| BATTERY VOLT    | • Ignition switch: ON (Engine stopped)   |                                       | 11 - 14 V  |
| ACCEL SEN 1     | • Ignition switch: ON (Engine stopped)   | Accelerator pedal: Fully released     | 0.45 - 1.00 V                                      |
|                 |  | Accelerator pedal: Fully depressed    | 4.4 - 4.8 V  |
| ACCEL SEN 2*1   | • Ignition switch: ON (Engine stopped)   | Accelerator pedal: Fully released     | 0.45 - 1.00 V                                      |
|                 |  | Accelerator pedal: Fully depressed    | 4.3 - 4.8 V  |

\*1: Accelerator pedal position sensor 2 signal and throttle position sensor 2 signal are converted by ECM internally. Thus, they differ from ECM terminals voltage signal.

\*2: Before measuring the terminal voltage, confirm that the battery is fully charged. Refer to [PG-135, "How to Handle Battery"](#).

TERMINAL LAYOUT

PHYSICAL VALUES

NOTE:

- ECM is located behind the instrument assist lower panel. For this inspection, remove passenger side instrument lower panel.
- Specification data are reference values and are measured between each terminal and ground.
- Pulse signal is measured by CONSULT.

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

\*1: This may vary depending on internal resistance of the tester.

# ECM

< ECU DIAGNOSIS INFORMATION >

[VQ37VHR FOR USA AND CANADA]

\*2: Before measuring the terminal voltage, confirm that the battery is fully charged. Refer to [PG-135. "How to Handle Battery"](#).

\*3: With ICC

\*4: Without ICC

## Fail safe

INFOID:000000006882817

### NON DTC RELATED ITEM

| Engine operating condition in fail-safe mode                       | Detected items                     | Remarks   | Reference page         |
|--|------------------------------------|---|------------------------|
| Engine speed will not rise more than 2,500 rpm due to the fuel cut | Malfunction indicator lamp circuit | When there is an open circuit on MIL circuit, the ECM cannot warn the driver by illuminating MIL when there is malfunction on engine control system.<br>Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating the fail-safe function.<br>The fail-safe function also operates when above diagnoses except MIL circuit are detected and demands the driver to repair the malfunction. | <a href="#">EC-524</a> |

### DTC RELATED ITEM

| DTC No.  | Detected items                            | Engine operating condition in fail-safe mode  |  |
|--|---|---|--|
| U1003<br>U1024   | Can communication circuit                 | VVEL actuator motor relay is turned off, and VVEL value is become at a minimum angle.<br>Engine speed will not rise more than 3,500 rpm due to the fuel cut.  |  |
| P0011<br>P0021   | Intake valve timing control               | The signal is not energized to the intake valve timing control solenoid valve and the valve control does not function.  |  |
| P0102<br>P0103<br>P010C<br>P010D   | Mass air flow sensor circuit              | Engine speed will not rise more than 2,400 rpm due to the fuel cut.   |  |
| P0117<br>P0118   | Engine coolant temperature sensor circuit | Engine coolant temperature will be determined by ECM based on the following condition.<br>CONSULT displays the engine coolant temperature decided by ECM.   |  |
|  |   | Condition   | Engine coolant temperature decided (CONSULT display) |
|  |   | Just as ignition switch is turned ON or START   | 40°C (104°F)   |
|  |   | Approx 4 minutes or more after engine starting  | 80°C (176°F)   |
|  |   | Except as shown above   | 40 - 80°C (104 - 176°F)<br>(Depends on the time)     |
|  |   | When the fail-safe system for engine coolant temperature sensor is activated, the cooling fan operates while engine is running.   |  |
| P0122<br>P0123<br>P0222<br>P0223<br>P0227<br>P0228<br>P1239<br>P2132<br>P2133<br>P2135 | Throttle position sensor                  | The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.<br>The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.<br>Therefore, the acceleration will be poor. |  |
| P0500  | Vehicle speed sensor                      | The cooling fan operates (Highest) while engine is running.   |  |
| P0524  | Engine oil pressure                       | The signal is not energized to the intake valve timing control solenoid valve and the valve control does not function.<br>Engine speed will not rise more than 2,400 rpm due to the fuel cut.   |  |

| DTC No.                                   | Detected items                     | Engine operating condition in fail-safe mode   |                   |
|---|------------------------------------|--|-------------------|
| P0605                                     | ECM                                | (When ECM calculation function is malfunctioning:<br>ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.<br>ECM deactivates ASCD operation.  |                   |
| P0607                                     | ECM                                | VVEL actuator motor relay is turned off, and VVEL value is become at a minimum angle.<br>Engine speed will not rise more than 2,500 rpm due to the fuel cut.   |                   |
| P0643                                     | Sensor power supply                | ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.  |                   |
| P1087<br>P1088                            | VVEL control function              | VVEL of normal bank is controlled at VVEL angle of abnormal bank.<br>Engine speed will not rise more than 3,500 rpm due to the fuel cut.   |                   |
| P1089<br>P1092                            | VVEL control shaft position sensor | VVEL value is maintained at a fixed angle.<br>Engine speed will not rise more than 3,500 rpm due to the fuel cut   |                   |
| P1608                                     | VVEL control shaft position sensor | VVEL actuator motor relay is turned off, and VVEL value is become at a minimum angle.<br>Engine speed will not rise more than 3,500 rpm due to the fuel cut  |                   |
| P1090<br>P1093                            | VVEL actuator motor                | VVEL of normal bank is controlled at VVEL angle of abnormal bank.<br>Engine speed will not rise more than 3,500 rpm due to the fuel cut.<br><br>VVEL actuator motor relay is turned off, and VVEL value is become at a minimum angle.<br>Engine speed will not rise more than 3,500 rpm due to the fuel cut. |                   |
| P1091                                     | VVEL actuator motor relay          | VVEL actuator motor relay is turned off, and VVEL value is become at a minimum angle.<br>Engine speed will not rise more than 3,500 rpm due to the fuel cut.   |                   |
| P1233<br>P2101                            | Electric throttle control function | ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.  |                   |
| P1236<br>P2118                            | Throttle control motor             | ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.  |                   |
| P1238<br>P2119                            | Electric throttle control actuator | (When electric throttle control actuator does not function properly due to the return spring malfunction:)<br>ECM controls the electric throttle actuator by regulating the throttle opening around the idle position. The engine speed will not rise more than 2,000 rpm.                                   |                   |
|   |                                    | (When throttle valve opening angle in fail-safe mode is not in specified range:)<br>ECM controls the electric throttle control actuator by regulating the throttle opening to 20 degrees or less.  |                   |
|   |                                    | (When ECM detects the throttle valve is stuck open:)<br>While the vehicle is being driven, it slows down gradually because of fuel cut. After the vehicle stops, the engine stalls.<br>The engine can restart in N or P position, and engine speed will not exceed 1,000 rpm or more.                        |                   |
| P1290<br>P2100<br>P2103                   | Throttle control motor relay       | ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.  |                   |
| P1606                                     | VVEL control module                | VVEL actuator motor relay is turned off, and VVEL value is become at a minimum angle.<br>Engine speed will not rise more than 3,500 rpm due to the fuel cut.   |                   |
| P1805                                     | Brake switch                       | ECM controls the electric throttle control actuator by regulating the throttle opening to a small range.<br>Therefore, acceleration will be poor.  |                   |
|   |                                    | Vehicle condition  | Driving condition |
|   |                                    | When engine is idling  | Normal            |
|   | When accelerating                  | Poor acceleration  |                   |
| P2122<br>P2123<br>P2127<br>P2128<br>P2138 | Accelerator pedal position sensor  | The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.<br>The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.<br>Therefore, the acceleration will be poor.        |                   |

## DTC Inspection Priority Chart

If some DTCs are displayed at the same time, perform inspections one by one based on the following priority chart.

| Priority | Detected items (DTC)  |
|----------|---|
| 1        | <ul style="list-style-type: none"> <li>• U0101 U1001 U1003 CAN communication line</li> <li>• U1024 VVEL CAN communication line</li> <li>• P0102 P0103 P010C P010D Mass air flow sensor</li> <li>• P010A Manifold absolute pressure (MAP) sensor</li> <li>• P0111 P0112 P0113 P0127 Intake air temperature sensor</li> <li>• P0117 P0118 P0125 Engine coolant temperature sensor</li> <li>• P0122 P0123 P0222 P0223 P0227 P0228 P1225 P1226 P1234 P1235 P1239 P2132 P2133 P2135 Throttle position sensor</li> <li>• P0128 Thermostat function</li> <li>• P0181 P0182 P0183 Fuel tank temperature sensor</li> <li>• P0196 P0197 P0198 Engine oil temperature sensor</li> <li>• P0327 P0328 P0332 P0333 Knock sensor</li> <li>• P0335 Crankshaft position sensor (POS)</li> <li>• P0340 P0345 Camshaft position sensor (PHASE)</li> <li>• P0460 P0461 P0462 P0463 Fuel level sensor</li> <li>• P0500 Vehicle speed sensor</li> <li>• P0605 P0607 ECM</li> <li>• P0643 Sensor power supply</li> <li>• P0700 TCM</li> <li>• P0705 Transmission range switch</li> <li>• P0850 Park/neutral position (PNP) switch</li> <li>• P1089 P1092 P1608 VVEL control shaft position sensor</li> <li>• P1606 P1607 VVEL control module</li> <li>• P1550 P1551 P1552 P1553 P1554 Battery current sensor</li> <li>• P1556 P1557 Battery temperature sensor</li> <li>• P1610 - P1615 NATS</li> <li>• P2122 P2123 P2127 P2128 P2138 Accelerator pedal position sensor</li> </ul> |

\*1: 1st trip DTC No. is the same as DTC No.

\*2: This number is prescribed by SAE J2012/ISO 15031-6.

\*3: In Diagnostic Test Mode II (Self-diagnostic results), this number is controlled by NISSAN.

\*4: Refer to [EC-77, "Diagnosis Description"](#), "PERMANENT DIAGNOSTIC TROUBLE CODE (PERMANENT DTC)".

\*5: The troubleshooting for this DTC needs CONSULT.

\*6: When the fail-safe operations for both self-diagnoses occur, the MIL illuminates.

\*7: SRT code will not be set if the self-diagnostic result is NG.

\*8: When the ECM is in the mode that displays SRT status, MIL may blink. For the details, refer to "How to Display SRT Status".

## Test Value and Test Limit

INFOID:000000006882820

The following is the information specified in Service \$06 of SAE J1979/ISO 15031-5.

The test value is a parameter used to determine whether a system/circuit diagnostic test is OK or NG while being monitored by the ECM during self-diagnosis. The test limit is a reference value which is specified as the maximum or minimum value and is compared with the test value being monitored.

These data (test value and test limit) are specified by On Board Monitor ID (OBDMID), Test ID (TID), Unit and Scaling ID and can be displayed on the GST screen.

The items of the test value and test limit will be displayed with GST screen which items are provided by the ECM. (e.g., if bank 2 is not applied on this vehicle, only the items of bank 1 are displayed)

# VVEL CONTROL MODULE

< ECU DIAGNOSIS INFORMATION >

[VQ37VHR FOR USA AND CANADA]

## VVEL CONTROL MODULE

### Reference Value

INFOID:000000006882821

### TERMINAL LAYOUT

### PHYSICAL VALUES

#### NOTE:

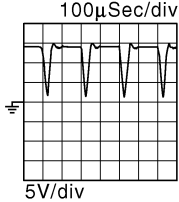

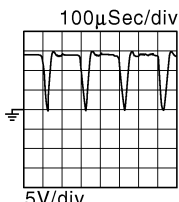

- VVEL control module is located behind the IPDM E/R. For this inspection, remove hoodledge cover (RH).
- Specification data are reference values and are measured between each terminal and ground.
- Pulse signal is measured by CONSULT.

| Terminal No. |          | Description   |              | Condition  | Value (Approx.)             |
|--------------|----------|---|--------------|--|-----------------------------|

# DIAGNOSIS AND REPAIR WORKFLOW

[VQ37VHR FOR USA AND CANADA]

< BASIC INSPECTION >

\*1: Include 1st trip DTC.

\*2: Include 1st trip freeze frame data.

## DETAILED FLOW

### 1. GET INFORMATION FOR SYMPTOM

---

1. Get the detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurred) using the "Diagnostic Work Sheet". (Refer to [EC-142, "Diagnostic Work Sheet"](#).)
2. Ask if the customer requests I/M examination.

Malfunction information, obtained>>GO TO 2.

No Malfunction information, but a request for I/M examination>>GO TO 13.

### 2. CHECK DTC

---

1. Check DTC of "All DTC Reading".
2. Perform the following procedure if DTC is displayed.
  - Record DTC and freeze frame data. (Print them out with CONSULT or GST.)
  - Erase only DTC of "ENGINE".
    - ⊗ With CONSULT: Refer to "How to Erase DTC and 1st Trip DTC" in [EC-88, "CONSULT Function"](#).
    - ⊗ Without CONSULT: Refer to "How to Erase Self-diagnostic Results" in [EC-85, "On Board Diagnosis Function"](#).
  - Turn ignition switch OFF.
  - Study the relationship between the cause detected by DTC and the symptom described by the customer. (Symptom Table is useful. Refer to [EC-532, "Symptom Table"](#).)
3. Check related service bulletins for information.

Are any symptoms described and any DTCs detected?

Symptom is described, DTC is detected>>GO TO 3.

Symptom is described, DTC is not detected>>GO TO 4.

Symptom is not described, DTC is detected>>GO TO 5.

### 3. CONFIRM THE SYMPTOM

---

Try to confirm the symptom described by the customer (except MIL ON).

Also study the normal operation and fail-safe related to the symptom. Refer to [EC-537, "Description"](#) and [EC-114, "Fail safe"](#).

Diagnosis Work Sheet is useful to verify the incident.

Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 5.

### 4. CONFIRM THE SYMPTOM

---

Try to confirm the symptom described by the customer.

Also study the normal operation and fail-safe related to the symptom. Refer to [EC-537, "Description"](#) and [EC-114, "Fail safe"](#).

Diagnosis Work Sheet is useful to verify the incident.

Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 6.

### 5. PERFORM DTC CONFIRMATION PROCEDURE

---

Perform DTC CONFIRMATION PROCEDURE for the displayed DTC, and then make sure that DTC is detected again.

If two or more DTCs are detected, refer to [EC-116, "DTC Inspection Priority Chart"](#) and determine trouble diagnosis order.

#### NOTE:

- Freeze frame data is useful if the DTC is not detected.

# DIAGNOSIS AND REPAIR WORKFLOW

[VQ37VHR FOR USA AND CANADA]

## < BASIC INSPECTION >

- Perform Component Function Check if DTC CONFIRMATION PROCEDURE is not included on Service Manual. This simplified check procedure is an effective alternative though DTC cannot be detected during this check.  
If the result of Component Function Check is NG, it is the same as the detection of DTC by DTC CONFIRMATION PROCEDURE.

### Is DTC detected?

YES >> GO TO 10.

NO >> Check according to [GI-44, "Intermittent Incident"](#).

## 6. PERFORM BASIC INSPECTION

Perform [EC-154, "Work Procedure"](#).

### Do you have CONSULT?

YES >> GO TO 7.

NO >> GO TO 9.

## 7. PERFORM SPEC IN DATA MONITOR MODE

### With CONSULT

Make sure that "MAS A/F SE-B1", "MAS A/F SE-B2", "B/FUEL SCHDL", "A/F ALPHA-B1" and "A/F ALPHA-B2" are within the SP value using CONSULT "SPEC" in "DATA MONITOR" mode of "ENGINE". Refer to [EC-172, "Component Function Check"](#).

### Is the measurement value within the SP value?

YES >> GO TO 9.

NO >> GO TO 8.

## 8. DETECT MALFUNCTIONING PART BY TROUBLE DIAGNOSIS - SPECIFICATION VALUE

Detect malfunctioning part according to [EC-173, "Diagnosis Procedure"](#).

### Is a malfunctioning part detected?

YES >> GO TO 11.

NO >> GO TO 9.

## 9. DETECT MALFUNCTIONING SYSTEM BY SYMPTOM TABLE

Detect malfunctioning system according to [EC-532, "Symptom Table"](#) based on the confirmed symptom in step 4, and determine the trouble diagnosis order based on possible causes and symptoms.

>> GO TO 10.

## 10. DETECT MALFUNCTIONING PART BY DIAGNOSIS PROCEDURE

Inspect according to Diagnosis Procedure of the system.

### **NOTE:**

The Diagnosis Procedure in EC section described based on open circuit inspection. A short circuit inspection is also required for the circuit check in the Diagnosis Procedure. For details, refer to [GI-47, "Circuit Inspection"](#).

### Is a malfunctioning part detected?

YES >> GO TO 11.

NO >> Monitor input data from related sensors or check voltage of related ECM terminals using CONSULT. Refer to [EC-98, "Reference Value"](#).

## 11. REPAIR OR REPLACE THE MALFUNCTIONING PART

1. Repair or replace the malfunctioning part.
2. Reconnect parts or connectors disconnected during Diagnosis Procedure again after repair and replacement.
3. Check DTC. If DTC is displayed, erase it.
  -  With CONSULT: Refer to "How to Erase DTC and 1st Trip DTC" in [EC-88, "CONSULT Function"](#).
  -  Without CONSULT: Refer to "How to Erase Self-diagnostic Results" in [EC-85, "On Board Diagnosis Function"](#).

>> GO TO 12.

# DIAGNOSIS AND REPAIR WORKFLOW

< BASIC INSPECTION >

[VQ37VHR FOR USA AND CANADA]

## 12. FINAL CHECK

When DTC was detected in step 2, perform DTC CONFIRMATION PROCEDURE or Component Function Check again, and then make sure that the malfunction have been completely repaired.

When symptom was described from the customer, refer to confirmed symptom in step 3 or 4, and make sure that the symptom is not detected.

Is DTC detected and does symptom remain?

YES-1 >> DTC is detected: GO TO 10.

YES-2 >> Symptom remains: GO TO 6.

NO-1 >> No request for I/M examination from the customer: Before returning the vehicle to the customer, always erase unnecessary DTC in ECM and TCM (⊗) With CONSULT: Refer to "How to Read DTC and 1st Trip DTC" in [EC-88. "CONSULT Function"](#), (⊗) Without CONSULT: Refer to "How to Read Self-diagnostic Results" in [EC-85. "On Board Diagnosis Function"](#).

NO-2 >> I/M examination, requested from the customer: GO TO 13.

## 13. PREPARE FOR I/M EXAMINATION

1. Set SRT codes. Refer to [EC-160. "Description"](#).
2. Erase permanent DTCs. Refer to [EC-166. "Description"](#).

>> INSPECTION END.

## Diagnostic Work Sheet

INFOID:000000006882824

### DESCRIPTION

There are many operating conditions that lead to the malfunction of engine components. A good grasp of such conditions can make troubleshooting faster and more accurate.

In general, each customer feels differently about an incident. It is important to fully understand the symptoms or conditions for a customer complaint.

Utilize a diagnostic worksheet like the WORKSHEET SAMPLE below in order to organize all the information for troubleshooting.

Some conditions may cause the MIL to illuminate steady or blink and DTC to be detected. Examples:

- Vehicle ran out of fuel, which caused the engine to misfire.
- Fuel filler cap was left off or incorrectly screwed on, allowing fuel to evaporate into the atmosphere.

### KEY POINTS

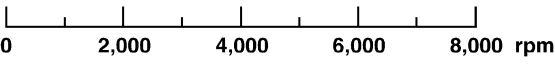

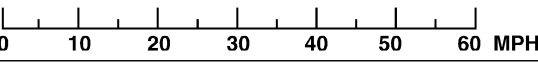

**WHAT** ..... Vehicle & engine model  
**WHEN** ..... Date, Frequencies  
**WHERE**..... Road conditions  
**HOW** ..... Operating conditions,  
Weather conditions,  
Symptoms

## ADDITIONAL SERVICE WHEN REPLACING ECM

< BASIC INSPECTION >

[VQ37VHR FOR USA AND CANADA]

---

### ADDITIONAL SERVICE WHEN REPLACING ECM

#### Description

INFOID:000000006882825

When replacing ECM, the following procedure must be performed.

#### Work Procedure

INFOID:000000006882826

**1.**PERFORM INITIALIZATION OF IVIS (NATS) SYSTEM AND REGISTRATION OF ALL IVIS (NATS) IGNITION KEY IDS

---

Refer to [SEC-39, "ECM : Work Procedure"](#).

>> GO TO 2.

**2.**PERFORM VIN REGISTRATION

---

Refer to [EC-146, "Work Procedure"](#).

>> GO TO 3.

**3.**PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

---

Refer to [EC-147, "Work Procedure"](#).

>> GO TO 4.

**4.**PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

---

Refer to [EC-148, "Work Procedure"](#).

>> GO TO 5.

**5.**PERFORM IDLE AIR VOLUME LEARNING

---

Refer to [EC-149, "Work Procedure"](#).

>> END

# ADDITIONAL SERVICE WHEN REPLACING VVEL CONTROL MODULE

< BASIC INSPECTION >

[VQ37VHR FOR USA AND CANADA]

## ADDITIONAL SERVICE WHEN REPLACING VVEL CONTROL MODULE

### Description

INFOID:000000006882827

When replacing VVEL control module, the following procedure must be performed.

### Work Procedure

INFOID:000000006882828

#### 1. PERFORM IDLE AIR VOLUME LEARNING

Refer to [EC-149, "Work Procedure"](#).

## VIN REGISTRATION

### Description

INFOID:000000006882829

VIN Registration is an operation to registering VIN in ECM. It must be performed each time ECM is replaced.

**NOTE:**

Accurate VIN which is registered in ECM may be required for Inspection & Maintenance (I/M).

### Work Procedure

INFOID:000000006882830

#### 1. CHECK VIN

---

Check the VIN of the vehicle and note it. Refer to [GI-35. "Information About Identification or Model Code"](#).

>> GO TO 2.

#### 2. PERFORM VIN REGISTRATION

 **With CONSULT**

1. Turn ignition switch ON and engine stopped.
2. Select "VIN REGISTRATION" in "WORK SUPPORT" mode.
3. Follow the instruction of CONSULT display.

>> END

# ACCELERATOR PEDAL RELEASED POSITION LEARNING

< BASIC INSPECTION >

[VQ37VHR FOR USA AND CANADA]

## ACCELERATOR PEDAL RELEASED POSITION LEARNING

### Description

INFOID:000000006882831

Accelerator Pedal Released Position Learning is a function of ECM to learn the fully released position of the accelerator pedal by monitoring the accelerator pedal position sensor output signal. It must be performed each time the harness connector of the accelerator pedal position sensor or ECM is disconnected.

A

EC

### Work Procedure

INFOID:000000006882832

C

#### 1. START

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch ON and wait at least 2 seconds.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON and wait at least 2 seconds.
5. Turn ignition switch OFF and wait at least 10 seconds.

# THROTTLE VALVE CLOSED POSITION LEARNING

< BASIC INSPECTION >

[VQ37VHR FOR USA AND CANADA]

## THROTTLE VALVE CLOSED POSITION LEARNING

### Description

INFOID:000000006882833

Throttle Valve Closed Position Learning is a function of ECM to learn the fully closed position of the throttle valve by monitoring the throttle position sensor output signal. It must be performed each time harness connector of electric throttle control actuator or ECM is disconnected or electric throttle control actuator is cleaned.

### Work Procedure

INFOID:000000006882834

#### 1. START

##### Ⓟ With CONSULT

1. Turn ignition switch ON.
2. Select "CLSD THL POS LEARN" in "WORK SUPPORT" mode.
3. Follow the instructions on the CONSULT display.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Check that throttle valve moves during the above 10 seconds by confirming the operating sound.

##### ⓧ Without CONSULT

1. Start the engine.

##### **NOTE:**

Coolant temperature is less than 25°C (77°F) before engine starts.

2. Warm up the engine until engine coolant temperature reaches 65°C (149°F).
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Check that throttle valve moves during the above 10 seconds by confirming the operating sound.

>> END

## IDLE AIR VOLUME LEARNING

### Description

INFOID:000000006882835

Idle Air Volume Learning is a function of ECM to learn the idle air volume that keeps engine idle speed within the specific range. It must be performed under the following conditions:

- Each time electric throttle control actuator or ECM is replaced.
- Each time VVEL actuator sub assembly or VVEL control module is replaced.
- Idle speed or ignition timing is out of specification.

### Work Procedure

INFOID:000000006882836

#### 1. PRECONDITIONING

Make sure that all of the following conditions are satisfied.

Learning will be cancelled if any of the following conditions are missed for even a moment.

- Battery voltage: More than 12.9 V (At idle)
- Engine coolant temperature: 70 - 105°C (158 - 221°F)
- Selector lever: P or N
- Electric load switch: OFF  
(Air conditioner, headlamp, rear window defogger)

**On vehicles equipped with daytime light systems, if the parking brake is applied before the engine is started the headlamp will not be illuminated.**

- Steering wheel: Neutral (Straight-ahead position)
- Vehicle speed: Stopped
- Transmission: Warmed-up
- With CONSULT: Drive vehicle until "ATF TEMP SE 1" in "DATA MONITOR" mode of "A/T" system indicates less than 0.9V.
- Without CONSULT: Drive vehicle for 10 minutes.

Do you have CONSULT?

- YES >> GO TO 2.
- NO >> GO TO 3.

#### 2. PERFORM IDLE AIR VOLUME LEARNING

##### With CONSULT

1. Perform Accelerator Pedal Released Position Learning. Refer to [EC-147, "Work Procedure"](#).
2. Perform Throttle Valve Closed Position Learning. [EC-148, "Work Procedure"](#).
3. Start engine and warm it up to normal operating temperature.
4. Select "IDLE AIR VOL LEARN" in "WORK SUPPORT" mode.
5. Touch "START" and wait 20 seconds.

Is "CMPLT" displayed on CONSULT screen?

- YES >> GO TO 4.
- NO >> GO TO 5.

#### 3. PERFORM IDLE AIR VOLUME LEARNING

##### Without CONSULT

**NOTE:**

- It is better to count the time accurately with a clock.
- It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.

1. Perform Accelerator Pedal Released Position Learning. Refer to [EC-147, "Work Procedure"](#).
2. Perform Throttle Valve Closed Position Learning. [EC-148, "Work Procedure"](#).
3. Start engine and warm it up to normal operating temperature.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Confirm that accelerator pedal is fully released, turn ignition switch ON and wait 3 seconds.
6. Repeat the following procedure quickly five times within 5 seconds.
  - Fully depress the accelerator pedal.
  - Fully release the accelerator pedal.
7. Wait 7 seconds, fully depress the accelerator pedal for approx. 20 seconds until the MIL stops blinking and illuminates.

# IDLE AIR VOLUME LEARNING

[VQ37VHR FOR USA AND CANADA]

< BASIC INSPECTION >

8. Fully release the accelerator pedal within 3 seconds after the MIL illuminates.
9. Start engine and let it idle.
10. Wait 20 seconds.

>> GO TO 4.

## 4. CHECK IDLE SPEED AND IGNITION TIMING

1. Start engine and warm it up to normal operating temperature.
2. Let it idle for 20 seconds.
3. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications. Refer to [EC-545. "Idle Speed"](#) and [EC-545. "Ignition Timing"](#).

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART-I

Check the following

- Check that throttle valve is fully closed.
- Check PCV valve operation.
- Check that downstream of throttle valve is free from air leakage.

Is the inspection result normal?

- YES >> GO TO 6.  
NO >> Repair or replace malfunctioning part.

## 6. DETECT MALFUNCTIONING PART-II

Engine component parts and their installation condition are questionable. Check and eliminate the cause of the incident.

It is useful to perform "TROUBLE DIAGNOSIS - SPECIFICATION VALUE". Refer to [EC-172. "Description"](#).

If any of the following conditions occur after the engine has started, eliminate the cause of the incident and perform Idle Air Volume Learning again:

- Engine stalls.
- Erroneous idle.

>> INSPECTION END

# VVEL CONTROL SHAFT POSITION SENSOR ADJUSTMENT

< BASIC INSPECTION >

[VQ37VHR FOR USA AND CANADA]

## VVEL CONTROL SHAFT POSITION SENSOR ADJUSTMENT

### Description

INFOID:000000006882837

VVEL control shaft position sensor adjustment is an operation to adjust the initial position angle that is the basis for the VVEL control shaft position sensor.

It must be performed each time VVEL actuator sub assembly is replaced.

#### CAUTION:

- It must be performed only on the replaced bank side.
- It must not be performed except when VVEL actuator sub assembly is replaced. If by any chance the adjustment is performed, replace VVEL actuator sub assembly.

### Work Procedure

INFOID:000000006882838

#### 1. START

Do you have CONSULT?

Do you have CONSULT?

YES >> GO TO 2.

NO >> GO TO 3.

#### 2. PERFORM VVEL CONTROL SHAFT POSITION SENSOR ADJUSTMENT

##### With CONSULT

1. Turn ignition switch ON.
2. Select "VVEL POS SEN ADJ PREP" in "WORK SUPPORT" mode with CONSULT.
3. Touch "Start" and wait a few seconds.
4. Make sure the "CMPLT" is displayed on CONSULT screen.
5. Select "VVEL POSITION SEN- B1" or "VVEL POSITION SEN- B2" in "DATA MONITOR" mode with CONSULT.
6. Loosen the VVEL control shaft position sensor mounting bolt (1).
7. Turn the VVEL control shaft position sensor (2) right and left while monitoring the output voltage of "VVEL POSITION SEN- B1" or "VVEL POSITION SEN- B2" and adjust the output voltage to be within the standard value.

**Voltage : 500 ± 48 mV**

8. Tighten the VVEL control shaft position sensor mounting bolt.

 **: 7.0 N•m (0.71 kg-m, 62 in-lb)**

9. Reconfirm that the output voltage of "VVEL POSITION SEN- B1" or "VVEL POSITION SEN- B2" is within the standard value.

**Voltage : 500 ± 48 mV**

#### NOTE:

If it varies from the standard value after the bolt is tightened, perform steps 6 to 8 again.

10. Turn ignition switch OFF and wait at least 10 seconds.
11. Start engine and warm it up to normal operating temperature.
12. Turn ignition switch OFF and wait at least 10 seconds.
13. Perform idle air volume learning. Refer to [EC-149, "Work Procedure"](#).

>> INSPECTION END

#### 3. PERFORM VVEL CONTROL SHAFT POSITION SENSOR ADJUSTMENT

##### Without CONSULT

1. Disconnect VVEL control shaft position sensor harness connector.
2. Remove VVEL actuator motor relay.
3. Turn ignition switch ON, wait at least 5 seconds and then turn OFF.
4. Reconnect all harness connectors disconnected.

# VVEL CONTROL SHAFT POSITION SENSOR ADJUSTMENT

< BASIC INSPECTION >

[VQ37VHR FOR USA AND CANADA]

5. Install VVEL actuator motor relay.
6. Turn ignition switch ON and wait at least 5 seconds.
7. Loosen the VVEL control shaft position sensor mounting bolt (1).
8. Turn the VVEL control shaft position sensor (2) right and left while monitoring the output voltage between the VVEL control module terminals with a tester and adjust the output voltage to be within the standard value.

| VVEL control module |           |          |          | Voltage     |
|---------------------|-----------|----------|----------|-------------|
| Bank                | Connector | +        | -        |             |
|                     |           | Terminal | Terminal |             |
| 1                   | E15       | 3        | 4        | 500 ± 48 mV |
| 2                   |           | 5        | 6        |             |

9. Tighten the VVEL control shaft position sensor mounting bolt.

**: 7.0 N•m (0.71 kg-m, 62 in-lb)**

10. Reconfirm that the output voltage of VVEL control shaft position sensor is within the standard value.

| VVEL control module |           |          |          | Voltage     |
|---------------------|-----------|----------|----------|-------------|
| Bank                | Connector | +        | -        |             |
|                     |           | Terminal | Terminal |             |
| 1                   | E15       | 3        | 4        | 500 ± 48 mV |
| 2                   |           | 5        | 6        |             |

**NOTE:**

If it varies from the standard value after the bolt is tightened, perform steps 7 to 9 again.

11. Turn ignition switch OFF and wait at least 10 seconds.
12. Start engine and warm it up to normal operating temperature.
13. Turn ignition switch OFF and wait at least 10 seconds.
14. Perform idle air volume learning. Refer to [EC-149, "Work Procedure"](#).

>> INSPECTION END

# MIXTURE RATIO SELF-LEARNING VALUE CLEAR

< BASIC INSPECTION >

[VQ37VHR FOR USA AND CANADA]

## MIXTURE RATIO SELF-LEARNING VALUE CLEAR

### Description

INFOID:000000006882839

This describes how to erase the mixture ratio self-learning value. For the actual procedure, follow the instructions in "Diagnosis Procedure".

### Work Procedure

INFOID:000000006882840

#### 1. START

##### With CONSULT

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT.
3. Clear mixture ratio self-learning value by touching "CLEAR".

##### With GST

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF.
3. Disconnect mass air flow sensor (bank 1) harness connector.
4. Restart engine and let it idle for at least 5 seconds.
5. Stop engine and reconnect mass air flow sensor (bank 1) harness connector.
6. Select Service \$03 with GST. Make sure DTC P0102 is detected.
7. Select Service \$04 with GST to erase the DTC P0102.

## BASIC INSPECTION

### Work Procedure

INFOID:000000006882841

#### 1.INSPECTION START

1. Check service records for any recent repairs that may indicate a related malfunction, or a current need for scheduled maintenance.
2. Open engine hood and check the following:
  - Harness connectors for improper connections
  - Wiring harness for improper connections, pinches and cut
  - Vacuum hoses for splits, kinks and improper connections
  - Hoses and ducts for leaks
  - Air cleaner clogging
  - Gasket
3. Confirm that electrical or mechanical loads are not applied.
  - Headlamp switch is OFF.
  - Air conditioner switch is OFF.
  - Rear window defogger switch is OFF.
  - Steering wheel is in the straight-ahead position, etc.
4. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge. Ensure engine stays below 1,000 rpm.

5. Run engine at about 2,000 rpm for about 2 minutes under no load.
6. Make sure that no DTC is displayed with CONSULT or GST.

Are any DTCs detected?

- YES >> GO TO 2.  
 NO >> GO TO 3.

#### 2.REPAIR OR REPLACE

Repair or replace components as necessary according to corresponding Diagnosis Procedure.

>> GO TO 3

#### 3.CHECK IDLE SPEED

1. Run engine at about 2,000 rpm for about 2 minutes under no load.

# BASIC INSPECTION

[VQ37VHR FOR USA AND CANADA]

## < BASIC INSPECTION >

- Rev engine (2,000 to 3,000 rpm) two or three times under no load, then run engine at idle speed for about 1 minute.
- Check idle speed.  
For procedure, refer to [EC-538, "Inspection"](#).  
For specification, refer to [EC-545, "Idle Speed"](#).

Is the inspection result normal?

- YES >> GO TO 10.  
NO >> GO TO 4.

## 4.PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

- Stop engine.
- Perform [EC-147, "Work Procedure"](#).

>> GO TO 5.

## 5.PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform [EC-148, "Work Procedure"](#).

>> GO TO 6.

## 6.PERFORM IDLE AIR VOLUME LEARNING

Perform [EC-149, "Work Procedure"](#).

Is Idle Air Volume Learning carried out successfully?

- YES >> GO TO 7.  
NO >> Follow the instruction of Idle Air Volume Learning. Then GO TO 4.

## 7.CHECK IDLE SPEED AGAIN

- Start engine and warm it up to normal operating temperature.
- Check idle speed.  
For procedure, refer to [EC-538, "Inspection"](#).  
For specification, refer to [EC-545, "Idle Speed"](#).

Is the inspection result normal?

- YES >> GO TO 10.  
NO >> GO TO 8.

## 8.DETECT MALFUNCTIONING PART

Check the Following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-319, "Component Inspection"](#).
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-314, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 9.  
NO >> Repair or replace. Then GO TO 4.

## 9.CHECK ECM FUNCTION

- Substitute with a non-malfunctioning ECM to check ECM function. (ECM may be the cause of the incident, although this is rare.)
- Perform initialization of IVIS (NATS) system and registration of all IVIS (NATS) ignition key IDs. Refer to [EC-144, "Work Procedure"](#).

>> GO TO 4.

## 10.CHECK IGNITION TIMING

- Run engine at idle.

# BASIC INSPECTION

[VQ37VHR FOR USA AND CANADA]

## < BASIC INSPECTION >

2. Check ignition timing with a timing light.

A :Timing indicator

For procedure, refer to [EC-539, "Inspection"](#).

For specification, refer to [EC-545, "Ignition Timing"](#).

Is the inspection result normal?

YES >> GO TO 19.

NO >> GO TO 11.

## 11. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

1. Stop engine.
2. Perform [EC-147, "Work Procedure"](#).

>> GO TO 12.

## 12. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform [EC-148, "Work Procedure"](#).

>> GO TO 13.

## 13. PERFORM IDLE AIR VOLUME LEARNING

Perform [EC-149, "Work Procedure"](#).

Is Idle Air Volume Learning carried out successfully?

YES >> GO TO 14.

NO >> Follow the instruction of Idle Air Volume Learning. Then GO TO 4.

## 14. CHECK IDLE SPEED AGAIN

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

For procedure, refer to [EC-538, "Inspection"](#).

For specification, refer to [EC-545, "Idle Speed"](#).

Is the inspection result normal?

YES >> GO TO 15.

NO >> GO TO 17.

## 15. CHECK IGNITION TIMING AGAIN

1. Run engine at idle.
2. Check ignition timing with a timing light.

A :Timing indicator

For procedure, refer to [EC-539, "Inspection"](#).

For specification, refer to [EC-545, "Ignition Timing"](#).

Is the inspection result normal?

YES >> GO TO 19.

NO >> GO TO 16.

## 16. CHECK TIMING CHAIN INSTALLATION

Check timing chain installation. Refer to [EM-53, "Removal and Installation"](#).

Is the inspection result normal?

YES >> GO TO 17.

NO >> Repair the timing chain installation. Then GO TO 4.

# BASIC INSPECTION

< BASIC INSPECTION >

[VQ37VHR FOR USA AND CANADA]

---

## 17. DETECT MALFUNCTIONING PART

---

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-319, "Component Inspection"](#).
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-314, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 18.

NO >> Repair or replace. Then GO TO 4.

---

## 18. CHECK ECM FUNCTION

---

1. Substitute with a non-malfunctioning ECM to check ECM function. (ECM may be the cause of the incident, although this is rare.)
2. Perform initialization of IVIS (NATS) system and registration of all IVIS (NATS) ignition key IDs. Refer to [EC-144, "Work Procedure"](#).

>> GO TO 4.

---

## 19. INSPECTION END

---

If ECM is replaced during this BASIC INSPECTION procedure, go to [EC-144, "Work Procedure"](#).

# FUEL PRESSURE CHECK

[VQ37VHR FOR USA AND CANADA]

< BASIC INSPECTION >

## FUEL PRESSURE CHECK

### Work Procedure

INFOID:00000006882842

#### FUEL PRESSURE RELEASE

##### 1. FUEL PRESSURE RELEASE

① With CONSULT

1. Turn ignition switch ON.
2. Select ENGINE using CONSULT.
3. Perform "FUEL PRESSURE RELEASE" in "WORK SUPPORT" mode.
4. Start engine.
5. After engine stalls, crank it two or three times to release all fuel pressure.
6. Turn ignition switch OFF.

② Without CONSULT

1. Remove fuel pump fuse (1) located in IPDM E/R (2).
2. Start engine.
3. After engine stalls, crank it two or three times to release all fuel pressure.
4. Turn ignition switch OFF.
5. Reinstall fuel pump fuse after servicing fuel system.

>> INSPECTION END

#### FUEL PRESSURE CHECK

##### 1. FUEL PRESSURE CHECK

1. Release fuel pressure to zero.
2. Install the inline fuel quick disconnected fitting (A) between fuel damper (1) and injector tube.

**CAUTION:**

**Before disconnecting fuel line, release fuel pressure from fuel line to eliminate danger.**

**NOTE:**

- Prepare pans or saucers under the disconnected fuel line because the fuel may spill out. The fuel pressure cannot be completely released because Y51 models do not have fuel return system.
- Use Fuel Pressure Gauge Kit (J-44321) to check fuel pressure.

3. Connect pressure gauge (B) to fuel pressure check adapter.
4. Turn ignition switch ON and check for fuel leakage.
5. Start engine and check for fuel leakage.
6. Read the indication of fuel pressure gauge.

At idling : Approximately 350 kPa (3.5 bar, 3.57 kg/cm<sup>2</sup>, 51 psi)

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> GO TO 2.

##### 2. CHECK FUEL HOSE AND FUEL TUBE

If result is unsatisfactory, check fuel hoses and fuel tubes for clogging.

Is the inspection result normal?

- YES >> Replace "fuel filter and fuel pump assembly".

# FUEL PRESSURE CHECK

# HOW TO SET SRT CODE

< BASIC INSPECTION >

[VQ37VHR FOR USA AND CANADA]

## HOW TO SET SRT CODE

### Description

INFOID:000000006882843

### OUTLINE

In order to set all SRTs, the self-diagnoses as in the "SRT ITEM" table must have been performed at least once. Each diagnosis may require actual driving for a long period of time under various conditions.

### SRT ITEM

The table below shows required self-diagnostic items to set the SRT to "CMPLT".

| SRT item*1<br>(CONSULT indication) | Required self-diagnostic items to set the SRT to "CMPLT" | Corresponding DTC No. |
|------------------------------------|--|-----------------------|
| CATALYST                           | Three way catalyst function                              | P0420, P0430          |
| EVAP SYSTEM                        | EVAP control system purge flow monitoring                | P0441                 |
|                                    | EVAP control system                                      | P0456                 |
| HO2S                               | Air fuel ratio (A/F) sensor 1                            | P0133, P0153          |
|                                    | Heated oxygen sensor 2                                   | P0137, P0157          |
|                                    | Heated oxygen sensor 2                                   | P0138, P0158          |
|                                    | Heated oxygen sensor 2                                   | P0139, P0159          |
| EGR/VVT SYSTEM                     | Intake valve timing control function                     | P0011, P0021          |

\*1: Though displayed on the CONSULT screen, "HO2S HTR" is not SRT item.

### SRT SERVICE PROCEDURE

If a vehicle has failed the state emissions inspection due to one or more SRT items indicating "INCMP", review the flowchart diagnostic sequence, referring to the following flowchart.

# HOW TO SET SRT CODE

< BASIC INSPECTION >

[VQ37VHR FOR USA AND CANADA]

P

# HOW TO SET SRT CODE

< BASIC INSPECTION >

[VQ37VHR FOR USA AND CANADA]

Always drive the vehicle in safe manner according to traffic conditions and obey all traffic laws.

\*1: Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH), then release the accelerator pedal and keep it released for more than 10 seconds. Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH) again.

\*2: Checking the vehicle speed with GST is advised.

- The time required for each diagnosis varies with road surface conditions, weather, altitude, individual driving habits, etc.

Zone A refers to the range where the time, required for the diagnosis under normal conditions\*, is the shortest.

# HOW TO SET SRT CODE

[VQ37VHR FOR USA AND CANADA]

## < BASIC INSPECTION >

Zone B refers to the range where the diagnosis can still be performed if the diagnosis is not completed within zone A.

\*: Normal conditions refer to the following:

- Sea level
  - Flat road
  - Ambient air temperature: 20 - 30°C (68 - 86°F)
  - Diagnosis is performed as quickly as possible under normal conditions.
- Under different conditions [For example: ambient air temperature other than 20 - 30°C (68 - 86°F)], diagnosis may also be performed.

## Work Procedure

INFOID:000000006882845

### 1. CHECK DTC

Check DTC.

Is any DTC detected?

YES >> Repair malfunction(s) and erase DTC. Refer to [EC-117, "DTC Index"](#).

NO >> GO TO 2.

### 2. CHECK SRT STATUS

WITH CONSULT

Select "SRT STATUS" in "DTC & SRT CONFIRMATION" mode with CONSULT.

WITHOUT CONSULT

Perform "SRT status" mode with [EC-85, "On Board Diagnosis Function"](#).

WITH GST

Select Service \$01 with GST.

Is SRT code(s) set?

YES >> GO TO 12.

NO-1 >> With CONSULT: GO TO 3.

NO-2 >> Without CONSULT: GO TO 4.

### 3. DTC CONFIRMATION PROCEDURE

1. Select "SRT WORK SUPPORT" in "DTC & SRT CONFIRMATION" mode with CONSULT.
2. For SRT(s) that is not set, perform the corresponding "DTC CONFIRMATION PROCEDURE" according to the "Performance Priority" in the "SRT ITEM" table. Refer to [EC-160, "Description"](#).
3. Check DTC.

Is any DTC detected?

YES >> Repair malfunction(s) and erase DTC. Refer to [EC-117, "DTC Index"](#).

NO >> GO TO 11.

### 4. PERFORM ROAD TEST

- Check the "Performance Priority" in the "SRT ITEM" table. Refer to [EC-160, "Description"](#).
- Perform the most efficient SRT set driving pattern to set the SRT properly. Refer to [EC-161, "SRT Set Driving Pattern"](#).

In order to set all SRTs, the SRT set driving pattern must be performed at least once.

>> GO TO 5.

### 5. PATTERN 1

1. Check the vehicle condition;
  - Engine coolant temperature is -10 to 35°C (14 to 95°F).
  - Fuel tank temperature is more than 0°C (32°F).
2. Start the engine.
3. Keep engine idling until the engine coolant temperature is greater than 70°C (158°F)

#### NOTE:

ECM terminal voltage is follows;

- Engine coolant temperature
  - -10 to 35°C (14 to 95°F): 3.0 - 4.3 V
  - 70°(158°F): Less than 1.4 V

## HOW TO SET SRT CODE

[VQ37VHR FOR USA AND CANADA]

< BASIC INSPECTION >

- Fuel tank temperature: Less than 4.1 V  
Refer to [EC-98. "Reference Value"](#).

>> GO TO 6.

### 6.PATTERN 2

1. Drive the vehicle. And depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH), then release the accelerator pedal and keep it released for more than 10 seconds.
2. Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH) again

#### NOTE:

- Checking the vehicle speed with GST is advised.
- When steady-state driving is performed again even after it is interrupted, each diagnosis can be conducted. In this case, the time required for diagnosis may be extended.

>> GO TO 7.

### 7.PATTERN 3

- Operate vehicle following the driving pattern shown in the figure.
- Release the accelerator pedal during deceleration of vehicle speed from 90 km/h (56 MPH) to 0 km/h (0 MPH).

>> GO TO 8.

### 8.PATTERN 4

- Operate vehicle following the driving pattern shown in the figure.
- Drive the vehicle in a proper gear at 60 km/h (38 MPH) and maintain the speed.
- Release the accelerator pedal fully at least 5 seconds.
- Repeat the above two steps at least 5 times.

>> GO TO 9.

### 9.PATTERN 5

- The accelerator pedal must be held very steady during steady-state driving.
- If the accelerator pedal is moved, the test must be conducted again.

>> GO TO 10.

### 10.PATTERN 6

Start engine and wait at least 2 hours. Then turn ignition switch OFF and wait at least 90 minutes.

>> GO TO 11.

### 11.CHECK SRT STATUS

#### Ⓢ WITH CONSULT

Select "SRT STATUS" in "DTC & SRT CONFIRMATION" mode with CONSULT.

#### ⓧ WITHOUT CONSULT

Perform "SRT status" mode with [EC-85. "On Board Diagnosis Function"](#).

# HOW TO SET SRT CODE

[VQ37VHR FOR USA AND CANADA]

< BASIC INSPECTION >

 WITH GST

Select Service \$01 with GST.

Is SRT(s) set?

YES >> GO TO 12.

NO >> Call TECH LINE or take appropriate action.

## 12.CHECK PERMANENT DTC

### NOTE:

Permanent DTC cannot be checked with a tool other than CONSULT or GST.

 WITH CONSULT

Select "SRT STATUS" in "DTC & SRT CONFIRMATION" mode with CONSULT.

 WITH GST

Select Service \$0A with GST.

Is permanent DTC(s) detected?

YES >> Go to [EC-166, "Description"](#).

NO >> END

# HOW TO ERASE PERMANENT DTC

< BASIC INSPECTION >

[VQ37VHR FOR USA AND CANADA]

## HOW TO ERASE PERMANENT DTC

### Description

INFOID:000000006882846

When a DTC is stored in ECM

When a DTC is stored in ECM and MIL is ON, a permanent DTC is erased with MIL shutoff if the same malfunction is not detected after performing the driving pattern for MIL shutoff three times in a row.

\*1: When the same malfunction is detected in two consecutive trips, MIL will illuminate.

\*2: MIL will turn off after vehicle is driven 3 times (pattern B) without any malfunctions.

When a DTC is not stored in ECM

The erasing method depends on a permanent DTC stored in ECM. Refer to the following table.

**NOTE:**

If the applicable permanent DTC includes multiple groups, perform the procedure of Group B first. If the permanent DTC is not erased, perform the procedure of Group A.

×: Applicable —: Not applicable

| Group* | Perform "DTC CONFIRMATION PROCEDURE" for applicable DTCs. | Driving pattern |   |
|--------|---|-----------------|---|
|        |   | B               | D |
| A      | ×   | —               | — |
| B      | —   | ×               | × |

\*: For group, refer to [EC-117. "DTC Index"](#).

Permanent DTC item

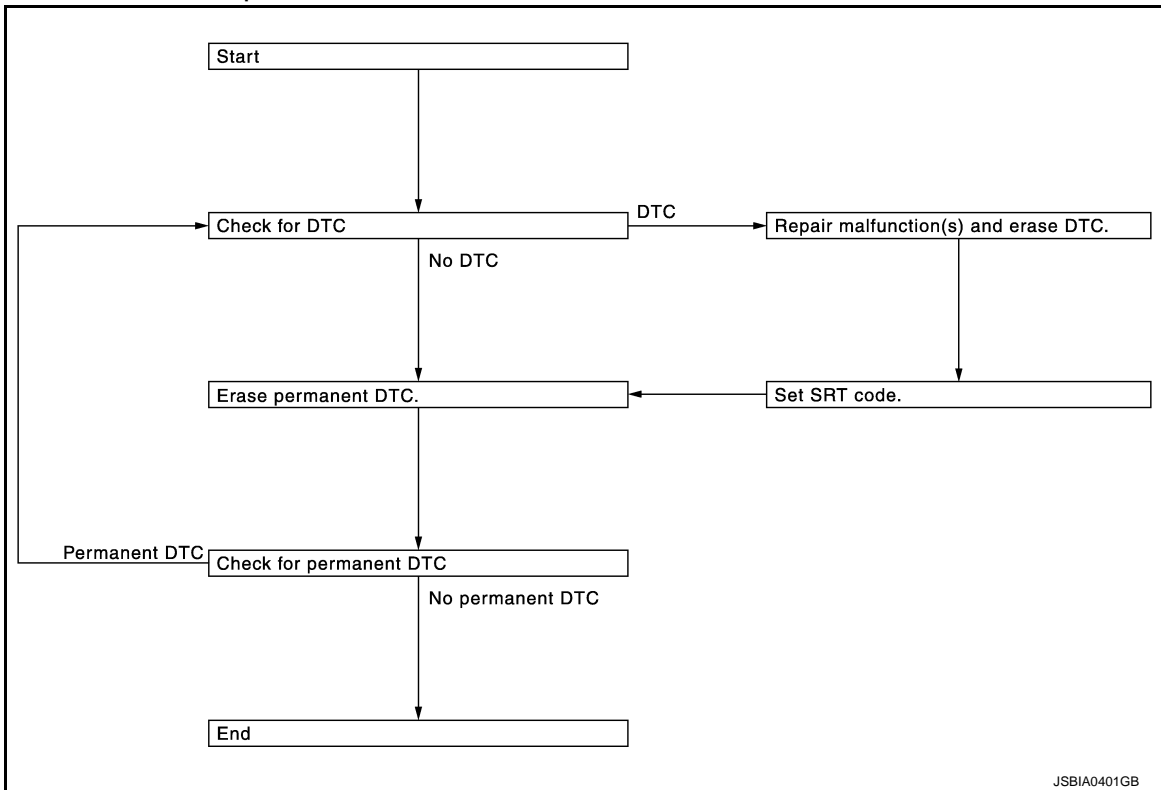

For permanent DTC items, MIL turns ON. Refer to [EC-117. "DTC Index"](#).

# HOW TO ERASE PERMANENT DTC

< BASIC INSPECTION >

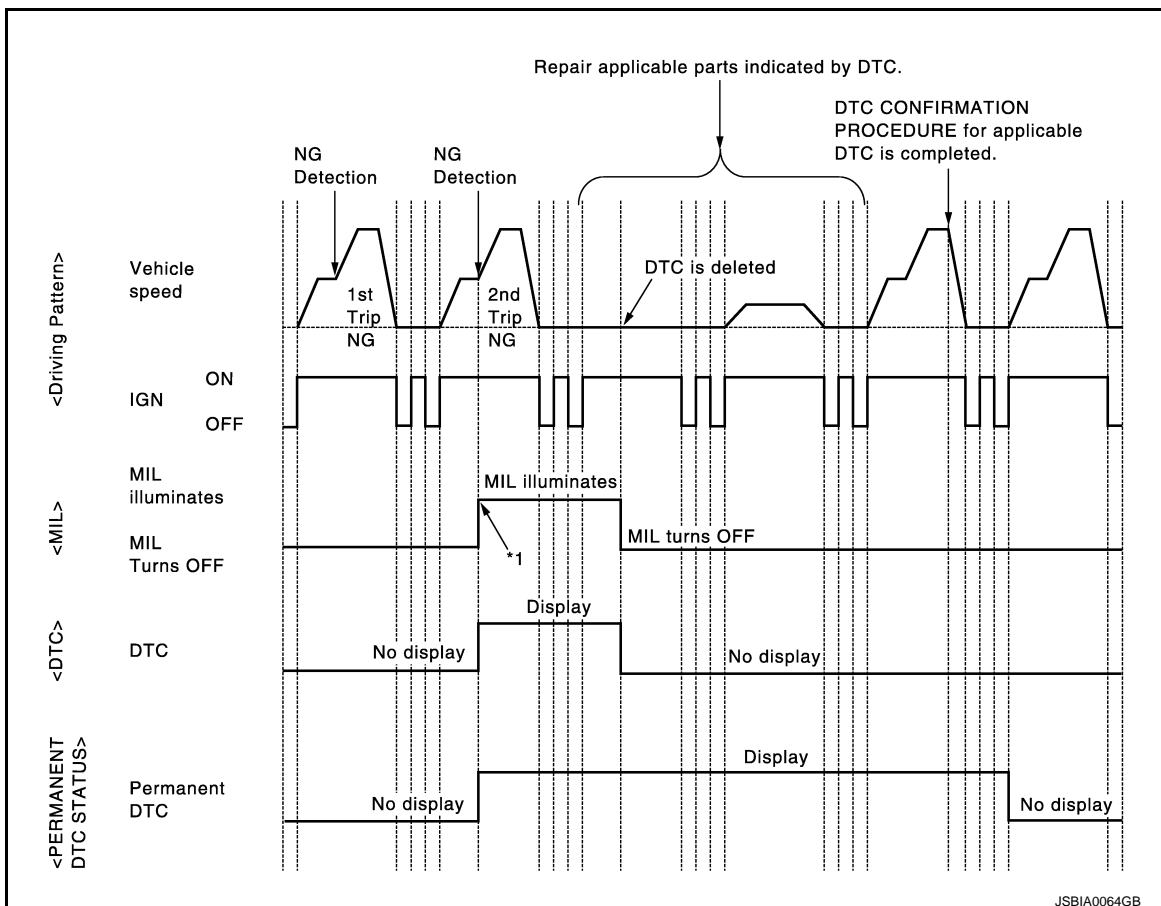

[VQ37VHR FOR USA AND CANADA]

## Permanent DTC service procedure

## Work Procedure (Group A)

INFOID:000000007202318

# HOW TO ERASE PERMANENT DTC

[VQ37VHR FOR USA AND CANADA]

< BASIC INSPECTION >

---

\*1: When the same malfunction is detected in two consecutive trips, MIL will illuminate.

## 1. CHECK DTC

---

Check DTC.

Is any DTC detected?

YES >> Repair malfunction(s) and erase DTC. Refer to [EC-85. "On Board Diagnosis Function"](#), [EC-88. "CONSULT Function"](#).

NO >> GO TO 2.

## 2. CHECK PERMANENT DTC

---

 With CONSULT

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Select "PERMANENT DTC STATUS" mode with CONSULT.

 With GST

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Select Service \$0A with GST.

Is any permanent DTC detected?

YES >> GO TO 3.

NO >> END

## 3. PERFORM DTC CONFIRMATION PROCEDURE

---

Perform "DTC CONFIRMATION PROCEDURE" for DTCs which are the same as permanent DTCs stored in ECM. Refer to [EC-117. "DTC Index"](#).

>> GO TO 4.

## 4. CHECK PERMANENT DTC

---

 With CONSULT

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Select "PERMANENT DTC STATUS" mode with CONSULT.

 With GST

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Select Service \$0A with GST.

Is any permanent DTC detected?

YES >> GO TO 1.

NO >> END

# HOW TO ERASE PERMANENT DTC

< BASIC INSPECTION >

[VQ37VHR FOR USA AND CANADA]

## Work Procedure (Group B)

INFOID:000000007202319

\*1: When the same malfunction is detected in two consecutive trips, MIL will illuminate.

\*2: After experiencing driving pattern B and D, permanent DTC is erased.

\*3: Indication does not change unless the ignition switch is turned from ON to OFF twice even after experiencing driving pattern B or D.

### NOTE:

Drive the vehicle according to only driving patterns indicating "INCMP" in driving patterns B and D on the "PERMANENT DTC STATUS" screen.

## 1. CHECK DTC

Check DTC.

Is any DTC detected?

YES >> Repair malfunction(s) and erase DTC. Refer to [EC-85. "On Board Diagnosis Function"](#), [EC-88. "CONSULT Function"](#).

NO >> GO TO 2.

## 2. CHECK PERMANENT DTC

With CONSULT

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Select "PERMANENT DTC STATUS" mode with CONSULT.

With GST

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

## HOW TO ERASE PERMANENT DTC

[VQ37VHR FOR USA AND CANADA]

< BASIC INSPECTION >

4. Turn ignition switch ON.
5. Select Service \$0A with GST.

Is any permanent DTC detected?

- YES >> GO TO 3.  
NO >> END

### 3.DRIVE DRIVING PATTERN B

#### CAUTION:

- Always drive at a safe speed.
- Never erase self-diagnosis results.
- If self-diagnosis results are erased during the trip of driving pattern B or D, the counter of driving pattern B and D is reset.

Ⓟ With CONSULT

1. Start engine and warm it up to normal operating temperature.
2. Use "PERMANENT DTC WORK SUPPORT" mode with CONSULT to drive the vehicle according to driving pattern B. Refer to [EC-88. "CONSULT Function"](#), [EC-82. "DIAGNOSIS DESCRIPTION : Driving Pattern"](#).

Ⓢ With GST

1. Start engine and warm it up to normal operating temperature.
2. Drive the vehicle according to driving pattern B. Refer to [EC-82. "DIAGNOSIS DESCRIPTION : Driving Pattern"](#).

>> GO TO 4.

### 4.CHECK PERMANENT DTC

Ⓟ With CONSULT

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Select "PERMANENT DTC STATUS" mode with CONSULT.

Ⓢ With GST

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Select Service \$0A with GST.

Is any permanent DTC detected?

- YES >> GO TO 5.  
NO >> END

### 5.DRIVE DRIVING PATTERN D

#### CAUTION:

- Always drive at a safe speed.
- Never erase self-diagnosis results.
- If self-diagnosis results are erased during the trip of driving pattern B or D, the counter of driving pattern B and D is reset.

1. Drive the vehicle according to driving pattern D. Refer to [EC-82. "DIAGNOSIS DESCRIPTION : Driving Pattern"](#).

>> GO TO 6.

### 6.CHECK PERMANENT DTC

Ⓟ With CONSULT

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.

## DTC/CIRCUIT DIAGNOSIS

### TROUBLE DIAGNOSIS - SPECIFICATION VALUE

#### Description

INFOID:000000006882850

The specification (SP) value indicates the tolerance of the value that is displayed in "SPEC" in "DATA MONITOR" mode of CONSULT during normal operation of the Engine Control System. When the value in "SPEC" in "DATA MONITOR" mode is within the SP value, the Engine Control System is confirmed OK. When the value in "SPEC" in "DATA MONITOR" mode is NOT within the SP value, the Engine Control System may have one or more malfunctions.

The SP value is used to detect malfunctions that may affect the Engine Control System, but will not illuminate the MIL.

The SP value will be displayed for the following three items:

- B/FUEL SCHDL (The fuel injection pulse width programmed into ECM prior to any learned on board correction)
- A/F ALPHA-B1/B2 (The mean value of air-fuel ratio feedback correction factor per cycle)
- MAS A/F SE-B1/B2 (The signal voltage of the mass air flow sensor)

#### Component Function Check

INFOID:000000006882851

### 1. PRECONDITIONING

Make sure that all of the following conditions are satisfied.

#### TESTING CONDITION

- Vehicle driven distance: More than 5,000 km (3,107 miles)
- Barometric pressure: 98.3 - 104.3 kPa (1.003 - 1.064 kg/cm<sup>2</sup>, 14.25 - 15.12 psi)
- Atmospheric temperature: 20 - 30°C (68 - 86°F)
- Engine coolant temperature: 75 - 95°C (167 - 203°F)
- Transmission: Warmed-up
- After the engine is warmed up to normal operating temperature, drive vehicle until "ATF TEMP 1" (A/T fluid temperature sensor signal) indicates more than 60°C (140°F).
- Electrical load: Not applied
  - Rear window defogger switch, air conditioner switch, lighting switch are OFF. Steering wheel is straight ahead.
- Engine speed: Idle

>> GO TO 2.

### 2. PERFORM SPEC IN DATA MONITOR MODE

#### Ⓜ With CONSULT

#### NOTE:

Perform "SPEC" in "DATA MONITOR" mode in maximum scale display.

1. Perform [EC-154. "Work Procedure"](#).
2. Select "B/FUEL SCHDL", "A/F ALPHA-B1", "A/F ALPHA-B2", "MAS A/F SE-B1" and "MAS A/F SE-B2" in "SPEC" of "DATA MONITOR" mode with CONSULT.
3. Make sure that monitor items are within the SP value.

Is the measurement value within the SP value?

- YES >> INSPECTION END  
 NO >> Go to [EC-173. "Diagnosis Procedure"](#).

# TROUBLE DIAGNOSIS - SPECIFICATION VALUE

JMBIA0056GB

## DETAILED PROCEDURE

### 1. CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

#### ⓑ With CONSULT

1. Start engine.
2. Confirm that the testing conditions are met. Refer to [EC-172, "Component Function Check"](#).
3. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

# TROUBLE DIAGNOSIS - SPECIFICATION VALUE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## NOTE:

Check "A/F ALPHA-B1", "A/F ALPHA-B2" for approximately 1 minute because they may fluctuate. It is NG if the indication is out of the SP value even a little.

Is the measurement value within the SP value?

YES >> GO TO 17.

NO-1 >> Less than the SP value: GO TO 2.

NO-2 >> More than the SP value: GO TO 3.

## 2.CHECK "B/FUEL SCHDL"

Select "B/FUEL SCHDL" in "SPEC" of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

Is the measurement value within the SP value?

YES >> GO TO 4.

NO >> More than the SP value: GO TO 19.

## 3.CHECK "B/FUEL SCHDL"

Select "B/FUEL SCHDL" in "SPEC" of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

Is the measurement value within the SP value?

YES >> GO TO 6.

NO-1 >> More than the SP value: GO TO 6.

NO-2 >> Less than the SP value: GO TO 25.

## 4.CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

1. Stop the engine.

2. Disconnect PCV hose, and then plug it.

3. Start engine.

4. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

YES >> GO TO 5.

NO >> GO TO 6.

## 5.CHANGE ENGINE OIL

1. Stop the engine.

2. Change engine oil.

## NOTE:

This symptom may occur when a large amount of gasoline is mixed with engine oil because of driving conditions (such as when engine oil temperature does not rise enough since a journey distance is too short during winter). The symptom will not be detected after changing engine oil or changing driving conditions.

>> INSPECTION END

## 6.CHECK FUEL PRESSURE

Check fuel pressure. (Refer to [EC-158, "Work Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 9.

NO-1 >> Fuel pressure is too high: Replace "fuel filter and fuel pump assembly" and then GO TO 8.

NO-2 >> Fuel pressure is too low: GO TO 7.

## 7.DETECT MALFUNCTIONING PART

Check fuel hoses and fuel tubes for clogging.

Is the inspection result normal?

YES >> Replace "fuel filter and fuel pump assembly" and then GO TO 8.

NO >> Repair or replace and then GO TO 8.

## 8.CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

## TROUBLE DIAGNOSIS - SPECIFICATION VALUE

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

1. Start engine.
2. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

- YES >> INSPECTION END  
NO >> GO TO 9.

### 9.PERFORM POWER BALANCE TEST

1. Perform "POWER BALANCE" in "ACTIVE TEST" mode.
2. Make sure that the each cylinder produces a momentary engine speed drop.

Is the inspection result normal?

- YES >> GO TO 12.  
NO >> GO TO 10.

### 10.DETECT MALFUNCTIONING PART

Check the following bellow.

- Ignition coil and its circuit (Refer to [EC-519, "Component Function Check".](#))
- Fuel injector and its circuit (Refer to [EC-512, "Component Function Check".](#))
- Intake air leakage
- Low compression pressure (Refer to [EM-18, "Inspection".](#))

Is the inspection result normal?

- YES >> Replace fuel injector and then GO TO 11.  
NO >> Repair or replace malfunctioning part and then GO TO 11.

### 11.CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

1. Start engine.
2. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

- YES >> INSPECTION END  
NO >> GO TO 12.

### 12.CHECK A/F SENSOR 1 FUNCTION

Perform all DTC CONFIRMATION PROCEDURE related with A/F sensor 1.

- For DTC P0130, P0150, refer to [EC-243, "DTC Logic".](#)
- For DTC P0131, P0151, refer to [EC-247, "DTC Logic".](#)
- For DTC P0132, P0152, refer to [EC-250, "DTC Logic".](#)
- For DTC P0133, P0153, refer to [EC-253, "DTC Logic".](#)
- For DTC P2A00, P2A03, refer to [EC-499, "DTC Logic".](#)

Are any DTCs detected?

- YES >> GO TO 13.  
NO >> GO TO 15.

### 13.CHECK A/F SENSOR 1 CIRCUIT

Perform Diagnosis Procedure according to corresponding DTC.

>> GO TO 14.

### 14.CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

1. Start engine.
2. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

- YES >> INSPECTION END  
NO >> GO TO 15.

### 15.DISCONNECT AND RECONNECT ECM HARNESS CONNECTOR

1. Stop the engine.

## TROUBLE DIAGNOSIS - SPECIFICATION VALUE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

2. Disconnect ECM harness connector. Check pin terminal and connector for damage, and then reconnect it.

>> GO TO 16.

### 16.CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

1. Start engine.
2. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

YES >> INSPECTION END

NO >> Detect malfunctioning part according to [EC-532. "Symptom Table"](#).

### 17.CHECK "B/FUEL SCHDL"

Select "B/FUEL SCHDL" in "SPEC" of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

Is the measurement value within the SP value?

YES >> INSPECTION END

NO-1 >> More than the SP value: GO TO 18.

NO-2 >> Less than the SP value: GO TO 25.

### 18.DETECT MALFUNCTIONING PART

1. Check for the cause of large engine friction. Refer to the following.
  - Engine oil level is too high
  - Engine oil viscosity
  - Belt tension of power steering, alternator, A/C compressor, etc. is excessive
  - Noise from engine
  - Noise from transmission, etc.
2. Check for the cause of insufficient combustion. Refer to the following.
  - Valve clearance malfunction
  - Intake valve timing control function malfunction
  - Camshaft sprocket installation malfunction, etc.

>> Repair or replace malfunctioning part, and then GO TO 30.

### 19.CHECK INTAKE SYSTEM

Check for the cause of uneven air flow through mass air flow sensor. Refer to the following.

- Crushed air ducts
- Malfunctioning seal of air cleaner element
- Uneven dirt of air cleaner element
- Improper specification of intake air system

Is the inspection result normal?

YES >> GO TO 21.

NO >> Repair or replace malfunctioning part, and then GO TO 20.

### 20.CHECK "A/F ALPHA-B1", "A/F ALPHA-B2", AND "B/FUEL SCHDL"

Select "A/F ALPHA-B1", "A/F ALPHA-B2", and "B/FUEL SCHDL" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

YES >> INSPECTION END

NO >> "B/FUEL SCHDL" is more, "A/F ALPHA-B1", "A/F ALPHA-B2" are less than the SP value: GO TO 21.

### 21.DISCONNECT AND RECONNECT MASS AIR FLOW SENSOR HARNESS CONNECTOR

1. Stop the engine.
2. Disconnect mass air flow sensor harness connector. Check pin terminal and connector for damage and then reconnect it again.

>> GO TO 22.

## TROUBLE DIAGNOSIS - SPECIFICATION VALUE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

---

### 22.CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

---

1. Start engine.
2. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

YES >> Detect malfunctioning part of mass air flow sensor circuit and repair it. Refer to [EC-211, "Diagnosis Procedure"](#). Then GO TO 29.

NO >> GO TO 23.

---

### 23.CHECK "MAS A/F SE-B1", "MAS A/F SE-B2"

---

Select "MAS A/F SE-B1", "MAS A/F SE-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

Is the measurement value within the SP value?

YES >> GO TO 24.

NO >> More than the SP value: Replace malfunctioning mass air flow sensor, and then GO TO 29.

---

### 24.REPLACE ECM

---

1. Replace ECM.
2. Go to [EC-144, "Work Procedure"](#).

>> GO TO 29.

---

### 25.CHECK INTAKE SYSTEM

---

Check for the cause of uneven air flow through mass air flow sensor. Refer to the following.

- Crushed air ducts
- Malfunctioning seal in air cleaner element
- Uneven dirt in air cleaner element
- Improper specification in intake air system

Is the inspection result normal?

YES >> GO TO 27.

NO >> Repair or replace malfunctioning part, and then GO TO 26.

---

### 26.CHECK "B/FUEL SCHDL"

---

Select "B/FUEL SCHDL" in "SPEC" of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

Is the measurement value within the SP value?

YES >> INSPECTION END

NO >> Less than the SP value: GO TO 27.

---

### 27.CHECK "MAS A/F SE-B1", "MAS A/F SE-B2"

---

Select "MAS A/F SE-B1", "MAS A/F SE-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

YES >> GO TO 28.

NO >> Less than the SP value: Replace malfunctioning mass air flow sensor, and then GO TO 30.

---

### 28.CHECK INTAKE SYSTEM

---

Check for the cause of air leak after the mass air flow sensor. Refer to the following.

- Disconnection, looseness, and cracks in air duct
- Looseness of oil filler cap
- Disconnection of oil level gauge
- Open stuck, breakage, hose disconnection, or cracks in PCV valve
- Disconnection or cracks in EVAP purge hose, stuck open EVAP canister purge volume control solenoid valve
- Malfunctioning seal in rocker cover gasket
- Disconnection, looseness, or cracks in hoses, such as a vacuum hose, connecting to intake air system parts
- Malfunctioning seal in intake air system, etc.

# TROUBLE DIAGNOSIS - SPECIFICATION VALUE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

>> GO TO 30.

## 29. CHECK "A/F ALPHA-B1", "A/F ALPHA-B2", AND "B/FUEL SCHDL"

Select "A/F ALPHA-B1", "A/F ALPHA-B2", and "B/FUEL SCHDL" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

YES >> INSPECTION END

NO >> Detect malfunctioning part according to [EC-532. "Symptom Table"](#).

## 30. CHECK "B/FUEL SCHDL"

Select "B/FUEL SCHDL" in "SPEC" of "DATA MONITOR" mode, and then make sure that the indication is within the SP value.

Is the measurement value within the SP value?

YES >> INSPECTION END

NO >> Detect malfunctioning part according to [EC-532. "Symptom Table"](#).

# POWER SUPPLY AND GROUND CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## POWER SUPPLY AND GROUND CIRCUIT

### Diagnosis Procedure

INFOID:00000006882853

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-I

1. Disconnect ECM harness connector.
2. Check the continuity between ECM harness connector and ground.

| ECM       |          | Ground | Continuity |
|-----------|----------|--------|------------|
| Connector | Terminal |        |            |
| F101      | 8        | Ground | Existed    |
| M107      | 123      |        |            |
|           | 124      |        |            |
|           | 127      |        |            |
|           | 128      |        |            |

3. Also check harness for short to power.

Is the inspection result normal?

- YES >> GO TO 4.  
NO >> GO TO 3.

#### 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F103, M116
- Harness for open or short between ECM and ground

>> Repair open circuit or short to power in harness or connectors.

#### 4. CHECK ECM POWER SUPPLY CIRCUIT-I

1. Reconnect ECM harness connector.
2. Turn ignition switch ON.
3. Check the voltage between ECM harness connector and ground.

| ECM       |          |           |          | Voltage         |
|-----------|----------|-----------|----------|-----------------|
| +         |          | -         |          |                 |
| Connector | Terminal | Connector | Terminal |                 |
| F102      | 53       | M107      | 128      | Battery voltage |

Is the inspection result normal?

- YES >> GO TO 6.  
NO >> GO TO 5.

#### 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- IPDM E/R harness connector E7
- 10 A fuse (No. 44)
- Harness for open or short between ECM and fuse

# POWER SUPPLY AND GROUND CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 6. CHECK ECM POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Check the voltage between ECM harness connector terminals as follows.

| ECM       |          |          | Voltage  |
|-----------|----------|----------|--|
| Connector | +        | -        |  |
|           | Terminal | Terminal |  |
| M107      | 125      | 128      | After turning ignition switch OFF, battery voltage will exist for a few seconds, then drop to approximately 0 V. |

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 9.

## 7. CHECK ECM POWER SUPPLY CIRCUIT-III

1. Turn ignition switch ON.
2. Check the voltage between IPDM E/R harness connector and ground.

| IPDM E/R  |          | Ground | Voltage         |
|-----------|----------|--------|-----------------|
| Connector | Terminal |        |                 |
| E5        | 5        | Ground | Battery voltage |

Is the inspection result normal?

YES >> GO TO 8.

NO >> Replace IPDM E/R. Refer to [PCS-33, "Exploded View"](#).

## 8. CHECK INTERMITTENT INCIDENT

Refer to [GI-47, "Circuit Inspection"](#).

>> INSPECTION END

## 9. CHECK ECM POWER SUPPLY CIRCUIT-IV

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Check the voltage between ECM harness connector terminals as follows.

| ECM       |          |           |          | Voltage         |
|-----------|----------|-----------|----------|-----------------|
| +         |          | -         |          |                 |
| Connector | Terminal | Connector | Terminal |                 |
| F101      | 24       | M107      | 128      | Battery voltage |

Is the inspection result normal?

YES >> GO TO 13.

NO >> GO TO 10.

## 10. CHECK ECM POWER SUPPLY CIRCUIT-V

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector.
3. Check the continuity between ECM harness connector and IPDM E/R harness connector.

| ECM       |          | IPDM E/R  |          | Continuity |
|-----------|----------|-----------|----------|------------|
| Connector | Terminal | Connector | Terminal |            |
| F101      | 24       | E7        | 70       | Existed    |

4. Also check harness for short to ground and short to power.

# POWER SUPPLY AND GROUND CIRCUIT

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

Is the inspection result normal?

- YES >> GO TO 12.
- NO >> GO TO 11.

## 11.DETECT MALFUNCTIONING PART

Check the following.

- Harness or connectors E20, F40
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 12.CHECK 15 A FUSE

1. Disconnect 15 A fuse (No. 51) from IPDM E/R.
2. Check 15 A fuse.

Is the inspection result normal?

- YES >> GO TO 15.
- NO >> Replace 15 A fuse.

## 13.CHECK ECM POWER SUPPLY CIRCUIT-VI

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector.
3. Check the continuity between ECM harness connector and IPDM E/R harness connector.

| ECM       |          | IPDM E/R  |          | Continuity |
|-----------|----------|-----------|----------|------------|
| Connector | Terminal | Connector | Terminal |            |
| M107      | 125      | E5        | 6        | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 15.
- NO >> GO TO 14.

## 14.DETECT MALFUNCTIONING PART

Check the following.

- Harness or connectors E106, M6
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 15.CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

Is the inspection result normal?

- YES >> Replace IPDM E/R. Refer to [PCS-33. "Exploded View"](#).
- NO >> Repair open circuit, short to ground or short to power in harness or connectors.

# POWER SUPPLY AND GROUND CIRCUIT (VVEL CONTROL MODULE)

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## POWER SUPPLY AND GROUND CIRCUIT (VVEL CONTROL MODULE)

### Diagnosis Procedure

INFOID:000000006882854

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK VVEL CONTROL MODULE GROUND CIRCUIT FOR OPEN AND SHORT

1. Disconnect VVEL control module harness connector.
2. Check the continuity between VVEL control module harness connector and ground.

| VVEL control module |          | Ground | Continuity |
|---------------------|----------|--------|------------|
| Connector           | Terminal |        |            |
| E15                 | 14       | Ground | Existed    |

3. Also check harness for short to power.

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> Repair open circuit, short to power in harness connectors.

#### 3. CHECK VVEL CONTROL MODULE POWER SUPPLY CIRCUIT-I

1. Reconnect VVEL control module harness connector.
2. Turn ignition switch ON.
3. Check the voltage between VVEL control module harness connector and ground.

| VVEL control module |          |          | Voltage  |
|---------------------|----------|----------|--|
| Connector           | +        | -        |  |
|                     | Terminal | Terminal |  |
| E15                 | 8        | 14       | After turning ignition switch OFF, battery voltage will exist for a few seconds, then drop to approximately 0 V. |

Is the inspection result normal?

- YES >> GO TO 5.  
NO >> GO TO 4.

#### 4. CHECK VVEL CONTROL MODULE POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Disconnect VVEL control module harness connector.
3. Disconnect IPDM E/R harness connector.
4. Check the continuity between VVEL control module harness connector and IPDM E/R harness connector.

| VVEL control module |          | IPDM E/R  |          | Continuity |
|---------------------|----------|-----------|----------|------------|
| Connector           | Terminal | Connector | Terminal |            |
| E15                 | 8        | E7        | 49       | Existed    |

5. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> [EC-180, "Diagnosis Procedure"](#)  
NO >> Repair open circuit, short to ground or short to power in harness or connectors.

#### 5. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

## POWER SUPPLY AND GROUND CIRCUIT (VVEL CONTROL MODULE)

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

---

Is the inspection result normal?

YES >> Replace IPDM E/R. Refer to [PCS-33, "Exploded View"](#).

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

# U0101 CAN COMM CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## U0101 CAN COMM CIRCUIT

### Description

INFOID:000000006882855

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

### DTC Logic

INFOID:000000006882856

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name      | DTC detecting condition  | Possible cause   |
|---------|-----------------------------|--|--|
| U0101   | Lost communication with TCM | When ECM is not transmitting or receiving CAN communication signal of OBD (emission related diagnosis) with TCM for 2 seconds or more. | <ul style="list-style-type: none"><li>CAN communication line between TCM and ECM (CAN communication line is open or shorted)</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PERFORM DTC CONFIRMATION PROCEDURE

- Turn ignition switch ON and wait at least 3 seconds.
- Check DTC.

Is DTC detected?

- YES >> [EC-185, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006882857

Go to [LAN-25, "Trouble Diagnosis Flow Chart"](#).

# U1001 CAN COMM CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## U1001 CAN COMM CIRCUIT

### Description

INFOID:000000006882861

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

### DTC Logic

INFOID:000000006882862

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name | DTC detecting condition   | Possible cause  |
|---------|------------------------|---|---|
| U1001   | CAN communication line | When ECM is not transmitting or receiving CAN communication signal other than OBD (emission related diagnosis) for 2 seconds or more. | <ul style="list-style-type: none"><li>Harness or connectors (CAN communication line is open or shorted)</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON and wait at least 3 seconds.
2. Check DTC.

#### Is DTC detected?

- YES >> [EC-186, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

# U1003 CAN COMM CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## U1003 CAN COMM CIRCUIT

### Description

INFOID:000000006882864

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. ECM and VVEL control module are connected with two communication lines (CAN H line and CAN L line) and transmit/receive data. ECM shares information and links with the VVEL control module during operation.

### DTC Logic

INFOID:000000006882865

#### DTC DETECTION LOGIC

##### NOTE:

If DTC U1003 is displayed with DTC P0607, first perform the trouble diagnosis for DTC P0607. Refer to [EC-387, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name                      | DTC detecting condition   | Possible cause   |
|---------|---|---|--|
| U1003   | Lost communication with VVEL control module | CAN communication signal other than OBD (emission related diagnosis) is not received between VVEL control module and ECM for 2 seconds or more. | <ul style="list-style-type: none"><li>• Harness or connectors (VVEL CAN communication line is open or shorted)</li><li>• ECM</li><li>• VVEL control module</li></ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON and wait at least 3 seconds.
2. Check DTC.

Is DTC detected?

YES >> Go to [EC-187, "Diagnosis Procedure"](#).

NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006882866

##### 1. CHECK VVEL CAN COMMUNICATION CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Disconnect VVEL control module harness connector.
4. Check the continuity between ECM harness connector and VVEL control module harness connector.

| ECM       |          | VVEL control module |          | Continuity |
|-----------|----------|---------------------|----------|------------|
| Connector | Terminal | Connector           | Terminal |            |
| F102      | 54       | E15                 | 24       | Existed    |
|           | 55       |                     | 11       |            |

5. Also check harness for short to ground and power.

Is the inspection result normal?

YES >> GO TO 3.

NO >> GO TO 2.

##### 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connector E20, F40

# U1003 CAN COMM CIRCUIT

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

- Harness for open or short between ECM and VVEL control module

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 3. CHECK INTERMITTENT INCIDENT

---

Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair or replace.

## 4. REPLACE VVEL CONTROL MODULE

---

1. Replace VVEL control module.
2. Go to [EC-145, "Work Procedure"](#).

>> GO TO 5.

## 5. PERFORM DTC CONFIRMATION PROCEDURE

---

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch ON.
3. Erase DTC.
4. Perform DTC Confirmation Procedure.  
See [EC-187, "DTC Logic"](#).
5. Check DTC.

Is the DTC U1003 displayed again?

YES >> GO TO 6.

NO >> INSPECTION END

## 6. REPLACE ECM

---

1. Replace ECM.
2. Go to [EC-144, "Work Procedure"](#).

>> INSPECTION END

# U1024 CAN COMM CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## U1024 CAN COMM CIRCUIT

### Description

INFOID:000000006882867

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. ECM and VVEL control module are connected with two communication lines (CAN H line and CAN L line) and transmit/receive data. ECM shares information and links with the VVEL control module during operation.

### DTC Logic

INFOID:000000006882868

#### DTC DETECTION LOGIC

##### NOTE:

If DTC U1024 is displayed with DTC P0607, first perform the trouble diagnosis for DTC P0607.

Refer to [EC-387, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name | DTC detecting condition   | Possible cause  |
|---------|------------------------|---|---|
| U1024   | VVEL CAN communication | <ul style="list-style-type: none"><li>When VVEL control module cannot transmit/receive can communication signal from ECM.</li><li>When detecting error during the initial diagnosis of CAN controller of VVEL control module.</li></ul> | <ul style="list-style-type: none"><li>Harness or connectors (CAN communication line is open or shorted)</li><li>ECM</li><li>VVEL control module</li></ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

- Turn ignition switch ON and wait at least 3 seconds.
- Check DTC.

##### Is DTC detected?

- YES >> Go to [EC-189, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006882869

##### 1. CHECK VVEL CAN COMMUNICATION CIRCUIT

- Turn ignition switch OFF.
- Disconnect ECM harness connector.
- Disconnect VVEL control module harness connector.
- Check the continuity between ECM harness connector and VVEL control module harness connector.

| ECM       |          | VVEL control module |          | Continuity |
|-----------|----------|---------------------|----------|------------|
| Connector | Terminal | Connector           | Terminal |            |
| F102      | 54       | E15                 | 24       | Existed    |
|           | 55       |                     | 11       |            |

- Also check harness for short to ground and power.

##### Is the inspection result normal?

- YES >> GO TO 3.  
NO >> GO TO 2.

##### 2. DETECT MALFUNCTIONING PART

# U1024 CAN COMM CIRCUIT

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

Check the following.

- Harness connector E20, F40
- Harness for open or short between ECM and VVEL control module

>> Harness for open or short between ECM and VVEL control module

## 3. CHECK INTERMITTENT INCIDENT

---

Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair or replace.

## 4. REPLACE VVEL CONTROL MODULE

---

1. Replace VVEL control module.
2. Go to [EC-145, "Work Procedure"](#).

>> GO TO 5.

## 5. PERFORM DTC CONFIRMATION PROCEDURE

---

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch ON.
3. Erase DTC.
4. Perform DTC Confirmation Procedure.  
See [EC-189, "DTC Logic"](#).

Is the DTC U1024 displayed again?

YES >> GO TO 6.

NO >> INSPECTION END

## 6. REPLACE ECM

---

1. Replace ECM.
2. Go to [EC-144, "Work Procedure"](#).

>> INSPECTION END

# P0011, P0021 IVT CONTROL

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0011, P0021 IVT CONTROL

### DTC Logic

INFOID:000000006882870

### DTC DETECTION LOGIC

#### NOTE:

- If DTC P0011 or P0021 is displayed with DTC P0075 or P0081, first perform the trouble diagnosis for DTC P0075, P0081. Refer to [EC-208, "DTC Logic"](#).
- If DTC P0011 or P0021 is displayed with DTC P0524, first perform the trouble diagnosis for DTC P0524. Refer to [EC-378, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name                           | Detecting condition  | Possible cause   |
|---------|--|--|--|
| P0011   | Intake valve timing control performance (bank 1) | There is a gap between angle of target and phase-control angle degree. | <ul style="list-style-type: none"><li>• Crankshaft position sensor (POS)</li><li>• Camshaft position sensor (PHASE)</li><li>• Intake valve control solenoid valve</li><li>• Accumulation of debris to the signal pick-up portion of the camshaft</li><li>• Timing chain installation</li><li>• Foreign matter caught in the oil groove for intake valve timing control</li></ul> |
| P0021   | Intake valve timing control performance (bank 2) |  |  |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 10 V and 16 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE-I

1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Maintain the following conditions for at least 6 consecutive seconds. Hold the accelerator pedal as steady as possible.

|                |                        |
|----------------|------------------------|
| ENG SPEED      | 525 - 2,000 rpm        |
| COOLAN TEMP/S  | More than 60°C (140°F) |
| Selector lever | P or N position        |

4. Let engine idle for 10 seconds.
5. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-192, "Diagnosis Procedure"](#)

NO >> GO TO 3.

#### 3. PERFORM DTC CONFIRMATION PROCEDURE-II

1. Select "DATA MONITOR" mode with CONSULT.
2. Maintain the following conditions for at least 20 consecutive seconds.

|               |  |
|---------------|--|
| ENG SPEED     | 1,700 - 3,175 rpm (A constant rotation is maintained.) |
| COOLAN TEMP/S | More than 70°C (158°F)                                 |

# P0011, P0021 IVT CONTROL

< DTC/CIRCUIT DIAGNOSIS >

|                  |   |
|------------------|---|
| Selector lever   | 1st or 2nd position   |
| Driving location | Driving vehicle uphill<br>(Increased engine load will help maintain the driving conditions required for this test.) |

## CAUTION:

**Always drive at a safe speed.**

3. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-192, "Diagnosis Procedure"](#)

NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000006882871

### 1. CHECK OIL PRESSURE WARNING LAMP

1. Start engine.
2. Check oil pressure warning lamp and confirm it is not illuminated.

Is oil pressure warning lamp illuminated?

YES >> Go to [LU-7, "Inspection"](#).

NO >> GO TO 2.

### 2. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE

Refer to [EC-193, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 3.

NO >> Replace malfunctioning intake valve timing control solenoid valve. Refer to [EM-52, "Exploded View"](#).

### 3. CHECK CRANKSHAFT POSITION SENSOR (POS)

Refer to [EC-314, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 4.

NO >> Replace crankshaft position sensor (POS). Refer to [EM-123, "Exploded View"](#).

### 4. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to [EC-319, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 5.

NO >> Replace malfunctioning camshaft position sensor (PHASE). Refer to [EM-52, "Exploded View"](#).

### 5. CHECK CAMSHAFT (INTAKE)

Check the following.

# P0011, P0021 IVT CONTROL

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

- Accumulation of debris on the signal plate of camshaft front end
- Chipping signal plate of camshaft front end

Is the inspection result normal?

YES >> GO TO 6.

NO >> Remove debris and clean the signal plate of camshaft front end or replace camshaft. Refer to [EM-96, "Exploded View"](#).

## 6. CHECK TIMING CHAIN INSTALLATION

Check service records for any recent repairs that may cause timing chain misaligned.

Are there any service records that may cause timing chain misaligned?

YES >> Check timing chain installation. Refer to [EM-53, "Removal and Installation"](#).

NO >> GO TO 7.

## 7. CHECK LUBRICATION CIRCUIT

Perform "Inspection of Camshaft Sprocket (INT) Oil Groove". Refer to [EM-106, "Inspection"](#).

Is the inspection result normal?

YES >> GO TO 8.

NO >> Clean lubrication line.

## 8. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882872

## 1. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE-I

1. Turn ignition switch OFF.
2. Disconnect intake valve timing control solenoid valve harness connector.
3. Check resistance between intake valve timing control solenoid valve terminals as follows.

| Terminals         | Resistance ( $\Omega$ )                   |
|-------------------|---|
| 1 and 2           | 7.0 - 7.7 [at 20°C (68°F)]                |
| 1 or 2 and ground | $\infty$<br>(Continuity should not exist) |

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace malfunctioning intake valve timing control solenoid valve. Refer to [EM-52, "Exploded View"](#).

## 2. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE-II

1. Remove intake valve timing control solenoid valve.

## P0011, P0021 IVT CONTROL

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

2. Provide 12 V DC between intake valve timing control solenoid valve terminals 1 and 2, and then interrupt it. Make sure that the plunger moves as shown in the figure.

**CAUTION:**

**Do not apply 12 V DC continuously for 5 seconds or more. Doing so may result in damage to the coil in intake valve timing control solenoid valve.**

**NOTE:**

**Always replace O-ring when intake valve timing control solenoid valve is removed.**

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace malfunctioning intake valve timing control solenoid valve. Refer to [EM-52. "Exploded View"](#).

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 10.5 V and 16 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for at least 10 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-195, "Diagnosis Procedure"](#).  
NG >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006882874

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK AIR FUEL RATIO (A/F) SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect air fuel ratio (A/F) sensor 1 harness connector.
2. Turn ignition switch ON.
3. Check the voltage between A/F sensor 1 harness connector and ground.

# P0031, P0032, P0051, P0052 A/F SENSOR 1 HEATER

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| DTC          | A/F sensor 1 |           |          | Ground | Voltage         |
|--------------|--------------|-----------|----------|--------|-----------------|
|              | Bank         | Connector | Terminal |        |                 |
| P0031, P0032 | 1            | F3        | 4        | Ground | Battery voltage |
| P0051, P0052 | 2            | F20       | 4        |        |                 |

Is the inspection result normal?

YES >> GO TO 4.

NO >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- IPDM E/R harness connector E7
- 15 A fuse (No. 45)
- Harness for open or short between A/F sensor 1 and fuse

>> Repair or replace harness or connectors.

## 4. CHECK A/F SENSOR 1 HEATER OUTPUT SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

| DTC          | A/F sensor 1 |           |          | ECM       |          | Continuity |
|--------------|--------------|-----------|----------|-----------|----------|------------|
|              | Bank         | Connector | Terminal | Connector | Terminal |            |
| P0031, P0032 | 1            | F3        | 3        | F101      | 1        | Existed    |
| P0051, P0052 | 2            | F20       | 3        |           | 5        |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 5. CHECK A/F SENSOR 1 HEATER

Refer to [EC-197, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

## 6. REPLACE AIR FUEL RATIO (A/F) SENSOR 1

Replace malfunctioning air fuel ratio (A/F) sensor 1.

### CAUTION:

- Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new A/F sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

>> INSPECTION END

## 7. CHECK INTERMITTENT INCIDENT

Perform [GI-44, "Intermittent Incident"](#).

>> Repair or replace.

# P0031, P0032, P0051, P0052 A/F SENSOR 1 HEATER

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## Component Inspection

INFOID:000000006882875

### 1. CHECK AIR FUEL RATIO (A/F) SENSOR 1

1. Turn ignition switch OFF.
2. Disconnect A/F sensor 1 harness connector.
3. Check resistance between A/F sensor 1 terminals as follows.

| Terminal   | Resistance ( $\Omega$ )       |
|------------|-------------------------------|
| 3 and 4    | 1.98 - 2.66 [at 25°C (77°F)]  |
| 3 and 1, 2 | $\infty$                      |
| 4 and 1, 2 | (Continuity should not exist) |

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> GO TO 2.

### 2. REPLACE AIR FUEL RATIO (A/F) SENSOR 1

Replace malfunctioning air fuel ratio (A/F) sensor 1.

**CAUTION:**

- Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new A/F sensor, clean exhaust system threads using Heated Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

**Before performing the following procedure, confirm that battery voltage is between 11 V and 16 V at idle.**

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
6. Let engine idle for 1 minute.
7. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-198, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006882877

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

# P0037, P0038, P0057, P0058 HO2S2 HEATER

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## 2. CHECK HO2S2 POWER SUPPLY CIRCUIT

1. Disconnect heated oxygen sensor 2 (HO2S2) harness connector.
2. Turn ignition switch ON.
3. Check the voltage between HO2S2 harness connector and ground.

| DTC          | HO2S2 |           |          | Ground | Voltage         |
|--------------|-------|-----------|----------|--------|-----------------|
|              | Bank  | Connector | Terminal |        |                 |
| P0037, P0038 | 1     | F54       | 2        | Ground | Battery voltage |
| P0057, P0058 | 2     | F53       | 2        |        |                 |

Is the inspection result normal?

YES >> GO TO 4.

NO >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- IPDM E/R harness connector E7
- 15 A fuse (No. 45)
- Harness for open or short between heated oxygen sensor 2 and fuse

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 4. CHECK HO2S2 OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC          | HO2S2 |           |          | ECM       |          | Continuity |
|--------------|-------|-----------|----------|-----------|----------|------------|
|              | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0037, P0038 | 1     | F54       | 3        | F101      | 17       | Existed    |
| P0057, P0058 | 2     | F53       | 3        |           | 33       |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 5. CHECK HEATED OXYGEN SENSOR 2 HEATER

Refer to [EC-200. "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

## 6. REPLACE HEATED OXYGEN SENSOR 2

Replace malfunctioning heated oxygen sensor 2.

### CAUTION:

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new heated oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

>> INSPECTION END

## 7. CHECK INTERMITTENT INCIDENT

# P0037, P0038, P0057, P0058 HO2S2 HEATER

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882878

### 1. CHECK HEATED OXYGEN SENSOR 2 HEATER

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 harness connector.
3. Check resistance between HO2S2 terminals as follows.

| Terminal      | Resistance ( $\Omega$ )       |
|---------------|-------------------------------|
| 2 and 3       | 3.4 - 4.4 [at 25°C (77°F)]    |
| 1 and 2, 3, 4 | $\infty$                      |
| 4 and 1, 2, 3 | (Continuity should not exist) |

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> GO TO 2.

### 2. REPLACE HEATED OXYGEN SENSOR 2

Replace malfunctioning heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved anti-seize lubricant (commercial service tool).

>> INSPECTION END

# P006A, P0101, P010B MAF SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P006A, P0101, P010B MAF SENSOR

### DTC Logic

INFOID:000000006882879

### DTC DETECTION LOGIC

**NOTE:**

If DTC P006A, P0101 or P010B is displayed with other DTC, first perform the trouble diagnosis for other DTC.

| DTC No. | Trouble diagnosis name                                  | DTC detecting condition  | Possible cause  |
|---------|---|--|---|
| P006A   | Manifold absolute pressure - mass air flow correlation  | A difference exceeding the specified value develops between a value transmitted from the manifold absolute pressure (MAP) sensor to ECM and an estimated intake pressure of intake manifold calculated by ECM, based on a mass air flow sensor signal. | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted.)</li> <li>• Mass air flow sensor</li> <li>• Manifold absolute pressure (MAP) sensor</li> <li>• EVAP control system pressure sensor</li> <li>• Intake air leaks</li> <li>• Intake air temperature sensor</li> </ul> |
| P0101   | Mass air flow sensor (bank 1) circuit range/performance | A difference exceeding the specified value develops between a signal transmitted from the mass air flow sensor (bank 1) to ECM and a signal transmitted from the mass air flow sensor (bank 2) to ECM.   | Mass air flow sensor (bank 1)   |
| P010B   | Mass air flow sensor (bank 2) circuit range/performance |  | Mass air flow sensor (bank 2)   |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

 **With CONSULT**

1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to normal operating temperature.
3. Accelerate the vehicle from 0 to 88 km/h (0 to 55 MPH) under the following conditions:

**CAUTION:**

**Always drive at a safe speed.**

**NOTE:**

- Accelerate with the accelerator pedal kept constant.
- The acceleration at engine speed 2,000 and 3,000 rpm allows easy diagnoses.

|                |             |
|----------------|-------------|
| ACCEL SEN 1    | 1.4 – 2.0 V |
| Selector lever | D position  |

4. Check 1st trip DTC.

 **Without CONSULT**

1. Start engine and warm it up to normal operating temperature.
2. With selector lever in D position, accelerate the vehicle from 0 to 88 km/h (0 to 55 MPH) under the following conditions:

**CAUTION:**

**Always drive at a safe speed.**

# P006A, P0101, P010B MAF SENSOR

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

### NOTE:

- Accelerate with the accelerator pedal kept constant.
- The acceleration at engine speed 2,000 and 3,000 rpm allows easy diagnoses.

| Accelerator pedal position sensor 1 |                 | Ground | Voltage (V) |
|-------------------------------------|-----------------|--------|-------------|
| Connector                           | Terminal        |        |             |
| M153 <sup>*1</sup>                  | 4 <sup>*1</sup> | Ground | 1.4 – 2.0   |
| M9 <sup>*2</sup>                    | 3 <sup>*2</sup> |        |             |

\*1: With ICC

\*2: Without ICC

### 3. Check 1st trip DTC.

#### Is 1st trip DTC detected?

YES >> Go to [EC-202, "Diagnosis Procedure"](#).

NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000006882880

### 1. CHECK INTAKE SYSTEM

Check the following for connection.

- Air duct
- Vacuum hoses
- Intake air passage between air duct and intake manifold

#### Is the inspection result normal?

YES >> GO TO 2.

NO >> Reconnect the parts.

### 2. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

#### Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair or replace ground connection.

### 3. CHECK MASS AIR FLOW SENSOR POWER SUPPLY CIRCUIT

1. Disconnect mass air flow sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between mass air flow sensor harness connector and ground.

| DTC          | Mass air flow sensor |           |          | Ground | Voltage         |
|--------------|----------------------|-----------|----------|--------|-----------------|
|              | Bank                 | Connector | Terminal |        |                 |
| P006A, P0101 | 1                    | F31       | 5        | Ground | Battery voltage |
| P006A, P010B | 2                    | F42       | 5        |        |                 |

#### Is the inspection result normal?

YES >> GO TO 5.

NO >> GO TO 4.

### 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E106, M6
- Harness connectors M116, F103
- Harness for open or short between mass air flow sensor and ECM
- Harness for open or short between mass air flow sensor and IPDM E/R

>> Repair open circuit, short to ground or short to power in harness or connectors.

# P006A, P0101, P010B MAF SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

## 5. CHECK MASS AIR FLOW SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between mass air flow sensor harness connector and ECM harness connector.

| DTC          | Mass air flow sensor |           |          | ECM       |          | Continuity |
|--------------|----------------------|-----------|----------|-----------|----------|------------|
|              | Bank                 | Connector | Terminal | Connector | Terminal |            |
| P006A, P0101 | 1                    | F31       | 4        | F102      | 68       | Existed    |
| P006A, P010B | 2                    | F42       | 4        |           | 94       |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 6. CHECK MASS AIR FLOW SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between mass air flow sensor harness connector and ECM harness connector.

| DTC          | Mass air flow sensor |           |          | ECM       |          | Continuity |
|--------------|----------------------|-----------|----------|-----------|----------|------------|
|              | Bank                 | Connector | Terminal | Connector | Terminal |            |
| P006A, P0101 | 1                    | F31       | 3        | F102      | 77       | Existed    |
| P006A, P010B | 2                    | F42       | 3        |           | 79       |            |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 7.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 7. CHECK MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR

Check manifold absolute pressure (MAP) sensor. Refer to [EC-219. "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 8.

NO >> Replace manifold absolute pressure (MAP) sensor. Refer to [EM-31. "Exploded View"](#).

## 8. CHECK INTAKE AIR TEMPERATURE SENSOR

Check intake air temperature sensor. Refer to [EC-227. "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 9.

NO >> Replace mass air flow sensor (with intake air temperature sensor) (bank 1). Refer to [EM-29. "Exploded View"](#).

## 9. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-349. "Component Inspection"](#).

Is the inspection result normal?

YES-1 (Only DTC P006A is detected)>>GO TO 10.

YES-2 (DTC P006A and P0101 are detected)>>GO TO 11.

YES-3 (DTC P006A and P010B are detected)>>GO TO 12.

NO >> Replace EVAP control system pressure sensor. Refer to [FL-13. "Exploded View"](#).

## 10. CHECK MASS AIR FLOW SENSOR

Refer to [EC-204. "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 13.

NO >> Replace mass air flow sensor (bank 1) and (bank 2). Refer to [EM-29. "Exploded View"](#).

# P006A, P0101, P010B MAF SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

## 11. CHECK MASS AIR FLOW SENSOR (BANK 1)

Check mass air flow sensor (bank 1). Refer to [EC-213, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 13.

NO >> Replace mass air flow sensor (bank 1). Refer to [EM-29, "Exploded View"](#).

## 12. CHECK MASS AIR FLOW SENSOR (BANK 2)

Check mass air flow sensor (bank 2). Refer to [EC-213, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 13.

NO >> Replace mass air flow sensor (bank 2). Refer to [EM-29, "Exploded View"](#).

## 13. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882881

## 1. CHECK MASS AIR FLOW SENSOR-I

### With CONSULT

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Start engine and warm it up to normal operating temperature.
4. Connect CONSULT and select "DATA MONITOR" mode.
5. Select "MAS A/F SE-B1" and "MAS A/F SE-B2", and check the indication.

| Monitor item                   | Condition  | Indication (V)            |
|--------------------------------|--|---------------------------|
| MAS A/F SE-B1<br>MAS A/F SE-B2 | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|                                | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|                                | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|                                | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

### Without CONSULT

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Start engine and warm it up to normal operating temperature.
4. Check the voltage between ECM harness connector terminals under the following conditions.

# P006A, P0101, P010B MAF SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| ECM       |                                       |          | Condition  | Voltage (V)               |
|-----------|---------------------------------------|----------|--|---------------------------|
| Connector | +                                     | -        |  |                           |
|           | Terminal                              | Terminal |  |                           |
| F102      | 77<br>[MAF sensor (bank 1)<br>signal] | 68       | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|           |                                       |          | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|           |                                       |          | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|           |                                       |          | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |
|           | 79<br>[MAF sensor (bank 2)<br>signal] | 94       | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|           |                                       |          | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|           |                                       |          | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|           |                                       |          | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

## Is the inspection result normal?

- YES >> INSPECTION END  
NO >> GO TO 2.

## 2. CHECK FOR THE CAUSE OF UNEVEN AIR FLOW THROUGH MASS AIR FLOW SENSOR

- Turn ignition switch OFF.
- Check for the cause of uneven air flow through mass air flow sensor. Refer to the following.
  - Crushed air ducts
  - Malfunctioning seal of air cleaner element
  - Uneven dirt of air cleaner element
  - Improper specification of intake air system parts

## Is the inspection result normal?

- YES >> GO TO 4.  
NO >> GO TO 3.

## 3. CHECK MASS AIR FLOW SENSOR-II

### With CONSULT

- Repair or replace malfunctioning part.
- Start engine and warm it up to normal operating temperature.
- Connect CONSULT and select "DATA MONITOR" mode.
- Select "MAS A/F SE-B1" and "MAS A/F SE-B2", and check the indication.

| Monitor item                   | Condition  | Indication (V)            |
|--------------------------------|--|---------------------------|
| MAS A/F SE-B1<br>MAS A/F SE-B2 | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|                                | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|                                | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|                                | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

### Without CONSULT

- Repair or replace malfunctioning part.
- Start engine and warm it up to normal operating temperature.
- Check the voltage between ECM harness connector terminals under the following conditions.

# P006A, P0101, P010B MAF SENSOR

< DTC/CIRCUIT DIAGNOSIS >

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

**Is the inspection result normal?**

- YES >> INSPECTION END  
 NO >> GO TO 4.

## 4. CHECK MASS AIR FLOW SENSOR-III

**With CONSULT**

1. Turn ignition switch OFF.
2. Disconnect mass air flow sensor harness connector and reconnect it again.
3. Start engine and warm it up to normal operating temperature.
4. Connect CONSULT and select "DATA MONITOR" mode.
5. Select "MAS A/F SE-B1" and "MAS A/F SE-B2", and check the indication.

| Monitor item                   | Condition  | Indication (V)            |
|--------------------------------|--|---------------------------|
| MAS A/F SE-B1<br>MAS A/F SE-B2 | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|                                | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|                                | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|                                | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

**Without CONSULT**

1. Turn ignition switch OFF.
2. Disconnect mass air flow sensor harness connector and reconnect it again.
3. Start engine and warm it up to normal operating temperature.
4. Check the voltage between ECM harness connector terminals under the following conditions.

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                                      | DTC detecting condition  | Possible cause  |
|---------|---|--|---|
| P0075   | Intake valve timing control solenoid valve (bank 1) circuit | An improper voltage is sent to the ECM through intake valve timing control solenoid valve. | <ul style="list-style-type: none"><li>• Harness or connectors (Intake valve timing control solenoid valve circuit is open or shorted.)</li><li>• Intake valve timing control solenoid valve</li></ul> |
| P0081   | Intake valve timing control solenoid valve (bank 2) circuit |  |   |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for 5 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-208, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006882883

#### 1. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect intake valve timing (IVT) control solenoid valve harness connector.
3. Turn ignition switch ON.
4. Check the voltage between intake valve timing control solenoid valve harness connector and ground.

| DTC   | IVT control solenoid valve |           |          | Ground | Voltage         |
|-------|----------------------------|-----------|----------|--------|-----------------|
|       | Bank                       | Connector | Terminal |        |                 |
| P0075 | 1                          | F28       | 2        | Ground | Battery voltage |
| P0081 | 2                          | F29       | 2        |        |                 |

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> GO TO 2.

#### 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between intake valve timing control solenoid valve and IPDM E/R

>> Repair open circuit, short to ground or short to power in harness or connectors.

#### 3. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

# P0075, P0081 IVT CONTROL SOLENOID VALVE

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between intake valve timing control solenoid valve harness connector and ECM harness connector.

| DTC   | IVT control solenoid valve |           |          | ECM       |          | Continuity |
|-------|----------------------------|-----------|----------|-----------|----------|------------|
|       | Bank                       | Connector | Terminal | Connector | Terminal |            |
| P0075 | 1                          | F28       | 1        | F101      | 18       | Existed    |
| P0081 | 2                          | F29       | 1        |           | 29       |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 4.CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE

Refer to [EC-209, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 5.

NO >> Replace malfunctioning intake valve timing control solenoid valve. Refer to [EM-52, "Exploded View"](#).

## 5.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882884

## 1.CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE-I

1. Turn ignition switch OFF.
2. Disconnect intake valve timing control solenoid valve harness connector.
3. Check resistance between intake valve timing control solenoid valve terminals as follows.

| Terminals         | Resistance ( $\Omega$ )                   |
|-------------------|---|
| 1 and 2           | 7.0 - 7.7 [at 20°C (68°F)]                |
| 1 or 2 and ground | $\infty$<br>(Continuity should not exist) |

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace malfunctioning intake valve timing control solenoid valve. Refer to [EM-52, "Exploded View"](#).

## 2.CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE-II

1. Remove intake valve timing control solenoid valve.
2. Provide 12 V DC between intake valve timing control solenoid valve terminals 1 and 2, and then interrupt it. Make sure that the plunger moves as shown in the figure.

### CAUTION:

Do not apply 12 V DC continuously for 5 seconds or more. Doing so may result in damage to the coil in intake valve timing control solenoid valve.

### NOTE:

Always replace O-ring when intake valve timing control solenoid valve is removed.

Is the inspection result normal?

## P0075, P0081 IVT CONTROL SOLENOID VALVE

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

---

YES >> INSPECTION END

NO >> Replace malfunctioning intake valve timing control solenoid valve. Refer to [EM-52, "Exploded View"](#).

### DTC Logic

INFOID:000000006882885

#### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                           | DTC detecting condition                                     | Possible cause   |
|---------|--|---|--|
| P0102   | Mass air flow sensor (bank 1) circuit low input  | An excessively low voltage from the sensor is sent to ECM.  | <ul style="list-style-type: none"><li>• Harness or connectors (The sensor circuit is open or shorted.)</li><li>• Intake air leaks</li><li>• Mass air flow sensor</li></ul> |
| P0103   | Mass air flow sensor (bank 1) circuit high input | An excessively high voltage from the sensor is sent to ECM. | <ul style="list-style-type: none"><li>• Harness or connectors (The sensor circuit is open or shorted.)</li><li>• Mass air flow sensor</li></ul>                            |
| P010C   | Mass air flow sensor (bank 2) circuit low input  | An excessively low voltage from the sensor is sent to ECM.  | <ul style="list-style-type: none"><li>• Harness or connectors (The sensor circuit is open or shorted.)</li><li>• Intake air leaks</li><li>• Mass air flow sensor</li></ul> |
| P010D   | Mass air flow sensor (bank 2) circuit high input | An excessively high voltage from the sensor is sent to ECM. | <ul style="list-style-type: none"><li>• Harness or connectors (The sensor circuit is open or shorted.)</li><li>• Mass air flow sensor</li></ul>                            |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### Which DTC is detected?

P0102, P010C>>GO TO 2.

P0103, P010D>>GO TO 3.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE FOR DTC P0102 AND P010C

1. Start engine and wait at least 5 seconds.
2. Check DTC.

##### Is DTC detected?

YES >> Go to [EC-211, "Diagnosis Procedure"](#).

NO >> INSPECTION END

##### 3. PERFORM DTC CONFIRMATION PROCEDURE FOR DTC P0103 AND P010D-I

1. Turn ignition switch ON and wait at least 5 seconds.
2. Check DTC.

##### Is DTC detected?

YES >> Go to [EC-211, "Diagnosis Procedure"](#).

NO >> GO TO 4.

##### 4. PERFORM DTC CONFIRMATION PROCEDURE FOR DTC P0103 AND P010D-II

1. Start engine and wait at least 5 seconds.
2. Check DTC.

##### Is DTC detected?

YES >> Go to [EC-211, "Diagnosis Procedure"](#).

NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006882886

##### 1. INSPECTION START

# P0102, P0103, P010C, P010D MAF SENSOR

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

Confirm the detected DTC.

Which DTC is detected?

- P0102, P010C>>GO TO 2.
- P0103, P010D>>GO TO 3.

### 2.CHECK INTAKE SYSTEM

Check the following for connection.

- Air duct
- Vacuum hoses
- Intake air passage between air duct to intake manifold

Is the inspection result normal?

- YES >> GO TO 3.
- NO >> Reconnect the parts.

### 3.CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47. "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 4.
- NO >> Repair or replace ground connection.

### 4.CHECK MAF SENSOR POWER SUPPLY CIRCUIT

1. Disconnect mass air flow (MAF) sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between MAF sensor harness connector and ground.

| DTC          | MAF sensor |           |          | Ground | Voltage         |
|--------------|------------|-----------|----------|--------|-----------------|
|              | Bank       | Connector | Terminal |        |                 |
| P0102, P0103 | 1          | F31       | 5        | Ground | Battery voltage |
| P010C, P010D | 2          | F42       | 5        |        |                 |

Is the inspection result normal?

- YES >> GO TO 6.
- NO >> GO TO 5.

### 5.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E106, M6
- Harness connectors M116, F103
- Harness for open or short between mass air flow sensor and ECM
- Harness for open or short between mass air flow sensor and IPDM E/R

>> Repair open circuit, short to ground or short to power in harness or connectors.

### 6.CHECK MAF SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between MAF sensor harness connector and ECM harness connector.

| DTC          | MAF sensor |           |          | ECM       |          | Continuity |
|--------------|------------|-----------|----------|-----------|----------|------------|
|              | Bank       | Connector | Terminal | Connector | Terminal |            |
| P0102, P0103 | 1          | F31       | 4        | F102      | 68       | Existed    |
| P010C, P010D | 2          | F42       | 4        |           | 94       |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 7.

# P0102, P0103, P010C, P010D MAF SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 7. CHECK MAF SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between MAF sensor harness connector and ECM harness connector.

| DTC          | MAF sensor |           |          | ECM       |          | Continuity |
|--------------|------------|-----------|----------|-----------|----------|------------|
|              | Bank       | Connector | Terminal | Connector | Terminal |            |
| P0102, P0103 | 1          | F31       | 3        | F102      | 77       | Existed    |
| P010C, P010D | 2          | F42       | 3        |           | 79       |            |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 8.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 8. CHECK MASS AIR FLOW SENSOR

Refer to [EC-213, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 9.

NO >> Replace malfunctioning mass air flow sensor. Refer to [EM-29, "Exploded View"](#).

## 9. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882887

### 1. CHECK MASS AIR FLOW SENSOR-I

#### With CONSULT

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Start engine and warm it up to normal operating temperature.
4. Connect CONSULT and select "DATA MONITOR" mode.
5. Select "MAS A/F SE-B1" and "MAS A/F SE-B2", and check the indication.

| Monitor item                   | Condition  | Indication (V)            |
|--------------------------------|--|---------------------------|
| MAS A/F SE-B1<br>MAS A/F SE-B2 | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|                                | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|                                | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|                                | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

#### Without CONSULT

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Start engine and warm it up to normal operating temperature.
4. Check the voltage between ECM harness connector terminals under the following conditions.

# P0102, P0103, P010C, P010D MAF SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| ECM       |                                       |          | Condition  | Voltage (V)               |
|-----------|---------------------------------------|----------|--|---------------------------|
| Connector | +                                     | -        |  |                           |
|           | Terminal                              | Terminal |  |                           |
| F102      | 77<br>[MAF sensor (bank 1)<br>signal] | 68       | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|           |                                       |          | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|           |                                       |          | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|           |                                       |          | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |
|           | 79<br>[MAF sensor (bank 2)<br>signal] | 94       | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|           |                                       |          | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|           |                                       |          | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|           |                                       |          | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

## Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

## 2. CHECK FOR THE CAUSE OF UNEVEN AIR FLOW THROUGH MASS AIR FLOW SENSOR

1. Turn ignition switch OFF.
2. Check for the cause of uneven air flow through mass air flow sensor. Refer to the following.
  - Crushed air ducts
  - Malfunctioning seal of air cleaner element
  - Uneven dirt of air cleaner element
  - Improper specification of intake air system parts

## Is the inspection result normal?

YES >> GO TO 4.

NO >> GO TO 3.

## 3. CHECK MASS AIR FLOW SENSOR-II

### With CONSULT

1. Repair or replace malfunctioning part.
2. Start engine and warm it up to normal operating temperature.
3. Connect CONSULT and select "DATA MONITOR" mode.
4. Select "MAS A/F SE-B1" and "MAS A/F SE-B2", and check the indication.

| Monitor item                   | Condition  | Indication (V)            |
|--------------------------------|--|---------------------------|
| MAS A/F SE-B1<br>MAS A/F SE-B2 | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|                                | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|                                | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|                                | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

### Without CONSULT

1. Repair or replace malfunctioning part.
2. Start engine and warm it up to normal operating temperature.
3. Check the voltage between ECM harness connector terminals under the following conditions.

# P0102, P0103, P010C, P010D MAF SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| ECM       |                                       |          | Condition  | Voltage (V)               |
|-----------|---------------------------------------|----------|--|---------------------------|

| F102      | 77<br>[MAF sensor (bank 1)<br>signal] | 68       | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|           |                                       |          | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|           |                                       |          | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|           |                                       |          | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |
|           | 79<br>[MAF sensor (bank 2)<br>signal] | 94       | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|           |                                       |          | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|           |                                       |          | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|           |                                       |          | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

## Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 4.

## 4. CHECK MASS AIR FLOW SENSOR-III

### With CONSULT

1. Turn ignition switch OFF.
2. Disconnect mass air flow sensor harness connector and reconnect it again.
3. Start engine and warm it up to normal operating temperature.
4. Connect CONSULT and select "DATA MONITOR" mode.
5. Select "MAS A/F SE-B1" and "MAS A/F SE-B2", and check the indication.

| Monitor item                   | Condition  | Indication (V)            |
|--------------------------------|--|---------------------------|
| MAS A/F SE-B1<br>MAS A/F SE-B2 | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|                                | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|                                | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|                                | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

### Without CONSULT

1. Turn ignition switch OFF.
2. Disconnect mass air flow sensor harness connector and reconnect it again.
3. Start engine and warm it up to normal operating temperature.
4. Check the voltage between ECM harness connector terminals under the following conditions.

## P0106 MANIFOLD ABSOLUTE PRESSURE SENSOR

### DTC Logic

INFOID:000000006882888

### DTC DETECTION LOGIC

#### NOTE:

If DTC P0106 is displayed with other DTC, first perform the trouble diagnosis for other DTC.

| DTC No. | Trouble diagnosis name                                     | DTC detecting condition  | Possible cause  |
|---------|--|--|---|
| P0106   | Manifold absolute pressure (MAP) circuit range/performance | A difference exceeding the specified value develops between a value transmitted from the manifold absolute pressure (MAP) sensor to ECM and an estimated intake pressure of intake manifold calculated by ECM. | <ul style="list-style-type: none"><li>• Harness or connectors (The sensor circuit is open or shorted.)</li><li>• Manifold absolute pressure (MAP) sensor</li><li>• Intake air leaks</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

If engine will not start or stops soon, wait at least 10 seconds with engine stopped (Ignition switch ON) instead of running engine at idle speed.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

##### With CONSULT

1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to normal operating temperature.
3. Accelerate the vehicle from 0 to 88 km/h (0 to 55 MPH) under the following conditions:

#### CAUTION:

Always drive at a safe speed.

#### NOTE:

- Accelerate with the accelerator pedal kept constant.
- The acceleration at engine speed 2,000 and 3,000 rpm allows easy diagnoses.

|                |             |
|----------------|-------------|
| ACCEL SEN 1    | 1.4 – 2.0 V |
| Selector lever | D position  |

4. Check 1st trip DTC.

##### Without CONSULT

1. Start engine and warm it up to normal operating temperature.
2. With selector lever in D position, accelerate the vehicle from 0 to 88 km/h (0 to 55 MPH) under the following conditions:

#### CAUTION:

Always drive at a safe speed.

#### NOTE:

- Accelerate with the accelerator pedal kept constant.
- The acceleration at engine speed 2,000 and 3,000 rpm allows easy diagnoses.

| Accelerator pedal position sensor 1 |          | Ground | Voltage (V) |
|-------------------------------------|----------|--------|-------------|
| Connector                           | Terminal |        |             |
| M153*1                              | 4*1      | Ground | 1.4 – 2.0   |
| M9*2                                | 3*2      |        |             |

\*1: With ICC

# P0106 MANIFOLD ABSOLUTE PRESSURE SENSOR

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

\*2: Without ICC

3. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-218, "Diagnosis Procedure"](#).

NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000006882889

### 1. CHECK INTAKE SYSTEM

Check the following for connection.

- Air duct
- Vacuum hoses
- Intake air passage between air duct and intake manifold.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace ground connection.

### 2. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair or replace ground connection.

### 3. CHECK MAP SENSOR POWER SUPPLY CIRCUIT

1. Disconnect manifold absolute pressure (MAP) sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between MAP sensor harness connector and ground.

| MAP sensor |          | Ground | Voltage (V) |
|------------|----------|--------|-------------|
| Connector  | Terminal |        |             |
| F50        | 1        | Ground | Approx. 5   |

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 4. CHECK MAP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between MAP sensor harness connector and ECM harness connector.

| MAP sensor |          | ECM       |          | Continuity |
|------------|----------|-----------|----------|------------|
| Connector  | Terminal | Connector | Terminal |            |
| F50        | 3        | F102      | 96       | Existed    |

4. Also check harness for short to ground and power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 5. CHECK MAP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between MAP sensor harness connector and ECM harness connector.

# P0106 MANIFOLD ABSOLUTE PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| MAP sensor |          | ECM       |          | Continuity |
|------------|----------|-----------|----------|------------|
| Connector  | Terminal | Connector | Terminal |            |
| F50        | 2        | F101      | 38       | Existed    |

2. Also check harness for short to ground and power.

Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 6.CHECK MAP SENSOR

Refer to [EC-219. "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> Replace MAP sensor. Refer to [EM-31. "Exploded View"](#).

## 7.CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882890

### 1.CHECK MAP SENSOR-I

1. Turn ignition switch OFF.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch OFF, wait at least 5 seconds and then turn ON.
4. Check the voltage between ECM harness connector terminals as follows.

| ECM       |          |           |          |
|-----------|----------|-----------|----------|
| +         |          | -         |          |
| Connector | Terminal | Connector | Terminal |
| F101      | 38       | F102      | 96       |

#### NOTE:

- To avoid the influence of intake manifold vacuum, check the voltage 1 or more minutes past after engine is stopped.
- Because the sensor is absolute pressure sensor, output value may differ depending on atmospheric pressure and altitude.

5. Measure the atmospheric pressure.

#### NOTE:

As the atmospheric pressure described on the synoptic chart is the value at sea level, compensate the pressure with the following chart.

| Altitude (m) | Compensated pressure (hPa) |
|--------------|----------------------------|
| 0            | 0                          |
| 200          | -24                        |
| 400          | -47                        |
| 600          | -70                        |
| 800          | -92                        |
| 1000         | -114                       |
| 1500         | -168                       |
| 2000         | -218                       |

6. Check the manifold absolute pressure sensor value corresponding to the atmospheric pressure.

# P0106 MANIFOLD ABSOLUTE PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| Atmospheric pressure (hPa) | Voltage (V) |
|----------------------------|-------------|
| 800                        | 3.1 – 3.7   |
| 850                        | 3.3 – 3.9   |
| 900                        | 3.5 – 4.1   |
| 950                        | 3.8 – 4.3   |
| 1000                       | 4.0 – 4.6   |
| 1050                       | 4.2 – 4.8   |

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace MAP sensor. Refer to [EM-31, "Exploded View"](#).

## 2. CHECK MAP SENSOR-II

1. Start engine and let it idle.
2. Check intake manifold vacuum.
3. Check the voltage between ECM harness connector terminals as per the following.

| ECM       |          |           |          |
|-----------|----------|-----------|----------|
| +         |          | -         |          |
| Connector | Terminal | Connector | Terminal |
| F101      | 38       | F102      | 96       |

4. Confirm the difference of the voltage when engine is stopped and at idling is within the values shown in the following chart.

| Intake manifold vacuum [kPA (mmHg)] | Voltage difference (V) |
|-------------------------------------|------------------------|
| -40 (-300)                          | 1.5 – 2.0              |
| -53.3 (-400)                        | 2.0 – 2.6              |
| -66.7 (-500)                        | 2.6 – 3.2              |
| -80 (-600)                          | 3.2 – 3.8              |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace MAP sensor. Refer to [EM-31, "Exploded View"](#).

[VQ37VHR FOR USA AND CANADA]

## P010A MANIFOLD ABSOLUTE PRESSURE SENSOR

### DTC Logic

INFOID:000000006882891

#### DTC DETECTION LOGIC

##### NOTE:

If DTC P010A is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643.  
Refer to [EC-388, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name                    | DTC detecting condition  | Possible cause   |
|---------|---|--|--|
| P010A   | Manifold absolute pressure sensor circuit | <ul style="list-style-type: none"><li>An excessively low voltage from the sensor is sent to ECM.</li><li>An excessively high voltage from the sensor is sent to ECM.</li></ul> | <ul style="list-style-type: none"><li>Harness or connectors (The sensor circuit is open or shorted.)</li><li>Manifold absolute pressure (MAP) sensor</li></ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

- Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON.
- Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

- Start engine and let it idle for 10 seconds.
- Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-221, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006882892

##### 1. CHECK GROUND CONNECTION

- Turn ignition switch OFF.
- Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

##### 2. CHECK MAP SENSOR POWER SUPPLY CIRCUIT

- Disconnect manifold absolute pressure (MAP) sensor harness connector.
- Turn ignition switch ON.
- Check the voltage between MAP sensor harness connector and ground.

| MAP sensor |          | Ground | Voltage (V) |
|------------|----------|--------|-------------|
| Connector  | Terminal |        |             |
| F50        | 1        | Ground | Approx. 5   |

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> Repair open circuit, short to ground or short to power in harness or connectors.

##### 3. CHECK MAP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

- Turn ignition switch OFF.
- Disconnect ECM harness connector.

# P010A MANIFOLD ABSOLUTE PRESSURE SENSOR

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

3. Check the continuity between MAP sensor harness connector and ECM harness connector.

| MAP sensor |          | ECM       |          | Continuity |
|------------|----------|-----------|----------|------------|
| Connector  | Terminal | Connector | Terminal |            |
| F50        | 3        | F102      | 96       | Existed    |

4. Also check harness for short to ground and power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 4.CHECK MAP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between MAP sensor harness connector and ECM harness connector.

| MAP sensor |          | ECM       |          | Continuity |
|------------|----------|-----------|----------|------------|
| Connector  | Terminal | Connector | Terminal |            |
| F50        | 2        | F101      | 38       | Existed    |

2. Also check harness for short to ground and power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 5.CHECK MAP SENSOR

Refer to [EC-222, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace MAP sensor. Refer to [EM-31, "Exploded View"](#).

## 6.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882893

### 1.CHECK MAP SENSOR-I

1. Turn ignition switch OFF.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch OFF, wait at least 5 seconds and then turn ON.
4. Check the voltage between ECM harness connector terminals as follows.

| ECM       |          |           |          |
|-----------|----------|-----------|----------|
| +         |          | -         |          |
| Connector | Terminal | Connector | Terminal |
| F101      | 38       | F102      | 96       |

#### NOTE:

- To avoid the influence of intake manifold vacuum, check the voltage 1 or more minutes past after engine is stopped.
  - Because the sensor is absolute pressure sensor, output value may differ depending on atmospheric pressure and altitude.
5. Measure the atmospheric pressure.

#### NOTE:

As the atmospheric pressure described on the synoptic chart is the value at sea level, compensate the pressure with the following chart.

# P010A MANIFOLD ABSOLUTE PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| Altitude (m) | Compensated pressure (hPa) |
|--------------|----------------------------|
| 0            | 0                          |
| 200          | -24                        |
| 400          | -47                        |
| 600          | -70                        |
| 800          | -92                        |
| 1000         | -114                       |
| 1500         | -168                       |
| 2000         | -218                       |

6. Check the manifold absolute pressure sensor value corresponding to the atmospheric pressure.

| Atmospheric pressure (hPa) | Voltage (V) |
|----------------------------|-------------|
| 800                        | 3.1 – 3.7   |
| 850                        | 3.3 – 3.9   |
| 900                        | 3.5 – 4.1   |
| 950                        | 3.8 – 4.3   |
| 1000                       | 4.0 – 4.6   |
| 1050                       | 4.2 – 4.8   |

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace MAP sensor. Refer to [EM-31. "Exploded View"](#).

## 2. CHECK MAP SENSOR-II

1. Start engine and let it idle.
2. Check intake manifold vacuum.
3. Check the voltage between ECM harness connector terminals as per the following.

| ECM       |          |           |          |
|-----------|----------|-----------|----------|
| +         |          | -         |          |
| Connector | Terminal | Connector | Terminal |
| F101      | 38       | F102      | 96       |

4. Confirm the difference of the voltage when engine is stopped and at idling is within the values shown in the following chart.

| Intake manifold vacuum | Voltage difference (V) |
|------------------------|------------------------|
| -40kPa (-300mmHg)      | 1.5 – 2.0              |
| -53.3kPa (-400mmHg)    | 2.0 – 2.6              |
| -66.7kPa (-500mmHg)    | 2.6 – 3.2              |
| -80kPa (-600mmHg)      | 3.2 – 3.8              |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace MAP sensor. Refer to [EM-31. "Exploded View"](#).

# P0111 IAT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0111 IAT SENSOR

### DTC Logic

INFOID:000000007202593

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis<br>(Trouble diagnosis content)                                      | DTC detecting condition  | Possible cause  |
|---------|---|--|---|
| P0111   | IAT SENSOR 1 B1<br>[Intake air temperature (IAT) sensor<br>circuit range/performance] | The comparison result of signals transmitted to ECM from each temperature sensor (IAT sensor, ECT sensor, FTT sensor, and EOT sensor) shows that the voltage signal of the IAT sensor is higher/lower than that of other temperature sensors when the engine is started with its cold state. | <ul style="list-style-type: none"><li>• Harness or connectors (High or low resistance in the IAT sensor circuit)</li><li>• IAT sensor</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1.INSPECTION START

##### Is it necessary to erase permanent DTC?

YES >> GO TO 3.

NO >> GO TO 2.

#### 2.PERFORM COMPONENT FUNCTION CHECK

Perform component function check. Refer to [EC-225, "Component Function Check"](#).

##### **NOTE:**

Use the component function check to check the overall function of the IAT sensor circuit. During this check, a 1st trip DTC might not be confirmed.

##### Is the inspection result normal?

YES >> INSPECTION END

NO >> Proceed to [EC-225, "Diagnosis Procedure"](#).

#### 3.PRECONDITIONING

If DTC CONFIRMATION PROCEDURE has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### **TESTING CONDITION:**

- Before performing the following procedure, do not add fuel.
- Before performing the following procedure, check that fuel level is between 1/4 and 4/4.
- Before performing the following procedure, confirm that battery voltage is 11 V or more at idle.

>> GO TO 4.

#### 4.PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for 60 minutes.
2. Move the vehicle to a cool place.

##### **NOTE:**

Cool the vehicle in an environment of ambient air temperature between  $-10^{\circ}\text{C}$  ( $14^{\circ}\text{F}$ ) and  $35^{\circ}\text{C}$  ( $95^{\circ}\text{F}$ ).

3. Turn ignition switch OFF and soak the vehicle for 12 hours.

##### **CAUTION:**

**Never turn ignition switch ON during soaking.**

##### **NOTE:**

The vehicle must be cooled with the hood open.

4. Start engine and let it idle for 5 minutes or more.

##### **CAUTION:**

**Never turn ignition switch OFF during idling.**

5. Check 1st trip DTC.

# P0111 IAT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

Is 1st trip DTC detected?

- YES >> Proceed to [EC-225, "Diagnosis Procedure"](#).
- NO >> INSPECTION END

A

## Component Function Check

INFOID:000000007202594

EC

### 1.CHECK INTAKE AIR TEMPERATURE (IAT) SENSOR

1. Turn ignition switch OFF.
2. Disconnect mass air flow sensor (bank 1) harness connector.
3. Check resistance between mass air flow sensor (bank 1) terminals as follows.

C

| Terminals | Condition             | Resistance (kΩ)       |
|-----------|-----------------------|-----------------------|
| 1 and 2   | Temperature [°C (°F)] | 25 (77) 1.800 – 2.200 |

D

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Proceed to [EC-225, "Diagnosis Procedure"](#).

E

### 2.CHECK INTERMITTENT INCIDENT

Check intermittent incident. Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Proceed to [EC-225, "Diagnosis Procedure"](#).

F

G

## Diagnosis Procedure

INFOID:000000007202595

H

### 1.CHECK INTAKE AIR TEMPERATURE (IAT) SENSOR

Check intake air temperature sensor. Refer to [EC-225, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Replace mass air flow sensor (with intake air temperature sensor) (bank 1). Refer to [EM-29, "Exploded View"](#).

I

J

### 2.CHECK INTERMITTENT INCIDENT

Check intermittent incident. Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

K

L

## Component Inspection

INFOID:000000007202596

### 1.CHECK INTAKE AIR TEMPERATURE (IAT) SENSOR

1. Turn ignition switch OFF.
2. Disconnect mass air flow sensor (bank 1) harness connector.
3. Check resistance between mass air flow sensor (bank 1) terminals as follows.

M

N

| Terminals | Condition             | Resistance (kΩ)       |
|-----------|-----------------------|-----------------------|
| 1 and 2   | Temperature [°C (°F)] | 25 (77) 1.800 – 2.200 |

O

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Replace mass air flow sensor (with intake air temperature sensor) (bank 1). Refer to [EM-29, "Exploded View"](#).

P

# P0112, P0113 IAT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0112, P0113 IAT SENSOR

### DTC Logic

INFOID:000000006882894

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                           | DTC detecting condition                                     | Possible cause   |
|---------|--|---|--|
| P0112   | Intake air temperature sensor circuit low input  | An excessively low voltage from the sensor is sent to ECM.  | • Harness or connectors<br>(The sensor circuit is open or shorted.)<br>• Intake air temperature sensor |
| P0113   | Intake air temperature sensor circuit high input | An excessively high voltage from the sensor is sent to ECM. |  |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON and wait at least 5 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-226, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006882895

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK INTAKE AIR TEMPERATURE SENSOR POWER SUPPLY CIRCUIT

1. Disconnect mass air flow (MAF) sensor (intake air temperature sensor is built-into) harness connector.
2. Turn ignition switch ON.
3. Check the voltage between mass air flow sensor (bank 1) harness connector and ground.

| MAF sensor (bank 1) |          | Ground | Voltage (V) |
|---------------------|----------|--------|-------------|
| Connector           | Terminal |        |             |
| F31                 | 2        | Ground | Approx. 5   |

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> Repair open circuit, short to ground or short to power in harness or connectors.

#### 3. CHECK INTAKE AIR TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between mass air flow sensor (bank 1) harness connector and ECM harness connector.

# P0112, P0113 IAT SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

| MAF sensor (bank 1) |          | ECM       |          | Continuity |
|---------------------|----------|-----------|----------|------------|
| Connector           | Terminal | Connector | Terminal |            |
| F31                 | 1        | F102      | 68       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 4.CHECK INTAKE AIR TEMPERATURE SENSOR

Refer to [EC-227, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 5.

NO >> Replace mass air flow sensor (with intake air temperature sensor) (bank 1). Refer to [EM-29, "Exploded View"](#).

## 5.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882896

## 1.CHECK INTAKE AIR TEMPERATURE SENSOR

1. Turn ignition switch OFF.
2. Disconnect mass air flow sensor (bank 1) harness connector.
3. Check resistance between mass air flow sensor (bank 1) terminals as follows.

| Terminals | Condition             |         | Resistance (kΩ) |
|-----------|-----------------------|---------|-----------------|
| 1 and 2   | Temperature [°C (°F)] | 25 (77) | 1.800 - 2.200   |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace mass air flow sensor (with intake air temperature sensor) (bank 1). Refer to [EM-29, "Exploded View"](#).

[VQ37VHR FOR USA AND CANADA]

## P0116 ECT SENSOR

### DTC Logic

INFOID:000000006882897

#### DTC DETECTION LOGIC

**NOTE:**

If DTC P0116 is displayed with P0117 or P0118, first perform the trouble diagnosis for DTC P0117, P0118. Refer to [EC-231, "DTC Logic"](#).

| DTC No. | Trouble diagnosis<br>(Trouble diagnosis content)                                       | DTC detecting condition  | Possible cause  |
|---------|--|--|---|
| P0116   | ECT SEN/CIRC<br>[Engine coolant temperature (ECT)<br>sensor circuit range/performance] | The comparison result of signals transmitted to ECM from each temperature sensor (IAT sensor, ECT sensor, FTT sensor, and EOT sensor) shows that the voltage signal of the ECT sensor is higher/lower than that of other temperature sensors when the engine is started with its cold state. | <ul style="list-style-type: none"><li>• Harness or connectors (High or low resistance in the ECT sensor circuit)</li><li>• ECT sensor</li></ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1.INSPECTION START

Is it necessary to erase permanent DTC?

- YES >> GO TO 3.
- NO >> GO TO 2.

##### 2.PERFORM COMPONENT FUNCTION CHECK

Perform component function check. Refer to [EC-229, "Component Function Check"](#).

**NOTE:**

Use the component function check to check the overall function of the ECT sensor circuit. During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Proceed to [EC-229, "Diagnosis Procedure"](#).

##### 3.PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

**TEST CONDITION:**

- Before performing the following procedure, do not add fuel.
- Before performing the following procedure, check that fuel level is between 1/4 and 4/4.
- Before performing the following procedure, confirm that battery voltage is 11 V or more at idle.

>> GO TO 4.

##### 4.PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for 60 minutes.
2. Move the vehicle to a cool place.

**NOTE:**

Cool the vehicle in an environment of ambient air temperature between -10°C (14°F) and 35°C (95°F).

3. Turn ignition switch OFF and soak the vehicle for 12 hours.

**CAUTION:**

**Never turn ignition switch ON during soaking.**

**NOTE:**

The vehicle must be cooled with the hood open.

4. Start engine and let it idle for 5 minutes or more.

# P0116 ECT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## CAUTION:

Never turn ignition switch OFF during idling.

5. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Proceed to [EC-229, "Diagnosis Procedure"](#).
- NO >> INSPECTION END

## Component Function Check

INFOID:000000007211665

### 1.CHECK ENGINE COOLANT TEMPERATURE (ECT) SENSOR

1. Turn ignition switch OFF.
2. Disconnect ECT sensor harness connector.
3. Remove ECT sensor. Refer to [CO-25, "Exploded View"](#).
4. Check resistance between ECT sensor terminals by heating with hot water as shown in the figure.

| Terminals | Condition             | Resistance (kΩ) |               |
|-----------|-----------------------|-----------------|---------------|
| 1 and 2   | Temperature [°C (°F)] | 20 (68)         | 2.10 - 2.90   |
|           |                       | 50 (122)        | 0.68 - 1.00   |
|           |                       | 90 (194)        | 0.236 - 0.260 |

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Proceed to [EC-229, "Diagnosis Procedure"](#).

### 2.CHECK INTERMITTENT INCIDENT

Check intermittent incident. Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Proceed to [EC-229, "Diagnosis Procedure"](#).

## Diagnosis Procedure

INFOID:000000007211666

### 1.CHECK ENGINE COOLANT TEMPERATURE (ECT) SENSOR

Check ECT sensor. Refer to [EC-229, "Component Inspection"](#).

Is the inspection result normal?

- OK >> GO TO 2.
- NG >> Replace ECT sensor. Refer to [CO-25, "Exploded View"](#).

### 2.CHECK INTERMITTENT INCIDENT

Check intermittent incident. Refer to [GI-44, "Intermittent Incident"](#).

>> **INSPECTION END**

## Component Inspection

INFOID:000000007211667

### 1.CHECK ENGINE COOLANT TEMPERATURE SENSOR

1. Turn ignition switch OFF.
2. Disconnect engine coolant temperature sensor harness connector.
3. Remove engine coolant temperature sensor. Refer to [CO-25, "Exploded View"](#).

# P0116 ECT SENSOR

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

4. Check resistance between engine coolant temperature sensor terminals by heating with hot water as shown in the figure.

| Terminals | Condition                                   | Resistance (k $\Omega$ ) |               |
|-----------|---|--------------------------|---------------|
| 1 and 2   | Temperature [ $^{\circ}$ C ( $^{\circ}$ F)] | 20 (68)                  | 2.10 - 2.90   |
|           |   | 50 (122)                 | 0.68 - 1.00   |
|           |   | 90 (194)                 | 0.236 - 0.260 |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace engine coolant temperature sensor. Refer to [CO-25, "Exploded View"](#).

# P0117, P0118 ECT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

## P0117, P0118 ECT SENSOR

### DTC Logic

INFOID:000000006882900

### DTC DETECTION LOGIC

| DTC No. | Trouble Diagnosis Name                               | DTC Detecting Condition                                     | Possible Cause   |
|---------|--|---|--|
| P0117   | Engine coolant temperature sensor circuit low input  | An excessively low voltage from the sensor is sent to ECM.  | <ul style="list-style-type: none"><li>• Harness or connectors (The sensor circuit is open or shorted.)</li><li>• Engine coolant temperature sensor</li></ul> |
| P0118   | Engine coolant temperature sensor circuit high input | An excessively high voltage from the sensor is sent to ECM. |  |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON and wait at least 5 seconds.
2. Check DTC.

Is DTC detected?

- YES >> Go to [EC-231, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006882901

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK ECT SENSOR POWER SUPPLY CIRCUIT

1. Disconnect engine coolant temperature (ECT) sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between ECT sensor harness connector and ground.

| ECT sensor |          | Ground | Voltage (V) |
|------------|----------|--------|-------------|
| Connector  | Terminal |        |             |
| F17        | 1        | Ground | Approx. 5   |

Is the inspection result normal?

- YES >> GO TO 4.  
NO >> GO TO 3.

#### 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F106, F107
- Harness for open or short between engine coolant temperature sensor and ECM

# P0117, P0118 ECT SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 4. CHECK ECT SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between ECT sensor harness connector and ECM harness connector.

| ECT sensor |          | ECM       |          | Continuity |
|------------|----------|-----------|----------|------------|
| Connector  | Terminal | Connector | Terminal |            |
| F17        | 2        | F102      | 84       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 5. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to [EC-232. "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace engine coolant temperature sensor. Refer to [CO-25. "Exploded View"](#).

## 6. CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882902

## 1. CHECK ENGINE COOLANT TEMPERATURE SENSOR

1. Turn ignition switch OFF.
2. Disconnect engine coolant temperature sensor harness connector.
3. Remove engine coolant temperature sensor. Refer to [CO-25. "Exploded View"](#).
4. Check resistance between engine coolant temperature sensor terminals by heating with hot water as shown in the figure.

| Terminals | Condition           | Resistance (kΩ) |               |
|-----------|---------------------|-----------------|---------------|
| 1 and 2   | Temperature °C (°F) | 20 (68)         | 2.10 - 2.90   |
|           |                     | 50 (122)        | 0.68 - 1.00   |
|           |                     | 90 (194)        | 0.236 - 0.260 |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace engine coolant temperature sensor. Refer to [CO-25. "Exploded View"](#).

## P0122, P0123, P0227, P0228 TP SENSOR

### DTC Logic

INFOID:000000006882903

#### DTC DETECTION LOGIC

##### NOTE:

If DTC P0122, P0123, P0227 or P0228 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to [EC-388, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name                                 | DTC detecting condition  | Possible cause  |
|---------|--|--|---|
| P0122   | Throttle position sensor 2 (bank 1) circuit low input  | An excessively low voltage from the TP sensor 2 is sent to ECM.  | • Harness or connectors (TP sensor 2 circuit is open or shorted.)<br>• Electric throttle control actuator (TP sensor 2) |
| P0123   | Throttle position sensor 2 (bank 1) circuit high input | An excessively high voltage from the TP sensor 2 is sent to ECM. |   |
| P0227   | Throttle position sensor 2 (bank 2) circuit low input  | An excessively low voltage from the TP sensor 2 is sent to ECM.  |   |
| P0228   | Throttle position sensor 2 (bank 2) circuit high input | An excessively high voltage from the TP sensor 2 is sent to ECM. |   |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for 1 second.
2. Check DTC.

Is DTC detected?

- YES >> Go to [EC-233, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006882904

##### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

##### 2. CHECK THROTTLE POSITION SENSOR 2 POWER SUPPLY CIRCUIT

1. Disconnect electric throttle control actuator harness connector.
2. Turn ignition switch ON.
3. Check the voltage between electric throttle control actuator harness connector and ground.

# P0122, P0123, P0227, P0228 TP SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| DTC          | Electric throttle control actuator |           |          | Ground | Voltage (V) |
|--------------|------------------------------------|-----------|----------|--------|-------------|
|              | Bank                               | Connector | Terminal |        |             |
| P0122, P0123 | 1                                  | F67       | 6        | Ground | Approx. 5   |
| P0227, P0228 | 2                                  | F27       | 1        |        |             |

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 3. CHECK THROTTLE POSITION SENSOR 2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between electric throttle control actuator harness connector and ECM harness connector.

| DTC          | Electric throttle control actuator |           |          | ECM       |          | Continuity |
|--------------|------------------------------------|-----------|----------|-----------|----------|------------|
|              | Bank                               | Connector | Terminal | Connector | Terminal |            |

| P0227, P0228 | 2                                  | F27       | 4        |           | 48       |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 4. CHECK THROTTLE POSITION SENSOR 2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between electric throttle control actuator harness connector and ECM harness connector.

| DTC          | Electric throttle control actuator |           |          | ECM       |          | Continuity |
|--------------|------------------------------------|-----------|----------|-----------|----------|------------|
|              | Bank                               | Connector | Terminal | Connector | Terminal |            |
| P0122, P0123 | 1                                  | F67       | 5        | F101      | 34       | Existed    |
| P0227, P0228 | 2                                  | F27       | 3        |           | 35       |            |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 5. CHECK THROTTLE POSITION SENSOR

Refer to [EC-235, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

## 6. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.
2. Go to [EC-235, "Special Repair Requirement"](#).

>> INSPECTION END

## 7. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882905

### 1. CHECK THROTTLE POSITION SENSOR

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Perform [EC-148, "Work Procedure"](#).
4. Turn ignition switch ON.
5. Set selector lever to D position.
6. Check the voltage between ECM harness connector terminals under the following conditions.

| ECM       |                           |          | Condition       | Voltage (V)    |
|-----------|---------------------------|----------|-----------------|----------------|
| Connector | +                         | -        |                 |                |
|           | Terminal                  | Terminal |                 |                |
| F101      | 30 [TP sensor 1 (bank 1)] | 40       | Fully released  | More than 0.36 |
|           |                           |          | Fully depressed | Less than 4.75 |
|           | 31 [TP sensor 1 (bank 2)] | 48       | Fully released  | More than 0.36 |
|           |                           |          | Fully depressed | Less than 4.75 |
|           | 34 [TP sensor 2 (bank 1)] | 40       | Fully released  | Less than 4.75 |
|           |                           |          | Fully depressed | More than 0.36 |
|           | 35 [TP sensor 2 (bank 2)] | 48       | Fully released  | Less than 4.75 |
|           |                           |          | Fully depressed | More than 0.36 |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

### 2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.
2. Go to [EC-235, "Special Repair Requirement"](#).

>> INSPECTION END

## Special Repair Requirement

INFOID:000000006882906

### 1. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Refer to [EC-148, "Work Procedure"](#)

>> GO TO 2.

### 2. PERFORM IDLE AIR VOLUME LEARNING

Refer to [EC-149, "Work Procedure"](#)

>> END

# P0125 ECT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0125 ECT SENSOR

### DTC Logic

INFOID:000000006882907

#### DTC DETECTION LOGIC

##### NOTE:

If DTC P0125 is displayed with P0117 or P0118, first perform the trouble diagnosis for DTC P0117 or P0118. Refer to [EC-231, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name   | DTC detecting condition  | Possible cause  |
|---------|--|--|---|
| P0125   | Insufficient engine coolant temperature for closed loop fuel control | <ul style="list-style-type: none"><li>• Voltage sent to ECM from the sensor is not practical, even when some time has passed after starting the engine.</li><li>• Engine coolant temperature is insufficient for closed loop fuel control.</li></ul> | <ul style="list-style-type: none"><li>• Harness or connectors (High resistance in the circuit)</li><li>• Engine coolant temperature sensor</li><li>• Thermostat</li></ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

##### 2. CHECK ENGINE COOLANT TEMPERATURE SENSOR FUNCTION

1. Turn ignition switch ON.
2. Select "DATA MONITOR" mode with CONSULT.
3. Check that "COOLAN TEMP/S" is above  $-5^{\circ}\text{C}$  ( $23^{\circ}\text{F}$ ).

Is the temperature above  $-5^{\circ}\text{C}$  ( $23^{\circ}\text{F}$ )?

YES >> INSPECTION END

NO >> GO TO 3.

##### 3. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and run it for 65 minutes at idle speed.  
If "COOLAN TEMP/S" increases to more than  $-5^{\circ}\text{C}$  ( $23^{\circ}\text{F}$ ) within 65 minutes, stop engine because the test result will be OK.

##### CAUTION:

Be careful not to overheat engine.

2. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> [EC-236, "Diagnosis Procedure"](#)

NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006882908

##### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace ground connection.

##### 2. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to [EC-237, "Component Inspection"](#).

Is the inspection result normal?

# P0125 ECT SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

YES >> GO TO 3.

NO >> Replace engine coolant temperature sensor. Refer to [CO-25, "Exploded View"](#).

## 3.CHECK THERMOSTAT OPERATION

When the engine is cold [lower than 70°C (158°F)] condition, grasp lower radiator hose and confirm the engine coolant does not flow.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair or replace thermostat. Refer to [CO-23, "Removal and Installation"](#).

## 4.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882909

## 1.CHECK ENGINE COOLANT TEMPERATURE SENSOR

1. Turn ignition switch OFF.
2. Disconnect engine coolant temperature sensor harness connector.
3. Remove engine coolant temperature sensor. Refer to [CO-25, "Exploded View"](#).
4. Check resistance between engine coolant temperature sensor terminals by heating with hot water as shown in the figure.

| Terminals | Condition             | Resistance (kΩ) |               |
|-----------|-----------------------|-----------------|---------------|
| 1 and 2   | Temperature [°C (°F)] | 20 (68)         | 2.10 - 2.90   |
|           |                       | 50 (122)        | 0.68 - 1.00   |
|           |                       | 90 (194)        | 0.236 - 0.260 |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace engine coolant temperature sensor. Refer to [CO-25, "Exploded View"](#).

# P0127 IAT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

## P0127 IAT SENSOR

### DTC Logic

INFOID:000000006882910

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name          | DTC detecting condition   | Possible cause  |
|---------|---------------------------------|---|---|
| P0127   | Intake air temperature too high | Rationally incorrect voltage from the sensor is sent to ECM, compared with the voltage signal from engine coolant temperature sensor. | <ul style="list-style-type: none"><li>• Harness or connectors (The sensor circuit is open or shorted)</li><li>• Intake air temperature sensor</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

**This test may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.**

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Wait until engine coolant temperature is less than 96°C (205°F)
  - Turn ignition switch ON.
  - Select "DATA MONITOR" mode with CONSULT.
  - Check the engine coolant temperature.
  - If the engine coolant temperature is not less than 96°C (205°F), turn ignition switch OFF and cool down engine.

#### NOTE:

Perform the following steps before engine coolant temperature is above 96°C (205°F).

2. Turn ignition switch ON.
3. Select "DATA MONITOR" mode with CONSULT.
4. Start engine.
5. Hold vehicle speed at more than 70 km/h (43 MPH) for 100 consecutive seconds.

#### CAUTION:

**Always drive vehicle at a safe speed.**

6. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-238, "Diagnosis Procedure"](#).

NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006882911

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace ground connection.

#### 2. CHECK INTAKE AIR TEMPERATURE SENSOR

Refer to [EC-239, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 3.

# P0128 THERMOSTAT FUNCTION

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0128 THERMOSTAT FUNCTION

### DTC Logic

INFOID:000000006882913

#### DTC DETECTION LOGIC

##### NOTE:

If DTC P0128 is displayed with DTC P0300, P0301, P0302, P0303, P0304, P0305 or P0306, first perform the trouble diagnosis for P0300, P0301, P0302, P0303, P0304, P0305, P0306. Refer to [EC-303](#).

Engine coolant temperature has not risen enough to open the thermostat even though the engine has run long enough.

This is due to a leak in the seal or the thermostat being stuck open.

| DTC No. | Trouble diagnosis name | DTC detecting condition  | Possible cause  |
|---------|------------------------|--|---|
| P0128   | Thermostat function    | The engine coolant temperature does not reach to specified temperature even though the engine has run long enough. | <ul style="list-style-type: none"><li>• Thermostat</li><li>• Leakage from sealing portion of thermostat</li><li>• Engine coolant temperature sensor</li></ul> |

#### DTC CONFIRMATION PROCEDURE

##### NOTE:

Never refuel before and during the following procedure.

### 1. PRECONDITIONING-I

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

### 2. PRECONDITIONING-II

 With CONSULT

1. Turn ignition switch ON.
2. Check the following conditions:

|                     |                      |
|---------------------|----------------------|
| Ambient temperature | -10°C (14°F) or more |
| A/C switch          | OFF                  |
| Blower fan switch   | OFF                  |

3. Select "DATA MONITOR" mode of "ENGINE" using CONSULT.
4. Check the following conditions:

|               |                           |
|---------------|---------------------------|
| COOLAN TEMP/S | -10°C – 52°C (14 – 126°F) |
|---------------|---------------------------|

Is the condition satisfied?

- YES >> GO TO 3.  
NO >> 1. Satisfy the condition.  
2. GO TO 3.

### 3. PERFORM DTC CONFIRMATION PROCEDURE-I

 With CONSULT

1. Start engine.
2. Drive the vehicle until the following condition is satisfied.

##### CAUTION:

**Always drive vehicle at safe speed.**

##### - STEP 1

Drive the vehicle under the conditions instructed below until the difference between "COOLAN TEMP/S" and "FUEL T/TMP SE" becomes at least 25°C (45°F).

# P0128 THERMOSTAT FUNCTION

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

|               |  |
|---------------|--|
| COOLAN TEMP/S | 71°C (159°F) or less   |
| FUEL T/TMP SE | Less than the value calculated by subtracting 25°C (45°F) from "COOLAN TEMP/S".* |

NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000006882914

### 1.CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to [EC-241, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace engine coolant temperature sensor. Refer to [CO-25, "Exploded View"](#).

### 2.CHECK THERMOSTAT

Check thermostat. Refer to [CO-24, "Inspection"](#).

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace thermostat. Refer to [CO-23, "Exploded View"](#).

## Component Inspection

INFOID:000000006882915

### 1.CHECK ENGINE COOLANT TEMPERATURE SENSOR

1. Turn ignition switch OFF.

2. Disconnect engine coolant temperature sensor harness connector.

3. Remove engine coolant temperature sensor. Refer to [CO-25, "Exploded View"](#).

# P0128 THERMOSTAT FUNCTION

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

4. Check resistance between engine coolant temperature sensor terminals by heating with hot water as shown in the figure.

| Terminals | Condition                                   | Resistance (k $\Omega$ ) |               |
|-----------|---|--------------------------|---------------|
| 1 and 2   | Temperature [ $^{\circ}$ C ( $^{\circ}$ F)] | 20 (68)                  | 2.10 - 2.90   |
|           |   | 50 (122)                 | 0.68 - 1.00   |
|           |   | 90 (194)                 | 0.236 - 0.260 |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace engine coolant temperature sensor. Refer to [CO-25, "Exploded View"](#).

# P0130, P0150 A/F SENSOR 1

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0130, P0150 A/F SENSOR 1

### DTC Logic

INFOID:000000006882916

#### DTC DETECTION LOGIC

To judge malfunctions, the diagnosis checks that the A/F signal computed by ECM from the A/F sensor 1 signal fluctuates according to fuel feedback control.

| DTC No. | Trouble diagnosis name                         | DTC detecting condition |  | Possible Cause   |
|---------|--|-------------------------|--|--|
| P0130   | Air fuel ratio (A/F) sensor 1 (bank 1) circuit | A)                      | The A/F signal computed by ECM from the A/F sensor 1 signal is constantly in a range other than approx. 2.2 V. | • Harness or connectors (The A/F sensor 1 circuit is open or shorted.)<br>• A/F sensor 1 |
|         |  | B)                      | The A/F signal computed by ECM from the A/F sensor 1 signal is constantly approx. 2.2 V.                       |  |
| P0150   | Air fuel ratio (A/F) sensor 1 (bank 2) circuit | A)                      | The A/F signal computed by ECM from the A/F sensor 1 signal is constantly in a range other than approx. 2.2 V. |  |
|         |  | B)                      | The A/F signal computed by ECM from the A/F sensor 1 signal is constantly approx. 2.2 V.                       |  |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 11 V at idle.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION A

1. Start engine and warm it up to normal operating temperature.
2. Let engine idle for 2 minutes.
3. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-245, "Diagnosis Procedure"](#).

NO-1 >> With CONSULT: GO TO 3.

NO-2 >> Without CONSULT: GO TO 7.

##### 3. CHECK AIR FUEL RATIO (A/F) SENSOR 1 FUNCTION

1. Start engine and warm it up to normal operating temperature.
2. Select "A/F SEN1 (B1)" or "A/F SEN1 (B2)" in "DATA MONITOR" mode with CONSULT.
3. Check "A/F SEN1 (B1)" or "A/F SEN1 (B2)" indication.

Does the indication fluctuate around 2.2 V?

YES >> GO TO 4.

NO >> Go to [EC-245, "Diagnosis Procedure"](#).

##### 4. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION B-I

1. Select "A/F SEN1 (B1) P1276" (for DTC P0130) or "A/F SEN1 (B2) P1286" (for DTC P0150) of "A/F SEN1" in "DTC WORK SUPPORT" mode with CONSULT.
2. Touch "START".
3. When the following conditions are met, "TESTING" will be displayed on the CONSULT screen.

# P0130, P0150 A/F SENSOR 1

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

|                |                            |
|----------------|----------------------------|
| ENG SPEED      | 1,100 - 3,200 rpm          |
| VHCL SPEED SE  | More than 64 km/h (40 mph) |
| B/FUEL SCHDL   | 1.0 - 8.0 msec             |
| Selector lever | D position                 |

If "TESTING" is not displayed after 20 seconds, retry from step 2.

**CAUTION:**

**Always drive vehicle at a safe speed.**

Is "TESTING" displayed on CONSULT screen?

YES >> GO TO 5.

NO >> Check A/F sensor 1 function again. GO TO 3.

## 5. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION B-II

Release accelerator pedal fully.

**NOTE:**

Never apply brake when releasing the accelerator pedal.

Which does "TESTING" change to?

COMPLETED>>GO TO 6.

OUT OF CONDITION>>Retry DTC CONFIRMATION PROCEDURE. GO TO 4.

## 6. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION B-III

Touch "SELF-DIAG RESULT".

Which is displayed on CONSULT screen?

OK >> INSPECTION END

NG >> Go to [EC-245, "Diagnosis Procedure"](#).

## 7. PERFORM COMPONENT FUNCTION CHECK FOR MALFUNCTION B

Perform component function check. Refer to [EC-244, "Component Function Check"](#).

**NOTE:**

Use component function check to check the overall function of the A/F sensor 1 circuit. During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-245, "Diagnosis Procedure"](#).

## Component Function Check

INFOID:000000006882917

### 1. PERFORM COMPONENT FUNCTION CHECK

 **With GST**

1. Start engine and warm it up to normal operating temperature.
2. Drive the vehicle at a speed of 80 km/h (50 MPH) for a few minutes in the suitable gear position.
3. Shift the selector lever to D position, then release the accelerator pedal fully until the vehicle speed decreases to 50 km/h (30 MPH).

**CAUTION:**

**Always drive vehicle at a safe speed.**

**NOTE:**

Never apply brake when releasing the accelerator pedal.

4. Repeat steps 2 and 3 for five times.
5. Stop the vehicle and turn ignition switch OFF.
6. Turn ignition switch ON.
7. Turn ignition switch OFF and wait at least 10 seconds.
8. Restart engine.
9. Repeat steps 2 and 3 for five times.
10. Stop the vehicle and connect GST to the vehicle.
11. Check 1st trip DTC.

Is 1st trip DTC detected?

# P0130, P0150 A/F SENSOR 1

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

- YES >> Go to [EC-245, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

A

## Diagnosis Procedure

INFOID:000000006882918

### 1. CHECK GROUND CONNECTION

EC

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

C

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

D

### 2. CHECK AIR FUEL RATIO (A/F) SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect A/F sensor 1 harness connector.
2. Turn ignition switch ON.
3. Check the voltage between A/F sensor 1 harness connector and ground.

E

| DTC   | A/F sensor 1 |           |          | Ground | Voltage         |
|-------|--------------|-----------|----------|--------|-----------------|
|       | Bank         | Connector | Terminal |        |                 |
| P0130 | 1            | F3        | 4        | Ground | Battery voltage |
| P0150 | 2            | F20       | 4        |        |                 |

F

Is the inspection result normal?

- YES >> GO TO 4.  
NO >> GO TO 3.

H

### 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- IPDM E/R harness connector E7
- 15 A fuse (No. 45)
- Harness for open or short between A/F sensor 1 and fuse

I

>> Repair or replace harness or connectors.

K

### 4. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

L

| DTC   | A/F sensor 1 |           |          | ECM       |          | Continuity |

|       |              |           | 2        |           | 61       |            |
| P0150 | 2            | F20       | 1        |           | 65       |            |
|       |              |           | 2        |           | 66       |            |

M

N

O

4. Check the continuity between A/F sensor 1 harness connector and ground, or ECM harness connector and ground.

P

# P0130, P0150 A/F SENSOR 1

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| DTC   | A/F sensor 1 |           |          | Ground | Continuity  |
|-------|--------------|-----------|----------|--------|-------------|
|       | Bank         | Connector | Terminal |        |             |
| P0130 | 1            | F3        | 1        | Ground | Not existed |
|       |              |           | 2        |        |             |
| P0150 | 2            | F20       | 1        |        |             |
|       |              |           | 2        |        |             |

| DTC   | ECM  |           |          | Ground | Continuity  |
|-------|------|-----------|----------|--------|-------------|
|       | Bank | Connector | Terminal |        |             |
| P0130 | 1    | F102      | 57       | Ground | Not existed |
|       |      |           | 61       |        |             |
| P0150 | 2    |           | 65       |        |             |
|       |      |           | 66       |        |             |

5. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 5.CHECK INTERMITTENT INCIDENT

Perform [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair or replace.

## 6.REPLACE AIR FUEL RATIO (A/F) SENSOR 1

Replace malfunctioning air fuel ratio (A/F) sensor 1.

### CAUTION:

- Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new A/F sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved anti-seize Lubricant (commercial service tool).

>> INSPECTION END

[VQ37VHR FOR USA AND CANADA]

## P0131, P0151 A/F SENSOR 1

### DTC Logic

INFOID:000000006882919

#### DTC DETECTION LOGIC

To judge malfunctions, the diagnosis checks that the A/F signal computed by ECM from the A/F sensor 1 signal is not inordinately low.

| DTC No. | Trouble diagnosis name                                     | DTC detecting condition  | Possible Cause   |
|---------|--|--|--|
| P0131   | Air fuel ratio (A/F) sensor 1 (bank 1) circuit low voltage | • The A/F signal computed by ECM from the A/F sensor 1 signal is constantly approx. 0 V. | • Harness or connectors (The A/F sensor 1 circuit is open or shorted.)<br>• A/F sensor 1 |
| P0151   | Air fuel ratio (A/F) sensor 1 (bank 2) circuit low voltage |  |  |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10.5 V at idle.

>> GO TO 2.

##### 2. CHECK A/F SENSOR FUNCTION

1. Start engine and warm it up to normal operating temperature.
2. Select "A/F SEN1 (B1)" or "A/F SEN1 (B2)" in "DATA MONITOR" mode with CONSULT
3. Check "A/F SEN1 (B1)" or "A/F SEN1 (B2)" indication.

Is the indication constantly approx. 0 V?

YES >> Go to [EC-248. "Diagnosis Procedure"](#).

NO >> GO TO 3.

##### 3. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Restart engine.
5. Drive and accelerate vehicle to more than 40 km/h (25 MPH) within 20 seconds after restarting engine.

##### CAUTION:

**Always drive vehicle at a safe speed.**

6. Maintain the following conditions for about 20 consecutive seconds.

|                |                            |
|----------------|----------------------------|
| ENG SPEED      | 1,000 - 3,200 rpm          |
| VHCL SPEED SE  | More than 40 km/h (25 mph) |
| B/FUEL SCHDL   | 1.5 - 9.0 msec             |
| Selector lever | Suitable position          |

##### NOTE:

- Keep the accelerator pedal as steady as possible during cruising.
- If this procedure is not completed within 1 minute after restarting engine at step 4, return to step 1.

7. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-248. "Diagnosis Procedure"](#).

NO >> INSPECTION END

# P0131, P0151 A/F SENSOR 1

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

## Diagnosis Procedure

INFOID:00000006882920

### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47. "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

### 2. CHECK AIR FUEL RATIO (A/F) SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect A/F sensor 1 harness connector.
2. Turn ignition switch ON.
3. Check the voltage between A/F sensor 1 harness connector and ground.

| DTC   | A/F sensor 1 |           |          | Ground | Voltage         |
|-------|--------------|-----------|----------|--------|-----------------|
|       | Bank         | Connector | Terminal |        |                 |
| P0130 | 1            | F3        | 4        | Ground | Battery voltage |
| P0150 | 2            | F20       | 4        |        |                 |

Is the inspection result normal?

- YES >> GO TO 4.  
NO >> GO TO 3.

### 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- IPDM E/R harness connector E7
- 15 A fuse (No. 45)
- Harness for open or short between A/F sensor 1 and fuse

>> Repair or replace harness or connectors.

### 4. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

| DTC   | A/F sensor 1 |           |          | ECM       |          | Continuity |
|-------|--------------|-----------|----------|-----------|----------|------------|
|       | Bank         | Connector | Terminal | Connector | Terminal |            |
| P0130 | 1            | F3        | 1        | F102      | 57       | Existed    |
|       |              |           | 2        |           | 61       |            |
| P0150 | 2            | F20       | 1        |           | 65       |            |
|       |              |           | 2        |           | 66       |            |

4. Check the continuity between A/F sensor 1 harness connector and ground, or ECM harness connector and ground.

| DTC   | A/F sensor 1 |           |          | Ground | Continuity  |
|-------|--------------|-----------|----------|--------|-------------|
|       | Bank         | Connector | Terminal |        |             |
| P0130 | 1            | F3        | 1        | Ground | Not existed |
|       |              |           | 2        |        |             |
| P0150 | 2            | F20       | 1        |        |             |
|       |              |           | 2        |        |             |

### DTC Logic

INFOID:000000006882923

#### DTC DETECTION LOGIC

To judge malfunctions, this diagnosis measures response time of the A/F signal computed by ECM from the A/F sensor 1 signal. The time is compensated by engine operating (speed and load), fuel feedback control constant, and the A/F sensor 1 temperature index. Judgment is based on whether the compensated time (the A/F signal cycling time index) is inordinately long or not.

| DTC No. | Trouble diagnosis name                                       | DTC detecting condition   | Possible Cause   |
|---------|--|---|--|
| P0133   | Air fuel ratio (A/F) sensor 1 (bank 1) circuit slow response | • The response of the A/F signal computed by ECM from A/F sensor 1 signal takes more than the specified time. | • Harness or connectors<br>(The A/F sensor 1 circuit is open or shorted.)<br>• A/F sensor 1<br>• A/F sensor 1 heater<br>• Fuel pressure<br>• Fuel injector<br>• Intake air leaks<br>• Exhaust gas leaks<br>• PCV<br>• Mass air flow sensor |
| P0153   | Air fuel ratio (A/F) sensor 1 (bank 2) circuit slow response |   |  |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

**Before performing the following procedure, confirm that battery voltage is more than 11 V at idle.**

Do you have CONSULT?

- YES >> GO TO 2.  
NO >> GO TO 5.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE-I

###### With CONSULT

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
6. Let engine idle for 1 minute.
7. Select "A/F SEN1(B1) P1278/P1279" (for DTC P0133) or "A/F SEN1(B2) P1288/P1289" (for DTC P0153) of "A/F SEN1" in "DTC WORK SUPPORT" mode with CONSULT.
8. Touch "START".

Is "COMPLETED" displayed on CONSULT screen?

- YES >> GO TO 3  
NO >> GO TO 4.

##### 3. PERFORM DTC CONFIRMATION PROCEDURE-II

Touch "SELF-DIAG RESULT".

Which is displayed on CONSULT screen?

- OK >> INSPECTION END  
NG >> Go to [EC-254, "Diagnosis Procedure"](#).

##### 4. PERFORM DTC CONFIRMATION PROCEDURE-II

1. After perform the following procedure, "TESTING" will be displayed on the CONSULT screen.

# P0133, P0153 A/F SENSOR 1

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

- Increase the engine speed up to about 3,600 rpm and maintain that speed for 10 seconds.
  - Fully release accelerator pedal and then let engine idle for about 10 seconds.
- If “TESTING” is not displayed after 10 seconds, go to [EC-172, "Component Function Check"](#).
2. Wait for about 20 seconds at idle under the condition that “TESTING” is displayed on the CONSULT screen.
  3. Make sure that “TESTING” changes to “COMPLETED”.  
If “TESTING” changed to “OUT OF CONDITION”, go to [EC-172, "Component Function Check"](#).
  4. Touch “SELF-DIAG RESULT”.

Which is displayed on CONSULT screen?

- OK >> INSPECTION END
- NG >> Go to [EC-254, "Diagnosis Procedure"](#).

## 5. CHECK AIR-FUEL RATIO SELF-LEARNING VALUE

 **With GST**

1. Start engine and warm it up to normal operating temperature.
2. Select Service \$01 with GST.
3. Calculate the total value of “Short term fuel trim” and “Long term fuel trim” indications.

Is the total percentage within  $\pm 15\%$ ?

- YES >> GO TO 7.
- NO >> GO TO 6.

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Intake air leaks
- Exhaust gas leaks
- Incorrect fuel pressure
- Lack of fuel
- Fuel injector
- Incorrect PCV hose connection
- PCV valve
- Mass air flow sensor

>> Repair or replace malfunctioning part.

## 7. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.
6. Increase the engine speed up to about 3,600 rpm and keep it for 10 seconds.
7. Fully release accelerator pedal and then let engine idle for about 1 minute.
8. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-254, "Diagnosis Procedure"](#).
- NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000006882924

### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Repair or replace ground connection.

### 2. RETIGHTEN A/F SENSOR 1

Loosen and retighten the A/F sensor 1. Refer to [EM-36, "Removal and Installation"](#).

# P0133, P0153 A/F SENSOR 1

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

>> GO TO 3.

## 3. CHECK EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before three way catalyst 1.

Is exhaust gas leak detected?

- YES >> Repair or replace.  
NO >> GO TO 4.

## 4. CHECK FOR INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

Is intake air leak detected?

- YES >> Repair or replace.  
NO >> GO TO 5.

## 5. CLEAR THE MIXTURE RATIO SELF-LEARNING VALUE

1. Clear the mixture ratio self-learning value. Refer to [EC-153. "Work Procedure"](#).
2. Run engine for at least 10 minutes at idle speed.

Is the 1st trip DTC P0171, P172, P0174 or P0175 detected? Is it difficult to start engine?

- YES >> Perform trouble diagnosis for DTC P0171, P0174 or P0172, P0175. Refer to [EC-279. "DTC Logic"](#) or [EC-283. "DTC Logic"](#).  
NO >> GO TO 6.

## 6. CHECK AIR FUEL RATIO (A/F) SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect A/F sensor 1 harness connector.
2. Turn ignition switch ON.
3. Check the voltage between A/F sensor 1 harness connector and ground.

| DTC   | A/F sensor 1 |           |          | Ground | Voltage         |
|-------|--------------|-----------|----------|--------|-----------------|
|       | Bank         | Connector | Terminal |        |                 |
| P0133 | 1            | F3        | 4        | Ground | Battery voltage |
| P0153 | 2            | F20       | 4        |        |                 |

Is the inspection result normal?

- YES >> GO TO 8.  
NO >> GO TO 7.

## 7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- IPDM E/R harness connector E7
- 15 A fuse (No. 45)
- Harness for open or short between A/F sensor 1 and fuse

>> Repair or replace harness or connectors.

## 8. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

# P0133, P0153 A/F SENSOR 1

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

| DTC   | A/F sensor 1 |           |          | ECM       |          | Continuity |
|-------|--------------|-----------|----------|-----------|----------|------------|
|       | Bank         | Connector | Terminal | Connector | Terminal |            |
| P0133 | 1            | F3        | 1        | F102      | 57       | Existed    |
|       |              |           | 2        |           | 61       |            |
| P0153 | 2            | F20       | 1        |           | 65       |            |
|       |              |           | 2        |           | 66       |            |

4. Check the continuity between A/F sensor 1 harness connector and ground, or ECM harness connector and ground.

| DTC   | A/F sensor 1 |           |          | Ground | Continuity  |
|-------|--------------|-----------|----------|--------|-------------|
|       | Bank         | Connector | Terminal |        |             |
| P0133 | 1            | F3        | 1        | Ground | Not existed |
|       |              |           | 2        |        |             |
| P0153 | 2            | F20       | 1        |        |             |
|       |              |           | 2        |        |             |

| DTC   | ECM  |           |          | Ground | Continuity  |
|-------|------|-----------|----------|--------|-------------|
|       | Bank | Connector | Terminal |        |             |
| P0133 | 1    | F102      | 57       | Ground | Not existed |
|       |      |           | 61       |        |             |
| P0153 | 2    |           | 65       |        |             |
|       |      |           | 66       |        |             |

5. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 9.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 9. CHECK AIR FUEL RATIO (A/F) SENSOR 1 HEATER

Refer to [EC-197, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 10.

NO >> GO TO 13.

## 10. CHECK MASS AIR FLOW SENSOR

Check both mass air flow sensor (bank 1 and bank 2).

Refer to [EC-204, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 11.

NO >> Replace malfunctioning mass air flow sensor. Refer to [EM-29, "Exploded View"](#).

## 11. CHECK PCV VALVE

Refer to [EC-542, "Inspection"](#).

Is the inspection result normal?

YES >> GO TO 12.

NO >> Repair or replace PCV valve. Refer to [EM-49, "Exploded View"](#).

## 12. CHECK INTERMITTENT INCIDENT

# P0133, P0153 A/F SENSOR 1

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

Perform [GI-44. "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 13.

NO >> Repair or replace.

## 13.REPLACE AIR FUEL RATIO (A/F) SENSOR 1

Replace malfunctioning air fuel ratio (A/F) sensor 1.

### CAUTION:

- Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new A/F sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

DTC Logic

INFOID:000000006882925

DTC DETECTION LOGIC

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/F) sensor 1. The oxygen storage capacity of the three way catalyst 1 causes the longer switching time. To judge malfunctions of heated oxygen sensor 2, ECM monitors whether the maximum voltage of the sensor is sufficiently high during various driving conditions such as fuel-cut.

| DTC No. | Trouble diagnosis name                              | DTC detecting condition   | Possible cause  |
|---------|---|---|---|
| P0137   | Heated oxygen sensor 2 (bank 1) circuit low voltage | The maximum voltage from the sensor does not reach the specified voltage. | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted)</li> <li>• Heated oxygen sensor 2</li> <li>• Fuel pressure</li> <li>• Fuel injector</li> <li>• Intake air leaks</li> </ul> |
| P0157   | Heated oxygen sensor 2 (bank 2) circuit low voltage |   |   |

DTC CONFIRMATION PROCEDURE

1.INSPECTION START

Do you have CONSULT?

Do you have CONSULT?

- YES >> GO TO 2.
- NO >> GO TO 5.

2.PRECONDITIONING

If DTC confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

**TESTING CONDITION:**

For better results, perform “DTC WORK SUPPORT” at a temperature of 0 to 30°C (32 to 86°F).

>> GO TO 3.

3.PERFORM DTC CONFIRMATION PROCEDURE

**Ⓢ With CONSULT**

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
7. Let engine idle for 1 minute.
8. Make sure that “COOLAN TEMP/S” indicates more than 70°C (158°F).  
If not, warm up engine and go to next step when “COOLAN TEMP/S” indication reaches 70°C (158°F).
9. Open engine hood.
10. Select “HO2S2 (B1) P1147” (for DTC P0137) or “HO2S2 (B2) P1167” (for DTC P0157) of “HO2S2” in “DTC WORK SUPPORT” mode with CONSULT.

< DTC/CIRCUIT DIAGNOSIS >

11. Start engine and follow the instruction of CONSULT display.

**NOTE:**

It will take at most 10 minutes until "COMPLETED" is displayed.

12. Touch "SELF-DIAG RESULTS".

Which is displayed on CONSULT screen?

- OK >> INSPECTION END
- NG >> Go to [EC-260. "Diagnosis Procedure"](#).
- CAN NOT BE DIAGNOSED>>GO TO 4.

**4.PERFORM DTC CONFIRMATION PROCEDURE AGAIN**

1. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
2. Perform DTC confirmation procedure again.

>> GO TO 3.

**5.PERFORM COMPONENT FUNCTION CHECK**

Perform component function check. Refer to [EC-259. "Component Function Check"](#).

**NOTE:**

Use component function check to check the overall function of the heated oxygen sensor 2 circuit. During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Go to [EC-260. "Diagnosis Procedure"](#).

**Component Function Check**

INFOID:000000006882926

**1.PERFORM COMPONENT FUNCTION CHECK-I**

**Without CONSULT**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Check the voltage between ECM harness connector terminals under the following condition.

| DTC   | ECM       |          |          | Condition   | Voltage   |
|-------|-----------|----------|----------|---|---|
|       | Connector | +        | -        |   |   |
|       |           | Terminal | Terminal |   |   |
| P0137 | F102      | 76       | 84       | Revving up to 4,000 rpm under no load at least 10 times | The voltage should be above 0.70 V at least once during this procedure. |
| P0157 |           | 80       |          |   |   |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> GO TO 2.

**2.PERFORM COMPONENT FUNCTION CHECK-II**

Check the voltage between ECM harness connector terminals under the following condition.

| DTC   | ECM       |          |          | Condition                             | Voltage   |
|-------|-----------|----------|----------|---------------------------------------|---|
|       | Connector | +        | -        |                                       |   |
|       |           | Terminal | Terminal |                                       |   |
| P0137 | F102      | 76       | 84       | Keeping engine at idle for 10 minutes | The voltage should be above 0.70 V at least once during this procedure. |
| P0157 |           | 80       |          |                                       |   |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> GO TO 3.

# P0137, P0157 HO2S2

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## 3. PERFORM COMPONENT FUNCTION CHECK-III

Check the voltage between ECM harness connector terminals under the following condition.

| DTC            | ECM       |          |          | Condition                                    | Voltage   |
|----------------|-----------|----------|----------|--|---|
|                | Connector | +        | -        |  |   |
|                |           | Terminal | Terminal |  |   |
| P0137<br>P0157 | F102      | 76       | 84       | Coasting from 80 km/h (50 MPH) in D position | The voltage should be above 0.70 V at least once during this procedure. |
|                |           | 80       |          |  |   |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Go to [EC-260, "Diagnosis Procedure"](#).

## Diagnosis Procedure

INFOID:000000006882927

### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Repair or replace ground connection.

### 2. CLEAR THE MIXTURE RATIO SELF-LEARNING VALUE

1. Clear the mixture ratio self-learning value. Refer to [EC-153, "Work Procedure"](#).
2. Run engine for at least 10 minutes at idle speed.

Is the 1st trip DTC P0171 or P0174 detected? Is it difficult to start engine?

- YES >> Perform trouble diagnosis for DTC P0171 or P0174. Refer to [EC-279, "DTC Logic"](#).
- NO >> GO TO 3.

### 3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 (HO2S2) harness connector.
3. Disconnect ECM harness connector.
4. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0137 | 1     | F54       | 1        | F102      | 84       | Existed    |
| P0157 | 2     | F53       | 1        |           |          |            |

5. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 4.
- NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0137 | 1     | F54       | 4        | F102      | 76       | Existed    |
| P0157 | 2     | F53       | 4        |           | 80       |            |

2. Check the continuity between HO2S2 harness connector and ground, or ECM harness connector and ground.

| DTC   | HO2S2 |           |          | Ground | Continuity  |
|-------|-------|-----------|----------|--------|-------------|
|       | Bank  | Connector | Terminal |        |             |
| P0137 | 1     | F54       | 4        | Ground | Not existed |
| P0157 | 2     | F53       | 4        |        |             |

| DTC   | ECM  |           |          | Ground | Continuity  |
|-------|------|-----------|----------|--------|-------------|
|       | Bank | Connector | Terminal |        |             |
| P0137 | 1    | F102      | 76       | Ground | Not existed |
| P0157 | 2    |           | 80       |        |             |

3. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 5. CHECK HEATED OXYGEN SENSOR 2

Refer to [EC-261, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

### 6. REPLACE HEATED OXYGEN SENSOR 2

Replace malfunctioning heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new heated oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

>> INSPECTION END

### 7. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882928

### 1. INSPECTION START

Do you have CONSULT?

Do you have CONSULT?

YES >> GO TO 2.

NO >> GO TO 3.

### 2. CHECK HEATED OXYGEN SENSOR 2

 **With CONSULT**

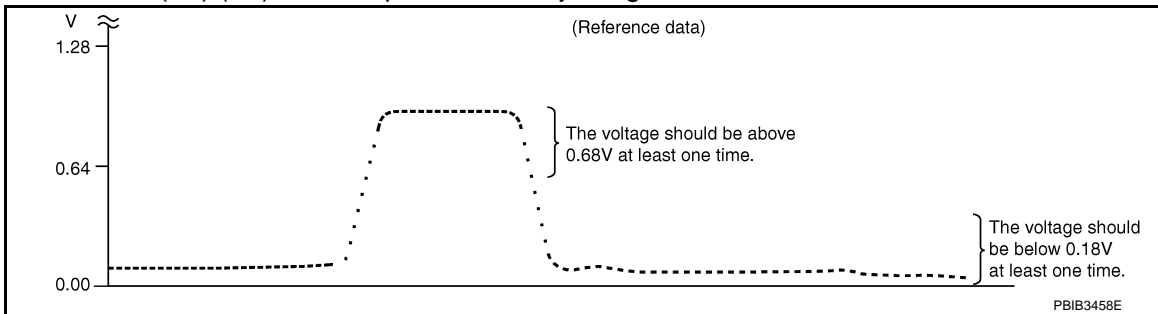

1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.
6. Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)/(B2)" as the monitor item with CONSULT.

# P0137, P0157 HO2S2

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

7. Check "HO2S2 (B1)/(B2)" at idle speed when adjusting "FUEL INJECTION" to  $\pm 25\%$ .

"HO2S2 (B1)/(B2)" should be above 0.70 V at least once when the "FUEL INJECTION" is +25%.

"HO2S2 (B1)/(B2)" should be below 0.18 V at least once when the "FUEL INJECTION" is -25%.

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 6.

## 3. CHECK HEATED OXYGEN SENSOR 2-I

⊗ Without CONSULT

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Check the voltage between ECM harness connector terminals under the following condition.

| Connector | ECM                       |          | Condition   | Voltage  |
|-----------|---------------------------|----------|---|--|
|           | +                         | -        |   |  |
|           | Terminal                  | Terminal |   |  |
| F102      | 76<br>[HO2S2<br>(bank 1)] | 84       | Revving up to 4,000 rpm under no load at least 10 times | The voltage should be above 0.70 V at least once during this procedure.<br>The voltage should be below 0.18 V at least once during this procedure. |
|           | 80<br>[HO2S2<br>(bank 2)] |          |   |  |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 4.

## 4. CHECK HEATED OXYGEN SENSOR 2-II

Check the voltage between ECM harness connector terminals under the following condition.

| Connector | ECM                       |          | Condition                             | Voltage  |
|-----------|---------------------------|----------|---------------------------------------|--|
|           | +                         | -        |                                       |  |
|           | Terminal                  | Terminal |                                       |  |
| F102      | 76<br>[HO2S2<br>(bank 1)] | 84       | Keeping engine at idle for 10 minutes | The voltage should be above 0.70 V at least once during this procedure.<br>The voltage should be below 0.18 V at least once during this procedure. |
|           | 80<br>[HO2S2<br>(bank 2)] |          |                                       |  |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 5.

## 5. CHECK HEATED OXYGEN SENSOR 2-III

Check the voltage between ECM harness connector terminals under the following condition.

# P0137, P0157 HO2S2

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| ECM       |                           |          | Condition                                    | Voltage  |

|           | 80<br>[HO2S2<br>(bank 2)] |          |  |  |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 6.

## 6. REPLACE HEATED OXYGEN SENSOR 2

Replace malfunctioning heated oxygen sensor 2.

### CAUTION:

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new heated oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

DTC Logic

INFOID:00000006882929

DTC DETECTION LOGIC

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/F) sensor 1. The oxygen storage capacity of the three way catalyst 1 causes the longer switching time.

**MALFUNCTION A**

To judge malfunctions of heated oxygen sensor 2, ECM monitors whether the voltage is unusually high during various driving conditions such as fuel cut.

**MALFUNCTION B**

To judge malfunctions of heated oxygen sensor 2, ECM monitors whether the minimum voltage of sensor is sufficiently low during various driving conditions such as fuel cut.

| DTC No. | Trouble diagnosis name                               | DTC detecting condition |  | Possible cause  |
|---------|--|-------------------------|--|---|
| P0138   | Heated oxygen sensor 2 (bank 1) circuit high voltage | A)                      | An excessively high voltage from the sensor is sent to ECM.                  | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted)</li> <li>• Heated oxygen sensor 2</li> </ul>   |
|         |  | B)                      | The minimum voltage from the sensor is not reached to the specified voltage. | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted)</li> <li>• Heated oxygen sensor 2</li> <li>• Fuel pressure</li> <li>• Fuel injector</li> </ul> |
| P0158   | Heated oxygen sensor 2 (bank 2) circuit high voltage | A)                      | An excessively high voltage from the sensor is sent to ECM.                  | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted)</li> <li>• Heated oxygen sensor 2</li> </ul>   |
|         |  | B)                      | The minimum voltage from the sensor is not reached to the specified voltage. | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted)</li> <li>• Heated oxygen sensor 2</li> <li>• Fuel pressure</li> <li>• Fuel injector</li> </ul> |

DTC CONFIRMATION PROCEDURE

1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

**2. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION A**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
6. Let engine idle for 2 minutes.
7. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-266, "Diagnosis Procedure"](#).

NO-1 >> With CONSULT: GO TO 3.

NO-2 >> Without CONSULT: GO TO 5.

**3. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION B**

**NOTE:**

**For better results, perform "DTC WORK SUPPORT" at a temperature of 0 to 30 °C (32 to 86 °F).**

1. Select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
7. Let engine idle for 1 minute.
8. Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).  
If not, warm up engine and go to next step when "COOLAN TEMP/S" indication reaches 70°C (158°F).
9. Open engine hood.
10. Select "HO2S2 (B1) P1146" (for DTC P0138) or "HO2S2 (B2) P1166" (for DTC P0158) of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT.
11. Start engine and follow the instruction of CONSULT display.

**NOTE:**

It will take at most 10 minutes until "COMPLETED" is displayed.

12. Touch "SELF-DIAG RESULTS".

Which is displayed on CONSULT screen?

OK >> INSPECTION END

NG >> Go to [EC-266, "Diagnosis Procedure"](#).

CON NOT BE DIAGNOSED>>GO TO 4.

**4. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION B AGAIN**

1. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
2. Perform DTC confirmation procedure again.

>> GO TO 3.

**5. PERFORM COMPONENT FUNCTION CHECK FOR MALFUNCTION B**

Perform component function check. Refer to [EC-265, "Component Function Check"](#).

**NOTE:**

Use component function check to check the overall function of the heated oxygen sensor 2 circuit. During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-266, "Diagnosis Procedure"](#).

**Component Function Check**

INFOID:000000006882930

**1. PERFORM COMPONENT FUNCTION CHECK-I**

< DTC/CIRCUIT DIAGNOSIS >

⊗ Without CONSULT

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Check the voltage between ECM harness connector terminals under the following condition.

| DTC   | ECM       |          |          | Condition   | Voltage   |
|-------|-----------|----------|----------|---|---|
|       | Connector | +        | -        |   |   |
|       |           | Terminal | Terminal |   |   |
| P0138 | F102      | 76       | 84       | Revving up to 4,000 rpm under no load at least 10 times | The voltage should be below 0.18 V at least once during this procedure. |
| P0158 |           | 80       |          |   |   |

Is the inspection result normal?

- YES >> INSPECTION END  
 NO >> GO TO 2.

**2.PERFORM COMPONENT FUNCTION CHECK-II**

Check the voltage between ECM harness connector terminals under the following condition.

| DTC   | ECM       |          |          | Condition                             | Voltage   |
|-------|-----------|----------|----------|---------------------------------------|---|
|       | Connector | +        | -        |                                       |   |
|       |           | Terminal | Terminal |                                       |   |
| P0138 | F102      | 76       | 84       | Keeping engine at idle for 10 minutes | The voltage should be below 0.18 V at least once during this procedure. |
| P0158 |           | 80       |          |                                       |   |

Is the inspection result normal?

- YES >> INSPECTION END  
 NO >> GO TO 3.

**3.PERFORM COMPONENT FUNCTION CHECK-III**

Check the voltage between ECM harness connector terminals under the following condition.

| DTC   | ECM       |          |          | Condition                                    | Voltage   |
|-------|-----------|----------|----------|--|---|
|       | Connector | +        | -        |  |   |
|       |           | Terminal | Terminal |  |   |
| P0138 | F102      | 76       | 84       | Coasting from 80 km/h (50 MPH) in D position | The voltage should be below 0.18 V at least once during this procedure. |
| P0158 |           | 80       |          |  |   |

Is the inspection result normal?

- YES >> INSPECTION END  
 NO >> Go to [EC-266. "Diagnosis Procedure"](#).

**Diagnosis Procedure**

INFOID:000000006882931

**1.INSPECTION START**

Confirm the detected malfunction (A or B). Refer to [EC-264. "DTC Logic"](#).

Which malfunction is detected?

- A >> GO TO 2  
 B >> GO TO 9.

**2.CHECK GROUND CONNECTION**

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47. "Circuit Inspection"](#).

Is the inspection result normal?

# P0138, P0158 HO2S2

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

- YES >> GO TO 3.
- NO >> Repair or replace ground connection.

### 3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Disconnect heated oxygen sensor 2 (HO2S2) harness connector.
2. Disconnect ECM harness connector.
3. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0138 | 1     | F54       | 1        | F102      | 84       | Existed    |
| P0158 | 2     | F53       | 1        |           |          |            |

4. Also check harness for short to ground and short to power.

#### Is the inspection result normal?

- YES >> GO TO 4.
- NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0138 | 1     | F54       | 4        | F102      | 76       | Existed    |
| P0158 | 2     | F53       | 4        |           | 80       |            |

2. Check the continuity between HO2S2 harness connector and ground, or ECM harness connector and ground.

| DTC   | HO2S2 |           |          | Ground | Continuity  |
|-------|-------|-----------|----------|--------|-------------|
|       | Bank  | Connector | Terminal |        |             |
| P0138 | 1     | F54       | 4        | Ground | Not existed |
| P0158 | 2     | F53       | 4        |        |             |

| DTC   | ECM  |           |          | Ground | Continuity  |
|-------|------|-----------|----------|--------|-------------|
|       | Bank | Connector | Terminal |        |             |
| P0138 | 1    | F102      | 76       | Ground | Not existed |
| P0158 | 2    |           | 80       |        |             |

3. Also check harness for short to power.

#### Is the inspection result normal?

- YES >> GO TO 5.
- NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 5. CHECK HO2S2 CONNECTOR FOR WATER

Check connectors for water.

**Water should not exist.**

#### Is the inspection result normal?

- YES >> GO TO 6.
- NO >> Repair or replace harness or connectors.

### 6. CHECK HEATED OXYGEN SENSOR 2

Refer to [EC-269, "Component Inspection"](#).

< DTC/CIRCUIT DIAGNOSIS >

Is the inspection result normal?

- YES >> GO TO 8.
- NO >> GO TO 7.

**7.**REPLACE HEATED OXYGEN SENSOR 2

Replace malfunctioning heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new heated oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

>> INSPECTION END

**8.**CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

**9.**CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 10.
- NO >> Repair or replace ground connection.

**10.**CLEAR THE MIXTURE RATIO SELF-LEARNING VALUE

1. Clear the mixture ratio self-learning value. Refer to [EC-153, "Work Procedure"](#).
2. Run engine for at least 10 minutes at idle speed.

Is the 1st trip DTC P0172 or P0175 detected? Is it difficult to start engine?

- YES >> Perform trouble diagnosis for DTC P0172, P0175. Refer to [EC-283, "DTC Logic"](#).
- NO >> GO TO 11.

**11.**CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 harness connector.
3. Disconnect ECM harness connector.
4. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0138 | 1     | F54       | 1        | F102      | 84       | Existed    |
| P0158 | 2     | F53       | 1        |           |          |            |

5. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 12.
- NO >> Repair open circuit, short to ground or short to power in harness or connectors.

**12.**CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0138 | 1     | F54       | 4        | F102      | 76       | Existed    |
| P0158 | 2     | F53       | 4        |           | 80       |            |

2. Check the continuity between HO2S2 harness connector or ECM harness connector and ground.

| DTC   | HO2S2 |           |          | Ground | Continuity  |
|-------|-------|-----------|----------|--------|-------------|
|       | Bank  | Connector | Terminal |        |             |
| P0138 | 1     | F54       | 4        | Ground | Not existed |
| P0158 | 2     | F53       | 4        |        |             |

| DTC   | ECM  |           |          | Ground | Continuity  |
|-------|------|-----------|----------|--------|-------------|
|       | Bank | Connector | Terminal |        |             |
| P0138 | 1    | F102      | 76       | Ground | Not existed |
| P0158 | 2    |           | 80       |        |             |

3. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 13.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 13. CHECK HEATED OXYGEN SENSOR 2

Refer to [EC-265, "Component Function Check"](#).

Is the inspection result normal?

YES >> GO TO 15.

NO >> GO TO 14.

### 14. REPLACE HEATED OXYGEN SENSOR 2

Replace malfunctioning heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new heated oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

>> INSPECTION END

### 15. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

## < DTC/CIRCUIT DIAGNOSIS >

1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.
6. Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)/(B2)" as the monitor item with CONSULT.
7. Check "HO2S2 (B1)/(B2)" at idle speed when adjusting "FUEL INJECTION" to  $\pm 25\%$ .

"HO2S2 (B1)/(B2)" should be above 0.70 V at least once when the "FUEL INJECTION" is +25%.  
 "HO2S2 (B1)/(B2)" should be below 0.18 V at least once when the "FUEL INJECTION" is -25%.

Is the inspection result normal?

- YES >> INSPECTION END  
 NO >> GO TO 6.

### 3. CHECK HEATED OXYGEN SENSOR 2-I

#### ⊗ Without CONSULT

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Check the voltage between ECM harness connector terminals under the following condition.

| Connector | ECM                       |          | Condition   | Voltage  |
|-----------|---------------------------|----------|---|--|
|           | +                         | -        |   |  |
|           | Terminal                  | Terminal |   |  |
| F102      | 76<br>[HO2S2<br>(bank 1)] | 84       | Revving up to 4,000 rpm under no load at least 10 times | The voltage should be above 0.70 V at least once during this procedure.<br>The voltage should be below 0.18 V at least once during this procedure. |
|           | 80<br>[HO2S2<br>(bank 2)] |          |   |  |

Is the inspection result normal?

- YES >> INSPECTION END  
 NO >> GO TO 4.

### 4. CHECK HEATED OXYGEN SENSOR 2-II

Check the voltage between ECM harness connector terminals under the following condition.

# P0138, P0158 HO2S2

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| ECM       |                           |          | Condition                             | Voltage  |
|-----------|---------------------------|----------|---------------------------------------|--|
| Connector | +                         | -        |                                       |  |
|           | Terminal                  | Terminal |                                       |  |
| F102      | 76<br>[HO2S2<br>(bank 1)] | 84       | Keeping engine at idle for 10 minutes | The voltage should be above 0.70 V at least once during this procedure.<br>The voltage should be below 0.18 V at least once during this procedure. |
|           | 80<br>[HO2S2<br>(bank 2)] |          |                                       |  |

Is the inspection result normal?

YES >> INSPECTION END  
NO >> GO TO 5.

## 5. CHECK HEATED OXYGEN SENSOR 2-III

Check the voltage between ECM harness connector terminals under the following condition.

| ECM       |                           |          | Condition                                    | Voltage  |
|-----------|---------------------------|----------|--|--|
| Connector | +                         | -        |  |  |
|           | Terminal                  | Terminal |  |  |
| F102      | 76<br>[HO2S2<br>(bank 1)] | 84       | Coasting from 80 km/h (50 MPH) in D position | The voltage should be above 0.70 V at least once during this procedure.<br>The voltage should be below 0.18 V at least once during this procedure. |
|           | 80<br>[HO2S2<br>(bank 2)] |          |  |  |

Is the inspection result normal?

YES >> INSPECTION END  
NO >> GO TO 6.

## 6. REPLACE HEATED OXYGEN SENSOR 2

Replace malfunctioning heated oxygen sensor 2.

### CAUTION:

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new heated oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

>> INSPECTION END

P0139, P0159 HO2S2

DTC Logic

INFOID:000000006882933

DTC DETECTION LOGIC

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/F) sensor 1. The oxygen storage capacity of the three way catalyst 1 causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the switching response of the sensor's voltage is faster than specified during various driving conditions such as fuel cut.

| DTC No. | Trouble diagnosis name                                | DTC detecting condition  | Possible cause   |
|---------|---|--|--|
| P0139   | Heated oxygen sensor 2 (bank 1) circuit slow response | The switching time between rich and lean of a heated oxygen sensor 2 signal delays more than the specified time computed by ECM. | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted)</li> <li>• Heated oxygen sensor 2</li> <li>• Fuel system</li> <li>• EVAP system</li> <li>• Intake air system</li> </ul> |
| P0159   | Heated oxygen sensor 2 (bank 2) circuit slow response |  |  |

DTC CONFIRMATION PROCEDURE

1. INSPECTION START

Do you have CONSULT?

Do you have CONSULT?

YES >> GO TO 2.

NO >> GO TO 7.

2. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

**TESTING CONDITION:**

For better results, perform "DTC WORK SUPPORT" at a temperature of 0 to 30°C (32 to 86°F).

>> GO TO 3.

3. PERFORM DTC CONFIRMATION PROCEDURE

**Ⓟ With CONSULT**

1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
7. Let engine idle for 1 minute.
8. Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).
9. Drive the vehicle in a proper gear at 60 km/h (38MPH) and maintain the speed.

**CAUTION:**

**Always drive vehicle at a safe speed.**

10. Release the accelerator pedal fully at least 5 seconds.

< DTC/CIRCUIT DIAGNOSIS >

**CAUTION:**

- Enable the engine brake.
- Always drive carefully.
- Never apply brake when releasing the accelerator pedal.

11. Repeat step 9 and 10 at least 8 times.
12. Check the following item of "DATA MONITOR".

| DTC   | Data monitor item | Status |
|-------|-------------------|--------|
| P0139 | HO2 S2 DIAG1 (B1) | CMPLT  |
|       | HO2 S2 DIAG2 (B1) |        |
| P0159 | HO2 S2 DIAG1 (B2) |        |
|       | HO2 S2 DIAG2 (B2) |        |

Is "CMPLT" displayed on CONSULT screen?

YES >> GO TO 6.

NO-1: "CMPLT" is not displayed on DIAG 1>>Perform DTC confirmation procedure again.

NO-2: "CMPLT" is not displayed on DIAG 2>>GO TO 4.

**4.PERFORM DTC WORK SUPPORT**

1. Open engine hood.
2. Select "HO2S2 (B1) P0139" or "HO2S2 (B2) P0159" of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT.
3. Start engine and follow the instruction of CONSULT display.

**NOTE:**

It will take at most 10 minutes until "COMPLETED" is displayed.

Is "COMPLETED" displayed on CONSULT screen?

YES >> GO TO 6.

NO >> GO TO 5.

**5.PERFORM DTC CONFIRMATION PROCEDURE AGAIN**

1. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
2. Perform DTC confirmation procedure again.

>> GO TO 3.

**6.PERFORM SELF-DIAGNOSIS**

**Ⓜ With CONSULT**

Perform ECM self-diagnosis.

Is DTC "P0139" or "P0159" detected?

YES >> Proceed to [EC-274, "Diagnosis Procedure"](#).

NO >> INSPECTION END

**7.PERFORM COMPONENT FUNCTION CHECK**

Perform component function check. Refer to [EC-273, "Component Function Check"](#).

**NOTE:**

Use component function check to check the overall function of the heated oxygen sensor 2 circuit. During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

YES >> INSPECTION END

NO >> Proceed to [EC-274, "Diagnosis Procedure"](#).

**Component Function Check**

INFOID:000000006882934

**1.PERFORM COMPONENT FUNCTION CHECK-I**

**Ⓧ Without CONSULT**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.

# P0139, P0159 HO2S2

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Check the voltage between ECM harness connector terminals under the following condition.

| DTC   | ECM       |          |    | Condition   | Voltage  |
|-------|-----------|----------|----|---|--|
|       | Connector | Terminal |    |   |  |
|       |           | +        | -  |   |  |
| P0139 | F102      | 76       | 84 | Revving up to 4,000 rpm under no load at least 10 times | A change of voltage should be more than 0.08 V for 1 second during this procedure. |
| P0159 |           | 80       |    |   |  |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

## 2.PERFORM COMPONENT FUNCTION CHECK-II

Check the voltage between ECM harness connector terminals under the following condition.

| DTC   | ECM       |          |    | Condition                             | Voltage  |
|-------|-----------|----------|----|---------------------------------------|--|
|       | Connector | Terminal |    |                                       |  |
|       |           | +        | -  |                                       |  |
| P0139 | F102      | 76       | 84 | Keeping engine at idle for 10 minutes | A change of voltage should be more than 0.08 V for 1 second during this procedure. |
| P0159 |           | 80       |    |                                       |  |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 3.

## 3.PERFORM COMPONENT FUNCTION CHECK-III

Check the voltage between ECM harness connector terminals under the following condition.

| DTC   | ECM       |          |          | Condition  | Voltage  |
|-------|-----------|----------|----------|--|--|
|       | Connector | +        | -        |  |  |
|       |           | Terminal | Terminal |  |  |
| P0139 | F102      | 76       | 84       | Coasting from 80 km/h (50 MPH) on the suitable gear position | A change of voltage should be more than 0.08 V for 1 second during this procedure. |
| P0159 |           | 80       |          |  |  |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Proceed to [EC-274, "Diagnosis Procedure"](#).

## Diagnosis Procedure

INFOID:000000006882935

### 1.CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace ground connection.

### 2.CLEAR THE MIXTURE RATIO SELF-LEARNING VALUE

1. Clear the mixture ratio self-learning value. Refer to [EC-153, "Work Procedure"](#).
2. Run engine for at least 10 minutes at idle speed.

Is the 1st trip DTC P0171, P0172, P0174 or P0175 detected? Is it difficult to start engine?

YES >> Perform trouble diagnosis for DTC P0171, P0174 or P0172, P0175. Refer to [EC-279, "DTC Logic"](#) or [EC-283, "DTC Logic"](#).

# P0139, P0159 HO2S2

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

NO >> GO TO 3.

### 3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 (HO2S2) harness connector.
3. Disconnect ECM harness connector.
4. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0139 | 1     | F54       | 1        | F102      | 84       | Existed    |
| P0159 | 2     | F53       | 1        |           |          |            |

5. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0139 | 1     | F54       | 4        | F102      | 76       | Existed    |
| P0159 | 2     | F53       | 4        |           | 80       |            |

2. Check the continuity between HO2S2 harness connector and ground, or ECM harness connector and ground.

| DTC   | HO2S2 |           |          | Ground | Continuity  |
|-------|-------|-----------|----------|--------|-------------|
|       | Bank  | Connector | Terminal |        |             |
| P0139 | 1     | F54       | 4        | Ground | Not existed |
| P0159 | 2     | F53       | 4        |        |             |

| DTC   | ECM  |           |          | Ground | Continuity  |
|-------|------|-----------|----------|--------|-------------|
|       | Bank | Connector | Terminal |        |             |
| P0139 | 1    | F102      | 76       | Ground | Not existed |
| P0159 | 2    |           | 80       |        |             |

3. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 5. CHECK HEATED OXYGEN SENSOR 2

Refer to [EC-276, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

### 6. REPLACE HEATED OXYGEN SENSOR 2

Replace malfunctioning heated oxygen sensor 2.

#### **CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.

< DTC/CIRCUIT DIAGNOSIS >

- Before installing new heated oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

>> INSPECTION END

7.CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

>> INSPECTION END

Component Inspection

INFOID:000000006882936

1.INSPECTION START

Do you have CONSULT?

Do you have CONSULT?

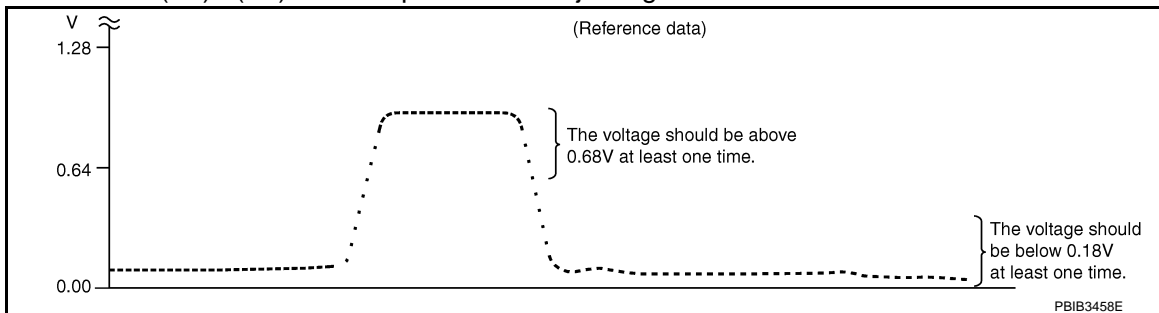

YES >> GO TO 2.

NO >> GO TO 3.

2.CHECK HEATED OXYGEN SENSOR 2

**Ⓟ With CONSULT**

1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.
6. Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)/(B2)" as the monitor item with CONSULT.
7. Check "HO2S2 (B1) / (B2)" at idle speed when adjusting "FUEL INJECTION" to  $\pm 25\%$ .

"HO2S2 (B1)/(B2)" should be above 0.70 V at least once when the "FUEL INJECTION" is +25%.

"HO2S2 (B1)/(B2)" should be below 0.18 V at least once when the "FUEL INJECTION" is -25%.

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 6.

3.CHECK HEATED OXYGEN SENSOR 2-I

**Ⓧ Without CONSULT**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Check the voltage between ECM harness connector terminals under the following condition.

| ECM       |                           |          | Condition  | Voltage  |
|-----------|---------------------------|----------|--|--|
| Connector | +                         | -        |  |  |
|           | Terminal                  | Terminal |  |  |
| F102      | 76<br>[HO2S2<br>(bank 1)] | 84       | Revvng up to 4,000 rpm under no load at least 10 times | The voltage should be above 0.70 V at least once during this procedure.<br>The voltage should be below 0.18 V at least once during this procedure. |
|           | 80<br>[HO2S2<br>(bank 2)] |          |  |  |

Is the inspection result normal?

YES >> INSPECTION END  
NO >> GO TO 4.

#### 4.CHECK HEATED OXYGEN SENSOR 2-II

Check the voltage between ECM harness connector terminals under the following condition.

| ECM       |                           |          | Condition                             | Voltage  |

## P0171, P0174 FUEL INJECTION SYSTEM FUNCTION

### DTC Logic

INFOID:000000006882937

#### DTC DETECTION LOGIC

With the Air/Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from A/F sensor 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios.

In case the amount of the compensation value is extremely large (the actual mixture ratio is too lean), the ECM judges the condition as the fuel injection system malfunction and illuminates the MIL (2 trip detection logic).

| Sensor       | Input signal to ECM  | ECM function           | Actuator      |
|--------------|--|------------------------|---------------|
| A/F sensor 1 | Density of oxygen in exhaust gas (Mixture ratio feedback signal) | Fuel injection control | Fuel injector |

| DTC No. | Trouble diagnosis name                  | DTC detecting condition   | Possible cause   |
|---------|---|---|--|
| P0171   | Fuel injection system too lean (bank 1) | • Fuel injection system does not operate properly.<br>• The amount of mixture ratio compensation is too large. (The mixture ratio is too lean.) | • Intake air leaks<br>• A/F sensor 1<br>• Fuel injector<br>• Exhaust gas leaks<br>• Incorrect fuel pressure<br>• Lack of fuel<br>• Mass air flow sensor<br>• Incorrect PCV hose connection |
| P0174   | Fuel injection system too lean (bank 2) |   |  |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE-I

1. Clear the mixture ratio self-learning value. Refer to [EC-153, "Work Procedure"](#).
2. Start engine.

Is it difficult to start engine?

- YES >> GO TO 3.  
NO >> GO TO 4.

##### 3. RESTART ENGINE

If it is difficult to start engine, the fuel injection system has a malfunction, too.  
Crank engine while depressing accelerator pedal.

#### NOTE:

When depressing accelerator pedal three fourths (3/4) or more, the control system does not start the engine.  
Do not depress accelerator pedal too much.

Does engine start?

- YES >> Go to [EC-280, "Diagnosis Procedure"](#).  
NO >> Check exhaust and intake air leak visually.

##### 4. PERFORM DTC CONFIRMATION PROCEDURE-II

1. Keep engine idle for at least 5 minutes.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

# P0171, P0174 FUEL INJECTION SYSTEM FUNCTION

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

- YES >> Go to [EC-280, "Diagnosis Procedure"](#).  
 NO >> GO TO 5.

### 5. PERFORM DTC CONFIRMATION PROCEDURE-III

- Turn ignition switch OFF and wait at least 10 seconds.
- Start engine.
- Maintain the following conditions for at least 10 consecutive minutes.  
Hold the accelerator pedal as steady as possible.

|               |                             |
|---------------|-----------------------------|
| VHCL SPEED SE | 50 - 120 km/h (31 - 75 MPH) |
|---------------|-----------------------------|

**CAUTION:**

**Always drive vehicle at a safe speed.**

- Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-280, "Diagnosis Procedure"](#).  
 NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000006882938

### 1. CHECK EXHAUST GAS LEAK

- Start engine and run it at idle.
- Listen for an exhaust gas leak before three way catalyst 1.

Is exhaust gas leak detected?

- YES >> Repair or replace.  
 NO >> GO TO 2.

### 2. CHECK FOR INTAKE AIR LEAK

- Listen for an intake air leak after the mass air flow sensor.
- Check PCV hose connection.

Is intake air leak detected?

- YES >> Repair or replace.  
 NO >> GO TO 3.

### 3. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT

- Turn ignition switch OFF.
- Disconnect corresponding A/F sensor 1 harness connector.
- Disconnect ECM harness connector.
- Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

| DTC   | A/F sensor 1 |           |          | ECM       |          | Continuity |
|-------|--------------|-----------|----------|-----------|----------|------------|
|       | Bank         | Connector | Terminal | Connector | Terminal |            |
| P0171 | 1            | F3        | 1        | F102      | 57       | Existed    |
|       |              |           | 2        |           | 61       |            |
| P0174 | 2            | F20       | 1        |           | 65       |            |
|       |              |           | 2        |           | 66       |            |

# P0171, P0174 FUEL INJECTION SYSTEM FUNCTION

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

5. Check the continuity between A/F sensor 1 harness connector and ground, or ECM harness connector and ground.

| DTC   | A/F sensor 1 |           |          | Ground | Continuity  |
|-------|--------------|-----------|----------|--------|-------------|
|       | Bank         | Connector | Terminal |        |             |
| P0171 | 1            | F3        | 1        | Ground | Not existed |
|       |              |           | 2        |        |             |
| P0174 | 2            | F20       | 1        |        |             |
|       |              |           | 2        |        |             |

| DTC   | ECM  |           |          | Ground | Continuity  |
|-------|------|-----------|----------|--------|-------------|
|       | Bank | Connector | Terminal |        |             |
| P0171 | 1    | F102      | 57       | Ground | Not existed |
|       |      |           | 61       |        |             |
| P0174 | 2    |           | 65       |        |             |
|       |      |           | 66       |        |             |

6. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 4. CHECK FUEL PRESSURE

1. Release fuel pressure to zero. Refer to [EC-158, "Work Procedure"](#).
2. Install fuel pressure gauge and check fuel pressure. Refer to [EC-158, "Work Procedure"](#).

**At idling: Approximately 350 kPa (3.57 kg/cm<sup>2</sup>, 51 psi)**

Is the inspection result normal?

YES >> GO TO 6.

NO >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check fuel hoses and fuel tubes for clogging.

Is the inspection result normal?

YES >> Replace "fuel filter and fuel pump assembly". Refer to [FL-5, "Exploded View"](#).

NO >> Repair or replace.

## 6. CHECK MASS AIR FLOW SENSOR

 **With CONSULT**

1. Install all removed parts.
2. Check "MASS AIR FLOW" in "DATA MONITOR" mode with CONSULT.  
For specification, refer to [EC-545, "Mass Air Flow Sensor"](#).

 **With GST**

1. Install all removed parts.
2. Check mass air flow sensor signal in Service \$01 with GST.  
For specification, refer to [EC-545, "Mass Air Flow Sensor"](#).

Is the measurement value within the specification?

YES >> GO TO 7.

NO >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or grounds. Refer to [EC-211, "Diagnosis Procedure"](#).

## 7. CHECK FUNCTION OF FUEL INJECTOR

 **With CONSULT**

1. Start engine.

# P0171, P0174 FUEL INJECTION SYSTEM FUNCTION

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT.
3. Make sure that each circuit produces a momentary engine speed drop.

### ⊗ Without CONSULT

1. Start engine and let it idle.
2. Listen to each fuel injector operating sound.

**Clicking sound should be heard.**

### Is the inspection result normal?

YES >> GO TO 8.

NO >> Perform trouble diagnosis for FUEL INJECTOR, refer to [EC-512. "Diagnosis Procedure"](#).

## 8. CHECK FUEL INJECTOR

1. Turn ignition switch OFF.
2. Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
3. Disconnect all fuel injector harness connectors.
4. Remove fuel tube assembly. Refer to [EM-39. "Removal and Installation"](#).  
Keep fuel hose and all fuel injectors connected to fuel tube.
5. For DTC P0171, reconnect fuel injector harness connectors on bank 1.  
For DTC P0174, reconnect fuel injector harness connectors on bank 2.
6. Disconnect all ignition coil harness connectors.
7. Prepare pans or saucers under each fuel injector.
8. Crank engine for about 3 seconds.  
For DTC P0171, make sure that fuel sprays out from fuel injectors on bank 1.  
For DTC P0174, make sure that fuel sprays out from fuel injectors on bank 2.

**Fuel should be sprayed evenly for each fuel injector.**

### Is the inspection result normal?

YES >> GO TO 9.

NO >> Replace fuel injectors from which fuel does not spray out. Always replace O-ring with new ones.

## 9. CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

>> INSPECTION END

# P0172, P0175 FUEL INJECTION SYSTEM FUNCTION

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0172, P0175 FUEL INJECTION SYSTEM FUNCTION

### DTC Logic

INFOID:000000006882939

#### DTC DETECTION LOGIC

With the Air/Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from A/F sensor 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios.

In case the amount of the compensation value is extremely large (the actual mixture ratio is too rich), the ECM judges the condition as the fuel injection system malfunction and illuminates the MIL (2 trip detection logic).

| Sensor       | Input signal to ECM   | ECM function           | Actuator      |
|--------------|---|------------------------|---------------|
| A/F sensor 1 | Density of oxygen in exhaust gas<br>(Mixture ratio feedback signal) | Fuel injection control | Fuel injector |

| DTC No. | Trouble diagnosis name                  | DTC detecting condition  | Possible cause  |
|---------|---|--|---|
| P0172   | Fuel injection system too rich (bank 1) | • Fuel injection system does not operate properly.<br>• The amount of mixture ratio compensation is too large.<br>(The mixture ratio is too rich.) | • A/F sensor 1<br>• Fuel injector<br>• Exhaust gas leaks<br>• Incorrect fuel pressure<br>• Mass air flow sensor |
| P0175   | Fuel injection system too rich (bank 2) |  |   |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE-I

1. Clear the mixture ratio self-learning value. Refer to [EC-153, "Work Procedure"](#).
2. Start engine.

Is it difficult to start engine?

YES >> GO TO 3.

NO >> GO TO 4.

##### 3. RESTART ENGINE

If it is difficult to start engine, the fuel injection system has a malfunction, too.

Crank engine while depressing accelerator pedal.

#### NOTE:

When depressing accelerator pedal three fourths (3/4) or more, the control system does not start the engine. Do not depress accelerator pedal too much.

Does engine start?

YES >> Go to [EC-284, "Diagnosis Procedure"](#).

NO >> Remove spark plugs and check for fouling, etc.

##### 4. PERFORM DTC CONFIRMATION PROCEDURE-II

1. Keep engine idle for at least 10 minutes.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-284, "Diagnosis Procedure"](#).

NO >> GO TO 5.

##### 5. PERFORM DTC CONFIRMATION PROCEDURE-III

# P0172, P0175 FUEL INJECTION SYSTEM FUNCTION

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Start engine.
3. Maintain the following conditions for at least 10 consecutive minutes.  
Hold the accelerator pedal as steady as possible.

|               |                             |
|---------------|-----------------------------|
| VHCL SPEED SE | 50 - 120 km/h (31 - 75 MPH) |
|---------------|-----------------------------|

### CAUTION:

**Always drive vehicle at a safe speed.**

4. Check 1st trip DTC.

### Is 1st trip DTC detected?

- YES >> Go to [EC-284, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000006882940

### 1. CHECK EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before three way catalyst 1.

### Is exhaust gas leak detected?

- YES >> Repair or replace.  
NO >> GO TO 2.

### 2. CHECK FOR INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

### Is intake air leak detected?

- YES >> Repair or replace.  
NO >> GO TO 3.

### 3. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect corresponding A/F sensor 1 harness connector.
3. Disconnect ECM harness connector.
4. Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

| DTC   | A/F sensor 1 |           |          | ECM       |          | Continuity |
|-------|--------------|-----------|----------|-----------|----------|------------|
|       | Bank         | Connector | Terminal | Connector | Terminal |            |
| P0172 | 1            | F3        | 1        | F102      | 57       | Existed    |
|       |              |           | 2        |           | 61       |            |
| P0175 | 2            | F20       | 1        |           | 65       |            |
|       |              |           | 2        |           | 66       |            |

5. Check the continuity between A/F sensor 1 harness connector and ground, or ECM harness connector and ground.

# P0172, P0175 FUEL INJECTION SYSTEM FUNCTION

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| DTC   | A/F sensor 1 |           |          | Ground | Continuity  |
|-------|--------------|-----------|----------|--------|-------------|
|       | Bank         | Connector | Terminal |        |             |
| P0172 | 1            | F3        | 1        | Ground | Not existed |
|       |              |           | 2        |        |             |

|       |      |           | 61       |        |             |
| P0175 | 2    |           | 65       |        |             |
|       |      |           | 66       |        |             |

6. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 4.CHECK FUEL PRESSURE

1. Release fuel pressure to zero. Refer to [EC-158, "Work Procedure"](#).

2. Install fuel pressure gauge and check fuel pressure. Refer to [EC-158, "Work Procedure"](#).

**At idling: Approximately 350 kPa (3.57 kg/cm<sup>2</sup>, 51 psi)**

Is the inspection result normal?

YES >> GO TO 5.

NO >> Replace "fuel filter and fuel pump assembly". Refer to [FL-5, "Exploded View"](#).

## 5.CHECK MASS AIR FLOW SENSOR

### With CONSULT

1. Install all removed parts.

2. Check "MASS AIR FLOW" in "DATA MONITOR" mode with CONSULT.  
For specification, refer to [EC-545, "Mass Air Flow Sensor"](#).

### With GST

1. Install all removed parts.

2. Check mass air flow sensor signal in "Service \$01" with GST.  
For specification, refer to [EC-545, "Mass Air Flow Sensor"](#).

Is the measurement value within the specification?

YES >> GO TO 6.

NO >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or grounds. Refer to [EC-211, "Diagnosis Procedure"](#).

## 6.CHECK FUNCTION OF FUEL INJECTOR

### With CONSULT

1. Start engine.

2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT.

3. Make sure that each circuit produces a momentary engine speed drop.

### Without CONSULT

1. Start engine and let it idle.

## P0172, P0175 FUEL INJECTION SYSTEM FUNCTION

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

- Listen to each fuel injector operating sound.

**Clicking sound should be heard.**

Is the inspection result normal?

YES >> GO TO 7.

NO >> Perform trouble diagnosis for FUEL INJECTOR, refer to [EC-512. "Diagnosis Procedure"](#).

### 7. CHECK FUEL INJECTOR

- Remove fuel injector assembly. Refer to [EM-39. "Removal and Installation"](#).  
Keep fuel hose and all fuel injectors connected to fuel tube.
- Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
- Disconnect all fuel injector harness connectors.
- Disconnect all ignition coil harness connectors.
- Prepare pans or saucers under each fuel injector.
- Crank engine for about 3 seconds.  
Make sure fuel that does not drip from fuel injector.

Is the inspection result normal?

YES >> GO TO 8.

NO >> Replace the fuel injectors from which fuel is dripping. Always replace O-ring with new one.

### 8. CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

>> INSPECTION END

# P0181 FTT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0181 FTT SENSOR

### DTC Logic

INFOID:000000006882941

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis<br>(Trouble diagnosis content)                                    | DTC detecting condition |  | Possible cause   |
|---------|---|-------------------------|--|--|
| P0181   | FTT SENSOR<br>[Fuel tank temperature<br>(FTT) sensor circuit range/<br>performance] | A)                      | Rationally incorrect voltage from the sensor is sent to ECM, compared with the voltage signals from ECT sensor and intake air temperature sensor.  | <ul style="list-style-type: none"><li>• Harness or connectors (The FTT sensor circuit is open or shorted)</li><li>• FTT sensor</li></ul> |
|         |   | B)                      | The comparison result of signals transmitted to ECM from each temperature sensor (IAT sensor, ECT sensor, EOT sensor, and FTT sensor) shows that the voltage signal of the FTT sensor is higher/lower than that of other temperature sensors when the engine is started with its cold state. |  |

### DTC CONFIRMATION PROCEDURE

#### 1.INSPECTION START

##### Is it necessary to erase permanent DTC?

- YES >> GO TO 7.  
NO >> GO TO 2.

#### 2.PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 3.

#### 3.PERFORM DTC CONFIRMATION PROCEDURE-I

1. Turn ignition switch ON and wait at least 10 seconds.
2. Check 1st trip DTC.

##### Is 1st trip DTC detected?

- YES >> Go to [EC-289, "Diagnosis Procedure"](#).  
NO >> GO TO 4.

#### 4.CHECK ENGINE COOLANT TEMPERATURE

1. Select "COOLAN TEMP/S" in "DATA MONITOR" with CONSULT.
2. Check "COOLAN TEMP/S" value.

##### "COOLAN TEMP/S" less than 60°C (140°F)?

- YES >> INSPECTION END  
NO >> GO TO 5.

#### 5.PERFORM DTC CONFIRMATION PROCEDURE-II

1. Cool engine down until "COOLAN TEMP/S" is less than 60°C (140°F).
2. Wait at least 10 seconds.
3. Check 1st trip DTC.

##### Is 1st trip DTC detected?

- YES >> Go to [EC-289, "Diagnosis Procedure"](#).  
NO >> GO TO 6.

# P0181 FTT SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

## 6. PERFORM COMPONENT FUNCTION CHECK (FOR MALFUNCTION B)

Perform component function check. Refer to [EC-288, "Component Function Check"](#).

### NOTE:

Use the component function check to check the overall function of the FTT sensor circuit. During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

YES >> INSPECTION END

NO >> Proceed to [EC-289, "Diagnosis Procedure"](#).

## 7. PRECONDITIONING

If DTC CONFIRMATION PROCEDURE has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

### TEST CONDITION:

- Before performing the following procedure, do not add fuel.
- Before performing the following procedure, check that fuel level is between 1/4 and 4/4.
- Before performing the following procedure, confirm that battery voltage is 11 V or more at idle.

>> GO TO 8.

## 8. PERFORM DTC CONFIRMATION PROCEDURE B

1. Start engine and let it idle for 60 minutes.
2. Move the vehicle to a cool place.

### NOTE:

Cool the vehicle in an environment of ambient air temperature between  $-10^{\circ}\text{C}$  ( $14^{\circ}\text{F}$ ) and  $35^{\circ}\text{C}$  ( $95^{\circ}\text{F}$ ).

3. Turn ignition switch OFF and soak the vehicle for 12 hours.

### CAUTION:

**Never turn ignition switch ON during soaking.**

### NOTE:

The vehicle must be cooled with the hood open.

4. Start engine and let it idle for 5 minutes or more.

### CAUTION:

**Never turn ignition switch OFF during idling.**

5. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Proceed to [EC-289, "Diagnosis Procedure"](#).

NO >> INSPECTION END

## Component Function Check

INFOID:000000007212350

### 1. CHECK FUEL TANK TEMPERATURE SENSOR

1. Turn ignition switch OFF.
2. Disconnect "fuel level sensor unit and fuel pump" harness connector.
3. Remove fuel level sensor unit. Refer to [FL-5, "Exploded View"](#).
4. Check resistance between "fuel level sensor unit and fuel pump" terminals by heating with hot water as shown in the figure.

| Terminals | Condition  | Resistance (k $\Omega$ ) |
|-----------|--|--------------------------|
| 4 and 5   | Temperature [ $^{\circ}\text{C}$ ( $^{\circ}\text{F}$ )] | 20 (68) 2.3 - 2.7        |
|           |  | 50 (122) 0.79 - 0.90     |

Is the inspection result normal?

YES >> GO TO 2.

NO >> Proceed to [EC-289, "Diagnosis Procedure"](#).

# P0181 FTT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## 2.CHECK INTERMITTENT INCIDENT

Check intermittent incident. Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> INSPECTION END

NO >> Proceed to [EC-289, "Diagnosis Procedure"](#).

## Diagnosis Procedure

INFOID:000000007212351

### 1.INSPECTION START

Confirm the detected malfunction (A or B). Refer to [EC-287, "DTC Logic"](#).

Which malfunction is detected?

YES >> GO TO 2.

NO >> GO TO 7.

### 2.CHECK DTC WITH COMBINATION METER

Refer to [MWI-31, "CONSULT Function"](#).

Is the inspection result normal?

YES >> GO TO 3.

NO >> Go to [MWI-62, "Component Function Check"](#).

### 3.CHECK FUEL TANK TEMPERATURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect "fuel level sensor unit and fuel pump" harness connector.
3. Turn ignition switch ON.
4. Check the voltage between "fuel level sensor unit and fuel pump" harness connector and ground.

| Fuel level sensor unit and fuel pump |          | Ground | Voltage (V) |
|--------------------------------------|----------|--------|-------------|
| Connector                            | Terminal |        |             |
| B241                                 | 4        | Ground | Approx. 5   |

Is the inspection result normal?

YES >> GO TO 5.

NO >> GO TO 4.

### 4.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B201, M117
- Harness for open or short between ECM and "fuel level sensor unit and fuel pump"

>> Repair open circuit, short to ground or short to power in harness or connector.

### 5.CHECK FUEL TANK TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect combination meter harness connector.
3. Check the continuity between "fuel level sensor unit and fuel pump" harness connector and combination meter harness connector.

| Fuel level sensor unit and fuel pump |          | Combination meter |          | Continuity |
|--------------------------------------|----------|-------------------|----------|------------|
| Connector                            | Terminal | Connector         | Terminal |            |
| B241                                 | 5        | M53               | 24       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

# P0181 FTT SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B201, M117
- Harness for open or short between “fuel level sensor unit and fuel pump” and combination meter

>> Repair open circuit, short to ground or short to power in harness or connector.

## 7. CHECK FUEL TANK TEMPERATURE SENSOR

Refer to [EC-290, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 8.

NO >> Replace “fuel level sensor unit and fuel pump”. Refer to [FL-5, "Exploded View"](#).

## 8. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000007212352

## 1. CHECK FUEL TANK TEMPERATURE SENSOR

1. Turn ignition switch OFF.
2. Disconnect “fuel level sensor unit and fuel pump” harness connector.
3. Remove fuel level sensor unit. Refer to [FL-5, "Exploded View"](#).
4. Check resistance between “fuel level sensor unit and fuel pump” terminals by heating with hot water as shown in the figure.

| Terminals | Condition             | Resistance (kΩ) |             |
|-----------|-----------------------|-----------------|-------------|
| 4 and 5   | Temperature [°C (°F)] | 20 (68)         | 2.3 - 2.7   |
|           |                       | 50 (122)        | 0.79 - 0.90 |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace “fuel level sensor unit and fuel pump”. Refer to [FL-5, "Exploded View"](#).

[VQ37VHR FOR USA AND CANADA]

## P0182, P0183 FTT SENSOR

### DTC Logic

INFOID:000000006882944

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                          | DTC detecting condition                                     | Possible cause   |
|---------|---|---|--|
| P0182   | Fuel tank temperature sensor circuit low input  | An excessively low voltage from the sensor is sent to ECM.  | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted.)</li> <li>• Fuel tank temperature sensor</li> </ul> |
| P0183   | Fuel tank temperature sensor circuit high input | An excessively high voltage from the sensor is sent to ECM. |  |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON and wait at least 5 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-291, "Diagnosis Procedure"](#).  
 NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006882945

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
 NO >> Repair or replace ground connection.

#### 2. CHECK DTC WITH "COMBINATION METER"

Refer to [MWI-31, "CONSULT Function"](#).

Is the inspection result normal?

- YES >> GO TO 3.  
 NO >> Go to [MWI-62, "Component Function Check"](#).

#### 3. CHECK FUEL TANK TEMPERATURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect "fuel level sensor unit and fuel pump" harness connector.
3. Turn ignition switch ON.
4. Check the voltage between "fuel level sensor unit and fuel pump" harness connector and ground.

| Fuel level sensor unit and fuel pump |          | Ground | Voltage (V) |
|--------------------------------------|----------|--------|-------------|
| Connector                            | Terminal |        |             |
| B241                                 | 4        | Ground | Approx. 5   |

Is the inspection result normal?

## P0182, P0183 FTT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

- YES >> GO TO 5.  
NO >> GO TO 4.

### 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M117, B201
- Harness for open or short between ECM and “fuel level sensor unit and fuel pump”

>> Repair open circuit, short to ground or short to power in harness or connector.

### 5. CHECK FUEL TANK TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect “combination meter” harness connector.
3. Check the continuity between “fuel level sensor unit and fuel pump” harness connector and “combination meter” harness connector.

| Fuel level sensor unit and fuel pump |          | Combination meter |          | Continuity |
|--------------------------------------|----------|-------------------|----------|------------|
| Connector                            | Terminal | Connector         | Terminal |            |
| B241                                 | 5        | M53               | 24       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 7.  
NO >> GO TO 6.

### 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M117, B201
- Harness for open or short between “fuel level sensor unit and fuel pump” and “combination meter”

>> Repair open circuit, short to ground or short to power in harness or connector.

### 7. CHECK FUEL TANK TEMPERATURE SENSOR

Refer to [EC-292, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 8.  
NO >> Replace “fuel level sensor unit and fuel pump”. Refer to [FL-5, "Exploded View"](#).

### 8. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

## P0196 EOT SENSOR

### DTC Logic

INFOID:000000006882947

#### DTC DETECTION LOGIC

##### NOTE:

If DTC P0196 is displayed with P0197 or P0198, first perform the trouble diagnosis for DTC P0197 or P0198. Refer to [EC-298, "DTC Logic"](#).

| DTC No. | Trouble diagnosis<br>(Trouble diagnosis content)                         | DTC detecting condition |  | Possible cause   |
|---------|--|-------------------------|--|--|
| P0196   | EOT SENSOR<br>[Engine oil temperature (EOT)<br>sensor range/performance] | A)                      | Rationally incorrect voltage from the sensor is sent to ECM, compared with the voltage signals from engine coolant temperature sensor and intake air temperature sensor.   | <ul style="list-style-type: none"><li>• Harness or connectors (The EOT sensor circuit is open or shorted)</li><li>• EOT sensor</li></ul> |
|         |  | B)                      | The comparison result of signals transmitted to ECM from each temperature sensor (IAT sensor, ECT sensor, EOT sensor, and FTT sensor) shows that the voltage signal of the EOT sensor is higher/lower than that of other temperature sensors when the engine is started with its cold state. |  |

#### DTC CONFIRMATION PROCEDURE

##### 1.INSPECTION START

##### Is it necessary to erase permanent DTC?

- YES >> GO TO 6.
- NO >> GO TO 2.

##### 2.PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 11 V at idle.

>> GO TO 3.

##### 3.PERFORM DTC CONFIRMATION PROCEDURE-I

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Start engine and let it idle for 5 minutes and 10 seconds.
6. Check 1st trip DTC.

##### Is 1st trip DTC detected?

- YES >> [EC-296, "Diagnosis Procedure"](#).
- NO >> GO TO 4.

##### 4.PERFORM DTC CONFIRMATION PROCEDURE-II

1. Select "DATA MONITOR" mode with CONSULT.
2. Check that "COOLAN TEMP/S" indicates above 80°C (176°F).  
If it is above 80°C (176°F), go to the following steps.  
If it is below 80°C (176°F), warm engine up until "COOLAN TEMP/S" indicates more than 80°C (176°F).  
Then perform the following steps.
3. Turn ignition switch OFF and soak the vehicle in a cool place.

# P0196 EOT SENSOR

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

4. Turn ignition switch ON.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Turn ignition switch ON.

**NOTE:**

**Do not turn ignition switch OFF until step 10.**

7. Select "DATA MONITOR" mode with CONSULT.
8. Check the following.

|  |                    |
|--|--------------------|
| COOLAN TEMP/S  | Below 40°C (104°F) |
| INT/A TEMP SE  | Below 40°C (104°F) |
| Difference between "COOLAN TEMP/S" and "INT/A TEMP SE" | Within 6°C (11°F)  |

If they are within the specified range, perform the following steps.

If they are out of the specified range, soak the vehicle to meet the above conditions. Then perform the following steps.

**NOTE:**

- **Do not turn ignition switch OFF.**
- **If it is supposed to need a long period of time, do not deplete the battery.**

9. Start engine and let it idle for 5 minutes.
10. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> [EC-296, "Diagnosis Procedure"](#).

NO >> GO TO 5.

## 5.PERFORM COMPONENT FUNCTION CHECK (FOR MALFUNCTION B)

Perform component function check. Refer to [EC-296, "Component Function Check"](#).

**NOTE:**

Use the component function check to check the overall function of the EOT sensor circuit. During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

YES >> INSPECTION END

NO >> Proceed to [EC-296, "Diagnosis Procedure"](#).

## 6.PRECONDITIONING

If DTC CONFIRMATION PROCEDURE has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

**TEST CONDITION:**

- **Before performing the following procedure, do not add fuel.**
- **Before performing the following procedure, check that fuel level is between 1/4 and 4/4.**
- **Before performing the following procedure, confirm that battery voltage is 11 V or more at idle.**

>> GO TO 7.

## 7.PERFORM DTC CONFIRMATION PROCEDURE B

1. Start engine and let it idle for 60 minutes.
2. Move the vehicle to a cool place.

**NOTE:**

Cool the vehicle in an environment of ambient air temperature between -10°C (14°F) and 35°C (95°F).

3. Turn ignition switch OFF and soak the vehicle for 12 hours.

**CAUTION:**

**Never turn ignition switch ON during soaking.**

**NOTE:**

The vehicle must be cooled with the hood open.

4. Start engine and let it idle for 5 minutes or more.

**CAUTION:**

**Never turn ignition switch OFF during idling.**

# P0196 EOT SENSOR

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

5. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Proceed to [EC-296, "Diagnosis Procedure"](#).
- NO >> INSPECTION END

## Component Function Check

INFOID:000000007215006

### 1. CHECK ENGINE OIL TEMPERATURE (EOT) SENSOR

1. Turn ignition switch OFF.
2. Disconnect EOT sensor harness connector.
3. Remove EOT sensor. Refer to [EM-45, "Exploded View"](#).
4. Check resistance between EOT sensor terminals by heating with hot water as shown in the figure.

| Terminals | Condition             |          | Resistance (kΩ) |
|-----------|-----------------------|----------|-----------------|
| 1 and 2   | Temperature [°C (°F)] | 20 (68)  | 2.10 - 2.90     |
|           |                       | 50 (122) | 0.68 - 1.00     |
|           |                       | 90 (194) | 0.236 - 0.260   |

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Proceed to [EC-296, "Diagnosis Procedure"](#).

### 2. CHECK INTERMITTENT INCIDENT

Check intermittent incident. Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Proceed to [EC-296, "Diagnosis Procedure"](#).

## Diagnosis Procedure

INFOID:000000007215007

### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Repair or replace ground connection.

### 2. CHECK ENGINE OIL TEMPERATURE SENSOR

Refer to [EC-296, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 3.
- NO >> Replace engine oil temperature sensor. Refer to [EM-45, "Exploded View"](#).

## P0197, P0198 EOT SENSOR

### DTC Logic

INFOID:000000006882950

### DTC DETECTION LOGIC

| DTC No. | Trouble Diagnosis Name                           | DTC Detecting Condition                                     | Possible Cause   |
|---------|--|---|--|
| P0197   | Engine oil temperature sensor circuit low input  | An excessively low voltage from the sensor is sent to ECM.  | <ul style="list-style-type: none"><li>• Harness or connectors (The sensor circuit is open or shorted.)</li><li>• Engine oil temperature sensor</li></ul> |
| P0198   | Engine oil temperature sensor circuit high input | An excessively high voltage from the sensor is sent to ECM. |  |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and wait at least 5 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-298, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006882951

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK EOT SENSOR POWER SUPPLY CIRCUIT

1. Disconnect engine oil temperature (EOT) sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between EOT sensor harness connector and ground.

| EOT sensor |          | Ground | Voltage (V) |
|------------|----------|--------|-------------|
| Connector  | Terminal |        |             |
| F38        | 1        | Ground | Approx. 5   |

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> Repair open circuit, short to ground or short to power in harness or connectors.

#### 3. CHECK EOT SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between EOT sensor harness connector and ECM harness connector.

| P2132   | Throttle position sensor 1 (bank 2) circuit low input  | An excessively low voltage from the TP sensor 1 is sent to ECM.  |  |
| P2133   | Throttle position sensor 1 (bank 2) circuit high input | An excessively high voltage from the TP sensor 1 is sent to ECM. |  |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for 1 second.
2. Check DTC.

Is DTC detected?

YES >> Go to [EC-300, "Diagnosis Procedure"](#).

NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006882954

##### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace ground connection.

##### 2. CHECK THROTTLE POSITION SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect electric throttle control actuator harness connector.
2. Turn ignition switch ON.
3. Check the voltage between electric throttle control actuator harness connector and ground.

# P0222, P0223, P2132, P2133 TP SENSOR

|              | Bank                               | Connector | Terminal |        |             |
| P0222, P0223 | 1                                  | F67       | 6        | Ground | Approx. 5   |
| P2132, P2133 | 2                                  | F27       | 1        |        |             |

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 3. CHECK THROTTLE POSITION SENSOR 1 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between electric throttle control actuator harness connector and ECM harness connector.

| DTC          | Electric throttle control actuator |           |          | ECM       |          | Continuity |
|--------------|------------------------------------|-----------|----------|-----------|----------|------------|
|              | Bank                               | Connector | Terminal | Connector | Terminal |            |
| P0222, P0223 | 1                                  | F67       | 3        | F101      | 40       | Existed    |
| P2132, P2133 | 2                                  | F27       | 4        |           | 48       |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 4. CHECK THROTTLE POSITION SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between electric throttle control actuator harness connector and ECM harness connector.

| DTC          | Electric throttle control actuator |           |          | ECM       |          | Continuity |
|--------------|------------------------------------|-----------|----------|-----------|----------|------------|
|              | Bank                               | Connector | Terminal | Connector | Terminal |            |
| P0222, P0223 | 1                                  | F67       | 4        | F101      | 30       | Existed    |
| P2132, P2133 | 2                                  | F27       | 2        |           | 31       |            |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 5. CHECK THROTTLE POSITION SENSOR

Refer to [EC-302, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

## 6. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.
2. Go to [EC-302, "Special Repair Requirement"](#).

>> INSPECTION END

## 7. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882955

### 1. CHECK THROTTLE POSITION SENSOR

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Perform [EC-148, "Work Procedure"](#).
4. Turn ignition switch ON.
5. Set selector lever to D position.
6. Check the voltage between ECM harness connector terminals under the following conditions.

| ECM       |                           |    | Condition       | Voltage (V)    |
|-----------|---------------------------|----|-----------------|----------------|
| Connector | +                         | -  |                 |                |
|           | Terminal                  |    |                 |                |
| F101      | 30 [TP sensor 1 (bank 1)] | 40 | Fully released  | More than 0.36 |
|           |                           |    | Fully depressed | Less than 4.75 |
|           | 31 [TP sensor 1 (bank 2)] | 48 | Fully released  | More than 0.36 |
|           |                           |    | Fully depressed | Less than 4.75 |
|           | 34 [TP sensor 2 (bank 1)] | 40 | Fully released  | Less than 4.75 |
|           |                           |    | Fully depressed | More than 0.36 |
|           | 35 [TP sensor 2 (bank 2)] | 48 | Fully released  | Less than 4.75 |
|           |                           |    | Fully depressed | More than 0.36 |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

### 2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.
2. Go to [EC-302, "Special Repair Requirement"](#).

>> INSPECTION END

## Special Repair Requirement

INFOID:000000006882956

### 1. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Refer to [EC-148, "Work Procedure"](#)

>> GO TO 2.

### 2. PERFORM IDLE AIR VOLUME LEARNING

Refer to [EC-149, "Work Procedure"](#)

>> END

# P0300, P0301, P0302, P0303, P0304, P0305, P0306 MISFIRE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0300, P0301, P0302, P0303, P0304, P0305, P0306 MISFIRE

### DTC Logic

INFOID:000000006882957

#### DTC DETECTION LOGIC

When a misfire occurs, engine speed will fluctuate. If the engine speed fluctuates enough to cause the crankshaft position (CKP) sensor (POS) signal to vary, ECM can determine that a misfire is occurring.

| Sensor                           | Input signal to ECM | ECM function                  |
|----------------------------------|---------------------|-------------------------------|
| Crankshaft position sensor (POS) | Engine speed        | On board diagnosis of misfire |

The misfire detection logic consists of the following two conditions.

- One Trip Detection Logic (Three Way Catalyst Damage)**  
On the 1st trip, when a misfire condition occurs that can damage the three way catalyst (TWC) due to overheating, the MIL will blink.  
When a misfire condition occurs, the ECM monitors the CKP sensor signal every 200 engine revolutions for a change.  
When the misfire condition decreases to a level that will not damage the TWC, the MIL will turn off.  
If another misfire condition occurs that can damage the TWC on a second trip, the MIL will blink.  
When the misfire condition decreases to a level that will not damage the TWC, the MIL will remain illuminating.  
If another misfire condition occurs that can damage the TWC, the MIL will begin to blink again.
- Two Trip Detection Logic (Exhaust quality deterioration)**  
For misfire conditions that will not damage the TWC (but will affect vehicle emissions), the MIL will only illuminate when the misfire is detected on a second trip. During this condition, the ECM monitors the CKP sensor signal every 1,000 engine revolutions.  
A misfire malfunction can be detected in any one cylinder or in multiple cylinders.

| DTC No. | Trouble diagnosis name              | DTC detecting condition     | Possible cause  |
|---------|-------------------------------------|-----------------------------|---|
| P0300   | Multiple cylinder misfires detected | Multiple cylinders misfire. | <ul style="list-style-type: none"><li>• Improper spark plug</li><li>• Insufficient compression</li><li>• Incorrect fuel pressure</li><li>• The fuel injector circuit is open or shorted</li><li>• Fuel injector</li><li>• Intake air leak</li><li>• The ignition signal circuit is open or shorted</li><li>• Lack of fuel</li><li>• Signal plate</li><li>• A/F sensor 1</li><li>• Incorrect PCV hose connection</li></ul> |
| P0301   | No.1 cylinder misfire detected      | No. 1 cylinder misfires.    |   |
| P0302   | No. 2 cylinder misfire detected     | No. 2 cylinder misfires.    |   |
| P0303   | No. 3 cylinder misfire detected     | No. 3 cylinder misfires.    |   |
| P0304   | No. 4 cylinder misfire detected     | No. 4 cylinder misfires.    |   |
| P0305   | No. 5 cylinder misfire detected     | No. 5 cylinder misfires.    |   |
| P0306   | No. 6 cylinder misfire detected     | No. 6 cylinder misfires.    |   |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE-I

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Restart engine and let it idle for about 15 minutes.
6. Check 1st trip DTC.

Is 1st trip DTC detected?

# P0300, P0301, P0302, P0303, P0304, P0305, P0306 MISFIRE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

- YES >> Go to [EC-304, "Diagnosis Procedure"](#).  
NO >> GO TO 3.

## 3.PERFORM DTC CONFIRMATION PROCEDURE-II

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and drive the vehicle under similar conditions to (1st trip) Freeze Frame Data for a certain time. Refer to the table below.

**Hold the accelerator pedal as steady as possible.**

Similar conditions to (1st trip) Freeze Frame Data mean that the following conditions should be satisfied at the same time.

**CAUTION:**

**Always drive vehicle in safe manner according to traffic conditions and obey all traffic laws when driving.**

|  |  |
|--|--|
| Engine speed                             | Engine speed in the freeze frame data $\pm$ 400 rpm  |
| Vehicle speed                            | Vehicle speed in the freeze frame data $\pm$ 10 km/h (6 MPH)   |
| Base fuel schedule                       | Base fuel schedule in the freeze frame data $\times$ (1 $\pm$ 0.1)   |
| Engine coolant temperature (T) condition | When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).<br>When the freeze frame data shows higher than or equal to 70 °C (158 °F), T should be higher than or equal to 70 °C (158 °F). |

Driving time varies according to the engine speed in the freeze frame data.

| Engine speed        | Time                      |
|---------------------|---------------------------|
| Around 1,000 rpm    | Approximately 10 minutes  |
| Around 2,000 rpm    | Approximately 5 minutes   |
| More than 3,000 rpm | Approximately 3.5 minutes |

5. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-304, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000006882958

### 1.CHECK FOR INTAKE AIR LEAK AND PCV HOSE

1. Start engine and run it at idle speed.
2. Listen for the sound of the intake air leak.
3. Check PCV hose connection.

Is intake air leak detected?

- YES >> Discover air leak location and repair.  
NO >> GO TO 2.

### 2.CHECK FOR EXHAUST SYSTEM CLOGGING

Stop engine and visually check exhaust tube, three way catalyst and muffler for dents.

Is the inspection result normal?

- YES-1 >> With CONSULT: GO TO 3.  
YES-2 >> Without CONSULT: GO TO 4.  
NO >> Repair or replace it.

### 3.PERFORM POWER BALANCE TEST

**Ⓟ With CONSULT**

1. Start engine.
2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT.

# P0300, P0301, P0302, P0303, P0304, P0305, P0306 MISFIRE

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

3. Make sure that each circuit produces a momentary engine speed drop.

Is the inspection result normal?

YES >> GO TO 9.

NO >> GO TO 4.

## 4. CHECK FUNCTION OF FUEL INJECTOR-I

1. Start engine and let it idle.
2. Listen to each fuel injector operation sound.

**Clicking sound should be heard.**

Is the inspection result normal?

YES >> GO TO 5.

NO >> Perform trouble diagnosis for FUEL INJECTOR, refer to [EC-512. "Diagnosis Procedure"](#).

## 5. CHECK FUNCTION OF IGNITION COIL-I

### CAUTION:

Perform the following procedure in a place where with no combustible objects and good ventilation.

1. Turn ignition switch OFF.
2. Remove fuel pump fuse (1) in IPDM E/R (2) to release fuel pressure.

### NOTE:

Do not use CONSULT to release fuel pressure, or fuel pressure applies again during the following procedure.

3. Start engine.
4. After engine stalls, crank it two or three times to release all fuel pressure.
5. Turn ignition switch OFF.
6. Remove all ignition coil harness connectors to avoid the electrical discharge from the ignition coils.
7. Remove ignition coil and spark plug of the cylinder to be checked.
8. Crank engine for 5 seconds or more to remove combustion gas in the cylinder.
9. Connect spark plug and harness connector to ignition coil.
10. Fix ignition coil using a rope etc. with gap of 13 - 17 mm (0.52 - 0.66 in) between the edge of the spark plug and grounded metal portion as shown in the figure.
11. Crank engine for about 3 seconds, and check whether spark is generated between the spark plug and the grounded metal portion.

**Spark should be generated.**

### CAUTION:

- Never place the spark plug and the ignition coil within 50 cm (19.7 in) each other. Be careful not to get an electrical shock while checking, because the electrical discharge voltage becomes 20 kV or more.
- It might damage the ignition coil if the gap of more than 17 mm (0.66 in) is made.

### NOTE:

When the gap is less than 13 mm (0.52 in), a spark might be generated even if the coil is malfunctioning.

Is the inspection result normal?

YES >> GO TO 9.

NO >> GO TO 6.

**6. CHECK FUNCTION OF IGNITION COIL-II**

1. Turn ignition switch OFF.
2. Disconnect spark plug and connect a non-malfunctioning spark plug.
3. Crank engine for about 3 seconds, and recheck whether spark is generated between the spark plug and the grounded metal portion.

**Spark should be generated.**

Is the inspection result normal?

YES >> GO TO 7.

NO >> Check ignition coil, power transistor and their circuits. Refer to [EC-519. "Diagnosis Procedure"](#).

**7. CHECK SPARK PLUG**

Check the initial spark plug for fouling, etc.

Is the inspection result normal?

YES >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to [EM-26. "Inspection"](#).

NO >> Repair or clean spark plug. Then GO TO 8.

**8. CHECK FUNCTION OF IGNITION COIL-III**

1. Reconnect the initial spark plugs.
2. Crank engine for about 3 seconds, and recheck whether spark is generated between the spark plug and the grounded portion.

**Spark should be generated.**

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to [EM-25. "Removal and Installation"](#).

**9. CHECK COMPRESSION PRESSURE**

Check compression pressure. Refer to [EM-18. "Inspection"](#).

Is the inspection result normal?

YES >> GO TO 10.

NO >> Check pistons, piston rings, valves, valve seats and cylinder head gaskets.

**10. CHECK FUEL PRESSURE**

1. Install all removed parts.
2. Release fuel pressure to zero. Refer to [EC-158. "Work Procedure"](#).
3. Install fuel pressure gauge and check fuel pressure. Refer to [EC-158. "Work Procedure"](#).

**At idle: Approximately 350 kPa (3.57 kg/cm<sup>2</sup>, 51 psi)**

Is the inspection result normal?

YES >> GO TO 12.

NO >> GO TO 11.

**11. DETECT MALFUNCTIONING PART**

Check fuel hoses and fuel tubes for clogging.

Is the inspection result normal?

YES >> Replace "fuel filter and fuel pump assembly".

NO >> Repair or replace.

# P0300, P0301, P0302, P0303, P0304, P0305, P0306 MISFIRE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## 12.CHECK IDLE SPEED AND IGNITION TIMING

For procedure, refer to [EC-154, "Work Procedure"](#).

For specification, refer to [EC-545, "Idle Speed"](#) and [EC-545, "Ignition Timing"](#).

Is the inspection result normal?

YES >> GO TO 13.

NO >> Follow the [EC-154, "Work Procedure"](#).

## 13.CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect corresponding A/F sensor 1 harness connector.
3. Disconnect ECM harness connector.
4. Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

| A/F sensor 1 |           |          | ECM       |          | Continuity |
|--------------|-----------|----------|-----------|----------|------------|
| Bank         | Connector | Terminal | Connector | Terminal |            |
| 1            | F3        | 1        | F102      | 57       | Existed    |
|              |           | 2        |           | 61       |            |
| 2            | F20       | 1        |           | 65       |            |
|              |           | 2        |           | 66       |            |

5. Check the continuity between A/F sensor 1 harness connector and ground, or ECM harness connector and ground.

| A/F sensor 1 |           |          | Ground | Continuity  |
|--------------|-----------|----------|--------|-------------|
| Bank         | Connector | Terminal |        |             |
| 1            | F3        | 1        | Ground | Not existed |
|              |           | 2        |        |             |
| 2            | F20       | 1        |        |             |
|              |           | 2        |        |             |

| ECM  |           |          | Ground | Continuity  |
|------|-----------|----------|--------|-------------|
| Bank | Connector | Terminal |        |             |
| 1    | F102      | 57       | Ground | Not existed |
|      |           | 61       |        |             |
| 65   |           |          |        |             |
| 66   |           |          |        |             |

6. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 14.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 14.CHECK A/F SENSOR 1 HEATER

Refer to [EC-197, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 15.

NO >> Replace (malfunctioning) A/F sensor 1. Refer to [EM-36, "Exploded View"](#).

## 15.CHECK MASS AIR FLOW SENSOR

### With CONSULT

Check mass air flow sensor signal in "DATA MONITOR" mode with CONSULT.

For specification, refer to [EC-545, "Mass Air Flow Sensor"](#).

### With GST

## P0300, P0301, P0302, P0303, P0304, P0305, P0306 MISFIRE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

---

Check mass air flow sensor signal in Service \$01 with GST.

For specification, refer to [EC-545, "Mass Air Flow Sensor"](#).

Is the measurement value within the specification?

YES >> GO TO 16.

NO >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or ground. Refer to [EC-211, "Diagnosis Procedure"](#).

### 16.CHECK SYMPTOM TABLE

---

Check items on the rough idle symptom in [EC-532, "Symptom Table"](#).

Is the inspection result normal?

YES >> GO TO 17.

NO >> Repair or replace.

### 17.ERASE THE 1ST TRIP DTC

---

Some tests may cause a 1st trip DTC to be set.

Erase the 1st trip DTC from the ECM memory after performing the tests. Refer to [EC-85, "On Board Diagnosis Function"](#) (Without CONSULT) or [EC-88, "CONSULT Function"](#) (With CONSULT).

>> GO TO 18.

### 18.CHECK INTERMITTENT INCIDENT

---

Refer to [GI-44, "Intermittent Incident"](#).

DTC CONFIRMATION PROCEDURE

1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

**TESTING CONDITION:**

**Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.**

>> GO TO 2.

2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and run it for at least 5 seconds at idle speed.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-309, "Diagnosis Procedure"](#).
- NO >> INSPECTION END

Diagnosis Procedure

INFOID:000000006882960

1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Repair or replace ground connection.

2. CHECK KNOCK SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Disconnect knock sensor harness connector and ECM harness connector.
2. Check the continuity between knock sensor harness connector and ECM harness connector.

| DTC          | Knock sensor |           |          | ECM       |          | Continuity |
|--------------|--------------|-----------|----------|-----------|----------|------------|
|              | Bank         | Connector | Terminal | Connector | Terminal |            |
| P0327, P0328 | 1            | F203      | 2        | F102      | 72       | Existed    |
| P0332, P0333 | 2            | F202      | 2        |           |          |            |

3. Also check harness for short to ground and short to power.

Is the inspection result normal?

< DTC/CIRCUIT DIAGNOSIS >

- YES >> GO TO 4.
- NO >> GO TO 3.

**3. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors F9, F201
- Harness for open or short between knock sensor and ECM

>> Repair open circuit or short to power in harness or connectors.

**4. CHECK KNOCK SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check the continuity between knock sensor harness connector and ECM harness connector.

| DTC          | Knock sensor |           |          | ECM       |          | Continuity |
|--------------|--------------|-----------|----------|-----------|----------|------------|
|              | Bank         | Connector | Terminal | Connector | Terminal |            |
| P0327, P0328 | 1            | F203      | 1        | F102      | 73       | Existed    |
| P0332, P0333 | 2            | F202      | 1        |           | 69       |            |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 6.
- NO >> GO TO 5.

**5. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors F9, F201
- Harness for open or short between ECM and knock sensor

>> Repair open circuit, short to ground or short to power in harness or connectors.

**6. CHECK KNOCK SENSOR**

Refer to [EC-310, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 7.
- NO >> Replace malfunctioning knock sensor. Refer to [EM-123, "Exploded View"](#).

**7. CHECK INTERMITTENT INCIDENT**

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

**Component Inspection**

INFOID:000000006882961

**1. CHECK KNOCK SENSOR**

1. Turn ignition switch OFF.
2. Disconnect knock sensor harness connector.
3. Check resistance between knock sensor terminals as per the following.

**NOTE:**

**It is necessary to use an ohmmeter which can measure more than 10 MΩ.**

| Terminals | Resistance (kΩ)                    |
|-----------|------------------------------------|
| 1 and 2   | Approx. 532 - 588 [at 20°C (68°F)] |

**CAUTION:**

**Do not use any knock sensors that have been dropped or physically damaged. Use only new ones.**

Is the inspection result normal?

- YES >> INSPECTION END

# P0335 CKP SENSOR (POS)

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0335 CKP SENSOR (POS)

### DTC Logic

INFOID:000000006882962

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                   | DTC detecting condition   | Possible cause  |
|---------|--|---|---|
| P0335   | Crankshaft position sensor (POS) circuit | <ul style="list-style-type: none"><li>• The crankshaft position sensor (POS) signal is not detected by the ECM during the first few seconds of engine cranking.</li><li>• The proper pulse signal from the crankshaft position sensor (POS) is not sent to ECM while the engine is running.</li><li>• The crankshaft position sensor (POS) signal is not in the normal pattern during engine running.</li></ul> | <ul style="list-style-type: none"><li>• Harness or connectors [CKP sensor (POS) circuit is open or shorted.] [CMP sensor (PHASE) (bank 2) circuit is open or shorted.] (APP sensor 2 circuit is shorted.) (EVAP control system pressure sensor circuit is shorted.) (Battery current sensor circuit is shorted.) (Refrigerant pressure sensor circuit is shorted.)</li><li>• Crankshaft position sensor (POS)</li><li>• Camshaft position sensor (PHASE) (bank 2)</li><li>• Accelerator pedal position sensor</li><li>• EVAP control system pressure sensor</li><li>• Battery current sensor</li><li>• Refrigerant pressure sensor</li><li>• Signal plate</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

**Before performing the following procedure, confirm that battery voltage is more than 10.5 V with ignition switch ON.**

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for at least 5 seconds.  
If engine does not start, crank engine for at least 2 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-312, "Diagnosis Procedure"](#).

NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006882963

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace ground connection.

#### 2. CHECK CRANKSHAFT POSITION (CKP) SENSOR (POS) POWER SUPPLY CIRCUIT-I

1. Disconnect crankshaft position (CKP) sensor (POS) harness connector.
2. Turn ignition switch ON.
3. Check the voltage between CKP sensor (POS) harness connector and ground.

# P0335 CKP SENSOR (POS)

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

| CKP sensor (POS) |          | Ground | Voltage (V) |
|------------------|----------|--------|-------------|
| Connector        | Terminal |        |             |
| F2               | 1        | Ground | Approx. 5   |

Is the inspection result normal?

YES >> GO TO 8.

NO >> GO TO 3.

## 3. CHECK CRANKSHAFT POSITION (CKP) SENSOR (POS) POWER SUPPLY CIRCUIT-II

1. Turn ignition switch ON.
2. Disconnect ECM harness connector.
3. Check the continuity between CKP sensor (POS) harness connector and ECM harness connector.

| CKP sensor (POS) |          | ECM       |          | Continuity |
|------------------|----------|-----------|----------|------------|
| Connector        | Terminal | Connector | Terminal |            |
| F2               | 1        | F101      | 46       | Existed    |

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit.

## 4. CHECK SENSOR POWER SUPPLY CIRCUIT

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                              |  |                                    |
|-----------|----------|-------------------------------------|--|------------------------------------|
| Connector | Terminal | Name                                | Connector                              | Terminal                           |
| F101      | 46       | CKP sensor (POS)                    | F2                                     | 1                                  |
| F102      | 64       | CMP sensor (PHASE) (bank 2)         | F18                                    | 1                                  |
|           |          | Battery current sensor              | E21                                    |                                    |
| M107      | 103      | APP sensor                          | M153 <sup>*1</sup><br>M9 <sup>*2</sup> | 3 <sup>*1</sup><br>6 <sup>*2</sup> |
|           | 107      | EVAP control system pressure sensor | B73                                    | 3                                  |
|           |          | Refrigerant pressure sensor         | E77                                    | 3                                  |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair short to ground or short to power in harness or connectors.

## 5. CHECK COMPONENTS

Check the following.

- Camshaft position sensor (PHASE) (bank 2) (Refer to [EC-319, "Component Inspection"](#).)
- Battery current sensor (Refer to [EC-437, "Component Inspection"](#).)
- EVAP control system pressure sensor (Refer to [EC-349, "Component Inspection"](#).)
- Refrigerant pressure sensor (Refer to [EC-530, "Diagnosis Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace malfunctioning component.

## 6. CHECK APP SENSOR

Refer to [EC-487, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 12.

# P0335 CKP SENSOR (POS)

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

NO >> GO TO 7.

## 7. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Go to [EC-487, "Special Repair Requirement"](#).

>> INSPECTION END

## 8. CHECK CKP SENSOR (POS) GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between CKP sensor (POS) harness connector and ECM harness connector.

| CKP sensor (POS) |          | ECM       |          | Continuity |
|------------------|----------|-----------|----------|------------|
| Connector        | Terminal | Connector | Terminal |            |
| F2               | 2        | F101      | 47       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 9.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 9. CHECK CKP SENSOR (POS) INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between CKP sensor (POS) harness connector and ECM harness connector.

| CKP sensor (POS) |          | ECM       |          | Continuity |
|------------------|----------|-----------|----------|------------|
| Connector        | Terminal | Connector | Terminal |            |
| F2               | 3        | F101      | 37       | Existed    |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 10.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 10. CHECK CRANKSHAFT POSITION SENSOR (POS)

Refer to [EC-314, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 11.

NO >> Replace crankshaft position sensor (POS). Refer to [EM-123, "Exploded View"](#).

## 11. CHECK GEAR TOOTH

Visually check for chipping signal plate gear tooth.

Is the inspection result normal?

YES >> GO TO 12.

NO >> Replace the signal plate. Refer to [EM-123, "Exploded View"](#).

## 12. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882964

### 1. CHECK CRANKSHAFT POSITION SENSOR (POS)-I

1. Turn ignition switch OFF.
2. Loosen the fixing bolt of the sensor.
3. Disconnect crankshaft position sensor (POS) harness connector.

# P0335 CKP SENSOR (POS)

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

- 4. Remove the sensor. Refer to [EM-123, "Exploded View"](#).
- 5. Visually check the sensor for chipping.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace crankshaft position sensor (POS). Refer to [EM-123, "Exploded View"](#).

## 2. CHECK CRANKSHAFT POSITION SENSOR (POS)-II

Check resistance between crankshaft position sensor (POS) terminals as follows.

| Terminals (Polarity) | Resistance ( $\Omega$ )               |
|----------------------|---------------------------------------|
| 1 (+) - 2 (-)        | Except 0 or $\infty$ [at 25°C (77°F)] |
| 1 (+) - 3 (-)        |                                       |
| 2 (+) - 3 (-)        |                                       |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace crankshaft position sensor (POS). Refer to [EM-123, "Exploded View"](#).

## P0340, P0345 CMP SENSOR (PHASE)

### DTC Logic

INFOID:000000006882965

#### DTC DETECTION LOGIC

##### NOTE:

If DTC P0340 or P0345 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to [EC-388, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name                            | DTC detecting condition  | Possible cause  |
|---------|---|--|---|
| P0340   | Camshaft position sensor (PHASE) (bank 1) circuit |  | <ul style="list-style-type: none"><li>• Harness or connectors [CMP sensor (PHASE) (bank 1) circuit is open or shorted.]</li><li>• Camshaft position sensor (PHASE) (bank 1)</li><li>• Camshaft (INT)</li><li>• Starter motor</li><li>• Starting system circuit</li><li>• Dead (Weak) battery</li></ul>  |
| P0345   | Camshaft position sensor (PHASE) (bank 2) circuit | <ul style="list-style-type: none"><li>• The cylinder No. signal is not sent to ECM for the first few seconds during engine cranking.</li><li>• The cylinder No. signal is not sent to ECM during engine running.</li><li>• The cylinder No. signal is not in the normal pattern during engine running.</li></ul> | <ul style="list-style-type: none"><li>• Harness or connectors [CMP sensor (PHASE) (bank 2) circuit is open or shorted.] [CKP sensor (POS) circuit is open or shorted.] (APP sensor 2 circuit is shorted.) (EVAP control system pressure sensor circuit is shorted.) (Battery current sensor circuit is open or shorted.) (Refrigerant pressure sensor circuit is shorted.)</li><li>• Camshaft position sensor (PHASE) (bank 2)</li><li>• Crankshaft position sensor (POS)</li><li>• Accelerator pedal position sensor</li><li>• EVAP control system pressure sensor</li><li>• Battery current sensor</li><li>• Refrigerant pressure sensor</li><li>• Camshaft (INT)</li><li>• Starter motor</li><li>• Starting system circuit</li><li>• Dead (Weak) battery</li></ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10.5 V with ignition switch ON.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE-I

1. Start engine and let it idle for at least 5 seconds.  
If engine does not start, crank engine for at least 2 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-317, "Diagnosis Procedure"](#).

NO >> GO TO 3.

##### 3. PERFORM DTC CONFIRMATION PROCEDURE-II

1. Maintaining engine speed at more than 800 rpm for at least 5 seconds.
2. Check 1st trip DTC.

# P0340, P0345 CMP SENSOR (PHASE)

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

Is 1st trip DTC detected?

- YES >> Go to [EC-317, "Diagnosis Procedure"](#).
- NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000006882966

### 1. CHECK STARTING SYSTEM

Turn ignition switch to START position.

Does the engine turn over? Does the starter motor operate?

- YES >> GO TO 2.
- NO >> Check starting system. (Refer to [ST-11, "Work Flow \(Heated Steering Wheel\)"](#).)

### 2. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 3.
- NO >> Repair or replace ground connection.

### 3. CHECK CAMSHAFT POSITION (CMP) SENSOR (PHASE) POWER SUPPLY CIRCUIT-I

1. Disconnect camshaft position (CMP) sensor (PHASE) harness connector.
2. Turn ignition switch ON.
3. Check the voltage between CMP sensor (PHASE) harness connector and ground.

| DTC   | CMP sensor (PHASE) |           |          | Ground | Voltage (V) |
|-------|--------------------|-----------|----------|--------|-------------|
|       | Bank               | Connector | Terminal |        |             |
| P0340 | 1                  | F5        | 1        | Ground | Approx. 5   |
| P0345 | 2                  | F18       | 1        |        |             |

Is the inspection result normal?

- YES >> GO TO 9.
- NO-1 >> P0340: Repair open circuit, short to ground or short to power in harness or connectors.
- NO-2 >> P0345: GO TO 4.

### 4. CHECK CAMSHAFT POSITION (CMP) SENSOR (PHASE) POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between CMP sensor (PHASE) harness connector and ECM harness connector.

| CMP sensor (PHASE) |           |          | ECM       |          | Continuity |
|--------------------|-----------|----------|-----------|----------|------------|
| Bank               | Connector | Terminal | Connector | Terminal |            |
| 2                  | F18       | 1        | F102      | 64       | Existed    |

Is the inspection result normal?

- YES >> GO TO 5.
- NO >> Repair open circuit.

### 5. CHECK CAMSHAFT POSITION (CMP) SENSOR (PHASE) POWER SUPPLY CIRCUIT-III

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                      |           |          |
|-----------|----------|-----------------------------|-----------|----------|
| Connector | Terminal | Name                        | Connector | Terminal |
| F101      | 46       | CKP sensor (POS)            | F2        | 1        |
| F102      | 64       | CMP sensor (PHASE) (bank 2) | F18       | 1        |
|           |          | Battery current sensor      | E21       |          |

# P0340, P0345 CMP SENSOR (PHASE)

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| ECM       |          | Sensor                              |                |            |
|-----------|----------|-------------------------------------|----------------|------------|

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair short to ground or short to power in harness or connectors.

## 6. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to [EC-314, "Component Inspection"](#).)
- Battery current sensor (Refer to [EC-437, "Component Inspection"](#).)
- EVAP control system pressure sensor (Refer to [EC-349, "Component Inspection"](#).)
- Refrigerant pressure sensor (Refer to [EC-530, "Diagnosis Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 7.

NO >> Replace malfunctioning component.

## 7. CHECK APP SENSOR

Refer to [EC-487, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 13.

NO >> GO TO 8.

## 8. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Go to [EC-487, "Special Repair Requirement"](#).

>> INSPECTION END

## 9. CHECK CMP SENSOR (PHASE) GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between CMP sensor (PHASE) harness connector and ECM harness connector.

| DTC   | CMP sensor (PHASE) |           |          | ECM       |          | Continuity |
|-------|--------------------|-----------|----------|-----------|----------|------------|
|       | Bank               | Connector | Terminal | Connector | Terminal |            |
| P0340 | 1                  | F5        | 2        | F102      | 96       | Existed    |
| P0345 | 2                  | F18       | 2        |           | 92       |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 10.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 10. CHECK CMP SENSOR (PHASE) INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between CMP sensor (PHASE) harness connector and ECM harness connector.

# P0340, P0345 CMP SENSOR (PHASE)

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| DTC   | CMP sensor (PHASE) |           |          | ECM       |          | Continuity |
|-------|--------------------|-----------|----------|-----------|----------|------------|
|       | Bank               | Connector | Terminal | Connector | Terminal |            |
| P0340 | 1                  | F5        | 3        | F102      | 59       | Existed    |
| P0345 | 2                  | F18       | 3        |           | 63       |            |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 11.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 11. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to [EC-319, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 12.

NO >> Replace malfunctioning camshaft position sensor (PHASE). Refer to [EM-52, "Exploded View"](#).

## 12. CHECK CAMSHAFT (INTAKE)

Check the following.

- Accumulation of debris to the signal plate of camshaft front end
- Chipping signal plate of camshaft front end

Is the inspection result normal?

YES >> GO TO 13.

NO >> Remove debris and clean the signal plate of camshaft front end or replace camshaft.

## 13. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:0000000006882967

### 1. CHECK CAMSHAFT POSITION SENSOR (PHASE)-I

1. Turn ignition switch OFF.
2. Loosen the fixing bolt of the sensor.
3. Disconnect camshaft position sensor (PHASE) harness connector.
4. Remove the sensor. Refer to [EM-52, "Exploded View"](#).
5. Visually check the sensor for chipping.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace malfunctioning camshaft position sensor (PHASE). Refer to [EM-52, "Exploded View"](#).

### 2. CHECK CAMSHAFT POSITION SENSOR (PHASE)-II

Check resistance camshaft position sensor (PHASE) terminals as follows.

## P0340, P0345 CMP SENSOR (PHASE)

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| Terminals (Polarity) | Resistance ( $\Omega$ )               |
|----------------------|---------------------------------------|
| 1 (+) - 2 (-)        | Except 0 or $\infty$ [at 25°C (77°F)] |
| 1 (+) - 3 (-)        |                                       |
| 2 (+) - 3 (-)        |                                       |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace malfunctioning camshaft position sensor (PHASE). Refer to [EM-52, "Exploded View"](#).

# P0420, P0430 THREE WAY CATALYST FUNCTION

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0420, P0430 THREE WAY CATALYST FUNCTION

### DTC Logic

INFOID:000000006882968

#### DTC DETECTION LOGIC

The ECM monitors the switching frequency ratio of air fuel ratio (A/F) sensor 1 and heated oxygen sensor 2. A three way catalyst 1 with high oxygen storage capacity will indicate a low switching frequency of heated oxygen sensor 2. As oxygen storage capacity decreases, the heated oxygen sensor 2 switching frequency will increase.

When the frequency ratio of A/F sensor 1 and heated oxygen sensor 2 approaches a specified limit value, the three way catalyst 1 malfunction is diagnosed.

| DTC No. | Trouble diagnosis name                              | DTC detecting condition   | Possible cause  |
|---------|---|---|---|
| P0420   | Catalyst system efficiency below threshold (bank 1) | <ul style="list-style-type: none"> <li>Three way catalyst (manifold) does not operate properly.</li> <li>Three way catalyst (manifold) does not have enough oxygen storage capacity.</li> </ul> | <ul style="list-style-type: none"> <li>Three way catalyst (manifold)</li> <li>Exhaust tube</li> <li>Intake air leaks</li> <li>Fuel injector</li> <li>Fuel injector leaks</li> <li>Spark plug</li> <li>Improper ignition timing</li> </ul> |
| P0430   | Catalyst system efficiency below threshold (bank 2) |   |   |

#### DTC CONFIRMATION PROCEDURE

##### 1. INSPECTION START

Do you have CONSULT?

Do you have CONSULT?

YES >> GO TO 2.

NO >> GO TO 7.

##### 2. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

Do not hold engine speed for more than the specified minutes below.

>> GO TO 3.

##### 3. PERFORM DTC CONFIRMATION PROCEDURE-I

###### Ⓜ With CONSULT

1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
7. Let engine idle for 1 minute.

## P0420, P0430 THREE WAY CATALYST FUNCTION

[VQ37VHR FOR USA AND CANADA]

### < DTC/CIRCUIT DIAGNOSIS >

8. Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).  
If not, warm up engine and go to next step when "COOLAN TEMP/S" indication reaches 70°C (158°F).
9. Open engine hood.
10. Select "DTC & SRT CONFIRMATION" then "SRT WORK SUPPORT" mode with CONSULT.
11. Rev engine up to about 2,000 rpm and hold it for 3 consecutive minutes then release the accelerator pedal completely.
12. Check the indication of "CATALYST".

Which is displayed on CONSULT screen?

- CMPLT >> GO TO 6.
- INCMP >> GO TO 4.

### 4.PERFORM DTC CONFIRMATION PROCEDURE-II

1. Wait 5 seconds at idle.
2. Rev engine up to about 2,000 rpm and maintain it until "INCMP" of "CATALYST" changes to "CMPLT" (It will take approximately 5 minutes).

Does the indication change to "CMPLT"?

- YES >> GO TO 6.
- NO >> GO TO 5.

### 5.PERFORM DTC CONFIRMATION PROCEDURE AGAIN

1. Stop engine and cool it down to less than 70°C (158°F).
2. Perform DTC CONFIRMATION PROCEDURE again.

>> GO TO 3.

### 6.PERFORM DTC CONFIRMATION PROCEDURE-III

Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-323, "Diagnosis Procedure"](#).
- NO >> INSPECTION END

### 7.PERFORM COMPONENT FUNCTION CHECK

Perform component function check. Refer to [EC-322, "Component Function Check"](#).

#### NOTE:

Use component function check to check the overall function of the three way catalyst (manifold). During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Go to [EC-323, "Diagnosis Procedure"](#).

### Component Function Check

INFOID:000000006882969

### 1.PERFORM COMPONENT FUNCTION CHECK

#### ⊗ Without CONSULT

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Open engine hood.
6. Check the voltage between ECM harness connector terminals under the following condition.

# P0420, P0430 THREE WAY CATALYST FUNCTION

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| DTC   | ECM       |                        |          | Condition  | Voltage  |
|-------|-----------|------------------------|----------|--|--|
|       | Connector | +                      | -        |  |  |
|       |           | Terminal               | Terminal |  |  |
| P0420 | F102      | 76<br>[HO2S2 (bank 1)] | 84       | Keeping engine speed at 2,500 rpm constant under no load | The voltage fluctuation cycle takes more than 5 seconds.<br>• 1 cycle: 0.6 - 1.0 → 0 - 0.3 → 0.6 - 1.0 |
| P0430 |           | 80<br>[HO2S2 (bank 2)] |          |  |  |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-323, "Diagnosis Procedure"](#).

## Diagnosis Procedure

INFOID:000000006882970

### 1. CHECK EXHAUST SYSTEM

Visually check exhaust tubes and muffler for dents.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace.

### 2. CHECK EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before the three way catalyst 1.

Is exhaust gas leak detected?

YES >> Repair or replace.

NO >> GO TO 3.

### 3. CHECK INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

Is intake air leak detected?

YES >> Repair or replace.

NO >> GO TO 4.

### 4. CHECK IDLE SPEED AND IGNITION TIMING

For procedure, refer to [EC-154, "Work Procedure"](#).

For specification, refer to [EC-545, "Idle Speed"](#) and [EC-545, "Ignition Timing"](#).

Is the inspection result normal?

YES >> GO TO 5.

NO >> Follow the [EC-154, "Work Procedure"](#).

### 5. CHECK FUEL INJECTORS

1. Stop engine and then turn ignition switch ON.
2. Check the voltage between ECM harness connector terminals as per the following.

# P0420, P0430 THREE WAY CATALYST FUNCTION

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| ECM       |          |           |          | Voltage         |
|-----------|----------|-----------|----------|-----------------|
| +         |          | -         |          |                 |
| Connector | Terminal | Connector | Terminal |                 |
| F102      | 81       | M107      | 128      | Battery voltage |
|           | 82       |           |          |                 |
|           | 85       |           |          |                 |
|           | 86       |           |          |                 |
|           | 89       |           |          |                 |
|           | 90       |           |          |                 |

Is the inspection result normal?

YES >> GO TO 6.

NO >> Perform [EC-512, "Diagnosis Procedure"](#).

## 6. CHECK FUNCTION OF IGNITION COIL-I

### CAUTION:

Perform the following procedure in a place where with no combustible objects and good ventilation.

1. Turn ignition switch OFF.
2. Remove fuel pump fuse (1) in IPDM E/R (2) to release fuel pressure.

### NOTE:

Do not use CONSULT to release fuel pressure, or fuel pressure applies again during the following procedure.

3. Start engine.
4. After engine stalls, crank it two or three times to release all fuel pressure.
5. Turn ignition switch OFF.
6. Remove all ignition coil harness connectors to avoid the electrical discharge from the ignition coils.
7. Remove ignition coil and spark plug of the cylinder to be checked.
8. Crank engine for 5 seconds or more to remove combustion gas in the cylinder.
9. Connect spark plug and harness connector to ignition coil.
10. Fix ignition coil using a rope etc. with gap of 13 - 17 mm (0.52 - 0.66 in) between the edge of the spark plug and grounded metal portion as shown in the figure.
11. Crank engine for about 3 seconds, and check whether spark is generated between the spark plug and the grounded metal portion.

**Spark should be generated.**

### CAUTION:

- Never place the spark plug and the ignition coil within 50 cm (19.7 in) each other. Be careful not to get an electrical shock while checking, because the electrical discharge voltage becomes 20 kV or more.
- It might damage the ignition coil if the gap of more than 17 mm (0.66 in) is made.

### NOTE:

When the gap is less than 13 mm (0.52 in), a spark might be generated even if the coil is malfunctioning.

Is the inspection result normal?

YES >> GO TO 10.

NO >> GO TO 7.

## 7. CHECK FUNCTION OF IGNITION COIL-II

1. Turn ignition switch OFF.

## P0420, P0430 THREE WAY CATALYST FUNCTION

[VQ37VHR FOR USA AND CANADA]

### < DTC/CIRCUIT DIAGNOSIS >

2. Disconnect spark plug and connect a non-malfunctioning spark plug.
3. Crank engine for about 3 seconds, and recheck whether spark is generated between the spark plug and the grounded metal portion.

**Spark should be generated.**

Is the inspection result normal?

YES >> GO TO 8.

NO >> Check ignition coil, power transistor and their circuits. Refer to [EC-519, "Diagnosis Procedure"](#).

### 8.CHECK SPARK PLUG

Check the initial spark plug for fouling, etc.

Is the inspection result normal?

YES >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to [EM-26, "Inspection"](#).

NO >> Repair or clean spark plug. Then GO TO 9.

### 9.CHECK FUNCTION OF IGNITION COIL-III

1. Reconnect the initial spark plugs.
2. Crank engine for about three seconds, and recheck whether spark is generated between the spark plug and the grounded portion.

**Spark should be generated.**

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to [EM-25, "Removal and Installation"](#).

### 10.CHECK FUEL INJECTOR

1. Turn ignition switch OFF.
2. Remove fuel injector assembly.  
Refer to [EM-39, "Removal and Installation"](#).  
Keep fuel hose and all fuel injectors connected to fuel tube.
3. Disconnect all ignition coil harness connectors.
4. Reconnect all fuel injector harness connectors disconnected.
5. Turn ignition switch ON.
6. Check that fuel does not drip from fuel injector.

Does fuel drip from fuel injector?

YES >> Replace the fuel injector(s) from which fuel is dripping.

NO >> GO TO 11.

### 11.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> Replace three way catalyst assembly. Refer to [EX-5, "VQ37VHR : Exploded View"](#).

NO >> Repair or replace harness or connector.

# P0441 EVAP CONTROL SYSTEM

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0441 EVAP CONTROL SYSTEM

### DTC Logic

INFOID:000000006882971

#### DTC DETECTION LOGIC

**NOTE:**

If DTC P0441 is displayed with other DTC such as P2122, P2123, P2127, P2128 or P2138, first perform trouble diagnosis for other DTC.

In this evaporative emission (EVAP) control system, purge flow occurs during non-closed throttle conditions. Purge volume is related to air intake volume. Under normal purge conditions (non-closed throttle), the EVAP canister purge volume control solenoid valve is open to admit purge flow. Purge flow exposes the EVAP control system pressure sensor to intake manifold vacuum.

Under normal conditions (non-closed throttle), sensor output voltage indicates if pressure drop and purge flow are adequate. If not, a malfunction is determined.

| DTC No. | Trouble diagnosis name                   | DTC detecting condition  | Possible cause   |
|---------|--|--|--|
| P0441   | EVAP control system incorrect purge flow | EVAP control system does not operate properly, EVAP control system has a leak between intake manifold and EVAP control system pressure sensor. | <ul style="list-style-type: none"> <li>• EVAP canister purge volume control solenoid valve stuck closed</li> <li>• EVAP control system pressure sensor and the circuit</li> <li>• Loose, disconnected or improper connection of rubber tube</li> <li>• Blocked rubber tube</li> <li>• Cracked EVAP canister</li> <li>• EVAP canister purge volume control solenoid valve circuit</li> <li>• Accelerator pedal position sensor</li> <li>• Blocked purge port</li> <li>• EVAP canister vent control valve</li> </ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1.INSPECTION START

Do you have CONSULT?

Do you have CONSULT?

YES >> GO TO 2.

NO >> GO TO 6.

##### 2.PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

**TESTING CONDITION:**

Always perform test at a temperature of 5°C (41°F) or more.

# P0441 EVAP CONTROL SYSTEM

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

>> GO TO 3.

## 3. PERFORM DTC CONFIRMATION PROCEDURE-I

### With CONSULT

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Start engine and let it idle for at least 70 seconds.
6. Select "PURG FLOW P0441" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT.
7. Touch "START".

Is "COMPLETED" displayed on CONSULT screen?

YES >> GO TO 5.

NO >> GO TO 4.

## 4. PERFORM DTC CONFIRMATION PROCEDURE-II

When the following conditions are met, "TESTING" will be displayed on the CONSULT screen. Maintain the conditions continuously until "TESTING" changes to "COMPLETED". (It will take at least 35 seconds.)

| Selector lever | Suitable position           |
|----------------|-----------------------------|
| VHCL SPEED SE  | 32 - 120 km/h (20 - 75 mph) |
| ENG SPEED      | 500 - 3,000 rpm             |
| B/FUEL SCHDL   | 1.25 - 9.0 msec             |
| COOLAN TEMP/S  | More than 0°C (32°F)        |

### **CAUTION:**

**Always drive vehicle at a safe speed.**

Is "COMPLETED" displayed on CONSULT screen?

YES >> GO TO 5.

NO >> Perform DTC CONFIRMATION PROCEDURE again. GO TO 3.

## 5. PERFORM DTC CONFIRMATION PROCEDURE-III

Touch "SELF-DIAG RESULTS".

Which is displayed on CONSULT screen?

OK >> INSPECTION END

NG >> Go to [EC-328, "Diagnosis Procedure"](#).

## 6. PERFORM COMPONENT FUNCTION CHECK

Perform component function check. Refer to [EC-327, "Component Function Check"](#).

### **NOTE:**

Use component function check to check the overall monitoring function of the EVAP control system purge flow monitoring. During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-328, "Diagnosis Procedure"](#).

## Component Function Check

INFOID:000000006882972

## 1. PERFORM COMPONENT FUNCTION CHECK

### Without CONSULT

1. Lift up drive wheels.
2. Start engine (VDC switch OFF) and warm it up to normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Turn ignition switch OFF and wait at least 10 seconds.

# P0441 EVAP CONTROL SYSTEM

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

6. Start engine and wait at least 70 seconds.
7. Set voltmeter probes to ECM harness connector terminals as per the following.

| ECM       |   |          |
|-----------|---|----------|
| Connector | +   | -        |
|           | Terminal  | Terminal |
| M107      | 102<br>(EVAP control system pressure sensor signal) | 112      |

8. Check EVAP control system pressure sensor value at idle speed and note it.
9. Establish and maintain the following conditions for at least 1 minute.

|                             |                                   |
|-----------------------------|-----------------------------------|
| Air conditioner switch      | ON                                |
| Headlamp switch             | ON                                |
| Rear window defogger switch | ON                                |
| Engine speed                | Approx. 3,000 rpm                 |
| Gear position               | Any position other than P, N or R |

10. Verify that EVAP control system pressure sensor value stays 0.1 V less than the value at idle speed (measured at step 8) for at least 1 second.

### Is the inspection result normal?

- YES >> INSPECTION END  
NO >> Go to [EC-328, "Diagnosis Procedure"](#).

## Diagnosis Procedure

INFOID:000000006882973

### 1.CHECK EVAP CANISTER

1. Turn ignition switch OFF.
2. Check EVAP canister for cracks.

### Is the inspection result normal?

- YES-1 >> With CONSULT: GO TO 2.  
YES-2 >> Without CONSULT: GO TO 3.  
NO >> Replace EVAP canister. Refer to [FL-13, "Exploded View"](#).

### 2.CHECK PURGE FLOW

#### With CONSULT

1. Disconnect vacuum hose connected to EVAP canister purge volume control solenoid valve at EVAP service port.
2. Start engine and let it idle.
3. Select "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT.
4. Touch "Qd" and "Qu" on CONSULT screen to adjust "PURG VOL C/V" opening and check vacuum existence.

|              |             |
|--------------|-------------|
| PURG VOL C/V | Vacuum      |
| 100%         | Existed     |
| 0%           | Not existed |

### Is the inspection result normal?

- YES >> GO TO 7.  
NO >> GO TO 4.

### 3.CHECK PURGE FLOW

#### Without CONSULT

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.

# P0441 EVAP CONTROL SYSTEM

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

3. Disconnect vacuum hose connected to EVAP canister purge volume control solenoid valve at EVAP service port and install vacuum gauge. For the location of EVAP service port, refer to [EC-65, "EVAPORATIVE EMISSION SYSTEM : System Diagram"](#).
4. Start engine and let it idle.  
**Do not depress accelerator pedal even slightly.**
5. Check vacuum gauge indication before 60 seconds passed after starting engine.

**Vacuum should not exist.**

6. Revving engine up to 2,000rpm after 100 seconds passed after starting engine.

**Vacuum should exist.**

Is the inspection result normal?

- YES >> GO TO 7.
- NO >> GO TO 4.

## 4.CHECK EVAP PURGE LINE

1. Turn ignition switch OFF.
2. Check EVAP purge line for improper connection or disconnection.  
Refer to [EC-65, "EVAPORATIVE EMISSION SYSTEM : System Diagram"](#).

Is the inspection result normal?

- YES >> GO TO 5.
- NO >> Repair it.

## 5.CHECK EVAP PURGE HOSE AND PURGE PORT

1. Disconnect purge hoses connected to EVAP service port **A** and EVAP canister purge volume control solenoid valve **B**.
2. Blow air into each hose and EVAP purge port **C**.

3. Check that air flows freely.

Is the inspection result normal?

- YES-1 >> With CONSULT: GO TO 6.
- YES-2 >> Without CONSULT: GO TO 7.
- NO >> Repair or clean hoses and/or purge port.

## 6.CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

**With CONSULT**

1. Start engine.
2. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT. Check that engine speed varies according to the valve opening.

Does engine speed vary according to the valve opening?

- YES >> GO TO 8.
- NO >> GO TO 7.

## P0441 EVAP CONTROL SYSTEM

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

---

### 7. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

---

Refer to [EC-334, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 8.

NO >> Replace EVAP canister purge volume control solenoid valve. Refer to [EM-31, "Exploded View"](#).

---

### 8. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR

---

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check connectors for water.

**Water should not exist.**

Is the inspection result normal?

YES >> GO TO 9.

NO >> Replace EVAP control system pressure sensor. Refer to [FL-13, "Exploded View"](#).

---

### 9. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR FUNCTION

---

Refer to [EC-350, "DTC Logic"](#) for DTC P0452, [EC-355, "DTC Logic"](#) for DTC P0453.

Is the inspection result normal?

YES >> GO TO 10.

NO >> Replace EVAP control system pressure sensor.

---

### 10. CHECK RUBBER TUBE FOR CLOGGING

---

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

Is the inspection result normal?

YES >> GO TO 11.

NO >> Clean the rubber tube using an air blower.

---

### 11. CHECK EVAP CANISTER VENT CONTROL VALVE

---

Refer to [EC-340, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 12.

NO >> Replace EVAP canister vent control valve. Refer to [FL-13, "Exploded View"](#).

---

### 12. CHECK EVAP PURGE LINE

---

Inspect EVAP purge line (pipe and rubber tube). Check for evidence of leaks.

Refer to [EC-65, "EVAPORATIVE EMISSION SYSTEM : System Diagram"](#).

Is the inspection result normal?

YES >> GO TO 13.

NO >> Replace it.

---

### 13. CLEAN EVAP PURGE LINE

---

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 14.

---

### 14. CHECK INTERMITTENT INCIDENT

---

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

# P0443 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0443 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

### DTC Logic

INFOID:000000006882974

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                            | DTC detecting condition  | Possible cause  |
|---------|---|--|---|
| P0443   | EVAP canister purge volume control solenoid valve | The canister purge flow is detected during the specified driving conditions, even when EVAP canister purge volume control solenoid valve is completely closed. | <ul style="list-style-type: none"><li>• EVAP control system pressure sensor</li><li>• EVAP canister purge volume control solenoid valve (The valve is stuck open.)</li><li>• EVAP canister vent control valve</li><li>• EVAP canister</li><li>• Hoses (Hoses are connected incorrectly or clogged.)</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

**Always perform test at a temperature of 5°C (41°F) or more.**

Do you have CONSULT

- YES >> GO TO 2.  
NO >> GO TO 3.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

##### With CONSULT

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Turn ignition switch ON.
6. Select "PURG VOL CN/V P1444" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT.
7. Touch "START".
8. Start engine and let it idle until "TESTING" on CONSULT changes to "COMPLETED". (It will take approximately 10 seconds.)  
**If "TESTING" is not displayed after 5 minutes, retry from step 2.**
9. Touch "SELF-DIAG RESULTS".

Which is displayed on CONSULT screen?

- OK >> INSPECTION END  
NG >> Go to [EC-332. "Diagnosis Procedure"](#).

#### 3. PERFORM DTC CONFIRMATION PROCEDURE

##### With GST

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Start engine and let it idle for at least 20 seconds.
6. Check 1st trip DTC.

Is 1st trip DTC displayed?

- YES >> Go to [EC-332. "Diagnosis Procedure"](#).  
NO >> INSPECTION END

# P0443 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

INFOID:00000006882975

## Diagnosis Procedure

### 1. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect EVAP canister purge volume control solenoid valve harness connector.
3. Turn ignition switch ON.
4. Check the voltage between EVAP canister purge volume control solenoid valve harness connector and ground.

| EVAP canister purge volume control solenoid valve |          | Ground | Voltage         |
|---|----------|--------|-----------------|
| Connector   | Terminal |        |                 |
| F7  | 1        | Ground | Battery voltage |

Is the inspection result normal?

YES >> GO TO 3.

NO >> GO TO 2.

### 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E106, M6
- Harness connectors M116, F103
- Harness for open or short between EVAP canister purge volume control solenoid valve and IPDM E/R
- Harness for open or short between EVAP canister purge volume control solenoid valve and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

### 3. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between EVAP canister purge volume control solenoid valve harness connector and ECM harness connector.

| EVAP canister purge volume control solenoid valve |          | ECM       |          | Continuity |
|---|----------|-----------|----------|------------|
| Connector   | Terminal | Connector | Terminal |            |
| F7  | 2        | F101      | 21       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 4. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check connectors for water.

**Water should not exist.**

Is the inspection result normal?

YES >> GO TO 5.

NO >> Replace EVAP control system pressure sensor. Refer to [FL-13, "Exploded View"](#).

### 5. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-349, "Component Inspection"](#).

Is the inspection result normal?

YES-1 >> With CONSULT: GO TO 6.

# P0443 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

YES-2 >> Without CONSULT: GO TO 7.

NO >> Replace EVAP control system pressure sensor. Refer to [FL-13, "Exploded View"](#).

## 6. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

### With CONSULT

1. Turn ignition switch OFF.
2. Reconnect harness connectors disconnected.
3. Start engine.
4. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT. Check that engine speed varies according to the valve opening.

Does engine speed vary according to the valve opening?

YES >> GO TO 8.

NO >> GO TO 7.

## 7. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to [EC-334, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 8.

NO >> Replace EVAP canister purge volume control solenoid valve. Refer to [EM-31, "Exploded View"](#).

## 8. CHECK RUBBER TUBE FOR CLOGGING

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

Is the inspection result normal?

YES >> GO TO 9.

NO >> Clean the rubber tube using an air blower.

## 9. CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-340, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 10.

NO >> Replace EVAP canister vent control valve. Refer to [FL-13, "Exploded View"](#).

## 10. CHECK IF EVAP CANISTER IS SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
2. Check if water will drain from EVAP canister (1).

2 : EVAP canister vent control valve

Does water drain from the EVAP canister?

YES >> GO TO 11.

NO >> GO TO 13.

## 11. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve and EVAP control system pressure sensor attached.

**The weight should be less than 2.1 kg (4.6 lb).**

Is the inspection result normal?

YES >> GO TO 13.

NO >> GO TO 12.

## 12. DETECT MALFUNCTIONING PART

Check the following.

# P0443 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

## 13. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882976

### 1. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

#### With CONSULT

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Disconnect EVAP purge hoses connected to EVAP canister purge volume control solenoid valve.
4. Turn ignition switch ON.
5. Select "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT.
6. Touch "Qd" and "Qu" on CONSULT screen to adjust "PURG VOL C/V" opening and check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

| Condition<br>(PURG VOL C/V value) | Air passage continuity<br>between (A) and (B) |
|-----------------------------------|---|
| 100%                              | Existed                                       |
| 0%                                | Not existed                                   |

#### Without CONSULT

1. Turn ignition switch OFF.
2. Disconnect EVAP canister purge volume control solenoid valve harness connector.
3. Disconnect EVAP purge hoses connected to EVAP canister purge volume control solenoid valve.
4. Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

| Condition  | Air passage continuity<br>between (A) and (B) |
|--|---|
| 12V direct current supply between<br>terminals 1 and 2 | Existed                                       |
| No supply  | Not existed                                   |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace EVAP canister purge volume control solenoid valve. Refer to [EM-31, "Exploded View"](#).

# P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

### DTC Logic

INFOID:000000006882977

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name  | DTC detecting condition   | Possible cause  |
|---------|---|---|---|
| P0444   | EVAP canister purge volume control solenoid valve circuit open    | An excessively low voltage signal is sent to ECM through the valve  | <ul style="list-style-type: none"> <li>Harness or connectors (The solenoid valve circuit is open or shorted.)</li> <li>EVAP canister purge volume control solenoid valve</li> </ul> |
| P0445   | EVAP canister purge volume control solenoid valve circuit shorted | An excessively high voltage signal is sent to ECM through the valve | <ul style="list-style-type: none"> <li>Harness or connectors (The solenoid valve circuit is shorted.)</li> <li>EVAP canister purge volume control solenoid valve</li> </ul>         |

### DTC CONFIRMATION PROCEDURE

#### 1.CONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm battery voltage is more than 11 V at idle.

>> GO TO 2.

#### 2.PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for at least 13 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-335. "Diagnosis Procedure"](#).  
 NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006882978

#### 1.CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect EVAP canister purge volume control solenoid valve harness connector.
3. Turn ignition switch ON.
4. Check the voltage between EVAP canister purge volume control solenoid valve harness connector and ground.

| EVAP canister purge volume control solenoid valve |          | Ground | Voltage         |
|---|----------|--------|-----------------|
| Connector   | Terminal |        |                 |
| F7  | 1        | Ground | Battery voltage |

Is the inspection result normal?

- YES >> GO TO 3.  
 NO >> GO TO 2.

#### 2.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E106, M6
- Harness connectors M116, F103
- Harness for open or short between EVAP canister purge volume control solenoid valve and IPDM E/R

# P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

- Harness for open or short between EVAP canister purge volume control solenoid valve and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 3. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between EVAP canister purge volume control solenoid valve harness connector and ECM harness connector.

| EVAP canister purge volume control solenoid valve |          | ECM       |          | Continuity |
|---|----------|-----------|----------|------------|
| Connector   | Terminal | Connector | Terminal |            |
| F7  | 2        | F101      | 21       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES-1 >> With CONSULT: GO TO 4.

YES-2 >> Without CONSULT: GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 4. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

**Ⓟ With CONSULT**

1. Reconnect all harness connectors disconnected.
2. Start engine.
3. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT. Check that engine speed varies according to the valve opening.

Does engine speed vary according to the valve opening?

YES >> GO TO 6.

NO >> GO TO 5.

## 5. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to [EC-336, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace EVAP canister purge volume control solenoid valve. Refer to [EM-31, "Exploded View"](#).

## 6. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

# P0447 EVAP CANISTER VENT CONTROL VALVE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0447 EVAP CANISTER VENT CONTROL VALVE

### DTC Logic

INFOID:000000006882980

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                        | DTC detecting condition   | Possible cause   |
|---------|---|---|--|
| P0447   | EVAP canister vent control valve circuit open | An improper voltage signal is sent to ECM through EVAP canister vent control valve. | <ul style="list-style-type: none"><li>• Harness or connectors (The valve circuit is open or shorted.)</li><li>• EVAP canister vent control valve</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm battery voltage is more than 11 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and wait at least 8 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-338, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006882981

#### 1. INSPECTION START

Do you have CONSULT?

Do you have CONSULT?

- YES >> GO TO 2.  
NO >> GO TO 3.

#### 2. CHECK EVAP CANISTER VENT CONTROL VALVE CIRCUIT

##### With CONSULT

1. Turn ignition switch OFF and then ON.
2. Select "VENT CONTROL/V" in "ACTIVE TEST" mode with CONSULT.
3. Touch "ON/OFF" on CONSULT screen.
4. Check for operating sound of the valve.

**Clicking sound should be heard.**

Is the inspection result normal?

- YES >> GO TO 7.  
NO >> GO TO 3.

#### 3. CHECK EVAP CANISTER VENT CONTROL VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect EVAP canister vent control valve harness connector.
3. Turn ignition switch ON.
4. Check the voltage between EVAP canister vent control valve harness connector and ground.

# P0447 EVAP CANISTER VENT CONTROL VALVE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| EVAP canister vent control valve |          | Ground | Voltage         |
|----------------------------------|----------|--------|-----------------|
| Connector                        | Terminal |        |                 |
| B74                              | 1        | Ground | Battery voltage |

Is the inspection result normal?

YES >> GO TO 5.

NO >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B8, E115
- Harness connectors B71, B72
- Harness for open or short between EVAP canister vent control valve and IPDM E/R

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 5. CHECK EVAP CANISTER VENT CONTROL VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between EVAP canister vent control valve harness connector and ECM harness connector.

| EVAP canister vent control valve |          | ECM       |          | Continuity |
|----------------------------------|----------|-----------|----------|------------|
| Connector                        | Terminal | Connector | Terminal |            |
| B74                              | 2        | M107      | 121      | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M7
- Harness connectors B71, B72
- Harness for open or short between EVAP canister vent control valve and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 7. CHECK RUBBER TUBE FOR CLOGGING

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

Is the inspection result normal?

YES >> GO TO 8.

NO >> Clean the rubber tube using an air blower.

## 8. CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-340, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 9.

NO >> Replace EVAP canister vent control valve. Refer to [FL-13, "Exploded View"](#).

## 9. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

# P0447 EVAP CANISTER VENT CONTROL VALVE

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

INFOID:00000006882982

## Component Inspection

### 1. CHECK EVAP CANISTER VENT CONTROL VALVE-I

1. Turn ignition switch OFF.
2. Remove EVAP canister vent control valve from EVAP canister. Refer to [FL-13, "Exploded View"](#).
3. Check portion (A) of EVAP canister vent control valve for rust.

Is it rusted?

- YES >> Replace EVAP canister vent control valve. Refer to [FL-13, "Exploded View"](#).
- NO >> GO TO 2.

### 2. CHECK EVAP CANISTER VENT CONTROL VALVE-II

#### Ⓟ With CONSULT

1. Reconnect harness connectors disconnected.
2. Turn ignition switch ON.
3. Perform "VENT CONTROL/V" in "ACTIVE TEST" mode.
4. Check air passage continuity and operation delay time.  
**Make sure that new O-ring is installed properly.**

| Condition VENT CONT/V | Air passage continuity between (A) and (B) |
|-----------------------|--|
| ON                    | Not existed                                |
| OFF                   | Existed                                    |

**Operation takes less than 1 second.**

#### ⓧ Without CONSULT

1. Disconnect EVAP canister vent control valve harness connector.
2. Check air passage continuity and operation delay time under the following conditions.  
**Make sure that new O-ring is installed properly.**

| Condition  | Air passage continuity between (A) and (B) |
|--|--|
| 12 V direct current supply between terminals 1 and 2 | Not existed                                |
| OFF  | Existed                                    |

**Operation takes less than 1 second.**

Is the inspection result normal?

- YES >> GO TO 3.
- NO >> Replace EVAP canister vent control valve. Refer to [FL-13, "Exploded View"](#).

### 3. CHECK EVAP CANISTER VENT CONTROL VALVE-III

#### Ⓟ With CONSULT

1. Clean the air passage [portion (A) to (B)] of EVAP canister vent control valve using an air blower.
2. Perform "VENT CONTROL/V" in "ACTIVE TEST" mode.

# P0447 EVAP CANISTER VENT CONTROL VALVE

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

3. Check air passage continuity and operation delay time.  
**Make sure that new O-ring is installed properly.**

| Condition VENT CONT/V | Air passage continuity between (A) and (B) |
|-----------------------|--|
| ON                    | Not existed                                |
| OFF                   | Existed                                    |

**Operation takes less than 1 second.**

JMBIA0169ZZ

### Without CONSULT

1. Clean the air passage [portion (A) to (B)] of EVAP canister vent control valve using an air blower.
2. Check air passage continuity and operation delay time under the following conditions.

**Make sure that new O-ring is installed properly.**

| Condition  | Air passage continuity between (A) and (B) |
|--|--|
| 12 V direct current supply between terminals 1 and 2 | Not existed                                |
| OFF  | Existed                                    |

**Operation takes less than 1 second.**

JMBIA0169ZZ

Is the inspection result normal?

# P0448 EVAP CANISTER VENT CONTROL VALVE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0448 EVAP CANISTER VENT CONTROL VALVE

### DTC Logic

INFOID:000000006882983

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                 | DTC detecting condition   | Possible cause   |
|---------|--|---|--|
| P0448   | EVAP canister vent control valve close | EVAP canister vent control valve remains closed under specified driving conditions. | <ul style="list-style-type: none"><li>• EVAP canister vent control valve</li><li>• EVAP control system pressure sensor and the circuit</li><li>• Blocked rubber tube to EVAP canister vent control valve</li><li>• EVAP canister is saturated with water</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON and wait at least 5 seconds.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and let it idle for at least 1 minute.
4. Repeat next procedures five times.
  - Increase the engine speed up to between 3,000 and 3,500 rpm and maintain that speed for 2 minutes.
- Do not exceed 2 minutes.**
  - Fully released accelerator pedal and keep engine idle for about 5 seconds.
5. Repeat next procedure 27 times.
  - Quickly increase the engine speed up to between 3,000 and 3,500 rpm and maintain that speed for 25 to 30 seconds.
  - Fully released accelerator pedal and keep engine idle for at least 35 seconds.

6. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-342, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006882984

#### 1. CHECK RUBBER TUBE

1. Turn ignition switch OFF.
2. Disconnect rubber tube connected to EVAP canister vent control valve.
3. Check the rubber tube for clogging.

Is the inspection result normal?

- YES >> GO TO 2.

# P0448 EVAP CANISTER VENT CONTROL VALVE

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

NO >> Clean rubber tube using an air blower.

## 2.CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-344, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 3.

NO >> Replace EVAP canister vent control valve. Refer to [FL-13, "Exploded View"](#).

## 3.CHECK IF EVAP CANISTER IS SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve (2) and EVAP control system pressure sensor attached.
2. Check if water will drain from the EVAP canister (1).

Does water drain from EVAP canister?

YES >> GO TO 4.

NO >> GO TO 6.

## 4.CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve and EVAP control system pressure sensor attached.

**The weight should be less than 2.1 kg (4.6 lb).**

Is the inspection result normal?

YES >> GO TO 6.

NO >> GO TO 5.

## 5.DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

## 6.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check connectors for water.

**Water should not exist.**

Is the inspection result normal?

YES >> GO TO 7.

NO >> Replace EVAP control system pressure sensor. Refer to [FL-13, "Exploded View"](#).

## 7.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-349, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 8.

NO >> Replace EVAP control system pressure sensor. Refer to [FL-13, "Exploded View"](#).

## 8.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

# P0448 EVAP CANISTER VENT CONTROL VALVE

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

INFOID:00000006882985

## Component Inspection

### 1. CHECK EVAP CANISTER VENT CONTROL VALVE-I

1. Turn ignition switch OFF.
2. Remove EVAP canister vent control valve from EVAP canister. Refer to [FL-13, "Exploded View"](#).
3. Check portion (A) of EVAP canister vent control valve for being rusted.

Is it rusted?

- YES >> Replace EVAP canister vent control valve. Refer to [FL-13, "Exploded View"](#).
- NO >> GO TO 2.

### 2. CHECK EVAP CANISTER VENT CONTROL VALVE-II

#### Ⓟ With CONSULT

1. Reconnect harness connectors disconnected.
2. Turn ignition switch ON.
3. Perform "VENT CONTROL/V" in "ACTIVE TEST" mode.
4. Check air passage continuity and operation delay time.  
**Make sure that new O-ring is installed properly.**

| Condition VENT CONT/V | Air passage continuity between (A) and (B) |
|-----------------------|--|
| ON                    | Not existed                                |
| OFF                   | Existed                                    |

**Operation takes less than 1 second.**

#### ⓧ Without CONSULT

1. Disconnect EVAP canister vent control valve harness connector.
2. Check air passage continuity and operation delay time under the following conditions.  
**Make sure that new O-ring is installed properly.**

| Condition  | Air passage continuity between (A) and (B) |
|--|--|
| 12 V direct current supply between terminals 1 and 2 | Not existed                                |
| OFF  | Existed                                    |

**Operation takes less than 1 second.**

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> GO TO 3.

### 3. CHECK EVAP CANISTER VENT CONTROL VALVE-III

#### Ⓟ With CONSULT

1. Clean the air passage [portion (A) to (B)] of EVAP canister vent control valve using an air blower.
2. Perform "VENT CONTROL/V" in "ACTIVE TEST" mode.

# P0448 EVAP CANISTER VENT CONTROL VALVE

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

3. Check air passage continuity and operation delay time.  
**Make sure that new O-ring is installed properly.**

| Condition VENT CONT/V | Air passage continuity between (A) and (B) |
|-----------------------|--|
| ON                    | Not existed                                |
| OFF                   | Existed                                    |

**Operation takes less than 1 second.**

JMBIA0169ZZ

### Without CONSULT

1. Clean the air passage [portion (A) to (B)] of EVAP canister vent control valve using an air blower.
2. Check air passage continuity and operation delay time under the following conditions.

**Make sure that new O-ring is installed properly.**

| Condition  | Air passage continuity between (A) and (B) |
|--|--|
| 12 V direct current supply between terminals 1 and 2 | Not existed                                |
| OFF  | Existed                                    |

# P0451 EVAP CONTROL SYSTEM PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0451 EVAP CONTROL SYSTEM PRESSURE SENSOR

### DTC Logic

INFOID:000000006882986

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                          | DTC detecting condition  | Possible cause   |
|---------|---|--|--|
| P0451   | EVAP control system pressure sensor performance | ECM detects a sloshing signal from the EVAP control system pressure sensor | <ul style="list-style-type: none"><li>• Harness or connectors (EVAP control system pressure sensor circuit is shorted.) [CKP sensor (POS) circuit is shorted.] (APP sensor 2 circuit is shorted.) [CMP sensor (PHASE) (bank 2) circuit is open or shorted.] (Battery current sensor circuit is open or shorted.) (Refrigerant pressure sensor circuit is shorted.)</li><li>• EVAP control system pressure sensor</li><li>• Crankshaft position sensor (POS)</li><li>• Accelerator pedal position sensor</li><li>• Camshaft position sensor (PHASE) (bank 2)</li><li>• Battery current sensor</li><li>• Refrigerant pressure sensor</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### NOTE:

**Never remove fuel filler cap during DTC confirmation procedure.**

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

With CONSULT>>GO TO 2.

Without CONSULT>>GO TO 5.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE-I

Ⓜ With CONSULT

1. Start engine and let it idle for least 40 seconds.

#### NOTE:

**Do not depress accelerator pedal even slightly.**

2. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Proceed to [EC-347, "Diagnosis Procedure"](#).

NO >> GO TO 3.

#### 3. PERFORM DTC CONFIRMATION PROCEDURE-II

Ⓜ With CONSULT

1. Select "EVAP DIAG READY" in "DATA MONITOR" mode of "ENGINE".
2. Let it idle until "OFF" of "EVAP DIAG READY" changes to "ON".

#### NOTE:

**It will take at most 2 hours until "OFF" of "EVAP DIAG READY" changes to "ON".**

3. Turn ignition switch OFF and wait at least 90 minutes.

#### NOTE:

**Never turn ignition switch ON during 90 minutes.**

4. Turn ignition switch ON.
5. Select "EVAP LEAK DIAG" in "DATA MONITOR" mode of "ENGINE".
6. Check that "EVAP LEAK DIAG" indication.

Which is displayed on CONSULT?

CMPLT >> GO TO 4.

# P0451 EVAP CONTROL SYSTEM PRESSURE SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

- YET >> 1. Perform DTC CONFIRMATION PROCEDURE again.  
2. GO TO 1.

## 4.PERFORM DTC CONFIRMATION PROCEDURE-III

 With CONSULT  
Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Proceed to [EC-347, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

## 5.PERFORM DTC CONFIRMATION PROCEDURE-IV

 With GST

1. Start engine and let it idle for least 40 seconds.

**NOTE:**

**Do not depress accelerator pedal even slightly.**

2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Proceed to [EC-347, "Diagnosis Procedure"](#).  
NO >> GO TO 6.

## 6.PERFORM DTC CONFIRMATION PROCEDURE-V

 With GST

1. Let it idle for at least 2 hours.  
2. Turn ignition switch OFF and wait at least 90 minutes.

**NOTE:**

**Never turn ignition switch ON during 90 minutes.**

3. Turn ignition switch ON.  
4. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Proceed to [EC-347, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000006882987

### 1.CHECK GROUND CONNECTION

1. Turn ignition switch OFF.  
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

### 2.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR FOR WATER

1. Disconnect EVAP control system pressure sensor harness connector.  
2. Check sensor harness connector for water.

**Water should not exist.**

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> Repair or replace harness connector.

### 3.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.  
2. Check the voltage between EVAP control system pressure sensor harness connector and ground.

# P0451 EVAP CONTROL SYSTEM PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| EVAP control system pressure sensor |          | Ground | Voltage (V) |
|-------------------------------------|----------|--------|-------------|
| Connector                           | Terminal |        |             |
| B73                                 | 3        | Ground | Approx. 5   |

Is the inspection result normal?

YES >> GO TO 8.

NO >> GO TO 4.

## 4.CHECK SENSOR POWER SUPPLY CIRCUIT

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                              |                    |                 |
|-----------|----------|-------------------------------------|--------------------|-----------------|
| Connector | Terminal | Name                                | Connector          | Terminal        |
| F101      | 46       | CKP sensor (POS)                    | F2                 | 1               |
| F102      | 64       | CMP sensor (PHASE) (bank 2)         | F18                | 1               |
|           |          | Battery current sensor              | E21                |                 |
| M107      | 103      | APP sensor                          | M153 <sup>*1</sup> | 3 <sup>*1</sup> |
|           |          |                                     | M9 <sup>*2</sup>   | 6 <sup>*2</sup> |
|           | 107      | EVAP control system pressure sensor | B73                | 3               |
|           |          | Refrigerant pressure sensor         | E77                | 3               |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair short to ground or short to power in harness or connectors.

## 5.CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to [EC-314, "Component Inspection"](#).)
- Camshaft position sensor (PHASE) (bank 2) (Refer to [EC-319, "Component Inspection"](#).)
- Battery current sensor (Refer to [EC-437, "Component Inspection"](#).)
- Refrigerant pressure sensor (Refer to [EC-530, "Diagnosis Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace malfunctioning component.

## 6.CHECK APP SENSOR

Refer to [EC-487, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 9.

NO >> GO TO 7.

## 7.REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly
2. Go to [EC-487, "Special Repair Requirement"](#).

>> INSPECTION END

## 8.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-349, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 9.

NO >> Replace EVAP control system pressure sensor. Refer to [FL-13, "Exploded View"](#).

# P0451 EVAP CONTROL SYSTEM PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## 9. CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882988

## 1. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

1. Turn ignition switch OFF.
2. Remove EVAP control system pressure sensor with its harness connector.  
**Always replace O-ring with a new one.**
3. Install a vacuum pump to EVAP control system pressure sensor.
4. Turn ignition switch ON and check output voltage between ECM harness connector terminals under the following conditions.

| Connector | ECM      |          | Condition<br>[Applied vacuum kPa (kg/cm <sup>2</sup> , psi)] | Voltage (V)                       |
|-----------|----------|----------|--|-----------------------------------|
|           | +        | -        |  |                                   |
|           | Terminal | Terminal |  |                                   |
| M107      | 102      | 112      | Not applied  | 1.8 - 4.8                         |
|           |          |          | -26.7 (-0.272, -3.87)  | 2.1 to 2.5 lower than above value |

### CAUTION:

- Always calibrate the vacuum pump gauge when using it.
- Never apply below -93.3 kPa (-0.952 kg/cm<sup>2</sup>, -13.53 psi) or pressure over 101.3 kPa (1.033 kg/cm<sup>2</sup>, 14.69 psi).

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace EVAP control system pressure sensor. Refer to [FL-13. "Exploded View"](#).

# P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

### DTC Logic

INFOID:00000006882989

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                        | DTC detecting condition                                    | Possible cause   |
|---------|---|--|--|
| P0452   | EVAP control system pressure sensor low input | An excessively low voltage from the sensor is sent to ECM. | <ul style="list-style-type: none"> <li>• Harness or connectors<br/>(EVAP control system pressure sensor circuit is open or shorted.)<br/>[CKP sensor (POS) circuit is shorted.]<br/>(APP sensor 2 circuit is shorted.)<br/>[CMP sensor (PHASE) (bank 2) circuit is open or shorted.]<br/>(Battery current sensor circuit is open or shorted.)<br/>(Refrigerant pressure sensor circuit is shorted.)</li> <li>• EVAP control system pressure sensor</li> <li>• Crankshaft position sensor (POS)</li> <li>• Accelerator pedal position sensor</li> <li>• Camshaft position sensor (PHASE) (bank 2)</li> <li>• Battery current sensor</li> <li>• Refrigerant pressure sensor</li> </ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

**Always perform test at a temperature of 5°C (41°F) or more.**

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

##### With CONSULT

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Turn ignition switch ON.
6. Select "DATA MONITOR" mode with CONSULT.
7. Make sure that "FUEL T/TMP SE" is more than 0°C (32°F).
8. Start engine and wait at least 20 seconds.
9. Check 1st trip DTC.

##### With GST

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes to ECM harness connector terminals as per the following.

| ECM       |  |                     |
|-----------|--|---------------------|
| Connector | +  | -                   |
|           | Terminal                                     | Terminal            |
| M107      | 106<br>(Fuel tank temperature sensor signal) | 128<br>(ECM ground) |

3. Make sure that the voltage is less than 4.2 V.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Turn ignition switch ON.
6. Turn ignition switch OFF and wait at least 10 seconds.

# P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

7. Start engine and wait at least 20 seconds.
8. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-351, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000006882990

### 1.CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

### 2.CHECK CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check sensor harness connector for water.

**Water should not exist.**

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> Repair or replace harness connector.

### 3.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT-I

1. Turn ignition switch ON.
2. Check the voltage between EVAP control system pressure sensor harness connector and ground.

| EVAP control system pressure sensor |          | Ground | Voltage (V) |
|-------------------------------------|----------|--------|-------------|
| Connector                           | Terminal |        |             |
| B73                                 | 3        | Ground | Approx. 5   |

Is the inspection result normal?

- YES >> GO TO 10.  
NO >> GO TO 4.

### 4.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between EVAP control system pressure sensor harness connector and ECM harness connector.

| EVAP control system pressure sensor |          | ECM       |          | Continuity |
|-------------------------------------|----------|-----------|----------|------------|
| Connector                           | Terminal | Connector | Terminal |            |
| B73                                 | 3        | M107      | 107      | Existed    |

Is the inspection result normal?

- YES >> GO TO 6.  
NO >> GO TO 5.

### 5.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M7, B1
- Harness connectors B71, B72
- Harness for open between ECM and EVAP control system pressure sensor

>> Repair open circuit.

# P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## 6. CHECK SENSOR POWER SUPPLY CIRCUIT

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                              |  |                                    |
|-----------|----------|-------------------------------------|--|------------------------------------|
| Connector | Terminal | Name                                | Connector                              | Terminal                           |
| F101      | 46       | CKP sensor (POS)                    | F2                                     | 1                                  |
| F102      | 64       | CMP sensor (PHASE) (bank 2)         | F18                                    | 1                                  |
|           |          | Battery current sensor              | E21                                    |                                    |
| M107      | 103      | APP sensor                          | M153 <sup>*1</sup><br>M9 <sup>*2</sup> | 3 <sup>*1</sup><br>6 <sup>*2</sup> |
|           |          | EVAP control system pressure sensor | B73                                    | 3                                  |
|           | 107      | Refrigerant pressure sensor         | E77                                    | 3                                  |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 7.

NO >> Repair short to ground or short to power in harness or connectors.

## 7. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to [EC-314, "Component Inspection"](#).)
- Camshaft position sensor (PHASE) (bank 2) (Refer to [EC-319, "Component Inspection"](#).)
- Battery current sensor (Refer to [EC-437, "Component Inspection"](#).)
- Refrigerant pressure sensor (Refer to [EC-530, "Diagnosis Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 8.

NO >> Replace malfunctioning component.

## 8. CHECK APP SENSOR

Refer to [EC-487, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 15.

NO >> GO TO 9.

## 9. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly
2. Go to [EC-487, "Special Repair Requirement"](#).

>> INSPECTION END

## 10. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between EVAP control system pressure sensor harness connector and ECM harness connector.

| EVAP control system pressure sensor |          | ECM       |          | Continuity |
|-------------------------------------|----------|-----------|----------|------------|
| Connector                           | Terminal | Connector | Terminal |            |
| B73                                 | 1        | M107      | 112      | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

# P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

- YES >> GO TO 12.
- NO >> GO TO 11.

## 11. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M7
- Harness connectors B71, B72
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 12. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between EVAP control system pressure sensor harness connector and ECM harness connector.

| EVAP control system pressure sensor |          | ECM       |          | Continuity |
|-------------------------------------|----------|-----------|----------|------------|
| Connector                           | Terminal | Connector | Terminal |            |
| B73                                 | 2        | M107      | 102      | Existed    |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 14.
- NO >> GO TO 13.

## 13. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M7
- Harness connectors B71, B72
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 14. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-353, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 15.
- NO >> Replace EVAP control system pressure sensor. Refer to [FL-13, "Exploded View"](#).

## 15. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882991

### 1. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

1. Turn ignition switch OFF.
2. Remove EVAP control system pressure sensor with its harness connector.  
**Always replace O-ring with a new one.**
3. Install a vacuum pump to EVAP control system pressure sensor.
4. Turn ignition switch ON and check output voltage between ECM harness connector terminals under the following conditions.

# P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| ECM       |          |          | Condition<br>[Applied vacuum kPa (kg/cm <sup>2</sup> , psi)] | Voltage (V)                       |
|-----------|----------|----------|--|-----------------------------------|
| Connector | +        | -        |  |                                   |
|           | Terminal | Terminal |  |                                   |
| M107      | 102      | 112      | Not applied  | 1.8 - 4.8                         |
|           |          |          | -26.7 (-0.272, -3.87)  | 2.1 to 2.5 lower than above value |

**CAUTION:**

- Always calibrate the vacuum pump gauge when using it.
- Never apply below -93.3 kPa (-0.952 kg/cm<sup>2</sup>, -13.53 psi) or pressure over 101.3 kPa (1.033 kg/cm<sup>2</sup>, 14.69 psi).

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace EVAP control system pressure sensor. Refer to [FL-13, "Exploded View"](#).

## P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

### DTC Logic

INFOID:000000006882992

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                         | DTC detecting condition                                     | Possible cause  |
|---------|--|---|---|
| P0453   | EVAP control system pressure sensor high input | An excessively high voltage from the sensor is sent to ECM. | <ul style="list-style-type: none"> <li>• Harness or connectors (EVAP control system pressure sensor circuit is open or shorted.) [CKP sensor (POS) circuit is shorted.] (APP sensor 2 circuit is shorted.) [CMP sensor (PHASE) (bank 2) circuit is open or shorted.] (Battery current sensor circuit is open or shorted.) (Refrigerant pressure sensor circuit is shorted.)</li> <li>• EVAP control system pressure sensor</li> <li>• Crankshaft position sensor (POS)</li> <li>• Accelerator pedal position sensor</li> <li>• Camshaft position sensor (PHASE) (bank 2)</li> <li>• Battery current sensor</li> <li>• Refrigerant pressure sensor</li> <li>• EVAP canister vent control valve</li> <li>• EVAP canister</li> <li>• Rubber hose from EVAP canister vent control valve to vehicle frame</li> </ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

**Always perform test at a temperature of 5°C (41°F) or more.**

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

##### With CONSULT

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Turn ignition switch ON.
6. Select "DATA MONITOR" mode with CONSULT.
7. Make sure that "FUEL T/TMP SE" is more than 0°C (32°F).
8. Start engine and wait at least 20 seconds.
9. Check 1st trip DTC.

##### With GST

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes to ECM harness connector terminals as per the following.

| ECM       |  |                     |
|-----------|--|---------------------|
| Connector | +  | -                   |
|           | Terminal                                     | Terminal            |
| M107      | 106<br>(Fuel tank temperature sensor signal) | 128<br>(ECM ground) |

3. Make sure that the voltage is less than 4.2 V.

# P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

4. Turn ignition switch OFF and wait at least 10 seconds.
5. Turn ignition switch ON.
6. Turn ignition switch OFF and wait at least 10 seconds.
7. Start engine and wait at least 20 seconds.
8. Check 1st trip DTC.

### Is 1st trip DTC detected?

- YES >> Go to [EC-356, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000006882993

### 1.CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

#### Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

### 2.CHECK CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check sensor harness connector for water.

**Water should not exist.**

#### Is the inspection result normal?

- YES >> GO TO 3.  
NO >> Repair or replace harness connector.

### 3.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check the voltage between EVAP control system pressure sensor harness connector and ground.

| EVAP control system pressure sensor |          | Ground | Voltage (V) |
|-------------------------------------|----------|--------|-------------|
| Connector                           | Terminal |        |             |
| B73                                 | 3        | Ground | Approx. 5   |

#### Is the inspection result normal?

- YES >> GO TO 10.  
NO >> GO TO 4.

### 4.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between EVAP control system pressure sensor harness connector and ECM harness connector.

| EVAP control system pressure sensor |          | ECM       |          | Continuity |
|-------------------------------------|----------|-----------|----------|------------|
| Connector                           | Terminal | Connector | Terminal |            |
| B73                                 | 3        | M107      | 107      | Existed    |

#### Is the inspection result normal?

- YES >> GO TO 6.  
NO >> GO TO 5.

### 5.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M7, B1
- Harness connectors B71, B72

# P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

- Harness for open between ECM and EVAP control system pressure sensor

>> Repair open circuit.

## 6. CHECK SENSOR POWER SUPPLY CIRCUIT

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                              |                |            |
|-----------|----------|-------------------------------------|----------------|------------|
| Connector | Terminal | Name                                | Connector      | Terminal   |
| F101      | 46       | CKP sensor (POS)                    | F2             | 1          |
| F102      | 64       | CMP sensor (PHASE) (bank 2)         | F18            | 1          |
|           |          | Battery current sensor              | E21            |            |
| M107      | 103      | APP sensor                          | M153*1<br>M9*2 | 3*1<br>6*2 |
|           |          | EVAP control system pressure sensor | B73            | 3          |
|           | 107      | Refrigerant pressure sensor         | E77            | 3          |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 7.

NO >> Repair short to ground or short to power in harness or connectors.

## 7. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to [EC-314, "Component Inspection"](#).)
- Camshaft position sensor (PHASE) (bank 2) (Refer to [EC-319, "Component Inspection"](#).)
- Battery current sensor (Refer to [EC-437, "Component Inspection"](#).)
- Refrigerant pressure sensor (Refer to [EC-530, "Diagnosis Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 8.

NO >> Replace malfunctioning component.

## 8. CHECK APP SENSOR

Refer to [EC-487, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 20.

NO >> GO TO 9.

## 9. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly
2. Go to [EC-487, "Special Repair Requirement"](#).

>> INSPECTION END

## 10. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between EVAP control system pressure sensor harness connector and ECM harness connector.

| EVAP control system pressure sensor |          | ECM       |          | Continuity |
|-------------------------------------|----------|-----------|----------|------------|
| Connector                           | Terminal | Connector | Terminal |            |
| B73                                 | 1        | M107      | 112      | Existed    |

# P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 12.
- NO >> GO TO 11.

## 11.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M7
- Harness connectors B71, B72
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 12.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between EVAP control system pressure sensor harness connector and ECM harness connector.

| EVAP control system pressure sensor |          | ECM       |          | Continuity |
|-------------------------------------|----------|-----------|----------|------------|
| Connector                           | Terminal | Connector | Terminal |            |
| B73                                 | 2        | M107      | 102      | Existed    |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 14.
- NO >> GO TO 13.

## 13.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M7
- Harness connectors B71, B72
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 14.CHECK RUBBER TUBE

1. Disconnect rubber tube connected to EVAP canister vent control valve.

2. Check the rubber tube for clogging.

Is the inspection result normal?

- YES >> GO TO 15.
- NO >> Clean the rubber tube using an air blower, repair or replace rubber tube.

## 15.CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-340, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 16.
- NO >> Replace EVAP canister vent control valve. Refer to [FL-13, "Exploded View"](#).

## 16.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-359, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 17.
- NO >> Replace EVAP control system pressure sensor. Refer to [FL-13, "Exploded View"](#).

## 17.CHECK IF EVAP CANISTER IS SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.

# P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

2. Check if water will drain from the EVAP canister (1).

2 : EVAP canister vent control valve

### Does water drain from EVAP canister?

- YES >> GO TO 18.
- NO >> GO TO 20.

## 18. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve and EVAP control system pressure sensor attached.

**The weight should be less than 2.1 kg (4.6 lb).**

### Is the inspection result normal?

- YES >> GO TO 20.
- NO >> GO TO 19.

## 19. DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

## 20. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882994

## 1. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

1. Turn ignition switch OFF.
2. Remove EVAP control system pressure sensor with its harness connector.  
**Always replace O-ring with a new one.**
3. Install a vacuum pump to EVAP control system pressure sensor.
4. Turn ignition switch ON and check output voltage between ECM harness connector terminals under the following conditions.

| Connector | ECM      |          | Condition<br>[Applied vacuum kPa (kg/cm <sup>2</sup> , psi)] | Voltage (V)                       |
|-----------|----------|----------|--|-----------------------------------|
|           | +        | -        |  |                                   |
|           | Terminal | Terminal |  |                                   |
| M107      | 102      | 112      | Not applied  | 1.8 - 4.8                         |
|           |          |          | -26.7 (-0.272, -3.87)  | 2.1 to 2.5 lower than above value |

### **CAUTION:**

- **Always calibrate the vacuum pump gauge when using it.**
- **Do not apply below -93.3 kPa (-0.952 kg/cm<sup>2</sup>, -13.53 psi) or pressure over 101.3 kPa (1.033 kg/cm<sup>2</sup>, 14.69 psi).**

### Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Replace EVAP control system pressure sensor. Refer to [FL-13, "Exploded View"](#).

# P0456 EVAP CONTROL SYSTEM

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0456 EVAP CONTROL SYSTEM

### DTC Logic

INFOID:000000006882995

### DTC DETECTION LOGIC

This diagnosis detects leaks in the EVAP line between fuel tank and EVAP canister purge volume control solenoid valve, using the negative pressure caused by decrease of fuel temperature in the fuel tank after turning ignition switch OFF.

If ECM judges that there are no leaks, the diagnosis will be OK.

| DTC No. | Trouble diagnosis name  | DTC detecting condition  | Possible cause  |
|---------|---|--|---|
| P0456   | Evaporative emission control system very small leak (negative pressure check) | <ul style="list-style-type: none"> <li>• EVAP system has a very small leak.</li> <li>• EVAP system does not operate properly.</li> </ul> | <ul style="list-style-type: none"> <li>• Incorrect fuel tank vacuum relief valve</li> <li>• Incorrect fuel filler cap used</li> <li>• Fuel filler cap remains open or fails to close.</li> <li>• Foreign matter caught in fuel filler cap.</li> <li>• Leak is in line between intake manifold and EVAP canister purge volume control solenoid valve.</li> <li>• Foreign matter caught in EVAP canister vent control valve.</li> <li>• EVAP canister or fuel tank leaks</li> <li>• EVAP purge line (pipe and rubber tube) leaks</li> <li>• EVAP purge line rubber tube bent</li> <li>• Loose or disconnected rubber tube</li> <li>• EVAP canister vent control valve and the circuit</li> <li>• EVAP canister purge volume control solenoid valve and the circuit</li> <li>• Fuel tank temperature sensor</li> <li>• O-ring of EVAP canister vent control valve is missing or damaged</li> <li>• EVAP canister is saturated with water</li> <li>• EVAP control system pressure sensor</li> <li>• Refueling EVAP vapor cut valve</li> <li>• ORVR system leaks</li> <li>• Fuel level sensor and the circuit</li> <li>• Foreign matter caught in EVAP canister purge volume control solenoid valve</li> </ul> |

### CAUTION:

- Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may illuminate.
- If the fuel filler cap is not tightened properly, the MIL may illuminate.
- Use only a genuine NISSAN rubber tube as a replacement.

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

# P0456 EVAP CONTROL SYSTEM

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

If DTC Confirmation Procedure has been previously conducted, always perform the following before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

### Do you have CONSULT?

YES >> GO TO 2.

NO >> GO TO 4.

## 2.PERFORM DTC CONFIRMATION PROCEDURE-I

### With CONSULT

1. Turn ignition switch ON and select "EVAP DIAG READY" in "DATA MONITOR" mode with CONSULT.
2. Start engine and wait at idle until "OFF" of "EVAP DIAG READY" changes to "ON".

#### **NOTE:**

It will take at most 2 hours until "OFF" of "EVAP DIAG READY" changes to "ON".

3. Turn ignition switch OFF and wait at least 90 minutes.

#### **NOTE:**

Never turn ignition switch ON during 90 minutes.

4. Turn ignition switch ON and select "EVAP LEAK DIAG" in "DATA MONITOR" mode with CONSULT.
5. Check that "EVAP LEAK DIAG" indication.

### Which is displayed on CONSULT?

CMPLT >> GO TO 3.

YET >> Perform DTC CONFIRMATION PROCEDURE again. GO TO 1.

## 3.PERFORM COMPONENT FUNCTION CHECK-II

Check 1st trip DTC.

### Is 1st trip DTC detected?

YES >> Go to [EC-361, "Diagnosis Procedure"](#).

NO >> INSPECTION END

## 4.PERFORM DTC CONFIRMATION PROCEDURE

### With GST

1. Start engine and wait engine idle for at least 2 hours.
2. Turn ignition switch OFF and wait at least 90 minutes.

#### **NOTE:**

Never turn ignition switch ON during 90 minutes.

3. Turn ignition switch ON.
4. Check 1st trip DTC.

### Is 1st trip DTC detected?

YES >> Go to [EC-361, "Diagnosis Procedure"](#).

NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000006882996

### 1.CHECK FUEL FILLER CAP DESIGN

1. Turn ignition switch OFF.
2. Check for genuine NISSAN fuel filler cap design.

### Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace with genuine NISSAN fuel filler cap.

## P0456 EVAP CONTROL SYSTEM

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

### 2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

Is the inspection result normal?

YES >> GO TO 3.

NO >> Open fuel filler cap, then clean cap and fuel filler neck threads using air blower. Then retighten until ratcheting sound is heard.

### 3. CHECK FUEL FILLER CAP FUNCTION

Check for air releasing sound while opening the fuel filler cap.

Is the inspection result normal?

YES >> GO TO 5.

NO >> GO TO 4.

### 4. CHECK FUEL TANK VACUUM RELIEF VALVE

Refer to [EC-527, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 5.

NO >> Replace fuel filler cap with a genuine one.

### 5. CHECK FOR EVAP LEAK

Refer to [EC-540, "Inspection"](#).

Is there any leak in EVAP line?

YES >> Repair or replace.

NO >> GO TO 6.

### 6. CHECK EVAP CANISTER VENT CONTROL VALVE

Check the following.

- EVAP canister vent control valve is installed properly.

Refer to [FL-13, "Exploded View"](#).

- EVAP canister vent control valve.

Refer to [EC-340, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> Repair or replace EVAP canister vent control valve and O-ring.

### 7. CHECK IF EVAP CANISTER IS SATURATED WITH WATER

1. Remove EVAP canister (1) with EVAP canister vent control valve (2) and EVAP control system pressure sensor attached.
2. Check if water will drain from EVAP canister.

Does water drain from the EVAP canister?

YES >> GO TO 8.

NO-1 >> With CONSULT: GO TO 10.

NO-2 >> Without CONSULT: GO TO 11.

PBIB2731E

### 8. CHECK EVAP CANISTER

Weigh the EVAP canister assembly with the EVAP canister vent control valve and EVAP control system pressure sensor attached.

**The weight should be less than 2.1 kg (4.6 lb).**

Is the inspection result normal?

YES-1 >> With CONSULT: GO TO 10.

YES-2 >> Without CONSULT: GO TO 11.

NO >> GO TO 9.

# P0456 EVAP CONTROL SYSTEM

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## 9. DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

## 10. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

### With CONSULT

1. Disconnect vacuum hose connected to EVAP service port and EVAP canister purge volume control solenoid valve from EVAP service port.
2. Start engine and let it idle.
3. Select "PURG VOL CONT/V" in "ACTIVE TEST" mode.
4. Touch "Qu" on CONSULT screen to increase "PURG VOL C/V" opening to 100%.
5. Check vacuum hose for vacuum.

**Vacuum should exist.**

Is the inspection result normal?

- YES >> GO TO 13.  
NO >> GO TO 12.

## 11. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

### Without CONSULT

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose connected to EVAP service port and EVAP canister purge volume control solenoid valve from EVAP service port.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

**Vacuum should exist.**

Is the inspection result normal?

- YES >> GO TO 13.  
NO >> GO TO 12.

## 12. CHECK VACUUM HOSE

Check vacuum hoses for clogging or disconnection. Refer to [EC-65, "EVAPORATIVE EMISSION SYSTEM: System Description"](#).

Is the inspection result normal?

- YES >> GO TO 13.  
NO >> Repair or reconnect the hose.

## 13. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to [EC-334, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 14.  
NO >> Replace EVAP canister purge volume control solenoid valve. Refer to [EM-31, "Exploded View"](#).

## 14. CHECK FUEL TANK TEMPERATURE SENSOR

Refer to [EC-290, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 15.  
NO >> Replace fuel level sensor unit.

## 15. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-349, "Component Inspection"](#).

## P0456 EVAP CONTROL SYSTEM

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

Is the inspection result normal?

YES >> GO TO 16.

NO >> Replace EVAP control system pressure sensor. Refer to [FL-13, "Exploded View"](#).

### 16.CHECK EVAP PURGE LINE

Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks or improper connection. Refer to [EC-65, "EVAPORATIVE EMISSION SYSTEM : System Description"](#).

Is the inspection result normal?

YES >> GO TO 17.

NO >> Repair or reconnect the hose.

### 17.CLEAN EVAP PURGE LINE

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 18.

### 18.CHECK EVAP/ORVR LINE

Check EVAP/ORVR line between EVAP canister and fuel tank for clogging, kinks, looseness and improper connection. For location, refer to [EC-525, "Diagnosis Procedure"](#).

Is the inspection result normal?

YES >> GO TO 19.

NO >> Repair or replace hoses and tubes.

### 19.CHECK RECIRCULATION LINE

Check recirculation line between filler neck tube and fuel tank for clogging, kinks, cracks, looseness and improper connection.

Is the inspection result normal?

YES >> GO TO 20.

NO >> Repair or replace hose, tube or filler tube.

### 20.CHECK REFUELING EVAP VAPOR CUT VALVE

Refer to [EC-527, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 21.

NO >> Replace refueling EVAP vapor cut valve with fuel tank. Refer to [FL-10, "Exploded View"](#).

### 21.CHECK FUEL LEVEL SENSOR

Refer to [MWI-63, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 22.

NO >> Replace fuel level sensor unit. Refer to [FL-5, "Exploded View"](#).

### 22.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006882997

### 1.CHECK FUEL TANK VACUUM RELIEF VALVE

1. Turn ignition switch OFF.
2. Remove fuel filler cap.

# P0456 EVAP CONTROL SYSTEM

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

3. Wipe clean valve housing.

4. Check valve opening pressure and vacuum.

**Pressure:** 15.3 - 20.0 kPa (0.156 - 0.204 kg/cm<sup>2</sup>, 2.22 - 2.90 psi)

**Vacuum:** -6.0 to -3.3 kPa (-0.061 to -0.034 kg/cm<sup>2</sup>, -0.87 to -0.48 psi)

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

## 2. REPLACE FUEL FILLER CAP

Replace fuel filler cap.

### **CAUTION:**

**Use only a genuine fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may illuminate.**

>> INSPECTION END

# P0460 FUEL LEVEL SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0460 FUEL LEVEL SENSOR

### DTC Logic

INFOID:000000006882998

#### DTC DETECTION LOGIC

##### NOTE:

- If DTC P0460 is displayed with DTC UXXXX, first perform the trouble diagnosis for DTC UXXXX.
- If DTC P0460 is displayed with DTC P0607, first perform the trouble diagnosis for DTC P0607. Refer to [EC-387, "DTC Logic"](#).

When the vehicle is parked, the fuel level in the fuel tank is naturally stable. It means that output signal of the fuel level sensor does not change. If ECM senses sloshing signal from the sensor, fuel level sensor malfunction is detected.

| DTC No. | Trouble diagnosis name          | DTC detecting condition   | Possible cause  |
|---------|---------------------------------|---|---|
| P0460   | Fuel level sensor circuit noise | Even though the vehicle is parked, a signal being varied is sent from the fuel level sensor to ECM. | <ul style="list-style-type: none"><li>• Harness or connectors (The CAN communication line is open or shorted)</li><li>• Harness or connectors (The sensor circuit is open or shorted)</li><li>• Combination meter</li><li>• Fuel level sensor</li></ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and wait maximum of 2 consecutive minutes.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-366, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006882999

##### 1. CHECK DTC WITH "COMBINATION METER"

Refer to [MWI-31, "CONSULT Function"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Go to [MWI-62, "Component Function Check"](#).

##### 2. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

# P0461 FUEL LEVEL SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0461 FUEL LEVEL SENSOR

### DTC Logic

INFOID:000000006883000

#### DTC DETECTION LOGIC

##### NOTE:

- If DTC P0461 is displayed with DTC UXXXX, first perform the trouble diagnosis for DTC UXXXX.
- If DTC P0461 is displayed with DTC P0607, first perform the trouble diagnosis for DTC P0607. Refer to [EC-387, "DTC Logic"](#).

Driving long distances naturally affect fuel gauge level.

This diagnosis detects the fuel gauge malfunction of the gauge not moving even after a long distance has been driven.

| DTC No. | Trouble diagnosis name                      | DTC detecting condition  | Possible cause  |
|---------|---|--|---|
| P0461   | Fuel level sensor circuit range/performance | The output signal of the fuel level sensor does not change within the specified range even though the vehicle has been driven a long distance. | <ul style="list-style-type: none"><li>• Harness or connectors (The CAN communication line is open or shorted)</li><li>• Harness or connectors (The sensor circuit is open or shorted)</li><li>• Combination meter</li><li>• Fuel level sensor</li></ul> |

#### DTC CONFIRMATION PROCEDURE

### 1. PERFORM COMPONENT FUNCTION CHECK

Perform component function check. Refer to [EC-367, "Component Function Check"](#).

Use component function check to check the overall function of the fuel level sensor. During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-368, "Diagnosis Procedure"](#).

### Component Function Check

INFOID:000000006883001

### 1. PRECONDITIONING

#### WARNING:

When performing the following procedure, always observe the handling of the fuel. Refer to [FL-6, "Removal and Installation"](#).

#### TESTING CONDITION:

Before starting component function check, preparation of draining fuel and refilling fuel is required.

Do you have CONSULT?

YES >> GO TO 2.

NO >> GO TO 3.

### 2. PERFORM COMPONENT FUNCTION CHECK

#### Ⓜ With CONSULT

##### NOTE:

Start from step 10, if it is possible to confirm that the fuel cannot be drained by 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) in advance.

1. Prepare a fuel container and a spare hose.
2. Release fuel pressure from fuel line, refer to [EC-158, "Work Procedure"](#).
3. Remove the fuel feed hose on the fuel level sensor unit.
4. Connect a spare fuel hose where the fuel feed hose was removed.
5. Turn ignition switch OFF and wait at least 10 seconds then turn ON.
6. Select "FUEL LEVEL SE" in "DATA MONITOR" mode with CONSULT.
7. Check "FUEL LEVEL SE" output voltage and note it.
8. Select "FUEL PUMP RELAY" in "ACTIVE TEST" mode with CONSULT.
9. Touch "ON" and drain fuel approximately 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) and stop it.

# P0461 FUEL LEVEL SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

10. Check "FUEL LEVEL SE" output voltage and note it.
11. Fill fuel into the fuel tank for 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal).
12. Check "FUEL LEVEL SE" output voltage and note it.
13. Confirm whether the voltage changes more than 0.03V during step 7 to 10 and 10 to 12.

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> Go to [EC-368, "Diagnosis Procedure"](#).

## 3.PERFORM COMPONENT FUNCTION CHECK

⊗ Without CONSULT

**NOTE:**

**Start from step 8, if it is possible to confirm that the fuel cannot be drained by 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) in advance.**

1. Prepare a fuel container and a spare hose.
2. Release fuel pressure from fuel line. Refer to [EC-158, "Work Procedure"](#).
3. Remove the fuel feed hose on the fuel level sensor unit.
4. Connect a spare fuel hose where the fuel feed hose was removed.
5. Turn ignition switch ON.
6. Drain fuel by 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) from the fuel tank using proper equipment.
7. Confirm that the fuel gauge indication varies.
8. Fill fuel into the fuel tank for 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal).
9. Confirm that the fuel gauge indication varies.

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> Go to [EC-368, "Diagnosis Procedure"](#).

## Diagnosis Procedure

INFOID:000000006883002

### 1.CHECK DTC WITH "COMBINATION METER"

Refer to [MWI-31, "CONSULT Function"](#).

Is the inspection result normal?

- YES >> GO TO 2.

## P0506 ISC SYSTEM

### Description

INFOID:000000006883009

The ECM controls the engine idle speed to a specified level through the fine adjustment of the air, which is let into the intake manifold, by operating the electric throttle control actuator. The operating of the throttle valve is varied to allow for optimum control of the engine idling speed. The crankshaft position sensor (POS) detects the actual engine speed and sends a signal to the ECM.

The ECM controls the electric throttle control actuator so that the engine speed coincides with the target value memorized in the ECM. The target engine speed is the lowest speed at which the engine can operate steadily. The optimum value stored in the ECM is determined by taking into consideration various engine conditions, such as during warming up, deceleration and engine load (air conditioner, power steering and cooling fan operation, etc.).

### DTC Logic

**NOTE:**

**If DTC P0507 is displayed with other DTC, first perform the trouble diagnosis for the other DTC.**

| DTC No. | Trouble diagnosis name                             | DTC detecting condition   | Possible cause  |
|---------|--|---|---|
| P0507   | Idle speed control system RPM higher than expected | The idle speed is more than the target idle speed by 200 rpm or more. | <ul style="list-style-type: none"> <li>• Electric throttle control actuator</li> <li>• Intake air leak</li> <li>• PCV system</li> </ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

**If the idle speed is out of the specified value, perform [EC-149, "Work Procedure"](#), before conducting DTC Confirmation Procedure.**

**TESTING CONDITION:**

- Before performing the following procedure, confirm that battery voltage is more than 11 V at idle.
- Always perform the test at a temperature above -10°C(14°F).

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Start engine and run it for at least 1 minute at idle speed.
6. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-374, "Diagnosis Procedure"](#).  
 NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883014

#### 1. CHECK PCV HOSE CONNECTION

Confirm that PCV hose is connected correctly.

Is the inspection result normal?

- YES >> GO TO 2.  
 NO >> Repair or replace.

# P0507 ISC SYSTEM

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

---

## 2.CHECK INTAKE AIR LEAK

---

1. Start engine and let it idle.
2. Listen for an intake air leak after the mass air flow sensor.

Is intake air leak detected?

- YES >> Discover air leak location and repair.  
NO >> GO TO 3.

---

## 3.REPLACE ECM

---

1. Stop engine.
2. Replace ECM.
3. Go to [EC-144, "Work Procedure"](#).

>> INSPECTION END

# P050A, P050E COLD START CONTROL

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P050A, P050E COLD START CONTROL

### Description

INFOID:000000007202598

ECM controls ignition timing and engine idle speed when engine is started with pre-warming up condition. This control promotes the activation of three way catalyst by heating the catalyst and reduces emissions.

### DTC Logic

INFOID:000000007202599

### DTC DETECTION LOGIC

#### NOTE:

If DTC P050A or P050E is displayed with other DTC, first perform the trouble diagnosis for other DTC.

| DTC No. | Trouble diagnosis name                         | DTC detecting condition   | Possible cause  |
|---------|--|---|---|
| P050A   | Cold start idle air control system performance | ECM does not control engine idle speed properly when engine is started with pre-warming up condition.                                   | <ul style="list-style-type: none"><li>• Lack of intake air volume</li><li>• Fuel injection system</li><li>• ECM</li></ul> |
| P050E   | Cold start engine exhaust temperature too low  | The temperature of the catalyst inlet does not rise to the proper temperature when the engine is started with pre-warming up condition. |   |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 11 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE-I

##### With CONSULT

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Select "DATA MONITOR" mode with CONSULT.
4. Check the indication of "COOLAN TEMP/S".

##### With GST

Follow the procedure "With CONSULT" above.

Is the value of "COOLAN TEMP/S" between 4°C (39°F) and 36°C (97°F)?

YES >> GO TO 3.

NO-1 [If it is below 4°C (39°F)]>>Warm up the engine until the value of "COOLAN TEMP/S" reaches 4°C (39°F) or more. Retry from step 1.

NO-2 [If it is above 36°C (97°F)]>>Cool engine down to less than 36°C (97°F). Retry from step 1.

#### 3. PERFORM DTC CONFIRMATION PROCEDURE-II

##### With CONSULT

1. Set the select lever in N range.
2. Start the engine and warm up in idle with the value of "COOLAN TEMP/S" between -10°C (14°F) and 40°C (104°F) for more than 15 seconds.
3. Check 1st trip DTC.

##### With GST

Follow the procedure "With CONSULT" above.

Is 1st trip DTC detected?

YES >> Go to [EC-377 "Diagnosis Procedure"](#).

NO >> INSPECTION END

# P050A, P050E COLD START CONTROL

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

INFOID:000000007202600

## Diagnosis Procedure

### 1. PERFORM IDLE AIR VOLUME LEARNING

Perform [EC-149, "Work Procedure"](#).

Is Idle Air Volume Learning carried out successfully?

YES >> GO TO 2.

NO >> Follow the instruction of Idle Air Volume Learning.

### 2. CHECK INTAKE SYSTEM

Check for the cause of intake air volume lacking. Refer to the following.

- Crushed intake air passage
- Intake air passage clogging
- Clogging of throttle body

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair or replace malfunctioning part

### 3. CHECK FUEL INJECTION SYSTEM FUNCTION

Perform DTC Confirmation Procedure for DTC P0171, P0174. Refer to [EC-279, "DTC Logic"](#).

Is the inspection result normal?

YES >> GO TO 4.

NO >> Go to [EC-280, "Diagnosis Procedure"](#) for DTC P0171, P0174.

### 4. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Erase DTC.
3. Perform DTC Confirmation Procedure.  
See [EC-376, "DTC Logic"](#).

Is the 1st trip DTC P050A or P050E displayed again?

YES >> GO TO 5.

NO >> INSPECTION END

### 5. REPLACE ECM

1. Replace ECM.
2. Go to [EC-144, "Work Procedure"](#).

# P0524 ENGINE OIL PRESSURE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0524 ENGINE OIL PRESSURE

### DTC Logic

INFOID:000000006883015

### DTC DETECTION LOGIC

#### NOTE:

If DTC P0524 is displayed with DTC P0075 or P0081, first perform the trouble diagnosis for DTC P0075, P0081. Refer to [EC-208, "DTC Logic"](#)

| DTC No. | Trouble diagnosis name      | Detecting condition  | Possible cause  |
|---------|-----------------------------|--|---|
| P0524   | Engine oil pressure too low | Engine oil pressure is low because there is a gap between angle of target and phase-control angle. | <ul style="list-style-type: none"><li>• Engine oil pressure or level too low</li><li>• Crankshaft position sensor (POS)</li><li>• Camshaft position sensor (PHASE)</li><li>• Intake valve control solenoid valve</li><li>• Accumulation of debris to the signal pick-up portion of the camshaft</li><li>• Timing chain installation</li><li>• Foreign matter caught in the oil groove for intake valve timing control</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING-I

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 10 V and 16 V at idle.

>> GO TO 2.

#### 2. PRECONDITIONING-II

Check oil level and oil pressure. Refer to [LU-7, "Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> Go to [LU-7, "Inspection"](#).

#### 3. PERFORM DTC CONFIRMATION PROCEDURE

1. Select "DATA MONITOR" mode with CONSULT.
2. Maintain the following conditions for at least 20 consecutive seconds.

|                  |   |
|------------------|---|
| ENG SPEED        | More than 1,700 rpm   |
| COOLAN TEMP/S    | More than 70°C (158°F)  |
| Selector lever   | 1st or 2nd position   |
| Driving location | Driving vehicle uphill<br>(Increased engine load will help maintain the driving conditions required for this test.) |

#### CAUTION:

Always drive at a safe speed.

3. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-379, "Diagnosis Procedure"](#)  
NO >> INSPECTION END

# P0524 ENGINE OIL PRESSURE

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

INFOID:000000006883016

## Diagnosis Procedure

### 1. CHECK OIL PRESSURE WARNING LAMP

1. Start engine.
2. Check oil pressure warning lamp and confirm it is not illuminated.

Is oil pressure warning lamp illuminated?

- YES >> Go to [LU-7, "Inspection"](#).  
NO >> GO TO 2.

### 2. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE

Refer to [EC-193, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> Replace malfunctioning intake valve timing control solenoid valve. Refer to [EM-52, "Exploded View"](#).

### 3. CHECK CRANKSHAFT POSITION SENSOR (POS)

Refer to [EC-314, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 4.  
NO >> Replace crankshaft position sensor (POS). Refer to [EM-123, "Exploded View"](#).

### 4. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to [EC-319, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 5.  
NO >> Replace malfunctioning camshaft position sensor (PHASE). Refer to [EM-52, "Exploded View"](#).

### 5. CHECK CAMSHAFT (INTAKE)

Check the following.

- Accumulation of debris to the signal plate of camshaft front end
- Chipping signal plate of camshaft front end

Is the inspection result normal?

- YES >> GO TO 6.  
NO >> Remove debris and clean the signal plate of camshaft front end or replace camshaft.

### 6. CHECK TIMING CHAIN INSTALLATION

Check service records for any recent repairs that may cause timing chain misaligned.

Are there any service records that may cause timing chain misaligned?

- YES >> Check timing chain installation. Refer to [EM-53, "Removal and Installation"](#).  
NO >> GO TO 7.

### 7. CHECK LUBRICATION CIRCUIT

Perform "Inspection of Camshaft Sprocket (INT) Oil Groove". Refer to [EM-106, "Inspection"](#).

# P0524 ENGINE OIL PRESSURE

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

Is the inspection result normal?

- YES >> GO TO 8.
- NO >> Clean lubrication line.

## 8.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006883017

### 1.CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE-I

1. Turn ignition switch OFF.
2. Disconnect intake valve timing control solenoid valve harness connector.
3. Check resistance between intake valve timing control solenoid valve terminals as per the following.

| Terminals         | Resistance ( $\Omega$ )                   |
|-------------------|---|
| 1 and 2           | 7.0 - 7.7 [at 20°C (68°F)]                |
| 1 or 2 and ground | $\infty$<br>(Continuity should not exist) |

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Replace malfunctioning intake valve timing control solenoid valve. Refer to [EM-52, "Exploded View"](#).

### 2.CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE-II

1. Remove intake valve timing control solenoid valve.
2. Provide 12 V DC between intake valve timing control solenoid valve terminals 1 and 2, and then interrupt it. Make sure that the plunger moves as shown in the figure.

**CAUTION:**

**Never apply 12 V DC continuously for 5 seconds or more. Doing so may result in damage to the coil in intake valve timing control solenoid valve.**

**NOTE:**

**Always replace O-ring when intake valve timing control solenoid valve is removed.**

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Replace malfunctioning intake valve timing control solenoid valve. Refer to [EM-52, "Exploded View"](#).

# P0550 PSP SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0550 PSP SENSOR

### DTC Logic

INFOID:000000006883018

### DTC DETECTION LOGIC

#### NOTE:

If DTC P0550 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to [EC-388, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name                 | DTC detecting condition  | Possible cause   |
|---------|--|--|--|
| P0550   | Power steering pressure sensor circuit | An excessively low or high voltage from the sensor is sent to ECM. | <ul style="list-style-type: none"><li>• Harness or connectors (The sensor circuit is open or shorted)</li><li>• Power steering pressure sensor</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for at least 5 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-381, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883019

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK PSP SENSOR POWER SUPPLY CIRCUIT

1. Disconnect power steering pressure (PSP) sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between PSP sensor harness connector and ground.

| PSP sensor |          | Ground | Voltage (V) |
|------------|----------|--------|-------------|
| Connector  | Terminal |        |             |
| F35        | 3        | Ground | Approx. 5   |

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> Repair open circuit, short to ground or short to power in harness or connectors.

#### 3. CHECK PSP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.

# P0550 PSP SENSOR

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

3. Check the continuity between PSP sensor harness connector and ECM harness connector.

| PSP sensor |          | ECM       |          | Continuity |
|------------|----------|-----------|----------|------------|
| Connector  | Terminal | Connector | Terminal |            |
| F35        | 1        | F102      | 96       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground short to power in harness or connectors.

## 4.CHECK PSP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between PSP sensor harness connector and ECM harness connector.

| PSP sensor |          | ECM       |          | Continuity |
|------------|----------|-----------|----------|------------|
| Connector  | Terminal | Connector | Terminal |            |
| F35        | 2        | F102      | 87       | Existed    |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 5.CHECK PSP SENSOR

Refer to [EC-382, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace PSP sensor. Refer to [ST-76, "2WD : Exploded View"](#).

## 6.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006883020

## 1.CHECK POWER STEERING PRESSURE SENSOR

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Start engine and let it idle.
4. Check the voltage between ECM harness connector terminals under the following conditions.

| ECM       |          |          | Condition      | Voltage (V)      |           |
|-----------|----------|----------|----------------|------------------|-----------|
| Connector | +        | -        |                |                  |           |
|           | Terminal | Terminal |                |                  |           |
| F102      | 87       | 96       | Steering wheel | Being turned     | 0.5 - 4.5 |
|           |          |          |                | Not being turned | 0.4 - 0.8 |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace power steering pressure sensor. Refer to [ST-76, "2WD : Exploded View"](#).

# P0603 ECM POWER SUPPLY

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0603 ECM POWER SUPPLY

### Description

INFOID:000000006883021

Battery voltage is supplied to the ECM even when the ignition switch is turned OFF for the ECM memory function of the DTC memory, the air-fuel ratio feedback compensation value memory, the idle air volume learning value memory, etc.

JMBIA0057ZZ

### DTC Logic

INFOID:000000006883022

#### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name   | DTC detecting condition                            | Possible cause  |
|---------|--------------------------|--|---|
| P0603   | ECM power supply circuit | ECM back up RAM system does not function properly. | <ul style="list-style-type: none"> <li>• Harness or connectors [ECM power supply (back up) circuit is open or shorted.]</li> <li>• ECM</li> </ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON and wait at least 10 seconds.
2. Turn ignition switch OFF and wait at least 5 minutes.
3. Turn ignition switch ON and wait at least 10 seconds.
4. Repeat steps 2 and 3 for five times.
5. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-383. "Diagnosis Procedure"](#).  
 NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883023

#### 1. CHECK ECM POWER SUPPLY

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the voltage between ECM harness connector terminals as per the following.

| ECM       |          |           |          | Voltage         |
|-----------|----------|-----------|----------|-----------------|
| +         |          | -         |          |                 |
| Connector | Terminal | Connector | Terminal |                 |
| F102      | 93       | M107      | 128      | Battery voltage |

## P0603 ECM POWER SUPPLY

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for 1 second.
2. Check DTC.

#### Is DTC detected?

- YES >> Go to [EC-388, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883029

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

#### Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK ACCELERATOR PEDAL POSITION SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between APP sensor harness connector and ground.

| APP sensor |          | Ground | Voltage (V) |
|------------|----------|--------|-------------|
| Connector  | Terminal |        |             |
| M153*1     | 6*1      | Ground | Approx. 5   |
| M9*2       | 5*2      |        |             |

# P0643 SENSOR POWER SUPPLY

< DTC/CIRCUIT DIAGNOSIS >

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 3.

## 3.CHECK SENSOR POWER SUPPLY CIRCUITS

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                                      |  |                                    |
|-----------|----------|---|--|------------------------------------|
| Connector | Terminal | Name  | Connector                              | Terminal                           |
| F101      | 43       | Electric throttle control actuator (bank 2) | F27                                    | 1                                  |
|           | 44       | Electric throttle control actuator (bank 1) | F67                                    | 6                                  |
| F102      | 60       | CMP sensor (PHASE) (bank 1)                 | F5                                     | 1                                  |
|           |          | Manifold absolute pressure (MAP) sensor     | F50                                    | 1                                  |
|           |          | PSP sensor                                  | F35                                    | 3                                  |
| M107      | 99       | APP sensor                                  | M153 <sup>*1</sup><br>M9 <sup>*2</sup> | 6 <sup>*1</sup><br>5 <sup>*2</sup> |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair short to ground or short to power in harness or connectors.

## 4.CHECK COMPONENTS

Check the following.

- Camshaft position sensor (PHASE) (bank 1) (Refer to [EC-319, "Component Inspection"](#).)
- Manifold absolute pressure (MAP) sensor (Refer to [EC-222, "Component Inspection"](#).)
- Power steering pressure sensor (Refer to [EC-382, "Component Inspection"](#).)

Is the inspection result normal?

YES >> GO TO 5.

NO >> Replace malfunctioning component.

## 5.CHECK TP SENSOR

Refer to [EC-235, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 9.

NO >> GO TO 6.

## 6.REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace electric throttle control actuator.
2. Go to [EC-235, "Special Repair Requirement"](#).

>> INSPECTION END

## 7.CHECK APP SENSOR

Refer to [EC-487, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 9.

NO >> GO TO 8.

## 8.REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Go to [EC-487, "Special Repair Requirement"](#).

## P0643 SENSOR POWER SUPPLY

< DTC/CIRCUIT DIAGNOSIS >

### 9. CHECK INTERMITTENT INCIDENT

---

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

# P0850 PNP SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P0850 PNP SWITCH

### Description

INFOID:000000006883030

When the selector lever position is P or N, park/neutral position (PNP) signal from the TCM is sent to ECM. ECM detects the position because the continuity of the line (the ON signal) exists.

### DTC Logic

INFOID:000000006883031

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name       | DTC detecting condition  | Possible cause   |
|---------|------------------------------|--|--|
| P0850   | Park/neutral position switch | The signal of the park/neutral position (PNP) signal does not change during driving after the engine is started. | <ul style="list-style-type: none"><li>• Harness or connectors<br/>[The park/neutral position (PNP) signal circuit is open or shorted.]</li><li>• TCM</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1.INSPECTION START

Do you have CONSULT?

Do you have CONSULT?

YES >> GO TO 2.

NO >> GO TO 5.

#### 2.PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 3.

#### 3.CHECK PNP SIGNAL

##### With CONSULT

1. Turn ignition switch ON.
2. Select "P/N POSI SW" in "DATA MONITOR" mode with CONSULT. Then check the "P/N POSI SW" signal under the following conditions.

| Position (Selector lever) | Known-good signal |
|---------------------------|-------------------|
| N or P position           | ON                |
| Except above position     | OFF               |

Is the inspection result normal?

YES >> GO TO 4.

NO >> Go to [EC-392. "Diagnosis Procedure"](#).

#### 4.PERFORM DTC CONFIRMATION PROCEDURE

1. Select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to normal operating temperature.
3. Maintain the following conditions for at least 50 consecutive seconds.

##### **CAUTION:**

**Always drive vehicle at a safe speed.**

|               |                        |
|---------------|------------------------|
| ENG SPEED     | 1,400 - 6,375 rpm      |
| COOLAN TEMP/S | More than 70°C (158°F) |

# P0850 PNP SWITCH

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

|                |                            |
|----------------|----------------------------|
| B/FUEL SCHDL   | 2.0 - 31.8 msec            |
| VHCL SPEED SE  | More than 64 km/h (40 mph) |
| Selector lever | Suitable position          |

### 4. Check 1st trip DTC.

#### Is 1st trip DTC detected?

YES >> Go to [EC-392, "Diagnosis Procedure"](#).

NO >> INSPECTION END

## 5.PERFORM COMPONENT FUNCTION CHECK

Perform component function check. Refer to [EC-392, "Component Function Check"](#).

### NOTE:

Use component function check the overall function of the park/neutral position (PNP) signal circuit. During this check, a 1st trip DTC might not be confirmed.

#### Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-392, "Diagnosis Procedure"](#).

## Component Function Check

INFOID:000000006883032

## 1.PERFORM COMPONENT FUNCTION CHECK

1. Turn ignition switch ON.
2. Check the voltage between ECM harness connector terminals under the following conditions.

| ECM       |          |          | Condition      | Voltage (V)  |                 |
|-----------|----------|----------|----------------|--------------|-----------------|
| Connector | +        | -        |                |              |                 |
|           | Terminal | Terminal |                |              |                 |
| M107      | 109      | 128      | Selector lever | P or N       | Battery voltage |
|           |          |          |                | Except above | Approx. 0       |

#### Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-392, "Diagnosis Procedure"](#).

## Diagnosis Procedure

INFOID:000000006883033

## 1.CHECK DTC WITH TCM

Refer to [TM-59, "Diagnosis Description"](#).

#### Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace.

## 2.CHECK STARTING SYSTEM

Turn ignition switch OFF, then turn it to START.

#### Does starter motor operate?

YES >> GO TO 3.

NO >> Check DTC with BCM. Refer to [BCS-15, "COMMON ITEM : CONSULT Function \(BCM - COMMON ITEM\)"](#).

## 3.CHECK PNP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect A/T assembly harness connector.
3. Disconnect ECM harness connector.
4. Check the continuity between A/T assembly harness connector and ECM harness connector.

# P0850 PNP SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| A/T assembly |          | ECM       |          | Continuity |
|--------------|----------|-----------|----------|------------|
| Connector    | Terminal | Connector | Terminal |            |
| F61          | 9        | M107      | 109      | Existed    |

5. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 5.
- NO >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F40, E20
- Harness connectors E106, M6
- Harness connectors M20, M30
- Harness for open or short between A/T assembly and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 5. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

### DTC Logic

INFOID:000000006883034

#### DTC DETECTION LOGIC

##### NOTE:

If DTC P100A or P100B is displayed with DTC P1090 or P1093, first perform the trouble diagnosis for DTC P1090 or P1093. Refer to [EC-406, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name             | DTC detecting condition                  | Possible cause  |
|---------|------------------------------------|--|---|
| P100A   | VVEL response malfunction (bank 1) | Actual event response to target is poor. | <ul style="list-style-type: none"><li>• Harness or connectors (VVEL actuator motor circuit is open or shorted.)</li><li>• VVEL actuator motor</li><li>• VVEL actuator sub assembly</li><li>• VVEL ladder assembly</li><li>• VVEL control module</li></ul> |
| P100B   | VVEL response malfunction (bank 2) |  |   |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

**Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.**

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine.
2. Depress the accelerator pedal rapidly half or more under no load conditions, and then release it.
3. Wait at idle for 5 seconds or more.
4. Repeat steps 2 to 3 for three times.
5. Check 1st trip DTC.

Is DTC detected?

YES >> Go to [EC-394, "Diagnosis Procedure"](#).

NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006883035

##### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace ground connection.

##### 2. VVEL ACTUATOR MOTOR OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect VVEL control module harness connector.
2. Disconnect VVEL actuator motor harness connector.
3. Check the continuity between VVEL control module harness connector and VVEL actuator motor harness connector.

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for 1 second.
2. Check DTC.

#### Is DTC detected?

- YES >> Go to [EC-399. "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883041

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47. "Circuit Inspection"](#).

#### Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. VVEL CONTROL SHAFT POSITION SENSOR POWER SUPPLY CIRCUIT

1. Disconnect VVEL control shaft position sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between VVEL control shaft position sensor harness connector and ground.

# P1089, P1092 VVEL CONTROL SHAFT POSITION SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| DTC No. | VVEL control shaft position sensor |           |          | Ground | Voltage (V) |
|---------|------------------------------------|-----------|----------|--------|-------------|
|         | Bank                               | Connector | Terminal |        |             |
| P1089   | 1                                  | F46       | 3        | Ground | Approx. 5   |
|         |                                    |           | 6        |        |             |
| P1092   | 2                                  | F47       | 3        |        |             |
|         |                                    |           | 6        |        |             |

Is the inspection result normal?

YES >> GO TO 4.

NO >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F40, E20
- Harness for open or short between VVEL control shaft position sensor and VVEL control module

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 4. CHECK VVEL CONTROL SHAFT POSITION SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect VVEL control module harness connector.
3. Check the continuity between VVEL control shaft position sensor harness connector and VVEL control module harness connector.

| DTC No. | VVEL control shaft position sensor |           |          | VVEL control module |          | Continuity |
|---------|------------------------------------|-----------|----------|---------------------|----------|------------|
|         | Bank                               | Connector | Terminal | Connector           | Terminal |            |
| P1089   | 1                                  | F46       | 2        | E15                 | 4        | Existed    |
|         |                                    |           | 5        |                     | 17       |            |
| P1092   | 2                                  | F47       | 2        |                     | 6        |            |
|         |                                    |           | 5        |                     | 19       |            |

4. Also check harness for short to ground and power.

Is the inspection result normal?

YES >> GO TO 6.

NO >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F40, E20
- Harness for open or short between VVEL control shaft position sensor and VVEL control module

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 6. VVEL CONTROL SHAFT POSITION SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between VVEL control shaft position sensor harness connector and VVEL control module harness connector.

| DTC No. | VVEL control shaft position sensor |           |          | VVEL control module |          | Continuity |
|---------|------------------------------------|-----------|----------|---------------------|----------|------------|
|         | Bank                               | Connector | Terminal | Connector           | Terminal |            |
| P1089   | 1                                  | F46       | 1        | E15                 | 3        | Existed    |
|         |                                    |           | 4        |                     | 16       |            |
| P1092   | 2                                  | F47       | 1        |                     | 5        |            |
|         |                                    |           | 4        |                     | 18       |            |

# P1089, P1092 VVEL CONTROL SHAFT POSITION SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

2. Also check harness for short to ground and power.

Is the inspection result normal?

YES >> GO TO 8.

NO >> GO TO 7.

## 7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F40, E20
- Harness for open or short between VVEL control shaft position sensor and VVEL control module

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 8. CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 9.

NO >> Repair or replace.

## 9. REPLACE VVEL CONTROL MODULE

1. Replace VVEL control module.
2. Go to [EC-145. "Work Procedure"](#).

>> GO TO 10.

## 10. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Erase DTC.
3. Perform DTC Confirmation Procedure.  
See [EC-399. "DTC Logic"](#).

Is the DTC P1089 or P1092 displayed again?

YES >> GO TO 11.

NO >> INSPECTION END

## 11. REPLACE VVEL ACTUATOR SUB ASSEMBLY

1. Replace VVEL actuator sub assembly.
2. Go to [EC-401. "Special Repair Requirement"](#).

>> INSPECTION END

## Special Repair Requirement

INFOID:000000006883042

### 1. PERFORM VVEL CONTROL SHAFT POSITION SENSOR ADJUSTMENT

Refer to [EC-151. "Work Procedure"](#).

>> GO TO 2.

### 2. PERFORM IDLE AIR VOLUME LEARNING

Refer to [EC-149. "Work Procedure"](#).

>> END

# P1090, P1093 VVEL ACTUATOR MOTOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1090, P1093 VVEL ACTUATOR MOTOR

### DTC Logic

INFOID:000000006883043

#### DTC DETECTION LOGIC

##### NOTE:

If DTC P1090 or P1093 is displayed with DTC P1091, first perform the trouble diagnosis for DTC P1091. Refer to [EC-406. "DTC Logic"](#).

| DTC No. | Trouble diagnosis name           | DTC detecting condition  | Possible cause  |
|---------|----------------------------------|--|---|
| P1090   | VVEL system performance (bank 1) | <ul style="list-style-type: none"><li>Event angle difference between the actual and the target is detected.</li><li>Abnormal current is sent to VVEL actuator motor.</li></ul> | <ul style="list-style-type: none"><li>Harness or connectors (VVEL actuator motor circuit is open or shorted.)</li><li>VVEL actuator motor</li><li>VVEL actuator sub assembly</li><li>VVEL ladder assembly</li><li>VVEL control module</li></ul> |
| P1093   | VVEL system performance (bank 2) |  |   |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

- Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON.
- Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

- Start engine and let it idle for 10 second.
- Keep the engine speed at about 3,500 rpm for at least 10 seconds under no load.
- Check DTC.

Is DTC detected?

- YES >> Go to [EC-402. "Diagnosis Procedure"](#).  
NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006883044

##### 1. CHECK GROUND CONNECTION

- Turn ignition switch OFF.
- Check ground connection M95. Refer to Ground Inspection in [GI-47. "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

##### 2. VVEL ACTUATOR MOTOR OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

- Disconnect VVEL control module harness connector.
- Disconnect VVEL actuator motor harness connector.
- Check the continuity between VVEL control module harness connector and VVEL actuator motor harness connector.

# P1090, P1093 VVEL ACTUATOR MOTOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| DTC No. | VVEL control module |           |          | VVEL actuator motor |          | Continuity  |
|---------|---------------------|-----------|----------|---------------------|----------|-------------|
|         | Bank                | Connector | Terminal | Connector           | Terminal |             |

|         |                     |           |          |                     | 2        | Existed     |

4. Also check harness for short to ground and power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F40, E20
- Harness for open or short between VVEL actuator motor and VVEL control module

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 4. CHECK VVEL ACTUATOR MOTOR

Refer to [EC-404, "Component Inspection \(VVEL ACTUATOR MOTOR\)"](#).

Is the inspection result normal?

YES >> GO TO 6.

NO >> GO TO 5.

## 5. REPLACE VVEL ACTUATOR SUB ASSEMBLY

1. Replace VVEL actuator sub assembly.
2. Go to [EC-405, "Special Repair Requirement"](#).

>> INSPECTION END

## 6. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> Repair or replace.

## 7. REPLACE VVEL CONTROL MODULE

1. Replace VVEL control module.
2. Go to [EC-145, "Work Procedure"](#).

>> GO TO 8.

## 8. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Erase DTC.
3. Perform DTC Confirmation Procedure.  
See [EC-402, "DTC Logic"](#).

Is the DTC P1090 or P1093 displayed again?

YES >> GO TO 9.

# P1090, P1093 VVEL ACTUATOR MOTOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

NO >> INSPECTION END

## 9. CHECK VVEL ACTUATOR SUB ASSEMBLY

Refer to [EC-404, "Component Inspection \(VVEL ACTUATOR SUB ASSEMBLY\)"](#).

Is the inspection result normal?

YES >> GO TO 11.

NO >> GO TO 10.

## 10. REPLACE VVEL ACTUATOR SUB ASSEMBLY

1. Replace VVEL actuator sub assembly.
2. Go to [EC-405, "Special Repair Requirement"](#).

>> INSPECTION END

## 11. CHECK VVEL LADDER ASSEMBLY

Refer to [EM-106, "Inspection"](#).

Is the inspection result normal?

YES >> GO TO 13.

NO >> GO TO 12.

## 12. REPLACE CYLINDER HEAD, VVEL LADDER ASSEMBLY AND VVEL ACTUATOR SUB ASSEMBLY

1. Replace cylinder head, VVEL ladder assembly and VVEL actuator sub assembly.
2. Go to [EC-405, "Special Repair Requirement"](#).

>> INSPECTION END

## 13. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection (VVEL ACTUATOR MOTOR)

INFOID:000000006883045

### 1. CHECK VVEL ACTUATOR MOTOR

1. Turn ignition switch OFF.
2. Disconnect VVEL actuator motor harness connector.
3. Check resistance between VVEL actuator motor terminals as follows.

| VVEL actuator motor | Resistance          |
|---------------------|---------------------|
| Terminal            |                     |
| 1 and 2             | 16 $\Omega$ or less |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

### 2. REPLACE VVEL ACTUATOR SUB ASSEMBLY

1. Replace VVEL actuator sub assembly.
2. Go to [EC-405, "Special Repair Requirement"](#).

>> INSPECTION END

## Component Inspection (VVEL ACTUATOR SUB ASSEMBLY)

INFOID:000000006883046

### 1. CHECK VVEL ACTUATOR SUB ASSEMBLY

1. Turn ignition switch OFF.
2. Remove VVEL actuator sub assembly. Refer to [EM-97, "Disassembly and Assembly"](#).

# P1090, P1093 VVEL ACTUATOR MOTOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

3. Turn the ball screw shaft to check that it works smoothly.

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

## 2.REPLACE VVEL ACTUATOR SUB ASSEMBLY

1. Replace VVEL actuator sub assembly.

2. Go to [EC-405. "Special Repair Requirement"](#).

>> INSPECTION END

## Special Repair Requirement

INFOID:000000006883047

## 1.PERFORM VVEL CONTROL SHAFT POSITION SENSOR ADJUSTMENT

Refer to [EC-151. "Work Procedure"](#).

### DTC Logic

INFOID:000000006883048

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name            | DTC detecting condition  | Possible cause  |
|---------|-----------------------------------|--|---|
| P1091   | VVEL actuator motor relay circuit | <ul style="list-style-type: none"><li>VVEL control module detects the VVEL actuator motor relay is stuck OFF.</li><li>VVEL control module detects the VVEL actuator motor relay is stuck ON.</li></ul> | <ul style="list-style-type: none"><li>Harness or connectors (VVEL actuator motor relay circuit is open or shorted.) (Abort circuit is open or shorted.)</li><li>VVEL actuator motor relay</li><li>VVEL control module</li><li>ECM</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

- Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON.
- Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

- Turn ignition switch ON and wait at least 1 seconds.
- Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON and wait at least 1 seconds.
- Check DTC.

Is DTC detected?

YES >> Go to [EC-406. "Diagnosis Procedure"](#).

NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883049

#### 1. VVEL ACTUATOR MOTOR RELAY POWER SUPPLY CIRCUIT-I

- Turn ignition switch OFF.
- Disconnect VVEL actuator motor relay.
- Check the voltage between VVEL actuator motor relay harness connector and ground.

| VVEL actuator motor relay |          | Ground | Voltage         |
|---------------------------|----------|--------|-----------------|
| Connector                 | Terminal |        |                 |
| E16                       | 1        | Ground | Battery voltage |
|                           | 5        |        |                 |

Is the inspection result normal?

YES >> GO TO 3.

NO >> GO TO 2.

#### 2. DETECT MALFUNCTIONING PART

Check the following.

- 50 A fusible link (letter G)
- Harness for open or short between VVEL actuator motor relay and battery

# P1091 VVEL ACTUATOR MOTOR RELAY

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

>> Repair open circuit, short to ground or short to power in harness or connectors.

### 3.VVEL ACTUATOR MOTOR RELAY POWER SUPPLY CIRCUIT-II

1. Disconnect VVEL control module harness connector.
2. Check the continuity between VVEL actuator motor relay harness connector and VVEL control module harness connector.

| VVEL control module |          | VVEL actuator motor relay |          | Continuity |
|---------------------|----------|---------------------------|----------|------------|
| Connector           | Terminal | Connector                 | Terminal |            |
| E15                 | 23       | E16                       | 2        | Existed    |

3. Also check harness for short to ground and power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 4.VVEL ACTUATOR MOTOR RELAY INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between VVEL actuator motor relay harness connector and VVEL control module harness connector.

| VVEL control module |           |          | VVEL actuator motor relay |          | Continuity |
|---------------------|-----------|----------|---------------------------|----------|------------|
| Bank                | Connector | Terminal | Connector                 | Terminal |            |
| 1                   | E15       | 13       | E16                       | 3        | Existed    |
| 2                   |           | 1        |                           |          |            |

2. Also check harness for short to ground and power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 5.CHECK VVEL ACTUATOR MOTOR RELAY

Refer to [EC-408. "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace VVEL actuator motor relay.

### 6.CHECK ABORT CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check the continuity between VVEL control module harness connector and ECM harness connector.

| VVEL control module |          | ECM       |          | Continuity |
|---------------------|----------|-----------|----------|------------|
| Connector           | Terminal | Connector | Terminal |            |
| E15                 | 21       | F101      | 28       | Existed    |

3. Also check harness for short to ground and power.

Is the inspection result normal?

YES >> GO TO 8.

NO >> GO TO 7.

### 7.DETECT MALFUNCTIONING PART

Check the following.

- Harness connector E20, F40
- Harness for open or short between ECM and VVEL control module

>> Repair open circuit, short to ground or short to power in harness or connectors.

### 8.CHECK INTERMITTENT INCIDENT

# P1091 VVEL ACTUATOR MOTOR RELAY

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 9.

NO >> Repair or replace.

## 9. REPLACE VVEL CONTROL MODULE

1. Replace VVEL control module.
2. Go to [EC-145, "Work Procedure"](#).

>> GO TO 10.

## 10. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Erase DTC.
3. Perform DTC Confirmation Procedure.  
See [EC-406, "DTC Logic"](#).

Is the DTC P1091 displayed again?

YES >> GO TO 11.

NO >> INSPECTION END

## 11. REPLACE ECM

1. Replace ECM.
2. Go to [EC-144, "Work Procedure"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006883050

### 1. CHECK VVEL ACTUATOR MOTOR RELAY

1. Turn ignition switch OFF.
2. Remove VVEL actuator motor relay.
3. Check the continuity between VVEL actuator motor relay terminals under the following conditions.

| Terminal | Condition  | Continuity  |
|----------|--|-------------|
| 3 and 5  | 12 V direct current supply between terminals 1 and 2 | Existed     |
|          | No current supply                                    | Not existed |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace VVEL actuator motor relay.

# P1148, P1168 CLOSED LOOP CONTROL

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1148, P1168 CLOSED LOOP CONTROL

### DTC Logic

INFOID:000000006883051

### DTC DETECTION LOGIC

#### NOTE:

**DTC P1148 or P1168 is displayed with DTC for A/F sensor 1.**

**When the DTC is detected, perform the trouble diagnosis of DTC corresponding to A/F sensor 1.**

| DTC No. | Trouble diagnosis name                | DTC detecting condition  | Possible cause  |
|---------|---------------------------------------|--|---|
| P1148   | Closed loop control function (bank 1) | The closed loop control function for bank 1 does not operate even when vehicle is being driven in the specified condition. | <ul style="list-style-type: none"><li>• Harness or connectors (The A/F sensor 1 circuit is open or shorted.)</li><li>• A/F sensor 1</li><li>• A/F sensor 1 heater</li></ul> |
| P1168   | Closed loop control function (bank 2) | The closed loop control function for bank 2 does not operate even when vehicle is being driven in the specified condition. |   |

# P1211 TCS CONTROL UNIT

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1211 TCS CONTROL UNIT

### Description

INFOID:000000006883052

The malfunction information related to TCS is transferred via the CAN communication line from “ABS actuator and electric unit (control unit)” to ECM.

**Be sure to erase the malfunction information such as DTC not only for “ABS actuator and electric unit (control unit)” but also for ECM after TCS related repair.**

### DTC Logic

INFOID:000000006883053

### DTC DETECTION LOGIC

**Freeze frame data is not stored in the ECM for this self-diagnosis.**

| DTC No. | Trouble diagnosis name | DTC detecting condition  | Possible cause  |
|---------|------------------------|--|---|
| P1211   | TCS control unit       | ECM receives malfunction information from “ABS actuator and electric unit (control unit)”. | <ul style="list-style-type: none"><li>• ABS actuator and electric unit (control unit)</li><li>• TCS related parts</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

#### TESTING CONDITION:

**Before performing the following procedure, confirm that battery voltage is more than 10.5 V at idle.**

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for at least 60 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> [EC-410. "Diagnosis Procedure"](#)

NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883054

Go to [BRC-55. "Work Flow"](#).

# P1212 TCS COMMUNICATION LINE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1212 TCS COMMUNICATION LINE

### Description

INFOID:000000006883055

This CAN communication line is used to control the smooth engine operation during the TCS operation. Pulse signals are exchanged between ECM and "ABS actuator and electric unit (control unit)".

**Be sure to erase the malfunction information such as DTC not only for "ABS actuator and electric unit (control unit)" but also for ECM after TCS related repair.**

### DTC Logic

INFOID:000000006883056

#### DTC DETECTION LOGIC

##### NOTE:

- If DTC P1212 is displayed with DTC UXXXX, first perform the trouble diagnosis for DTC UXXXX.
- If DTC P1212 is displayed with DTC P0607, first perform the trouble diagnosis for DTC P0607. Refer to [EC-387, "DTC Logic"](#).

Freeze frame data is not stored in the ECM for this self-diagnosis.

| DTC No. | Trouble diagnosis name | DTC detecting condition   | Possible cause   |
|---------|------------------------|---|--|
| P1212   | TCS communication line | ECM cannot receive the information from "ABS actuator and electric unit (control unit)" continuously. | <ul style="list-style-type: none"><li>• Harness or connectors (The CAN communication line is open or shorted.)</li><li>• ABS actuator and electric unit (control unit)</li><li>• Dead (Weak) battery</li></ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10.5 V at idle.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for at least 10 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-411, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883057

Go to [BRC-55, "Work Flow"](#).

# P1217 ENGINE OVER TEMPERATURE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1217 ENGINE OVER TEMPERATURE

### DTC Logic

INFOID:000000006883058

#### DTC DETECTION LOGIC

##### NOTE:

- If DTC P1217 is displayed with DTC UXXXX, first perform the trouble diagnosis for DTC UXXXX.
- If DTC P1217 is displayed with DTC P0607, first perform the trouble diagnosis for DTC P0607. Refer to [EC-387, "DTC Logic"](#).

If the cooling fan or another component in the cooling system malfunctions, engine coolant temperature will rise.

When the engine coolant temperature reaches an abnormally high temperature condition, a malfunction is indicated.

| DTC No. | Trouble diagnosis name             | DTC detecting condition  | Possible cause  |
|---------|------------------------------------|--|---|
| P1217   | Engine over temperature (Overheat) | <ul style="list-style-type: none"><li>• Cooling fan does not operate properly (Overheat).</li><li>• Cooling fan system does not operate properly (Overheat).</li><li>• Engine coolant was not added to the system using the proper filling method.</li><li>• Engine coolant is not within the specified range.</li></ul> | <ul style="list-style-type: none"><li>• Harness or connectors (The cooling fan circuit is open or shorted.)</li><li>• IPDM E/R</li><li>• Cooling fan control module</li><li>• Cooling fan motor</li><li>• Radiator hose</li><li>• Radiator</li><li>• Radiator cap</li><li>• Water pump</li><li>• Thermostat</li></ul> |

##### CAUTION:

When a malfunction is indicated, always replace the coolant. Refer to [CO-8, "Draining"](#) and [CO-9, "Refilling"](#). Also, replace the engine oil. Refer to [LU-9, "Draining"](#) and [LU-9, "Refilling"](#).

1. Fill radiator with coolant up to specified level with a filling speed of 2 liters per minute. Always use coolant with the proper mixture ratio. Refer to [MA-17, "FOR NORTH AMERICA : Anti-Freeze Coolant Mixture Ratio"](#).
2. After refilling coolant, run engine to ensure that no water-flow noise is emitted.

#### DTC CONFIRMATION PROCEDURE

##### 1. PERFORM COMPONENT FUNCTION CHECK

Perform component function check. Refer to [EC-412, "Component Function Check"](#).

##### NOTE:

Use component function check to check the overall function of the cooling fan. During this check, a DTC might not be confirmed.

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Go to [EC-413, "Diagnosis Procedure"](#).

#### Component Function Check

INFOID:000000006883059

##### 1. PERFORM COMPONENT FUNCTION CHECK-I

##### WARNING:

Never remove the radiator cap when the engine is hot. Serious burns could be caused by high pressure fluid escaping from the radiator.

Wrap a thick cloth around cap. Carefully remove the cap by turning it a quarter turn to allow built-up pressure to escape. Then turn the cap all the way off.

# P1217 ENGINE OVER TEMPERATURE

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

Check the coolant level in the reservoir tank and radiator.

**Allow engine to cool before checking coolant level.**

Is the coolant level in the reservoir tank and/or radiator below the proper range?

- YES >> Go to [EC-413, "Diagnosis Procedure"](#).  
NO >> GO TO 2.

## 2.PERFORM COMPONENT FUNCTION CHECK-II

Confirm whether customer filled the coolant or not.

Did customer fill the coolant?

- YES >> Go to [EC-413, "Diagnosis Procedure"](#).  
NO >> GO TO 3.

## 3.PERFORM COMPONENT FUNCTION CHECK-III

### With CONSULT

1. Turn ignition switch ON.
2. Perform "FAN DUTY CONTROL" in "ACTIVE TEST" mode with CONSULT.
3. Make sure that cooling fan speed varies according to the percentage.

### Without CONSULT

Perform IPDM E/R auto active test and check cooling fan motors operation, refer to [PCS-12, "Diagnosis Description"](#).

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> Go to [EC-413, "Diagnosis Procedure"](#).

## Diagnosis Procedure

INFOID:000000006883060

## 1.CHECK COOLING FAN OPERATION

### With CONSULT

1. Turn ignition switch ON.
2. Perform "FAN DUTY CONTROL" in "ACTIVE TEST" mode with CONSULT.
3. Make sure that cooling fan speed varies according to the percentage.

### Without CONSULT

1. Perform IPDM E/R auto active test and check cooling fan motors operation, refer to [PCS-12, "Diagnosis Description"](#).
2. Make sure that cooling fan operates.

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Go to [EC-506, "Diagnosis Procedure"](#).

## 2.CHECK COOLING SYSTEM FOR LEAK-I

Check cooling system for leak. Refer to [CO-8, "Inspection"](#).

Is leakage detected?

- YES >> GO TO 3.  
NO >> GO TO 4.

## 3.CHECK COOLING SYSTEM FOR LEAK-II

Check the following for leak.

- Hose
- Radiator
- Water pump

# P1217 ENGINE OVER TEMPERATURE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

>> Repair or replace malfunctioning part.

## 4. CHECK RADIATOR CAP

Check radiator cap. Refer to [CO-12, "RADIATOR CAP : Inspection"](#).

Is the inspection result normal?

YES >> GO TO 5.

NO >> Replace radiator cap. Refer to [CO-25, "Exploded View"](#).

## 5. CHECK THERMOSTAT

Check thermostat. Refer to [CO-24, "Inspection"](#).

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace thermostat. Refer to [CO-23, "Exploded View"](#).

## 6. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to [EC-232, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> Replace engine coolant temperature sensor. Refer to [CO-25, "Exploded View"](#).

## 7. CHECK MAIN 12 CAUSES

If the cause cannot be isolated, check the following.

| Engine | Step | Inspection item  | Equipment  | Standard   | Reference page                                     |
|--------|------|--|--|--|--|
| OFF    | 1    | <ul style="list-style-type: none"> <li>Blocked radiator</li> <li>Blocked condenser</li> <li>Blocked radiator grille</li> <li>Blocked bumper</li> </ul> | <ul style="list-style-type: none"> <li>Visual</li> </ul>                                       | No blocking  | —  |
|        | 2    | <ul style="list-style-type: none"> <li>Coolant mixture</li> </ul>  | <ul style="list-style-type: none"> <li>Coolant tester</li> </ul>                               | <a href="#">MA-17, "FOR NORTH AMERICA : Anti-Freeze Coolant Mixture Ratio"</a> |  |
|        | 3    | <ul style="list-style-type: none"> <li>Coolant level</li> </ul>  | <ul style="list-style-type: none"> <li>Visual</li> </ul>                                       | Coolant up to MAX level in reservoir tank and radiator filler neck             | <a href="#">CO-8, "Inspection"</a>                 |

[VQ37VHR FOR USA AND CANADA]

## P1225, P1234 TP SENSOR

### DTC Logic

INFOID:000000006883061

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                                 | DTC detecting condition                                     | Possible cause   |
|---------|--|---|--|
| P1225   | Closed throttle position learning performance (bank 1) | Closed throttle position learning value is excessively low. | • Electric throttle control actuator (TP sensor 1 and 2) |
| P1234   | Closed throttle position learning performance (bank 2) |   |  |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-416, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883062

#### 1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Turn ignition switch OFF.
2. Remove the intake air duct.
3. Check if foreign matter is caught between the throttle valve (1) and the housing.

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Remove the foreign matter and clean the electric throttle control actuator inside, and then perform throttle valve closed position learning. Refer to [EC-148, "Work Procedure"](#).

#### 2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.
2. Go to [EC-417, "Special Repair Requirement"](#).

>> INSPECTION END

| P1233 | F102      | 52       | M107      | 128      | Ignition switch | OFF             | Approx. 0 |
|       |           |          |           |          |                 |                 | ON        |
| P2101 | F101      | 3        |           |          |                 | OFF             | Approx. 0 |
|       |           |          |           | ON       |                 | Battery voltage |           |

Is the inspection result normal?

- YES >> GO TO 9.  
NO >> GO TO 3.

## 3. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY CIRCUIT

- Turn ignition switch OFF.
- Disconnect ECM harness connector.
- Disconnect IPDM E/R harness connector E7.
- Check the continuity between IPDM E/R harness connector and ECM harness connector.

| IPDM E/R  |          | ECM       |          | Continuity |
|-----------|----------|-----------|----------|------------|
| Connector | Terminal | Connector | Terminal |            |
| E7        | 71       | F101      | 25       | Existed    |

- Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 5.  
NO >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 5. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT-II

- Check the continuity between IPDM E/R harness connector and ECM harness connector.

| DTC   | IPDM E/R  |          | ECM       |          | Continuity |
|-------|-----------|----------|-----------|----------|------------|
|       | Connector | Terminal | Connector | Terminal |            |
| P1233 | E5        | 7        | F102      | 52       | Existed    |
| P2101 |           |          | F101      | 3        |            |

- Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 7.  
NO >> GO TO 6.

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 7. CHECK FUSE

# P1233, P2101 ELECTRIC THROTTLE CONTROL FUNCTION

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

1. Disconnect 15 A fuse (No. 50) from IPDM E/R.
2. Check 15 A fuse for blown.

Is the inspection result normal?

- YES >> GO TO 8.  
NO >> Replace 15 A fuse.

## 8.CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

Is the inspection result normal?

- YES >> Replace IPDM E/R.  
NO >> Repair or replace harness or connectors.

## 9.CHECK THROTTLE CONTROL MOTOR OUTPUT SIGNAL CIRCUIT FOR OPEN OR SHORT

1. Turn ignition switch OFF.
2. Disconnect electric throttle control actuator harness connector.
3. Disconnect ECM harness connector.
4. Check the continuity between electric throttle control actuator harness connector and ECM harness connector.

| DTC   | Electric throttle control actuator |           |          | ECM       |          | Continuity  |
|-------|------------------------------------|-----------|----------|-----------|----------|-------------|
|       | Bank                               | Connector | Terminal | Connector | Terminal |             |
| P1233 | 2                                  | F27       | 5        | F102      | 49       | Existed     |
|       |                                    |           | 6        |           | 50       | Not existed |
|       |                                    |           |          |           | 49       | Not existed |
|       |                                    |           | 50       |           | Existed  |             |
| P2101 | 1                                  | F67       | 1        | F101      | 2        | Existed     |
|       |                                    |           | 2        |           | 4        | Not existed |
|       |                                    |           |          |           | 2        | Not existed |
|       |                                    |           | 4        |           | Existed  |             |

5. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 10.  
NO >> Repair or replace.

## 10.CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Remove the intake air duct.
2. Check if foreign matter is caught between the throttle valve (1) and the housing.

Is the inspection result normal?

- YES >> GO TO 11.  
NO >> Remove the foreign matter and clean the electric throttle control actuator inside, and then perform throttle valve closed position leaning. Refer to [EC-148. "Work Procedure"](#).

## 11.CHECK THROTTLE CONTROL MOTOR

Refer to [EC-423. "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 12.  
NO >> GO TO 13.

## 12.CHECK INTERMITTENT INCIDENT

# P1233, P2101 ELECTRIC THROTTLE CONTROL FUNCTION

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

Refer to [GI-44. "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 13.

NO >> Repair or replace harness or connectors.

## 13. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunction electric throttle control actuator.
2. Go to [EC-423. "Special Repair Requirement"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006883069

### 1. CHECK THROTTLE CONTROL MOTOR

1. Turn ignition switch OFF.
2. Disconnect electric throttle control actuator harness connector.
3. Check resistance between electric throttle control actuator terminals as per the following.

| Electric throttle control actuator |           | Resistance ( $\Omega$ )         |
|------------------------------------|-----------|---------------------------------|
| Bank                               | Terminals |                                 |
| 1                                  | 1 and 2   | Approx. 1 - 15 [at 25°C (77°F)] |
| 2                                  | 5 and 6   |                                 |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

### 2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.
2. Go to [EC-423. "Special Repair Requirement"](#).

>> INSPECTION END

## Special Repair Requirement

INFOID:000000006883070

### 1. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Refer to [EC-148. "Work Procedure"](#)

>> GO TO 2.

### 2. PERFORM IDLE AIR VOLUME LEARNING

Refer to [EC-149. "Work Procedure"](#)

>> END

# P1236, P2118 THROTTLE CONTROL MOTOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1236, P2118 THROTTLE CONTROL MOTOR

### DTC Logic

INFOID:000000006883071

#### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                        | DTC detecting condition  | Possible cause   |
|---------|---|--|--|
| P1236   | Throttle control motor (bank 2) circuit short | ECM detects short in both circuits between ECM and throttle control motor. | <ul style="list-style-type: none"><li>• Harness or connectors (Throttle control motor circuit is shorted.)</li><li>• Electric throttle control actuator (Throttle control motor)</li></ul> |
| P2118   | Throttle control motor (bank 1) circuit short |  |  |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON and wait at least 2 seconds.
2. Start engine and let it idle for 5 seconds.
3. Check DTC.

Is DTC detected?

- YES >> Go to [EC-424, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006883072

##### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

##### 2. CHECK THROTTLE CONTROL MOTOR OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect electric throttle control actuator harness connector.
2. Disconnect ECM harness connector.
3. Check the continuity between electric throttle control actuator harness connector and ECM harness connector.

| DTC   | Electric throttle control actuator |           |          | ECM       |          | Continuity  |
|-------|------------------------------------|-----------|----------|-----------|----------|-------------|
|       | Bank                               | Connector | Terminal | Connector | Terminal |             |
| P1236 | 2                                  | F27       | 5        | F102      | 49       | Existed     |
|       |                                    |           |          |           | 50       | Not existed |
|       |                                    |           | 6        |           | 49       | Not existed |
|       |                                    |           |          |           | 50       | Existed     |

# P1236, P2118 THROTTLE CONTROL MOTOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| DTC   | Electric throttle control actuator |           |          | ECM       |          | Continuity  |
|-------|------------------------------------|-----------|----------|-----------|----------|-------------|
|       | Bank                               | Connector | Terminal | Connector | Terminal |             |

|       |                                    |           | 2        |           | 4        | Not existed |
|       |                                    |           |          |           | 2        | Not existed |
|       |                                    |           | 4        |           | Existed  |             |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair or replace.

## 3. CHECK THROTTLE CONTROL MOTOR

Refer to [EC-425, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 4.

NO >> GO TO 5.

## 4. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair or replace harness or connectors.

## 5. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.

2. Go to [EC-425, "Special Repair Requirement"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006883073

## 1. CHECK THROTTLE CONTROL MOTOR

1. Turn ignition switch OFF.

2. Disconnect electric throttle control actuator harness connector.

3. Check resistance between electric throttle control actuator terminals as per the following.

| Electric throttle control actuator |           | Resistance ( $\Omega$ )         |
|------------------------------------|-----------|---------------------------------|
| Bank                               | Terminals |                                 |
| 1                                  | 1 and 2   | Approx. 1 - 15 [at 25°C (77°F)] |
| 2                                  | 5 and 6   |                                 |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

## 2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.

2. Go to [EC-425, "Special Repair Requirement"](#).

>> INSPECTION END

## Special Repair Requirement

### DTC Logic

INFOID:000000006883075

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                      | DTC detecting condition |   | Possible cause                       |
|---------|---|-------------------------|---|--------------------------------------|
| P1238   | Electric throttle control actuator (bank 2) | A)                      | Electric throttle control actuator does not function properly due to the return spring malfunction. | • Electric throttle control actuator |
|         |   | B)                      | Throttle valve opening angle in fail-safe mode is not in specified range.                           |                                      |
|         |   | C)                      | ECM detect the throttle valve is stuck open.  |                                      |
| P2119   | Electric throttle control actuator (bank 1) | A)                      | Electric throttle control actuator does not function properly due to the return spring malfunction. |                                      |
|         |   | B)                      | Throttle valve opening angle in fail-safe mode is not in specified range.                           |                                      |
|         |   | C)                      | ECM detect the throttle valve is stuck open.  |                                      |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION A AND B

1. Turn ignition switch ON and wait at least 1 second.
2. Shift selector lever to D position and wait at least 3 seconds.
3. Shift selector lever to P position.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Turn ignition switch ON and wait at least 1 second.
6. Shift selector lever to D position and wait at least 3 seconds.
7. Shift selector lever to P position.
8. Turn ignition switch OFF, wait at least 10 seconds, and then turn ON.
9. Check DTC.

Is DTC detected?

YES >> Go to [EC-427, "Diagnosis Procedure"](#).

NO >> GO TO 3.

#### 3. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION C

1. Turn ignition switch ON and wait at least 1 second.
2. Shift selector lever to D position and wait at least 3 seconds.
3. Shift selector lever to P position.
4. Start engine and let it idle for 3 seconds.
5. Check DTC.

Is DTC detected?

YES >> Go to [EC-427, "Diagnosis Procedure"](#).

NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883076

#### 1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Turn ignition switch OFF.

# P1238, P2119 ELECTRIC THROTTLE CONTROL ACTUATOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

2. Remove the intake air duct.
3. Check if foreign matter is caught between the throttle valve (1) and the housing.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Remove the foreign matter and clean the electric throttle control actuator inside, and then perform throttle valve closed position leaning. Refer to [EC-148, "Work Procedure"](#).

## 2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.
2. Go to [EC-428, "Special Repair Requirement"](#).

## P1239, P2135 TP SENSOR

### DTC Logic

INFOID:000000006883078

#### DTC DETECTION LOGIC

##### NOTE:

If DTC P1239 or P2135 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to [EC-388, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name                                      | DTC detecting condition   | Possible cause   |
|---------|---|---|--|
| P1239   | Throttle position sensor (bank 2) circuit range/performance | Rationally incorrect voltage is sent to ECM compared with the signals from TP sensor 1 and TP sensor 2. | <ul style="list-style-type: none"> <li>Harness or connector (TP sensor 1 or 2 circuit is open or shorted.)</li> <li>Electric throttle control actuator (TP sensor 1 or 2)</li> </ul> |
| P2135   | Throttle position sensor (bank 1) circuit range/performance |   |  |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

- Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON.
- Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

- Start engine and let it idle for 1 second.
- Check DTC.

Is DTC detected?

- YES >> Go to [EC-429, "Diagnosis Procedure"](#).  
 NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006883079

##### 1. CHECK GROUND CONNECTION

- Turn ignition switch OFF.
- Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
 NO >> Repair or replace ground connection.

##### 2. CHECK THROTTLE POSITION SENSOR POWER SUPPLY CIRCUIT-I

- Disconnect electric throttle control actuator harness connector.
- Turn ignition switch ON.
- Check the voltage between electric throttle control actuator harness connector and ground.

| DTC   | Electric throttle control actuator |           |          | Ground | Voltage (V) |
|-------|------------------------------------|-----------|----------|--------|-------------|
|       | Bank                               | Connector | Terminal |        |             |
| P1239 | 2                                  | F27       | 1        | Ground | Approx. 5   |
| P2135 | 1                                  | F67       | 6        |        |             |

Is the inspection result normal?

- YES >> GO TO 3.  
 NO >> Repair open circuit, short to ground or short to power in harness or connectors.

# P1239, P2135 TP SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## 3. CHECK THROTTLE POSITION SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between electric throttle control actuator harness connector and ECM harness connector.

| DTC   | Electric throttle control actuator |           |          | ECM       |          | Continuity |
|-------|------------------------------------|-----------|----------|-----------|----------|------------|
|       | Bank                               | Connector | Terminal | Connector | Terminal |            |
| P1239 | 2                                  | F27       | 4        | F101      | 48       | Existed    |
| P2135 | 1                                  | F67       | 3        |           | 40       |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 4. CHECK THROTTLE POSITION SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between electric throttle control actuator harness connector and ECM harness connector.

| DTC   | Electric throttle control actuator |           |          | ECM       |          | Continuity |
|-------|------------------------------------|-----------|----------|-----------|----------|------------|
|       | Bank                               | Connector | Terminal | Connector | Terminal |            |
| P1239 | 2                                  | F27       | 2        | F101      | 31       | Existed    |
|       |                                    |           | 3        |           | 35       |            |
| P2135 | 1                                  | F67       | 4        |           | 30       |            |
|       |                                    |           | 5        |           | 34       |            |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 5. CHECK THROTTLE POSITION SENSOR

Refer to [EC-430, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

## 6. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.
2. [EC-431, "Special Repair Requirement"](#).

>> INSPECTION END

## 7. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006883080

## 1. CHECK THROTTLE POSITION SENSOR

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Perform [EC-148, "Work Procedure"](#).

# P1239, P2135 TP SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

4. Turn ignition switch ON.
5. Set selector lever to D position.
6. Check the voltage between ECM harness connector terminals as per the following.

| ECM       |                           |          | Condition       | Voltage (V)    |
|-----------|---------------------------|----------|-----------------|----------------|
| Connector | +                         | -        |                 |                |
|           | Terminal                  | Terminal |                 |                |
| F101      | 30 [TP sensor 1 (bank 1)] | 40       | Fully released  | More than 0.36 |
|           |                           |          | Fully depressed | Less than 4.75 |
|           | 31 [TP sensor 1 (bank 2)] | 48       | Fully released  | More than 0.36 |
|           |                           |          | Fully depressed | Less than 4.75 |
|           | 34 [TP sensor 2 (bank 1)] | 40       | Fully released  | Less than 4.75 |
|           |                           |          | Fully depressed | More than 0.36 |
|           | 35 [TP sensor 2 (bank 2)] | 48       | Fully released  | Less than 4.75 |
|           |                           |          | Fully depressed | More than 0.36 |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

## 2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.
2. Go to [EC-431. "Special Repair Requirement"](#).

>> INSPECTION END

## Special Repair Requirement

INFOID:000000006883081

## 1. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Refer to [EC-148. "Work Procedure"](#)

>> GO TO 2.

## 2. PERFORM IDLE AIR VOLUME LEARNING

Refer to [EC-149. "Work Procedure"](#)

>> END

# P1290, P2100, P2103 THROTTLE CONTROL MOTOR RELAY

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1290, P2100, P2103 THROTTLE CONTROL MOTOR RELAY

### DTC Logic

INFOID:000000006883082

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                             | DTC detecting condition  | Possible cause   |
|---------|--|--|--|
| P1290   | Throttle control motor relay circuit open (bank 2) | ECM detects a voltage of power source for throttle control motor is excessively low. | <ul style="list-style-type: none"><li>• Harness or connectors (Throttle control motor relay circuit is open)</li><li>• Throttle control motor relay</li></ul>    |
| P2100   | Throttle control motor relay circuit open (bank 1) |  |  |
| P2103   | Throttle control motor relay circuit short         | ECM detect the throttle control motor relay is stuck ON.                             | <ul style="list-style-type: none"><li>• Harness or connectors (Throttle control motor relay circuit is shorted)</li><li>• Throttle control motor relay</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

**Before performing the following procedure, confirm that battery voltage is more than 8 V.**

Which DTC is detected?

P1290, P2100 >> GO TO 2.

P2103 >> GO TO 3.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE FOR DTC P1290 AND P2100

1. Turn ignition switch ON and wait at least 2 seconds.
2. Start engine and let it idle for 5 seconds.
3. Check DTC.

Is DTC detected?

YES >> Go to [EC-432, "Diagnosis Procedure"](#).

NO >> INSPECTION END

#### 3. PERFORM DTC CONFIRMATION PROCEDURE FOR DTC P2103

1. Turn ignition switch ON and wait at least 1 second.
2. Check DTC.

Is DTC detected?

YES >> Go to [EC-432, "Diagnosis Procedure"](#).

NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883083

#### 1. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Disconnect IPDM E/R harness connector E7.
4. Check the continuity between IPDM E/R harness connector and ECM harness connector.

| IPDM E/R  |          | ECM       |          | Continuity |
|-----------|----------|-----------|----------|------------|
| Connector | Terminal | Connector | Terminal |            |
| E7        | 71       | F101      | 25       | Existed    |

5. Also check harness for short to ground and short to power.

# P1290, P2100, P2103 THROTTLE CONTROL MOTOR RELAY

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

Is the inspection result normal?

YES >> GO TO 3.

NO >> GO TO 2.

## 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 3. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT

1. Check the continuity between IPDM E/R sensor harness connector and ECM harness connector.

| DTC   | IPDM E/R  |          | ECM       |          | Continuity |
|-------|-----------|----------|-----------|----------|------------|
|       | Connector | Terminal | Connector | Terminal |            |
| P1290 | E5        | 7        | F102      | 52       | Existed    |
| P2100 |           |          | F101      | 3        |            |
| P2103 |           |          | F101      | 3        |            |
|       |           |          | F102      | 52       |            |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 5. CHECK FUSE

1. Disconnect 15 A fuse (No. 50) from IPDM E/R.
2. Check 15 A fuse for blown.

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace 15A fuse.

## 6. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> Replace IPDM E/R. Refer to [PCS-33, "Exploded View"](#).

NO >> Repair or replace harness or connectors.

# P1550 BATTERY CURRENT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1550 BATTERY CURRENT SENSOR

### DTC Logic

INFOID:000000006883087

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                           | DTC detecting condition  | Possible cause   |
|---------|--|--|--|
| P1550   | Battery current sensor circuit range/performance | The output voltage of the battery current sensor remains within the specified range while engine is running. | <ul style="list-style-type: none"><li>• Harness or connectors<br/>(Battery current sensor circuit is open or shorted.)<br/>[CKP sensor (POS) circuit is open or shorted.]<br/>[CMP sensor (PHASE) (bank 2) circuit is open or shorted.]<br/>(APP sensor 2 circuit is shorted.)<br/>(EVAP control system pressure sensor circuit is shorted.)<br/>(Refrigerant pressure sensor circuit is shorted.)</li><li>• Battery current sensor</li><li>• Crankshaft position sensor (POS)</li><li>• Camshaft position sensor (PHASE) (bank 2)</li><li>• Accelerator pedal position sensor</li><li>• EVAP control system pressure sensor</li><li>• Refrigerant pressure sensor</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 8 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and wait at least 10 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-434, "Diagnosis Procedure"](#).

NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883088

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace ground connection.

#### 2. CHECK BATTERY CURRENT SENSOR POWER SUPPLY CIRCUIT-I

1. Disconnect battery current sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between battery current sensor harness connector and ground.

| Battery current sensor |          | Ground | Voltage (V) |
|------------------------|----------|--------|-------------|
| Connector              | Terminal |        |             |
| E21                    | 1        | Ground | Approx. 5   |

# P1550 BATTERY CURRENT SENSOR

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

Is the inspection result normal?

YES >> GO TO 9.

NO >> GO TO 3.

### 3.CHECK BATTERY CURRENT SENSOR POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between battery current sensor harness connector and ECM harness connector.

| Battery current sensor |          | ECM       |          | Continuity |
|------------------------|----------|-----------|----------|------------|
| Connector              | Terminal | Connector | Terminal |            |
| E21                    | 1        | F102      | 64       | Existed    |

Is the inspection result normal?

YES >> GO TO 5.

NO >> GO TO 4.

### 4.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F40, E20
- Harness for open between battery current sensor and ECM

>> Repair open circuit.

### 5.CHECK SENSOR POWER SUPPLY CIRCUIT

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                              |  |                                    |
|-----------|----------|-------------------------------------|--|------------------------------------|
| Connector | Terminal | Name                                | Connector                              | Terminal                           |
| F101      | 46       | CKP sensor (POS)                    | F2                                     | 1                                  |
| F102      | 64       | CMP sensor (PHASE) (bank 2)         | F18                                    | 1                                  |
|           |          | Battery current sensor              | E21                                    |                                    |
| M107      | 103      | APP sensor                          | M153 <sup>*1</sup><br>M9 <sup>*2</sup> | 3 <sup>*1</sup><br>6 <sup>*2</sup> |
|           | 107      | EVAP control system pressure sensor | B73                                    | 3                                  |
|           |          | Refrigerant pressure sensor         | E77                                    | 3                                  |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair short to ground or short to power in harness or connectors.

### 6.CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to [EC-314, "Component Inspection"](#).)
- Camshaft position sensor (PHASE) (bank 2) (Refer to [EC-319, "Component Inspection"](#).)
- EVAP control system pressure sensor (Refer to [EC-349, "Component Inspection"](#).)
- Refrigerant pressure sensor (Refer to [EC-530, "Diagnosis Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 7.

NO >> Replace malfunctioning component.

### 7.CHECK APP SENSOR

Refer to [EC-437, "Component Inspection"](#).

Is the inspection result normal?

# P1550 BATTERY CURRENT SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

- YES >> GO TO 14.  
NO >> GO TO 8.

## 8. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Go to [EC-487. "Special Repair Requirement"](#).

>> INSPECTION END

## 9. CHECK BATTERY CURRENT SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between battery current sensor harness connector and ECM harness connector.

| Battery current sensor |          | ECM       |          | Continuity |
|------------------------|----------|-----------|----------|------------|
| Connector              | Terminal | Connector | Terminal |            |
| E21                    | 3        | F102      | 95       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 11.  
NO >> GO TO 10.

## 10. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between battery current sensor and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 11. CHECK BATTERY CURRENT SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between battery current sensor harness connector and ECM harness connector.

| Battery current sensor |          | ECM       |          | Continuity |
|------------------------|----------|-----------|----------|------------|
| Connector              | Terminal | Connector | Terminal |            |
| E21                    | 4        | F102      | 91       | Existed    |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 13.  
NO >> GO TO 12.

## 12. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between battery current sensor and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 13. CHECK BATTERY CURRENT SENSOR

Refer to [EC-437. "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 14.  
NO >> Replace battery negative cable assembly.

## 14. CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

# P1550 BATTERY CURRENT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

>> INSPECTION END

## Component Inspection

INFOID:000000006883089

### 1. CHECK BATTERY CURRENT SENSOR

1. Turn ignition switch OFF.
2. Reconnect harness connectors disconnected.
3. Disconnect battery negative cable (1).

←: To body ground

4. Install jumper cable (A) between battery negative terminal and body ground.
5. Turn ignition switch ON.
6. Check the voltage between ECM harness connector terminals as per the following.

| ECM       |                                       |          | Voltage (V) |
|-----------|---------------------------------------|----------|-------------|
| Connector | +                                     | -        |             |
|           | Terminal                              | Terminal |             |
| F102      | 91<br>(Battery current sensor signal) | 95       | Approx. 2.5 |

Before measuring the terminal voltage, confirm that the battery is fully charged. Refer to [PG-135, "How to Handle Battery"](#).

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> Replace battery negative cable assembly.

# P1551, P1552 BATTERY CURRENT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1551, P1552 BATTERY CURRENT SENSOR

### DTC Logic

INFOID:000000006883090

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                    | DTC detecting condition                                     | Possible cause   |
|---------|---|---|--|
| P1551   | Battery current sensor circuit low input  | An excessively low voltage from the sensor is sent to ECM.  | <ul style="list-style-type: none"><li>• Harness or connectors (Battery current sensor circuit is open or shorted.) [CKP sensor (POS) circuit is open or shorted.] [CMP sensor (PHASE) (bank 2) circuit is open or shorted.] [APP sensor 2 circuit is shorted.] (EVAP control system pressure sensor circuit is shorted.) (Refrigerant pressure sensor circuit is shorted.)</li><li>• Battery current sensor</li><li>• Crankshaft position sensor (POS)</li><li>• Camshaft position sensor (PHASE) (bank 2)</li><li>• Accelerator pedal position sensor</li><li>• EVAP control system pressure sensor</li><li>• Refrigerant pressure sensor</li></ul> |
| P1552   | Battery current sensor circuit high input | An excessively high voltage from the sensor is sent to ECM. |  |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

**Before performing the following procedure, confirm that battery voltage is more than 8 V with ignition switch ON**

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON and wait at least 10 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-438, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883091

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK BATTERY CURRENT SENSOR POWER SUPPLY CIRCUIT-I

1. Disconnect battery current sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between battery current sensor harness connector and ground.

# P1551, P1552 BATTERY CURRENT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| Battery current sensor |          | Ground | Voltage (V) |
|------------------------|----------|--------|-------------|
| Connector              | Terminal |        |             |
| E21                    | 1        | Ground | Approx. 5   |

Is the inspection result normal?

YES >> GO TO 9.

NO >> GO TO 3.

## 3. CHECK BATTERY CURRENT SENSOR POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between battery current sensor harness connector and ECM harness connector.

| Battery current sensor |          | ECM       |          | Continuity |
|------------------------|----------|-----------|----------|------------|
| Connector              | Terminal | Connector | Terminal |            |
| E21                    | 1        | F102      | 64       | Existed    |

Is the inspection result normal?

YES >> GO TO 5.

NO >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F40, E20
- Harness for open between battery current sensor and ECM

>> Repair open circuit.

## 5. CHECK SENSOR POWER SUPPLY CIRCUIT

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                              |  |                                    |
|-----------|----------|-------------------------------------|--|------------------------------------|
| Connector | Terminal | Name                                | Connector                              | Terminal                           |
| F101      | 46       | CKP sensor (POS)                    | F2                                     | 1                                  |
| F102      | 64       | CMP sensor (PHASE) (bank 2)         | F18                                    | 1                                  |
|           |          | Battery current sensor              | E21                                    |                                    |
| M107      | 103      | APP sensor                          | M153 <sup>*1</sup><br>M9 <sup>*2</sup> | 3 <sup>*1</sup><br>6 <sup>*2</sup> |
|           |          | EVAP control system pressure sensor | B73                                    | 3                                  |
|           | 107      | Refrigerant pressure sensor         | E77                                    | 3                                  |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair short to ground or short to power in harness or connectors.

## 6. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to [EC-314, "Component Inspection"](#).)
- Camshaft position sensor (PHASE) (bank 2) (Refer to [EC-319, "Component Inspection"](#).)
- EVAP control system pressure sensor (Refer to [EC-349, "Component Inspection"](#).)
- Refrigerant pressure sensor (Refer to [EC-530, "Diagnosis Procedure"](#).)

Is the inspection result normal?

# P1551, P1552 BATTERY CURRENT SENSOR

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

- YES >> GO TO 7.  
NO >> Replace malfunctioning component.

### 7. CHECK APP SENSOR

Refer to [EC-449, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 14.  
NO >> GO TO 8.

### 8. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Go to [EC-487, "Special Repair Requirement"](#).

>> INSPECTION END

### 9. CHECK BATTERY CURRENT SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between battery current sensor harness connector and ECM harness connector.

| Battery current sensor |          | ECM       |          | Continuity |
|------------------------|----------|-----------|----------|------------|
| Connector              | Terminal | Connector | Terminal |            |
| E21                    | 3        | F102      | 95       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 11.  
NO >> GO TO 10.

### 10. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between battery current sensor and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

### 11. CHECK BATTERY CURRENT SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between battery current sensor harness connector and ECM harness connector.

| Battery current sensor |          | ECM       |          | Continuity |
|------------------------|----------|-----------|----------|------------|
| Connector              | Terminal | Connector | Terminal |            |
| E21                    | 4        | F102      | 91       | Existed    |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 13.  
NO >> GO TO 12.

### 12. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between battery current sensor and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

### 13. CHECK BATTERY CURRENT SENSOR

Refer to [EC-449, "Component Inspection"](#).

# P1551, P1552 BATTERY CURRENT SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

Is the inspection result normal?

- YES >> GO TO 14.
- NO >> Replace battery negative cable assembly.

## 14. CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006883092

### 1. CHECK BATTERY CURRENT SENSOR

1. Turn ignition switch OFF.
2. Reconnect harness connectors disconnected.
3. Disconnect battery negative cable (1).

←: To body ground

4. Install jumper cable (A) between battery negative terminal and body ground.
5. Turn ignition switch ON.
6. Check the voltage between ECM harness connector terminals as per the following.

| ECM       |                                       |          | Voltage (V) |
|-----------|---------------------------------------|----------|-------------|
| Connector | +                                     | -        |             |
|           | Terminal                              | Terminal |             |
| F102      | 91<br>(Battery current sensor signal) | 95       | Approx. 2.5 |

Before measuring the terminal voltage, confirm that the battery is fully charged. Refer to [PG-135. "How to Handle Battery"](#).

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Replace battery negative cable assembly.

# P1553 BATTERY CURRENT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1553 BATTERY CURRENT SENSOR

### DTC Logic

INFOID:000000006883093

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name             | DTC detecting condition  | Possible cause   |
|---------|------------------------------------|--|--|
| P1553   | Battery current sensor performance | The signal voltage transmitted from the sensor to ECM is higher than the amount of the maximum power generation. | <ul style="list-style-type: none"> <li>• Harness or connectors<br/>(Battery current sensor circuit is open or shorted.)<br/>[CKP sensor (POS) circuit is open or shorted.]<br/>[CMP sensor (PHASE) (bank 2) circuit is open or shorted.]<br/>(APP sensor 2 circuit is shorted.)<br/>(EVAP control system pressure sensor circuit is shorted.)<br/>(Refrigerant pressure sensor circuit is shorted.)</li> <li>• Battery current sensor</li> <li>• Crankshaft position sensor (POS)</li> <li>• Camshaft position sensor (PHASE) (bank 2)</li> <li>• Accelerator pedal position sensor</li> <li>• EVAP control system pressure sensor</li> <li>• Refrigerant pressure sensor</li> </ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 8 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and wait at least 10 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-442, "Diagnosis Procedure"](#).

NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883094

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace ground connection.

#### 2. CHECK BATTERY CURRENT SENSOR POWER SUPPLY CIRCUIT-I

1. Disconnect battery current sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between battery current sensor harness connector and ground.

| Battery current sensor |          | Ground | Voltage (V) |
|------------------------|----------|--------|-------------|
| Connector              | Terminal |        |             |
| E21                    | 1        | Ground | Approx. 5   |

# P1553 BATTERY CURRENT SENSOR

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

Is the inspection result normal?

YES >> GO TO 9.

NO >> GO TO 3.

### 3.CHECK BATTERY CURRENT SENSOR POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between battery current sensor harness connector and ECM harness connector.

| Battery current sensor |          | ECM       |          | Continuity |
|------------------------|----------|-----------|----------|------------|
| Connector              | Terminal | Connector | Terminal |            |
| E21                    | 1        | F102      | 64       | Existed    |

Is the inspection result normal?

YES >> GO TO 5.

NO >> GO TO 4.

### 4.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F40, E20
- Harness for open between battery current sensor and ECM

>> Repair open circuit.

### 5.CHECK SENSOR POWER SUPPLY CIRCUIT

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                              |  |                                    |
|-----------|----------|-------------------------------------|--|------------------------------------|
| Connector | Terminal | Name                                | Connector                              | Terminal                           |
| F101      | 46       | CKP sensor (POS)                    | F2                                     | 1                                  |
| F102      | 64       | CMP sensor (PHASE) (bank 2)         | F18                                    | 1                                  |
|           |          | Battery current sensor              | E21                                    |                                    |
| M107      | 103      | APP sensor                          | M153 <sup>*1</sup><br>M9 <sup>*2</sup> | 3 <sup>*1</sup><br>6 <sup>*2</sup> |
|           | 107      | EVAP control system pressure sensor | B73                                    | 3                                  |
|           |          | Refrigerant pressure sensor         | E77                                    | 3                                  |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair short to ground or short to power in harness or connectors.

### 6.CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to [EC-314, "Component Inspection"](#).)
- Camshaft position sensor (PHASE) (bank 2) (Refer to [EC-319, "Component Inspection"](#).)
- EVAP control system pressure sensor (Refer to [EC-349, "Component Inspection"](#).)
- Refrigerant pressure sensor (Refer to [EC-530, "Diagnosis Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 7.

NO >> Replace malfunctioning component.

### 7.CHECK APP SENSOR

Refer to [EC-449, "Component Inspection"](#).

Is the inspection result normal?

# P1553 BATTERY CURRENT SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

- YES >> GO TO 14.  
NO >> GO TO 8.

## 8. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Go to [EC-487. "Special Repair Requirement"](#).

>> INSPECTION END

## 9. CHECK BATTERY CURRENT SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between battery current sensor harness connector and ECM harness connector.

| Battery current sensor |          | ECM       |          | Continuity |
|------------------------|----------|-----------|----------|------------|
| Connector              | Terminal | Connector | Terminal |            |
| E21                    | 3        | F102      | 95       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 11.  
NO >> GO TO 10.

## 10. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between battery current sensor and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 11. CHECK BATTERY CURRENT SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between battery current sensor harness connector and ECM harness connector.

| Battery current sensor |          | ECM       |          | Continuity |
|------------------------|----------|-----------|----------|------------|
| Connector              | Terminal | Connector | Terminal |            |
| E21                    | 4        | F102      | 91       | Existed    |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 13.  
NO >> GO TO 12.

## 12. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between battery current sensor and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 13. CHECK BATTERY CURRENT SENSOR

Refer to [EC-449. "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 14.  
NO >> Replace battery negative cable assembly.

## 14. CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

# P1554 BATTERY CURRENT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1554 BATTERY CURRENT SENSOR

### DTC Logic

INFOID:000000006883096

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name             | DTC detecting condition  | Possible cause   |
|---------|------------------------------------|--|--|
| P1554   | Battery current sensor performance | The output voltage of the battery current sensor is lower than the specified value while the battery voltage is high enough. | <ul style="list-style-type: none"> <li>• Harness or connectors<br/>(Battery current sensor circuit is open or shorted.)<br/>[CKP sensor (POS) circuit is open or shorted.]<br/>[CMP sensor (PHASE) (bank 2) circuit is open or shorted.]<br/>(APP sensor 2 circuit is shorted.)<br/>(EVAP control system pressure sensor circuit is shorted.)<br/>(Refrigerant pressure sensor circuit is shorted.)</li> <li>• Battery current sensor</li> <li>• Crankshaft position sensor (POS)</li> <li>• Camshaft position sensor (PHASE) (bank 2)</li> <li>• Accelerator pedal position sensor</li> <li>• EVAP control system pressure sensor</li> <li>• Refrigerant pressure sensor</li> </ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PERFORM COMPONENT FUNCTION CHECK

Perform component function check. Refer to [EC-446, "Component Function Check"](#).

#### NOTE:

Use component function check to check the overall function of the battery current sensor circuit. During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-447, "Diagnosis Procedure"](#).

### Component Function Check

INFOID:000000006883097

#### 1. PRECONDITIONING

#### TESTING CONDITION:

- Before performing the following procedure, confirm that battery voltage is more than 12.8 V at idle.
- Before performing the following procedure, confirm that all load switches and A/C switch are turned OFF.

>> GO TO 2.

#### 2. PERFORM COMPONENT FUNCTION CHECK

##### With CONSULT

1. Start engine and let it idle.
2. Select "BAT CUR SEN" in "DATA MONITOR" mode with CONSULT.
3. Check "BAT CUR SEN" indication for 10 seconds.  
"BAT CUR SEN" should be above 2,300 mV at least once.

##### Without CONSULT

1. Start engine and let it idle.
2. Check the voltage between ECM harness connector terminals as per the following.

| ECM       |                                       |          | Voltage (V)             |
|-----------|---------------------------------------|----------|-------------------------|
| Connector | +                                     | -        |                         |
|           | Terminal                              | Terminal |                         |
| F102      | 91<br>(Battery current sensor signal) | 95       | Above 2.3 at least once |

Is the inspection result normal?

# P1554 BATTERY CURRENT SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

- YES >> INSPECTION END  
NO >> Go to [EC-447, "Diagnosis Procedure"](#)

## Diagnosis Procedure

INFOID:000000006883098

### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

### 2. CHECK BATTERY CURRENT SENSOR POWER SUPPLY CIRCUIT-I

1. Disconnect battery current sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between battery current sensor harness connector and ground.

| Battery current sensor |          | Ground | Voltage (V) |
|------------------------|----------|--------|-------------|
| Connector              | Terminal |        |             |
| E21                    | 1        | Ground | Approx. 5   |

Is the inspection result normal?

- YES >> GO TO 9.  
NO >> GO TO 3.

### 3. CHECK BATTERY CURRENT SENSOR POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between battery current sensor harness connector and ECM harness connector.

| Battery current sensor |          | ECM       |          | Continuity |
|------------------------|----------|-----------|----------|------------|
| Connector              | Terminal | Connector | Terminal |            |
| E21                    | 1        | F102      | 64       | Existed    |

Is the inspection result normal?

- YES >> GO TO 5.  
NO >> GO TO 4.

### 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F40, E20
- Harness for open between battery current sensor and ECM

>> Repair open circuit.

### 5. CHECK SENSOR POWER SUPPLY CIRCUIT

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                      |           |          |
|-----------|----------|-----------------------------|-----------|----------|
| Connector | Terminal | Name                        | Connector | Terminal |
| F101      | 46       | CKP sensor (POS)            | F2        | 1        |
| F102      | 64       | CMP sensor (PHASE) (bank 2) | F18       | 1        |
|           |          | Battery current sensor      | E21       |          |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair short to ground or short to power in harness or connectors.

## 6. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to [EC-314, "Component Inspection"](#).)
- Camshaft position sensor (PHASE) (bank 2) (Refer to [EC-319, "Component Inspection"](#).)
- EVAP control system pressure sensor (Refer to [EC-349, "Component Inspection"](#).)
- Refrigerant pressure sensor (Refer to [EC-530, "Diagnosis Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 7.

NO >> Replace malfunctioning component.

## 7. CHECK APP SENSOR

Refer to [EC-449, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 14.

NO >> GO TO 8.

## 8. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Go to [EC-487, "Special Repair Requirement"](#).

>> INSPECTION END

## 9. CHECK BATTERY CURRENT SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between battery current sensor harness connector and ECM harness connector.

| Battery current sensor |          | ECM       |          | Continuity |
|------------------------|----------|-----------|----------|------------|
| Connector              | Terminal | Connector | Terminal |            |
| E21                    | 3        | F102      | 95       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 11.

NO >> GO TO 10.

## 10. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between battery current sensor and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

# P1554 BATTERY CURRENT SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

## 11. CHECK BATTERY CURRENT SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between battery current sensor harness connector and ECM harness connector.

| Battery current sensor |          | ECM       |          | Continuity |
|------------------------|----------|-----------|----------|------------|
| Connector              | Terminal | Connector | Terminal |            |
| E21                    | 4        | F102      | 91       | Existed    |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 13.

NO >> GO TO 12.

## 12. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between battery current sensor and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 13. CHECK BATTERY CURRENT SENSOR

Refer to [EC-449, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 14.

NO >> Replace battery negative cable assembly.

## 14. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006883099

### 1. CHECK BATTERY CURRENT SENSOR

1. Turn ignition switch OFF.
2. Reconnect harness connectors disconnected.
3. Disconnect battery negative cable (1).

←: To body ground

4. Install jumper cable (A) between battery negative terminal and body ground.
5. Turn ignition switch ON.
6. Check the voltage between ECM harness connector terminals as per the following.

| Connector | ECM                                   |          | Voltage (V) |
|-----------|---------------------------------------|----------|-------------|
|           | +                                     | -        |             |
|           | Terminal                              | Terminal |             |
| F102      | 91<br>(Battery current sensor signal) | 95       | Approx. 2.5 |

Before measuring the terminal voltage, confirm that the battery is fully charged. Refer to [PG-135, "How to Handle Battery"](#).

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace battery negative cable assembly.

# P1556, P1557 BATTERY TEMPERATURE SENSOR

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start the engine and let it idle at least 10 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Proceed to [EC-450. "Diagnosis Procedure"](#).

NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006883101

##### 1. CHECK BATTERY TEMPERATURE SENSOR INPUT SIGNAL CIRCUIT-I

1. Disconnect battery current sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between battery current sensor harness connector and ground.

| Battery current sensor |          | Ground | Voltage (V) |
|------------------------|----------|--------|-------------|
| Connector              | Terminal |        |             |
| E21                    | 2        | Ground | Approx. 5 V |

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 2.

##### 2. CHECK BATTERY TEMPERATURE SENSOR INPUT SIGNAL CIRCUIT-II

1. Turn ignition switch ON.
2. Disconnect ECM harness connector.
3. Check the continuity between battery current sensor harness connector and ECM harness connector.

# P1556, P1557 BATTERY TEMPERATURE SENSOR

|           |          | EVAP control system pressure sensor | B73                                    | 3                                  |
|           | 107      | Refrigerant pressure sensor         | E77                                    | 3                                  |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair short to ground or short to power in harness or connectors.

## 4. CHECK COMPONENTS

Check the following.

- Camshaft position sensor (bank 2) (Refer to [EC-319, "Component Inspection"](#).)
- CKP sensor (Refer to [EC-314, "Component Inspection"](#).)
- Battery current sensor (Refer to [EC-437, "Component Inspection"](#).)
- EVAP control system pressure sensor (Refer to [EC-349, "Component Inspection"](#).)
- Refrigerant pressure sensor (Refer to [EC-530, "Diagnosis Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 5.

NO >> Replace malfunctioning component.

## 5. CHECK APP SENSOR

Refer to [EC-487, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 9.

NO >> GO TO 6.

## 6. REPLACE ACCELERATOR PEDAL ASSEMBLY

Replace accelerator pedal assembly.

>> INSPECTION END

## 7. CHECK BATTERY TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between battery current sensor harness connector and ECM harness connector.

# P1556, P1557 BATTERY TEMPERATURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| Battery current sensor |          | ECM       |          | Continuity |
|------------------------|----------|-----------|----------|------------|
| Connector              | Terminal | Connector | Terminal |            |
| E21                    | 3        | M160      | 150      | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 8.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 8.CHECK BATTERY TEMPERATURE SENSOR

Refer to [EC-452, "Component Inspection \(Battery Temperature Sensor\)"](#).

Is the inspection result normal?

YES >> GO TO 9.

NO >> Replace battery negative cable assembly.

## 9.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection (Battery Temperature Sensor)

INFOID:000000006883102

## 1.CHECK BATTERY TEMPERATURE SENSOR

1. Turn ignition switch OFF.
2. Disconnect battery current sensor.
3. Check the resistance between battery current sensor connector terminals.

| Battery current sensor |   | Resistance   |
|------------------------|---|--|
| +                      | - |  |
| Terminal               |   |  |
| 2                      | 3 | continuity with the resistance value 100 Ω or more |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace battery negative cable assembly.

# P1564 ASCD STEERING SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1564 ASCD STEERING SWITCH

### DTC Logic

INFOID:000000006883103

### DTC DETECTION LOGIC

#### NOTE:

If DTC P1564 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to [EC-385, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name | DTC detecting condition  | Possible cause  |
|---------|------------------------|--|---|
| P1564   | ASCD steering switch   | <ul style="list-style-type: none"><li>An excessively high voltage signal from the ASCD steering switch is sent to ECM.</li><li>ECM detects that input signal from the ASCD steering switch is out of the specified range.</li><li>ECM detects that the ASCD steering switch is stuck ON.</li></ul> | <ul style="list-style-type: none"><li>Harness or connectors (The switch circuit is open or shorted.)</li><li>ASCD steering switch</li><li>ECM</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

- Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON.
- Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

- Turn ignition switch ON and wait at least 10 seconds.
- Press MAIN switch for at least 10 seconds, then release it and wait at least 10 seconds.
- Press CANCEL switch for at least 10 seconds, then release it and wait at least 10 seconds.
- Press RESUME/ACCELERATE switch for at least 10 seconds, then release it and wait at least 10 seconds.
- Press SET/COAST switch for at least 10 seconds, then release it and wait at least 10 seconds.
- Check DTC.

Is DTC detected?

- YES >> Go to [EC-453, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883104

#### 1. CHECK GROUND CONNECTION

- Turn ignition switch OFF.
- Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK ASCD STEERING SWITCH CIRCUIT

##### With CONSULT

- Turn ignition switch ON.
- Select "MAIN SW", "CANCEL SW", "RESUME/ACC SW" and "SET SW" in "DATA MONITOR" mode with CONSULT.
- Check each item indication under the following conditions.

# P1564 ASCD STEERING SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| Monitor item  | Condition                |          | Indication |
|---------------|--------------------------|----------|------------|
| MAIN SW       | MAIN switch              | Pressed  | ON         |
|               |                          | Released | OFF        |
| CANCEL SW     | CANCEL switch            | Pressed  | ON         |
|               |                          | Released | OFF        |
| RESUME/ACC SW | RESUME/ACCELERATE switch | Pressed  | ON         |
|               |                          | Released | OFF        |
| SET SW        | SET/COAST switch         | Pressed  | ON         |
|               |                          | Released | OFF        |

**⊗ Without CONSULT**

1. Turn ignition switch ON.
2. Check the voltage between ECM harness connector terminals as per the following.

| ECM       |                                      |          | Condition                            | Voltage (V) |
|-----------|--------------------------------------|----------|--------------------------------------|-------------|
| Connector | +                                    | -        |                                      |             |
|           | Terminal                             | Terminal |                                      |             |
| M107      | 101<br>(ASCD steering switch signal) | 108      | MAIN switch: Pressed                 | Approx. 0   |
|           |                                      |          | CANCEL switch: Pressed               | Approx. 1   |
|           |                                      |          | SET/COAST switch: Pressed            | Approx. 2   |
|           |                                      |          | RESUME/ACCELERATE switch: Pressed    | Approx. 3   |
|           |                                      |          | All ASCD steering switches: Released | Approx. 4   |

Is the inspection result normal?

- YES >> GO TO 8.  
NO >> GO TO 3.

### 3. CHECK ASCD STEERING SWITCH GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Disconnect combination switch harness connector.
4. Check the continuity between combination switch and ECM harness connector.

| Combination switch | ECM      |           | Continuity |
|--------------------|----------|-----------|------------|
|                    | Terminal | Connector |            |
| 16                 | M107     | 108       | Existed    |

5. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 5.  
NO >> GO TO 4.

### 4. DETECT MALFUNCTIONING PART

Check the following.

- Combination switch (spiral cable)
- Harness for open and short between ECM and combination switch

>> Repair open circuit, short to ground or short to power in harness or connectors.

### 5. CHECK ASCD STEERING SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between combination switch and ECM harness connector.

# P1564 ASCD STEERING SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| Combination switch |           | ECM      |  | Continuity |
|--------------------|-----------|----------|--|------------|
| Terminal           | Connector | Terminal |  |            |
| 13                 | M107      | 101      |  | Existed    |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 7.
- NO >> GO TO 6.

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Combination switch (spiral cable)
- Harness for open and short between ECM and combination switch

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 7. CHECK ASCD STEERING SWITCH

Refer to [EC-455, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 8.
- NO >> Replace ASCD steering switch. Refer to [ST-31, "Exploded View"](#).

## 8. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006883105

## 1. CHECK ASCD STEERING SWITCH

1. Turn ignition switch OFF.
2. Disconnect combination switch (spiral cable) harness connector M303.
3. Check resistance between combination switch harness connector terminals under the following conditions.

| Combination switch |           | Condition                            | Resistance (Ω) |
|--------------------|-----------|--------------------------------------|----------------|
| Connector          | Terminals |                                      |                |
| M303               | 13 and 16 | MAIN switch: Pressed                 | Approx. 0      |
|                    |           | CANCEL switch: Pressed               | Approx. 250    |
|                    |           | SET/COAST switch: Pressed            | Approx. 660    |
|                    |           | RESUME/ACCELERATE switch: Pressed    | Approx. 1,480  |
|                    |           | All ASCD steering switches: Released | Approx. 4,000  |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Replace ASCD steering switch. Refer to [ST-31, "Exploded View"](#).

# P1564 ICC STEERING SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1564 ICC STEERING SWITCH

### DTC Logic

INFOID:000000006883106

#### DTC DETECTION LOGIC

##### NOTE:

If DTC P1564 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to [EC-385, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name | DTC detecting condition   | Possible cause   |
|---------|------------------------|---|--|
| P1564   | ICC steering switch    | <ul style="list-style-type: none"><li>An excessively high voltage signal from the ICC steering switch is sent to ECM.</li><li>ECM detects that input signal from the ICC steering switch is out of the specified range.</li><li>ECM detects that the ICC steering switch is stuck ON.</li></ul> | <ul style="list-style-type: none"><li>Harness or connectors (The switch circuit is open or shorted.)</li><li>ICC steering switch</li><li>ECM</li></ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

- Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON.
- Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

- Turn ignition switch ON and wait at least 10 seconds.
- Press MAIN switch for at least 10 seconds, then release it and wait at least 10 seconds.
- Press DYNAMIC DRIVE ASSISTANCE SYSTEMS switch for at least 10 seconds, then release it and wait at least 10 seconds.
- Press CANCEL switch for at least 10 seconds, then release it and wait at least 10 seconds.
- Press RESUME/ACCELERATE switch for at least 10 seconds, then release it and wait at least 10 seconds.
- Press SET/COAST switch for at least 10 seconds, then release it and wait at least 10 seconds.
- Press DISTANCE switch for at least 10 seconds, then release it and wait at least 10 seconds.
- Check DTC.

##### Is DTC detected?

YES >> Go to [EC-456, "Diagnosis Procedure"](#).

NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006883107

##### 1. CHECK GROUND CONNECTION

- Turn ignition switch OFF.
- Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

##### Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace ground connection.

##### 2. CHECK ICC STEERING SWITCH CIRCUIT

##### With CONSULT

- Turn ignition switch ON.
- Select "MAIN SW", "DYNAMIC DRIVE ASSISTANCE SYSTEMS SW", "CANCEL SW", "RESUME/ACC SW", "SET SW" and "DIST SW" in "DATA MONITOR" mode with CONSULT.
- Check each item indication under the following conditions.

# P1564 ICC STEERING SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| Monitor item                        | Condition                               | Indication |     |
|-------------------------------------|---|------------|-----|
| MAIN SW                             | MAIN switch                             | Pressed    | ON  |
|                                     |   | Released   | OFF |
| DYNAMIC DRIVE ASSISTANCE SYSTEMS SW | DYNAMIC DRIVE ASSISTANCE SYSTEMS switch | Pressed    | ON  |
|                                     |   | Released   | OFF |
| CANCEL SW                           | CANCEL switch                           | Pressed    | ON  |
|                                     |   | Released   | OFF |
| RESUME/ACC SW                       | RESUME/ACCELERATE switch                | Pressed    | ON  |
|                                     |   | Released   | OFF |
| SET SW                              | SET/COAST switch                        | Pressed    | ON  |
|                                     |   | Released   | OFF |
| DIST SW                             | DISTANCE switch                         | Pressed    | ON  |
|                                     |   | Released   | OFF |

**⊗ Without CONSULT**

1. Turn ignition switch ON.
2. Check the voltage between ECM harness connector terminals as per the following.

| Connector | ECM                                 |          | Condition  | Voltage (V) |
|-----------|-------------------------------------|----------|--|-------------|
|           | +                                   | -        |  |             |
|           | Terminal                            | Terminal |  |             |
| M107      | 101<br>(ICC steering switch signal) | 108      | MAIN switch: Pressed                             | Approx. 0   |
|           |                                     |          | DYNAMIC DRIVE ASSISTANCE SYSTEMS switch: Pressed | Approx. 1.0 |
|           |                                     |          | CANCEL switch: Pressed                           | Approx. 1.9 |
|           |                                     |          | DISTANCE switch: Pressed                         | Approx. 2.6 |
|           |                                     |          | SET/COAST switch: Pressed                        | Approx. 3.2 |
|           |                                     |          | RESUME/ACCELERATE switch: Pressed                | Approx. 3.7 |
|           |                                     |          | All ICC steering switches: Released              | Approx. 4.2 |

Is the inspection result normal?

- YES >> GO TO 8.  
NO >> GO TO 3.

### 3. CHECK ICC STEERING SWITCH GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Disconnect combination switch harness connector.
4. Check the continuity between combination switch and ECM harness connector.

| Combination switch | ECM      |          | Continuity |
|--------------------|----------|----------|------------|
|                    | Terminal | Terminal |            |
| 16                 | M107     | 108      | Existed    |

5. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 5.  
NO >> GO TO 4.

### 4. DETECT MALFUNCTIONING PART

Check the following.

- Combination switch (spiral cable)

# P1564 ICC STEERING SWITCH

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

- Harness for open and short between ECM and combination switch

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 5.CHECK ICC STEERING SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between combination switch and ECM harness connector.

| Combination switch<br>Terminal | ECM       |          | Continuity |
|--------------------------------|-----------|----------|------------|
|                                | Connector | Terminal |            |
| 13                             | M107      | 101      | Existed    |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

## 6.DETECT MALFUNCTIONING PART

Check the following.

- Combination switch (spiral cable)
- Harness for open and short between ECM and combination switch

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 7.CHECK ICC STEERING SWITCH

Refer to [EC-458, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 8.

NO >> Replace ICC steering switch. Refer to [ST-31, "Exploded View"](#).

## 8.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006883108

## 1.CHECK ICC STEERING SWITCH

1. Turn ignition switch OFF.
2. Disconnect combination switch (spiral cable) harness connector M303.
3. Check resistance between combination switch harness connector terminals under the following conditions.

| Combination switch |           | Condition  | Resistance ( $\Omega$ ) |
|--------------------|-----------|--|-------------------------|
| Connector          | Terminals |  |                         |
| M303               | 13 and 16 | MAIN switch: Pressed                             | Approx. 0               |
|                    |           | DYNAMIC DRIVE ASSISTANCE SYSTEMS switch: Pressed | Approx. 270             |
|                    |           | CANCEL switch: Pressed                           | Approx. 620             |
|                    |           | DISTANCE switch: Pressed                         | Approx. 1,090           |
|                    |           | SET/COAST switch: Pressed                        | Approx. 1,810           |
|                    |           | RESUME/ACCELERATE switch: Pressed                | Approx. 2,990           |
|                    |           | All ICC steering switches: Released              | Approx. 5,420           |

Is the inspection result normal?

YES >> INSPECTION END

# P1568 ICC FUNCTION

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1568 ICC FUNCTION

### DTC Logic

INFOID:000000006883109

### DTC DETECTION LOGIC

#### NOTE:

- If DTC P1568 is displayed with DTC UXXXX, first perform the trouble diagnosis for DTC UXXXX.
- If DTC P1568 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to [EC-385, "DTC Logic"](#).
- If DTC P1568 is displayed with DTC P0607, first perform the trouble diagnosis for DTC P0607. Refer to [EC-387, "DTC Logic"](#).

| DTC No. | Trouble Diagnosis Name | DTC Detecting Condition  | Possible Cause   |
|---------|------------------------|--|--|
| P1568   | ICC function           | ECM detects a difference between signals from ADAS control unit is out of specified range. | <ul style="list-style-type: none"><li>• Harness or connectors (The CAN communication line is open or shorted.)</li><li>• ADAS control unit</li><li>• ECM</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

**Step 4 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.**

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Press MAIN switch on ICC steering switch.
3. Drive the vehicle at more than 40 km/h (25 MPH).

#### CAUTION:

**Always drive vehicle at a safe speed.**

4. Press SET/COAST switch.
5. Check DTC.

Is DTC detected?

YES >> Go to [EC-460, "Diagnosis Procedure"](#).

NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883110

#### 1. REPLACE ADAS CONTROL UNIT

1. Replace ADAS control unit.
2. Perform [CCS-70, "Work Procedure \(Vehicle-To-Vehicle Distance Control Mode\)"](#).
3. Check DTC of ADAS control unit. Refer to [CCS-31, "On Board Diagnosis Function"](#).

>> INSPECTION END

# P1572 ASCD BRAKE SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1572 ASCD BRAKE SWITCH

### Description

INFOID:000000006883111

When the brake pedal is depressed, ASCD brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by those two types of input (ON/OFF signal). Refer to [EC-63, "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\) : System Description"](#) for the ASCD function.

### DTC Logic

INFOID:000000006883112

#### DTC DETECTION LOGIC

##### NOTE:

- If DTC P1572 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to [EC-385, "DTC Logic"](#).
- This self-diagnosis has the one trip detection logic. When malfunction A is detected, DTC is not stored in ECM memory. And in that case, 1st trip DTC and 1st trip freeze frame data are displayed. 1st trip DTC is erased when ignition switch is turned OFF. And even when malfunction A is detected in two consecutive trips, DTC is not stored in ECM memory.

| DTC No. | Trouble diagnosis name | DTC detecting condition |  | Possible cause   |
|---------|------------------------|-------------------------|--|--|
| P1572   | ASCD brake switch      | A)                      | When the vehicle speed is above 30 km/h (19 MPH), ON signals from the stop lamp switch and the ASCD brake switch are sent to the ECM at the same time. | <ul style="list-style-type: none"><li>• Harness or connectors (The stop lamp switch circuit is shorted.)</li><li>• Harness or connectors (The ASCD brake switch circuit is shorted.)</li><li>• Stop lamp switch</li><li>• ASCD brake switch</li><li>• Incorrect stop lamp switch installation</li><li>• Incorrect ASCD brake switch installation</li><li>• ECM</li></ul> |
|         |                        | B)                      | ASCD brake switch signal is not sent to ECM for extremely long time while the vehicle is being driven.   |  |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### NOTE:

The procedure for malfunction B is not described. It takes an extremely long time to complete the procedure for malfunction B. By performing the procedure for malfunction A, the condition that causes malfunction B can be detected.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION A

1. Start engine (VDC switch OFF).
2. Press MAIN switch and make sure that CRUISE lamp illuminates.
3. Drive the vehicle for at least 5 consecutive seconds under the following conditions.

##### CAUTION:

**Always drive vehicle at a safe speed.**

##### NOTE:

**This procedure may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.**

|                |                            |
|----------------|----------------------------|
| Vehicle speed  | More than 30 km/h (19 mph) |
| Selector lever | Suitable position          |

4. Check 1st trip DTC.

# P1572 ASCD BRAKE SWITCH

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

Is 1st trip DTC detected?

YES >> Go to [EC-462, "Diagnosis Procedure"](#).

NO >> GO TO 3.

## 3.PERFORM DTC CONFIRMATION PROCEDURE

1. Drive the vehicle for at least 5 consecutive seconds under the following conditions.

**CAUTION:**

**Always drive vehicle at a safe speed.**

**NOTE:**

**This procedure may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.**

|                  |   |
|------------------|---|
| Vehicle speed    | More than 30 km/h (19 mph)  |
| Selector lever   | Suitable position   |
| Driving location | Depress the brake pedal for more than 5 seconds so as not to come off from the above-mentioned vehicle speed. |

2. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-462, "Diagnosis Procedure"](#).

NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000006883113

## 1.CHECK OVERALL FUNCTION-I

### With CONSULT

1. Turn ignition switch ON.
2. Select "BRAKE SW1" in "DATA MONITOR" mode with CONSULT.
3. Check "BRAKE SW1" indication under the following conditions.

| Monitor item | Condition   |                    | Indication |
|--------------|-------------|--------------------|------------|
| BRAKE SW1    | Brake pedal | Slightly depressed | OFF        |
|              | Brake pedal | Fully released     | ON         |

### Without CONSULT

1. Turn ignition switch ON.
2. Check the voltage between ECM harness connector terminals as per the following.

| Connector | ECM                               |          | Condition                         | Voltage (V)     |
|-----------|-----------------------------------|----------|-----------------------------------|-----------------|
|           | +                                 | -        |                                   |                 |
|           | Terminal                          | Terminal |                                   |                 |
| M107      | 126<br>(ASCD brake switch signal) | 128      | Brake pedal<br>Slightly depressed | Approx. 0       |
|           |                                   |          | Brake pedal<br>Fully released     | Battery voltage |

Is the inspection result normal?

YES >> GO TO 2.

NO >> GO TO 3.

## 2.CHECK OVERALL FUNCTION-II

### With CONSULT

Select "BRAKE SW2" and check indication under the following conditions.

# P1572 ASCD BRAKE SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| Monitor item | Condition   |                    | Indication |
|--------------|-------------|--------------------|------------|
| BRAKE SW2    | Brake pedal | Slightly depressed | ON         |
|              |             | Fully released     | OFF        |

## Without CONSULT

Check the voltage between ECM harness connector terminals as per the following.

| Connector | ECM                              |          | Condition      | Voltage (V)        |                 |
|-----------|----------------------------------|----------|----------------|--------------------|-----------------|
|           | +                                | -        |                |                    |                 |
|           | Terminal                         | Terminal |                |                    |                 |
| M107      | 122<br>(Stop lamp switch signal) | 128      | Brake pedal    | Slightly depressed | Battery voltage |
|           |                                  |          | Fully released | Approx. 0          |                 |

Is the inspection result normal?

YES >> GO TO 13.

NO >> GO TO 8.

## 3. CHECK ASCD BRAKE SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ASCD brake switch harness connector.
3. Turn ignition switch ON.
4. Check the voltage between ASCD brake switch harness connector and ground.

| ASCD brake switch |          | Ground | Voltage         |
|-------------------|----------|--------|-----------------|
| Connector         | Terminal |        |                 |
| E109              | 1        | Ground | Battery voltage |

Is the inspection result normal?

YES >> GO TO 5.

NO >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector E103
- 10 A fuse (No. 3)
- Harness for open or short between ASCD brake switch and fuse

>> Repair open circuit or short to ground in harness or connectors.

## 5. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between ASCD brake switch harness connector and ECM harness connector.

| ASCD brake switch |          | ECM       |          | Continuity |
|-------------------|----------|-----------|----------|------------|
| Connector         | Terminal | Connector | Terminal |            |
| E109              | 2        | M107      | 126      | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E106, M6

# P1572 ASCD BRAKE SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

- Harness for open or short between ECM and ASCD brake switch

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 7. CHECK ASCD BRAKE SWITCH

Refer to [EC-465, "Component Inspection \(ASCD Brake Switch\)"](#)

Is the inspection result normal?

YES >> GO TO 13.

NO >> Replace ASCD brake switch. Refer to [BR-18, "Exploded View"](#).

## 8. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect stop lamp switch harness connector.
3. Check the voltage between stop lamp switch harness connector and ground.

| Stop lamp switch |          | Ground | Voltage         |
|------------------|----------|--------|-----------------|
| Connector        | Terminal |        |                 |
| E110             | 1        | Ground | Battery voltage |

Is the inspection result normal?

YES >> GO TO 10.

NO >> GO TO 9.

## 9. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector E103
- 10A fuse (No. 7)
- Harness for open or short between stop lamp switch and battery

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 10. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check the continuity between stop lamp switch harness connector and ECM harness connector.

| Stop lamp switch |          | ECM       |          | Continuity |
|------------------|----------|-----------|----------|------------|
| Connector        | Terminal | Connector | Terminal |            |
| E110             | 2        | M107      | 122      | Existed    |

3. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 12.

NO >> GO TO 11.

## 11. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connectors E103, M2
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 12. CHECK STOP LAMP SWITCH

Refer to [EC-465, "Component Inspection \(Stop Lamp Switch\)"](#)

Is the inspection result normal?

YES >> GO TO 13.

NO >> Replace stop lamp switch. Refer to [BR-18, "Exploded View"](#).

# P1572 ASCD BRAKE SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## 13.CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

>> INSPECTION END

### Component Inspection (ASCD Brake Switch)

INFOID:000000006883114

#### 1.CHECK ASCD BRAKE SWITCH-I

1. Turn ignition switch OFF.
2. Disconnect ASCD brake switch harness connector.
3. Check the continuity between ASCD brake switch terminals under the following conditions.

| Terminals | Condition   |                    | Continuity  |
|-----------|-------------|--------------------|-------------|
| 1 and 2   | Brake pedal | Fully released     | Existed     |
|           |             | Slightly depressed | Not existed |

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> GO TO 2.

#### 2.CHECK ASCD BRAKE SWITCH-II

1. Adjust ASCD brake switch installation. Refer to [BR-19. "Inspection and Adjustment"](#).
2. Check the continuity between ASCD brake switch terminals under the following conditions.

| Terminals | Condition   |                    | Continuity  |
|-----------|-------------|--------------------|-------------|
| 1 and 2   | Brake pedal | Fully released     | Existed     |
|           |             | Slightly depressed | Not existed |

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> Replace ASCD brake switch. Refer to [BR-18. "Exploded View"](#).

### Component Inspection (Stop Lamp Switch)

INFOID:000000006883115

#### 1.CHECK STOP LAMP SWITCH-I

1. Turn ignition switch OFF.
2. Disconnect stop lamp switch harness connector.
3. Check the continuity between stop lamp switch terminals under the following conditions.

| Terminals | Condition   |                    | Continuity  |
|-----------|-------------|--------------------|-------------|
| 1 and 2   | Brake pedal | Fully released     | Not existed |
|           |             | Slightly depressed | Existed     |

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> GO TO 2.

#### 2.CHECK STOP LAMP SWITCH-II

1. Adjust stop lamp switch installation. Refer to [BR-19. "Inspection and Adjustment"](#).
2. Check the continuity between stop lamp switch terminals under the following conditions.

| Terminals | Condition   |                    | Continuity  |
|-----------|-------------|--------------------|-------------|
| 1 and 2   | Brake pedal | Fully released     | Not existed |
|           |             | Slightly depressed | Existed     |

Is the inspection result normal?

## P1572 ASCD BRAKE SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

---

YES >> INSPECTION END

NO >> Replace stop lamp switch. Refer to [BR-18, "Exploded View"](#).

# P1572 ICC BRAKE SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1572 ICC BRAKE SWITCH

### DTC Logic

INFOID:000000006883116

### DTC DETECTION LOGIC

#### NOTE:

- If DTC P1572 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to [EC-385, "DTC Logic"](#).
- This self-diagnosis has the one trip detection logic. When malfunction A is detected, DTC is not stored in ECM memory. And in that case, 1st trip DTC and 1st trip freeze frame data are displayed. 1st trip DTC is erased when ignition switch is turned OFF. And even when malfunction A is detected in two consecutive trips, DTC is not stored in ECM memory.

| DTC No. | Trouble diagnosis name | DTC detecting condition |  | Possible cause   |
|---------|------------------------|-------------------------|--|--|
| P1572   | ICC brake switch       | A)                      | ON signals from the stop lamp switch and the ICC brake switch are sent to ECM at the same time.      | <ul style="list-style-type: none"><li>• Harness or connectors (The stop lamp switch circuit is shorted.)</li><li>• Harness or connectors (The ICC brake switch circuit is shorted.)</li><li>• Stop lamp switch</li><li>• ICC brake switch</li><li>• ICC brake hold relay</li><li>• Incorrect stop lamp switch installation</li><li>• Incorrect ICC brake switch installation</li><li>• ECM</li></ul> |
|         |                        | B)                      | ICC brake switch signal is not sent to ECM for extremely long time while the vehicle is being driven |  |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### NOTE:

The procedure for malfunction B is not described. It takes an extremely long time to complete the procedure for malfunction B. By performing the procedure for malfunction A, the condition that causes malfunction B can be detected.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine (VDC switch OFF).
2. Press MAIN switch and make sure that CRUISE lamp illuminates.
3. Drive the vehicle for at least 5 consecutive seconds under the following conditions.

#### CAUTION:

**Always drive vehicle at a safe speed.**

#### NOTE:

**This procedure may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.**

|                |                            |
|----------------|----------------------------|
| Vehicle speed  | More than 30 km/h (19 mph) |
| Selector lever | Suitable position          |

4. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-468, "Diagnosis Procedure"](#).  
NO >> GO TO 3.

#### 3. PERFORM DTC CONFIRMATION PROCEDURE

1. Drive the vehicle for at least 5 consecutive seconds under the following conditions.

# P1572 ICC BRAKE SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## CAUTION:

Always drive vehicle at a safe speed.

## NOTE:

This procedure may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

|                  |   |
|------------------|---|
| Vehicle speed    | More than 30 km/h (19 mph)  |
| Selector lever   | Suitable position   |
| Driving location | Depress the brake pedal for more than 5 seconds so as not to come off from the above-mentioned vehicle speed. |

2. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-468, "Diagnosis Procedure"](#).

NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000006883117

### 1. CHECK OVERALL FUNCTION-I

#### With CONSULT

1. Turn ignition switch ON.
2. Select "BRAKE SW1" in "DATA MONITOR" mode with CONSULT.
3. Check "BRAKE SW1" indication under the following conditions.

| Monitor item | Condition   |                    | Indication |
|--------------|-------------|--------------------|------------|
| BRAKE SW1    | Brake pedal | Slightly depressed | OFF        |
|              | Brake pedal | Fully released     | ON         |

#### Without CONSULT

1. Turn ignition switch ON.
2. Check the voltage between ECM harness connector terminals under the following conditions.

| Connector | ECM                              |     | Condition   | Voltage (V)        |                 |
|-----------|----------------------------------|-----|-------------|--------------------|-----------------|
|           | +                                | -   |             |                    |                 |
| Terminal  | Terminal                         |     |             |                    |                 |
| M107      | 126<br>(ICC brake switch signal) | 128 | Brake pedal | Slightly depressed | Approx. 0       |
|           |                                  |     | Brake pedal | Fully released     | Battery voltage |

Is the inspection result normal?

YES >> GO TO 2.

NO >> GO TO 3.

### 2. CHECK OVERALL FUNCTION-II

#### With CONSULT

Select "BRAKE SW2" and check indication under the following conditions.

| Monitor item | Condition   |                    | Indication |
|--------------|-------------|--------------------|------------|
| BRAKE SW2    | Brake pedal | Slightly depressed | ON         |
|              |             | Fully released     | OFF        |

#### Without CONSULT

Check the voltage between ECM harness connector terminals as per the following.

# P1572 ICC BRAKE SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| ECM       |                                  |          | Condition      | Voltage (V)        |                 |
|-----------|----------------------------------|----------|----------------|--------------------|-----------------|
| Connector | +                                | -        |                |                    |                 |
|           | Terminal                         | Terminal |                |                    |                 |
| M107      | 122<br>(Stop lamp switch signal) | 128      | Brake pedal    | Slightly depressed | Battery voltage |
|           |                                  |          | Fully released | Approx. 0          |                 |

Is the inspection result normal?

YES >> GO TO 14.

NO >> GO TO 8.

## 3.CHECK ICC BRAKE SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ICC brake switch harness connector.
3. Turn ignition switch ON.
4. Check the voltage between ICC brake switch harness connector and ground.

| ICC brake switch |          | Ground | Voltage         |
|------------------|----------|--------|-----------------|
| Connector        | Terminal |        |                 |
| E114             | 1        | Ground | Battery voltage |

Is the inspection result normal?

YES >> GO TO 5.

NO >> GO TO 4.

## 4.DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector E103
- 10 A fuse (No. 3)
- Harness for open or short between ICC brake switch and fuse

>> Repair open circuit or short to ground in harness or connectors.

## 5.CHECK ICC BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between ICC brake switch harness connector and ECM harness connector.

| ICC brake switch |          | ECM       |          | Continuity |
|------------------|----------|-----------|----------|------------|
| Connector        | Terminal | Connector | Terminal |            |
| E114             | 2        | M107      | 126      | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

## 6.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E106, M6
- Harness for open or short between ICC brake switch and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 7.CHECK ICC BRAKE SWITCH

Refer to [EC-471, "Component Inspection \(ICC Brake Switch\)"](#).

# P1572 ICC BRAKE SWITCH

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

Is the inspection result normal?

YES >> GO TO 14.

NO >> Replace ICC brake switch. Refer to [BR-18. "Exploded View"](#).

## 8. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect stop lamp switch harness connector.
3. Disconnect ICC brake hold relay harness connector.
4. Check the voltage between stop lamp switch harness connector and ground.

| Stop lamp switch |          | Ground | Voltage         |
|------------------|----------|--------|-----------------|
| Connector        | Terminal |        |                 |
| E110             | 1        | Ground | Battery voltage |

5. Check the voltage between ICC brake hold relay harness connector and ground.

| ICC brake hold relay |          | Ground | Voltage         |
|----------------------|----------|--------|-----------------|
| Connector            | Terminal |        |                 |
| E92                  | 5        | Ground | Battery voltage |

Is the inspection result normal?

YES >> GO TO 10.

NO >> GO TO 9.

## 9. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector E103
- 10 A fuse (No. 7)
- Harness for open or short between battery and stop lamp switch
- Harness for open or short between battery and ICC brake hold relay

>> Repair open circuit or short to ground in harness or connectors.

## 10. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check the continuity between stop lamp switch harness connector and ECM harness connector.

| Stop lamp switch |          | ECM       |          | Continuity |
|------------------|----------|-----------|----------|------------|
| Connector        | Terminal | Connector | Terminal |            |
| E110             | 2        | M107      | 122      | Existed    |

3. Check the continuity between ICC brake hold relay harness connector and ECM harness connector.

| ICC brake hold relay |          | ECM       |          | Continuity |
|----------------------|----------|-----------|----------|------------|
| Connector            | Terminal | Connector | Terminal |            |
| E92                  | 3        | M107      | 122      | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 12.

NO >> GO TO 11.

## 11. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector E103, M2
- Harness for open or short between ECM and stop lamp switch
- Harness for open or short between ECM and ICC brake hold relay

# P1572 ICC BRAKE SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 12. CHECK STOP LAMP SWITCH

Refer to [EC-471, "Component Inspection \(Stop Lamp Switch\)"](#).

Is the inspection result normal?

YES >> GO TO 13.

NO >> Replace stop lamp switch. Refer to [BR-18, "Exploded View"](#).

## 13. CHECK ICC BRAKE HOLD RELAY

Refer to [EC-472, "Component Inspection \(ICC Brake Hold Relay\)"](#).

Is the inspection result normal?

YES >> GO TO 14.

NO >> Replace ICC brake hold relay.

## 14. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection (ICC Brake Switch)

INFOID:000000006883118

### 1. CHECK ICC BRAKE SWITCH-I

1. Turn ignition switch OFF.
2. Disconnect ICC brake switch harness connector.
3. Check the continuity between ICC brake switch terminals under the following conditions.

| Terminals | Condition   |                    | Continuity  |
|-----------|-------------|--------------------|-------------|
| 1 and 2   | Brake pedal | Fully released     | Existed     |
|           |             | Slightly depressed | Not existed |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

### 2. CHECK ICC BRAKE SWITCH-II

1. Adjust ICC brake switch installation. Refer to [BR-19, "Inspection and Adjustment"](#).
2. Check the continuity between ICC brake switch terminals under the following conditions.

| Terminals | Condition   |                    | Continuity  |
|-----------|-------------|--------------------|-------------|
| 1 and 2   | Brake pedal | Fully released     | Existed     |
|           |             | Slightly depressed | Not existed |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace ICC brake switch. Refer to [BR-18, "Exploded View"](#).

## Component Inspection (Stop Lamp Switch)

INFOID:000000006883119

### 1. CHECK STOP LAMP SWITCH-I

1. Turn ignition switch OFF.
2. Disconnect stop lamp switch harness connector.
3. Check the continuity between stop lamp switch terminals under the following conditions.

# P1572 ICC BRAKE SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| Terminals | Condition   |                    | Continuity  |
|-----------|-------------|--------------------|-------------|
| 1 and 2   | Brake pedal | Fully released     | Not existed |
|           |             | Slightly depressed | Existed     |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

## 2.CHECK STOP LAMP SWITCH-II

1. Adjust stop lamp switch installation. Refer to [BR-19, "Inspection and Adjustment"](#).
2. Check the continuity between stop lamp switch terminals under the following conditions.

| Terminals | Condition   |                    | Continuity  |
|-----------|-------------|--------------------|-------------|
| 1 and 2   | Brake pedal | Fully released     | Not existed |
|           |             | Slightly depressed | Existed     |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace stop lamp switch. Refer to [BR-18, "Exploded View"](#).

## Component Inspection (ICC Brake Hold Relay)

INFOID:000000006883120

### 1.CHECK ICC BRAKE HOLD RELAY

1. Turn ignition switch OFF.
2. Remove ICC brake hold relay.
3. Check the continuity between ICC brake hold relay terminals under the following conditions.

| Terminals | Condition   | Continuity  |
|-----------|---|-------------|
| 3 and 5   | 12V direct current supply between terminals 1 and 2 | Existed     |
|           | No current supply                                   | Not existed |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace ICC brake hold relay

# P1574 ASCD VEHICLE SPEED SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1574 ASCD VEHICLE SPEED SENSOR

### Description

INFOID:000000006883121

The ECM receives two vehicle speed signals via the CAN communication line. One is sent from “combination meter”, and the other is from TCM (Transmission control module). The ECM uses these signals for ASCD control. Refer to [EC-63, "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\) : System Description"](#) for ASCD functions.

### DTC Logic

INFOID:000000006883122

#### DTC DETECTION LOGIC

##### NOTE:

- If DTC P1574 is displayed with DTC UXXXX, first perform the trouble diagnosis for DTC UXXXX.
- If DTC P1574 is displayed with DTC P0500, first perform the trouble diagnosis for DTC P0500. Refer to [EC-370, "DTC Logic"](#).
- If DTC P1574 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to [EC-385, "DTC Logic"](#).
- If DTC P1574 is displayed with DTC P0607, first perform the trouble diagnosis for DTC P0607. Refer to [EC-387, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name    | DTC detecting condition   | Possible cause  |
|---------|---------------------------|---|---|
| P1574   | ASCD vehicle speed sensor | The difference between the two vehicle speed signals is out of the specified range. | <ul style="list-style-type: none"><li>• Harness or connectors<br/>(The CAN communication line is open or shorted.)</li><li>• Combination meter</li><li>• ABS actuator and electric unit (control unit)</li><li>• Wheel sensor</li><li>• TCM</li><li>• ECM</li></ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine (VDC switch OFF).
2. Drive the vehicle at more than 40 km/h (25 MPH).

##### CAUTION:

**Always drive vehicle at a safe speed.**

##### NOTE:

**This procedure may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.**

3. Check DTC.

Is DTC detected?

- YES >> Go to [EC-473, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883123

##### 1. CHECK DTC WITH TCM

Check DTC with TCM. Refer to [TM-59, "Diagnosis Description"](#).

Is the inspection result normal?

## P1574 ASCD VEHICLE SPEED SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

---

YES >> GO TO 2.

NO >> Perform trouble shooting relevant to DTC indicated.

### 2.CHECK DTC WITH “ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)”

---

Refer to [BRC-40. "CONSULT Function"](#).

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair or replace.

### 3.CHECK DTC WITH “COMBINATION METER”

---

Refer to [MWI-31. "CONSULT Function"](#).

>> INSPECTION END

# P1574 ICC VEHICLE SPEED SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1574 ICC VEHICLE SPEED SENSOR

### Description

INFOID:000000006883124

The ECM receives two vehicle speed signals via CAN communication line. One is sent from “combination meter”, and the other is from TCM (Transmission control module). The ECM uses these signals for ICC control. Refer to [CCS-13, "System Description"](#) for ICC functions.

### DTC Logic

INFOID:000000006883125

#### DTC DETECTION LOGIC

##### NOTE:

- If DTC P1574 is displayed with DTC UXXXX, first perform the trouble diagnosis for DTC UXXXX.
- If DTC P1574 is displayed with DTC P0500, first perform the trouble diagnosis for DTC P0500. Refer to [EC-370, "DTC Logic"](#).
- If DTC P1574 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to [EC-385, "DTC Logic"](#).
- If DTC P1574 is displayed with DTC P0607, first perform the trouble diagnosis for DTC P0607. Refer to [EC-387, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name   | DTC detecting condition   | Possible cause  |
|---------|--------------------------|---|---|
| P1574   | ICC vehicle speed sensor | The difference between the two vehicle speed signals is out of the specified range. | <ul style="list-style-type: none"><li>• Harness or connectors<br/>(The CAN communication line is open or shorted.)</li><li>• Combination meter</li><li>• ABS actuator and electric unit (control unit)</li><li>• Wheel sensor</li><li>• TCM</li><li>• ECM</li></ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine (VDC switch OFF).
2. Drive the vehicle at more than 40 km/h (25 MPH).

##### CAUTION:

**Always drive vehicle at a safe speed.**

##### NOTE:

**This procedure may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.**

3. Check DTC.

Is DTC detected?

- YES >> Go to [EC-475, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883126

##### 1. CHECK DTC WITH TCM

Check DTC with TCM. Refer to [TM-59, "Diagnosis Description"](#).

Is the inspection result normal?

- YES >> GO TO 2.

## P1574 ICC VEHICLE SPEED SENSOR

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

---

NO >> Perform trouble shooting relevant to DTC indicated.

### 2.CHECK DTC WITH “ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)”

---

Refer to [BRC-40, "CONSULT Function"](#).

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair or replace.

### 3.CHECK DTC WITH “COMBINATION METER”

---

Check combination meter function.

Refer to [MWI-31, "CONSULT Function"](#).

>> INSPECTION END

# P1606 VVEL CONTROL MODULE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1606 VVEL CONTROL MODULE

### DTC Logic

INFOID:000000006883127

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name | DTC detecting condition   | Possible cause  |
|---------|------------------------|---|---|
| P1606   | VVEL control module    | <ul style="list-style-type: none"><li>VVEL control module calculation function is malfunctioning.</li><li>VVEL EEPROM system is malfunctioning.</li></ul> | <ul style="list-style-type: none"><li>VVEL control module</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

- Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON.
- Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

- Turn ignition switch ON and wait at least 1 second.
- Check DTC.

Is DTC detected?

- YES >> Go to [EC-477, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883128

#### 1. PERFORM DTC CONFIRMATION PROCEDURE

- Turn ignition switch ON.
- Erase DTC.
- Perform DTC Confirmation Procedure.  
See [EC-477, "DTC Logic"](#).

Is the DTC P1606 displayed again?

- YES >> GO TO 2.  
NO >> INSPECTION END

#### 2. REPLACE VVEL CONTROL MODULE

- Replace VVEL control module.
- Go to [EC-145, "Work Procedure"](#).

>> INSPECTION END

# P1607 VVEL CONTROL MODULE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1607 VVEL CONTROL MODULE

### DTC Logic

INFOID:000000006883129

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name      | DTC detecting condition  | Possible cause        |
|---------|-----------------------------|--|-----------------------|
| P1607   | VVEL control module circuit | • The internal circuit of the VVEL control module is malfunctioning. | • VVEL control module |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

**Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.**

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for at least 1 second.
2. Check DTC.

#### Is DTC detected?

- YES >> Go to [EC-478. "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883130

#### 1. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Erase DTC.
3. Perform DTC Confirmation Procedure.  
See [EC-478. "DTC Logic"](#).

#### Is the DTC P1607 displayed again?

- YES >> GO TO 2.  
NO >> INSPECTION END

#### 2. REPLACE VVEL CONTROL MODULE

1. Replace VVEL control module.
2. Go to [EC-145. "Work Procedure"](#).

>> INSPECTION END

# P1608 VVEL SENSOR POWER SUPPLY

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1608 VVEL SENSOR POWER SUPPLY

### DTC Logic

INFOID:000000006883131

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name           | DTC detecting condition  | Possible cause   |
|---------|----------------------------------|--|--|
| P1608   | VVEL sensor power supply circuit | VVEL control module detects a voltage of power source for sensor is excessively low or high. | <ul style="list-style-type: none"><li>• Harness or connectors (VVEL control shaft position sensor power supply circuit is open or shorted.)</li><li>• VVEL control shaft position sensor</li><li>• VVEL control module</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON and wait at least 1 second.
2. Check DTC.

#### Is DTC detected?

- YES >> Go to [EC-479. "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883132

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47. "Circuit Inspection"](#).

#### Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK VVEL CONTROL SHAFT POSITION SENSOR POWER SUPPLY CIRCUIT

1. Disconnect VVEL control shaft position sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between VVEL control shaft position sensor harness connector and ground.

| VVEL control shaft position sensor |           |          | Ground | Voltage (V) |
|------------------------------------|-----------|----------|--------|-------------|
| Bank                               | Connector | Terminal |        |             |
| 1                                  | F46       | 3        | Ground | Approx. 5   |
|                                    |           | 6        |        |             |
| 2                                  | F47       | 3        |        |             |
|                                    |           | 6        |        |             |

#### Is the inspection result normal?

- YES >> GO TO 7.  
NO >> GO TO 3.

# P1608 VVEL SENSOR POWER SUPPLY

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

## 3. CHECK VVEL CONTROL SHAFT POSITION SENSOR POWER SUPPLY CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect VVEL control module harness connector.
3. Check the continuity between VVEL control shaft position sensor harness connector and VVEL control module harness connector.

| VVEL control shaft position sensor |           |          | VVEL control module |          | Continuity |
|------------------------------------|-----------|----------|---------------------|----------|------------|
| Bank                               | Connector | Terminal | Connector           | Terminal |            |
| 1                                  | F46       | 3        | E15                 | 9        | Existed    |
|                                    |           | 6        |                     | 22       |            |
| 2                                  | F47       | 3        |                     | 7        |            |
|                                    |           | 6        |                     | 20       |            |

4. Also check harness for short to ground and power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between VVEL control shaft position sensor and VVEL control module

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 5. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair or replace.

## 6. REPLACE VVEL CONTROL MODULE

1. Replace VVEL control module.
2. Go to [EC-145, "Work Procedure"](#).

>> INSPECTION END

## 7. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 8.

NO >> Repair or replace.

## 8. REPLACE VVEL ACTUATOR SUB ASSEMBLY

1. Replace VVEL actuator sub assembly.
2. Go to [EC-480, "Special Repair Requirement"](#).

>> INSPECTION END

# P1805 BRAKE SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P1805 BRAKE SWITCH

### DTC Logic

INFOID:000000006883134

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name | DTC detecting condition   | Possible cause   |
|---------|------------------------|---|--|
| P1805   | Brake switch           | A brake switch signal is not sent to ECM for extremely long time while the vehicle is being driven. | <ul style="list-style-type: none"> <li>• Harness or connectors (Stop lamp switch circuit is open or shorted.)</li> <li>• Stop lamp switch</li> </ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Fully depress the brake pedal for at least 5 seconds.
3. Erase the DTC.
4. Check 1st trip DTC.

#### Is 1st trip DTC detected?

- YES >> Go to [EC-482, "Diagnosis Procedure"](#).
- NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883135

#### 1. CHECK STOP LAMP SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Check the stop lamp when depressing and releasing the brake pedal.

| Brake pedal        | Stop lamp       |
|--------------------|-----------------|
| Fully released     | Not illuminated |
| Slightly depressed | Illuminated     |

#### Is the inspection result normal?

- YES >> GO TO 4.
- NO >> GO TO 2.

#### 2. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Disconnect stop lamp switch harness connector.
2. Check the voltage between stop lamp switch harness connector and ground.

| Stop lamp switch |          | Ground | Voltage         |
|------------------|----------|--------|-----------------|
| Connector        | Terminal |        |                 |
| E110             | 1        | Ground | Battery voltage |

#### Is the inspection result normal?

- YES >> GO TO 4.
- NO >> GO TO 3.

#### 3. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector E103
- 10 A fuse (No. 7)
- Harness for open or short between stop lamp switch and battery

>> Repair open circuit, short to ground or short to power in harness or connectors.

#### 4. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

# P1805 BRAKE SWITCH

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

1. Disconnect stop lamp switch harness connector.
2. Disconnect ECM harness connector.
3. Check the continuity between stop lamp switch harness connector and ECM harness connector.

| Stop lamp switch |          | ECM       |          | Continuity |
|------------------|----------|-----------|----------|------------|
| Connector        | Terminal | Connector | Terminal |            |
| E110             | 2        | M107      | 122      | Existed    |

4. Also check harness for short to ground and short to power.

### Is the inspection result normal?

YES >> GO TO 6.

NO >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector E103, M2
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 6. CHECK STOP LAMP SWITCH

Refer to [EC-483, "Component Inspection \(Stop Lamp Switch\)"](#).

### Is the inspection result normal?

YES >> GO TO 7.

NO >> Replace stop lamp switch. Refer to [BR-18, "Exploded View"](#).

## 7. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection (Stop Lamp Switch)

INFOID:000000006883136

### 1. CHECK STOP LAMP SWITCH-I

1. Turn ignition switch OFF.
2. Disconnect stop lamp switch harness connector.
3. Check the continuity between stop lamp switch terminals under the following conditions.

| Terminals | Condition   |                    | Continuity  |
|-----------|-------------|--------------------|-------------|
| 1 and 2   | Brake pedal | Fully released     | Not existed |
|           |             | Slightly depressed | Existed     |

### Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

### 2. CHECK STOP LAMP SWITCH-II

1. Adjust stop lamp switch installation. Refer to [BR-19, "Inspection and Adjustment"](#).
2. Check the continuity between stop lamp switch terminals under the following conditions.

| Terminals | Condition   |                    | Continuity  |
|-----------|-------------|--------------------|-------------|
| 1 and 2   | Brake pedal | Fully released     | Not existed |
|           |             | Slightly depressed | Existed     |

### Is the inspection result normal?

YES >> INSPECTION END

## P1805 BRAKE SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

NO >> Replace stop lamp switch. Refer to [BR-18. "Exploded View"](#).

# P2122, P2123 APP SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P2122, P2123 APP SENSOR

### DTC Logic

INFOID:000000006883137

#### DTC DETECTION LOGIC

##### NOTE:

If DTC P2122 or P2123 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to [EC-388, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name                                 | DTC detecting condition   | Possible cause   |
|---------|--|---|--|
| P2122   | Accelerator pedal position sensor 1 circuit low input  | An excessively low voltage from the APP sensor 1 is sent to ECM.  | <ul style="list-style-type: none"> <li>Harness or connectors (APP sensor 1 circuit is open or shorted.)</li> </ul> |
| P2123   | Accelerator pedal position sensor 1 circuit high input | An excessively high voltage from the APP sensor 1 is sent to ECM. | <ul style="list-style-type: none"> <li>Accelerator pedal position sensor (APP sensor 1)</li> </ul>                 |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

- Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON.
- Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

- Start engine and let it idle for 1 second.
- Check DTC.

Is DTC detected?

- YES >> Go to [EC-485, "Diagnosis Procedure"](#).  
 NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006883138

##### 1. CHECK GROUND CONNECTION

- Turn ignition switch OFF.
- Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
 NO >> Repair or replace ground connection.

##### 2. CHECK APP SENSOR 1 POWER SUPPLY CIRCUIT

- Disconnect accelerator pedal position (APP) sensor harness connector.
- Turn ignition switch ON.
- Check the voltage between APP sensor harness connector and ground.

| APP sensor |          | Ground | Voltage (V) |
|------------|----------|--------|-------------|
| Connector  | Terminal |        |             |
| M153*1     | 6*1      | Ground | Approx. 5   |
| M9*2       | 5*2      |        |             |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

## P2122, P2123 APP SENSOR

[VQ37VHR FOR USA AND CANADA]

### < DTC/CIRCUIT DIAGNOSIS >

- YES >> GO TO 4.  
NO >> GO TO 3.

### 3.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M6, E106
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit, short to ground or short to power in harness or connectors.

### 4.CHECK APP SENSOR 1 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between APP sensor harness connector and ECM harness connector.

| APP sensor                             |                                    | ECM       |          | Continuity |
|--|------------------------------------|-----------|----------|------------|
| Connector                              | Terminal                           | Connector | Terminal |            |
| M153 <sup>*1</sup><br>M9 <sup>*2</sup> | 5 <sup>*1</sup><br>4 <sup>*2</sup> | M107      | 100      | Existed    |

\*1: With ICC

\*2: Without ICC

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 6.  
NO >> GO TO 5 (With ICC).  
NO >> Repair open circuit, short to ground or short to power in harness or connectors (Without ICC).

### 5.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M150, M151
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit, short to ground or short to power in harness or connectors.

### 6.CHECK APP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between APP sensor harness connector and ECM harness connector.

| APP sensor                             |                                    | ECM       |          | Continuity |
|--|------------------------------------|-----------|----------|------------|
| Connector                              | Terminal                           | Connector | Terminal |            |
| M153 <sup>*1</sup><br>M9 <sup>*2</sup> | 4 <sup>*1</sup><br>3 <sup>*2</sup> | M107      | 97       | Existed    |

\*1: With ICC

\*2: Without ICC

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 8.  
NO >> GO TO 7 (With ICC).  
NO >> Repair open circuit, short to ground or short to power in harness or connectors (Without ICC).

### 7.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M150, M151
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit, short to ground or short to power in harness or connectors.

# P2122, P2123 APP SENSOR

[VQ37VHR FOR USA AND CANADA]

## 8. CHECK APP SENSOR

Refer to [EC-487, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 10.

NO >> GO TO 9.

## 9. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Go to [EC-487, "Special Repair Requirement"](#).

>> INSPECTION END

## 10. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000006883139

### 1. CHECK ACCELERATOR PEDAL POSITION SENSOR

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Turn ignition switch ON.
4. Check the voltage ECM harness connector terminals as per the following.

| ECM       |                   |          | Condition       | Voltage (V) |
|-----------|-------------------|----------|-----------------|-------------|
| Connector | +                 | -        |                 |             |
|           | Terminal          | Terminal |                 |             |
| M107      | 97 (APP sensor 1) | 100      | Fully released  | 0.45 - 1.0  |
|           |                   |          | Fully depressed | 4.2 - 4.8   |
|           | 98 (APP sensor 2) | 104      | Fully released  | 0.22 - 0.50 |
|           |                   |          | Fully depressed | 2.1 - 2.5   |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

### 2. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Go to [EC-487, "Special Repair Requirement"](#).

>> INSPECTION END

## Special Repair Requirement

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                                 | DTC detecting condition   | Possible cause  |
|---------|--|---|---|
| P2127   | Accelerator pedal position sensor 2 circuit low input  | An excessively low voltage from the APP sensor 2 is sent to ECM.  | <ul style="list-style-type: none"><li>• Harness or connectors (APP sensor 2 circuit is open or shorted.) [CKP sensor (POS) circuit is shorted.] [CMP sensor (PHASE) (bank 2) circuit is open or shorted.] (Battery current sensor circuit is open or shorted.) (EVAP control system pressure sensor circuit is shorted.) (Refrigerant pressure sensor circuit is shorted.)</li><li>• Accelerator pedal position sensor (APP sensor 2)</li><li>• Crankshaft position sensor (POS)</li><li>• Camshaft position sensor (PHASE) (bank 2)</li><li>• Battery current sensor</li><li>• EVAP control system pressure sensor</li><li>• Refrigerant pressure sensor</li></ul> |
| P2128   | Accelerator pedal position sensor 2 circuit high input | An excessively high voltage from the APP sensor 2 is sent to ECM. |   |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for 1 second.
2. Check DTC.

Is DTC detected?

- YES >> Go to [EC-489, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000006883142

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT-I

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between APP sensor harness connector and ground.

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 5.

NO >> GO TO 4 (With ICC).

NO >> Repair open circuit, short to ground or short to power in harness or connectors (Without ICC).

## 4.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M150, M151
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 5.CHECK SENSOR POWER SUPPLY CIRCUIT

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                              |  |                                    |
|-----------|----------|-------------------------------------|--|------------------------------------|
| Connector | Terminal | Name                                | Connector                              | Terminal                           |
| F101      | 46       | CKP sensor (POS)                    | F2                                     | 1                                  |
| F102      | 64       | CMP sensor (PHASE) (bank 2)         | F18                                    | 1                                  |
|           |          | Battery current sensor              | E21                                    |                                    |
| M107      | 103      | APP sensor                          | M153 <sup>*1</sup><br>M9 <sup>*2</sup> | 3 <sup>*1</sup><br>6 <sup>*2</sup> |
|           |          | EVAP control system pressure sensor | B73                                    | 3                                  |
|           | 107      | Refrigerant pressure sensor         | E77                                    | 3                                  |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair short to ground or short to power in harness or connectors.

# P2127, P2128 APP SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## 6. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to [EC-314, "Component Inspection"](#).)
- Camshaft position sensor (PHASE) (bank 2) (Refer to [EC-319, "Component Inspection"](#).)
- Battery current sensor (Refer to [EC-437, "Component Inspection"](#).)
- EVAP control system pressure sensor (Refer to [EC-349, "Component Inspection"](#).)
- Refrigerant pressure sensor (Refer to [EC-530, "Diagnosis Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 13.

NO >> Replace malfunctioning component.

## 7. CHECK APP SENSOR 2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between APP sensor harness connector and ECM harness connector.

| APP sensor     |          | ECM       |          | Continuity |
|----------------|----------|-----------|----------|------------|
| Connector      | Terminal | Connector | Terminal |            |
| M153*1<br>M9*2 | 2        | M107      | 104      | Existed    |

\*1: With ICC

\*2: Without ICC

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 9.

NO >> GO TO 8 (With ICC).

NO >> Repair open circuit, short to ground or short to power in harness or connectors (Without ICC).

## 8. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M150, M151
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 9. CHECK APP SENSOR 2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between APP sensor harness connector and ECM harness connector.

| APP sensor     |          | ECM       |          | Continuity |
|----------------|----------|-----------|----------|------------|
| Connector      | Terminal | Connector | Terminal |            |
| M153*1<br>M9*2 | 1        | M107      | 98       | Existed    |

\*1: With ICC

\*2: Without ICC

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 11.

NO >> GO TO 10 (With ICC).

NO >> Repair open circuit, short to ground or short to power in harness or connectors (Without ICC).

## 10. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M150, M151
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit, short to ground or short to power in harness or connectors.

**11. CHECK APP SENSOR**

Refer to [EC-492, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 13.
- NO >> GO TO 12.

**12. REPLACE ACCELERATOR PEDAL ASSEMBLY**

1. Replace accelerator pedal assembly.
2. Go to [EC-492, "Special Repair Requirement"](#).

>> INSPECTION END

**13. CHECK INTERMITTENT INCIDENT**

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

**Component Inspection**

INFOID:000000006883143

**1. CHECK ACCELERATOR PEDAL POSITION SENSOR**

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Turn ignition switch ON.
4. Check the voltage ECM harness connector terminals as per the following.

| ECM       |                   |          | Condition       | Voltage (V) |
|-----------|-------------------|----------|-----------------|-------------|
| Connector | +                 | -        |                 |             |
|           | Terminal          | Terminal |                 |             |
| M107      | 97 (APP sensor 1) | 100      | Fully released  | 0.45 - 1.0  |
|           |                   |          | Fully depressed | 4.2 - 4.8   |
|           | 98 (APP sensor 2) | 104      | Fully released  | 0.22 - 0.50 |
|           |                   |          | Fully depressed | 2.1 - 2.5   |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> GO TO 2.

**2. REPLACE ACCELERATOR PEDAL ASSEMBLY**

1. Replace accelerator pedal assembly.
2. Go to [EC-487, "Special Repair Requirement"](#).

>> INSPECTION END

**Special Repair Requirement**

### DTC Logic

INFOID:000000006883145

#### DTC DETECTION LOGIC

##### NOTE:

If DTC P2138 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to [EC-388, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name                                      | DTC detecting condition   | Possible cause  |
|---------|---|---|---|
| P2138   | Accelerator pedal position sensor circuit range/performance | Rationally incorrect voltage is sent to ECM compared with the signals from APP sensor 1 and APP sensor 2. | <ul style="list-style-type: none"><li>• Harness or connectors<br/>(APP sensor 2 circuit is open or shorted.)<br/>[CKP sensor (POS) circuit is shorted.]<br/>[CMP sensor (PHASE) (bank 2) circuit is open or shorted.]<br/>(Battery current sensor circuit is open or shorted.)<br/>(EVAP control system pressure sensor circuit is shorted.)<br/>(Refrigerant pressure sensor circuit is shorted.)</li><li>• Accelerator pedal position sensor (APP sensor 2)</li><li>• Crankshaft position sensor (POS)</li><li>• Camshaft position sensor (PHASE) (bank 2)</li><li>• Battery current sensor</li><li>• EVAP control system pressure sensor</li><li>• Refrigerant pressure sensor</li></ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for 1 second.
2. Check DTC.

##### Is DTC detected?

- YES >> Go to [EC-494, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006883146

##### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

##### Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

##### 2. CHECK APP SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between APP sensor harness connector and ground.

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6 (With ICC).

NO >> Repair open circuit, short to ground or short to power in harness or connectors (Without ICC).

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M105, M151
- Harness for open or short between ECM and accelerator pedal position sensor

# P2138 APP SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 7. CHECK SENSOR POWER SUPPLY CIRCUIT

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                              |                |            |
|-----------|----------|-------------------------------------|----------------|------------|
| Connector | Terminal | Name                                | Connector      | Terminal   |
| F101      | 46       | CKP sensor (POS)                    | F2             | 1          |
| F102      | 64       | CMP sensor (PHASE) (bank 2)         | F18            | 1          |
|           |          | Battery current sensor              | E21            |            |
| M107      | 103      | APP sensor                          | M153*1<br>M9*2 | 3*1<br>6*2 |
|           |          | EVAP control system pressure sensor | B73            | 3          |
|           | 107      | Refrigerant pressure sensor         | E77            | 3          |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 8.

NO >> Repair short to ground or short to power in harness or connectors.

## 8. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to [EC-314, "Component Inspection"](#).)
- Camshaft position sensor (PHASE) (bank 2) (Refer to [EC-319, "Component Inspection"](#).)
- Battery current sensor (Refer to [EC-437, "Component Inspection"](#).)
- EVAP control system pressure sensor (Refer to [EC-349, "Component Inspection"](#).)
- Refrigerant pressure sensor (Refer to [EC-530, "Diagnosis Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 15.

NO >> Replace malfunctioning component.

## 9. CHECK APP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between APP sensor harness connector and ECM harness connector.

| APP sensor     |          | ECM       |          | Continuity |
|----------------|----------|-----------|----------|------------|
| Connector      | Terminal | Connector | Terminal |            |
| M153*1<br>M9*2 | 5*1      | M107      | 100      | Existed    |
|                | 4*2      |           | 104      |            |
|                | 2        |           |          |            |

\*1: With ICC

\*2: Without ICC

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 11.

NO >> GO TO 10 (With ICC).

NO >> Repair open circuit, short to ground or short to power in harness or connectors (Without ICC).

## 10. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M150, M151

# P2138 APP SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 11. CHECK APP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between APP sensor harness connector and ECM harness connector.

| APP sensor                             |                 | ECM       |          | Continuity |
|--|-----------------|-----------|----------|------------|
| Connector                              | Terminal        | Connector | Terminal |            |
| M153 <sup>*1</sup><br>M9 <sup>*2</sup> | 4 <sup>*1</sup> | M107      | 97       | Existed    |
|  | 3 <sup>*2</sup> |           | 98       |            |
|  | 1               |           |          |            |

\*1: With ICC

\*2: Without ICC

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 13.

NO >> GO TO 12 (With ICC).

NO >> Repair open circuit, short to ground or short to power in harness or connectors (Without ICC).

## 12. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M150, M151
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 13. CHECK APP SENSOR

Refer to [EC-497, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 15.

NO >> GO TO 14.

## 14. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Go to [EC-498, "Special Repair Requirement"](#).

>> INSPECTION END

## 15. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:0000000006883147

### 1. CHECK ACCELERATOR PEDAL POSITION SENSOR

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Turn ignition switch ON.
4. Check the voltage ECM harness connector terminals as per the following.

# P2138 APP SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| ECM       |                   |          | Condition         | Voltage (V)     |             |
|-----------|-------------------|----------|-------------------|-----------------|-------------|
| Connector | +                 | -        |                   |                 |             |
|           | Terminal          | Terminal |                   |                 |             |
| M107      | 97 (APP sensor 1) | 100      | Accelerator pedal | Fully released  | 0.45 - 1.0  |
|           |                   |          |                   | Fully depressed | 4.2 - 4.8   |
|           | 98 (APP sensor 2) | 104      |                   | Fully released  | 0.22 - 0.50 |
|           |                   |          |                   | Fully depressed | 2.1 - 2.5   |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

## 2. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Go to [EC-487, "Special Repair Requirement"](#).

>> INSPECTION END

## Special Repair Requirement

INFOID:000000006883148

## 1. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

Refer to [EC-147, "Work Procedure"](#).

>> GO TO 2.

## 2. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Refer to [EC-148, "Work Procedure"](#).

>> GO TO 3.

## 3. PERFORM IDLE AIR VOLUME LEARNING

Refer to [EC-149, "Work Procedure"](#).

>> END

# P2A00, P2A03 A/F SENSOR 1

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## P2A00, P2A03 A/F SENSOR 1

### DTC Logic

INFOID:000000006883149

#### DTC DETECTION LOGIC

To judge the malfunction, the A/F signal computed by ECM from the A/F sensor 1 signal is monitored not it will shift to LEAN side or RICH side.

| DTC No. | Trouble diagnosis name   | DTC detecting condition   | Possible Cause   |
|---------|--|---|--|
| P2A00   | Air fuel ratio (A/F) sensor 1 (bank 1) circuit range/performance | <ul style="list-style-type: none"><li>The output voltage computed by ECM from the A/F sensor 1 signal is shifts to the lean side for a specified period.</li><li>The A/F signal computed by ECM from the A/F sensor 1 signal is shifts to the rich side for a specified period.</li></ul> | <ul style="list-style-type: none"><li>A/F sensor 1</li><li>A/F sensor 1 heater</li><li>Heated oxygen sensor 2</li><li>Fuel pressure</li><li>Fuel injector</li><li>Intake air leaks</li><li>Exhaust gas leaks</li></ul> |
| P2A03   | Air fuel ratio (A/F) sensor 1 (bank 2) circuit range/performance |   |  |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

- Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON.
- Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 11 V at idle.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

- Clear the mixture ratio self-learning value. Refer to [EC-153, "Work Procedure"](#).
- Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON.
- Turn ignition switch OFF and wait at least 10 seconds.
- Start engine and keep the engine speed between 3,500 and 4,000 rpm for 1 minute under no load.
- Let engine idle for 1 minute.
- Keep engine speed between 2,500 and 3,000 rpm for 20 minutes.
- Check 1st trip DTC.

##### Is 1st trip DTC detected?

- YES >> Go to [EC-499, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006883150

##### 1. CHECK GROUND CONNECTION

- Turn ignition switch OFF.
- Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

##### Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

##### 2. RETIGHTEN A/F SENSOR 1 AND HEATED OXYGEN SENSOR 2

- Loosen and retighten the A/F sensor 1 and heated oxygen sensor 2. Refer to [EM-36, "Removal and Installation"](#).

>> GO TO 3.

# P2A00, P2A03 A/F SENSOR 1

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

## 3. CHECK FOR EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before the three way catalyst 2.

Is exhaust gas detected?

- YES >> Repair or replace.  
NO >> GO TO 4.

## 4. CHECK FOR INTAKE AIR LEAK

1. Start engine and run it at idle.
2. Listen for an intake air leak after the mass air flow sensor.

Is intake air leak detected?

- YES >> Repair or replace.  
NO >> GO TO 5.

## 5. CLEAR THE MIXTURE RATIO SELF-LEARNING VALUE

1. Clear the mixture ratio self-learning value. Refer to [EC-153, "Work Procedure"](#).
2. Run engine for at least 10 minutes at idle speed.

Is the 1st trip DTC P0171, P0172, P0174 or P0175 detected? Is it difficult to start engine?

- YES >> Perform trouble diagnosis for DTC P0171, P0174 or P0172, P0175. Refer to [EC-280, "Diagnosis Procedure"](#) or [EC-284, "Diagnosis Procedure"](#).  
NO >> GO TO 6.

## 6. CHECK HARNESS CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect A/F sensor 1 harness connector.
3. Check harness connector for water.

**Water should not exit.**

Is the inspection result normal?

- YES >> GO TO 7.  
NO >> Repair or replace harness connector.

## 7. CHECK A/F SENSOR 1 POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check the voltage between A/F sensor 1 harness connector and ground.

| DTC   | A/F sensor 1 |           |          | Ground | Voltage         |
|-------|--------------|-----------|----------|--------|-----------------|
|       | Bank         | Connector | Terminal |        |                 |
| P2A00 | 1            | F3        | 4        | Ground | Battery voltage |
| P2A03 | 2            | F20       | 4        |        |                 |

Is the inspection result normal?

- YES >> GO TO 9.  
NO >> GO TO 8.

## 8. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- IPDM E/R harness connector E7
- 15 A fuse (No. 45)
- Harness for open or short between A/F sensor 1 and fuse

>> Repair or replace harness or connectors.

## 9. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.

# P2A00, P2A03 A/F SENSOR 1

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

2. Disconnect ECM harness connector.
3. Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

| DTC   | A/F sensor 1 |           |          | ECM       |          | Continuity |
|-------|--------------|-----------|----------|-----------|----------|------------|
|       | Bank         | Connector | Terminal | Connector | Terminal |            |
| P2A00 | 1            | F3        | 1        | F102      | 57       | Existed    |
|       |              |           | 2        |           | 61       |            |
| P2A03 | 2            | F20       | 1        |           | 65       |            |
|       |              |           | 2        |           | 66       |            |

4. Check the continuity between A/F sensor 1 harness connector and ground, or ECM harness connector and ground.

| DTC   | A/F sensor 1 |           |          | Ground | Continuity  |
|-------|--------------|-----------|----------|--------|-------------|
|       | Bank         | Connector | Terminal |        |             |
| P2A00 | 1            | F3        | 1        | Ground | Not existed |
|       |              |           | 2        |        |             |
| P2A03 | 2            | F20       | 1        |        |             |
|       |              |           | 2        |        |             |

| DTC   | ECM  |           |          | Ground | Continuity  |
|-------|------|-----------|----------|--------|-------------|
|       | Bank | Connector | Terminal |        |             |
| P2A00 | 1    | F102      | 57       | Ground | Not existed |
|       |      |           | 61       |        |             |
| P2A03 | 2    |           | 65       |        |             |
|       |      |           | 66       |        |             |

5. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 10.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 10.CHECK A/F SENSOR 1 HEATER

Refer to [EC-197, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 11.

NO >> GO TO 13.

## 11.CHECK HEATED OXYGEN SENSOR 2

Refer to [EC-261, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 12.

NO >> Replace malfunctioning heated oxygen sensor 2. Refer to [EX-5, "VQ37VHR : Exploded View"](#).

## 12.CHECK INTERMITTENT INCIDENT

Perform [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 13.

NO >> Repair or replace.

## 13.REPLACE AIR FUEL RATIO (A/F) SENSOR 1

Replace air fuel ratio (A/F) sensor 1.

**CAUTION:**

## P2A00, P2A03 A/F SENSOR 1

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

- Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new A/F sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

Do you have CONSULT?

YES >> GO TO 14.

NO >> GO TO 15.

### 14. CONFIRM A/F ADJUSTMENT DATA

---

Ⓟ **With CONSULT**

1. Turn ignition switch ON.
2. Select "A/F ADJ-B1" and "A/F ADJ-B2" in "DATA MONITOR" mode with CONSULT.
3. Make sure that "0.000" is displayed on CONSULT screen.

Is "0.000" displayed?

YES >> INSPECTION END

NO >> GO TO 15.

### 15. CLEAR THE MIXTURE RATIO SELF-LEARNING VALUE

---

Clear the mixture ratio self-learning value. Refer to [EC-153. "Work Procedure"](#).

Do you have CONSULT?

YES >> GO TO 16.

NO >> INSPECTION END

### 16. CONFIRM A/F ADJUSTMENT DATA

---

Ⓟ **With CONSULT**

1. Turn ignition switch ON.
2. Select "A/F ADJ-B1" and "A/F ADJ-B2" in "DATA MONITOR" mode with CONSULT.
3. Make sure that "0.000" is displayed on CONSULT screen.

>> INSPECTION END

# ASCD BRAKE SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## ASCD BRAKE SWITCH

### Component Function Check

INFOID:000000006883151

#### 1. CHECK ASCD BRAKE SWITCH FUNCTION

##### With CONSULT

1. Turn ignition switch ON.
2. Select "BRAKE SW1" in "DATA MONITOR" mode with CONSULT.
3. Check "BRAKE SW1" indication under the following conditions.

| Monitor item | Condition   |                    | Indication |
|--------------|-------------|--------------------|------------|
| BRAKE SW1    | Brake pedal | Slightly depressed | OFF        |
|              | Brake pedal | Fully released     | ON         |

##### Without CONSULT

1. Turn ignition switch ON.
2. Check the voltage between ECM harness connector terminals as per the following.

| Connector | ECM                               |          | Condition   |                    | Voltage (V)     |
|-----------|-----------------------------------|----------|-------------|--------------------|-----------------|
|           | +                                 | -        |             |                    |                 |
|           | Terminal                          | Terminal |             |                    |                 |
| M107      | 126<br>(ASCD brake switch signal) | 128      | Brake pedal | Slightly depressed | Approx. 0       |
|           |                                   |          | Brake pedal | Fully released     | Battery voltage |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-503. "Diagnosis Procedure"](#).

### Diagnosis Procedure

INFOID:000000006883152

#### 1. CHECK ASCD BRAKE SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ASCD brake switch harness connector.
3. Turn ignition switch ON.
4. Check the voltage between ASCD brake switch harness connector and ground.

| ASCD brake switch |          | Ground | Voltage         |
|-------------------|----------|--------|-----------------|
| Connector         | Terminal |        |                 |
| E109              | 1        | Ground | Battery voltage |

Is the inspection result normal?

YES >> GO TO 3.

NO >> GO TO 2.

#### 2. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector E103
- 10 A fuse (No. 3)
- Harness for open or short between ASCD brake switch and fuse

>> Repair open circuit or short to ground in harness or connectors.

#### 3. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between ASCD brake switch harness connector and ECM harness connector.

# ASCD BRAKE SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| ASCD brake switch |          | ECM       |          | Continuity |
|-------------------|----------|-----------|----------|------------|
| Connector         | Terminal | Connector | Terminal |            |
| E109              | 2        | M107      | 126      | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 5.
- NO >> GO TO 4.

## 4.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E106, M6
- Harness for open or short between ECM and ASCD brake switch

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 5.CHECK ASCD BRAKE SWITCH

Refer to [EC-504, "Component Inspection \(ASCD Brake Switch\)"](#)

Is the inspection result normal?

- YES >> GO TO 6.
- NO >> Replace ASCD brake switch. Refer to [BR-18, "Exploded View"](#).

## 6.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection (ASCD Brake Switch)

INFOID:000000006883153

### 1.CHECK ASCD BRAKE SWITCH-I

1. Turn ignition switch OFF.
2. Disconnect ASCD brake switch harness connector.
3. Check the continuity between ASCD brake switch terminals under the following conditions.

| Terminals | Condition   |                    | Continuity  |
|-----------|-------------|--------------------|-------------|
| 1 and 2   | Brake pedal | Fully released     | Existed     |
|           |             | Slightly depressed | Not existed |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> GO TO 2.

### 2.CHECK ASCD BRAKE SWITCH-II

1. Adjust ASCD brake switch installation. Refer to [BR-19, "Inspection and Adjustment"](#).
2. Check the continuity between ASCD brake switch terminals under the following conditions.

| Terminals | Condition   |                    | Continuity  |
|-----------|-------------|--------------------|-------------|
| 1 and 2   | Brake pedal | Fully released     | Existed     |
|           |             | Slightly depressed | Not existed |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Replace ASCD brake switch. Refer to [BR-18, "Exploded View"](#).

# ASCD INDICATOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## ASCD INDICATOR

### Component Function Check

INFOID:000000006883154

#### 1.CHECK ASCD INDICATOR FUNCTION

Check ASCD indicator under the following conditions.

| ASCD INDICATOR | CONDITION  |  | SPECIFICATION |
|----------------|--|--|---------------|
| CRUISE LAMP    | <ul style="list-style-type: none"><li>Ignition switch: ON</li></ul>  | <ul style="list-style-type: none"><li>MAIN switch: Pressed at the 1st time → at the 2nd time</li></ul> | ON → OFF      |
| SET LAMP       | <ul style="list-style-type: none"><li>MAIN switch: ON</li><li>When vehicle speed is between 40 km/h (25 MPH) and 144 km/h (89 MPH)</li></ul> | <ul style="list-style-type: none"><li>ASCD: Operating</li></ul>  | ON            |
|                |  | <ul style="list-style-type: none"><li>ASCD: Not operating</li></ul>                                    | OFF           |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-505, "Diagnosis Procedure"](#).

### Diagnosis Procedure

INFOID:000000006883155

#### 1.CHECK DTC

Check that DTC UXXXX is not displayed.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Perform trouble diagnosis for DTC UXXXX.

#### 2.CHECK DTC WITH "COMBINATION METER"

Refer to [MWI-31, "CONSULT Function"](#).

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair or replace.

#### 3.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> Replace combination meter. Refer to [MWI-79, "Exploded View"](#).

NO >> Repair or replace.

**COOLING FAN**

**Component Function Check**

INFOID:000000006883156

**1. CHECK COOLING FAN FUNCTION**

**With CONSULT**

1. Turn ignition switch ON.
2. Perform "FAN DUTY CONTROL" in "ACTIVE TEST" mode with CONSULT.
3. Make sure that cooling fan speed varies according to the percentage.

**Without CONSULT**

1. Perform IPDM E/R auto active test and check cooling fan motors operation, refer to [PCS-12. "Diagnosis Description"](#).
2. Make sure that cooling fan operates.

Is the inspection result normal?

- YES >> INSPECTION END  
 NO >> Go to [EC-506. "Diagnosis Procedure"](#).

**Diagnosis Procedure**

INFOID:000000006883157

**1. CHECK COOLING FAN CONTROL MODULE POWER SUPPLY CIRCUIT-I**

1. Turn ignition switch OFF.
2. Disconnect cooling fan control module harness connector.
3. Turn ignition switch ON.
4. Check the voltage between cooling fan control module harness connector and ground.

| Cooling fan control module |          | Ground | Voltage         |
|----------------------------|----------|--------|-----------------|
| Connector                  | Terminal |        |                 |
| E37                        | 3        | Ground | Battery voltage |

Is the inspection result normal?

- YES >> GO TO 2.  
 NO >> GO TO 7.

**2. CHECK COOLING FAN CONTROL MODULE GROUND CIRCUIT**

1. Turn ignition switch OFF.
2. Check the continuity between cooling fan control module harness connector and ground.

| Cooling fan control module |          | Ground | Continuity |
|----------------------------|----------|--------|------------|
| Connector                  | Terminal |        |            |
| E37                        | 1        | Ground | Existed    |

3. Also check harness for short to power.

Is the inspection result normal?

- YES >> GO TO 3.  
 NO >> Repair open circuit or short to power in harness or connectors.

**3. CHECK IPDM E/R GROUND CIRCUIT**

1. Disconnect IPDM E/R harness connectors.
2. Check the continuity between IPDM E/R harness connector and ground.

| IPDM E/R  |          | Ground | Continuity |
|-----------|----------|--------|------------|
| Connector | Terminal |        |            |
| E5        | 11       | Ground | Existed    |
| E6        | 41       |        |            |

3. Also check harness for short to power.

# COOLING FAN

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit or short to power in harness or connectors.

### 4. CHECK COOLING FAN CONTROL SIGNAL CIRCUIT

1. Disconnect IPDM E/R harness connector.
2. Check the continuity between IPDM E/R harness connector and cooling fan control module harness connector.

| IPDM E/R  |          | Cooling fan control module |          | Continuity |
|-----------|----------|----------------------------|----------|------------|
| Connector | Terminal | Connector                  | Terminal |            |
| E9        | 97       | E37                        | 2        | Existed    |

3. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 5. CHECK COOLING FAN CONTROL MODULE OUTPUT SIGNAL CIRCUIT

1. Reconnect all harness connectors disconnected.
2. Disconnect cooling fan control module harness connectors.
3. Turn ignition switch ON.
4. Check the voltage between cooling fan control module harness connector and ground.

| Cooling fan control module |          | Ground | Voltage         |
|----------------------------|----------|--------|-----------------|
| Connector                  | Terminal |        |                 |
| E301                       | 4        | Ground | Battery voltage |
| E302                       | 6        |        |                 |

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace cooling fan control module. Refer to [CO-18, "Exploded View"](#).

### 6. CHECK COOLING FAN MOTORS -1 AND -2

Refer to [EC-508, "Component Inspection \(Cooling Fan Motor\)"](#).

Is the inspection result normal?

YES >> GO TO 11.

NO >> Replace cooling fan motor. Refer to [CO-18, "Exploded View"](#).

### 7. CHECK COOLING FAN CONTROL MODULE POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect cooling fan relay.
3. Turn ignition switch ON.
4. Check the voltage between cooling fan relay harness connector and ground.

| Cooling fan relay |          | Ground | Voltage         |
|-------------------|----------|--------|-----------------|
| Connector         | Terminal |        |                 |
| E17               | 1        | Ground | Battery voltage |
|                   | 3        |        |                 |

Is the inspection result normal?

YES >> GO TO 9.

NO >> GO TO 8.

### 8. DETECT MALFUNCTIONING PART

Check the following.

- 10A fuse (No. 42)

# COOLING FAN

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

- IPDM E/R harness connector E7
- 50A fusible link (letter O)
- Harness for open or short between cooling fan relay and fuse
- Harness for open or short between cooling fan relay and battery

>> Repair open circuit, short to ground or short to power in harness or connectors.

### 9. CHECK COOLING FAN CONTROL MODULE POWER SUPPLY CIRCUIT-III

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R harness connector.
3. Check the continuity between cooling fan relay harness connector and IPDM E/R harness connector.

| Cooling fan relay |          | IPDM E/R  |          | Continuity |
|-------------------|----------|-----------|----------|------------|
| Connector         | Terminal | Connector | Terminal |            |
| E17               | 2        | E7        | 73       | Existed    |

4. Check the continuity between cooling fan relay harness connector and cooling fan control module harness connector.

| Cooling fan relay |          | Cooling fan control module |          | Continuity |
|-------------------|----------|----------------------------|----------|------------|
| Connector         | Terminal | Connector                  | Terminal |            |
| E17               | 5        | E37                        | 3        | Existed    |

5. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 10.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 10. CHECK COOLING FAN RELAY

Refer to [EC-509, "Component Inspection \(Cooling Fan Relay\)"](#).

Is the inspection result normal?

YES >> GO TO 11.

NO >> Replace cooling fan relay.

### 11. CHECK INTERMITTENT INCIDENT

Perform [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> Replace IPDM E/R. Refer to [PCS-33, "Exploded View"](#).

NO >> Repair or replace harness connectors.

## Component Inspection (Cooling Fan Motor)

INFOID:000000006883158

### 1. CHECK COOLING FAN MOTOR

1. Turn ignition switch OFF.
2. Disconnect cooling fan control module harness connectors.
3. Supply cooling fan control module terminals with battery voltage and check operation.

| Cooling fan control module |           |          |     | Operation             |
|----------------------------|-----------|----------|-----|-----------------------|
| Motor                      | Connector | Terminal |     |                       |
|                            |           | (+)      | (-) |                       |
| 1                          | E301      | 4        | 5   | Cooling fan operates. |
| 2                          | E302      | 6        | 7   |                       |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace cooling fan motor. Refer to [CO-18, "Exploded View"](#).

# COOLING FAN

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## Component Inspection (Cooling Fan Relay)

INFOID:000000006883159

### 1. CHECK COOLING FAN RELAY

1. Turn ignition switch OFF.
2. Remove cooling fan relay.
3. Check the continuity between cooling fan relay terminals under the following conditions.

| Terminals | Conditions   | Continuity  |
|-----------|--|-------------|
| 3 and 5   | 12 V direct current supply between terminals 1 and 2 | Existed     |
|           | No current supply                                    | Not existed |

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> Replace cooling fan relay.

# ELECTRICAL LOAD SIGNAL

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## ELECTRICAL LOAD SIGNAL

### Description

INFOID:000000006883160

The electrical load signal (Headlamp switch signal, rear window defogger switch signal, etc.) is transferred via the CAN communication line.

### Component Function Check

INFOID:000000006883161

#### 1. CHECK REAR WINDOW DEFOGGER SWITCH FUNCTION

1. Turn ignition switch ON.
2. Connect CONSULT and select "DATA MONITOR" mode.
3. Select "LOAD SIGNAL" and check indication under the following conditions.

| Monitor item | Condition                   | Indication |     |
|--------------|-----------------------------|------------|-----|
| LOAD SIGNAL  | Rear window defogger switch | ON         | ON  |
|              |                             | OFF        | OFF |

Is the inspection result normal?

YES >> GO TO 2.

NO >> Go to [EC-510, "Diagnosis Procedure"](#).

#### 2. CHECK LIGHTING SWITCH FUNCTION

Check "LOAD SIGNAL" indication under the following conditions.

| Monitor item | Condition       | Indication         |     |
|--------------|-----------------|--------------------|-----|
| LOAD SIGNAL  | Lighting switch | ON at 2nd position | ON  |
|              |                 | OFF                | OFF |

Is the inspection result normal?

YES >> GO TO 3.

NO >> Go to [EC-510, "Diagnosis Procedure"](#).

#### 3. CHECK HEATER FAN CONTROL SWITCH FUNCTION

Select "HEATER FAN SW" and check indication under the following conditions.

| Monitor item  | Condition                 | Indication |     |
|---------------|---------------------------|------------|-----|
| HEATER FAN SW | Heater fan control switch | ON         | ON  |
|               |                           | OFF        | OFF |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-510, "Diagnosis Procedure"](#).

### Diagnosis Procedure

INFOID:000000006883162

#### 1. INSPECTION START

Confirm the malfunctioning circuit (rear window defogger, headlamp or heater fan). Refer to [EC-510, "Component Function Check"](#).

Which circuit is related to the incident?

Rear window defogger >> GO TO 2.

Headlamp >> GO TO 3.

Heater fan >> GO TO 4.

#### 2. CHECK REAR WINDOW DEFOGGER SYSTEM

Refer to [DEF-11, "Work Flow"](#).

# ELECTRICAL LOAD SIGNAL

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

>> INSPECTION END

## 3.CHECK HEADLAMP SYSTEM

Refer to [EXL-49, "Work Flow"](#).

>> INSPECTION END

## 4.CHECK HEATER FAN CONTROL SYSTEM

Refer to [HAC-68, "Work Flow"](#).

>> INSPECTION END

## FUEL INJECTOR

### Component Function Check

INFOID:000000006883163

#### 1.INSPECTION START

Turn ignition switch to START.

Are any cylinders ignited?

- YES >> GO TO 2.
- NO >> Go to [EC-512, "Diagnosis Procedure"](#).

#### 2.CHECK FUEL INJECTOR FUNCTION

##### Ⓜ With CONSULT

1. Start engine.
2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT.
3. Make sure that each circuit produces a momentary engine speed drop.

##### ⓧ Without CONSULT

1. Start engine.
2. Listen to each fuel injector operating sound.

**Clicking sound should be heard.**

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Go to [EC-512, "Diagnosis Procedure"](#).

### Diagnosis Procedure

INFOID:000000006883164

#### 1.CHECK FUEL INJECTOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect fuel injector harness connector.
3. Turn ignition switch ON.
4. Check the voltage between fuel injector harness connector and ground.

| Fuel injector |           |          | Ground | Voltage         |
|---------------|-----------|----------|--------|-----------------|
| Cylinder      | Connector | Terminal |        |                 |
| 1             | F121      | 1        | Ground | Battery voltage |
| 2             | F122      | 1        |        |                 |
| 3             | F123      | 1        |        |                 |
| 4             | F124      | 1        |        |                 |
| 5             | F125      | 1        |        |                 |
| 6             | F126      | 1        |        |                 |

Is the inspection result normal?

- YES >> GO TO 3.
- NO >> GO TO 2.

#### 2.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness connectors F30, F120
- IPDM E/R harness connector E7
- 10 A fuse (No. 44)

# FUEL INJECTOR

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

- Harness for open or short between fuel injector and fuse

>> Repair open circuit, short to ground or short to power in harness or connectors.

### 3.CHECK FUEL INJECTOR OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between fuel injector harness connector and ECM harness connector.

| Fuel injector |           |          | ECM       |          | Continuity |
|---------------|-----------|----------|-----------|----------|------------|
| Cylinder      | Connector | Terminal | Connector | Terminal |            |
| 1             | F121      | 2        | F102      | 89       | Existed    |
| 2             | F122      | 2        |           | 85       |            |
| 3             | F123      | 2        |           | 81       |            |
| 4             | F124      | 2        |           | 90       |            |
| 5             | F125      | 2        |           | 86       |            |
| 6             | F126      | 2        |           | 82       |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 5.
- NO >> GO TO 4

### 4.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F30, F120
- Harness for open or short between fuel injector and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

### 5.CHECK FUEL INJECTOR

Refer to [EC-513. "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 6.
- NO >> Replace malfunctioning fuel injector. Refer to [EM-39. "Exploded View"](#).

### 6.CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

Is the inspection result normal?

- YES >> Replace IPDM E/R. Refer to [PCS-33. "Exploded View"](#).
- NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## Component Inspection

INFOID:000000006883165

### 1.CHECK FUEL INJECTOR

1. Turn ignition switch OFF.
2. Disconnect fuel injector harness connector.
3. Check resistance between fuel injector terminals as follows.

| Terminals | Resistance ( $\Omega$ )                 |
|-----------|---|
| 1 and 2   | 11.1 - 14.3 [at 10 - 60°C (60 - 140°F)] |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Replace malfunctioning fuel injector. Refer to [EM-39. "Exploded View"](#).

# FUEL PUMP

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## FUEL PUMP

### Component Function Check

INFOID:000000006883166

#### 1.CHECK FUEL PUMP FUNCTION

1. Turn ignition switch ON.
2. Pinch fuel feed hose (1) with two fingers.

**Fuel pressure pulsation should be felt on the fuel feed hose for 1 second after ignition switch is turned ON.**

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> [EC-514. "Diagnosis Procedure"](#).

### Diagnosis Procedure

INFOID:000000006883167

#### 1.CHECK FUEL PUMP POWER SUPPLY CIRCUIT-I

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Turn ignition switch ON.
4. Check the voltage between ECM harness connector and ground.

| ECM       |          | Ground | Voltage         |
|-----------|----------|--------|-----------------|
| Connector | Terminal |        |                 |
| F101      | 22       | Ground | Battery voltage |

Is the inspection result normal?

- YES >> GO TO 4.  
NO >> GO TO 2.

#### 2.CHECK FUEL PUMP POWER SUPPLY CIRCUIT-II

Check the voltage between IPDM E/R harness connector and ground.

| IPDM E/R  |          | Ground | Voltage         |
|-----------|----------|--------|-----------------|
| Connector | Terminal |        |                 |
| E7        | 77       | Ground | Battery voltage |

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> GO TO 10.

#### 3.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between IPDM E/R and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

#### 4.CHECK FUEL PUMP POWER SUPPLY CIRCUIT-III

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Disconnect "fuel level sensor unit and fuel pump" harness connector.
4. Turn ignition switch ON.

# FUEL PUMP

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

5. Check the voltage between “fuel level sensor unit and fuel pump” harness connector and ground.

| Fuel level sensor unit and fuel pump |          | Ground | Voltage   |
|--------------------------------------|----------|--------|---|
| Connector                            | Terminal |        |   |
| B241                                 | 1        | Ground | Battery voltage should exist for 1 second after ignition switch is turned ON. |

Is the inspection result normal?

YES >> GO TO 8.

NO >> GO TO 5.

## 5.CHECK 15A FUSE

1. Turn ignition switch OFF.
2. Disconnect 15A fuse (No. 41) from IPDM E/R.
3. Check 15 A fuse.

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace fuse.

## 6.CHECK FUEL PUMP POWER SUPPLY CIRCUIT-IV

1. Disconnect IPDM E/R harness connector.
2. Check the continuity between IPDM E/R harness connector and “fuel level sensor unit and fuel pump” harness connector.

| IPDM E/R  |          | Fuel level sensor unit and fuel pump |          | Continuity |
|-----------|----------|--------------------------------------|----------|------------|
| Connector | Terminal | Connector                            | Terminal |            |
| E5        | 13       | B241                                 | 1        | Existed    |

3. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 10.

NO >> GO TO 7.

## 7.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E105, B3
- Harness connectors B51, B230
- IPDM E/R harness connector E5
- Harness for open or short between IPDM E/R and “fuel level sensor unit and fuel pump”

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 8.CHECK FUEL PUMP GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Check the continuity between “fuel level sensor unit and fuel pump” harness connector and ground.

| Fuel level sensor unit and fuel pump |          | Ground | Continuity |
|--------------------------------------|----------|--------|------------|
| Connector                            | Terminal |        |            |
| B241                                 | 3        | Ground | Existed    |

3. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 9.

NO >> Repair open circuit or short to power in harness or connectors.

## 9.CHECK FUEL PUMP

# FUEL PUMP

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

Refer to [EC-516. "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 10.

NO >> Replace fuel pump. Refer to [FL-5. "Exploded View"](#).

## 10.CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

Is the inspection result normal?

YES >> Replace IPDM E/R. Refer to [PCS-33. "Exploded View"](#).

NO >> Repair or replace harness or connectors.

## Component Inspection

INFOID:000000006883168

### 1.CHECK FUEL PUMP

1. Turn ignition switch OFF.
2. Disconnect "fuel level sensor unit and fuel pump" harness connector.
3. Check resistance between "fuel level sensor unit and fuel pump" terminals as follows.

| Terminals | Resistance ( $\Omega$ )    |
|-----------|----------------------------|
| 1 and 3   | 0.2 - 5.0 [at 25°C (77°F)] |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace "fuel level sensor unit and fuel pump". Refer to [FL-5. "Exploded View"](#).

# ICC BRAKE SWITCH

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## ICC BRAKE SWITCH

### Component Function Check

INFOID:000000006883169

#### 1. CHECK ICC BRAKE SWITCH FUNCTION

##### With CONSULT

1. Turn ignition switch ON.
2. Select "BRAKE SW1" in "DATA MONITOR" mode with CONSULT.
3. Check "BRAKE SW1" indication under the following conditions.

| Monitor item | Condition   |                    | Indication |
|--------------|-------------|--------------------|------------|
| BRAKE SW1    | Brake pedal | Slightly depressed | OFF        |
|              | Brake pedal | Fully released     | ON         |

##### Without CONSULT

1. Turn ignition switch ON.
2. Check the voltage between ECM harness connector terminals as per the following.

| ECM       |                                  |          | Condition   | Voltage (V)        |                 |
|-----------|----------------------------------|----------|-------------|--------------------|-----------------|

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> Go to [EC-517. "Diagnosis Procedure"](#).

### Diagnosis Procedure

INFOID:000000006883170

#### 1. CHECK ICC BRAKE SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ICC brake switch harness connector.
3. Turn ignition switch ON.
4. Check the voltage between ICC brake switch harness connector and ground.

| ICC brake switch |          | Ground | Voltage         |
|------------------|----------|--------|-----------------|
| Connector        | Terminal |        |                 |
| E114             | 1        | Ground | Battery voltage |

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> GO TO 2.

#### 2. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector E103
- 10A fuse (No. 3)
- Harness for open or short between ICC brake switch and fuse

>> Repair open circuit or short to ground in harness or connectors.

#### 3. CHECK ICC BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.

# ICC BRAKE SWITCH

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

3. Check the continuity between ICC brake switch harness connector and ECM harness connector.

| ICC brake switch |          | ECM       |          | Continuity |
|------------------|----------|-----------|----------|------------|
| Connector        | Terminal | Connector | Terminal |            |
| E114             | 2        | M107      | 126      | Existed    |

4. Also check harness for short to ground and short to power.

### Is the inspection result normal?

YES >> GO TO 5.

NO >> GO TO 4.

## 4.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E106, M6
- Harness for open or short between ICC brake switch and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 5.CHECK ICC BRAKE SWITCH

Refer to [EC-518, "Component Inspection \(ICC Brake Switch\)"](#).

### Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace ICC brake switch. Refer to [BR-18, "Exploded View"](#).

## 6.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection (ICC Brake Switch)

INFOID:000000006883171

### 1.CHECK ICC BRAKE SWITCH-I

1. Turn ignition switch OFF.
2. Disconnect ICC brake switch harness connector.
3. Check the continuity between ICC brake switch terminals under the following conditions.

| Terminals | Condition   |                    | Continuity  |
|-----------|-------------|--------------------|-------------|
| 1 and 2   | Brake pedal | Fully released     | Existed     |
|           |             | Slightly depressed | Not existed |

### Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

### 2.CHECK ICC BRAKE SWITCH-II

1. Adjust ICC brake switch installation. Refer to [BR-19, "Inspection and Adjustment"](#).
2. Check the continuity between ICC brake switch terminals under the following conditions.

| Terminals | Condition   |                    | Continuity  |
|-----------|-------------|--------------------|-------------|
| 1 and 2   | Brake pedal | Fully released     | Existed     |
|           |             | Slightly depressed | Not existed |

### Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace ICC brake switch. Refer to [BR-18, "Exploded View"](#).

# IGNITION SIGNAL

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## IGNITION SIGNAL

### Component Function Check

INFOID:000000006883172

#### 1.INSPECTION START

Turn ignition switch OFF, and restart engine.

Does the engine start?

YES-1 >> With CONSULT: GO TO 2.

YES-2 >> Without CONSULT: GO TO 3.

No >> Go to [EC-519, "Diagnosis Procedure"](#).

#### 2.CHECK IGNITION SIGNAL FUNCTION

##### With CONSULT

1. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT.

2. Make sure that each circuit produces a momentary engine speed drop.

Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-519, "Diagnosis Procedure"](#).

#### 3.CHECK IGNITION SIGNAL FUNCTION

##### Without CONSULT

1. Let engine idle.

2. Read the voltage signal between ECM harness connector terminals under the following conditions with an oscilloscope.

| ECM       |          |           |          | Voltage signal |
|-----------|----------|-----------|----------|----------------|
| +         |          | -         |          |                |
| Connector | Terminal | Connector | Terminal |                |
| F101      | 11       | M107      | 128      |                |
|           | 12       |           |          |                |
|           | 15       |           |          |                |
|           | 16       |           |          |                |
|           | 19       |           |          |                |
|           | 20       |           |          |                |

##### NOTE:

The pulse cycle changes depending on rpm at idle.

Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-519, "Diagnosis Procedure"](#).

### Diagnosis Procedure

INFOID:000000006883173

#### 1.CHECK IGNITION COIL POWER SUPPLY CIRCUIT-I

1. Turn ignition switch OFF, wait at least 10 seconds and then turn it ON.

2. Check the voltage between ECM harness connector terminals as per the following.

| ECM       |          |          | Voltage         |
|-----------|----------|----------|-----------------|
| Connector | +        | -        |                 |
|           | Terminal | Terminal |                 |
| M107      | 125      | 128      | Battery voltage |

Is the inspection result normal?

YES >> GO TO 2.

# IGNITION SIGNAL

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

NO >> Go to [EC-180, "Diagnosis Procedure"](#).

## 2.CHECK IGNITION COIL POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect condenser harness connector.
3. Turn ignition switch ON.
4. Check the voltage between condenser harness connector and ground.

| Condenser |          | Ground | Voltage         |
|-----------|----------|--------|-----------------|
| Connector | Terminal |        |                 |
| F8        | 1        | Ground | Battery voltage |

Is the inspection result normal?

YES >> GO TO 5.

NO >> GO TO 3.

## 3.CHECK IGNITION COIL POWER SUPPLY CIRCUIT-III

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R harness connector.
3. Check the continuity between IPDM E/R harness connector and condenser harness connector.

| IPDM E/R  |          | Condenser |          | Continuity |
|-----------|----------|-----------|----------|------------|
| Connector | Terminal | Connector | Terminal |            |
| E5        | 5        | F8        | 1        | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> Go to [EC-180, "Diagnosis Procedure"](#).

NO >> GO TO 4.

## 4.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between IPDM E/R and condenser

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 5.CHECK CONDENSER GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Check the continuity between condenser harness connector and ground.

| Condenser |          | Ground | Continuity |
|-----------|----------|--------|------------|
| Connector | Terminal |        |            |
| F8        | 2        | Ground | Existed    |

3. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair open circuit or short to power in harness or connectors.

## 6.CHECK CONDENSER

Refer to [EC-523, "Component Inspection \(Condenser\)"](#)

Is the inspection result normal?

YES >> GO TO 7.

NO >> Replace condenser.

## 7.CHECK IGNITION COIL POWER SUPPLY CIRCUIT-IV

# IGNITION SIGNAL

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

1. Reconnect all harness connectors disconnected.
2. Disconnect ignition coil harness connector.
3. Turn ignition switch ON.
4. Check the voltage between ignition coil harness connector and ground.

| Ignition coil |           |          | Ground | Voltage         |
|---------------|-----------|----------|--------|-----------------|
| Cylinder      | Connector | Terminal |        |                 |
| 1             | F11       | 3        | Ground | Battery voltage |
| 2             | F12       | 3        |        |                 |
| 3             | F13       | 3        |        |                 |
| 4             | F14       | 3        |        |                 |
| 5             | F15       | 3        |        |                 |
| 6             | F16       | 3        |        |                 |

Is the inspection result normal?

YES >> GO TO 9.

NO >> GO TO 8.

## 8.DETECT MALFUNCTIONING PART

Check the following.

- Harness connector F40, E20
- Harness for open or short between ignition coil and harness connector F40

>> Repair or replace harness or connectors.

## 9.CHECK IGNITION COIL GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Check the continuity between ignition coil harness connector and ground.

| Ignition coil |           |          | Ground | Continuity |
|---------------|-----------|----------|--------|------------|
| Cylinder      | Connector | Terminal |        |            |
| 1             | F11       | 2        | Ground | Existed    |
| 2             | F12       | 2        |        |            |
| 3             | F13       | 2        |        |            |
| 4             | F14       | 2        |        |            |
| 5             | F15       | 2        |        |            |
| 6             | F16       | 2        |        |            |

3. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 10.

NO >> Repair open circuit or short to power in harness or connectors.

## 10.CHECK IGNITION COIL OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check the continuity between ignition coil harness connector and ECM harness connector.

# IGNITION SIGNAL

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| Ignition coil |           |          | ECM       |          | Continuity |
|---------------|-----------|----------|-----------|----------|------------|
| Cylinder      | Connector | Terminal | Connector | Terminal |            |
| 1             | F11       | 1        | F101      | 20       | Existed    |
| 2             | F12       | 1        |           | 16       |            |
| 3             | F13       | 1        |           | 12       |            |
| 4             | F14       | 1        |           | 11       |            |
| 5             | F15       | 1        |           | 15       |            |
| 6             | F16       | 1        |           | 19       |            |

3. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 11.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 11.CHECK IGNITION COIL WITH POWER TRANSISTOR

Refer to [EC-522, "Component Inspection \(Ignition Coil with Power Transistor\)"](#).

Is the inspection result normal?

YES >> GO TO 12.

NO >> Replace malfunctioning ignition coil with power transistor. Refer to [EM-39, "Exploded View"](#).

## 12.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection (Ignition Coil with Power Transistor)

INFOID:000000006883174

### 1.CHECK IGNITION COIL WITH POWER TRANSISTOR-I

1. Turn ignition switch OFF.
2. Disconnect ignition coil harness connector.
3. Check resistance between ignition coil terminals as per the following.

| Terminals | Resistance ( $\Omega$ ) [at 25°C (77°F)] |
|-----------|--|
| 1 and 2   | Except 0 or $\infty$                     |
| 1 and 3   | Except 0                                 |
| 2 and 3   |  |

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace malfunctioning ignition coil with power transistor. Refer to [EM-39, "Exploded View"](#).

### 2.CHECK IGNITION COIL WITH POWER TRANSISTOR-II

#### **CAUTION:**

**Perform the following procedure in a place where with no combustible objects and good ventilation.**

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.

# IGNITION SIGNAL

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

3. Remove fuel pump fuse (1) in IPDM E/R (2) to release fuel pressure.  
**NOTE:**  
 Do not use CONSULT to release fuel pressure, or fuel pressure applies again during the following procedure.
4. Start engine.
5. After engine stalls, crank it two or three times to release all fuel pressure.
6. Turn ignition switch OFF.
7. Remove all ignition coil harness connectors to avoid the electrical discharge from the ignition coils.
8. Remove ignition coil and spark plug of the cylinder to be checked.
9. Crank engine for 5 seconds or more to remove combustion gas in the cylinder.
10. Connect spark plug and harness connector to ignition coil.
11. Fix ignition coil using a rope etc. with gap of 13 - 17 mm (0.52 - 0.66 in) between the edge of the spark plug and grounded metal portion as shown in the figure.
12. Crank engine for about three seconds, and check whether spark is generated between the spark plug and the grounded metal portion.

**Spark should be generated.**

### CAUTION:

- Never place the spark plug and the ignition coil within 50 cm (19.7 in) each other. Be careful not to get an electrical shock while checking, because the electrical discharge voltage becomes 20 kV or more.
- It might damage the ignition coil if the gap of more than 17 mm (0.66 in) is made.

### NOTE:

When the gap is less than 13 mm (0.52 in), spark might be generated even if the coil is malfunctioning.

### Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace malfunctioning ignition coil with power transistor. Refer to [EM-39, "Exploded View"](#).

## Component Inspection (Condenser)

INFOID:000000006883175

### 1. CHECK CONDENSER

1. Turn ignition switch OFF.
2. Disconnect condenser harness connector.
3. Check resistance between condenser terminals as per the following.

| Terminals | Resistance (MΩ)          |
|-----------|--------------------------|
| 1 and 2   | Above 1 [at 25°C (77°F)] |

### Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace condenser.

# MALFUNCTION INDICATOR LAMP

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## MALFUNCTION INDICATOR LAMP

### Component Function Check

INFOID:000000006883176

#### 1.CHECK MIL FUNCTION

---

1. Turn ignition switch ON.
2. Make sure that MIL illuminates.

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Go to [EC-524, "Diagnosis Procedure"](#).

### Diagnosis Procedure

INFOID:000000006883177

#### 1.CHECK DTC

---

Check that DTC UXXXX is not displayed.

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Perform trouble diagnosis for DTC UXXXX.

#### 2.CHECK DTC WITH "COMBINATION METER"

---

Refer to [MWI-31, "CONSULT Function"](#).

Is the inspection result normal?

- YES >> GO TO 3.
- NO >> Repair or replace.

#### 3.CHECK INTERMITTENT INCIDENT

---

Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

- YES >> Replace combination meter. Refer to [MWI-79, "Exploded View"](#).
- NO >> Repair or replace.

# ON BOARD REFUELING VAPOR RECOVERY (ORVR)

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## ON BOARD REFUELING VAPOR RECOVERY (ORVR)

### Component Function Check

INFOID:000000006883178

#### 1.CHECK ORVR FUNCTION

Check whether the following symptoms are present.

- Fuel odor from EVAP canister is strong.
- Cannot refuel/Fuel odor from the fuel filler opening is strong while refueling.

Are any symptoms present?

- YES >> Go to [EC-525. "Diagnosis Procedure"](#).  
NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000006883179

#### 1.INSPECTION START

Check whether the following symptoms are present.

- A: Fuel odor from EVAP canister is strong.  
B: Cannot refuel/Fuel odor from the fuel filler opening is strong while refueling.

Which symptom is present?

- A >> GO TO 2.  
B >> GO TO 7.

#### 2.CHECK EVAP CANISTER

1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
2. Weigh the EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.

**The weight should be less than 2.1 kg (4.6 lb).**

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> GO TO 4.

#### 3.CHECK IF EVAP CANISTER IS SATURATED WITH WATER

Check if water will drain from EVAP canister (1).

- 2: EVAP canister vent control valve

Does water drain from the EVAP canister?

- YES >> GO TO 4.  
NO >> GO TO 6.

#### 4.REPLACE EVAP CANISTER

Replace EVAP canister with a new one.

>> GO TO 5.

#### 5.DETECT MALFUNCTIONING PART

Check the EVAP hose between EVAP canister and vehicle frame for clogging or poor connection.

>> Repair or replace EVAP hose.

#### 6.CHECK REFUELING EVAP VAPOR CUT VALVE

Refer to [EC-527. "Component Inspection"](#).

# ON BOARD REFUELING VAPOR RECOVERY (ORVR)

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace refueling EVAP vapor cut valve with fuel tank. Refer to [FL-10. "Exploded View"](#).

## 7. CHECK EVAP CANISTER

1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.

2. Weigh the EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.

**The weight should be less than 2.1 kg (4.6 lb).**

Is the inspection result normal?

YES >> GO TO 8.

NO >> GO TO 9.

## 8. CHECK IF EVAP CANISTER IS SATURATED WITH WATER

Check if water will drain from EVAP canister (1).

2 : EVAP canister vent control valve

Does water drain from the EVAP canister?

YES >> GO TO 9.

NO >> GO TO 11.

## 9. REPLACE EVAP CANISTER

Replace EVAP canister with a new one.

>> GO TO 10.

## 10. DETECT MALFUNCTIONING PART

Check the EVAP hose between EVAP canister and vehicle frame for clogging or poor connection.

>> Repair or replace EVAP hose.

## 11. CHECK VENT HOSES AND VENT TUBES

Check hoses and tubes between EVAP canister and refueling control valve for clogging, kinks, looseness and improper connection.

Is the inspection result normal?

YES >> GO TO 12.

NO >> Repair or replace hoses and tubes.

## 12. CHECK FILLER NECK TUBE

Check recirculation line for clogging, dents and cracks.

Is the inspection result normal?

YES >> GO TO 13.

NO >> Replace filler neck tube.

## 13. CHECK REFUELING EVAP VAPOR CUT VALVE

Refer to [EC-527. "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 14.

NO >> Replace refueling EVAP vapor cut valve with fuel tank. Refer to [FL-10. "Exploded View"](#).

## 14. CHECK FUEL FILLER TUBE

Check filler neck tube and hose connected to the fuel tank for clogging, dents and cracks.

# ON BOARD REFUELING VAPOR RECOVERY (ORVR)

[VQ37VHR FOR USA AND CANADA]

< DTC/CIRCUIT DIAGNOSIS >

Is the inspection result normal?

YES >> GO TO 15.

NO >> Replace fuel filler tube. Refer to [FL-10, "Exploded View"](#).

## 15.CHECK ONE-WAY FUEL VALVE-I

Check one-way valve for clogging.

Is the inspection result normal?

YES >> GO TO 16.

NO >> Repair or replace one-way fuel valve with fuel tank. Refer to [FL-10, "Exploded View"](#).

## 16.CHECK ONE-WAY FUEL VALVE-II

1. Make sure that fuel is drained from the tank.
2. Remove fuel filler tube and hose.
3. Check one-way fuel valve for operation as follows.  
When a stick is inserted, the valve should open, when removing stick it should close.

**Do not drop any material into the tank.**

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace fuel filler tube or replace one-way fuel valve with fuel tank. Refer to [FL-10, "Exploded View"](#).

INFOID:000000006883180

## Component Inspection

### 1.INSPECTION START

Do you have CONSULT?

Do you have CONSULT?

YES >> GO TO 2.

NO >> GO TO 3.

### 2.CHECK REFUELING EVAP VAPOR CUT VALVE

**Ⓜ With CONSULT**

1. Turn ignition switch OFF.
2. Remove fuel tank. Refer to [FL-10, "Removal and Installation"](#).
3. Drain fuel from the tank as follows:
  - Remove fuel feed hose located on the fuel gauge retainer.
  - Connect a spare fuel hose, one side to fuel gauge retainer where the hose was removed and the other side to a fuel container.
  - Drain fuel using "FUEL PUMP RELAY" in "ACTIVE TEST" mode with CONSULT.
4. Check refueling EVAP vapor cut valve for being stuck to close as follows.  
Blow air into the refueling EVAP vapor cut valve (from the end of EVAP/ORVR line hose), and check that the air flows freely into the tank.
5. Check refueling EVAP vapor cut valve for being stuck to open as follows.
  - Connect vacuum pump to hose end.
  - Remove fuel gauge retainer with fuel gauge unit.

**Always replace O-ring with new one.**

  - Turn fuel tank upside down.

# ON BOARD REFUELING VAPOR RECOVERY (ORVR)

[VQ37VHR FOR USA AND CANADA]

## < DTC/CIRCUIT DIAGNOSIS >

- Apply vacuum pressure to hose end [-13.3 kPa (-0.136 kg/cm<sup>3</sup>, -1.93 psi)] with fuel gauge retainer remaining open and check that the pressure is applicable.

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Replace refueling EVAP vapor cut valve with fuel tank.

## 3. CHECK REFUELING EVAP VAPOR CUT VALVE

### ⊗ Without CONSULT

1. Turn ignition switch OFF.
  2. Remove fuel tank. Refer to [FL-10. "Removal and Installation"](#).
  3. Drain fuel from the tank as follows:
    - Remove fuel gauge retainer.
    - Drain fuel from the tank using a handy pump into a fuel container.
  4. Check refueling EVAP vapor cut valve for being stuck to close as follows.  
Blow air into the refueling EVAP vapor cut valve (from the end of EVAP/ORVR line hose), and check that the air flows freely into the tank.
  5. Check refueling EVAP vapor cut valve for being stuck to open as follows.
    - Connect vacuum pump to hose end.
    - Remove fuel gauge retainer with fuel gauge unit.
- Always replace O-ring with new one.**
- Turn fuel tank upside down.
  - Apply vacuum pressure to hose end [-13.3 kPa (-0.136 kg/cm<sup>3</sup>, -1.93 psi)] with fuel gauge retainer remaining open and check that the pressure is applicable.

# ON BOARD REFUELING VAPOR RECOVERY (ORVR)

# REFRIGERANT PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## REFRIGERANT PRESSURE SENSOR

### Component Function Check

INFOID:000000006883181

#### 1. CHECK REFRIGERANT PRESSURE SENSOR FUNCTION

1. Start engine and warm it up to normal operating temperature.
2. Turn A/C switch and blower fan switch ON.
3. Check the voltage between ECM harness connector terminals as per the following.

| Connector | ECM   |          | Voltage (V) |
|-----------|---|----------|-------------|
|           | +   | -        |             |
|           | Terminal                                    | Terminal |             |
| M107      | 105<br>(Refrigerant pressure sensor signal) | 112      | 1.0 - 4.0   |

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> Go to [EC-530, "Diagnosis Procedure"](#).

### Diagnosis Procedure

INFOID:000000006883182

#### 1. CHECK GROUND CONNECTION

1. Turn A/C switch and blower fan switch OFF.
2. Turn ignition switch OFF.
3. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK REFRIGERANT PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Disconnect refrigerant pressure sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between refrigerant pressure sensor harness connector and ground.

| Refrigerant pressure sensor |          | Ground | Voltage (V) |
|-----------------------------|----------|--------|-------------|
| Connector                   | Terminal |        |             |
| E77                         | 3        | Ground | Approx. 5   |

Is the inspection result normal?

- YES >> GO TO 4.  
NO >> GO TO 3.

#### 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M6, E106
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair open circuit, short to ground or short to power in harness or connectors.

#### 4. CHECK REFRIGERANT PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between refrigerant pressure sensor harness connector and ECM harness connector.

# REFRIGERANT PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

| Refrigerant pressure sensor |          | ECM       |          | Continuity |
|-----------------------------|----------|-----------|----------|------------|
| Connector                   | Terminal | Connector | Terminal |            |
| E77                         | 1        | M107      | 112      | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 6.
- NO >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M6, E106
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 6. CHECK REFRIGERANT PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between refrigerant pressure sensor harness connector and ECM harness connector.

| Refrigerant pressure sensor |          | ECM       |          | Continuity |
|-----------------------------|----------|-----------|----------|------------|
| Connector                   | Terminal | Connector | Terminal |            |
| E77                         | 2        | M107      | 105      | Existed    |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 8.
- NO >> GO TO 7.

## 7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M6, E106
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 8. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

- YES >> Replace refrigerant pressure sensor. Refer to [HA-39, "Exploded View"](#).
- NO >> Repair or replace.

# NORMAL OPERATING CONDITION

< SYMPTOM DIAGNOSIS >

[VQ37VHR FOR USA AND CANADA]

## NORMAL OPERATING CONDITION

### Description

INFOID:000000006883185

#### FUEL CUT CONTROL (AT NO LOAD AND HIGH ENGINE SPEED)

If the engine speed is above 2,400 rpm under no load (for example, the selector lever position is neutral and engine speed is over 2,400 rpm) fuel will be cut off after some time. The exact time when the fuel is cut off varies based on engine speed. However, if the engine speed is above 4,500 rpm, fuel will be cut off in a few seconds. Fuel cut will be operated until the engine speed reaches 1,500 rpm, then fuel cut will be cancelled.

**NOTE:**

This function is different from deceleration control listed under Multiport Fuel Injection (MFI) System, [EC-58. "MULTIPOINT FUEL INJECTION SYSTEM : System Description"](#).

#### TORQUE CUT CONTROL (AT HIGH ENGINE OIL TEMPERATURE)

ECM receives engine oil temperature signal from engine oil temperature sensor.

To avoid VVEL performance, ECM performs the engine torque cut control at high engine oil temperature.

If engine oil temperature is too high, engine oil viscosity will change. As a result, engine oil pressure is decreased. This control is to control the VVEL operating angle by operating the VVEL actuator sub assembly. If this control is operated, engine performance will decrease, then maximum engine speed is reduced a little, for example.

**NOTE:**

If the engine oil temperature sensor is deteriorated, its characteristic will change.

In this case, the operating temperature for engine torque cut control might be decrease.

Perform Component Inspection of the engine oil temperature sensor to check for the deterioration.

Refer to [EC-296. "Component Inspection"](#).

## PERIODIC MAINTENANCE

### IDLE SPEED

#### Inspection

INFOID:000000006883186

#### CHECK IDLE SPEED

 **With CONSULT**

Check idle speed in “DATA MONITOR” mode of “ENGINE” using CONSULT.

 **With GST**

Check idle speed with Service \$01 of GST.

# IGNITION TIMING

< PERIODIC MAINTENANCE >

[VQ37VHR FOR USA AND CANADA]

## IGNITION TIMING

### Inspection

INFOID:000000006883187

### CHECK IGNITION TIMING

1. Attach timing light to loop wire as shown.

1. Loop wire
- A. Timing light
- B. Timing indicator

2. Check ignition timing.

# EVAP LEAK CHECK

< PERIODIC MAINTENANCE >

[VQ37VHR FOR USA AND CANADA]

## EVAP LEAK CHECK

### Inspection

INFOID:000000006883188

#### CAUTION:

- Do not use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup>, 0.6 psi) of pressure in EVAP system.

#### NOTE:

- Do not start engine.
- Improper installation of EVAP service port adapter to the EVAP service port may cause a leak.

#### Ⓟ WITH CONSULT

1. To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port.
2. Turn ignition switch ON.
3. Select the "EVAP SYSTEM CLOSE" of "WORK SUPPORT" mode with CONSULT.
4. Touch "START". A bar graph (Pressure indicating display) will appear on the screen.
5. Apply positive pressure to the EVAP system until the pressure indicator reaches the middle of the bar graph.
6. Remove EVAP service port adapter and hose with pressure pump.
7. Locate the leak using a leak detector. Refer to [EC-65. "EVAPORATIVE EMISSION SYSTEM : System Diagram"](#).

#### ⓧ WITHOUT CONSULT

1. To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port.
2. Apply battery voltage between the terminals of EVAP canister vent control valve to make a closed EVAP system.
3. To locate the leak, deliver positive pressure to the EVAP system until pressure gauge points reach 1.38 to 2.76 kPa (0.014 to 0.028 kg/cm<sup>2</sup>, 0.2 to 0.4 psi).
4. Remove EVAP service port adapter and hose with pressure pump.

# EVAP LEAK CHECK

< PERIODIC MAINTENANCE >

[VQ37VHR FOR USA AND CANADA]

5. Locate the leak using a leak detector. Refer to [EC-65. "EVAPORATIVE EMISSION SYSTEM : System Diagram"](#).

# POSITIVE CRANKCASE VENTILATION

< PERIODIC MAINTENANCE >

[VQ37VHR FOR USA AND CANADA]

## POSITIVE CRANKCASE VENTILATION

### Inspection

INFOID:000000006883189

#### 1. CHECK PCV VALVE

With engine running at idle, remove PCV valve from rocker cover. A properly working valve makes a hissing noise as air passes through it. A strong vacuum should be felt immediately when a finger is placed over valve inlet.

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Replace PCV valve.

# REMOVAL AND INSTALLATION

## ECM

### Removal and Installation

INFOID:000000006883190

#### REMOVAL

1. Remove the instrument lower cover. Refer to [IP-12, "Exploded View"](#).
2. Remove the dash side finisher (LH). Refer to [INT-34, "DASH SIDE FINISHER : Removal and Installation"](#).
3. Remove the ECM cover bolts (A) and remove ECM cover (1).

4. Disconnect ECM harness connectors.
5. Remove ECM bracket bolt (A)
6. Slide the ECM bracket (1) upward and then remove ECM bracket with ECM.
7. Remove ECM bracket bolts (B) and separate ECM (2) and ECM bracket.

#### INSTALLATION

Install in the reverse order of removal.

**CAUTION:**

**Must be perform additional service when replacing ECM. Refer to [EC-144, "Work Procedure"](#).**

# VVEL CONTROL MODULE

< REMOVAL AND INSTALLATION >

[VQ37VHR FOR USA AND CANADA]

## VVEL CONTROL MODULE

### Removal and Installation

INFOID:000000006883191

#### REMOVAL

1. Remove hoodledge cover (RH) and cowl top cover (RH). Refer to [EXT-21, "Exploded View"](#).
2. Remove the battery and battery tray. Refer to [PG-142, "Exploded View"](#).
3. Remove VVEL control module bracket bolts (A).
4. Remove the ground harness fix bolt (B).
5. Remove VVEL control module bracket (1).

6. Disconnect VVEL control module harness connector.
7. Remove the fix bolts (A). And then separate VVEL control module (1), ground harness (2) and VVEL control module bracket (3).

#### INSTALLATION

Install in the reverse order of removal.

#### **CAUTION:**

**Must be perform additional service when replacing VVEL control module. Refer to [EC-145, "Work Procedure"](#).**

# SERVICE DATA AND SPECIFICATIONS (SDS)

< SERVICE DATA AND SPECIFICATIONS (SDS)

[VQ37VHR FOR USA AND CANADA]

## SERVICE DATA AND SPECIFICATIONS (SDS)

### SERVICE DATA AND SPECIFICATIONS (SDS)

#### Idle Speed

INFOID:0000000006883197

EC

| Condition                     | Specification |
|-------------------------------|---------------|
| No load* (in P or N position) | 650 ± 50 rpm  |

\*: Under the following conditions

- A/C switch: OFF
- Electric load: OFF (Lights, heater fan & rear window defogger)
- Steering wheel: Kept in straight-ahead position

#### Ignition Timing

INFOID:0000000006883198

| Condition                     | Specification |
|-------------------------------|---------------|
| No load* (in P or N position) | 10 ± 2° BTDC  |

\*: Under the following conditions

- A/C switch: OFF
- Electric load: OFF (Lights, heater fan & rear window defogger)
- Steering wheel: Kept in straight-ahead position

#### Calculated Load Value

INFOID:0000000006883199

| Condition    | Specification (Using CONSULT or GST) |
|--------------|--------------------------------------|
| At idle      | 5 – 35 %                             |
| At 2,500 rpm | 5 – 35 %                             |

#### Mass Air Flow Sensor

INFOID:0000000006883200

|                                      |  |
|--------------------------------------|--|
| Supply voltage                       | Battery voltage (11 – 14 V)                            |
| Output voltage at idle               | 0.7 – 1.2 V*   |
| Mass air flow (Using CONSULT or GST) | 2.0 – 6.0 g/s at idle*<br>7.0 – 20.0 g/s at 2,500 rpm* |

\*: Engine is warmed up to normal operating temperature and running under no load.

## PRECAUTION

### PRECAUTIONS

#### Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:000000007729617

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

**WARNING:**

Always observe the following items for preventing accidental activation.

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see "SRS AIR BAG".
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

#### PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

**WARNING:**

Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

#### Precaution for Procedure without Cowl Top Cover

INFOID:000000007729618

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.

#### Precautions For Xenon Headlamp Service

INFOID:000000007729619

**WARNING:**

Comply with the following warnings to prevent any serious accident.

- Disconnect the battery cable (negative terminal) or the power supply fuse before installing, removing, or touching the xenon headlamp (bulb included). The xenon headlamp contains high-voltage generated parts.
- Never work with wet hands.
- Check the xenon headlamp ON-OFF status after assembling it to the vehicle. Never turn the xenon headlamp ON in other conditions. Connect the power supply to the vehicle-side connector.

# PRECAUTIONS

[VQ37VHR FOR MEXICO]

< PRECAUTION >

(Turning it ON outside the lamp case may cause fire or visual impairments.)

- Never touch the bulb glass immediately after turning it OFF. It is extremely hot.

## CAUTION:

Comply with the following cautions to prevent any error and malfunction.

- Install the xenon bulb securely. (Insufficient bulb socket installation may melt the bulb, the connector, the housing, etc. by high-voltage leakage or corona discharge.)
- Never perform HID circuit inspection with a tester.
- Never touch the xenon bulb glass with hands. Never put oil and grease on it.
- Dispose of the used xenon bulb after packing it in thick vinyl without breaking it.
- Never wipe out dirt and contamination with organic solvent (thinner, gasoline, etc.).

## On Board Diagnostic (OBD) System of Engine and A/T

INFOID:000000007729620

The ECM has an on board diagnostic system. It will illuminate the malfunction indicator lamp (MIL) to warn the driver of a malfunction causing emission deterioration.

## CAUTION:

- Always turn the ignition switch OFF and disconnect the negative battery cable before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MIL to illuminate.
- Always connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MIL to illuminate due to the open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)
- Certain systems and components, especially those related to OBD, may use a new style slide-locking type harness connector. For description and how to disconnect, refer to [PG-5, "Harness Connector"](#).
- Always route and secure the harnesses properly after work. The interference of the harness with a bracket, etc. may cause the MIL to illuminate due to the short circuit.
- Always connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MIL to illuminate due to the malfunction of the EVAP system or fuel injection system, etc.
- Always erase the unnecessary malfunction information (repairs completed) from the ECM and TCM (Transmission control module) before returning the vehicle to the customer.

## General Precautions

INFOID:000000007729621

- Always use a 12 volt battery as power source.
- Never attempt to disconnect battery cables while engine is running.
- Before connecting or disconnecting the ECM harness connector, turn ignition switch OFF and disconnect negative battery cable. Failure to do so may damage the ECM because battery voltage is applied to ECM even if ignition switch is turned OFF.
- Before removing parts, turn ignition switch OFF and then disconnect negative battery cable.

- Never disassemble ECM.
- If a battery cable is disconnected, the memory will return to the ECM value.  
The ECM will now start to self-control at its initial value. Thus, engine operation can vary slightly in this case. However, this is not an indication of a malfunction. Never replace parts because of a slight variation.
- If the battery is disconnected, the following emission-related diagnostic information will be cleared within 24 hours.
  - Diagnostic trouble codes
  - 1st trip diagnostic trouble codes
  - Freeze frame data
  - 1st trip freeze frame data
  - System readiness test (SRT) codes
  - Test values

# PRECAUTIONS

[VQ37VHR FOR MEXICO]

## < PRECAUTION >

- When connecting ECM harness connector (A), fasten (B) it securely with a lever as far as it will go as shown in the figure.
- 1 : ECM
- C : Loosen

- When connecting or disconnecting pin connectors into or from ECM, never damage pin terminals (bends or break). Make sure that there are not any bends or breaks on ECM pin terminal, when connecting pin connectors.
- Securely connect ECM harness connectors. A poor connection can cause an extremely high (surge) voltage to develop in coil and condenser, thus resulting in damage to ICs.
- Keep engine control system harness at least 10 cm (4 in) away from adjacent harness, to prevent engine control system malfunctions due to receiving external noise, degraded operation of ICs, etc.
- Keep engine control system parts and harness dry.
- Before replacing ECM, perform ECM Terminals and Reference Value inspection and make sure ECM functions properly. Refer to [EC-609, "Reference Value"](#).
- Handle mass air flow sensor carefully to avoid damage.
- Never clean mass air flow sensor with any type of detergent.
- Never disassemble electric throttle control actuator.
- Even a slight leak in the air intake system can cause serious incidents.
- Never shock or jar the camshaft position sensor (PHASE), crankshaft position sensor (POS).

- After performing each TROUBLE DIAGNOSIS, perform DTC Confirmation Procedure or Component Function Check. The DTC should not be displayed in the DTC Confirmation Procedure if the repair is completed. The Component Function Check should be a good result if the repair is completed.

# PRECAUTIONS

[VQ37VHR FOR MEXICO]

## < PRECAUTION >

- When measuring ECM signals with a circuit tester, never allow the two tester probes to contact. Accidental contact of probes will cause a short circuit and damage the ECM power transistor.

- B1 indicates bank 1, B2 indicates bank 2 as shown in the figure.
- Never operate fuel pump when there is no fuel in lines.
- Tighten fuel hose clamps to the specified torque.

- Never depress accelerator pedal when starting.
- Immediately after starting, never rev up engine unnecessarily.
- Never rev up engine just prior to shutdown.

## PRECAUTIONS

[VQ37VHR FOR MEXICO]

### < PRECAUTION >

- When installing C.B. ham radio or a mobile phone, be sure to observe the following as it may adversely affect electronic control systems depending on installation location.
- Keep the antenna as far as possible from the electronic control units.
- Keep the antenna feeder line more than 20 cm (8 in) away from the harness of electronic controls. Never let them run parallel for a long distance.
- Adjust the antenna and feeder line so that the standing-wave ratio can be kept smaller.
- Be sure to ground the radio to vehicle body.

## Infiniti Drive Mode Selector : Component Description

INFOID:000000007729627

| Part name                | Description   |
|--------------------------|---|
| Drive mode select switch | Transmits an ON/OFF state signal of STANDARD, SPORT, ECO, or SNOW mode to the A/C auto amp.   |
| A/C auto amp.            | Transmits an input signal (ON/OFF state of each mode) received from the drive mode select switch to the TCM, combination meter, 4WAS main control unit, and ADAS control unit via CAN communication.  |
| TCM                      | Transmits a state of a mode received from the A/C auto amp. to ECM.   |
| ECM                      | <ul style="list-style-type: none"> <li>• Receives a ECO mode signal from TCM and controls throttle angle characteristics and torque.</li> <li>• Controls the ECO drive indicator when in ECO mode. The ECO drive indicator turns according to accelerator pedal operation.</li> </ul> |
| Combination meter        | <ul style="list-style-type: none"> <li>• Indicates a mode state on the vehicle information display, based on a mode state signal received from the A/C auto amp.</li> <li>• Turns ON the ECO drive indicator according to a request from ECM when in ECO mode.</li> </ul>             |

Accelerator Pedal Position Sensor

INFOID:000000007729628

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.

Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometer which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.

Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for engine operations such as fuel cut.

Air Fuel Ratio Sensor 1

INFOID:000000007729629

The air fuel ratio (A/F) sensor 1 is a planar one-cell limit current sensor. The sensor element of the A/F sensor 1 is composed an electrode layer, which transports ions. It has a heater in the element.

The sensor is capable of precise measurement  $\lambda = 1$ , but also in the lean and rich range. Together with its control electronics, the sensor outputs a clear, continuous signal throughout a wide  $\lambda$  range.

The exhaust gas components diffuse through the diffusion layer at the sensor cell. An electrode layer is applied voltage, and this current relative oxygen density in lean. Also this current relative hydrocarbon density in rich.

Therefore, the A/F sensor 1 is able to indicate air fuel ratio by this electrode layer of current. In addition, a heater is integrated in the sensor to ensure the required operating temperature of about 800°C (1,472°F).

Air Fuel Ratio Sensor 1 Heater

INFOID:000000007729630

SYSTEM DESCRIPTION

| Sensor   | Input Signal to ECM  | ECM function                                    | Actuator                                |
|--|----------------------|---|---|
| Camshaft position sensor (PHASE)<br>Crankshaft position sensor (POS) | Engine speed         | Air fuel ratio (A/F) sensor 1<br>heater control | Air fuel ratio (A/F) sensor 1<br>heater |
| Mass air flow sensor   | Amount of intake air |   |   |

The ECM performs ON/OFF duty control of the A/F sensor 1 heater corresponding to the engine operating condition to keep the temperature of A/F sensor 1 element at the specified range.

ASCD Brake Switch

INFOID:000000007729631

When the brake pedal is depressed, ASCD brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by those two types of input (ON/OFF signal).

Refer to [EC-578. "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\) : System Description"](#) for the ASCD function.

## ASCD Indicator

INFOID:000000007729632

ASCD operation status is indicated by two indicators (CRUISE and SET) and CRUISE lamp in combination meter.

CRUISE indicator is displayed to indicate that ASCD system is ready for operation when MAIN switch on ASCD steering switch is turned ON.

SET indicator is displayed when the following conditions are met.

- CRUISE indicator is displayed.
- SET/COAST switch on ASCD steering switch is turned ON while vehicle speed is within the range of the ASCD setting.

SET indicator is displayed during ASCD control.

Refer to [EC-578. "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\) : System Description"](#) for the ASCD function.

## ASCD Steering Switch

INFOID:000000007729633

ASCD steering switch has variant values of electrical resistance for each button. ECM reads voltage variation of switch, and determines which button is operated.

Refer to [EC-578. "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\) : System Description"](#) for the ASCD function.

## Battery Current Sensor (With Battery Temperature Sensor)

INFOID:000000007729634

### OUTLINE

The power generation voltage variable control enables fuel consumption to be decreased by reducing the engine load which is caused by the power generation of the generator.

Based on sensor signals, ECM judges whether or not the power generation voltage variable control is performed. When performing the power generation voltage variable control, ECM calculates the target power generation voltage based on the sensor signal. And ECM sends the calculated value as the power generation command value to IPDM E/R. For the details of the power generation voltage variable control, refer to [CHG-8. "POWER GENERATION VOLTAGE VARIABLE CONTROL SYSTEM : System Description"](#).

### CAUTION:

**Never connect the electrical component or the ground wire directly to the battery terminal. The connection causes the malfunction of the power generation voltage variable control, and then the battery discharge may occur.**

### BATTERY CURRENT SENSOR

The battery current sensor is installed to the battery negative cable. The sensor measures the charging/discharging current of the battery.

### BATTERY TEMPERATURE SENSOR

Battery temperature sensor is integrated in battery current sensor. The sensor measures temperature around the battery. The electrical resistance of the thermistor decreases as temperature increases.

#### <Reference data>

| Temperature [°C (°F)] | Voltage* (V) | Resistance (kΩ) |
|-----------------------|--------------|-----------------|
| 25 (77)               | 3.333        | 1.9 - 2.1       |
| 90 (194)              | 0.969        | 0.222 - 0.258   |

\*: These data are reference values and are measured between battery temperature sensor signal terminal and sensor ground.

## Brake Switch

INFOID:000000007729635

Brake switch signal is applied to the ECM through the stop lamp switch when the brake pedal is depressed. This signal is used mainly to decrease the engine speed when the vehicle is being driven.

## Camshaft Position Sensor (PHASE)

INFOID:000000007729636

The camshaft position sensor (PHASE) senses the retraction of camshaft (INT) to identify a particular cylinder. The camshaft position sensor (PHASE) senses the piston position.

When the crankshaft position sensor (POS) system becomes inoperative, the camshaft position sensor (PHASE) provides various controls of engine parts instead, utilizing timing of cylinder identification signals.

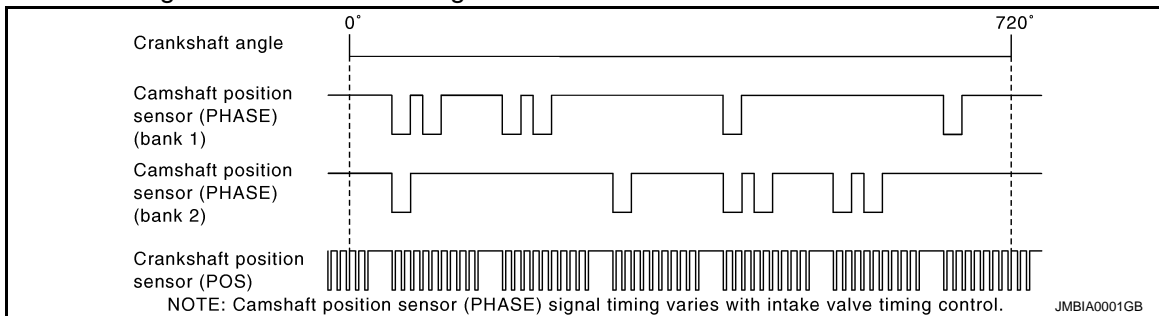

The sensor consists of a permanent magnet and Hall IC.

When engine is running, the high and low parts of the teeth cause the gap with the sensor to change.

The changing gap causes the magnetic field near the sensor to change.

Due to the changing magnetic field, the voltage from the sensor changes.

ECM receives the signals as shown in the figure.

## Cooling Fan

INFOID:000000007729637

### COOLING FAN CONTROL MODULE

Cooling fan control module receives ON/OFF pulse duty signal from IPDM E/R. Corresponding to this ON/OFF pulse duty signal, cooling fan control module sends cooling fan motor operating voltage to cooling fan motor. The revolution speed of cooling fan motor is controlled by duty cycle of the voltage.

### COOLING FAN MOTOR

Cooling fan motor receives cooling fan motor operating voltage from cooling fan control module. The revolution speed of cooling fan motor is controlled by duty cycle of the voltage.

## Crankshaft Position Sensor (POS)

INFOID:000000007729638

The crankshaft position sensor (POS) is located on the cylinder block facing the gear teeth (cogs) of the signal plate. It detects the fluctuation of the engine revolution.

The sensor consists of a permanent magnet and Hall IC.

When the engine is running, the high and low parts of the teeth cause the gap with the sensor to change.

The changing gap causes the magnetic field near the sensor to change.

Due to the changing magnetic field, the voltage from the sensor changes.

The ECM receives the voltage signal and detects the fluctuation of the engine revolution.

# COMPONENT PARTS

< SYSTEM DESCRIPTION >

[VQ37VHR FOR MEXICO]

ECM receives the signals as shown in the figure.

## ECM

INFOID:000000007729639

The ECM consists of a microcomputer and connectors for signal input and output and for power supply. The ECM controls the engine.

## Electric Throttle Control Actuator

INFOID:000000007729640

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle control motor is operated by the ECM and it opens and closes the throttle valve. The throttle position sensor detects the throttle valve position and feeds the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and controls the throttle valve opening angle properly in response to driving condition via the throttle control motor.

## Engine Coolant Temperature Sensor

INFOID:000000007729641

The engine coolant temperature sensor is used to detect the engine coolant temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine coolant temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

### <Reference data>

| Engine coolant temperature [°C (°F)] | Voltage* (V) | Resistance (kΩ) |
|--------------------------------------|--------------|-----------------|
| -10 (14)                             | 4.4          | 7.0 - 11.4      |
| 20 (68)                              | 3.5          | 2.10 - 2.90     |
| 50 (122)                             | 2.2          | 0.68 - 1.00     |
| 90 (194)                             | 0.9          | 0.236 - 0.260   |

\*: These data are reference values and are measured between ECM terminals 71 (Engine coolant temperature sensor) and 84 (Sensor ground).

## Engine Oil Temperature Sensor

INFOID:000000007729642

The engine oil temperature sensor is used to detect the engine oil temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine oil temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

### <Reference data>

| Engine oil temperature [°C (°F)] | Voltage* (V) | Resistance (kΩ) |
|----------------------------------|--------------|-----------------|
| -10 (14)                         | 4.4          | 7.0 - 11.4      |
| 20 (68)                          | 3.5          | 2.10 - 2.90     |
| 50 (122)                         | 2.2          | 0.68 - 1.00     |
| 90 (194)                         | 0.9          | 0.236 - 0.260   |
| 110 (230)                        | 0.6          | 0.143 - 0.153   |

\*: These data are reference values and are measured between ECM terminals 78 (Engine oil temperature sensor) and 84 (Sensor ground).

## EVAP Canister Purge Volume Control Solenoid Valve

INFOID:0000000007729643

The EVAP canister purge volume control solenoid valve is used to control the flow rate of fuel vapor from the EVAP canister. The EVAP canister purge volume control solenoid valve is moved by ON/OFF pulses from the ECM. The longer the ON pulse, the greater the amount of fuel vapor that will flow through the valve.

## EVAP Canister Vent Control Valve

INFOID:0000000007729644

The EVAP canister vent control valve is located on the EVAP canister and is used to seal the canister vent.

This solenoid valve responds to signals from the ECM. When the ECM sends an ON signal, the coil in the solenoid valve is energized. A plunger will then move to seal the canister vent. The ability to seal the vent is necessary for the on board diagnosis of other evaporative emission control system components.

This solenoid valve is used only for diagnosis, and usually remains opened.

When the vent is closed, under normal purge conditions, the evaporative emission control system is depressurized and allows "EVAP Control System" diagnosis.

# COMPONENT PARTS

< SYSTEM DESCRIPTION >

[VQ37VHR FOR MEXICO]

## EVAP Control System Pressure Sensor

INFOID:000000007729646

The EVAP control system pressure sensor detects pressure in the purge line. The sensor output voltage to the ECM increases as pressure increases.

## Fuel Injector

INFOID:000000007729646

The fuel injector is a small, precise solenoid valve. When the ECM supplies a ground to the fuel injector circuit, the coil in the fuel injector is energized. The energized coil pulls the ball valve back and allows fuel to flow through the fuel injector into the intake manifold. The amount of fuel injected depends upon the injection pulse duration. Pulse duration is the length of time the fuel injector remains open. The ECM controls the injection pulse duration based on engine fuel needs.

## Fuel Level Sensor

INFOID:000000007729647

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the "A/C auto amp.". The "A/C auto amp." sends the fuel level sensor signal to the ECM via the CAN communication line. It consists of two parts, one is mechanical float and the other is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

## Fuel Pump

INFOID:000000007729648

| Sensor   | Input signal to ECM | ECM Function      | Actuator        |
|--|---------------------|-------------------|-----------------|
| Crankshaft position sensor (POS)<br>Camshaft position sensor (PHASE) | Engine speed*       | Fuel pump control | Fuel pump relay |
| Battery  | Battery voltage*    |                   | ↓<br>Fuel pump  |

\*: ECM determines the start signal status by the signals of engine speed and battery voltage.

The ECM activates the fuel pump for several seconds after the ignition switch is turned ON to improve engine startability. If the ECM receives a engine speed signal from the camshaft position sensor (PHASE), it knows that the engine is rotating, and causes the pump to operate. If the engine speed signal is not received when the ignition switch is ON, the engine stalls. The ECM stops pump operation and prevents battery discharging, thereby improving safety. The ECM does not directly drive the fuel pump. It controls the ON/OFF fuel pump relay, which in turn controls the fuel pump.

| Condition                        | Fuel pump operation    |
|----------------------------------|------------------------|
| Ignition switch is turned to ON. | Operates for 1 second. |
| Engine running and cranking      | Operates.              |
| When engine is stopped           | Stops in 1.5 seconds.  |
| Except as shown above            | Stops.                 |

# COMPONENT PARTS

< SYSTEM DESCRIPTION >

[VQ37VHR FOR MEXICO]

## Fuel Tank Temperature Sensor

INFOID:000000007729649

The fuel tank temperature sensor is used to detect the fuel temperature inside the fuel tank. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the fuel temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

### <Reference data>

| Fluid temperature [°C (°F)] | Voltage* (V) | Resistance (kΩ) |
|-----------------------------|--------------|-----------------|
| 20 (68)                     | 3.5          | 2.3 - 2.7       |
| 50 (122)                    | 2.2          | 0.79 - 0.90     |

\*: These data are reference values and are measured between ECM terminals 106 (Fuel tank temperature sensor) and 128 (ECM ground).

## Heated Oxygen Sensor 2

INFOID:000000007729650

The heated oxygen sensor 2, after three way catalyst 1, monitors the oxygen level in the exhaust gas on each bank.

Even if switching characteristics of the air fuel ratio (A/F) sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.

This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1 V in richer conditions to 0 V in leaner conditions.

Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

## Heated Oxygen Sensor 2 Heater

INFOID:000000007729651

### SYSTEM DESCRIPTION

| Sensor   | Input signal to ECM        | ECM function                             | Actuator                      |
|--|----------------------------|--|-------------------------------|
| Camshaft position sensor (PHASE)<br>Crankshaft position sensor (POS) | Engine speed               | Heated oxygen sensor 2<br>heater control | Heated oxygen sensor 2 heater |
| Engine coolant temperature sensor                                    | Engine coolant temperature |  |                               |
| Mass air flow sensor   | Amount of intake air       |  |                               |

The ECM performs ON/OFF control of the heated oxygen sensor 2 heater corresponding to the engine speed, amount of intake air and engine coolant temperature.

### OPERATION

| Engine speed rpm   | Heated oxygen sensor 2 heater |
|--|-------------------------------|
| Above 3,600  | OFF                           |
| Below 3,600 rpm after the following conditions are met. <ul style="list-style-type: none"> <li>Engine: After warming up</li> <li>Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load</li> </ul> | ON                            |

## Ignition Coil

INFOID:000000007729652

The ignition signal from the ECM is sent to and amplified by the power transistor. The power transistor turns ON and OFF the ignition coil primary circuit. This ON/OFF operation induces the proper high voltage in the coil secondary circuit.

## Intake Air Temperature Sensor

INFOID:000000007729653

The intake air temperature sensor is built-into the mass air flow sensor (1). The sensor detects intake air temperature and transmits a signal to the ECM.

The temperature sensing unit uses a thermistor which is sensitive to the change in temperature. Electrical resistance of the thermistor decreases in response to the rise in temperature.

### <Reference data>

| Intake air temperature [°C (°F)] | Voltage* (V) | Resistance (kΩ) |
|----------------------------------|--------------|-----------------|
| 25 (77)                          | 3.3          | 1.800 - 2.200   |
| 80 (176)                         | 1.2          | 0.283 - 0.359   |

\*: These data are reference values and are measured between ECM terminals 67 (Intake air temperature sensor) and 68 (Sensor ground).

## Intake Valve Timing Control Solenoid Valve

INFOID:000000007729654

Intake valve timing control solenoid valve is activated by ON/OFF pulse duty (ratio) signals from the ECM.

The intake valve timing control solenoid valve changes the oil amount and direction of flow through intake valve timing control unit or stops oil flow.

The longer pulse width advances valve angle.

The shorter pulse width retards valve angle.

When ON and OFF pulse widths become equal, the solenoid valve stops oil pressure flow to fix the intake valve angle at the control position.

## ICC Brake Switch

INFOID:000000007729655

When the brake pedal is depressed, ICC brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by those two types of input (ON/OFF signal).

Refer to [CCS-13. "System Description"](#) for the ICC function.

## ICC Steering Switch

INFOID:000000007729656

ICC steering switch has variant values of electrical resistance for each button. ECM reads voltage variation of switch, and determines which button is operated.

Refer to [CCS-13. "System Description"](#) for the ICC function.

## Knock Sensor

INFOID:000000007729657

The knock sensor is attached to the cylinder block. It senses engine knocking using a piezoelectric element. A knocking vibration from the cylinder block is sensed as vibrational pressure. This pressure is converted into a voltage signal and sent to the ECM.

## Manifold Absolute Pressure Sensor

INFOID:000000007729658

The manifold absolute pressure (MAP) sensor is placed at intake manifold collector. It detects intake manifold pressure and sends the voltage signal to the ECM.

The sensor uses a silicon diaphragm which is sensitive to the change in pressure. As the pressure increases, the voltage rises.

## Malfunction Indicator Lamp

INFOID:000000007729659

The Malfunction Indicator Lamp (MIL) is located on the combination meter.

The MIL will illuminate when the ignition switch is turned ON without the engine running. This is a bulb check.

When the engine is started, the MIL should turn off. If the MIL remains illuminated, the on board diagnostic system has detected an engine system malfunction.

For details, refer to [EC-590, "Diagnosis Description"](#).

## Mass Air Flow Sensor

INFOID:000000007729660

The mass air flow sensor (1) is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. The mass air flow sensor controls the temperature of the hot wire to a certain amount. The heat generated by the hot wire is reduced as the intake air flows around it. The greater air flow, the greater the heat loss.

Therefore, the electric current supplied to hot wire is changed to maintain the temperature of the hot wire as air flow increases. The ECM detects the air flow by means of this current change.

## Power Steering Pressure Sensor

INFOID:000000007729661

Power steering pressure (PSP) sensor is installed to the power steering high-pressure tube and detects a power steering load.

This sensor is a potentiometer which transforms the power steering load into output voltage, and emits the voltage signal to the ECM. The ECM controls the electric throttle control actuator and adjusts the throttle valve opening angle to increase the engine speed and adjusts the idle speed for the increased load.

## Refrigerant Pressure Sensor

INFOID:000000007729662

The refrigerant pressure sensor is installed at the condenser of the air conditioner system. The sensor uses an electrostatic volume pressure transducer to convert refrigerant pressure to voltage. The voltage signal is sent to ECM, and ECM controls cooling fan system.

## Throttle Control Motor

INFOID:000000007729663

The throttle control motor is operated by the ECM and it opens and closes the throttle valve. The current opening angle of the throttle valve is detected by the throttle position sensor and it provides feedback to the ECM to control the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

## Throttle Control Motor Relay

INFOID:000000007729664

Power supply for the throttle control motor is provided to the ECM via throttle control motor relay. The throttle control motor relay is ON/OFF controlled by the ECM. When the ignition switch is turned ON, the ECM sends an ON signal to throttle control motor relay and battery voltage is provided to the ECM. When the ignition switch is turned OFF, the ECM sends an OFF signal to throttle control motor relay and battery voltage is not provided to the ECM.

## Throttle Position Sensor

INFOID:000000007729665

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has two sensors. These sensors are a kind of potentiometer which transform the throttle valve position into output voltage, and emit the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and controls the throttle valve opening angle properly in response to driving condition via the throttle control motor.

## VVEL Actuator Motor

INFOID:000000007729666

The VVEL actuator motor rotates the control shaft according to the control signal from the VVEL control module. The VVEL control module judges whether the VVEL actuator motor controls the angle properly by the VVEL control shaft position sensor signal.

## VVEL Actuator Motor Relay

INFOID:000000007729667

Power supply for the VVEL actuator motor is provided to the VVEL control module via VVEL actuator motor relay. VVEL actuator motor relay is ON/OFF controlled by the VVEL control module. In addition, when the VVEL actuator motor relay cannot be controlled by the VVEL control module for some reason, it ON/OFF controlled by ECM.

VVEL Control Module

INFOID:000000007729668

The VVEL control module consists of a microcomputer and connectors for signal input and output and for power supply. The VVEL control module controls VVEL system.

VVEL Control Position Sensor

INFOID:000000007729669

VVEL control shaft position sensor (1) is placed on VVEL actuator sub assembly and detects the control shaft position angle. A magnet is pressed into the arm on the edge of control shaft. The magnetic field changes as the magnet rotates together with the arm resulting in the output voltage change of the sensor. VVEL control module detects the actual position angle through the voltage change and sends the signal to ECM.

## STRUCTURE AND OPERATION

### Positive Crankcase Ventilation

INFOID:000000007729670

- |                     |                                       |                         |
|---------------------|---------------------------------------|-------------------------|
| 1. PCV valve        | 2. Electric throttle control actuator | 3. Mass air flow sensor |
| A. Normal condition | B. Hi-load condition                  |                         |

↵: Fresh air  
 ←: Blow-by air

This system returns blow-by gas to the intake manifold.

The positive crankcase ventilation (PCV) valve is provided to conduct crankcase blow-by gas to the intake manifold.

During partial throttle operation of the engine, the intake manifold sucks the blow-by gas through the PCV valve.

Normally, the capacity of the valve is sufficient to handle any blow-by and a small amount of ventilating air. The ventilating air is drawn from the air inlet tubes into the crankcase. In this process the air passes through the hose connecting air inlet tubes to rocker cover.

Under full-throttle condition, the manifold vacuum is insufficient to draw the blow-by flow through the valve. The flow goes through the hose connection in the reverse direction.

On vehicles with an excessively high blow-by, the valve does not meet the requirement. This is because some of the flow will go through the hose connection to the air inlet tubes under all conditions.

# STRUCTURE AND OPERATION

[VQ37VHR FOR MEXICO]

## On Board Refueling Vapor Recovery (ORVR)

INFOID:000000007729671

From the beginning of refueling, the air and vapor inside the fuel tank go through refueling EVAP vapor cut valve and EVAP/ORVR line to the EVAP canister. The vapor is absorbed by the EVAP canister and the air is released to the atmosphere.

When the refueling has reached the full level of the fuel tank, the refueling EVAP vapor cut valve is closed and refueling is stopped because of auto shut-off. The vapor which was absorbed by the EVAP canister is purged during driving.

### **WARNING:**

When conducting inspections below, be sure to observe the following:

- Put a "CAUTION: FLAMMABLE" sign in workshop.
- Never smoke while servicing fuel system. Keep open flames and sparks away from work area.
- Always furnish the workshop with a CO<sub>2</sub> fire extinguisher.

### **CAUTION:**

- Before removing fuel line parts, carry out the following procedures:
  - Put drained fuel in an explosion-proof container and put lid on securely.
  - Release fuel pressure from fuel line. Refer to [EC-667, "Work Procedure"](#).
  - Disconnect battery ground cable.
- Always replace O-ring when the fuel gauge retainer is removed.
- Never kink or twist hose and tube when they are installed.
- Never tighten hose and clamps excessively to avoid damaging hoses.
- After installation, run engine and check for fuel leaks at connections.
- Never attempt to top off the fuel tank after the fuel pump nozzle shuts off automatically. Continued refueling may cause fuel overflow, resulting in fuel spray and possibly a fire.

\*1: This sensor is not used to control the engine system under normal conditions.

\*2: This signal is sent to the ECM via the CAN communication line.

\*3: ECM determines the start signal status by the signals of engine speed and battery voltage.

## SYSTEM DESCRIPTION

The amount of fuel injected from the fuel injector is determined by the ECM. The ECM controls the length of time the valve remains open (injection pulse duration). The amount of fuel injected is a program value in the ECM memory. The program value is preset by engine operating conditions. These conditions are determined by input signals (for engine speed and intake air) from the crankshaft position sensor (POS), camshaft position sensor (PHASE) and the mass air flow sensor.

## VARIOUS FUEL INJECTION INCREASE/DECREASE COMPENSATION

In addition, the amount of fuel injected is compensated to improve engine performance under various operating conditions as listed below.

<Fuel increase>

- During warm-up
- When starting the engine
- During acceleration
- Hot-engine operation
- When selector lever is changed from N to D
- High-load, high-speed operation

<Fuel decrease>

- During deceleration
- During high engine speed operation

## MIXTURE RATIO FEEDBACK CONTROL (CLOSED LOOP CONTROL)

The mixture ratio feedback system provides the best air-fuel mixture ratio for driveability and emission control. The three way catalyst 1 can better reduce CO, HC and NOx emissions. This system uses A/F sensor 1 in the exhaust manifold to monitor whether the engine operation is rich or lean. The ECM adjusts the injection pulse width according to the sensor voltage signal. For more information about A/F sensor 1, refer to [EC-559, "Air Fuel Ratio Sensor 1"](#). This maintains the mixture ratio within the range of stoichiometric (ideal air-fuel mixture). This stage is referred to as the closed loop control condition.

Heated oxygen sensor 2 is located downstream of the three way catalyst 1. Even if the switching characteristics of A/F sensor 1 shift, the air-fuel ratio is controlled to stoichiometric by the signal from heated oxygen sensor 2.

• **Open Loop Control**

The open loop system condition refers to when the ECM detects any of the following conditions. Feedback control stops in order to maintain stabilized fuel combustion.

- Deceleration and acceleration
- High-load, high-speed operation
- Malfunction of A/F sensor 1 or its circuit
- Insufficient activation of A/F sensor 1 at low engine coolant temperature
- High engine coolant temperature
- During warm-up
- After shifting from N to D
- When starting the engine

**MIXTURE RATIO SELF-LEARNING CONTROL**

The mixture ratio feedback control system monitors the mixture ratio signal transmitted from A/F sensor 1. This feedback signal is then sent to the ECM. The ECM controls the basic mixture ratio as close to the theoretical mixture ratio as possible. However, the basic mixture ratio is not necessarily controlled as originally designed. Both manufacturing differences (i.e., mass air flow sensor hot wire) and characteristic changes during operation (i.e., fuel injector clogging) directly affect mixture ratio.

Accordingly, the difference between the basic and theoretical mixture ratios is monitored in this system. This is then computed in terms of "injection pulse duration" to automatically compensate for the difference between the two ratios.

"Fuel trim" refers to the feedback compensation value compared against the basic injection duration. Fuel trim includes short-term fuel trim and long-term fuel trim.

"Short-term fuel trim" is the short-term fuel compensation used to maintain the mixture ratio at its theoretical value. The signal from A/F sensor 1 indicates whether the mixture ratio is RICH or LEAN compared to the theoretical value. The signal then triggers a reduction in fuel volume if the mixture ratio is rich, and an increase in fuel volume if it is lean.

"Long-term fuel trim" is overall fuel compensation carried out over time to compensate for continual deviation of the short-term fuel trim from the central value. Continual deviation will occur due to individual engine differences, wear over time and changes in the usage environment.

**FUEL INJECTION TIMING**

Two types of systems are used.

• **Sequential Multiport Fuel Injection System**

Fuel is injected into each cylinder during each engine cycle according to the firing order. This system is used when the engine is running.

• **Simultaneous Multiport Fuel Injection System**

Fuel is injected simultaneously into all six cylinders twice each engine cycle. In other words, pulse signals of the same width are simultaneously transmitted from the ECM.

The six injectors will then receive the signals two times for each engine cycle.

This system is used when the engine is being started and/or if the fail-safe system (CPU) is operating.

**FUEL SHUT-OFF**

# SYSTEM

< SYSTEM DESCRIPTION >

[VQ37VHR FOR MEXICO]

Fuel to each cylinder is cut off during deceleration, operation of the engine at excessively high speeds or operation of the vehicle at excessively high speeds.

## ELECTRIC IGNITION SYSTEM

\*1: This signal is sent to the ECM via the CAN communication line.

\*2: ECM determines the start signal status by the signals of engine speed and battery voltage.

#### SYSTEM DESCRIPTION

Ignition order: 1 - 2 - 3 - 4 - 5 - 6

The ignition timing is controlled by the ECM to maintain the best air-fuel ratio for every running condition of the engine. The ignition timing data is stored in the ECM.

The ECM receives information such as the injection pulse width and camshaft position sensor (PHASE) signal. Computing this information, ignition signals are transmitted to the power transistor.

During the following conditions, the ignition timing is revised by the ECM according to the other data stored in the ECM.

- At starting
- During warm-up
- At idle
- At low battery voltage
- During acceleration

# SYSTEM

< SYSTEM DESCRIPTION >

[VQ37VHR FOR MEXICO]

The knock sensor retard system is designed only for emergencies. The basic ignition timing is programmed within the anti-knocking zone, if recommended fuel is used under dry conditions. The retard system does not operate under normal driving conditions. If engine knocking occurs, the knock sensor monitors the condition. The signal is transmitted to the ECM. The ECM retards the ignition timing to eliminate the knocking condition.

\*1: This signal is sent to the ECM via the CAN communication line.

\*2: ECM determines the start signal status by the signals of engine speed and battery voltage.

#### SYSTEM DESCRIPTION

This system improves engine operation when the air conditioner is used. Under the following conditions, the air conditioner is turned off.

- When the accelerator pedal is fully depressed.
- When cranking the engine.
- At high engine speeds.
- When the engine coolant temperature becomes excessively high.
- When operating power steering during low engine speed or low vehicle speed.
- When engine speed is excessively low.
- When refrigerant pressure is excessively low or high.

\*: This signal is sent to the ECM via the CAN communication line

### BASIC ASCD SYSTEM

Refer to Owner's Manual for ASCD operating instructions.

Automatic Speed Control Device (ASCD) allows a driver to keep vehicle at predetermined constant speed without depressing accelerator pedal. Driver can set vehicle speed in advance between approximately 35 km/h (22 MPH) and 144 km/h (89 MPH).

ECM controls throttle angle of electric throttle control actuator to regulate engine speed.

Operation status of ASCD is indicated by CRUISE indicator and SET indicator in combination meter. If any malfunction occurs in the ASCD system, it automatically deactivates control.

#### NOTE:

**Always drive vehicle in a safe manner according to traffic conditions and obey all traffic laws.**

### SET OPERATION

Press MAIN switch. (The CRUISE indicator in combination meter illuminates.)

When vehicle speed reaches a desired speed between approximately 35 km/h (22 MPH) and 144 km/h (89 MPH), press SET/COAST switch. (Then SET lamp in combination meter illuminates.)

### ACCELERATE OPERATION

If the RESUME/ACCELERATE switch is pressed during cruise control driving, increase the vehicle speed until the switch is released or vehicle speed reaches maximum speed controlled by the system.

And then ASCD will maintain the new set speed.

### CANCEL OPERATION

When any of following conditions exist, cruise operation will be canceled.

- CANCEL switch is pressed
- More than 2 switches at ASCD steering switch are pressed at the same time (Set speed will be cleared)
- Brake pedal is depressed
- Selector lever is in the N, P, R position
- Vehicle speed decreased to 13 km/h (8 MPH) lower than the set speed

- TCS system is operated
- When the ECM detects any of the following conditions, the ECM will cancel the cruise operation and inform the driver by blinking indicator lamp.
- Engine coolant temperature is slightly higher than the normal operating temperature, CRUISE lamp may blink slowly.  
When the engine coolant temperature decreases to the normal operating temperature, CRUISE lamp will stop blinking and the cruise operation will be able to work by pressing SET/COAST switch or RESUME/ACCELERATE switch.
  - Malfunction for some self-diagnoses regarding ASCD control: SET indicator will blink quickly.  
If MAIN switch is turned to OFF while ASCD is activated, all of ASCD operations will be canceled and vehicle speed memory will be erased.

## COAST OPERATION

When the SET/COAST switch is pressed during cruise control driving, decrease vehicle set speed until the switch is released. And then ASCD will maintain the new set speed.

## RESUME OPERATION

When the RESUME/ACCELERATE switch is pressed after cancel operation other than pressing MAIN switch is performed, vehicle speed will return to last set speed. To resume vehicle set speed, vehicle condition must meet following conditions.

- Brake pedal is released
- A/T selector lever is in the P and N positions
- Vehicle speed is greater than 35 km/h (22 MPH) and less than 144 km/h (89 MPH)

## CAN COMMUNICATION

### CAN COMMUNICATION : System Description

INFOID:000000007729682

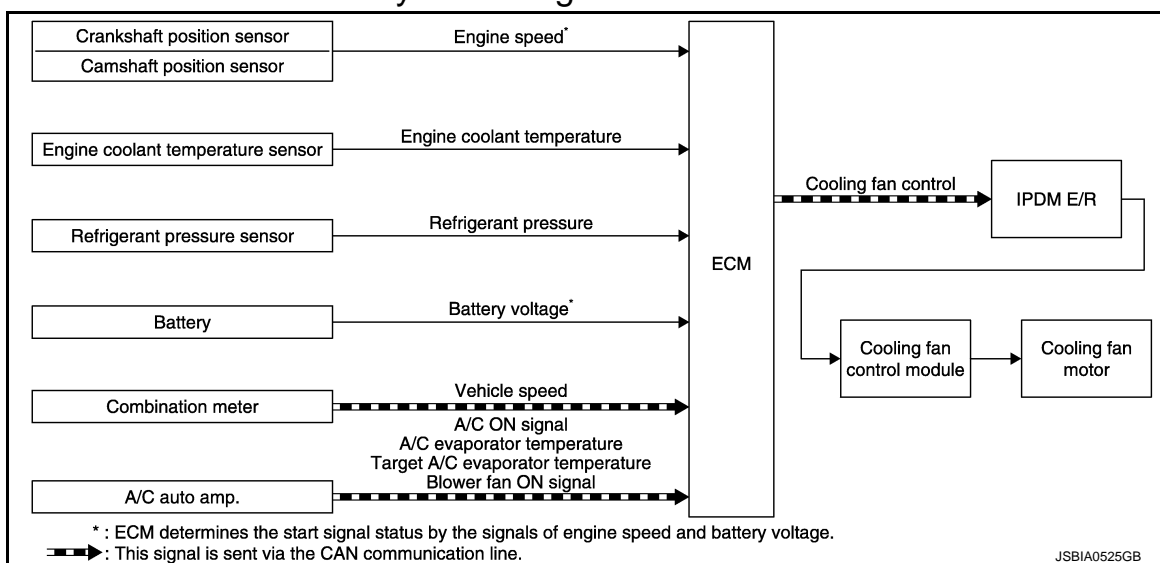

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

Refer to [LAN-17. "CAN COMMUNICATION SYSTEM : CAN Communication Control Circuit"](#), about CAN communication for detail.

\*1: The ECM determines the start signal status by the signals of engine speed and battery voltage.

\*2: This signal is sent to ECM via the CAN communication line.

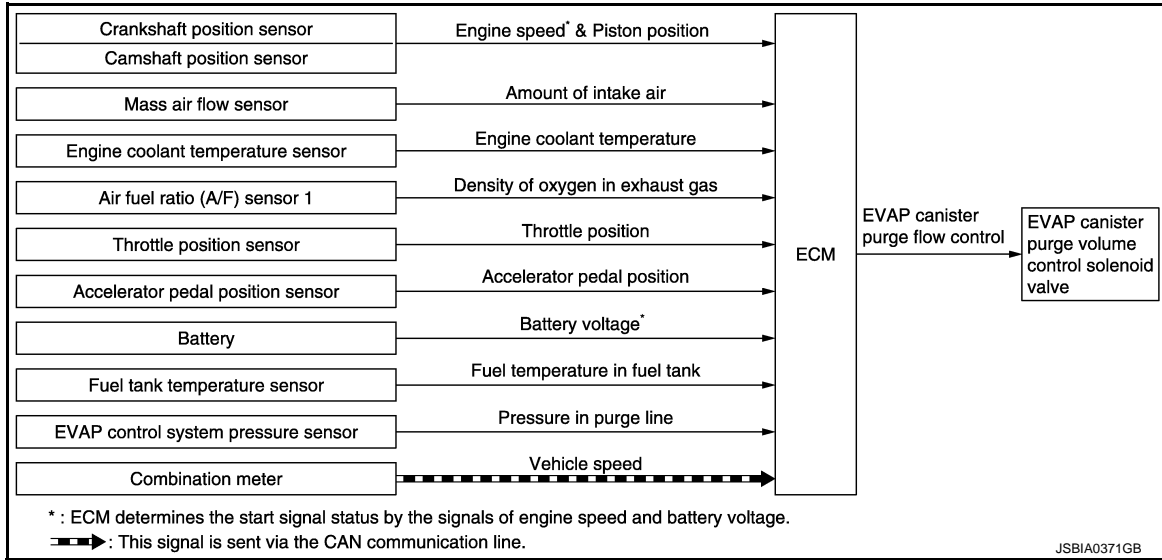

## SYSTEM DESCRIPTION

ECM controls cooling fan speed corresponding to vehicle speed, engine coolant temperature, air conditioner ON signal, refrigerant pressure, target A/C evaporator temperature and A/C evaporator temperature. Cooling fan control signal is sent to IPDM E/R from ECM by CAN communication line. Then, IPDM E/R sends ON/OFF pulse duty signal to cooling fan control module. Corresponding to this ON/OFF pulse duty signal, cooling fan control module gives cooling fan motor operating voltage to cooling fan motors. Cooling fan speed is controlled by duty cycle of cooling fan motor operating voltage sent from cooling fan control module.

\*1: ECM determines the start signal status by the signals of engine speed and battery voltage.

\*2: This signal is sent to the ECM via the CAN communication line.

## SYSTEM DESCRIPTION

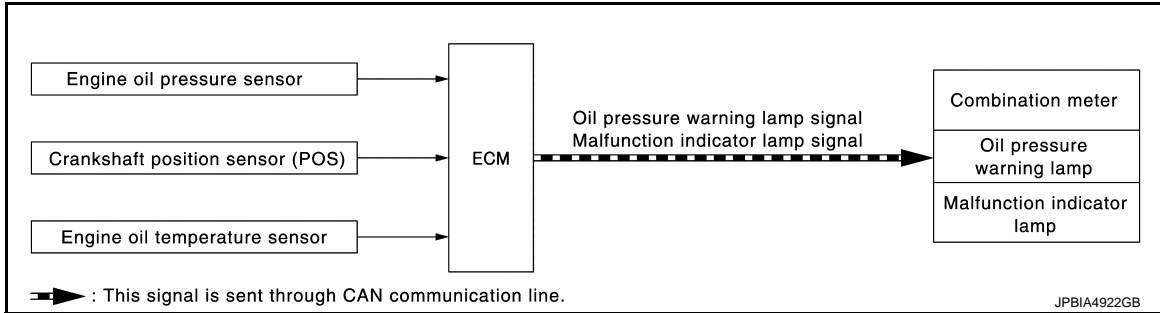

The evaporative emission system is used to reduce hydrocarbons emitted into the atmosphere from the fuel system. This reduction of hydrocarbons is accomplished by activated charcoals in the EVAP canister. The fuel vapor in the sealed fuel tank is led into the EVAP canister which contains activated carbon and the vapor is stored there when the engine is not operating or when refueling to the fuel tank. The vapor in the EVAP canister is purged by the air through the purge line to the intake manifold when the engine is operating. EVAP canister purge volume control solenoid valve is controlled by ECM. When the engine operates, the flow rate of vapor controlled by EVAP canister purge volume control solenoid valve is proportionally regulated as the air flow increases. EVAP canister purge volume control solenoid valve also shuts off the vapor purge line during decelerating and idling.

## ENGINE PROTECTION CONTROL AT LOW ENGINE OIL PRESSURE

gram

INFOID:000000007768316

## ENGINE PROTECTION CONTROL AT LOW ENGINE OIL PRESSURE : System Description

INFOID:000000007768317

### INPUT/OUTPUT SIGNAL CHART

| Sensor                           | Input signal to ECM    | ECM function  | Actuator   |
|----------------------------------|------------------------|---|--|
| Engine oil pressure sensor       | Engine pressure        | Engine protection control<br>• Oil pressure warning lamp signal<br>• FUEl cut control | Combination meter<br>• Oil pressure warning lamp |
| Crankshaft position sensor (POS) | Engine speed           |   |  |
| Engine oil temperature sensor    | Engine oil temperature |   |  |

### SYSTEM DESCRIPTION

- The engine protection control at low engine oil pressure warns the driver of a decrease in engine oil pressure by the oil pressure warning lamp a before the engine becomes damaged.
- When detecting a decrease in engine oil pressure at an engine speed less than 1,000 rpm, ECM transmits an oil pressure warning lamp signal to the combination meter. The combination meter turns ON the oil pressure warning lamp, according to the signal.

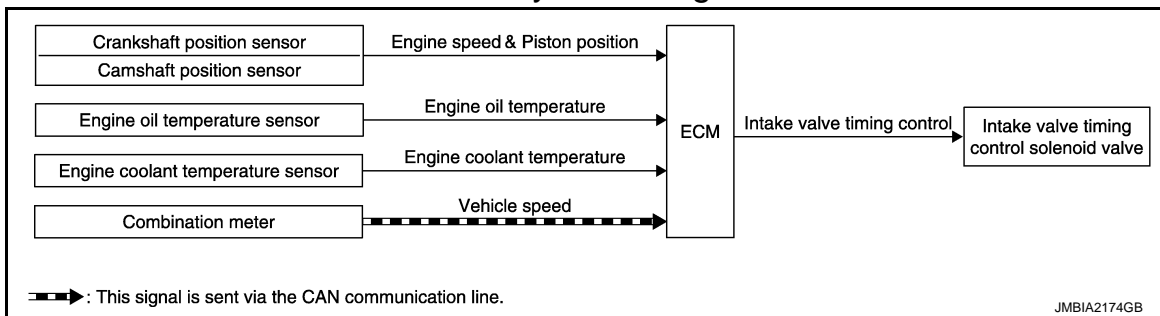

| Decrease in engine oil pressure | Engine speed        | Combination meter         |
|---------------------------------|---------------------|---------------------------|
|                                 |                     | Oil pressure warning lamp |
| Detection                       | Less than 1,000 rpm | ON*                       |
|                                 | 1,000 rpm or more   | ON                        |

\*: When detecting a normal engine oil pressure, ECM turns OFF the oil pressure warning lamp.

\*: This signal is sent to the ECM via the CAN communication line

## SYSTEM DESCRIPTION

This mechanism hydraulically controls cam phases continuously with the fixed operating angle of the intake valve.

The ECM receives signals such as crankshaft position, camshaft position, engine speed, and engine coolant temperature. Then, the ECM sends ON/OFF pulse duty signals to the intake valve timing (IVT) control solenoid valve depending on driving status. This makes it possible to control the shut/open timing of the intake valve to increase engine torque in low/mid speed range and output in high-speed range.

VVEL (Variable Valve Event & Lift) is a system that controls valve event and valve lift continuously. Rotational movement of the drive shaft equipped with eccentric cam is transmitted to output cam via the rocker arm and two kinds of links to depress the intake valve. ECM decides the target valve lift according to the driving condition and sends the command signal to the VVEL control module. The VVEL control module controls the rotation of the control shaft using the VVEL actuator motor and changes the movement of the output cam by shifting the link supporting point. As a result, valve lift changes continuously to improve engine output and response.

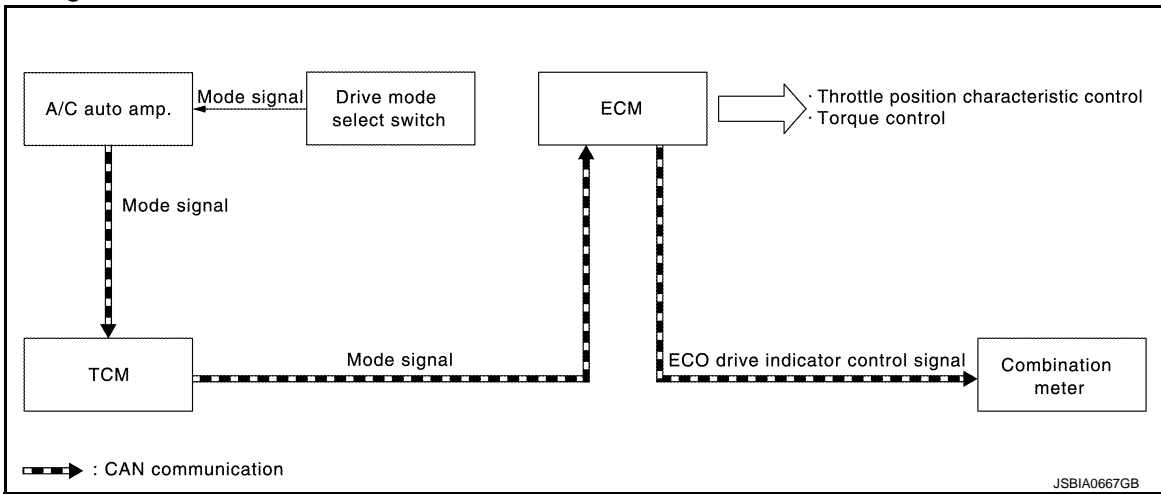

## Infiniti Drive Mode Selector

Infiniti Drive Mode Selector : System Description

INFOID:000000007729693

System Diagram

NOTE:

- This section provides descriptions only about the control by ECM.  
For overall control, refer to [DMS-5, "Infiniti Drive Mode Selector : System Description"](#).

Infiniti drive mode selector

- A/C auto amp. receives an operation state signal of the drive mode select switch and transmits a mode signal (see below) to TCM via CAN communication.
  - STANDARD: ON/OFF
  - SPORT: ON/OFF
  - ECO: ON/OFF
  - SNOW: ON/OFF
- TCM transmits a mode state signal to ECM via CAN communication, based on a ECO mode signal received from the A/C auto amp.
- ECM controls throttle angle characteristics and torque appropriate to each mode, based on a ECO mode signal received from TCM via CAN communication.
- The combination meter turns ON the ECO drive indicator when in ECO mode, based on a ECO drive indicator control signal received from ECM via CAN communication.

Control

- With the drive mode selector, a drive mode select switch installed at the top of the center console switches a vehicle drive mode, changes throttle angle characteristics, and controls torque.
- Vehicle characteristics are controlled in the following modes, on the basis of STANDARD mode ("●" position of the drive mode select switch).
  - SPORT: Changing throttle angle characteristics allows to use a high engine performance range and increases driving performance.
  - ECO: Changing throttle angle characteristics and controlling torque, ECO drive indicator enhance fuel economy in actual traffic.
  - SNOW: Changing throttle angle characteristics enhances driving performance on roads with a low coefficient of friction.

| Control item | Vehicle drive mode |     |      | Description   |
|--------------|--------------------|-----|------|---|
|              | SPORT              | ECO | SNOW |   |
| Engine       | ×                  | ×   | ×    | Changes throttle angle and controls torque* and the ECO drive indicator*. |

\*: Torque control and the ECO drive indicator is available only when in ECO mode.

ECO drive indicator control

ECO drive indicator turns ON in ECO mode.

## OPERATION

< SYSTEM DESCRIPTION >

[VQ37VHR FOR MEXICO]

---

If MAIN switch is turned to OFF during ASCD is activated, all of ASCD operations will be canceled and vehicle speed memory will be erased.

## HANDLING PRECAUTION

### Infiniti Drive Mode Selector

INFOID:000000007729695

#### ECO DRIVE INDICATOR LAMP CONTROL

- ECO drive indicator turns OFF under the following conditions.
  - While driving at low speeds [3 MPH (4.8 km/h) or less] or high speeds [90 MPH (144 km/h) or more].
  - Intelligent cruise control is in operation.
  - Selector lever is in R range.

#### ENGINE OUTPUT CHARACTERISTICS AFTER SWITCHING MODE

- Engine output characteristics after switching mode by operating the drive mode select switch are as follows.
  - After switching mode to a mode that engine output increase, engine output characteristics are changed by releasing the accelerator pedal.
  - After switching mode to a mode that engine output decreases, engine output characteristics are changed immediately.
- When an accelerator angle is constant, engine output characteristics are as follows.
  - SPORT > STANDARD > ECO > SNOW

Output characteristics of each mode

| Control mode | Engine output                           |
|--------------|---|
| SPORT        | Increase                                |
| STANDARD     | Normal                                  |

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

< SYSTEM DESCRIPTION >

[VQ37VHR FOR MEXICO]

## ON BOARD DIAGNOSTIC (OBD) SYSTEM

### Diagnosis Description

INFOID:000000007729696

This system is an on board diagnostic system that records exhaust emission-related diagnostic information and detects a sensors/actuator-related malfunction. A malfunction is indicated by the malfunction indicator lamp (MIL) and stored in ECU memory as a DTC. The diagnostic information can be obtained with the diagnostic tool (GST: Generic Scan Tool).

### GST (Generic Scan Tool)

INFOID:000000007729697

When GST is connected with a data link connector equipped on the vehicle side, it will communicate with the control unit equipped in the vehicle and then enable various kinds of diagnostic tests. Refer to [EC-590, "Diagnosis Description"](#).

**NOTE:**

Service \$0A is not applied for regions where it is not mandated.

## DIAGNOSIS SYSTEM (ECM)

### DIAGNOSIS DESCRIPTION

#### DIAGNOSIS DESCRIPTION : 1st Trip Detection Logic and Two Trip Detection Logic

INFOID:000000007729698

When a malfunction is detected for the first time, 1st trip DTC and 1st trip Freeze Frame data are stored in the ECM memory. The MIL will not illuminate at this stage. <1st trip>

If the same malfunction is detected again during the next drive, the DTC and Freeze Frame data are stored in the ECM memory, and the MIL illuminates. The MIL illuminates at the same time when the DTC is stored. <2nd trip> The "trip" in the "Two Trip Detection Logic" means a driving mode in which self-diagnosis is performed during vehicle operation. Specific on board diagnostic items will cause the ECM to illuminate or blink the MIL, and store DTC and Freeze Frame data, even in the 1st trip, as shown below.

x: Applicable —: Not applicable

| Items   | MIL      |            |          |            | DTC                 |                     | 1st trip DTC        |                     |

#### DIAGNOSIS DESCRIPTION : DTC and Freeze Frame Data

INFOID:000000007729699

##### DTC AND 1ST TRIP DTC

The 1st trip DTC (whose number is the same as the DTC number) is displayed for the latest self-diagnostic result obtained. If the ECM memory was cleared previously, and the 1st trip DTC did not recur, the 1st trip DTC will not be displayed.

If a malfunction is detected during the 1st trip, the 1st trip DTC is saved in the ECM memory. The MIL will not light up (two trip detection logic). If the same malfunction is not detected in the 2nd trip (meeting the required driving pattern), the 1st trip DTC is cleared from the ECM memory. If the same malfunction is detected in the 2nd trip, both the 1st trip DTC and DTC are saved in the ECM memory and the MIL lights up. In other words, the DTC is stored in the ECM memory and the MIL lights up when the same malfunction occurs in two consecutive trips. If a 1st trip DTC is stored and a non-diagnostic operation is performed between the 1st and 2nd trips, only the 1st trip DTC will continue to be stored. For malfunctions that blink or light up the MIL during the 1st trip, the DTC and 1st trip DTC are stored in the ECM memory.

For malfunctions in which 1st trip DTCs are displayed, refer to [EC-628, "DTC Index"](#). These items are required by legal regulations to continuously monitor the system/component. In addition, the items monitored non-continuously are also displayed on CONSULT.

1st trip DTC is specified in Service \$07 of SAE J1979/ISO 15031-5. 1st trip DTC detection occurs without illuminating the MIL and therefore does not warn the driver of a malfunction.

When a 1st trip DTC is detected, check, print out or write down and erase (1st trip) DTC and Freeze Frame data as specified in Work Flow procedure Step 2, refer to [EC-649, "Work Flow"](#). Then perform DTC Confirmation Procedure or Component Function Check to try to duplicate the malfunction. If the malfunction is duplicated, the item requires repair.

##### FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA

The ECM records the driving conditions such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed, vehicle speed, absolute throttle position, base fuel schedule and intake air temperature at the moment a malfunction is detected.

Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data. The data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT or GST. The 1st trip freeze frame data can only be displayed on the CONSULT screen.

# DIAGNOSIS SYSTEM (ECM)

[VQ37VHR FOR MEXICO]

## < SYSTEM DESCRIPTION >

Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MIL on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. The ECM has the following priorities to update the data.

| Priority | Items                      |  |
|----------|----------------------------|--|
| 1        | Freeze frame data          | Misfire — DTC: P0300 - P0308<br>Fuel Injection System Function — DTC: P0171, P0172, P0174, P0175 |
| 2        |                            | Except the above items   |
| 3        | 1st trip freeze frame data |  |

For example, the EGR malfunction (Priority: 2) was detected and the freeze frame data was saved in the 2nd trip. After that when the misfire (Priority: 1) is detected in another trip, the freeze frame data will be updated from the EGR malfunction to the misfire. The 1st trip freeze frame data is updated each time a different malfunction is detected. There is no priority for 1st trip freeze frame data. However, once freeze frame data is stored in the ECM memory, 1st trip freeze data is no longer stored (because only one freeze frame data or 1st trip freeze frame data can be stored in the ECM). If freeze frame data is stored in the ECM memory and freeze frame data with the same priority occurs later, the first (original) freeze frame data remains unchanged in the ECM memory.

Both 1st trip freeze frame data and freeze frame data (along with the DTCs) are cleared when the ECM memory is erased.

## DIAGNOSIS DESCRIPTION : Counter System

INFOID:000000007729700

### RELATIONSHIP BETWEEN MIL, 1ST TRIP DTC, DTC, AND DETECTABLE ITEMS

- When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data are stored in the ECM memory.
- When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data are stored in the ECM memory, and the MIL will come on.
- The MIL will turn OFF after the vehicle is driven 3 times (driving pattern B) with no malfunction. The drive is counted only when the recorded driving pattern is met (as stored in the ECM). If another malfunction occurs while counting, the counter will reset.
- The DTC and the freeze frame data will be stored until the vehicle is driven 40 times (driving pattern A) without the same malfunction recurring (except for Misfire and Fuel Injection System). For Misfire and Fuel Injection System, the DTC and freeze frame data will be stored until the vehicle is driven 80 times (driving pattern C) without the same malfunction recurring. The "TIME" in "SELF-DIAGNOSTIC RESULTS" mode of CONSULT will count the number of times the vehicle is driven.
- The 1st trip DTC is not displayed when the self-diagnosis results in OK for the 2nd trip.

### COUNTER SYSTEM CHART

| Items                               | Fuel Injection System | Misfire           | Other          |
|-------------------------------------|-----------------------|-------------------|----------------|
| MIL (turns OFF)                     | 3 (pattern B)         | 3 (pattern B)     | 3 (pattern B)  |
| DTC, Freeze Frame Data (no display) | 80 (pattern C)        | 80 (pattern C)    | 40 (pattern A) |
| 1st Trip DTC (clear)                | 1 (pattern C), *1     | 1 (pattern C), *1 | 1 (pattern B)  |
| 1st Trip Freeze Frame Data (clear)  | *1, *2                | *1, *2            | 1 (pattern B)  |

For details about patterns B and C under "Fuel Injection System" and "Misfire", see "EXPLANATION FOR DRIVING PATTERNS FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM".

For details about patterns A and B under Other, see "EXPLANATION FOR DRIVING PATTERNS FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM".

- \*1: Clear timing is at the moment OK is detected.
- \*2: Clear timing is when the same malfunction is detected in the 2nd trip.

Relationship Between MIL, DTC, 1st Trip DTC and Driving Patterns for "Misfire <Exhaust Quality Deterioration>", "Fuel Injection System"

\*1: When the same malfunction is detected in two consecutive trips, MIL will light up.

\*2: MIL will turn OFF after vehicle is driven 3 times (pattern B) without any malfunctions.

\*3: When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data will be stored in ECM.

\*4: The DTC and the freeze frame data will not be displayed any longer after vehicle is driven 80 times (pattern C) without the same malfunction. (The DTC and the freeze frame data still remain in ECM.)

\*5: When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data will be stored in ECM.

\*6: The 1st trip DTC and the 1st trip freeze frame data will be cleared at the moment OK is detected.

\*7: When the same malfunction is detected in the 2nd trip, the 1st trip freeze frame data will be cleared.

\*8: 1st trip DTC will be cleared when vehicle is driven once (pattern C) without the same malfunction after DTC is stored in ECM.

## Explanation for Driving Patterns for "Misfire <Exhaust Quality Deterioration>", "Fuel Injection System"

### Driving Pattern B

Refer to [EC-595. "DIAGNOSIS DESCRIPTION : Driving Pattern"](#).

# DIAGNOSIS SYSTEM (ECM)

[VQ37VHR FOR MEXICO]

## < SYSTEM DESCRIPTION >

### Driving Pattern C

Refer to [EC-595. "DIAGNOSIS DESCRIPTION : Driving Pattern"](#).

Example:

If the stored freeze frame data is as per the following:

Engine speed: 850 rpm, Calculated load value: 30%, Engine coolant temperature: 80°C (176°F)

To be satisfied with driving pattern C, the vehicle should run under the following conditions:

Engine speed: 475 – 1,225 rpm, Calculated load value: 27 – 33%, Engine coolant temperature: more than 70°C (158°F)

Driving Pattern B

Refer to [EC-595, "DIAGNOSIS DESCRIPTION : Driving Pattern"](#).

## DIAGNOSIS DESCRIPTION : Driving Pattern

INFOID:000000007729702

**CAUTION:**

**Always drive at a safe speed.**

### DRIVING PATTERN A

Driving pattern A means a trip satisfying the following conditions.

- Engine speed reaches 400 rpm or more.
- Engine coolant temperature rises by 20°C (32°F) or more after starting the engine.
- Engine coolant temperature reaches 70°C (158°F) or more.
- The ignition switch is turned from ON to OFF.

**NOTE:**

- When the same malfunction is detected regardless of driving conditions, reset the counter of driving pattern A.
- When the above conditions are satisfied without detecting the same malfunction, reset the counter of driving pattern A.

### DRIVING PATTERN B

Driving pattern B means a trip satisfying the following conditions.

- Engine speed reaches 400 rpm or more.
- Engine coolant temperature reaches 70°C (158°F) or more.
- Vehicle speed of 70 – 120 km/h (44 – 75 MPH) is maintained for 60 seconds or more under the control of closed loop.
- Vehicle speed of 30 – 60 km/h (19 – 37 MPH) is maintained for 10 seconds or more under the control of closed loop.
- Under the closed loop control condition, the following state reaches 12 seconds or more in total: Vehicle speed of 4 km/h (2 MPH) or less with idling condition.
- The state of driving at 10 km/h (7 MPH) or more reaches 10 minutes or more in total.
- A lapse of 22 minutes or more after engine start.

**NOTE:**

- Drive the vehicle at a constant velocity.
- When the same malfunction is detected regardless of driving conditions, reset the counter of driving pattern B.
- When the above conditions are satisfied without detecting the same malfunction, reset the counter of driving pattern B.

### DRIVING PATTERN C

Driving pattern C means operating vehicle as per the following:

The following conditions should be satisfied at the same time:

Engine speed: (Engine speed in the freeze frame data) ±375 rpm

# DIAGNOSIS SYSTEM (ECM)

[VQ37VHR FOR MEXICO]

## < SYSTEM DESCRIPTION >

Calculated load value: (Calculated load value in the freeze frame data) x (1±0.1) [%]

Engine coolant temperature condition:

- When the freeze frame data shows lower than 70°C (158°F), engine coolant temperature should be lower than 70°C (158°F).
- When the freeze frame data shows higher than or equal to 70°C (158°F), engine coolant temperature should be higher than or equal to 70°C (158°F).

### NOTE:

- When the same malfunction is detected regardless of the above vehicle conditions, reset the counter of driving pattern C.
- When the above conditions are satisfied without detecting the same malfunction, reset the counter of driving pattern C.
- The 1st trip DTC will be cleared when C counter is counted once without the same malfunction after DTC is stored in ECM.

## DRIVING PATTERN D

Driving pattern D means a trip satisfying the following conditions.

- The state of driving at 40 km/h (25 MPH) reaches 300 seconds or more in total.
- Idle speed lasts 30 seconds or more.
- A lapse of 600 seconds or more after engine start.

### NOTE:

- When the same malfunction is detected regardless of driving conditions, reset the counter of driving pattern D.
- When the above conditions are satisfied without detecting the same malfunction, reset the counter of driving pattern D.

## DIAGNOSIS DESCRIPTION : System Readiness Test (SRT) Code

INFOID:000000007729704

System Readiness Test (SRT) code is specified in Service \$01 of SAE J1979/ISO 15031-5.

As part of an enhanced emissions test for Inspection & Maintenance (I/M), certain states require the status of SRT be used to indicate whether the ECM has completed self-diagnosis of major emission systems and components. Completion must be verified in order for the emissions inspection to proceed.

If a vehicle is rejected for a State emissions inspection due to one or more SRT items indicating "INCMP", use the information in this Service Manual to set the SRT to "CMPLT".

In most cases the ECM will automatically complete its self-diagnosis cycle during normal usage, and the SRT status will indicate "CMPLT" for each application system. Once set as "CMPLT", the SRT status remains "CMPLT" until the self-diagnosis memory is erased.

Occasionally, certain portions of the self-diagnostic test may not be completed as a result of the customer's normal driving pattern; the SRT will indicate "INCMP" for these items.

### NOTE:

The SRT will also indicate "INCMP" if the self-diagnosis memory is erased for any reason or if the ECM memory power supply is interrupted for several hours.

If, during the state emissions inspection, the SRT indicates "CMPLT" for all test items, the inspector will continue with the emissions test. However, if the SRT indicates "INCMP" for one or more of the SRT items the vehicle is returned to the customer untested.

### NOTE:

If MIL is ON during the state emissions inspection, the vehicle is also returned to the customer untested even though the SRT indicates "CMPLT" for all test items. Therefore, it is important to check SRT ("CMPLT") and DTC (No DTCs) before the inspection.

## SRT SET TIMING

SRT is set as "CMPLT" after self-diagnosis has been performed one or more times. Completion of SRT is done regardless of whether the result is OK or NG. The set timing is different between OK and NG results and is shown in the table below.

# DIAGNOSIS SYSTEM (ECM)

< SYSTEM DESCRIPTION >

[VQ37VHR FOR MEXICO]

| Self-diagnosis result |        | Example           |                |         |              |                        |     |        |

|                       |        | P1402             | OK (1)         | OK (2)  | — (2)        | — (2)                  |     |        |
|                       |        | SRT of EGR        | "INCMP"        | "INCMP" | "CMPLT"      | "CMPLT"                |     |        |
| NG exists             | Case 3 | P0400             | OK             | OK      | —            | —                      |     |        |
|                       |        | P0402             | —              | —       | —            | —                      |     |        |
|                       |        | P1402             | NG             | —       | NG           | NG<br>(Consecutive NG) |     |        |
|                       |        | (1st trip)<br>DTC | 1st trip DTC   | —       | 1st trip DTC | DTC<br>(= MIL ON)      |     |        |
|                       |        | SRT of EGR        | "INCMP"        | "INCMP" | "INCMP"      | "CMPLT"                |     |        |

OK: Self-diagnosis is carried out and the result is OK.

NG: Self-diagnosis is carried out and the result is NG.

—: Self-diagnosis is not carried out.

When all SRT related self-diagnoses show OK results in a single cycle (Ignition OFF-ON-OFF), the SRT will indicate "CMPLT". → Case 1 above

When all SRT related self-diagnoses show OK results through several different cycles, the SRT will indicate "CMPLT" at the time the respective self-diagnoses have at least one OK result. → Case 2 above

If one or more SRT related self-diagnoses show NG results in 2 consecutive cycles, the SRT will also indicate "CMPLT". → Case 3 above

The table above shows that the minimum number of cycles for setting SRT as "INCMP" is the number one (1) for each self-diagnosis (Case 1 & 2) or the number two (2) for one of self-diagnoses (Case 3). However, in preparation for the state emissions inspection, it is unnecessary for each self-diagnosis to be executed twice (Case 3) for the following reasons:

- The SRT will indicate "CMPLT" at the time the respective self-diagnoses have one (1) OK result.
- The emissions inspection requires "CMPLT" of the SRT only with OK self-diagnosis results.
- During SRT driving pattern, the 1st trip DTC (NG) is detected prior to "CMPLT" of SRT and the self-diagnosis memory must be erased from the ECM after repair.
- If the 1st trip DTC is erased, all the SRT will indicate "INCMP".

**NOTE:**

SRT can be set as "CMPLT" together with the DTC(s). Therefore, DTC check must always be carried out prior to the state emission inspection even though the SRT indicates "CMPLT".

## DIAGNOSIS DESCRIPTION : Malfunction Indicator Lamp (MIL)

INFOID:000000007729707

When emission related ECU detects a malfunction in the emission control systems components and/or the powertrain control components (which affect vehicle emissions), it turns on/blinks MIL to inform the driver that a malfunction has been detected.

1. The MIL illuminates when ignition switch is turned ON (engine is not running).

**NOTE:**

Check the MIL circuit if MIL does not illuminate. Refer to [EC-957. "Component Function Check"](#).

2. When the engine is started, the MIL should go off.

**NOTE:**

If MIL continues to illuminate/blink, perform self-diagnoses and inspect/repair accordingly because an emission related ECU has detected a malfunction in the emission control systems components and/or the powertrain control components (which affect vehicle emissions).

JSBIA1315ZZ

## On Board Diagnosis Function

INFOID:000000007729708

### ON BOARD DIAGNOSIS ITEM

The on board diagnostic system has the following functions.

| Diagnostic test mode                          | Function   |
|---|--|
| Bulb check                                    | MIL can be checked.  |
| SRT status                                    | ECM can read if SRT codes are set.   |
| Malfunction warning                           | If ECM detects a malfunction, it illuminates or blinks MIL to inform the driver that a malfunction has been detected.            |
| Self-diagnostic results                       | DTCs or 1st trip DTCs stored in ECM can be read.   |
| Accelerator pedal released position learning  | ECM can learn the accelerator pedal released position. Refer to <a href="#">EC-656, "Description"</a> .                          |
| Throttle valve closed position learning       | ECM can learn the throttle valve closed position. Refer to <a href="#">EC-656, "Description"</a> .                               |
| Idle air volume learning                      | ECM can learn the idle air volume. Refer to <a href="#">EC-658, "Description"</a> .  |
| VVEL control shaft position sensor adjustment | The initial position of the VVEL control shaft position sensor can be adjusted. Refer to <a href="#">EC-660, "Description"</a> . |

### BLUB CHECK MODE

#### Description

This function allows damage inspection in the MIL bulb (blown, open circuit, etc.).

#### Operation Procedure

1. Turn ignition switch ON.
2. The MIL on the instrument panel should stay ON.  
If it remains OFF, check MIL circuit. Refer to [EC-957, "Diagnosis Procedure"](#).

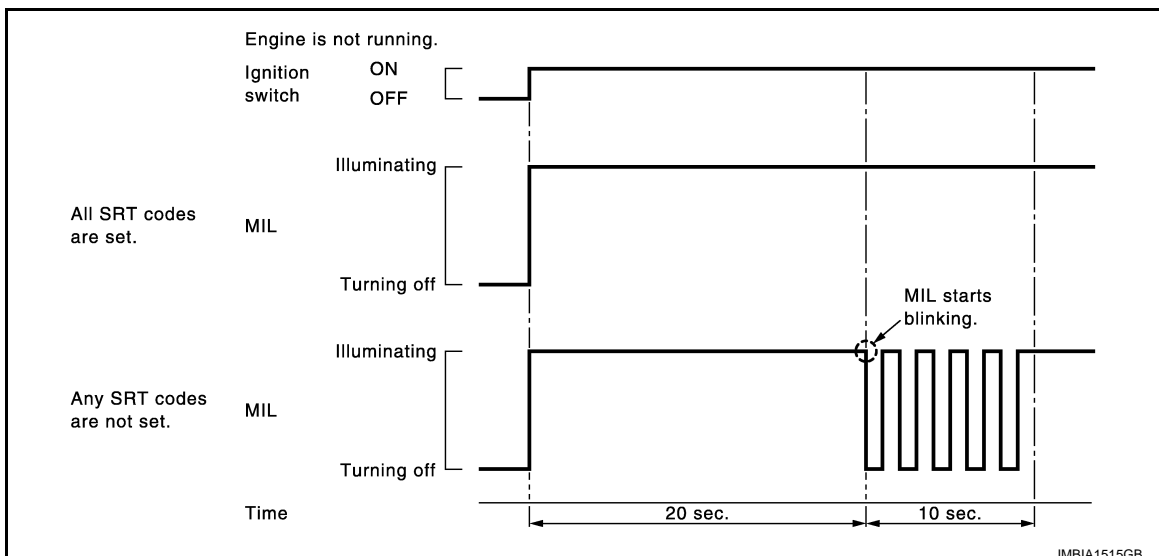

### SRT STATUS MODE

#### Description

This function allows to read if ECM has completed the self-diagnoses of major emission control systems and components. For SRT, refer to [EC-596, "DIAGNOSIS DESCRIPTION : System Readiness Test \(SRT\) Code"](#).

#### Operation Procedure

1. Turn ignition switch ON and wait 20 seconds.
2. SRT status is indicated as shown blow.
  - ECM continues to illuminate MIL if all SRT codes are set.
  - ECM blinks MIL for about 10 seconds if all SRT codes are not set.

JMBIA1515GB

## MALFUNCTION WARNING MODE

### Description

In this function ECM turns on or blinks MIL when it detects a malfunction in the emission control system components and/or the powertrain control components (which affect vehicle emissions) to inform the driver that a malfunction has been detected.

### Operation Procedure

1. Turn ignition switch ON.
2. Check that MIL illuminates.  
If it remains OFF, check MIL circuit. Refer to [EC-957. "Diagnosis Procedure"](#).
3. Start engine and let it idle.
  - For two trip detection logic diagnoses, ECM turns on MIL when it detects the same malfunction twice in the two consecutive driving cycles.
  - For 1st trip detection logic diagnoses, ECM turns on MIL when it detects a malfunction in one driving cycle.
  - ECM blinks MIL when it detects a malfunction that may damage the three way catalyst (misfire).

## SELF-DIAGNOSTIC RESULTS MODE

### Description

This function allows to indicate DTCs or 1st trip DTCs stored in ECM according to the number of times MIL is blinking.

### How to Set Self-diagnostic Results Mode

#### NOTE:

- It is better to count the time accurately with a clock.
  - It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.
  - After ignition switch is turned off, ECM is always released from the "self-diagnostic results" mode.
1. Confirm that accelerator pedal is fully released, turn ignition switch ON and wait 3 seconds.
  2. Repeat the following procedure quickly five times within 5 seconds.
    - Fully depress the accelerator pedal.
    - Fully release the accelerator pedal.
  3. Wait 7 seconds, fully depress the accelerator pedal and keep it depressed for approx. 10 seconds until the MIL starts blinking.

#### NOTE:

Do not release the accelerator pedal for 10 seconds if MIL starts blinking during this period. This blinking is displaying SRT status and is continued for another 10 seconds.

4. Fully release the accelerator pedal.  
ECM has entered to self-diagnostic results mode.

#### NOTE:

Wait until the same DTC (or 1st trip DTC) appears to completely confirm all DTCs.

### How to Read Self-diagnostic Results

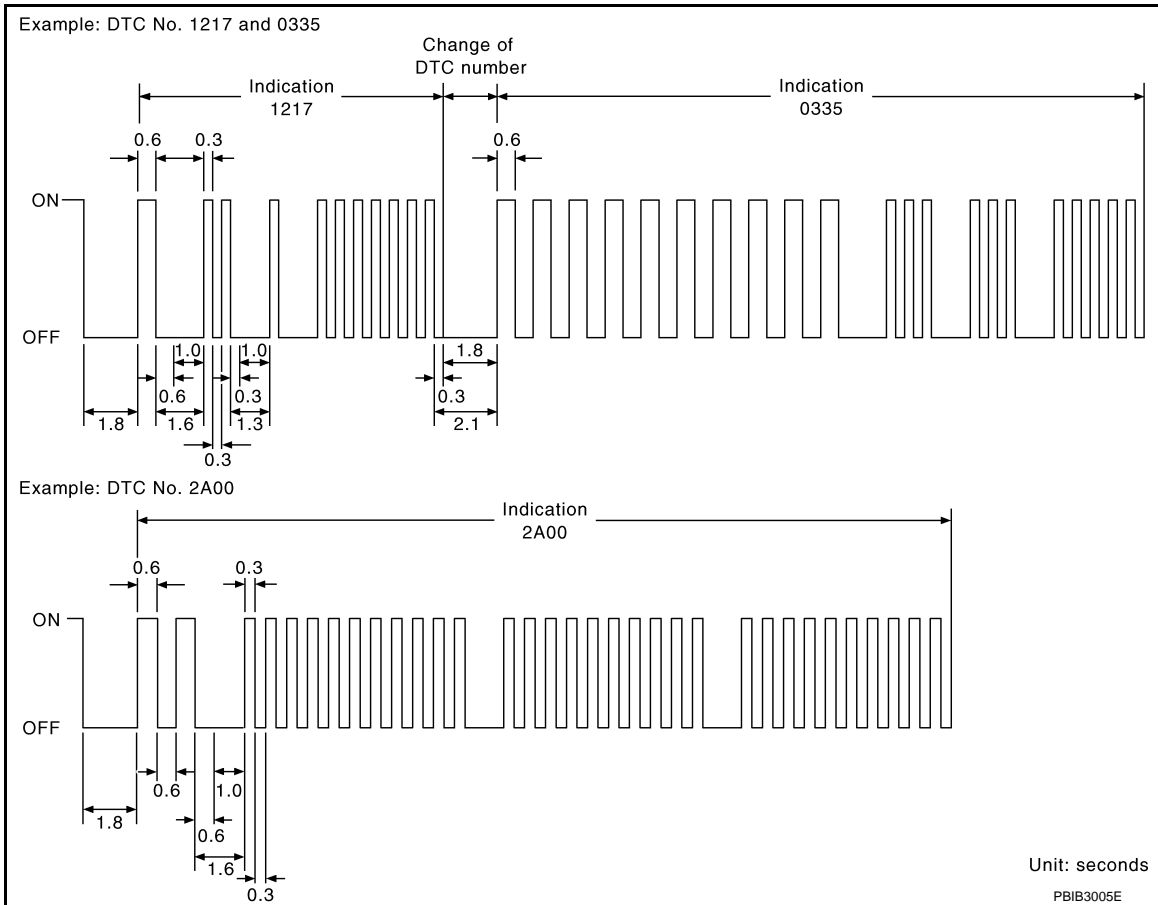

The DTC and 1st trip DTC are indicated by the number of blinks of the MIL as shown below. The DTC and 1st trip DTC are displayed at the same time. If the MIL does not illuminate in diagnostic test mode I (Malfunction warning), all displayed items are 1st trip DTCs. If only one code is displayed when the MIL illuminates in "malfunction warning" mode, it is a DTC; if two or more codes are displayed, they may be either

# DIAGNOSIS SYSTEM (ECM)

< SYSTEM DESCRIPTION >

[VQ37VHR FOR MEXICO]

DTCs or 1st trip DTCs. DTC No. is same as that of 1st trip DTC. These unidentified codes can be identified by using the CONSULT or GST. A DTC will be used as an example for how to read a code.

A particular trouble code can be identified by the number of four-digit numeral flashes per the following.

| Number  | 0  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | A  | B  | C  | D  | E  | F  |
|---------|----|---|---|---|---|---|---|---|---|---|----|----|----|----|----|----|
| Flashes | 10 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 11 | 12 | 13 | 14 | 15 | 16 |

The length of time the 1,000th-digit numeral flashes on and off is 1.2 seconds consisting of an ON (0.6-seconds) - OFF (0.6-seconds) cycle.

The 100th-digit numeral and lower digit numerals consist of a 0.3-seconds ON and 0.3-seconds OFF cycle.

A change from one digit numeral to another occurs at an interval of 1.0-second OFF. In other words, the later numeral appears on the display 1.3 seconds after the former numeral has disappeared.

A change from one trouble code to another occurs at an interval of 1.8-seconds OFF.

In this way, all the detected malfunctions are classified by their DTC numbers. The DTC 0000 refers to no malfunction. Refer to [EC-628, "DTC Index"](#).

## How to Erase Self-diagnostic Results

By performing this procedure, ECM memory is erased and the following diagnostic information is erased as well.

- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values

### NOTE:

Also, if a battery terminal is disconnected, ECM memory is erased and the diagnostic information as listed above is erased. (The amount of time required for erasing may vary from a few seconds to several hours.)

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

# DIAGNOSIS SYSTEM (ECM)

[VQ37VHR FOR MEXICO]

## < SYSTEM DESCRIPTION >

4. Turn ignition switch ON.
5. Set ECM in self-diagnostic results.
6. The diagnostic information has been erased from the backup memory in the ECM.  
Fully depress the accelerator pedal and keep it depressed for more than 10 seconds.
7. Fully release the accelerator pedal, and confirm the DTC 0000 is displayed.

## CONSULT Function

INFOID:00000000729709

### FUNCTION

| Diagnostic test mode           | Function  |
|--------------------------------|---|
| Work support                   | This mode enables a technician to adjust some devices faster and more accurately by following the indications on the CONSULT unit.      |
| Self-diagnostic results        | Self-diagnostic results such as 1st trip DTC, DTCs and 1st trip freeze frame data or freeze frame data can be read and erased quickly.* |
| Data monitor                   | Input/Output data in the ECM can be read.   |
| CAN diagnostic support monitor | The results of transmit/receive diagnosis of CAN communication can be read.   |
| Active test                    | Diagnostic Test Mode in which CONSULT drives some actuators apart from the ECMs and also shifts some parameters in a specified range.   |
| DTC & SRT confirmation         | The status of system monitoring tests and the self-diagnosis status/results can be confirmed.   |
| Function test                  | This mode is used to inform customers when their vehicle requires periodic maintenance.   |
| ECU part number                | ECM part number can be read.  |

\*: The following emission-related diagnostic information is cleared when the ECM memory is erased.

- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values

### WORK SUPPORT MODE

#### Work Item

| WORK ITEM             | CONDITION  | USAGE   |
|-----------------------|--|---|
| IDLE AIR VOL LEARN    | <ul style="list-style-type: none"> <li>• The idle air volume that keeps the engine within the specified range is memorized in ECM.</li> </ul>  | When learning the idle air volume                 |
| EVAP SYSTEM CLOSE     | Close the EVAP canister vent control valve in order to make evap system close under the following conditions. <ul style="list-style-type: none"> <li>• Ignition switch ON</li> <li>• Engine not running</li> <li>• Ambient temperature is above 0°C (32°F).</li> <li>• No vacuum and no high pressure in EVAP system</li> <li>• Fuel tank temp. is more than 0°C (32°F).</li> <li>• Within 10 minutes after starting "EVAP SYSTEM CLOSE"</li> <li>• When trying to execute "EVAP SYSTEM CLOSE" Under the condition except above, CONSULT will discontinue it and display appropriate instruction.</li> </ul> <b>NOTE:</b><br><b>When starting engine, CONSULT may display "Battery voltage is low. Charge battery", even when using a charged battery.</b> | When detecting EVAP vapor leak in the EVAP system |
| FUEL PRESSURE RELEASE | <ul style="list-style-type: none"> <li>• Fuel pump will stop by touching "START" during idling. Crank a few times after engine stalls.</li> </ul>  | When releasing fuel pressure from fuel line       |
| SELF-LEARNING CONT    | <ul style="list-style-type: none"> <li>• The coefficient of self-learning control mixture ratio returns to the original coefficient.</li> </ul>  | When clearing mixture ratio self-learning value   |
| TARGET IDLE RPM ADJ*  | <ul style="list-style-type: none"> <li>• Idle condition</li> </ul>   | When setting target idle speed                    |

# DIAGNOSIS SYSTEM (ECM)

< SYSTEM DESCRIPTION >

[VQ37VHR FOR MEXICO]

| WORK ITEM             | CONDITION  | USAGE   |
|-----------------------|--|---|
| TARGET IGN TIM ADJ*   | <ul style="list-style-type: none"> <li>Idle condition</li> </ul>   | When adjusting target ignition timing             |

\*: This function is not necessary in the usual service procedure.

## SELF-DIAG RESULTS MODE

Self Diagnostic Item

Regarding items of DTC and 1st trip DTC, refer to [EC-628, "DTC Index"](#).

How to Read DTC and 1st Trip DTC

DTCs and 1st trip DTCs related to the malfunction are displayed in "Self-diag results".

- When ECM detects a 1st trip DTC, "1t" is displayed for "TIME".
- When ECM has detected a current DTC, "0" is displayed for "TIME".
- If "TIME" is neither "0" nor "1t", the DTC occurred in the past and ECM shows the number of times the vehicle has been driven since the last detection of the DTC.

How to Erase DTC and 1st Trip DTC

### NOTE:

- If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
- If the DTC is not for A/T related items (see [EC-628, "DTC Index"](#)), skip step 1.
  - Erase DTC in TCM. Refer to [TM-59, "Diagnosis Description"](#).
  - Select "ENGINE" with CONSULT.
  - Select "SELF-DIAG RESULTS".
  - Touch "ERASE". (DTC in ECM will be erased.)

Freeze Frame Data and 1st Trip Freeze Frame Data

\*: Leaving cooling fan OFF with CONSULT while engine is running may cause the engine to overheat.

## DTC & SRT CONFIRMATION MODE

### SRT STATUS Mode

For items whose SRT codes are set, "CMPLT" is displayed on the CONSULT screen; for items whose SRT codes are not set, "INCMP" is displayed.

### SRT WORK SUPPORT Mode

This mode enables a technician to drive a vehicle to set the SRT while monitoring the SRT status.

# ECU DIAGNOSIS INFORMATION

## ECM

### Reference Value

INFOID:000000007729710

### VALUES ON THE DIAGNOSIS TOOL

#### NOTE:

- Specification data are reference values.
- Specification data are output/input values which are detected or supplied by the ECM at the connector.
  - \* Specification data may not be directly related to their components signals/values/operations.
    - i.e. Adjust ignition timing with a timing light before monitoring IGN TIMING, because the monitor may show the specification data in spite of the ignition timing not being adjusted to the specification data. This IGN TIMING monitors the data calculated by the ECM according to the signals input from the camshaft position sensor and other ignition timing related sensors.

#### CONSULT MONITOR ITEM

| Monitor Item    | Condition  |                                       | Values/Status                                      |
|-----------------|--|---------------------------------------|--|
| ENG SPEED       | • Run engine and compare CONSULT value with the tachometer indication.   |                                       | Almost the same speed as the tachometer indication |
| MAS A/F SE-B1   | See <a href="#">EC-674, "Description"</a> .  |                                       |  |

\*1: Accelerator pedal position sensor 2 signal and throttle position sensor 2 signal are converted by ECM internally. Thus, they differ from ECM terminals voltage signal.

\*2: Before measuring the terminal voltage, confirm that the battery is fully charged. Refer to [PG-135, "How to Handle Battery"](#).

TERMINAL LAYOUT

PHYSICAL VALUES

NOTE:

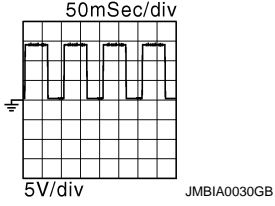

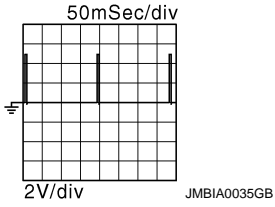

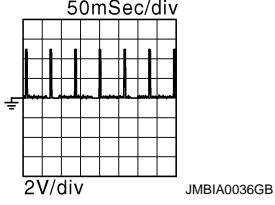

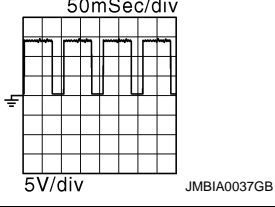

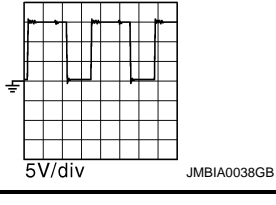

- ECM is located behind the instrument assist lower panel. For this inspection, remove passenger side instrument lower panel.
- Specification data are reference values and are measured between each terminal and ground.
- Pulse signal is measured by CONSULT.

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

\*1: This may vary depending on internal resistance of the tester.

# ECM

[VQ37VHR FOR MEXICO]

## < ECU DIAGNOSIS INFORMATION >

\*2: Before measuring the terminal voltage, confirm that the battery is fully charged. Refer to [PG-135. "How to Handle Battery"](#).

\*3: With ICC

\*4: Without ICC

### Fail safe

INFOID:000000007729711

### NON DTC RELATED ITEM

| Engine operating condition in fail-safe mode                       | Detected items                     | Remarks   | Reference page         |
|--|------------------------------------|---|------------------------|
| Engine speed will not rise more than 2,500 rpm due to the fuel cut | Malfunction indicator lamp circuit | When there is an open circuit on MIL circuit, the ECM cannot warn the driver by illuminating MIL when there is malfunction on engine control system.<br>Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating the fail-safe function.<br>The fail-safe function also operates when above diagnoses except MIL circuit are detected and demands the driver to repair the malfunction. | <a href="#">EC-957</a> |

### DTC RELATED ITEM

| DTC No.  | Detected items                            | Engine operating condition in fail-safe mode  |  |
|--|---|---|--|
| U1003<br>U1024   | Can communication circuit                 | VVEL actuator motor relay is turned off, and VVEL value is become at a minimum angle.<br>Engine speed will not rise more than 3,500 rpm due to the fuel cut.  |  |
| P0011<br>P0021   | Intake valve timing control               | The signal is not energized to the intake valve timing control solenoid valve and the valve control does not function.  |  |
| P0102<br>P0103<br>P010C<br>P010D   | Mass air flow sensor circuit              | Engine speed will not rise more than 2,400 rpm due to the fuel cut.   |  |
| P0117<br>P0118   | Engine coolant temperature sensor circuit | Engine coolant temperature will be determined by ECM based on the following condition.<br>CONSULT displays the engine coolant temperature decided by ECM.   |  |
|  |   | Condition   | Engine coolant temperature decided (CONSULT display) |
|  |   | Just as ignition switch is turned ON or START   | 40°C (104°F)   |
|  |   | Approx 4 minutes or more after engine starting  | 80°C (176°F)   |
|  |   | Except as shown above   | 40 - 80°C (104 - 176°F)<br>(Depends on the time)     |
|  |   | When the fail-safe system for engine coolant temperature sensor is activated, the cooling fan operates while engine is running.   |  |
| P0122<br>P0123<br>P0222<br>P0223<br>P0227<br>P0228<br>P1239<br>P2132<br>P2133<br>P2135 | Throttle position sensor                  | The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.<br>The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.<br>Therefore, the acceleration will be poor. |  |
| P0500  | Vehicle speed sensor                      | The cooling fan operates (Highest) while engine is running.   |  |
| P0524  | Engine oil pressure                       | The signal is not energized to the intake valve timing control solenoid valve and the valve control does not function.<br>Engine speed will not rise more than 2,400 rpm due to the fuel cut.   |  |

\*1: 1st trip DTC No. is the same as DTC No.

\*2: This number is prescribed by SAE J2012/ISO 15031-6.

\*3: In Diagnostic Test Mode II (Self-diagnostic results), this number is controlled by NISSAN.

\*4: The troubleshooting for this DTC needs CONSULT.

\*5: When the fail-safe operations for both self-diagnoses occur, the MIL illuminates.

\*6: When the ECM is in the mode that displays SRT status, MIL may blink. For the details, refer to “How to Display SRT Status”.

## Test Value and Test Limit

INFOID:000000007729714

The following is the information specified in Service \$06 of SAE J1979/ISO 15031-5.

The test value is a parameter used to determine whether a system/circuit diagnostic test is OK or NG while being monitored by the ECM during self-diagnosis. The test limit is a reference value which is specified as the maximum or minimum value and is compared with the test value being monitored.

These data (test value and test limit) are specified by On Board Monitor ID (OBDMID), Test ID (TID), Unit and Scaling ID and can be displayed on the GST screen.

The items of the test value and test limit will be displayed with GST screen which items are provided by the ECM. (e.g., if bank 2 is not applied on this vehicle, only the items of bank 1 are displayed)

# VVEL CONTROL MODULE

< ECU DIAGNOSIS INFORMATION >

[VQ37VHR FOR MEXICO]

## VVEL CONTROL MODULE

### Reference Value

INFOID:000000007729716

### TERMINAL LAYOUT

### PHYSICAL VALUES

#### NOTE:

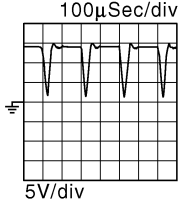

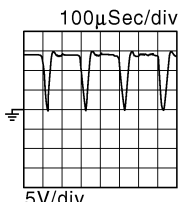

- VVEL control module is located behind the IPDM E/R. For this inspection, remove hoodledge cover (RH).
- Specification data are reference values and are measured between each terminal and ground.
- Pulse signal is measured by CONSULT.

| Terminal No. |          | Description   |              | Condition   | Value (Approx.)                     |
|--------------|----------|---|--------------|---|-------------------------------------|
| +            | —        | Signal name   | Input/Output |   |                                     |
| 1 (W)        | 14 (B/R) | VVEL actuator motor power supply (bank 2)                     | Input        | [Ignition switch: ON]   | BATTERY VOLTAGE (11 - 14 V)         |

## 1.GET INFORMATION FOR SYMPTOM

---

Get the detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurred) using the "Diagnostic Work Sheet". (Refer to [EC-651, "Diagnostic Work Sheet"](#).)

>> GO TO 2.

## 2.CHECK DTC

---

1. Check DTC.
2. Perform the following procedure if DTC is displayed.
  - Record DTC and freeze frame data. (Print them out with CONSULT or GST.)
  - Erase DTC. (Refer to [EC-598, "On Board Diagnosis Function"](#).)
  - Study the relationship between the cause detected by DTC and the symptom described by the customer. (Symptom Matrix Chart is useful. Refer to [EC-969, "Symptom Table"](#).)
3. Check related service bulletins for information.

Are any symptoms described and is any DTCs detected?

Symptom is described, DTC is detected>>GO TO 3.

Symptom is described, DTC is not detected>>GO TO 4.

Symptom is not described, DTC is detected>>GO TO 5.

## 3.CONFIRM THE SYMPTOM

---

Try to confirm the symptom described by the customer (except MI ON).

Also study the normal operation and fail-safe related to the symptom. Refer to [EC-974, "Description"](#) and [EC-625, "Fail safe"](#).

Diagnosis Work Sheet is useful to verify the incident.

Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 5.

## 4.CONFIRM THE SYMPTOM

---

Try to confirm the symptom described by the customer.

Also study the normal operation and fail-safe related to the symptom. Refer to [EC-974, "Description"](#) and [EC-625, "Fail safe"](#).

Diagnosis Work Sheet is useful to verify the incident.

Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 6.

## 5.PERFORM DTC CONFIRMATION PROCEDURE

---

Perform DTC CONFIRMATION PROCEDURE for the displayed DTC, and then make sure that DTC is detected again.

If two or more DTCs are detected, refer to [EC-627, "DTC Inspection Priority Chart"](#) and determine trouble diagnosis order.

### NOTE:

- Freeze frame data is useful if the DTC is not detected.
- Perform Component Function Check if DTC CONFIRMATION PROCEDURE is not included on Service Manual. This simplified check procedure is an effective alternative though DTC cannot be detected during this check.
  - If the result of Component Function Check is NG, it is the same as the detection of DTC by DTC CONFIRMATION PROCEDURE.

Is DTC detected?

YES >> GO TO 10.

NO >> Check according to [GI-44, "Intermittent Incident"](#).

## 6.PERFORM BASIC INSPECTION

---

Perform [EC-663, "Work Procedure"](#).

Do you have CONSULT?

# DIAGNOSIS AND REPAIR WORKFLOW

< BASIC INSPECTION >

[VQ37VHR FOR MEXICO]

- YES >> GO TO 7.
- NO >> GO TO 9.

## 7. PERFORM SPEC IN DATA MONITOR MODE

### With CONSULT

Make sure that "MAS A/F SE-B1", "MAS A/F SE-B2", "B/FUEL SCHDL", and "A/F ALPHA-B1", "A/F ALPHA-B2" are within the SP value using CONSULT "SPEC" in "DATA MONITOR" mode. Refer to [EC-674, "Component Function Check"](#).

Is the measurement value within the SP value?

- YES >> GO TO 9.
- NO >> GO TO 8.

## 8. DETECT MALFUNCTIONING PART BY TROUBLE DIAGNOSIS - SPECIFICATION VALUE

Detect malfunctioning part according to [EC-675, "Diagnosis Procedure"](#).

Is a malfunctioning part detected?

- YES >> GO TO 11.
- NO >> GO TO 9.

## 9. DETECT MALFUNCTIONING SYSTEM BY SYMPTOM TABLE

Detect malfunctioning system according to [EC-969, "Symptom Table"](#) based on the confirmed symptom in step 4, and determine the trouble diagnosis order based on possible causes and symptoms.

>> GO TO 10.

## 10. DETECT MALFUNCTIONING PART BY DIAGNOSIS PROCEDURE

Inspect according to Diagnosis Procedure of the system.

### NOTE:

The Diagnosis Procedure in EC section described based on open circuit inspection. A short circuit inspection is also required for the circuit check in the Diagnosis Procedure. For details, refer to [GI-47, "Circuit Inspection"](#).

Is a malfunctioning part detected?

- YES >> GO TO 11.
- NO >> Monitor input data from related sensors or check voltage of related ECM terminals using CONSULT. Refer to [EC-609, "Reference Value"](#).

## 11. REPAIR OR REPLACE THE MALFUNCTIONING PART

1. Repair or replace the malfunctioning part.
2. Reconnect parts or connectors disconnected during Diagnosis Procedure again after repair and replacement.
3. Check DTC. If DTC is displayed, erase it. Refer to [EC-598, "On Board Diagnosis Function"](#) (Without CONSULT) or [EC-601, "CONSULT Function"](#) (With CONSULT).

>> GO TO 12.

## 12. FINAL CHECK

When DTC was detected in step 2, perform DTC CONFIRMATION PROCEDURE or Component Function Check again, and then make sure that the malfunction have been completely repaired.

When symptom was described from the customer, refer to confirmed symptom in step 3 or 4, and make sure that the symptom is not detected.

Is DTC detected and does symptom remain?

- YES-1 >> DTC is detected: GO TO 10.
- YES-2 >> Symptom remains: GO TO 6.
- NO >> Before returning the vehicle to the customer, make sure to always erase unnecessary DTC in ECM and TCM (Transmission Control Module). Refer to [EC-590, "Diagnosis Description"](#).

## Diagnostic Work Sheet

INFOID:000000007793178

### DESCRIPTION

# DIAGNOSIS AND REPAIR WORKFLOW

< BASIC INSPECTION >

[VQ37VHR FOR MEXICO]

There are many operating conditions that lead to the malfunction of engine components. A good grasp of such conditions can make troubleshooting faster and more accurate.

In general, each customer feels differently about symptoms. It is important to fully understand the symptoms or conditions for a customer complaint.

Utilize a diagnostic worksheet like the one on the next page in order to organize all the information for troubleshooting.

Some conditions may cause the MI to illuminate or blink, and DTC to be detected. Examples:

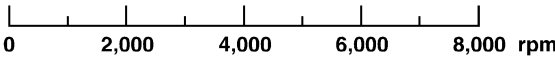

- Vehicle ran out of fuel, which caused the engine to misfire.
- Fuel filler cap was left off or incorrectly screwed on, allowing fuel to evaporate into the atmosphere.

### KEY POINTS

- WHAT** ..... Vehicle & engine model  
**WHEN** ..... Date, Frequencies  
**WHERE**..... Road conditions  
**HOW** ..... Operating conditions,  
Weather conditions,  
Symptoms

# ADDITIONAL SERVICE WHEN REPLACING ECM

< BASIC INSPECTION >

[VQ37VHR FOR MEXICO]

## ADDITIONAL SERVICE WHEN REPLACING ECM

### Description

INFOID:000000007729721

When replacing ECM, the following procedure must be performed.

### Work Procedure

INFOID:000000007729722

**1.**PERFORM INITIALIZATION OF IVIS (NATS) SYSTEM AND REGISTRATION OF ALL IVIS (NATS) IGNITION KEY IDS

Refer to [SEC-39. "ECM : Work Procedure"](#).

>> GO TO 2.

**2.**PERFORM VIN REGISTRATION

Refer to [EC-655. "Work Procedure"](#).

>> GO TO 3.

**3.**PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

Refer to [EC-656. "Work Procedure"](#).

>> GO TO 4.

**4.**PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Refer to [EC-657. "Work Procedure"](#).

>> GO TO 5.

**5.**PERFORM IDLE AIR VOLUME LEARNING

Refer to [EC-658. "Work Procedure"](#).

## ADDITIONAL SERVICE WHEN REPLACING VVEL CONTROL MODULE

< BASIC INSPECTION >

[VQ37VHR FOR MEXICO]

---

## ADDITIONAL SERVICE WHEN REPLACING VVEL CONTROL MODULE

### Description

INFOID:000000007729723

When replacing VVEL control module, the following procedure must be performed.

### Work Procedure

INFOID:000000007729724

#### 1. PERFORM IDLE AIR VOLUME LEARNING

---

Refer to [EC-658, "Work Procedure"](#).

>> END

VIN REGISTRATION

Description

INFOID:000000007729725

VIN Registration is an operation to registering VIN in ECM. It must be performed each time ECM is replaced.

**NOTE:**

Accurate VIN which is registered in ECM may be required for Inspection & Maintenance (I/M).

Work Procedure

INFOID:000000007729726

**1.**CHECK VIN

Check the VIN of the vehicle and note it. Refer to [GI-35. "Information About Identification or Model Code"](#).

>> GO TO 2.

**2.**PERFORM VIN REGISTRATION

 **With CONSULT**

1. Turn ignition switch ON and engine stopped.
2. Select "VIN REGISTRATION" in "WORK SUPPORT" mode.
3. Follow the instruction of CONSULT display.

# ACCELERATOR PEDAL RELEASED POSITION LEARNING

< BASIC INSPECTION >

[VQ37VHR FOR MEXICO]

---

## ACCELERATOR PEDAL RELEASED POSITION LEARNING

### Description

INFOID:000000007729727

Accelerator Pedal Released Position Learning is a function of ECM to learn the fully released position of the accelerator pedal by monitoring the accelerator pedal position sensor output signal. It must be performed each time the harness connector of the accelerator pedal position sensor or ECM is disconnected.

### Work Procedure

INFOID:000000007729728

#### 1. START

---

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch ON and wait at least 2 seconds.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON and wait at least 2 seconds.
5. Turn ignition switch OFF and wait at least 10 seconds.

>> END

# THROTTLE VALVE CLOSED POSITION LEARNING

< BASIC INSPECTION >

[VQ37VHR FOR MEXICO]

## THROTTLE VALVE CLOSED POSITION LEARNING

### Description

INFOID:000000007729729

Throttle Valve Closed Position Learning is a function of ECM to learn the fully closed position of the throttle valve by monitoring the throttle position sensor output signal. It must be performed each time harness connector of electric throttle control actuator or ECM is disconnected or electric throttle control actuator is cleaned.

### Work Procedure

INFOID:000000007729730

#### 1. START

##### With CONSULT

1. Turn ignition switch ON.
2. Select "CLSD THL POS LEARN" in "WORK SUPPORT" mode.
3. Follow the instructions on the CONSULT display.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Check that throttle valve moves during the above 10 seconds by confirming the operating sound.

##### Without CONSULT

1. Start the engine.  
**NOTE:**  
Coolant temperature is less than 25°C (77°F) before engine starts.
2. Warm up the engine until engine coolant temperature reaches 65°C (149°F).
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Check that throttle valve moves during the above 10 seconds by confirming the operating sound.

## IDLE AIR VOLUME LEARNING

### Description

INFOID:00000000729731

Idle Air Volume Learning is a function of ECM to learn the idle air volume that keeps engine idle speed within the specific range. It must be performed under the following conditions:

- Each time electric throttle control actuator or ECM is replaced.
- Each time VVEL actuator sub assembly or VVEL control module is replaced.
- Idle speed or ignition timing is out of specification.

### Work Procedure

INFOID:00000000729732

#### 1. PRECONDITIONING

Make sure that all of the following conditions are satisfied.

Learning will be cancelled if any of the following conditions are missed for even a moment.

- Battery voltage: More than 12.9 V (At idle)
- Engine coolant temperature: 70 - 105°C (158 - 221°F)
- Selector lever: P or N
- Electric load switch: OFF  
(Air conditioner, headlamp, rear window defogger)
- **On vehicles equipped with daytime light systems, if the parking brake is applied before the engine is started the headlamp will not be illuminated.**
- Steering wheel: Neutral (Straight-ahead position)
- Vehicle speed: Stopped
- Transmission: Warmed-up
- With CONSULT: Drive vehicle until "ATF TEMP SE 1" in "DATA MONITOR" mode of "A/T" system indicates less than 0.9V.
- Without CONSULT: Drive vehicle for 10 minutes.

Do you have CONSULT?

- YES >> GO TO 2.
- NO >> GO TO 3.

#### 2. PERFORM IDLE AIR VOLUME LEARNING

##### With CONSULT

1. Perform Accelerator Pedal Released Position Learning. Refer to [EC-656, "Work Procedure"](#).
2. Perform Throttle Valve Closed Position Learning. [EC-657, "Work Procedure"](#).
3. Start engine and warm it up to normal operating temperature.
4. Select "IDLE AIR VOL LEARN" in "WORK SUPPORT" mode.
5. Touch "START" and wait 20 seconds.

Is "CMPLT" displayed on CONSULT screen?

- YES >> GO TO 4.
- NO >> GO TO 5.

#### 3. PERFORM IDLE AIR VOLUME LEARNING

##### Without CONSULT

**NOTE:**

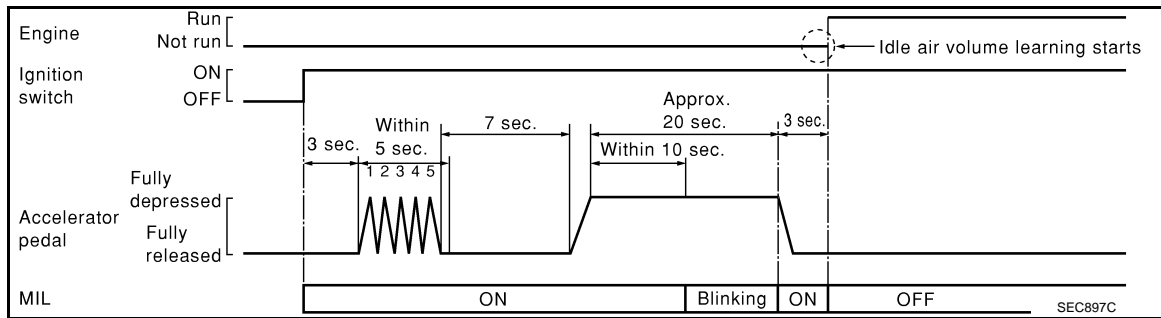

- **It is better to count the time accurately with a clock.**
  - **It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.**
1. Perform Accelerator Pedal Released Position Learning. Refer to [EC-656, "Work Procedure"](#).
  2. Perform Throttle Valve Closed Position Learning. [EC-657, "Work Procedure"](#).
  3. Start engine and warm it up to normal operating temperature.
  4. Turn ignition switch OFF and wait at least 10 seconds.
  5. Confirm that accelerator pedal is fully released, turn ignition switch ON and wait 3 seconds.
  6. Repeat the following procedure quickly five times within 5 seconds.
    - Fully depress the accelerator pedal.
    - Fully release the accelerator pedal.
  7. Wait 7 seconds, fully depress the accelerator pedal for approx. 20 seconds until the MIL stops blinking and illuminates.

# IDLE AIR VOLUME LEARNING

[VQ37VHR FOR MEXICO]

< BASIC INSPECTION >

8. Fully release the accelerator pedal within 3 seconds after the MIL illuminates.
9. Start engine and let it idle.
10. Wait 20 seconds.

>> GO TO 4.

## 4. CHECK IDLE SPEED AND IGNITION TIMING

1. Start engine and warm it up to normal operating temperature.
2. Let it idle for 20 seconds.
3. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications. Refer to [EC-982. "Idle Speed"](#) and [EC-982. "Ignition Timing"](#).

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART-I

Check the following

- Check that throttle valve is fully closed.
- Check PCV valve operation.
- Check that downstream of throttle valve is free from air leakage.

Is the inspection result normal?

- YES >> GO TO 6.
- NO >> Repair or replace malfunctioning part.

## 6. DETECT MALFUNCTIONING PART-II

Engine component parts and their installation condition are questionable. Check and eliminate the cause of the incident.

It is useful to perform "TROUBLE DIAGNOSIS - SPECIFICATION VALUE". Refer to [EC-674. "Description"](#).

If any of the following conditions occur after the engine has started, eliminate the cause of the incident and perform Idle Air Volume Learning again:

- Engine stalls.
- Erroneous idle.

>> INSPECTION END

# VVEL CONTROL SHAFT POSITION SENSOR ADJUSTMENT

< BASIC INSPECTION >

[VQ37VHR FOR MEXICO]

## VVEL CONTROL SHAFT POSITION SENSOR ADJUSTMENT

### Description

INFOID:000000007729733

VVEL control shaft position sensor adjustment is an operation to adjust the initial position angle that is the basis for the VVEL control shaft position sensor.

It must be performed each time VVEL actuator sub assembly is replaced.

#### CAUTION:

- It must be performed only on the replaced bank side.
- It must not be performed except when VVEL actuator sub assembly is replaced. If by any chance the adjustment is performed, replace VVEL actuator sub assembly.

### Work Procedure

INFOID:000000007729734

#### 1. START

Do you have CONSULT?

Do you have CONSULT?

YES >> GO TO 2.

NO >> GO TO 3.

#### 2. PERFORM VVEL CONTROL SHAFT POSITION SENSOR ADJUSTMENT

##### With CONSULT

1. Turn ignition switch ON.
2. Select "VVEL POS SEN ADJ PREP" in "WORK SUPPORT" mode with CONSULT.
3. Touch "Start" and wait a few seconds.
4. Make sure the "CMPLT" is displayed on CONSULT screen.
5. Select "VVEL POSITION SEN- B1" or "VVEL POSITION SEN- B2" in "DATA MONITOR" mode with CONSULT.
6. Loosen the VVEL control shaft position sensor mounting bolt (1).
7. Turn the VVEL control shaft position sensor (2) right and left while monitoring the output voltage of "VVEL POSITION SEN- B1" or "VVEL POSITION SEN- B2" and adjust the output voltage to be within the standard value.

**Voltage : 500 ± 48 mV**

8. Tighten the VVEL control shaft position sensor mounting bolt.

**Torque : 7.0 N•m (0.71 kg-m, 62 in-lb)**

9. Reconfirm that the output voltage of "VVEL POSITION SEN- B1" or "VVEL POSITION SEN- B2" is within the standard value.

**Voltage : 500 ± 48 mV**

#### NOTE:

If it varies from the standard value after the bolt is tightened, perform steps 6 to 8 again.

10. Turn ignition switch OFF and wait at least 10 seconds.
11. Start engine and warm it up to normal operating temperature.
12. Turn ignition switch OFF and wait at least 10 seconds.
13. Perform idle air volume learning. Refer to [EC-658, "Work Procedure"](#).

>> INSPECTION END

#### 3. PERFORM VVEL CONTROL SHAFT POSITION SENSOR ADJUSTMENT

##### Without CONSULT

1. Disconnect VVEL control shaft position sensor harness connector.
2. Remove VVEL actuator motor relay.
3. Turn ignition switch ON, wait at least 5 seconds and then turn OFF.
4. Reconnect all harness connectors disconnected.

# VVEL CONTROL SHAFT POSITION SENSOR ADJUSTMENT

< BASIC INSPECTION >

[VQ37VHR FOR MEXICO]

5. Install VVEL actuator motor relay.
6. Turn ignition switch ON and wait at least 5 seconds.
7. Loosen the VVEL control shaft position sensor mounting bolt (1).
8. Turn the VVEL control shaft position sensor (2) right and left while monitoring the output voltage between the VVEL control module terminals with a tester and adjust the output voltage to be within the standard value.

| VVEL control module |           |          |          | Voltage     |
|---------------------|-----------|----------|----------|-------------|
| Bank                | Connector | +        | -        |             |
|                     |           | Terminal | Terminal |             |
| 1                   | E15       | 3        | 4        | 500 ± 48 mV |
| 2                   |           | 5        | 6        |             |

9. Tighten the VVEL control shaft position sensor mounting bolt.

**: 7.0 N•m (0.71 kg-m, 62 in-lb)**

10. Reconfirm that the output voltage of VVEL control shaft position sensor is within the standard value.

| VVEL control module |           |          |          | Voltage     |
|---------------------|-----------|----------|----------|-------------|
| Bank                | Connector | +        | -        |             |
|                     |           | Terminal | Terminal |             |
| 1                   | E15       | 3        | 4        | 500 ± 48 mV |
| 2                   |           | 5        | 6        |             |

**NOTE:**

If it varies from the standard value after the bolt is tightened, perform steps 7 to 9 again.

11. Turn ignition switch OFF and wait at least 10 seconds.
12. Start engine and warm it up to normal operating temperature.
13. Turn ignition switch OFF and wait at least 10 seconds.
14. Perform idle air volume learning. Refer to [EC-658, "Work Procedure"](#).

>> INSPECTION END

# MIXTURE RATIO SELF-LEARNING VALUE CLEAR

< BASIC INSPECTION >

[VQ37VHR FOR MEXICO]

---

## MIXTURE RATIO SELF-LEARNING VALUE CLEAR

### Description

INFOID:000000007729735

This describes how to erase the mixture ratio self-learning value. For the actual procedure, follow the instructions in "Diagnosis Procedure".

### Work Procedure

INFOID:000000007729736

#### 1. START

---

##### With CONSULT

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT.
3. Clear mixture ratio self-learning value by touching "CLEAR".

##### With GST

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF.
3. Disconnect mass air flow sensor (bank 1) harness connector.
4. Restart engine and let it idle for at least 5 seconds.
5. Stop engine and reconnect mass air flow sensor (bank 1) harness connector.
6. Select Service \$03 with GST. Make sure DTC P0102 is detected.
7. Select Service \$04 with GST to erase the DTC P0102.

>> END

**BASIC INSPECTION**

**Work Procedure**

INFOID:00000000729737

**1.INSPECTION START**

1. Check service records for any recent repairs that may indicate a related malfunction, or a current need for scheduled maintenance.
2. Open engine hood and check the following:
  - Harness connectors for improper connections
  - Wiring harness for improper connections, pinches and cut
  - Vacuum hoses for splits, kinks and improper connections
  - Hoses and ducts for leaks
  - Air cleaner clogging
  - Gasket
3. Confirm that electrical or mechanical loads are not applied.
  - Headlamp switch is OFF.
  - Air conditioner switch is OFF.
  - Rear window defogger switch is OFF.
  - Steering wheel is in the straight-ahead position, etc.
4. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge. Ensure engine stays below 1,000 rpm.

5. Run engine at about 2,000 rpm for about 2 minutes under no load.
6. Make sure that no DTC is displayed with CONSULT or GST.

Are any DTCs detected?

- YES >> GO TO 2.
- NO >> GO TO 3.

**2.REPAIR OR REPLACE**

Repair or replace components as necessary according to corresponding Diagnosis Procedure.

>> GO TO 3

**3.CHECK IDLE SPEED**

1. Run engine at about 2,000 rpm for about 2 minutes under no load.

# BASIC INSPECTION

[VQ37VHR FOR MEXICO]

## < BASIC INSPECTION >

- Rev engine (2,000 to 3,000 rpm) two or three times under no load, then run engine at idle speed for about 1 minute.
- Check idle speed.  
For procedure, refer to [EC-975, "Inspection"](#).  
For specification, refer to [EC-982, "Idle Speed"](#).

Is the inspection result normal?

- YES >> GO TO 10.  
NO >> GO TO 4.

## 4.PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

- Stop engine.
- Perform [EC-656, "Work Procedure"](#).

>> GO TO 5.

## 5.PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform [EC-657, "Work Procedure"](#).

>> GO TO 6.

## 6.PERFORM IDLE AIR VOLUME LEARNING

Perform [EC-658, "Work Procedure"](#).

Is Idle Air Volume Learning carried out successfully?

- YES >> GO TO 7.  
NO >> Follow the instruction of Idle Air Volume Learning. Then GO TO 4.

## 7.CHECK IDLE SPEED AGAIN

- Start engine and warm it up to normal operating temperature.
- Check idle speed.  
For procedure, refer to [EC-975, "Inspection"](#).  
For specification, refer to [EC-982, "Idle Speed"](#).

Is the inspection result normal?

- YES >> GO TO 10.  
NO >> GO TO 8.

## 8.DETECT MALFUNCTIONING PART

Check the Following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-786, "Component Inspection"](#).
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-781, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 9.  
NO >> Repair or replace. Then GO TO 4.

## 9.CHECK ECM FUNCTION

- Substitute with a non-malfunctioning ECM to check ECM function. (ECM may be the cause of the incident, although this is rare.)
- Perform initialization of IVIS (NATS) system and registration of all IVIS (NATS) ignition key IDs. Refer to [EC-653, "Work Procedure"](#).

>> GO TO 4.

## 10.CHECK IGNITION TIMING

- Run engine at idle.

# BASIC INSPECTION

[VQ37VHR FOR MEXICO]

## < BASIC INSPECTION >

2. Check ignition timing with a timing light.

A :Timing indicator

For procedure, refer to [EC-976, "Inspection"](#).

For specification, refer to [EC-982, "Ignition Timing"](#).

Is the inspection result normal?

YES >> GO TO 19.

NO >> GO TO 11.

## 11.PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

1. Stop engine.
2. Perform [EC-656, "Work Procedure"](#).

>> GO TO 12.

## 12.PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform [EC-657, "Work Procedure"](#).

>> GO TO 13.

## 13.PERFORM IDLE AIR VOLUME LEARNING

Perform [EC-658, "Work Procedure"](#).

Is Idle Air Volume Learning carried out successfully?

YES >> GO TO 14.

NO >> Follow the instruction of Idle Air Volume Learning. Then GO TO 4.

## 14.CHECK IDLE SPEED AGAIN

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

For procedure, refer to [EC-975, "Inspection"](#).

For specification, refer to [EC-982, "Idle Speed"](#).

Is the inspection result normal?

YES >> GO TO 15.

NO >> GO TO 17.

## 15.CHECK IGNITION TIMING AGAIN

1. Run engine at idle.
2. Check ignition timing with a timing light.

A :Timing indicator

For procedure, refer to [EC-976, "Inspection"](#).

For specification, refer to [EC-982, "Ignition Timing"](#).

Is the inspection result normal?

YES >> GO TO 19.

NO >> GO TO 16.

## 16.CHECK TIMING CHAIN INSTALLATION

Check timing chain installation. Refer to [EM-53, "Removal and Installation"](#).

Is the inspection result normal?

YES >> GO TO 17.

NO >> Repair the timing chain installation. Then GO TO 4.

## BASIC INSPECTION

< BASIC INSPECTION >

[VQ37VHR FOR MEXICO]

---

### 17. DETECT MALFUNCTIONING PART

---

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-786, "Component Inspection"](#).
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-781, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 18.

NO >> Repair or replace. Then GO TO 4.

### 18. CHECK ECM FUNCTION

---

1. Substitute with a non-malfunctioning ECM to check ECM function. (ECM may be the cause of the incident, although this is rare.)
2. Perform initialization of IVIS (NATS) system and registration of all IVIS (NATS) ignition key IDs. Refer to [EC-653, "Work Procedure"](#).

>> GO TO 4.

### 19. INSPECTION END

---

If ECM is replaced during this BASIC INSPECTION procedure, go to [EC-653, "Work Procedure"](#).

>> INSPECTION END

## FUEL PRESSURE CHECK

### Work Procedure

INFOID:000000007729738

### FUEL PRESSURE RELEASE

#### 1. FUEL PRESSURE RELEASE

##### ☐ With CONSULT

1. Turn ignition switch ON.
2. Select ENGINE using CONSULT.
3. Perform "FUEL PRESSURE RELEASE" in "WORK SUPPORT" mode.
4. Start engine.
5. After engine stalls, crank it two or three times to release all fuel pressure.
6. Turn ignition switch OFF.

##### ☒ Without CONSULT

1. Remove fuel pump fuse (1) located in IPDM E/R (2).
2. Start engine.
3. After engine stalls, crank it two or three times to release all fuel pressure.
4. Turn ignition switch OFF.
5. Reinstall fuel pump fuse after servicing fuel system.

>> INSPECTION END

### FUEL PRESSURE CHECK

#### 1. FUEL PRESSURE CHECK

1. Release fuel pressure to zero.
2. Install the inline fuel quick disconnected fitting (A) between fuel damper (1) and injector tube.

##### **CAUTION:**

**Before disconnecting fuel line, release fuel pressure from fuel line to eliminate danger.**

##### **NOTE:**

- Prepare pans or saucers under the disconnected fuel line because the fuel may spill out. The fuel pressure cannot be completely released because Y51 models do not have fuel return system.
- Use Fuel Pressure Gauge Kit (J-44321) to check fuel pressure.

3. Connect pressure gauge (B) to fuel pressure check adapter.
4. Turn ignition switch ON and check for fuel leakage.
5. Start engine and check for fuel leakage.
6. Read the indication of fuel pressure gauge.

**At idling : Approximately 350 kPa (3.5 bar, 3.57 kg/cm<sup>2</sup>, 51 psi)**

Is the inspection result normal?

- YES >> INSPECTION END  
 NO >> GO TO 2.

#### 2. CHECK FUEL HOSE AND FUEL TUBE

If result is unsatisfactory, check fuel hoses and fuel tubes for clogging.

Is the inspection result normal?

- YES >> Replace "fuel filter and fuel pump assembly".

**FUEL PRESSURE CHECK**

< BASIC INSPECTION >

[VQ37VHR FOR MEXICO]

---

NO >> Repair or replace.

# HOW TO SET SRT CODE

< BASIC INSPECTION >

[VQ37VHR FOR MEXICO]

## HOW TO SET SRT CODE

### Description

INFOID:000000007729739

### OUTLINE

In order to set all SRTs, the self-diagnoses as in the "SRT ITEM" table must have been performed at least once. Each diagnosis may require actual driving for a long period of time under various conditions.

### SRT ITEM

The table below shows required self-diagnostic items to set the SRT to "CMPLT".

| SRT item*1<br>(CONSULT indication) | Required self-diagnostic items to set the SRT to "CMPLT" | Corresponding DTC No. |
|------------------------------------|--|-----------------------|
| CATALYST                           | Three way catalyst function                              | P0420, P0430          |
| HO2S                               | Air fuel ratio (A/F) sensor 1                            | P0133, P0153          |
|                                    | Heated oxygen sensor 2                                   | P0137, P0157          |
|                                    | Heated oxygen sensor 2                                   | P0138, P0158          |
|                                    | Heated oxygen sensor 2                                   | P0139, P0159          |
| EGR/VVT SYSTEM                     | Intake valve timing control function                     | P0011, P0021          |

\*1: Though displayed on the CONSULT screen, "HO2S HTR" is not SRT item.

### SRT SERVICE PROCEDURE

If a vehicle has failed the state emissions inspection due to one or more SRT items indicating "INCMP", review the flowchart diagnostic sequence, referring to the following flowchart.

# HOW TO SET SRT CODE

< BASIC INSPECTION >

[VQ37VHR FOR MEXICO]

SRT Set Driving Pattern

INFOID:000000007729740

**CAUTION:**

# HOW TO SET SRT CODE

< BASIC INSPECTION >

[VQ37VHR FOR MEXICO]

Always drive the vehicle in safe manner according to traffic conditions and obey all traffic laws.

\*1: Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH), then release the accelerator pedal and keep it released for more than 10 seconds. Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH) again.

\*2: Checking the vehicle speed with GST is advised.

- The time required for each diagnosis varies with road surface conditions, weather, altitude, individual driving habits, etc.

Zone A refers to the range where the time, required for the diagnosis under normal conditions\*, is the shortest.

# HOW TO SET SRT CODE

[VQ37VHR FOR MEXICO]

## < BASIC INSPECTION >

Zone B refers to the range where the diagnosis can still be performed if the diagnosis is not completed within zone A.

\*: Normal conditions refer to the following:

- Sea level
  - Flat road
  - Ambient air temperature: 20 - 30°C (68 - 86°F)
  - Diagnosis is performed as quickly as possible under normal conditions.
- Under different conditions [For example: ambient air temperature other than 20 - 30°C (68 - 86°F)], diagnosis may also be performed.

## Work Procedure

INFOID:00000000729741

### 1. CHECK DTC

Check DTC.

Is any DTC detected?

YES >> Repair malfunction(s) and erase DTC. Refer to [EC-628, "DTC Index"](#).

NO >> GO TO 2.

### 2. CHECK SRT STATUS

WITH CONSULT

Select "SRT STATUS" in "DTC & SRT CONFIRMATION" mode with CONSULT.

WITHOUT CONSULT

Perform "SRT status" mode with [EC-598, "On Board Diagnosis Function"](#).

WITH GST

Select Service \$01 with GST.

Is SRT code(s) set?

YES >> END

NO-1 >> With CONSULT: GO TO 3.

NO-2 >> Without CONSULT: GO TO 4.

### 3. DTC CONFIRMATION PROCEDURE

1. Select "SRT WORK SUPPORT" in "DTC & SRT CONFIRMATION" mode with CONSULT.
2. For SRT(s) that is not set, perform the corresponding "DTC CONFIRMATION PROCEDURE" according to the "Performance Priority" in the "SRT ITEM" table. Refer to [EC-669, "Description"](#).
3. Check DTC.

Is any DTC detected?

YES >> Repair malfunction(s) and erase DTC. Refer to [EC-628, "DTC Index"](#).

NO >> GO TO 7.

### 4. PERFORM ROAD TEST

- Check the "Performance Priority" in the "SRT ITEM" table. Refer to [EC-669, "Description"](#).
- Perform the most efficient SRT set driving pattern to set the SRT properly. Refer to [EC-670, "SRT Set Driving Pattern"](#).

In order to set all SRTs, the SRT set driving pattern must be performed at least once.

>> GO TO 5.

### 5. PATTERN 1

1. Check the vehicle condition;
  - Engine coolant temperature is -10 to 35°C (14 to 95°F).
  - Fuel tank temperature is more than 0°C (32°F).
2. Start the engine.
3. Keep engine idling until the engine coolant temperature is greater than 70°C (158°F)

#### NOTE:

ECM terminal voltage is follows;

- Engine coolant temperature
  - -10 to 35°C (14 to 95°F): 3.0 - 4.3 V
  - 70°(158°F): Less than 1.4 V

# HOW TO SET SRT CODE

[VQ37VHR FOR MEXICO]

## < BASIC INSPECTION >

- Fuel tank temperature: Less than 4.1 V  
Refer to [EC-609, "Reference Value"](#).

>> GO TO 6.

## 6.PATTERN 2

1. Drive the vehicle. And depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH), then release the accelerator pedal and keep it released for more than 10 seconds.
2. Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH) again

### NOTE:

- Checking the vehicle speed with GST is advised.
- When steady-state driving is performed again even after it is interrupted, each diagnosis can be conducted. In this case, the time required for diagnosis may be extended.

>> GO TO 7.

## 7.CHECK SRT STATUS

### WITH CONSULT

Select "SRT STATUS" in "DTC & SRT CONFIRMATION" mode with CONSULT.

### WITHOUT CONSULT

Perform "SRT status" mode with [EC-598, "On Board Diagnosis Function"](#).

### WITH GST

Select Service \$01 with GST.

### Is SRT(s) set?

- YES >> END  
NO >> Call TECH LINE or take appropriate action.

## DTC/CIRCUIT DIAGNOSIS

### TROUBLE DIAGNOSIS - SPECIFICATION VALUE

#### Description

INFOID:000000007729748

The specification (SP) value indicates the tolerance of the value that is displayed in "SPEC" in "DATA MONITOR" mode of CONSULT during normal operation of the Engine Control System. When the value in "SPEC" in "DATA MONITOR" mode is within the SP value, the Engine Control System is confirmed OK. When the value in "SPEC" in "DATA MONITOR" mode is NOT within the SP value, the Engine Control System may have one or more malfunctions.

The SP value is used to detect malfunctions that may affect the Engine Control System, but will not illuminate the MIL.

The SP value will be displayed for the following three items:

- B/FUEL SCHDL (The fuel injection pulse width programmed into ECM prior to any learned on board correction)
- A/F ALPHA-B1/B2 (The mean value of air-fuel ratio feedback correction factor per cycle)
- MAS A/F SE-B1/B2 (The signal voltage of the mass air flow sensor)

#### Component Function Check

INFOID:000000007729749

### 1. PRECONDITIONING

Make sure that all of the following conditions are satisfied.

#### TESTING CONDITION

- Vehicle driven distance: More than 5,000 km (3,107 miles)
- Barometric pressure: 98.3 - 104.3 kPa (1.003 - 1.064 kg/cm<sup>2</sup>, 14.25 - 15.12 psi)
- Atmospheric temperature: 20 - 30°C (68 - 86°F)
- Engine coolant temperature: 75 - 95°C (167 - 203°F)
- Transmission: Warmed-up
- After the engine is warmed up to normal operating temperature, drive vehicle until "ATF TEMP 1" (A/T fluid temperature sensor signal) indicates more than 60°C (140°F).
- Electrical load: Not applied
- Rear window defogger switch, air conditioner switch, lighting switch are OFF. Steering wheel is straight ahead.
- Engine speed: Idle

>> GO TO 2.

### 2. PERFORM SPEC IN DATA MONITOR MODE

#### Ⓟ With CONSULT

#### NOTE:

Perform "SPEC" in "DATA MONITOR" mode in maximum scale display.

1. Perform [EC-663. "Work Procedure"](#).
2. Select "B/FUEL SCHDL", "A/F ALPHA-B1", "A/F ALPHA-B2", "MAS A/F SE-B1" and "MAS A/F SE-B2" in "SPEC" of "DATA MONITOR" mode with CONSULT.
3. Make sure that monitor items are within the SP value.

Is the measurement value within the SP value?

- YES >> INSPECTION END  
 NO >> Go to [EC-675. "Diagnosis Procedure"](#).

# TROUBLE DIAGNOSIS - SPECIFICATION VALUE

JMBIA0056GB

## DETAILED PROCEDURE

### 1. CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

#### ⓑ With CONSULT

1. Start engine.
2. Confirm that the testing conditions are met. Refer to [EC-674, "Component Function Check"](#).
3. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

# TROUBLE DIAGNOSIS - SPECIFICATION VALUE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## NOTE:

Check "A/F ALPHA-B1", "A/F ALPHA-B2" for approximately 1 minute because they may fluctuate. It is NG if the indication is out of the SP value even a little.

Is the measurement value within the SP value?

YES >> GO TO 17.

NO-1 >> Less than the SP value: GO TO 2.

NO-2 >> More than the SP value: GO TO 3.

## 2.CHECK "B/FUEL SCHDL"

Select "B/FUEL SCHDL" in "SPEC" of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

Is the measurement value within the SP value?

YES >> GO TO 4.

NO >> More than the SP value: GO TO 19.

## 3.CHECK "B/FUEL SCHDL"

Select "B/FUEL SCHDL" in "SPEC" of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

Is the measurement value within the SP value?

YES >> GO TO 6.

NO-1 >> More than the SP value: GO TO 6.

NO-2 >> Less than the SP value: GO TO 25.

## 4.CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

1. Stop the engine.

2. Disconnect PCV hose, and then plug it.

3. Start engine.

4. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

YES >> GO TO 5.

NO >> GO TO 6.

## 5.CHANGE ENGINE OIL

1. Stop the engine.

2. Change engine oil.

## NOTE:

This symptom may occur when a large amount of gasoline is mixed with engine oil because of driving conditions (such as when engine oil temperature does not rise enough since a journey distance is too short during winter). The symptom will not be detected after changing engine oil or changing driving conditions.

>> INSPECTION END

## 6.CHECK FUEL PRESSURE

Check fuel pressure. (Refer to [EC-667, "Work Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 9.

NO-1 >> Fuel pressure is too high: Replace "fuel filter and fuel pump assembly" and then GO TO 8.

NO-2 >> Fuel pressure is too low: GO TO 7.

## 7.DETECT MALFUNCTIONING PART

Check fuel hoses and fuel tubes for clogging.

Is the inspection result normal?

YES >> Replace "fuel filter and fuel pump assembly" and then GO TO 8.

NO >> Repair or replace and then GO TO 8.

## 8.CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

## TROUBLE DIAGNOSIS - SPECIFICATION VALUE

[VQ37VHR FOR MEXICO]

< DTC/CIRCUIT DIAGNOSIS >

1. Start engine.
2. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

- YES >> INSPECTION END  
NO >> GO TO 9.

### 9.PERFORM POWER BALANCE TEST

1. Perform "POWER BALANCE" in "ACTIVE TEST" mode.
2. Make sure that the each cylinder produces a momentary engine speed drop.

Is the inspection result normal?

- YES >> GO TO 12.  
NO >> GO TO 10.

### 10.DETECT MALFUNCTIONING PART

Check the following bellow.

- Ignition coil and its circuit (Refer to [EC-952, "Component Function Check".](#))
- Fuel injector and its circuit (Refer to [EC-945, "Component Function Check".](#))
- Intake air leakage
- Low compression pressure (Refer to [EM-18, "Inspection".](#))

Is the inspection result normal?

- YES >> Replace fuel injector and then GO TO 11.  
NO >> Repair or replace malfunctioning part and then GO TO 11.

### 11.CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

1. Start engine.
2. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

- YES >> INSPECTION END  
NO >> GO TO 12.

### 12.CHECK A/F SENSOR 1 FUNCTION

Perform all DTC CONFIRMATION PROCEDURE related with A/F sensor 1.

- For DTC P0130, P0150, refer to [EC-719, "DTC Logic".](#)
- For DTC P0131, P0151, refer to [EC-723, "DTC Logic".](#)
- For DTC P0132, P0152, refer to [EC-726, "DTC Logic".](#)
- For DTC P0133, P0153, refer to [EC-729, "DTC Logic".](#)
- For DTC P2A00, P2A03, refer to [EC-932, "DTC Logic".](#)

Are any DTCs detected?

- YES >> GO TO 13.  
NO >> GO TO 15.

### 13.CHECK A/F SENSOR 1 CIRCUIT

Perform Diagnosis Procedure according to corresponding DTC.

>> GO TO 14.

### 14.CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

1. Start engine.
2. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

- YES >> INSPECTION END  
NO >> GO TO 15.

### 15.DISCONNECT AND RECONNECT ECM HARNESS CONNECTOR

1. Stop the engine.

## TROUBLE DIAGNOSIS - SPECIFICATION VALUE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

2. Disconnect ECM harness connector. Check pin terminal and connector for damage, and then reconnect it.

>> GO TO 16.

### 16.CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

1. Start engine.
2. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

YES >> INSPECTION END

NO >> Detect malfunctioning part according to [EC-969. "Symptom Table"](#).

### 17.CHECK "B/FUEL SCHDL"

Select "B/FUEL SCHDL" in "SPEC" of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

Is the measurement value within the SP value?

YES >> INSPECTION END

NO-1 >> More than the SP value: GO TO 18.

NO-2 >> Less than the SP value: GO TO 25.

### 18.DETECT MALFUNCTIONING PART

1. Check for the cause of large engine friction. Refer to the following.
  - Engine oil level is too high
  - Engine oil viscosity
  - Belt tension of power steering, alternator, A/C compressor, etc. is excessive
  - Noise from engine
  - Noise from transmission, etc.
2. Check for the cause of insufficient combustion. Refer to the following.
  - Valve clearance malfunction
  - Intake valve timing control function malfunction
  - Camshaft sprocket installation malfunction, etc.

>> Repair or replace malfunctioning part, and then GO TO 30.

### 19.CHECK INTAKE SYSTEM

Check for the cause of uneven air flow through mass air flow sensor. Refer to the following.

- Crushed air ducts
- Malfunctioning seal of air cleaner element
- Uneven dirt of air cleaner element
- Improper specification of intake air system

Is the inspection result normal?

YES >> GO TO 21.

NO >> Repair or replace malfunctioning part, and then GO TO 20.

### 20.CHECK "A/F ALPHA-B1", "A/F ALPHA-B2", AND "B/FUEL SCHDL"

Select "A/F ALPHA-B1", "A/F ALPHA-B2", and "B/FUEL SCHDL" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

YES >> INSPECTION END

NO >> "B/FUEL SCHDL" is more, "A/F ALPHA-B1", "A/F ALPHA-B2" are less than the SP value: GO TO 21.

### 21.DISCONNECT AND RECONNECT MASS AIR FLOW SENSOR HARNESS CONNECTOR

1. Stop the engine.
2. Disconnect mass air flow sensor harness connector. Check pin terminal and connector for damage and then reconnect it again.

>> GO TO 22.

## TROUBLE DIAGNOSIS - SPECIFICATION VALUE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

---

### 22. CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

---

1. Start engine.
2. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

YES >> Detect malfunctioning part of mass air flow sensor circuit and repair it. Refer to [EC-706, "Diagnosis Procedure"](#). Then GO TO 29.

NO >> GO TO 23.

---

### 23. CHECK "MAS A/F SE-B1", "MAS A/F SE-B2"

---

Select "MAS A/F SE-B1", "MAS A/F SE-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

Is the measurement value within the SP value?

YES >> GO TO 24.

NO >> More than the SP value: Replace malfunctioning mass air flow sensor, and then GO TO 29.

---

### 24. REPLACE ECM

---

1. Replace ECM.
2. Go to [EC-653, "Work Procedure"](#).

>> GO TO 29.

---

### 25. CHECK INTAKE SYSTEM

---

Check for the cause of uneven air flow through mass air flow sensor. Refer to the following.

- Crushed air ducts
- Malfunctioning seal in air cleaner element
- Uneven dirt in air cleaner element
- Improper specification in intake air system

Is the inspection result normal?

YES >> GO TO 27.

NO >> Repair or replace malfunctioning part, and then GO TO 26.

---

### 26. CHECK "B/FUEL SCHDL"

---

Select "B/FUEL SCHDL" in "SPEC" of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

Is the measurement value within the SP value?

YES >> INSPECTION END

NO >> Less than the SP value: GO TO 27.

---

### 27. CHECK "MAS A/F SE-B1", "MAS A/F SE-B2"

---

Select "MAS A/F SE-B1", "MAS A/F SE-B2" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

YES >> GO TO 28.

NO >> Less than the SP value: Replace malfunctioning mass air flow sensor, and then GO TO 30.

---

### 28. CHECK INTAKE SYSTEM

---

Check for the cause of air leak after the mass air flow sensor. Refer to the following.

- Disconnection, looseness, and cracks in air duct
- Looseness of oil filler cap
- Disconnection of oil level gauge
- Open stuck, breakage, hose disconnection, or cracks in PCV valve
- Disconnection or cracks in EVAP purge hose, stuck open EVAP canister purge volume control solenoid valve
- Malfunctioning seal in rocker cover gasket
- Disconnection, looseness, or cracks in hoses, such as a vacuum hose, connecting to intake air system parts
- Malfunctioning seal in intake air system, etc.

# TROUBLE DIAGNOSIS - SPECIFICATION VALUE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

>> GO TO 30.

## 29.CHECK "A/F ALPHA-B1", "A/F ALPHA-B2", AND "B/FUEL SCHDL"

Select "A/F ALPHA-B1", "A/F ALPHA-B2", and "B/FUEL SCHDL" in "SPEC" of "DATA MONITOR" mode, and make sure that each indication is within the SP value.

Is the measurement value within the SP value?

YES >> INSPECTION END

NO >> Detect malfunctioning part according to [EC-969. "Symptom Table"](#).

## 30.CHECK "B/FUEL SCHDL"

Select "B/FUEL SCHDL" in "SPEC" of "DATA MONITOR" mode, and then make sure that the indication is within the SP value.

Is the measurement value within the SP value?

YES >> INSPECTION END

NO >> Detect malfunctioning part according to [EC-969. "Symptom Table"](#).

# POWER SUPPLY AND GROUND CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## POWER SUPPLY AND GROUND CIRCUIT

### Diagnosis Procedure

INFOID:000000007729751

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-I

1. Disconnect ECM harness connector.
2. Check the continuity between ECM harness connector and ground.

| ECM       |          | Ground | Continuity |
|-----------|----------|--------|------------|
| Connector | Terminal |        |            |
| F101      | 8        | Ground | Existed    |
| M107      | 123      |        |            |
|           | 124      |        |            |
|           | 127      |        |            |
|           | 128      |        |            |

3. Also check harness for short to power.

Is the inspection result normal?

- YES >> GO TO 4.  
NO >> GO TO 3.

#### 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F103, M116
- Harness for open or short between ECM and ground

>> Repair open circuit or short to power in harness or connectors.

#### 4. CHECK ECM POWER SUPPLY CIRCUIT-I

1. Reconnect ECM harness connector.
2. Turn ignition switch ON.
3. Check the voltage between ECM harness connector and ground.

| ECM       |          |           |          | Voltage         |
|-----------|----------|-----------|----------|-----------------|
| +         |          | -         |          |                 |
| Connector | Terminal | Connector | Terminal |                 |
| F102      | 53       | M107      | 128      | Battery voltage |

Is the inspection result normal?

- YES >> GO TO 6.  
NO >> GO TO 5.

#### 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- IPDM E/R harness connector E7
- 10 A fuse (No. 44)
- Harness for open or short between ECM and fuse

# POWER SUPPLY AND GROUND CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 6. CHECK ECM POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Check the voltage between ECM harness connector terminals as follows.

| ECM       |          |          | Voltage  |
|-----------|----------|----------|--|
| Connector | +        | -        |  |
|           | Terminal | Terminal |  |
| M107      | 125      | 128      | After turning ignition switch OFF, battery voltage will exist for a few seconds, then drop to approximately 0 V. |

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 9.

## 7. CHECK ECM POWER SUPPLY CIRCUIT-III

1. Turn ignition switch ON.
2. Check the voltage between IPDM E/R harness connector and ground.

| IPDM E/R  |          | Ground | Voltage         |
|-----------|----------|--------|-----------------|
| Connector | Terminal |        |                 |
| E5        | 5        | Ground | Battery voltage |

Is the inspection result normal?

YES >> GO TO 8.

NO >> Replace IPDM E/R. Refer to [PCS-33, "Exploded View"](#).

## 8. CHECK INTERMITTENT INCIDENT

Refer to [GI-47, "Circuit Inspection"](#).

>> INSPECTION END

## 9. CHECK ECM POWER SUPPLY CIRCUIT-IV

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Check the voltage between ECM harness connector terminals as follows.

| ECM       |          |           |          | Voltage         |
|-----------|----------|-----------|----------|-----------------|
| +         |          | -         |          |                 |
| Connector | Terminal | Connector | Terminal |                 |
| F101      | 24       | M107      | 128      | Battery voltage |

Is the inspection result normal?

YES >> GO TO 13.

NO >> GO TO 10.

## 10. CHECK ECM POWER SUPPLY CIRCUIT-V

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector.
3. Check the continuity between ECM harness connector and IPDM E/R harness connector.

| ECM       |          | IPDM E/R  |          | Continuity |
|-----------|----------|-----------|----------|------------|
| Connector | Terminal | Connector | Terminal |            |
| F101      | 24       | E7        | 70       | Existed    |

4. Also check harness for short to ground and short to power.

# POWER SUPPLY AND GROUND CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

Is the inspection result normal?

- YES >> GO TO 12.
- NO >> GO TO 11.

## 11.DETECT MALFUNCTIONING PART

Check the following.

- Harness or connectors E20, F40
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 12.CHECK 15 A FUSE

1. Disconnect 15 A fuse (No. 51) from IPDM E/R.
2. Check 15 A fuse.

Is the inspection result normal?

- YES >> GO TO 15.
- NO >> Replace 15 A fuse.

## 13.CHECK ECM POWER SUPPLY CIRCUIT-VI

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector.
3. Check the continuity between ECM harness connector and IPDM E/R harness connector.

| ECM       |          | IPDM E/R  |          | Continuity |
|-----------|----------|-----------|----------|------------|
| Connector | Terminal | Connector | Terminal |            |
| M107      | 125      | E5        | 6        | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 15.
- NO >> GO TO 14.

## 14.DETECT MALFUNCTIONING PART

Check the following.

- Harness or connectors E106, M6
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 15.CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

Is the inspection result normal?

- YES >> Replace IPDM E/R. Refer to [PCS-33. "Exploded View"](#).
- NO >> Repair open circuit, short to ground or short to power in harness or connectors.

# POWER SUPPLY AND GROUND CIRCUIT (VVEL CONTROL MODULE)

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## POWER SUPPLY AND GROUND CIRCUIT (VVEL CONTROL MODULE)

### Diagnosis Procedure

INFOID:000000007729752

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK VVEL CONTROL MODULE GROUND CIRCUIT FOR OPEN AND SHORT

1. Disconnect VVEL control module harness connector.
2. Check the continuity between VVEL control module harness connector and ground.

| VVEL control module |          | Ground | Continuity |
|---------------------|----------|--------|------------|
| Connector           | Terminal |        |            |
| E15                 | 14       | Ground | Existed    |

3. Also check harness for short to power.

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> Repair open circuit, short to power in harness connectors.

#### 3. CHECK VVEL CONTROL MODULE POWER SUPPLY CIRCUIT-I

1. Reconnect VVEL control module harness connector.
2. Turn ignition switch ON.
3. Check the voltage between VVEL control module harness connector and ground.

| VVEL control module |          |          | Voltage  |
|---------------------|----------|----------|--|
| Connector           | +        | -        |  |
|                     | Terminal | Terminal |  |
| E15                 | 8        | 14       | After turning ignition switch OFF, battery voltage will exist for a few seconds, then drop to approximately 0 V. |

Is the inspection result normal?

- YES >> GO TO 5.  
NO >> GO TO 4.

#### 4. CHECK VVEL CONTROL MODULE POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Disconnect VVEL control module harness connector.
3. Disconnect IPDM E/R harness connector.
4. Check the continuity between VVEL control module harness connector and IPDM E/R harness connector.

| VVEL control module |          | IPDM E/R  |          | Continuity |
|---------------------|----------|-----------|----------|------------|
| Connector           | Terminal | Connector | Terminal |            |
| E15                 | 8        | E7        | 49       | Existed    |

5. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> [EC-682, "Diagnosis Procedure"](#)  
NO >> Repair open circuit, short to ground or short to power in harness or connectors.

#### 5. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

## POWER SUPPLY AND GROUND CIRCUIT (VVEL CONTROL MODULE)

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

---

Is the inspection result normal?

YES >> Replace IPDM E/R. Refer to [PCS-33, "Exploded View"](#).

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

# U0101 CAN COMM CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## U0101 CAN COMM CIRCUIT

### Description

INFOID:000000007729753

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

### DTC Logic

INFOID:000000007729754

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name      | DTC detecting condition  | Possible cause   |
|---------|-----------------------------|--|--|
| U0101   | Lost communication with TCM | When ECM is not transmitting or receiving CAN communication signal of OBD (emission related diagnosis) with TCM for 2 seconds or more. | <ul style="list-style-type: none"><li>CAN communication line between TCM and ECM (CAN communication line is open or shorted)</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PERFORM DTC CONFIRMATION PROCEDURE

- Turn ignition switch ON and wait at least 3 seconds.
- Check DTC.

Is DTC detected?

- YES >> [EC-687, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000007729755

Go to [LAN-25, "Trouble Diagnosis Flow Chart"](#).

# U1001 CAN COMM CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## U1003 CAN COMM CIRCUIT

### Description

INFOID:000000007729762

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. ECM and VVEL control module are connected with two communication lines (CAN H line and CAN L line) and transmit/receive data. ECM shares information and links with the VVEL control module during operation.

### DTC Logic

INFOID:000000007729763

#### DTC DETECTION LOGIC

##### NOTE:

If DTC U1003 is displayed with DTC P0607, first perform the trouble diagnosis for DTC P0607. Refer to [EC-821, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name                      | DTC detecting condition   | Possible cause   |
|---------|---|---|--|
| U1003   | Lost communication with VVEL control module | CAN communication signal other than OBD (emission related diagnosis) is not received between VVEL control module and ECM for 2 seconds or more. | <ul style="list-style-type: none"> <li>• Harness or connectors (VVEL CAN communication line is open or shorted)</li> <li>• ECM</li> <li>• VVEL control module</li> </ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON and wait at least 3 seconds.
2. Check DTC.

Is DTC detected?

- YES >> Go to [EC-689, "Diagnosis Procedure"](#).  
 NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000007729764

##### 1. CHECK VVEL CAN COMMUNICATION CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Disconnect VVEL control module harness connector.
4. Check the continuity between ECM harness connector and VVEL control module harness connector.

| ECM       |          | VVEL control module |          | Continuity |
|-----------|----------|---------------------|----------|------------|
| Connector | Terminal | Connector           | Terminal |            |
| F102      | 54       | E15                 | 24       | Existed    |
|           | 55       |                     | 11       |            |

5. Also check harness for short to ground and power.

Is the inspection result normal?

- YES >> GO TO 3.  
 NO >> GO TO 2.

##### 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connector E20, F40

# U1003 CAN COMM CIRCUIT

[VQ37VHR FOR MEXICO]

< DTC/CIRCUIT DIAGNOSIS >

- Harness for open or short between ECM and VVEL control module

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 3.CHECK INTERMITTENT INCIDENT

---

Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair or replace.

## 4.REPLACE VVEL CONTROL MODULE

---

1. Replace VVEL control module.
2. Go to [EC-654, "Work Procedure"](#).

>> GO TO 5.

## 5.PERFORM DTC CONFIRMATION PROCEDURE

---

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch ON.
3. Erase DTC.
4. Perform DTC Confirmation Procedure.  
See [EC-689, "DTC Logic"](#).
5. Check DTC.

Is the DTC U1003 displayed again?

YES >> GO TO 6.

NO >> INSPECTION END

## 6.REPLACE ECM

---

1. Replace ECM.
2. Go to [EC-653, "Work Procedure"](#).

>> INSPECTION END

# U1024 CAN COMM CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## U1024 CAN COMM CIRCUIT

### Description

INFOID:000000007729765

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. ECM and VVEL control module are connected with two communication lines (CAN H line and CAN L line) and transmit/receive data. ECM shares information and links with the VVEL control module during operation.

### DTC Logic

INFOID:000000007729766

#### DTC DETECTION LOGIC

##### NOTE:

If DTC U1024 is displayed with DTC P0607, first perform the trouble diagnosis for DTC P0607.

Refer to [EC-821, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name | DTC detecting condition   | Possible cause  |
|---------|------------------------|---|---|
| U1024   | VVEL CAN communication | <ul style="list-style-type: none"><li>When VVEL control module cannot transmit/receive can communication signal from ECM.</li><li>When detecting error during the initial diagnosis of CAN controller of VVEL control module.</li></ul> | <ul style="list-style-type: none"><li>Harness or connectors (CAN communication line is open or shorted)</li><li>ECM</li><li>VVEL control module</li></ul> |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

- Turn ignition switch ON and wait at least 3 seconds.
- Check DTC.

##### Is DTC detected?

YES >> Go to [EC-691, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000007729767

##### 1. CHECK VVEL CAN COMMUNICATION CIRCUIT

- Turn ignition switch OFF.
- Disconnect ECM harness connector.
- Disconnect VVEL control module harness connector.
- Check the continuity between ECM harness connector and VVEL control module harness connector.

| ECM       |          | VVEL control module |          | Continuity |
|-----------|----------|---------------------|----------|------------|
| Connector | Terminal | Connector           | Terminal |            |
| F102      | 54       | E15                 | 24       | Existed    |
|           | 55       |                     | 11       |            |

- Also check harness for short to ground and power.

##### Is the inspection result normal?

YES >> GO TO 3.  
NO >> GO TO 2.

##### 2. DETECT MALFUNCTIONING PART

# U1024 CAN COMM CIRCUIT

[VQ37VHR FOR MEXICO]

< DTC/CIRCUIT DIAGNOSIS >

Check the following.

- Harness connector E20, F40
- Harness for open or short between ECM and VVEL control module

>> Harness for open or short between ECM and VVEL control module

## 3. CHECK INTERMITTENT INCIDENT

---

Refer to [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair or replace.

## 4. REPLACE VVEL CONTROL MODULE

---

1. Replace VVEL control module.
2. Go to [EC-654, "Work Procedure"](#).

>> GO TO 5.

## 5. PERFORM DTC CONFIRMATION PROCEDURE

---

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch ON.
3. Erase DTC.
4. Perform DTC Confirmation Procedure.  
See [EC-691, "DTC Logic"](#).

Is the DTC U1024 displayed again?

YES >> GO TO 6.

NO >> INSPECTION END

## 6. REPLACE ECM

---

1. Replace ECM.
2. Go to [EC-653, "Work Procedure"](#).

>> INSPECTION END

### DTC DETECTION LOGIC

#### NOTE:

- If DTC P0011 or P0021 is displayed with DTC P0075 or P0081, first perform the trouble diagnosis for DTC P0075, P0081. Refer to [EC-703, "DTC Logic"](#).
- If DTC P0011 or P0021 is displayed with DTC P0524, first perform the trouble diagnosis for DTC P0524. Refer to [EC-812, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name                           | Detecting condition  | Possible cause   |
|---------|--|--|--|
| P0011   | Intake valve timing control performance (bank 1) | There is a gap between angle of target and phase-control angle degree. | <ul style="list-style-type: none"><li>• Crankshaft position sensor (POS)</li><li>• Camshaft position sensor (PHASE)</li><li>• Intake valve control solenoid valve</li><li>• Accumulation of debris to the signal pick-up portion of the camshaft</li><li>• Timing chain installation</li><li>• Foreign matter caught in the oil groove for intake valve timing control</li></ul> |
| P0021   | Intake valve timing control performance (bank 2) |  |  |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 10 V and 16 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE-I

1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Maintain the following conditions for at least 6 consecutive seconds. Hold the accelerator pedal as steady as possible.

|                |                        |
|----------------|------------------------|
| ENG SPEED      | 525 - 2,000 rpm        |
| COOLAN TEMP/S  | More than 60°C (140°F) |
| Selector lever | P or N position        |

4. Let engine idle for 10 seconds.
5. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-694, "Diagnosis Procedure"](#)  
NO >> GO TO 3.

#### 3. PERFORM DTC CONFIRMATION PROCEDURE-II

1. Select "DATA MONITOR" mode with CONSULT.
2. Maintain the following conditions for at least 20 consecutive seconds.

|               |  |
|---------------|--|
| ENG SPEED     | 1,700 - 3,175 rpm (A constant rotation is maintained.) |
| COOLAN TEMP/S | More than 70°C (158°F)                                 |

# P0011, P0021 IVT CONTROL

< DTC/CIRCUIT DIAGNOSIS >

|                  |   |
|------------------|---|
| Selector lever   | 1st or 2nd position   |
| Driving location | Driving vehicle uphill<br>(Increased engine load will help maintain the driving conditions required for this test.) |

## CAUTION:

**Always drive at a safe speed.**

3. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-694, "Diagnosis Procedure"](#)

NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000007729769

### 1. CHECK OIL PRESSURE WARNING LAMP

1. Start engine.
2. Check oil pressure warning lamp and confirm it is not illuminated.

Is oil pressure warning lamp illuminated?

YES >> Go to [LU-7, "Inspection"](#).

NO >> GO TO 2.

PBIA8559J

### 2. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE

Refer to [EC-695, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 3.

NO >> Replace malfunctioning intake valve timing control solenoid valve. Refer to [EM-52, "Exploded View"](#).

### 3. CHECK CRANKSHAFT POSITION SENSOR (POS)

Refer to [EC-781, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 4.

NO >> Replace crankshaft position sensor (POS). Refer to [EM-123, "Exploded View"](#).

### 4. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to [EC-786, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 5.

NO >> Replace malfunctioning camshaft position sensor (PHASE). Refer to [EM-52, "Exploded View"](#).

### 5. CHECK CAMSHAFT (INTAKE)

Check the following.

# P0011, P0021 IVT CONTROL

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

- Accumulation of debris on the signal plate of camshaft front end
- Chipping signal plate of camshaft front end

Is the inspection result normal?

YES >> GO TO 6.

NO >> Remove debris and clean the signal plate of camshaft front end or replace camshaft. Refer to [EM-96, "Exploded View"](#).

## 6.CHECK TIMING CHAIN INSTALLATION

Check service records for any recent repairs that may cause timing chain misaligned.

Are there any service records that may cause timing chain misaligned?

YES >> Check timing chain installation. Refer to [EM-53, "Removal and Installation"](#).

NO >> GO TO 7.

## 7.CHECK LUBRICATION CIRCUIT

Perform "Inspection of Camshaft Sprocket (INT) Oil Groove". Refer to [EM-106, "Inspection"](#).

Is the inspection result normal?

YES >> GO TO 8.

NO >> Clean lubrication line.

## 8.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000007729770

## 1.CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE-I

1. Turn ignition switch OFF.
2. Disconnect intake valve timing control solenoid valve harness connector.
3. Check resistance between intake valve timing control solenoid valve terminals as follows.

| Terminals         | Resistance ( $\Omega$ )                   |
|-------------------|---|
| 1 and 2           | 7.0 - 7.7 [at 20°C (68°F)]                |
| 1 or 2 and ground | $\infty$<br>(Continuity should not exist) |

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace malfunctioning intake valve timing control solenoid valve. Refer to [EM-52, "Exploded View"](#).

## 2.CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE-II

1. Remove intake valve timing control solenoid valve.

## P0011, P0021 IVT CONTROL

[VQ37VHR FOR MEXICO]

### < DTC/CIRCUIT DIAGNOSIS >

2. Provide 12 V DC between intake valve timing control solenoid valve terminals 1 and 2, and then interrupt it. Make sure that the plunger moves as shown in the figure.

**CAUTION:**

**Do not apply 12 V DC continuously for 5 seconds or more. Doing so may result in damage to the coil in intake valve timing control solenoid valve.**

**NOTE:**

**Always replace O-ring when intake valve timing control solenoid valve is removed.**

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace malfunctioning intake valve timing control solenoid valve. Refer to [EM-52. "Exploded View"](#).

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 10.5 V and 16 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for at least 10 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-697, "Diagnosis Procedure"](#).  
NG >> INSPECTION END

### Diagnosis Procedure

INFOID:000000007729772

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK AIR FUEL RATIO (A/F) SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect air fuel ratio (A/F) sensor 1 harness connector.
2. Turn ignition switch ON.
3. Check the voltage between A/F sensor 1 harness connector and ground.

# P0031, P0032, P0051, P0052 A/F SENSOR 1 HEATER

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| DTC          | A/F sensor 1 |           |          | Ground | Voltage         |
|--------------|--------------|-----------|----------|--------|-----------------|
|              | Bank         | Connector | Terminal |        |                 |
| P0031, P0032 | 1            | F74       | 4        | Ground | Battery voltage |
| P0051, P0052 | 2            | F75       | 4        |        |                 |

Is the inspection result normal?

YES >> GO TO 4.

NO >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- IPDM E/R harness connector E7
- 15 A fuse (No. 45)
- Harness for open or short between A/F sensor 1 and fuse

>> Repair or replace harness or connectors.

## 4. CHECK A/F SENSOR 1 HEATER OUTPUT SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

| DTC          | A/F sensor 1 |           |          | ECM       |          | Continuity |
|--------------|--------------|-----------|----------|-----------|----------|------------|
|              | Bank         | Connector | Terminal | Connector | Terminal |            |
| P0031, P0032 | 1            | F74       | 3        | F101      | 1        | Existed    |
| P0051, P0052 | 2            | F75       | 3        |           | 5        |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 5. CHECK A/F SENSOR 1 HEATER

Refer to [EC-699, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

## 6. REPLACE AIR FUEL RATIO (A/F) SENSOR 1

Replace malfunctioning air fuel ratio (A/F) sensor 1.

### CAUTION:

- Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new A/F sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

>> INSPECTION END

## 7. CHECK INTERMITTENT INCIDENT

Perform [GI-44, "Intermittent Incident"](#).

>> Repair or replace.

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## Component Inspection

INFOID:000000007729773

### 1. CHECK AIR FUEL RATIO (A/F) SENSOR 1

1. Turn ignition switch OFF.
2. Disconnect A/F sensor 1 harness connector.
3. Check resistance between A/F sensor 1 terminals as follows.

| Terminal   | Resistance ( $\Omega$ )       |
|------------|-------------------------------|
| 3 and 4    | 1.98 - 2.66 [at 25°C (77°F)]  |
| 3 and 1, 2 | $\infty$                      |
| 4 and 1, 2 | (Continuity should not exist) |

Is the inspection result normal?

- YES >> INSPECTION END  
NO >> GO TO 2.

### 2. REPLACE AIR FUEL RATIO (A/F) SENSOR 1

Replace malfunctioning air fuel ratio (A/F) sensor 1.

**CAUTION:**

- Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new A/F sensor, clean exhaust system threads using Heated Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 11 V and 16 V at idle.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
6. Let engine idle for 1 minute.
7. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-700, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000007729775

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

# P0037, P0038, P0057, P0058 HO2S2 HEATER

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## 2. CHECK HO2S2 POWER SUPPLY CIRCUIT

1. Disconnect heated oxygen sensor 2 (HO2S2) harness connector.
2. Turn ignition switch ON.
3. Check the voltage between HO2S2 harness connector and ground.

| DTC          | HO2S2 |           |          | Ground | Voltage         |
|--------------|-------|-----------|----------|--------|-----------------|
|              | Bank  | Connector | Terminal |        |                 |
| P0037, P0038 | 1     | F54       | 2        | Ground | Battery voltage |
| P0057, P0058 | 2     | F53       | 2        |        |                 |

Is the inspection result normal?

YES >> GO TO 4.

NO >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- IPDM E/R harness connector E7
- 15 A fuse (No. 45)
- Harness for open or short between heated oxygen sensor 2 and fuse

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 4. CHECK HO2S2 OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC          | HO2S2 |           |          | ECM       |          | Continuity |
|--------------|-------|-----------|----------|-----------|----------|------------|
|              | Bank  | Connector | Terminal | Connector | Terminal |            |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for 5 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-703. "Diagnosis Procedure"](#).  
 NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000007729781

#### 1. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect intake valve timing (IVT) control solenoid valve harness connector.
3. Turn ignition switch ON.
4. Check the voltage between intake valve timing control solenoid valve harness connector and ground.

| DTC   | IVT control solenoid valve |           |          | Ground | Voltage         |
|-------|----------------------------|-----------|----------|--------|-----------------|
|       | Bank                       | Connector | Terminal |        |                 |
| P0075 | 1                          | F28       | 2        | Ground | Battery voltage |
| P0081 | 2                          | F29       | 2        |        |                 |

Is the inspection result normal?

- YES >> GO TO 3.  
 NO >> GO TO 2.

#### 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- Harness for open or short between intake valve timing control solenoid valve and IPDM E/R

>> Repair open circuit, short to ground or short to power in harness or connectors.

#### 3. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

# P0075, P0081 IVT CONTROL SOLENOID VALVE

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between intake valve timing control solenoid valve harness connector and ECM harness connector.

| DTC   | IVT control solenoid valve |           |          | ECM       |          | Continuity |
|-------|----------------------------|-----------|----------|-----------|----------|------------|
|       | Bank                       | Connector | Terminal | Connector | Terminal |            |
| P0075 | 1                          | F28       | 1        | F101      | 18       | Existed    |
| P0081 | 2                          | F29       | 1        |           | 29       |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 4.CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE

Refer to [EC-704, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 5.

NO >> Replace malfunctioning intake valve timing control solenoid valve. Refer to [EM-52, "Exploded View"](#).

## 5.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000007729782

### 1.CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE-I

1. Turn ignition switch OFF.
2. Disconnect intake valve timing control solenoid valve harness connector.
3. Check resistance between intake valve timing control solenoid valve terminals as follows.

| Terminals         | Resistance ( $\Omega$ )                   |
|-------------------|---|
| 1 and 2           | 7.0 - 7.7 [at 20°C (68°F)]                |
| 1 or 2 and ground | $\infty$<br>(Continuity should not exist) |

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace malfunctioning intake valve timing control solenoid valve. Refer to [EM-52, "Exploded View"](#).

### 2.CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE-II

1. Remove intake valve timing control solenoid valve.
2. Provide 12 V DC between intake valve timing control solenoid valve terminals 1 and 2, and then interrupt it. Make sure that the plunger moves as shown in the figure.

#### CAUTION:

Do not apply 12 V DC continuously for 5 seconds or more. Doing so may result in damage to the coil in intake valve timing control solenoid valve.

#### NOTE:

Always replace O-ring when intake valve timing control solenoid valve is removed.

Is the inspection result normal?

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                           | DTC detecting condition                                     | Possible cause   |
|---------|--|---|--|
| P0102   | Mass air flow sensor (bank 1) circuit low input  | An excessively low voltage from the sensor is sent to ECM.  | <ul style="list-style-type: none"><li>• Harness or connectors (The sensor circuit is open or shorted.)</li><li>• Intake air leaks</li><li>• Mass air flow sensor</li></ul> |
| P0103   | Mass air flow sensor (bank 1) circuit high input | An excessively high voltage from the sensor is sent to ECM. | <ul style="list-style-type: none"><li>• Harness or connectors (The sensor circuit is open or shorted.)</li><li>• Mass air flow sensor</li></ul>                            |
| P010C   | Mass air flow sensor (bank 2) circuit low input  | An excessively low voltage from the sensor is sent to ECM.  | <ul style="list-style-type: none"><li>• Harness or connectors (The sensor circuit is open or shorted.)</li><li>• Intake air leaks</li><li>• Mass air flow sensor</li></ul> |
| P010D   | Mass air flow sensor (bank 2) circuit high input | An excessively high voltage from the sensor is sent to ECM. | <ul style="list-style-type: none"><li>• Harness or connectors (The sensor circuit is open or shorted.)</li><li>• Mass air flow sensor</li></ul>                            |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### Which DTC is detected?

P0102, P010C>>GO TO 2.

P0103, P010D>>GO TO 3.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE FOR DTC P0102 AND P010C

1. Start engine and wait at least 5 seconds.
2. Check DTC.

#### Is DTC detected?

YES >> Go to [EC-706, "Diagnosis Procedure"](#).

NO >> INSPECTION END

#### 3. PERFORM DTC CONFIRMATION PROCEDURE FOR DTC P0103 AND P010D-I

1. Turn ignition switch ON and wait at least 5 seconds.
2. Check DTC.

#### Is DTC detected?

YES >> Go to [EC-706, "Diagnosis Procedure"](#).

NO >> GO TO 4.

#### 4. PERFORM DTC CONFIRMATION PROCEDURE FOR DTC P0103 AND P010D-II

1. Start engine and wait at least 5 seconds.
2. Check DTC.

#### Is DTC detected?

YES >> Go to [EC-706, "Diagnosis Procedure"](#).

NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000007729784

#### 1. INSPECTION START

# P0102, P0103, P010C, P010D MAF SENSOR

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

Confirm the detected DTC.

Which DTC is detected?

P0102, P010C>>GO TO 2.

P0103, P010D>>GO TO 3.

### 2.CHECK INTAKE SYSTEM

Check the following for connection.

- Air duct
- Vacuum hoses
- Intake air passage between air duct to intake manifold

Is the inspection result normal?

YES >> GO TO 3.

NO >> Reconnect the parts.

### 3.CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47. "Circuit Inspection"](#).

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair or replace ground connection.

### 4.CHECK MAF SENSOR POWER SUPPLY CIRCUIT

1. Disconnect mass air flow (MAF) sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between MAF sensor harness connector and ground.

| DTC          | MAF sensor |           |          | Ground | Voltage         |
|--------------|------------|-----------|----------|--------|-----------------|
|              | Bank       | Connector | Terminal |        |                 |
| P0102, P0103 | 1          | F31       | 5        | Ground | Battery voltage |
| P010C, P010D | 2          | F42       | 5        |        |                 |

Is the inspection result normal?

YES >> GO TO 6.

NO >> GO TO 5.

### 5.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E106, M6
- Harness connectors M116, F103
- Harness for open or short between mass air flow sensor and ECM
- Harness for open or short between mass air flow sensor and IPDM E/R

>> Repair open circuit, short to ground or short to power in harness or connectors.

### 6.CHECK MAF SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between MAF sensor harness connector and ECM harness connector.

| DTC          | MAF sensor |           |          | ECM       |          | Continuity |
|--------------|------------|-----------|----------|-----------|----------|------------|
|              | Bank       | Connector | Terminal | Connector | Terminal |            |
| P0102, P0103 | 1          | F31       | 4        | F102      | 68       | Existed    |
| P010C, P010D | 2          | F42       | 4        |           | 94       |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 7.

# P0102, P0103, P010C, P010D MAF SENSOR

[VQ37VHR FOR MEXICO]

< DTC/CIRCUIT DIAGNOSIS >

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 7. CHECK MAF SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between MAF sensor harness connector and ECM harness connector.

| DTC          | MAF sensor |           |          | ECM       |          | Continuity |
|--------------|------------|-----------|----------|-----------|----------|------------|
|              | Bank       | Connector | Terminal | Connector | Terminal |            |
| P0102, P0103 | 1          | F31       | 3        | F102      | 77       | Existed    |
| P010C, P010D | 2          | F42       | 3        |           | 79       |            |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 8.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 8. CHECK MASS AIR FLOW SENSOR

Refer to [EC-708, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 9.

NO >> Replace malfunctioning mass air flow sensor. Refer to [EM-29, "Exploded View"](#).

## 9. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000007729785

### 1. CHECK MASS AIR FLOW SENSOR-I

#### With CONSULT

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Start engine and warm it up to normal operating temperature.
4. Connect CONSULT and select "DATA MONITOR" mode.
5. Select "MAS A/F SE-B1" and "MAS A/F SE-B2", and check the indication.

| Monitor item                   | Condition  | Indication (V)            |
|--------------------------------|--|---------------------------|
| MAS A/F SE-B1<br>MAS A/F SE-B2 | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|                                | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|                                | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|                                | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

#### Without CONSULT

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Start engine and warm it up to normal operating temperature.
4. Check the voltage between ECM harness connector terminals under the following conditions.

# P0102, P0103, P010C, P010D MAF SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| ECM       |                                       |          | Condition  | Voltage (V)               |
|-----------|---------------------------------------|----------|--|---------------------------|
| Connector | +                                     | -        |  |                           |
|           | Terminal                              | Terminal |  |                           |
| F102      | 77<br>[MAF sensor (bank 1)<br>signal] | 68       | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|           |                                       |          | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|           |                                       |          | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|           |                                       |          | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |
|           | 79<br>[MAF sensor (bank 2)<br>signal] | 94       | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|           |                                       |          | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|           |                                       |          | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|           |                                       |          | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

## Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

## 2. CHECK FOR THE CAUSE OF UNEVEN AIR FLOW THROUGH MASS AIR FLOW SENSOR

- Turn ignition switch OFF.
- Check for the cause of uneven air flow through mass air flow sensor. Refer to the following.
  - Crushed air ducts
  - Malfunctioning seal of air cleaner element
  - Uneven dirt of air cleaner element
  - Improper specification of intake air system parts

## Is the inspection result normal?

YES >> GO TO 4.

NO >> GO TO 3.

## 3. CHECK MASS AIR FLOW SENSOR-II

### With CONSULT

- Repair or replace malfunctioning part.
- Start engine and warm it up to normal operating temperature.
- Connect CONSULT and select "DATA MONITOR" mode.
- Select "MAS A/F SE-B1" and "MAS A/F SE-B2", and check the indication.

| Monitor item                   | Condition  | Indication (V)            |
|--------------------------------|--|---------------------------|
| MAS A/F SE-B1<br>MAS A/F SE-B2 | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|                                | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|                                | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|                                | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

### Without CONSULT

- Repair or replace malfunctioning part.
- Start engine and warm it up to normal operating temperature.
- Check the voltage between ECM harness connector terminals under the following conditions.

# P0102, P0103, P010C, P010D MAF SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

**Is the inspection result normal?**

- YES >> INSPECTION END  
 NO >> GO TO 4.

## 4. CHECK MASS AIR FLOW SENSOR-III

**With CONSULT**

1. Turn ignition switch OFF.
2. Disconnect mass air flow sensor harness connector and reconnect it again.
3. Start engine and warm it up to normal operating temperature.
4. Connect CONSULT and select "DATA MONITOR" mode.
5. Select "MAS A/F SE-B1" and "MAS A/F SE-B2", and check the indication.

| Monitor item                   | Condition  | Indication (V)            |
|--------------------------------|--|---------------------------|
| MAS A/F SE-B1<br>MAS A/F SE-B2 | Ignition switch ON (Engine stopped.)                             | Approx. 0.4               |
|                                | Idle (Engine is warmed-up to normal operating temperature.)      | 0.7 - 1.2                 |
|                                | 2,500 rpm (Engine is warmed-up to normal operating temperature.) | 1.3 - 1.7                 |
|                                | Idle to about 4,000 rpm  | 0.7 - 1.2 to Approx. 2.4* |

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

**Without CONSULT**

1. Turn ignition switch OFF.
2. Disconnect mass air flow sensor harness connector and reconnect it again.
3. Start engine and warm it up to normal operating temperature.
4. Check the voltage between ECM harness connector terminals under the following conditions.

# P0102, P0103, P010C, P010D MAF SENSOR

## P0112, P0113 IAT SENSOR

### DTC Logic

INFOID:000000007729796

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                           | DTC detecting condition                                     | Possible cause   |
|---------|--|---|--|
| P0112   | Intake air temperature sensor circuit low input  | An excessively low voltage from the sensor is sent to ECM.  | • Harness or connectors<br>(The sensor circuit is open or shorted.)<br>• Intake air temperature sensor |
| P0113   | Intake air temperature sensor circuit high input | An excessively high voltage from the sensor is sent to ECM. |  |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON and wait at least 5 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-712, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000007729797

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK INTAKE AIR TEMPERATURE SENSOR POWER SUPPLY CIRCUIT

1. Disconnect mass air flow (MAF) sensor (intake air temperature sensor is built-into) harness connector.
2. Turn ignition switch ON.
3. Check the voltage between mass air flow sensor (bank 1) harness connector and ground.

| MAF sensor (bank 1) |          | Ground | Voltage (V) |
|---------------------|----------|--------|-------------|
| Connector           | Terminal |        |             |
| F31                 | 2        | Ground | Approx. 5   |

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> Repair open circuit, short to ground or short to power in harness or connectors.

#### 3. CHECK INTAKE AIR TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between mass air flow sensor (bank 1) harness connector and ECM harness connector.

# P0112, P0113 IAT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| MAF sensor (bank 1) |          | ECM       |          | Continuity |
|---------------------|----------|-----------|----------|------------|
| Connector           | Terminal | Connector | Terminal |            |
| F31                 | 1        | F102      | 68       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 4.CHECK INTAKE AIR TEMPERATURE SENSOR

Refer to [EC-713, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 5.

NO >> Replace mass air flow sensor (with intake air temperature sensor) (bank 1). Refer to [EM-29, "Exploded View"](#).

## 5.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000007729798

## 1.CHECK INTAKE AIR TEMPERATURE SENSOR

1. Turn ignition switch OFF.
2. Disconnect mass air flow sensor (bank 1) harness connector.
3. Check resistance between mass air flow sensor (bank 1) terminals as follows.

| Terminals | Condition             |         | Resistance (kΩ) |
|-----------|-----------------------|---------|-----------------|
| 1 and 2   | Temperature [°C (°F)] | 25 (77) | 1.800 - 2.200   |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace mass air flow sensor (with intake air temperature sensor) (bank 1). Refer to [EM-29, "Exploded View"](#).

|---------|--|---|--|
| P0117   | Engine coolant temperature sensor circuit low input  | An excessively low voltage from the sensor is sent to ECM.  | <ul style="list-style-type: none"><li>• Harness or connectors (The sensor circuit is open or shorted.)</li><li>• Engine coolant temperature sensor</li></ul> |
| P0118   | Engine coolant temperature sensor circuit high input | An excessively high voltage from the sensor is sent to ECM. |  |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON and wait at least 5 seconds.
2. Check DTC.

Is DTC detected?

- YES >> Go to [EC-714, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000007729807

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK ECT SENSOR POWER SUPPLY CIRCUIT

1. Disconnect engine coolant temperature (ECT) sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between ECT sensor harness connector and ground.

| ECT sensor |          | Ground | Voltage (V) |
|------------|----------|--------|-------------|
| Connector  | Terminal |        |             |
| F17        | 1        | Ground | Approx. 5   |

Is the inspection result normal?

- YES >> GO TO 4.  
NO >> GO TO 3.

#### 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F106, F107
- Harness for open or short between engine coolant temperature sensor and ECM

# P0117, P0118 ECT SENSOR

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

>> Repair open circuit, short to ground or short to power in harness or connectors.

### 4. CHECK ECT SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between ECT sensor harness connector and ECM harness connector.

| ECT sensor |          | ECM       |          | Continuity |
|------------|----------|-----------|----------|------------|
| Connector  | Terminal | Connector | Terminal |            |
| F17        | 2        | F102      | 84       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 5. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to [EC-715. "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace engine coolant temperature sensor. Refer to [CO-25. "Exploded View"](#).

### 6. CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000007729808

### 1. CHECK ENGINE COOLANT TEMPERATURE SENSOR

1. Turn ignition switch OFF.
2. Disconnect engine coolant temperature sensor harness connector.
3. Remove engine coolant temperature sensor. Refer to [CO-25. "Exploded View"](#).
4. Check resistance between engine coolant temperature sensor terminals by heating with hot water as shown in the figure.

| Terminals | Condition           | Resistance (kΩ) |               |
|-----------|---------------------|-----------------|---------------|
| 1 and 2   | Temperature °C (°F) | 20 (68)         | 2.10 - 2.90   |
|           |                     | 50 (122)        | 0.68 - 1.00   |
|           |                     | 90 (194)        | 0.236 - 0.260 |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace engine coolant temperature sensor. Refer to [CO-25. "Exploded View"](#).

[VQ37VHR FOR MEXICO]

## P0122, P0123, P0227, P0228 TP SENSOR

### DTC Logic

INFOID:000000007729809

#### DTC DETECTION LOGIC

##### NOTE:

If DTC P0122, P0123, P0227 or P0228 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to [EC-822, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name                                 | DTC detecting condition  | Possible cause   |
|---------|--|--|--|
| P0122   | Throttle position sensor 2 (bank 1) circuit low input  | An excessively low voltage from the TP sensor 2 is sent to ECM.  | <ul style="list-style-type: none"><li>• Harness or connectors (TP sensor 2 circuit is open or shorted.)</li><li>• Electric throttle control actuator (TP sensor 2)</li></ul> |
| P0123   | Throttle position sensor 2 (bank 1) circuit high input | An excessively high voltage from the TP sensor 2 is sent to ECM. |  |
| P0227   | Throttle position sensor 2 (bank 2) circuit low input  | An excessively low voltage from the TP sensor 2 is sent to ECM.  |  |
| P0228   | Throttle position sensor 2 (bank 2) circuit high input | An excessively high voltage from the TP sensor 2 is sent to ECM. |  |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for 1 second.
2. Check DTC.

Is DTC detected?

YES >> Go to [EC-716, "Diagnosis Procedure"](#).

NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000007729810

##### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace ground connection.

##### 2. CHECK THROTTLE POSITION SENSOR 2 POWER SUPPLY CIRCUIT

1. Disconnect electric throttle control actuator harness connector.
2. Turn ignition switch ON.
3. Check the voltage between electric throttle control actuator harness connector and ground.

# P0122, P0123, P0227, P0228 TP SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| DTC          | Electric throttle control actuator |           |          | Ground | Voltage (V) |

| P0122, P0123 | 1                                  | F67       | 6        | Ground | Approx. 5   |
| P0227, P0228 | 2                                  | F27       | 1        |        |             |

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 3. CHECK THROTTLE POSITION SENSOR 2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between electric throttle control actuator harness connector and ECM harness connector.

| DTC          | Electric throttle control actuator |           |          | ECM       |          | Continuity |
|--------------|------------------------------------|-----------|----------|-----------|----------|------------|
|              | Bank                               | Connector | Terminal | Connector | Terminal |            |
| P0122, P0123 | 1                                  | F67       | 3        | F101      | 40       | Existed    |
| P0227, P0228 | 2                                  | F27       | 4        |           | 48       |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 4. CHECK THROTTLE POSITION SENSOR 2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between electric throttle control actuator harness connector and ECM harness connector.

| DTC          | Electric throttle control actuator |           |          | ECM       |          | Continuity |
|--------------|------------------------------------|-----------|----------|-----------|----------|------------|
|              | Bank                               | Connector | Terminal | Connector | Terminal |            |
| P0122, P0123 | 1                                  | F67       | 5        | F101      | 34       | Existed    |
| P0227, P0228 | 2                                  | F27       | 3        |           | 35       |            |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 5. CHECK THROTTLE POSITION SENSOR

Refer to [EC-718, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

## 6. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.
2. Go to [EC-718, "Special Repair Requirement"](#).

>> INSPECTION END

## Component Inspection

### 1. CHECK THROTTLE POSITION SENSOR

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Perform [EC-657, "Work Procedure"](#).
4. Turn ignition switch ON.
5. Set selector lever to D position.
6. Check the voltage between ECM harness connector terminals under the following conditions.

| ECM       |                           |          | Condition       | Voltage (V)    |
|-----------|---------------------------|----------|-----------------|----------------|
| Connector | +                         | -        |                 |                |
|           | Terminal                  | Terminal |                 |                |
| F101      | 30 [TP sensor 1 (bank 1)] | 40       | Fully released  | More than 0.36 |
|           |                           |          | Fully depressed | Less than 4.75 |
|           | 31 [TP sensor 1 (bank 2)] | 48       | Fully released  | More than 0.36 |
|           |                           |          | Fully depressed | Less than 4.75 |
|           | 34 [TP sensor 2 (bank 1)] | 40       | Fully released  | Less than 4.75 |
|           |                           |          | Fully depressed | More than 0.36 |
|           | 35 [TP sensor 2 (bank 2)] | 48       | Fully released  | Less than 4.75 |
|           |                           |          | Fully depressed | More than 0.36 |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

### 2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.
2. Go to [EC-718, "Special Repair Requirement"](#).

>> INSPECTION END

## Special Repair Requirement

INFOID:000000007729812

### 1. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Refer to [EC-657, "Work Procedure"](#)

>> GO TO 2.

### 2. PERFORM IDLE AIR VOLUME LEARNING

Refer to [EC-658, "Work Procedure"](#)

>> END

P0130, P0150 A/F SENSOR 1

DTC Logic

INFOID:000000007729825

DTC DETECTION LOGIC

To judge malfunctions, the diagnosis checks that the A/F signal computed by ECM from the A/F sensor 1 signal fluctuates according to fuel feedback control.

| DTC No. | Trouble diagnosis name                         | DTC detecting condition |  | Possible Cause   |
|---------|--|-------------------------|--|--|
| P0130   | Air fuel ratio (A/F) sensor 1 (bank 1) circuit | A)                      | The A/F signal computed by ECM from the A/F sensor 1 signal is constantly in a range other than approx. 2.2 V. | <ul style="list-style-type: none"> <li>• Harness or connectors (The A/F sensor 1 circuit is open or shorted.)</li> <li>• A/F sensor 1</li> </ul> |
|         |  | B)                      | The A/F signal computed by ECM from the A/F sensor 1 signal is constantly approx. 2.2 V.                       |  |
| P0150   | Air fuel ratio (A/F) sensor 1 (bank 2) circuit | A)                      | The A/F signal computed by ECM from the A/F sensor 1 signal is constantly in a range other than approx. 2.2 V. |  |
|         |  | B)                      | The A/F signal computed by ECM from the A/F sensor 1 signal is constantly approx. 2.2 V.                       |  |

DTC CONFIRMATION PROCEDURE

1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

**TESTING CONDITION:**

**Before performing the following procedure, confirm that battery voltage is more than 11 V at idle.**

>> GO TO 2.

2. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION A

1. Start engine and warm it up to normal operating temperature.
2. Let engine idle for 2 minutes.
3. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-721, "Diagnosis Procedure"](#).

NO-1 >> With CONSULT: GO TO 3.

NO-2 >> Without CONSULT: GO TO 7.

3. CHECK AIR FUEL RATIO (A/F) SENSOR 1 FUNCTION

1. Start engine and warm it up to normal operating temperature.
2. Select "A/F SEN1 (B1)" or "A/F SEN1 (B2)" in "DATA MONITOR" mode with CONSULT.
3. Check "A/F SEN1 (B1)" or "A/F SEN1 (B2)" indication.

Does the indication fluctuate around 2.2 V?

YES >> GO TO 4.

NO >> Go to [EC-721, "Diagnosis Procedure"](#).

4. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION B-I

1. Select "A/F SEN1 (B1) P1276" (for DTC P0130) or "A/F SEN1 (B2) P1286" (for DTC P0150) of "A/F SEN1" in "DTC WORK SUPPORT" mode with CONSULT.
2. Touch "START".
3. When the following conditions are met, "TESTING" will be displayed on the CONSULT screen.

# P0130, P0150 A/F SENSOR 1

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

|                |                            |
|----------------|----------------------------|
| ENG SPEED      | 1,100 - 3,200 rpm          |
| VHCL SPEED SE  | More than 64 km/h (40 mph) |
| B/FUEL SCHDL   | 1.0 - 8.0 msec             |
| Selector lever | D position                 |

If "TESTING" is not displayed after 20 seconds, retry from step 2.

**CAUTION:**

**Always drive vehicle at a safe speed.**

Is "TESTING" displayed on CONSULT screen?

YES >> GO TO 5.

NO >> Check A/F sensor 1 function again. GO TO 3.

## 5. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION B-II

Release accelerator pedal fully.

**NOTE:**

Never apply brake when releasing the accelerator pedal.

Which does "TESTING" change to?

COMPLETED>>GO TO 6.

OUT OF CONDITION>>Retry DTC CONFIRMATION PROCEDURE. GO TO 4.

## 6. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION B-III

Touch "SELF-DIAG RESULT".

Which is displayed on CONSULT screen?

OK >> INSPECTION END

NG >> Go to [EC-721, "Diagnosis Procedure"](#).

## 7. PERFORM COMPONENT FUNCTION CHECK FOR MALFUNCTION B

Perform component function check. Refer to [EC-720, "Component Function Check"](#).

**NOTE:**

Use component function check to check the overall function of the A/F sensor 1 circuit. During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-721, "Diagnosis Procedure"](#).

## Component Function Check

INFOID:000000007729826

### 1. PERFORM COMPONENT FUNCTION CHECK

 **With GST**

1. Start engine and warm it up to normal operating temperature.
2. Drive the vehicle at a speed of 80 km/h (50 MPH) for a few minutes in the suitable gear position.
3. Shift the selector lever to D position, then release the accelerator pedal fully until the vehicle speed decreases to 50 km/h (30 MPH).

**CAUTION:**

**Always drive vehicle at a safe speed.**

**NOTE:**

Never apply brake when releasing the accelerator pedal.

4. Repeat steps 2 and 3 for five times.
5. Stop the vehicle and turn ignition switch OFF.
6. Turn ignition switch ON.
7. Turn ignition switch OFF and wait at least 10 seconds.
8. Restart engine.
9. Repeat steps 2 and 3 for five times.
10. Stop the vehicle and connect GST to the vehicle.
11. Check 1st trip DTC.

Is 1st trip DTC detected?

# P0130, P0150 A/F SENSOR 1

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

- YES >> Go to [EC-721, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000007729827

### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

### 2. CHECK AIR FUEL RATIO (A/F) SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect A/F sensor 1 harness connector.
2. Turn ignition switch ON.
3. Check the voltage between A/F sensor 1 harness connector and ground.

| DTC   | A/F sensor 1 |           |          | Ground | Voltage         |
|-------|--------------|-----------|----------|--------|-----------------|
|       | Bank         | Connector | Terminal |        |                 |
| P0130 | 1            | F74       | 4        | Ground | Battery voltage |
| P0150 | 2            | F75       | 4        |        |                 |

Is the inspection result normal?

- YES >> GO TO 4.  
NO >> GO TO 3.

### 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- IPDM E/R harness connector E7
- 15 A fuse (No. 45)
- Harness for open or short between A/F sensor 1 and fuse

>> Repair or replace harness or connectors.

### 4. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

| DTC   | A/F sensor 1 |           |          | ECM       |          | Continuity |
|-------|--------------|-----------|----------|-----------|----------|------------|
|       | Bank         | Connector | Terminal | Connector | Terminal |            |
| P0130 | 1            | F74       | 1        | F102      | 57       | Existed    |
|       |              |           | 2        |           | 61       |            |
| P0150 | 2            | F75       | 1        |           | 65       |            |
|       |              |           | 2        |           | 66       |            |

4. Check the continuity between A/F sensor 1 harness connector and ground, or ECM harness connector and ground.

# P0130, P0150 A/F SENSOR 1

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| DTC   | A/F sensor 1 |           |          | Ground | Continuity  |

|       | Bank         | Connector | Terminal |        |             |
| P0130 | 1            | F74       | 1        | Ground | Not existed |
|       |              |           | 2        |        |             |
| P0150 | 2            | F75       | 1        |        |             |
|       |              |           | 2        |        |             |

| DTC   | ECM  |           |          | Ground | Continuity  |
|-------|------|-----------|----------|--------|-------------|
|       | Bank | Connector | Terminal |        |             |
| P0130 | 1    | F102      | 57       | Ground | Not existed |
|       |      |           | 61       |        |             |
| P0150 | 2    |           | 65       |        |             |
|       |      |           | 66       |        |             |

5. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 5.CHECK INTERMITTENT INCIDENT

Perform [GI-44, "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair or replace.

## 6.REPLACE AIR FUEL RATIO (A/F) SENSOR 1

Replace malfunctioning air fuel ratio (A/F) sensor 1.

### CAUTION:

- Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new A/F sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved anti-seize Lubricant (commercial service tool).

>> INSPECTION END

# P0131, P0151 A/F SENSOR 1

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## P0131, P0151 A/F SENSOR 1

### DTC Logic

INFOID:000000007729828

#### DTC DETECTION LOGIC

To judge malfunctions, the diagnosis checks that the A/F signal computed by ECM from the A/F sensor 1 signal is not inordinately low.

| DTC No. | Trouble diagnosis name                                     | DTC detecting condition  | Possible Cause   |
|---------|--|--|--|
| P0131   | Air fuel ratio (A/F) sensor 1 (bank 1) circuit low voltage | • The A/F signal computed by ECM from the A/F sensor 1 signal is constantly approx. 0 V. | • Harness or connectors (The A/F sensor 1 circuit is open or shorted.)<br>• A/F sensor 1 |
| P0151   | Air fuel ratio (A/F) sensor 1 (bank 2) circuit low voltage |  |  |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

**Before performing the following procedure, confirm that battery voltage is more than 10.5 V at idle.**

>> GO TO 2.

##### 2. CHECK A/F SENSOR FUNCTION

1. Start engine and warm it up to normal operating temperature.
2. Select "A/F SEN1 (B1)" or "A/F SEN1 (B2)" in "DATA MONITOR" mode with CONSULT
3. Check "A/F SEN1 (B1)" or "A/F SEN1 (B2)" indication.

Is the indication constantly approx. 0 V?

YES >> Go to [EC-724, "Diagnosis Procedure"](#).

NO >> GO TO 3.

##### 3. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Restart engine.
5. Drive and accelerate vehicle to more than 40 km/h (25 MPH) within 20 seconds after restarting engine.

##### CAUTION:

**Always drive vehicle at a safe speed.**

6. Maintain the following conditions for about 20 consecutive seconds.

|                |                            |
|----------------|----------------------------|
| ENG SPEED      | 1,000 - 3,200 rpm          |
| VHCL SPEED SE  | More than 40 km/h (25 mph) |
| B/FUEL SCHDL   | 1.5 - 9.0 msec             |
| Selector lever | Suitable position          |

##### NOTE:

- Keep the accelerator pedal as steady as possible during cruising.
- If this procedure is not completed within 1 minute after restarting engine at step 4, return to step 1.

7. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-724, "Diagnosis Procedure"](#).

NO >> INSPECTION END

# P0131, P0151 A/F SENSOR 1

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

INFOID:000000007729829

## Diagnosis Procedure

### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47. "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

### 2. CHECK AIR FUEL RATIO (A/F) SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect A/F sensor 1 harness connector.
2. Turn ignition switch ON.
3. Check the voltage between A/F sensor 1 harness connector and ground.

| DTC   | A/F sensor 1 |           |          | Ground | Voltage         |
|-------|--------------|-----------|----------|--------|-----------------|
|       | Bank         | Connector | Terminal |        |                 |
| P0130 | 1            | F74       | 4        | Ground | Battery voltage |
| P0150 | 2            | F75       | 4        |        |                 |

Is the inspection result normal?

- YES >> GO TO 4.  
NO >> GO TO 3.

### 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- IPDM E/R harness connector E7
- 15 A fuse (No. 45)
- Harness for open or short between A/F sensor 1 and fuse

>> Repair or replace harness or connectors.

### 4. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

| DTC   | A/F sensor 1 |           |          | ECM       |          | Continuity |
|-------|--------------|-----------|----------|-----------|----------|------------|

## P0132, P0152 A/F SENSOR 1

### DTC Logic

INFOID:000000007729830

#### DTC DETECTION LOGIC

To judge the malfunction, the diagnosis checks that the A/F signal computed by ECM from the A/F sensor 1 signal is not inordinately high.

| DTC No. | Trouble diagnosis name                                      | DTC detecting condition  | Possible Cause   |
|---------|---|--|--|
| P0132   | Air fuel ratio (A/F) sensor 1 (bank 1) circuit high voltage | • The A/F signal computed by ECM from the A/F sensor 1 signal is constantly approx. 5 V. | • Harness or connectors (The A/F sensor 1 circuit is open or shorted.)<br>• A/F sensor 1 |
| P0152   | Air fuel ratio (A/F) sensor 1 (bank 2) circuit high voltage |  |  |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

**Before performing the following procedure, confirm that battery voltage is more than 10.5 V at idle.**

>> GO TO 2.

##### 2. CHECK A/F SENSOR FUNCTION

1. Start engine and warm it up to normal operating temperature.
2. Select "A/F SEN1 (B1)" or "A/F SEN1 (B2)" in "DATA MONITOR" mode with CONSULT.
3. Check "A/F SEN1 (B1)" or "A/F SEN1 (B2)" indication.

Is the indication constantly approx. 5V?

YES >> Go to [EC-727, "Diagnosis Procedure"](#).

NO >> GO TO 3.

##### 3. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Restart engine.
5. Drive and accelerate vehicle to more than 40 km/h (25 MPH) within 20 seconds after restarting engine.

##### CAUTION:

**Always drive vehicle at a safe speed.**

6. Maintain the following conditions for about 20 consecutive seconds.

|                |                            |
|----------------|----------------------------|
| ENG SPEED      | 1,000 - 3,200 rpm          |
| VHCL SPEED SE  | More than 40 km/h (25 mph) |
| B/FUEL SCHDL   | 1.5 - 9.0 msec             |
| Selector lever | Suitable position          |

##### NOTE:

- Keep the accelerator pedal as steady as possible during cruising.
- If this procedure is not completed within 1 minute after restarting engine at step 4, return to step 1.

7. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-727, "Diagnosis Procedure"](#).

NO >> INSPECTION END

Diagnosis Procedure

1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47. "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
 NO >> Repair or replace ground connection.

2. CHECK AIR FUEL RATIO (A/F) SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect A/F sensor 1 harness connector.
2. Turn ignition switch ON.
3. Check the voltage between A/F sensor 1 harness connector and ground.

| DTC   | A/F sensor 1 |           |          | Ground | Voltage         |
|-------|--------------|-----------|----------|--------|-----------------|
|       | Bank         | Connector | Terminal |        |                 |
| P0130 | 1            | F74       | 4        | Ground | Battery voltage |
| P0150 | 2            | F75       | 4        |        |                 |

Is the inspection result normal?

- YES >> GO TO 4.  
 NO >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- IPDM E/R harness connector E7
- 15 A fuse (No. 45)
- Harness for open or short between A/F sensor 1 and fuse

>> Repair or replace harness or connectors.

4. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

| DTC   | A/F sensor 1 |           |          | ECM       |          | Continuity |
|-------|--------------|-----------|----------|-----------|----------|------------|
|       | Bank         | Connector | Terminal | Connector | Terminal |            |
| P0130 | 1            | F74       | 1        | F102      | 57       | Existed    |
|       |              |           | 2        |           | 61       |            |
| P0150 | 2            | F75       | 1        |           | 65       |            |
|       |              |           | 2        |           | 66       |            |

4. Check the continuity between A/F sensor 1 harness connector and ground, or ECM harness connector and ground.

| DTC   | A/F sensor 1 |           |          | Ground | Continuity  |
|-------|--------------|-----------|----------|--------|-------------|
|       | Bank         | Connector | Terminal |        |             |
| P0130 | 1            | F74       | 1        | Ground | Not existed |
|       |              |           | 2        |        |             |
| P0150 | 2            | F75       | 1        |        |             |
|       |              |           | 2        |        |             |

# P0132, P0152 A/F SENSOR 1

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| DTC   | ECM  |           |          | Ground | Continuity  |
|-------|------|-----------|----------|--------|-------------|
|       | Bank | Connector | Terminal |        |             |
| P0130 | 1    | F102      | 57       | Ground | Not existed |
|       |      |           | 61       |        |             |
| P0150 | 2    |           | 65       |        |             |
|       |      |           | 66       |        |             |

5. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 5.CHECK INTERMITTENT INCIDENT

Perform [GI-44. "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair or replace.

## 6.REPLACE AIR FUEL RATIO (A/F) SENSOR 1

Replace malfunctioning air fuel ratio (A/F) sensor 1.

### **CAUTION:**

- Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new A/F sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved anti-seize Lubricant (commercial service tool).

>> INSPECTION END

P0133, P0153 A/F SENSOR 1

DTC Logic

INFOID:000000007729832

DTC DETECTION LOGIC

To judge malfunctions, this diagnosis measures response time of the A/F signal computed by ECM from the A/F sensor 1 signal. The time is compensated by engine operating (speed and load), fuel feedback control constant, and the A/F sensor 1 temperature index. Judgment is based on whether the compensated time (the A/F signal cycling time index) is inordinately long or not.

| DTC No. | Trouble diagnosis name                                       | DTC detecting condition   | Possible Cause  |
|---------|--|---|---|
| P0133   | Air fuel ratio (A/F) sensor 1 (bank 1) circuit slow response | <ul style="list-style-type: none"> <li>The response of the A/F signal computed by ECM from A/F sensor 1 signal takes more than the specified time.</li> </ul> | <ul style="list-style-type: none"> <li>Harness or connectors (The A/F sensor 1 circuit is open or shorted.)</li> <li>A/F sensor 1</li> <li>A/F sensor 1 heater</li> <li>Fuel pressure</li> <li>Fuel injector</li> <li>Intake air leaks</li> <li>Exhaust gas leaks</li> <li>PCV</li> <li>Mass air flow sensor</li> </ul> |
| P0153   | Air fuel ratio (A/F) sensor 1 (bank 2) circuit slow response |   |   |

DTC CONFIRMATION PROCEDURE

1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

- Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON.
- Turn ignition switch OFF and wait at least 10 seconds.

**TESTING CONDITION:**

**Before performing the following procedure, confirm that battery voltage is more than 11 V at idle.**

Do you have CONSULT?

- YES >> GO TO 2.
- NO >> GO TO 5.

2. PERFORM DTC CONFIRMATION PROCEDURE-I

 **With CONSULT**

- Start engine and warm it up to normal operating temperature.
- Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON.
- Turn ignition switch OFF and wait at least 10 seconds.
- Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- Let engine idle for 1 minute.
- Select "A/F SEN1(B1) P1278/P1279" (for DTC P0133) or "A/F SEN1(B2) P1288/P1289" (for DTC P0153) of "A/F SEN1" in "DTC WORK SUPPORT" mode with CONSULT.
- Touch "START".

Is "COMPLETED" displayed on CONSULT screen?

- YES >> GO TO 3
- NO >> GO TO 4.

3. PERFORM DTC CONFIRMATION PROCEDURE-II

Touch "SELF-DIAG RESULT".

Which is displayed on CONSULT screen?

- OK >> INSPECTION END
- NG >> Go to [EC-730, "Diagnosis Procedure"](#).

4. PERFORM DTC CONFIRMATION PROCEDURE-II

- After perform the following procedure, "TESTING" will be displayed on the CONSULT screen.

# P0133, P0153 A/F SENSOR 1

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

- Increase the engine speed up to about 3,600 rpm and maintain that speed for 10 seconds.
  - Fully release accelerator pedal and then let engine idle for about 10 seconds.
- If **"TESTING"** is not displayed after 10 seconds, go to [EC-674, "Component Function Check"](#).
2. Wait for about 20 seconds at idle under the condition that "TESTING" is displayed on the CONSULT screen.
  3. Make sure that "TESTING" changes to "COMPLETED".  
If **"TESTING"** changed to **"OUT OF CONDITION"**, go to [EC-674, "Component Function Check"](#).
  4. Touch "SELF-DIAG RESULT".

Which is displayed on CONSULT screen?

- OK >> INSPECTION END
- NG >> Go to [EC-730, "Diagnosis Procedure"](#).

## 5. CHECK AIR-FUEL RATIO SELF-LEARNING VALUE

### With GST

1. Start engine and warm it up to normal operating temperature.
2. Select Service \$01 with GST.
3. Calculate the total value of "Short term fuel trim" and "Long term fuel trim" indications.

Is the total percentage within  $\pm 15\%$ ?

- YES >> GO TO 7.
- NO >> GO TO 6.

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Intake air leaks
- Exhaust gas leaks
- Incorrect fuel pressure
- Lack of fuel
- Fuel injector
- Incorrect PCV hose connection
- PCV valve
- Mass air flow sensor

>> Repair or replace malfunctioning part.

## 7. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.
6. Increase the engine speed up to about 3,600 rpm and keep it for 10 seconds.
7. Fully release accelerator pedal and then let engine idle for about 1 minute.
8. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-730, "Diagnosis Procedure"](#).
- NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000007729833

### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Repair or replace ground connection.

### 2. RETIGHTEN A/F SENSOR 1

Loosen and retighten the A/F sensor 1. Refer to [EM-36, "Removal and Installation"](#).

>> GO TO 3.

### 3. CHECK EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before three way catalyst 1.

Is exhaust gas leak detected?

- YES >> Repair or replace.  
 NO >> GO TO 4.

### 4. CHECK FOR INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

Is intake air leak detected?

- YES >> Repair or replace.  
 NO >> GO TO 5.

### 5. CLEAR THE MIXTURE RATIO SELF-LEARNING VALUE

1. Clear the mixture ratio self-learning value. Refer to [EC-662. "Work Procedure"](#).
2. Run engine for at least 10 minutes at idle speed.

Is the 1st trip DTC P0171, P172, P0174 or P0175 detected? Is it difficult to start engine?

- YES >> Perform trouble diagnosis for DTC P0171, P0174 or P0172, P0175. Refer to [EC-754. "DTC Logic"](#) or [EC-758. "DTC Logic"](#).  
 NO >> GO TO 6.

### 6. CHECK AIR FUEL RATIO (A/F) SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect A/F sensor 1 harness connector.
2. Turn ignition switch ON.
3. Check the voltage between A/F sensor 1 harness connector and ground.

| DTC   | A/F sensor 1 |           |          | Ground | Voltage         |
|-------|--------------|-----------|----------|--------|-----------------|
|       | Bank         | Connector | Terminal |        |                 |
| P0133 | 1            | F74       | 4        | Ground | Battery voltage |
| P0153 | 2            | F75       | 4        |        |                 |

Is the inspection result normal?

- YES >> GO TO 8.  
 NO >> GO TO 7.

### 7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E20, F40
- IPDM E/R harness connector E7
- 15 A fuse (No. 45)
- Harness for open or short between A/F sensor 1 and fuse

>> Repair or replace harness or connectors.

### 8. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

# P0133, P0153 A/F SENSOR 1

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

| DTC   | A/F sensor 1 |           |          | ECM       |          | Continuity |
|-------|--------------|-----------|----------|-----------|----------|------------|
|       | Bank         | Connector | Terminal | Connector | Terminal |            |
| P0133 | 1            | F74       | 1        | F102      | 57       | Existed    |
|       |              |           | 2        |           | 61       |            |
| P0153 | 2            | F75       | 1        |           | 65       |            |
|       |              |           | 2        |           | 66       |            |

4. Check the continuity between A/F sensor 1 harness connector and ground, or ECM harness connector and ground.

| DTC   | A/F sensor 1 |           |          | Ground | Continuity  |
|-------|--------------|-----------|----------|--------|-------------|
|       | Bank         | Connector | Terminal |        |             |
| P0133 | 1            | F74       | 1        | Ground | Not existed |
|       |              |           | 2        |        |             |
| P0153 | 2            | F75       | 1        |        |             |
|       |              |           | 2        |        |             |

| DTC   | ECM  |           |          | Ground | Continuity  |
|-------|------|-----------|----------|--------|-------------|
|       | Bank | Connector | Terminal |        |             |
| P0133 | 1    | F102      | 57       | Ground | Not existed |
|       |      |           | 61       |        |             |
| P0153 | 2    |           | 65       |        |             |
|       |      |           | 66       |        |             |

5. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 9.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 9. CHECK AIR FUEL RATIO (A/F) SENSOR 1 HEATER

Refer to [EC-699, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 10.

NO >> GO TO 13.

## 10. CHECK MASS AIR FLOW SENSOR

Check both mass air flow sensor (bank 1 and bank 2).

Refer to [EC-708, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 11.

NO >> Replace malfunctioning mass air flow sensor. Refer to [EM-29, "Exploded View"](#).

## 11. CHECK PCV VALVE

Refer to [EC-979, "Inspection"](#).

Is the inspection result normal?

YES >> GO TO 12.

NO >> Repair or replace PCV valve. Refer to [EM-49, "Exploded View"](#).

## 12. CHECK INTERMITTENT INCIDENT

# P0133, P0153 A/F SENSOR 1

[VQ37VHR FOR MEXICO]

< DTC/CIRCUIT DIAGNOSIS >

Perform [GI-44. "Intermittent Incident"](#).

Is the inspection result normal?

YES >> GO TO 13.

NO >> Repair or replace.

## 13.REPLACE AIR FUEL RATIO (A/F) SENSOR 1

Replace malfunctioning air fuel ratio (A/F) sensor 1.

### CAUTION:

- Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new A/F sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

DTC Logic

INFOID:000000007729834

DTC DETECTION LOGIC

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/F) sensor 1. The oxygen storage capacity of the three way catalyst 1 causes the longer switching time. To judge malfunctions of heated oxygen sensor 2, ECM monitors whether the maximum voltage of the sensor is sufficiently high during various driving conditions such as fuel-cut.

| DTC No. | Trouble diagnosis name                              | DTC detecting condition   | Possible cause  |
|---------|---|---|---|
| P0137   | Heated oxygen sensor 2 (bank 1) circuit low voltage | The maximum voltage from the sensor does not reach the specified voltage. | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted)</li> <li>• Heated oxygen sensor 2</li> <li>• Fuel pressure</li> <li>• Fuel injector</li> <li>• Intake air leaks</li> </ul> |
| P0157   | Heated oxygen sensor 2 (bank 2) circuit low voltage |   |   |

DTC CONFIRMATION PROCEDURE

1.INSPECTION START

Do you have CONSULT?

Do you have CONSULT?

- YES >> GO TO 2.
- NO >> GO TO 5.

2.PRECONDITIONING

If DTC confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

**TESTING CONDITION:**

**For better results, perform “DTC WORK SUPPORT” at a temperature of 0 to 30°C (32 to 86°F).**

>> GO TO 3.

3.PERFORM DTC CONFIRMATION PROCEDURE

**Ⓟ With CONSULT**

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
7. Let engine idle for 1 minute.
8. Make sure that “COOLAN TEMP/S” indicates more than 70°C (158°F).  
If not, warm up engine and go to next step when “COOLAN TEMP/S” indication reaches 70°C (158°F).
9. Open engine hood.
10. Select “HO2S2 (B1) P1147” (for DTC P0137) or “HO2S2 (B2) P1167” (for DTC P0157) of “HO2S2” in “DTC WORK SUPPORT” mode with CONSULT.

< DTC/CIRCUIT DIAGNOSIS >

11. Start engine and follow the instruction of CONSULT display.

**NOTE:**

It will take at most 10 minutes until "COMPLETED" is displayed.

12. Touch "SELF-DIAG RESULTS".

Which is displayed on CONSULT screen?

- OK >> INSPECTION END
- NG >> Go to [EC-736. "Diagnosis Procedure"](#).
- CAN NOT BE DIAGNOSED>>GO TO 4.

**4.PERFORM DTC CONFIRMATION PROCEDURE AGAIN**

1. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
2. Perform DTC confirmation procedure again.

>> GO TO 3.

**5.PERFORM COMPONENT FUNCTION CHECK**

Perform component function check. Refer to [EC-735. "Component Function Check"](#).

**NOTE:**

Use component function check to check the overall function of the heated oxygen sensor 2 circuit. During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Go to [EC-736. "Diagnosis Procedure"](#).

**Component Function Check**

INFOID:000000007729835

**1.PERFORM COMPONENT FUNCTION CHECK-I**

**Without CONSULT**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Check the voltage between ECM harness connector terminals under the following condition.

| DTC   | Connector | ECM      |          | Condition   | Voltage   |
|-------|-----------|----------|----------|---|---|
|       |           | +        | -        |   |   |
|       |           | Terminal | Terminal |   |   |
| P0137 | F102      | 76       | 84       | Revving up to 4,000 rpm under no load at least 10 times | The voltage should be above 0.70 V at least once during this procedure. |
| P0157 |           | 80       |          |   |   |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> GO TO 2.

**2.PERFORM COMPONENT FUNCTION CHECK-II**

Check the voltage between ECM harness connector terminals under the following condition.

| DTC   | Connector | ECM      |          | Condition                             | Voltage   |
|-------|-----------|----------|----------|---------------------------------------|---|
|       |           | +        | -        |                                       |   |
|       |           | Terminal | Terminal |                                       |   |
| P0137 | F102      | 76       | 84       | Keeping engine at idle for 10 minutes | The voltage should be above 0.70 V at least once during this procedure. |
| P0157 |           | 80       |          |                                       |   |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> GO TO 3.

**3.PERFORM COMPONENT FUNCTION CHECK-III**

Check the voltage between ECM harness connector terminals under the following condition.

| DTC            | ECM       |          |          | Condition                                    | Voltage   |
|----------------|-----------|----------|----------|--|---|
|                | Connector | +        | -        |  |   |
|                |           | Terminal | Terminal |  |   |
| P0137<br>P0157 | F102      | 76       | 84       | Coasting from 80 km/h (50 MPH) in D position | The voltage should be above 0.70 V at least once during this procedure. |
|                |           | 80       |          |  |   |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Go to [EC-736, "Diagnosis Procedure"](#).

**Diagnosis Procedure**

INFOID:000000007729836

**1.CHECK GROUND CONNECTION**

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Repair or replace ground connection.

**2.CLEAR THE MIXTURE RATIO SELF-LEARNING VALUE**

1. Clear the mixture ratio self-learning value. Refer to [EC-662, "Work Procedure"](#).
2. Run engine for at least 10 minutes at idle speed.

Is the 1st trip DTC P0171 or P0174 detected? Is it difficult to start engine?

- YES >> Perform trouble diagnosis for DTC P0171 or P0174. Refer to [EC-754, "DTC Logic"](#).
- NO >> GO TO 3.

**3.CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 (HO2S2) harness connector.
3. Disconnect ECM harness connector.
4. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0137 | 1     | F54       | 1        | F102      | 84       | Existed    |
| P0157 | 2     | F53       | 1        |           |          |            |

5. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 4.
- NO >> Repair open circuit, short to ground or short to power in harness or connectors.

**4.CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0137 | 1     | F54       | 4        | F102      | 76       | Existed    |
| P0157 | 2     | F53       | 4        |           | 80       |            |

2. Check the continuity between HO2S2 harness connector and ground, or ECM harness connector and ground.

< DTC/CIRCUIT DIAGNOSIS >

| DTC   | HO2S2 |           |          | Ground | Continuity  |
|-------|-------|-----------|----------|--------|-------------|
|       | Bank  | Connector | Terminal |        |             |
| P0137 | 1     | F54       | 4        | Ground | Not existed |
| P0157 | 2     | F53       | 4        |        |             |

| DTC   | ECM  |           |          | Ground | Continuity  |
|-------|------|-----------|----------|--------|-------------|
|       | Bank | Connector | Terminal |        |             |
| P0137 | 1    | F102      | 76       | Ground | Not existed |
| P0157 | 2    |           | 80       |        |             |

3. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

**5.CHECK HEATED OXYGEN SENSOR 2**

Refer to [EC-737, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

**6.REPLACE HEATED OXYGEN SENSOR 2**

Replace malfunctioning heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new heated oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

>> INSPECTION END

**7.CHECK INTERMITTENT INCIDENT**

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

**Component Inspection**

INFOID:000000007729837

**1.INSPECTION START**

Do you have CONSULT?

Do you have CONSULT?

YES >> GO TO 2.

NO >> GO TO 3.

**2.CHECK HEATED OXYGEN SENSOR 2**

**With CONSULT**

1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.
6. Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)/(B2)" as the monitor item with CONSULT.

# P0137, P0157 HO2S2

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

7. Check "HO2S2 (B1)/(B2)" at idle speed when adjusting "FUEL INJECTION" to  $\pm 25\%$ .

"HO2S2 (B1)/(B2)" should be above 0.70 V at least once when the "FUEL INJECTION" is +25%.

"HO2S2 (B1)/(B2)" should be below 0.18 V at least once when the "FUEL INJECTION" is -25%.

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 6.

## 3. CHECK HEATED OXYGEN SENSOR 2-I

⊗ Without CONSULT

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Check the voltage between ECM harness connector terminals under the following condition.

| ECM       |                           |          | Condition   | Voltage  |
|-----------|---------------------------|----------|---|--|
| Connector | +                         | -        |   |  |
|           | Terminal                  | Terminal |   |  |
| F102      | 76<br>[HO2S2<br>(bank 1)] | 84       | Revving up to 4,000 rpm under no load at least 10 times | The voltage should be above 0.70 V at least once during this procedure.<br>The voltage should be below 0.18 V at least once during this procedure. |
|           | 80<br>[HO2S2<br>(bank 2)] |          |   |  |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 4.

## 4. CHECK HEATED OXYGEN SENSOR 2-II

Check the voltage between ECM harness connector terminals under the following condition.

| ECM       |                           |          | Condition                             | Voltage  |
|-----------|---------------------------|----------|---------------------------------------|--|
| Connector | +                         | -        |                                       |  |
|           | Terminal                  | Terminal |                                       |  |
| F102      | 76<br>[HO2S2<br>(bank 1)] | 84       | Keeping engine at idle for 10 minutes | The voltage should be above 0.70 V at least once during this procedure.<br>The voltage should be below 0.18 V at least once during this procedure. |
|           | 80<br>[HO2S2<br>(bank 2)] |          |                                       |  |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 5.

## 5. CHECK HEATED OXYGEN SENSOR 2-III

Check the voltage between ECM harness connector terminals under the following condition.

| ECM       |                           |          | Condition                                    | Voltage  |
|-----------|---------------------------|----------|--|--|
| Connector | +                         | -        |  |  |
|           | Terminal                  | Terminal |  |  |
| F102      | 76<br>[HO2S2<br>(bank 1)] | 84       | Coasting from 80 km/h (50 MPH) in D position | The voltage should be above 0.70 V at least once during this procedure.<br>The voltage should be below 0.18 V at least once during this procedure. |
|           | 80<br>[HO2S2<br>(bank 2)] |          |  |  |

DTC Logic

INFOID:000000007729838

DTC DETECTION LOGIC

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/F) sensor 1. The oxygen storage capacity of the three way catalyst 1 causes the longer switching time.

**MALFUNCTION A**

To judge malfunctions of heated oxygen sensor 2, ECM monitors whether the voltage is unusually high during various driving conditions such as fuel cut.

**MALFUNCTION B**

To judge malfunctions of heated oxygen sensor 2, ECM monitors whether the minimum voltage of sensor is sufficiently low during various driving conditions such as fuel cut.

| DTC No. | Trouble diagnosis name                               | DTC detecting condition |  | Possible cause  |
|---------|--|-------------------------|--|---|
| P0138   | Heated oxygen sensor 2 (bank 1) circuit high voltage | A)                      | An excessively high voltage from the sensor is sent to ECM.                  | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted)</li> <li>• Heated oxygen sensor 2</li> </ul>   |
|         |  | B)                      | The minimum voltage from the sensor is not reached to the specified voltage. | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted)</li> <li>• Heated oxygen sensor 2</li> <li>• Fuel pressure</li> <li>• Fuel injector</li> </ul> |
| P0158   | Heated oxygen sensor 2 (bank 2) circuit high voltage | A)                      | An excessively high voltage from the sensor is sent to ECM.                  | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted)</li> <li>• Heated oxygen sensor 2</li> </ul>   |
|         |  | B)                      | The minimum voltage from the sensor is not reached to the specified voltage. | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted)</li> <li>• Heated oxygen sensor 2</li> <li>• Fuel pressure</li> <li>• Fuel injector</li> </ul> |

DTC CONFIRMATION PROCEDURE

1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

## 2. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION A

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
6. Let engine idle for 2 minutes.
7. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-742, "Diagnosis Procedure"](#).

NO-1 >> With CONSULT: GO TO 3.

NO-2 >> Without CONSULT: GO TO 5.

## 3. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION B

### NOTE:

**For better results, perform "DTC WORK SUPPORT" at a temperature of 0 to 30 °C (32 to 86 °F).**

1. Select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
7. Let engine idle for 1 minute.
8. Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).  
If not, warm up engine and go to next step when "COOLAN TEMP/S" indication reaches 70°C (158°F).
9. Open engine hood.
10. Select "HO2S2 (B1) P1146" (for DTC P0138) or "HO2S2 (B2) P1166" (for DTC P0158) of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT.
11. Start engine and follow the instruction of CONSULT display.

### NOTE:

It will take at most 10 minutes until "COMPLETED" is displayed.

12. Touch "SELF-DIAG RESULTS".

Which is displayed on CONSULT screen?

OK >> INSPECTION END

NG >> Go to [EC-742, "Diagnosis Procedure"](#).

CON NOT BE DIAGNOSED>>GO TO 4.

## 4. PERFORM DTC CONFIRMATION PROCEDURE FOR MALFUNCTION B AGAIN

1. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
2. Perform DTC confirmation procedure again.

>> GO TO 3.

## 5. PERFORM COMPONENT FUNCTION CHECK FOR MALFUNCTION B

Perform component function check. Refer to [EC-741, "Component Function Check"](#).

### NOTE:

Use component function check to check the overall function of the heated oxygen sensor 2 circuit. During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-742, "Diagnosis Procedure"](#).

## Component Function Check

INFOID:00000000729839

## 1. PERFORM COMPONENT FUNCTION CHECK-I

< DTC/CIRCUIT DIAGNOSIS >

⊗ Without CONSULT

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Check the voltage between ECM harness connector terminals under the following condition.

| DTC   | ECM       |          |          | Condition   | Voltage   |
|-------|-----------|----------|----------|---|---|
|       | Connector | +        | -        |   |   |
|       |           | Terminal | Terminal |   |   |
| P0138 | F102      | 76       | 84       | Revving up to 4,000 rpm under no load at least 10 times | The voltage should be below 0.18 V at least once during this procedure. |
| P0158 |           | 80       |          |   |   |

Is the inspection result normal?

- YES >> INSPECTION END  
 NO >> GO TO 2.

**2.PERFORM COMPONENT FUNCTION CHECK-II**

Check the voltage between ECM harness connector terminals under the following condition.

| DTC   | ECM       |          |          | Condition                             | Voltage   |
|-------|-----------|----------|----------|---------------------------------------|---|
|       | Connector | +        | -        |                                       |   |
|       |           | Terminal | Terminal |                                       |   |
| P0138 | F102      | 76       | 84       | Keeping engine at idle for 10 minutes | The voltage should be below 0.18 V at least once during this procedure. |
| P0158 |           | 80       |          |                                       |   |

Is the inspection result normal?

- YES >> INSPECTION END  
 NO >> GO TO 3.

**3.PERFORM COMPONENT FUNCTION CHECK-III**

Check the voltage between ECM harness connector terminals under the following condition.

| DTC   | ECM       |          |          | Condition                                    | Voltage   |
|-------|-----------|----------|----------|--|---|
|       | Connector | +        | -        |  |   |
|       |           | Terminal | Terminal |  |   |
| P0138 | F102      | 76       | 84       | Coasting from 80 km/h (50 MPH) in D position | The voltage should be below 0.18 V at least once during this procedure. |
| P0158 |           | 80       |          |  |   |

Is the inspection result normal?

- YES >> INSPECTION END  
 NO >> Go to [EC-742, "Diagnosis Procedure"](#).

**Diagnosis Procedure**

INFOID:000000007729840

**1.INSPECTION START**

Confirm the detected malfunction (A or B). Refer to [EC-740, "DTC Logic"](#).

Which malfunction is detected?

- A >> GO TO 2  
 B >> GO TO 9.

**2.CHECK GROUND CONNECTION**

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

< DTC/CIRCUIT DIAGNOSIS >

- YES >> GO TO 3.
- NO >> Repair or replace ground connection.

**3.CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT**

1. Disconnect heated oxygen sensor 2 (HO2S2) harness connector.
2. Disconnect ECM harness connector.
3. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0138 | 1     | F54       | 1        | F102      | 84       | Existed    |
| P0158 | 2     | F53       | 1        |           |          |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 4.
- NO >> Repair open circuit, short to ground or short to power in harness or connectors.

**4.CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0138 | 1     | F54       | 4        | F102      | 76       | Existed    |
| P0158 | 2     | F53       | 4        |           | 80       |            |

2. Check the continuity between HO2S2 harness connector and ground, or ECM harness connector and ground.

| DTC   | HO2S2 |           |          | Ground | Continuity  |
|-------|-------|-----------|----------|--------|-------------|
|       | Bank  | Connector | Terminal |        |             |
| P0138 | 1     | F54       | 4        | Ground | Not existed |
| P0158 | 2     | F53       | 4        |        |             |

| DTC   | ECM  |           |          | Ground | Continuity  |
|-------|------|-----------|----------|--------|-------------|
|       | Bank | Connector | Terminal |        |             |
| P0138 | 1    | F102      | 76       | Ground | Not existed |
| P0158 | 2    |           | 80       |        |             |

3. Also check harness for short to power.

Is the inspection result normal?

- YES >> GO TO 5.
- NO >> Repair open circuit, short to ground or short to power in harness or connectors.

**5.CHECK HO2S2 CONNECTOR FOR WATER**

Check connectors for water.

**Water should not exist.**

Is the inspection result normal?

- YES >> GO TO 6.
- NO >> Repair or replace harness or connectors.

**6.CHECK HEATED OXYGEN SENSOR 2**

Refer to [EC-745, "Component Inspection"](#).

< DTC/CIRCUIT DIAGNOSIS >

Is the inspection result normal?

- YES >> GO TO 8.
- NO >> GO TO 7.

**7.**REPLACE HEATED OXYGEN SENSOR 2

Replace malfunctioning heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new heated oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

>> INSPECTION END

**8.**CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

**9.**CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 10.
- NO >> Repair or replace ground connection.

**10.**CLEAR THE MIXTURE RATIO SELF-LEARNING VALUE

1. Clear the mixture ratio self-learning value. Refer to [EC-662, "Work Procedure"](#).
2. Run engine for at least 10 minutes at idle speed.

Is the 1st trip DTC P0172 or P0175 detected? Is it difficult to start engine?

- YES >> Perform trouble diagnosis for DTC P0172, P0175. Refer to [EC-758, "DTC Logic"](#).
- NO >> GO TO 11.

**11.**CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 harness connector.
3. Disconnect ECM harness connector.
4. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0138 | 1     | F54       | 1        | F102      | 84       | Existed    |
| P0158 | 2     | F53       | 1        |           |          |            |

5. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 12.
- NO >> Repair open circuit, short to ground or short to power in harness or connectors.

**12.**CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between HO2S2 harness connector and ECM harness connector.

< DTC/CIRCUIT DIAGNOSIS >

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0138 | 1     | F54       | 4        | F102      | 76       | Existed    |
| P0158 | 2     | F53       | 4        |           | 80       |            |

2. Check the continuity between HO2S2 harness connector or ECM harness connector and ground.

| DTC   | HO2S2 |           |          | Ground | Continuity  |
|-------|-------|-----------|----------|--------|-------------|

| P0158 | 2    |           | 80       |        |             |

3. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 13.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

**13.CHECK HEATED OXYGEN SENSOR 2**

Refer to [EC-741. "Component Function Check"](#).

Is the inspection result normal?

YES >> GO TO 15.

NO >> GO TO 14.

**14.REPLACE HEATED OXYGEN SENSOR 2**

Replace malfunctioning heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new heated oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

>> INSPECTION END

**15.CHECK INTERMITTENT INCIDENT**

Refer to [GI-44. "Intermittent Incident"](#).

>> INSPECTION END

# P0138, P0158 HO2S2

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.
6. Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)/(B2)" as the monitor item with CONSULT.
7. Check "HO2S2 (B1)/(B2)" at idle speed when adjusting "FUEL INJECTION" to  $\pm 25\%$ .

"HO2S2 (B1)/(B2)" should be above 0.70 V at least once when the "FUEL INJECTION" is +25%.  
 "HO2S2 (B1)/(B2)" should be below 0.18 V at least once when the "FUEL INJECTION" is -25%.

Is the inspection result normal?

- YES >> INSPECTION END  
 NO >> GO TO 6.

### 3. CHECK HEATED OXYGEN SENSOR 2-I

#### ⊗ Without CONSULT

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Check the voltage between ECM harness connector terminals under the following condition.

| Connector | ECM                       |          | Condition   | Voltage  |
|-----------|---------------------------|----------|---|--|
|           | +                         | -        |   |  |
|           | Terminal                  | Terminal |   |  |
| F102      | 76<br>[HO2S2<br>(bank 1)] | 84       | Revving up to 4,000 rpm under no load at least 10 times | The voltage should be above 0.70 V at least once during this procedure.<br>The voltage should be below 0.18 V at least once during this procedure. |
|           | 80<br>[HO2S2<br>(bank 2)] |          |   |  |

Is the inspection result normal?

- YES >> INSPECTION END  
 NO >> GO TO 4.

### 4. CHECK HEATED OXYGEN SENSOR 2-II

Check the voltage between ECM harness connector terminals under the following condition.

| ECM       |                           |          | Condition                             | Voltage  |
|-----------|---------------------------|----------|---------------------------------------|--|
| Connector | +                         | -        |                                       |  |
|           | Terminal                  | Terminal |                                       |  |
| F102      | 76<br>[HO2S2<br>(bank 1)] | 84       | Keeping engine at idle for 10 minutes | The voltage should be above 0.70 V at least once during this procedure.<br>The voltage should be below 0.18 V at least once during this procedure. |
|           | 80<br>[HO2S2<br>(bank 2)] |          |                                       |  |

DTC Logic

INFOID:000000007729842

DTC DETECTION LOGIC

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/F) sensor 1. The oxygen storage capacity of the three way catalyst 1 causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the switching response of the sensor's voltage is faster than specified during various driving conditions such as fuel cut.

| DTC No. | Trouble diagnosis name                                | DTC detecting condition   | Possible cause  |
|---------|---|---|---|
| P0139   | Heated oxygen sensor 2 (bank 1) circuit slow response | It takes more time for the sensor to respond between rich and lean than the specified time. | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted)</li> <li>• Heated oxygen sensor 2</li> <li>• Fuel pressure</li> <li>• Fuel injector</li> <li>• Intake air leaks</li> </ul> |
| P0159   | Heated oxygen sensor 2 (bank 2) circuit slow response |   |   |

DTC CONFIRMATION PROCEDURE

1.INSPECTION START

Do you have CONSULT?

Do you have CONSULT?

YES >> GO TO 2.

NO >> GO TO 6.

2.PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

**TESTING CONDITION:**

For better results, perform "DTC WORK SUPPORT" at a temperature of 0 to 30°C (32 to 86°F).

>> GO TO 3.

3.PERFORM DTC CONFIRMATION PROCEDURE

Ⓟ With CONSULT

1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
7. Let engine idle for 1 minute.
8. Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).
9. Open engine hood.
10. Select "HO2S2 (B1) P0139" or "HO2S2 (B2) P0159" of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT.
11. Start engine and follow the instruction of CONSULT display.

< DTC/CIRCUIT DIAGNOSIS >

**NOTE:**

It will take at most 10 minutes until "COMPLETED" is displayed.

Is "COMPLETED" displayed on CONSULT screen?

- YES >> GO TO 5.
- NO >> GO TO 4.

**4.PERFORM DTC CONFIRMATION PROCEDURE AGAIN**

1. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
2. Perform DTC confirmation procedure again.

>> GO TO 3.

**5.PERFORM SELF-DIAGNOSIS**

**With CONSULT**

Perform ECM self-diagnosis.

Is DTC "P0139" or "P0159" detected?

- YES >> Proceed to [EC-750, "Diagnosis Procedure"](#).
- NO >> INSPECTION END

**6.PERFORM COMPONENT FUNCTION CHECK**

Perform component function check. Refer to [EC-749, "Component Function Check"](#).

**NOTE:**

Use component function check to check the overall function of the heated oxygen sensor 2 circuit. During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Proceed to [EC-750, "Diagnosis Procedure"](#).

**Component Function Check**

INFOID:000000007729843

**1.PERFORM COMPONENT FUNCTION CHECK-I**

**Without CONSULT**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Check the voltage between ECM harness connector terminals under the following condition.

| DTC   | ECM       |          | Condition | Voltage   |  |
|-------|-----------|----------|-----------|---|--|
|       | Connector | Terminal |           |   |  |
|       |           | +        |           |   | -  |
| P0139 | F102      | 76       | 84        | Revving up to 4,000 rpm under no load at least 10 times |  |
| P0159 |           | 80       |           |   | A change of voltage should be more than 0.08 V for 1 second during this procedure. |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> GO TO 2.

**2.PERFORM COMPONENT FUNCTION CHECK-II**

Check the voltage between ECM harness connector terminals under the following condition.

# P0139, P0159 HO2S2

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| DTC   | ECM       |          |    | Condition                             | Voltage  |
|-------|-----------|----------|----|---------------------------------------|--|
|       | Connector | Terminal |    |                                       |  |
|       |           | +        | -  |                                       |  |
| P0139 | F102      | 76       | 84 | Keeping engine at idle for 10 minutes | A change of voltage should be more than 0.08 V for 1 second during this procedure. |
| P0159 |           | 80       |    |                                       |  |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> GO TO 3.

## 3.PERFORM COMPONENT FUNCTION CHECK-III

Check the voltage between ECM harness connector terminals under the following condition.

| DTC   | ECM       |          |          |  | Condition  | Voltage  |
|-------|-----------|----------|----------|--|--|--|
|       | Connector | +        | -        |  |  |  |
|       |           | Terminal | Terminal |  |  |  |
| P0139 | F102      | 76       | 84       |  | Coasting from 80 km/h (50 MPH) on the suitable gear position | A change of voltage should be more than 0.08 V for 1 second during this procedure. |
| P0159 |           | 80       |          |  |  |  |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Proceed to [EC-750, "Diagnosis Procedure"](#).

## Diagnosis Procedure

INFOID:000000007729844

### 1.CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Repair or replace ground connection.

### 2.CLEAR THE MIXTURE RATIO SELF-LEARNING VALUE

1. Clear the mixture ratio self-learning value. Refer to [EC-662, "Work Procedure"](#).
2. Run engine for at least 10 minutes at idle speed.

Is the 1st trip DTC P0171, P0172, P0174 or P0175 detected? Is it difficult to start engine?

- YES >> Perform trouble diagnosis for DTC P0171, P0174 or P0172, P0175. Refer to [EC-754, "DTC Logic"](#) or [EC-758, "DTC Logic"](#).
- NO >> GO TO 3.

### 3.CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 (HO2S2) harness connector.
3. Disconnect ECM harness connector.
4. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0139 | 1     | F54       | 1        | F102      | 84       | Existed    |
| P0159 | 2     | F53       | 1        |           |          |            |

5. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 4.

< DTC/CIRCUIT DIAGNOSIS >

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

**4.CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check the continuity between HO2S2 harness connector and ECM harness connector.

| DTC   | HO2S2 |           |          | ECM       |          | Continuity |
|-------|-------|-----------|----------|-----------|----------|------------|
|       | Bank  | Connector | Terminal | Connector | Terminal |            |
| P0139 | 1     | F54       | 4        | F102      | 76       | Existed    |
| P0159 | 2     | F53       | 4        |           | 80       |            |

2. Check the continuity between HO2S2 harness connector and ground, or ECM harness connector and ground.

| DTC   | HO2S2 |           |          | Ground | Continuity  |
|-------|-------|-----------|----------|--------|-------------|
|       | Bank  | Connector | Terminal |        |             |
| P0139 | 1     | F54       | 4        | Ground | Not existed |
| P0159 | 2     | F53       | 4        |        |             |

| DTC   | ECM  |           |          | Ground | Continuity  |
|-------|------|-----------|----------|--------|-------------|
|       | Bank | Connector | Terminal |        |             |
| P0139 | 1    | F102      | 76       | Ground | Not existed |
| P0159 | 2    |           | 80       |        |             |

3. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

**5.CHECK HEATED OXYGEN SENSOR 2**

Refer to [EC-751. "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

**6.REPLACE HEATED OXYGEN SENSOR 2**

Replace malfunctioning heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new heated oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

>> INSPECTION END

**7.CHECK INTERMITTENT INCIDENT**

Refer to [GI-44. "Intermittent Incident"](#).

>> INSPECTION END

**Component Inspection**

INFOID:000000007729845

**1.INSPECTION START**

Do you have CONSULT?

Do you have CONSULT?

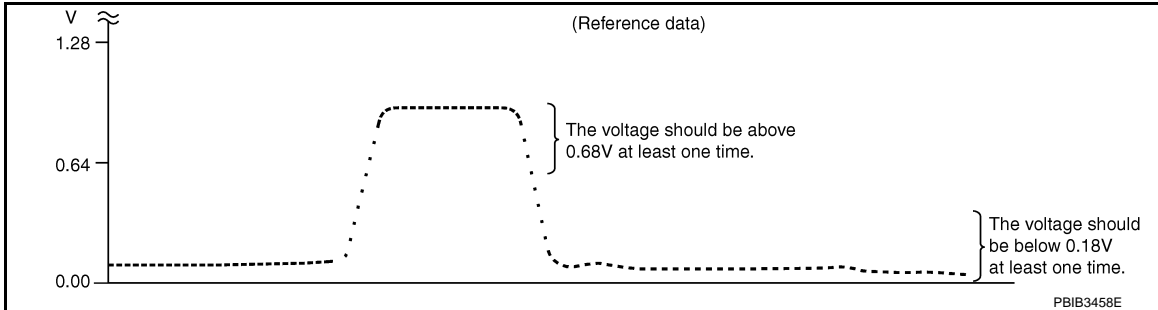

< DTC/CIRCUIT DIAGNOSIS >

- YES >> GO TO 2.
- NO >> GO TO 3.

**2. CHECK HEATED OXYGEN SENSOR 2**

**With CONSULT**

1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.
6. Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)/(B2)" as the monitor item with CONSULT.
7. Check "HO2S2 (B1) / (B2)" at idle speed when adjusting "FUEL INJECTION" to  $\pm 25\%$ .

"HO2S2 (B1)/(B2)" should be above 0.70 V at least once when the "FUEL INJECTION" is +25%.  
 "HO2S2 (B1)/(B2)" should be below 0.18 V at least once when the "FUEL INJECTION" is -25%.

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> GO TO 6.

**3. CHECK HEATED OXYGEN SENSOR 2-I**

**Without CONSULT**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Check the voltage between ECM harness connector terminals under the following condition.

| ECM       |                           | Condition   | Voltage   |
|-----------|---------------------------|---|---|
| Connector | + Terminal                |   |   |
| F102      | 76<br>[HO2S2<br>(bank 1)] | Revving up to 4,000 rpm under no load at least 10 times | The voltage should be above 0.40 V at least once during this procedure. |
|           | 80<br>[HO2S2<br>(bank 2)] |   |   |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> GO TO 4.

**4. CHECK HEATED OXYGEN SENSOR 2-II**

Check the voltage between ECM harness connector terminals under the following condition.

| ECM       |                           |          | Condition                             | Voltage   |
|-----------|---------------------------|----------|---------------------------------------|---|
| Connector | +                         | -        |                                       |   |
|           | Terminal                  | Terminal |                                       |   |
| F102      | 76<br>[HO2S2<br>(bank 1)] | 84       | Keeping engine at idle for 10 minutes | The voltage should be above 0.40 V at least once during this procedure. |
|           | 80<br>[HO2S2<br>(bank 2)] |          |                                       |   |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> GO TO 5.

**5.CHECK HEATED OXYGEN SENSOR 2-III**

Check the voltage between ECM harness connector terminals under the following condition.

| ECM       |                           |          | Condition  | Voltage   |
|-----------|---------------------------|----------|--|---|
| Connector | +                         | -        |  |   |
|           | Terminal                  | Terminal |  |   |
| F102      | 76<br>[HO2S2<br>(bank 1)] | 84       | Coasting from 80 km/h (50 MPH) on the suitable gear position | The voltage should be above 0.40 V at least once during this procedure. |
|           | 80<br>[HO2S2<br>(bank 2)] |          |  |   |

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> GO TO 6.

**6.REPLACE HEATED OXYGEN SENSOR 2**

Replace malfunctioning heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new heated oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner [commercial service tool (J-43897-18 or J-43897-12)] and approved Anti-seize Lubricant (commercial service tool).

[VQ37VHR FOR MEXICO]

## P0171, P0174 FUEL INJECTION SYSTEM FUNCTION

### DTC Logic

INFOID:000000007729846

#### DTC DETECTION LOGIC

With the Air/Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from A/F sensor 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios.

In case the amount of the compensation value is extremely large (the actual mixture ratio is too lean), the ECM judges the condition as the fuel injection system malfunction and illuminates the MIL (2 trip detection logic).

| Sensor       | Input signal to ECM   | ECM function           | Actuator      |
|--------------|---|------------------------|---------------|
| A/F sensor 1 | Density of oxygen in exhaust gas<br>(Mixture ratio feedback signal) | Fuel injection control | Fuel injector |

| DTC No. | Trouble diagnosis name                  | DTC detecting condition   | Possible cause   |
|---------|---|---|--|
| P0171   | Fuel injection system too lean (bank 1) | • Fuel injection system does not operate properly.<br>• The amount of mixture ratio compensation is too large. (The mixture ratio is too lean.) | • Intake air leaks<br>• A/F sensor 1<br>• Fuel injector<br>• Exhaust gas leaks<br>• Incorrect fuel pressure<br>• Lack of fuel<br>• Mass air flow sensor<br>• Incorrect PCV hose connection |
| P0174   | Fuel injection system too lean (bank 2) |   |  |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE-I

1. Clear the mixture ratio self-learning value. Refer to [EC-662. "Work Procedure"](#).
2. Start engine.

Is it difficult to start engine?

- YES >> GO TO 3.  
NO >> GO TO 4.

##### 3. RESTART ENGINE

If it is difficult to start engine, the fuel injection system has a malfunction, too.  
Crank engine while depressing accelerator pedal.

#### NOTE:

When depressing accelerator pedal three fourths (3/4) or more, the control system does not start the engine.  
Do not depress accelerator pedal too much.

Does engine start?

- YES >> Go to [EC-755. "Diagnosis Procedure"](#).  
NO >> Check exhaust and intake air leak visually.

##### 4. PERFORM DTC CONFIRMATION PROCEDURE-II

1. Keep engine idle for at least 5 minutes.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

# P0171, P0174 FUEL INJECTION SYSTEM FUNCTION

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

- YES >> Go to [EC-755. "Diagnosis Procedure"](#).  
 NO >> GO TO 5.

## 5. PERFORM DTC CONFIRMATION PROCEDURE-III

- Turn ignition switch OFF and wait at least 10 seconds.
- Start engine.
- Maintain the following conditions for at least 10 consecutive minutes.  
Hold the accelerator pedal as steady as possible.

|               |                             |
|---------------|-----------------------------|
| VHCL SPEED SE | 50 - 120 km/h (31 - 75 MPH) |
|---------------|-----------------------------|

**CAUTION:**

**Always drive vehicle at a safe speed.**

- Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-755. "Diagnosis Procedure"](#).  
 NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000007729847

### 1. CHECK EXHAUST GAS LEAK

- Start engine and run it at idle.
- Listen for an exhaust gas leak before three way catalyst 1.

Is exhaust gas leak detected?

- YES >> Repair or replace.  
 NO >> GO TO 2.

### 2. CHECK FOR INTAKE AIR LEAK

- Listen for an intake air leak after the mass air flow sensor.
- Check PCV hose connection.

Is intake air leak detected?

- YES >> Repair or replace.  
 NO >> GO TO 3.

### 3. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT

- Turn ignition switch OFF.
- Disconnect corresponding A/F sensor 1 harness connector.
- Disconnect ECM harness connector.
- Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

| DTC   | A/F sensor 1 |           |          | ECM       |          | Continuity |
|-------|--------------|-----------|----------|-----------|----------|------------|
|       | Bank         | Connector | Terminal | Connector | Terminal |            |
| P0171 | 1            | F74       | 1        | F102      | 57       | Existed    |
|       |              |           | 2        |           | 61       |            |
| P0174 | 2            | F75       | 1        |           | 65       |            |
|       |              |           | 2        |           | 66       |            |

# P0171, P0174 FUEL INJECTION SYSTEM FUNCTION

[VQ37VHR FOR MEXICO]

< DTC/CIRCUIT DIAGNOSIS >

5. Check the continuity between A/F sensor 1 harness connector and ground, or ECM harness connector and ground.

| DTC   | A/F sensor 1 |           |          | Ground | Continuity  |
|-------|--------------|-----------|----------|--------|-------------|
|       | Bank         | Connector | Terminal |        |             |
| P0171 | 1            | F74       | 1        | Ground | Not existed |
|       |              |           | 2        |        |             |
| P0174 | 2            | F75       | 1        |        |             |
|       |              |           | 2        |        |             |

| DTC   | ECM  |           |          | Ground | Continuity  |
|-------|------|-----------|----------|--------|-------------|
|       | Bank | Connector | Terminal |        |             |
| P0171 | 1    | F102      | 57       | Ground | Not existed |
|       |      |           | 61       |        |             |
| P0174 | 2    |           | 65       |        |             |
|       |      |           | 66       |        |             |

6. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 4. CHECK FUEL PRESSURE

1. Release fuel pressure to zero. Refer to [EC-667, "Work Procedure"](#).
2. Install fuel pressure gauge and check fuel pressure. Refer to [EC-667, "Work Procedure"](#).

**At idling: Approximately 350 kPa (3.57 kg/cm<sup>2</sup>, 51 psi)**

Is the inspection result normal?

YES >> GO TO 6.

NO >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check fuel hoses and fuel tubes for clogging.

Is the inspection result normal?

YES >> Replace "fuel filter and fuel pump assembly". Refer to [FL-5, "Exploded View"](#).

NO >> Repair or replace.

## 6. CHECK MASS AIR FLOW SENSOR

 **With CONSULT**

1. Install all removed parts.
2. Check "MASS AIR FLOW" in "DATA MONITOR" mode with CONSULT.  
For specification, refer to [EC-982, "Mass Air Flow Sensor"](#).

 **With GST**

1. Install all removed parts.
2. Check mass air flow sensor signal in Service \$01 with GST.  
For specification, refer to [EC-982, "Mass Air Flow Sensor"](#).

Is the measurement value within the specification?

YES >> GO TO 7.

NO >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or grounds. Refer to [EC-706, "Diagnosis Procedure"](#).

## 7. CHECK FUNCTION OF FUEL INJECTOR

 **With CONSULT**

1. Start engine.

# P0171, P0174 FUEL INJECTION SYSTEM FUNCTION

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT.
3. Make sure that each circuit produces a momentary engine speed drop.

### ⊗ Without CONSULT

1. Start engine and let it idle.
2. Listen to each fuel injector operating sound.

**Clicking sound should be heard.**

### Is the inspection result normal?

YES >> GO TO 8.

NO >> Perform trouble diagnosis for FUEL INJECTOR, refer to [EC-945. "Diagnosis Procedure"](#).

## 8. CHECK FUEL INJECTOR

1. Turn ignition switch OFF.
2. Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
3. Disconnect all fuel injector harness connectors.
4. Remove fuel tube assembly. Refer to [EM-39. "Removal and Installation"](#).  
Keep fuel hose and all fuel injectors connected to fuel tube.
5. For DTC P0171, reconnect fuel injector harness connectors on bank 1.  
For DTC P0174, reconnect fuel injector harness connectors on bank 2.
6. Disconnect all ignition coil harness connectors.
7. Prepare pans or saucers under each fuel injector.
8. Crank engine for about 3 seconds.  
For DTC P0171, make sure that fuel sprays out from fuel injectors on bank 1.  
For DTC P0174, make sure that fuel sprays out from fuel injectors on bank 2.

**Fuel should be sprayed evenly for each fuel injector.**

### Is the inspection result normal?

YES >> GO TO 9.

NO >> Replace fuel injectors from which fuel does not spray out. Always replace O-ring with new ones.

## 9. CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

>> INSPECTION END

# P0172, P0175 FUEL INJECTION SYSTEM FUNCTION

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## P0172, P0175 FUEL INJECTION SYSTEM FUNCTION

### DTC Logic

INFOID:000000007729848

#### DTC DETECTION LOGIC

With the Air/Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from A/F sensor 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios.

In case the amount of the compensation value is extremely large (the actual mixture ratio is too rich), the ECM judges the condition as the fuel injection system malfunction and illuminates the MIL (2 trip detection logic).

| Sensor       | Input signal to ECM   | ECM function           | Actuator      |
|--------------|---|------------------------|---------------|
| A/F sensor 1 | Density of oxygen in exhaust gas<br>(Mixture ratio feedback signal) | Fuel injection control | Fuel injector |

| DTC No. | Trouble diagnosis name                  | DTC detecting condition  | Possible cause  |
|---------|---|--|---|
| P0172   | Fuel injection system too rich (bank 1) | • Fuel injection system does not operate properly.<br>• The amount of mixture ratio compensation is too large.<br>(The mixture ratio is too rich.) | • A/F sensor 1<br>• Fuel injector<br>• Exhaust gas leaks<br>• Incorrect fuel pressure<br>• Mass air flow sensor |
| P0175   | Fuel injection system too rich (bank 2) |  |   |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE-I

1. Clear the mixture ratio self-learning value. Refer to [EC-662, "Work Procedure"](#).
2. Start engine.

Is it difficult to start engine?

- YES >> GO TO 3.  
NO >> GO TO 4.

##### 3. RESTART ENGINE

If it is difficult to start engine, the fuel injection system has a malfunction, too.

Crank engine while depressing accelerator pedal.

#### NOTE:

When depressing accelerator pedal three fourths (3/4) or more, the control system does not start the engine. Do not depress accelerator pedal too much.

Does engine start?

- YES >> Go to [EC-759, "Diagnosis Procedure"](#).  
NO >> Remove spark plugs and check for fouling, etc.

##### 4. PERFORM DTC CONFIRMATION PROCEDURE-II

1. Keep engine idle for at least 10 minutes.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-759, "Diagnosis Procedure"](#).  
NO >> GO TO 5.

##### 5. PERFORM DTC CONFIRMATION PROCEDURE-III

# P0172, P0175 FUEL INJECTION SYSTEM FUNCTION

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Start engine.
3. Maintain the following conditions for at least 10 consecutive minutes.  
Hold the accelerator pedal as steady as possible.

|               |                             |
|---------------|-----------------------------|
| VHCL SPEED SE | 50 - 120 km/h (31 - 75 MPH) |
|---------------|-----------------------------|

### CAUTION:

**Always drive vehicle at a safe speed.**

4. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-759, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000007729849

### 1. CHECK EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before three way catalyst 1.

Is exhaust gas leak detected?

- YES >> Repair or replace.  
NO >> GO TO 2.

### 2. CHECK FOR INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

Is intake air leak detected?

- YES >> Repair or replace.  
NO >> GO TO 3.

### 3. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect corresponding A/F sensor 1 harness connector.
3. Disconnect ECM harness connector.
4. Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

| DTC   | A/F sensor 1 |           |          | ECM       |          | Continuity |
|-------|--------------|-----------|----------|-----------|----------|------------|
|       | Bank         | Connector | Terminal | Connector | Terminal |            |
| P0172 | 1            | F74       | 1        | F102      | 57       | Existed    |
|       |              |           | 2        |           | 61       |            |
| P0175 | 2            | F75       | 1        |           | 65       |            |
|       |              |           | 2        |           | 66       |            |

5. Check the continuity between A/F sensor 1 harness connector and ground, or ECM harness connector and ground.

# P0172, P0175 FUEL INJECTION SYSTEM FUNCTION

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| DTC   | A/F sensor 1 |           |          | Ground | Continuity  |

| P0175 | 2    |           | 65       |        |             |
|       |      |           | 66       |        |             |

6. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 4.CHECK FUEL PRESSURE

1. Release fuel pressure to zero. Refer to [EC-667, "Work Procedure"](#).

2. Install fuel pressure gauge and check fuel pressure. Refer to [EC-667, "Work Procedure"](#).

**At idling: Approximately 350 kPa (3.57 kg/cm<sup>2</sup>, 51 psi)**

Is the inspection result normal?

YES >> GO TO 5.

NO >> Replace "fuel filter and fuel pump assembly". Refer to [FL-5, "Exploded View"](#).

## 5.CHECK MASS AIR FLOW SENSOR

### With CONSULT

1. Install all removed parts.

2. Check "MASS AIR FLOW" in "DATA MONITOR" mode with CONSULT.  
For specification, refer to [EC-982, "Mass Air Flow Sensor"](#).

### With GST

1. Install all removed parts.

2. Check mass air flow sensor signal in "Service \$01" with GST.  
For specification, refer to [EC-982, "Mass Air Flow Sensor"](#).

Is the measurement value within the specification?

YES >> GO TO 6.

NO >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or grounds. Refer to [EC-706, "Diagnosis Procedure"](#).

## 6.CHECK FUNCTION OF FUEL INJECTOR

### With CONSULT

1. Start engine.

2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT.

3. Make sure that each circuit produces a momentary engine speed drop.

### Without CONSULT

1. Start engine and let it idle.

# P0172, P0175 FUEL INJECTION SYSTEM FUNCTION

[VQ37VHR FOR MEXICO]

< DTC/CIRCUIT DIAGNOSIS >

- Listen to each fuel injector operating sound.

**Clicking sound should be heard.**

Is the inspection result normal?

YES >> GO TO 7.

NO >> Perform trouble diagnosis for FUEL INJECTOR, refer to [EC-945. "Diagnosis Procedure"](#).

## 7. CHECK FUEL INJECTOR

- Remove fuel injector assembly. Refer to [EM-39. "Removal and Installation"](#).  
Keep fuel hose and all fuel injectors connected to fuel tube.
- Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
- Disconnect all fuel injector harness connectors.
- Disconnect all ignition coil harness connectors.
- Prepare pans or saucers under each fuel injector.
- Crank engine for about 3 seconds.  
Make sure fuel that does not drip from fuel injector.

Is the inspection result normal?

YES >> GO TO 8.

NO >> Replace the fuel injectors from which fuel is dripping. Always replace O-ring with new one.

## 8. CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

>> INSPECTION END

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## P0182, P0183 FTT SENSOR

### DTC Logic

INFOID:000000007729857

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                          | DTC detecting condition                                     | Possible cause  |
|---------|---|---|---|
| P0182   | Fuel tank temperature sensor circuit low input  | An excessively low voltage from the sensor is sent to ECM.  | <ul style="list-style-type: none"><li>• Harness or connectors (The sensor circuit is open or shorted.)</li><li>• Fuel tank temperature sensor</li></ul> |
| P0183   | Fuel tank temperature sensor circuit high input | An excessively high voltage from the sensor is sent to ECM. |   |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON and wait at least 5 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-762, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000007729858

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK DTC WITH "COMBINATION METER"

Refer to [MWI-31, "CONSULT Function"](#).

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> Go to [MWI-62, "Component Function Check"](#).

#### 3. CHECK FUEL TANK TEMPERATURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect "fuel level sensor unit and fuel pump" harness connector.
3. Turn ignition switch ON.
4. Check the voltage between "fuel level sensor unit and fuel pump" harness connector and ground.

| Fuel level sensor unit and fuel pump |          | Ground | Voltage (V) |
|--------------------------------------|----------|--------|-------------|
| Connector                            | Terminal |        |             |
| B241                                 | 4        | Ground | Approx. 5   |

Is the inspection result normal?

# P0182, P0183 FTT SENSOR

[VQ37VHR FOR MEXICO]

< DTC/CIRCUIT DIAGNOSIS >

- YES >> GO TO 5.
- NO >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M117, B201
- Harness for open or short between ECM and “fuel level sensor unit and fuel pump”

>> Repair open circuit, short to ground or short to power in harness or connector.

## 5. CHECK FUEL TANK TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect “combination meter” harness connector.
3. Check the continuity between “fuel level sensor unit and fuel pump” harness connector and “combination meter” harness connector.

| Fuel level sensor unit and fuel pump |          | Combination meter |          | Continuity |
|--------------------------------------|----------|-------------------|----------|------------|
| Connector                            | Terminal | Connector         | Terminal |            |
| B241                                 | 5        | M53               | 24       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 7.
- NO >> GO TO 6.

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M117, B201
- Harness for open or short between “fuel level sensor unit and fuel pump” and “combination meter”

>> Repair open circuit, short to ground or short to power in harness or connector.

## 7. CHECK FUEL TANK TEMPERATURE SENSOR

Refer to [EC-763, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 8.
- NO >> Replace “fuel level sensor unit and fuel pump”. Refer to [FL-5, "Exploded View"](#).

## 8. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000007729859

## 1. CHECK FUEL TANK TEMPERATURE SENSOR

1. Turn ignition switch OFF.
2. Disconnect “fuel level sensor unit and fuel pump” harness connector.
3. Remove fuel level sensor unit. Refer to [FL-5, "Exploded View"](#).

# P0182, P0183 FTT SENSOR

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

4. Check resistance between "fuel level sensor unit and fuel pump" terminals by heating with hot water as shown in the figure.

| Terminals | Condition                                   | Resistance (k $\Omega$ ) |             |
|-----------|---|--------------------------|-------------|
| 4 and 5   | Temperature [ $^{\circ}$ C ( $^{\circ}$ F)] | 20 (68)                  | 2.3 - 2.7   |
|           |   | 50 (122)                 | 0.79 - 0.90 |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace "fuel level sensor unit and fuel pump". Refer to [FL-5. "Exploded View"](#).

[VQ37VHR FOR MEXICO]

## P0197, P0198 EOT SENSOR

### DTC Logic

INFOID:000000007729867

### DTC DETECTION LOGIC

| DTC No. | Trouble Diagnosis Name                           | DTC Detecting Condition                                     | Possible Cause  |
|---------|--|---|---|
| P0197   | Engine oil temperature sensor circuit low input  | An excessively low voltage from the sensor is sent to ECM.  | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted.)</li> <li>• Engine oil temperature sensor</li> </ul> |
| P0198   | Engine oil temperature sensor circuit high input | An excessively high voltage from the sensor is sent to ECM. |   |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and wait at least 5 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-765, "Diagnosis Procedure"](#).  
 NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000007729868

#### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
 NO >> Repair or replace ground connection.

#### 2. CHECK EOT SENSOR POWER SUPPLY CIRCUIT

1. Disconnect engine oil temperature (EOT) sensor harness connector.
2. Turn ignition switch ON.
3. Check the voltage between EOT sensor harness connector and ground.

| EOT sensor |          | Ground | Voltage (V) |
|------------|----------|--------|-------------|
| Connector  | Terminal |        |             |
| F38        | 1        | Ground | Approx. 5   |

Is the inspection result normal?

- YES >> GO TO 3.  
 NO >> Repair open circuit, short to ground or short to power in harness or connectors.

#### 3. CHECK EOT SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between EOT sensor harness connector and ECM harness connector.

# P0197, P0198 EOT SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| EOT sensor |          | ECM       |          | Continuity |
|------------|----------|-----------|----------|------------|

### DTC Logic

INFOID:000000007729870

#### DTC DETECTION LOGIC

##### NOTE:

If DTC P0222, P0223, P2132 or P2133 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to [EC-822, "DTC Logic"](#).

| DTC No. | Trouble diagnosis name                                 | DTC detecting condition  | Possible cause  |
|---------|--|--|---|
| P0222   | Throttle position sensor 1 (bank 1) circuit low input  | An excessively low voltage from the TP sensor 1 is sent to ECM.  | • Harness or connectors (TP sensor 1 circuit is open or shorted.)<br>• Electric throttle control actuator (TP sensor 1) |
| P0223   | Throttle position sensor 1 (bank 1) circuit high input | An excessively high voltage from the TP sensor 1 is sent to ECM. |   |
| P2132   | Throttle position sensor 1 (bank 2) circuit low input  | An excessively low voltage from the TP sensor 1 is sent to ECM.  |   |
| P2133   | Throttle position sensor 1 (bank 2) circuit high input | An excessively high voltage from the TP sensor 1 is sent to ECM. |   |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for 1 second.
2. Check DTC.

Is DTC detected?

- YES >> Go to [EC-767, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000007729871

##### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

##### 2. CHECK THROTTLE POSITION SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect electric throttle control actuator harness connector.
2. Turn ignition switch ON.
3. Check the voltage between electric throttle control actuator harness connector and ground.

## P0222, P0223, P2132, P2133 TP SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| DTC          | Electric throttle control actuator |           |          | Ground | Voltage (V) |
|--------------|------------------------------------|-----------|----------|--------|-------------|
|              | Bank                               | Connector | Terminal |        |             |
| P0222, P0223 | 1                                  | F67       | 6        | Ground | Approx. 5   |
| P2132, P2133 | 2                                  | F27       | 1        |        |             |

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 3. CHECK THROTTLE POSITION SENSOR 1 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between electric throttle control actuator harness connector and ECM harness connector.

| DTC          | Electric throttle control actuator |           |          | ECM       |          | Continuity |
|--------------|------------------------------------|-----------|----------|-----------|----------|------------|
|              | Bank                               | Connector | Terminal | Connector | Terminal |            |
| P0222, P0223 | 1                                  | F67       | 3        | F101      | 40       | Existed    |
| P2132, P2133 | 2                                  | F27       | 4        |           | 48       |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 4. CHECK THROTTLE POSITION SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between electric throttle control actuator harness connector and ECM harness connector.

| DTC          | Electric throttle control actuator |           |          | ECM       |          | Continuity |
|--------------|------------------------------------|-----------|----------|-----------|----------|------------|
|              | Bank                               | Connector | Terminal | Connector | Terminal |            |
| P0222, P0223 | 1                                  | F67       | 4        | F101      | 30       | Existed    |
| P2132, P2133 | 2                                  | F27       | 2        |           | 31       |            |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

### 5. CHECK THROTTLE POSITION SENSOR

Refer to [EC-769, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

### 6. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.
2. Go to [EC-769, "Special Repair Requirement"](#).

>> INSPECTION END

### 7. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

### 1. CHECK THROTTLE POSITION SENSOR

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Perform [EC-657, "Work Procedure"](#).
4. Turn ignition switch ON.
5. Set selector lever to D position.
6. Check the voltage between ECM harness connector terminals under the following conditions.

| Connector | ECM                       |    | Condition       | Voltage (V)    |
|-----------|---------------------------|----|-----------------|----------------|
|           | +                         | -  |                 |                |
|           | Terminal                  |    |                 |                |
| F101      | 30 [TP sensor 1 (bank 1)] | 40 | Fully released  | More than 0.36 |
|           |                           |    | Fully depressed | Less than 4.75 |
|           | 31 [TP sensor 1 (bank 2)] | 48 | Fully released  | More than 0.36 |
|           |                           |    | Fully depressed | Less than 4.75 |
|           | 34 [TP sensor 2 (bank 1)] | 40 | Fully released  | Less than 4.75 |
|           |                           |    | Fully depressed | More than 0.36 |
|           | 35 [TP sensor 2 (bank 2)] | 48 | Fully released  | Less than 4.75 |
|           |                           |    | Fully depressed | More than 0.36 |

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 2.

### 2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.
2. Go to [EC-769, "Special Repair Requirement"](#).

>> INSPECTION END

## Special Repair Requirement

INFOID:000000007729873

### 1. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Refer to [EC-657, "Work Procedure"](#)

>> GO TO 2.

### 2. PERFORM IDLE AIR VOLUME LEARNING

Refer to [EC-658, "Work Procedure"](#)

>> END

# P0300, P0301, P0302, P0303, P0304, P0305, P0306 MISFIRE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## P0300, P0301, P0302, P0303, P0304, P0305, P0306 MISFIRE

### DTC Logic

INFOID:000000007729874

#### DTC DETECTION LOGIC

When a misfire occurs, engine speed will fluctuate. If the engine speed fluctuates enough to cause the crankshaft position (CKP) sensor (POS) signal to vary, ECM can determine that a misfire is occurring.

| Sensor                           | Input signal to ECM | ECM function                  |
|----------------------------------|---------------------|-------------------------------|
| Crankshaft position sensor (POS) | Engine speed        | On board diagnosis of misfire |

The misfire detection logic consists of the following two conditions.

- One Trip Detection Logic (Three Way Catalyst Damage)**  
On the 1st trip, when a misfire condition occurs that can damage the three way catalyst (TWC) due to overheating, the MIL will blink.  
When a misfire condition occurs, the ECM monitors the CKP sensor signal every 200 engine revolutions for a change.  
When the misfire condition decreases to a level that will not damage the TWC, the MIL will turn off.  
If another misfire condition occurs that can damage the TWC on a second trip, the MIL will blink.  
When the misfire condition decreases to a level that will not damage the TWC, the MIL will remain illuminating.  
If another misfire condition occurs that can damage the TWC, the MIL will begin to blink again.
- Two Trip Detection Logic (Exhaust quality deterioration)**  
For misfire conditions that will not damage the TWC (but will affect vehicle emissions), the MIL will only illuminate when the misfire is detected on a second trip. During this condition, the ECM monitors the CKP sensor signal every 1,000 engine revolutions.  
A misfire malfunction can be detected in any one cylinder or in multiple cylinders.

| DTC No. | Trouble diagnosis name              | DTC detecting condition     | Possible cause  |
|---------|-------------------------------------|-----------------------------|---|
| P0300   | Multiple cylinder misfires detected | Multiple cylinders misfire. | <ul style="list-style-type: none"><li>• Improper spark plug</li><li>• Insufficient compression</li><li>• Incorrect fuel pressure</li><li>• The fuel injector circuit is open or shorted</li><li>• Fuel injector</li><li>• Intake air leak</li><li>• The ignition signal circuit is open or shorted</li><li>• Lack of fuel</li><li>• Signal plate</li><li>• A/F sensor 1</li><li>• Incorrect PCV hose connection</li></ul> |
| P0301   | No.1 cylinder misfire detected      | No. 1 cylinder misfires.    |   |
| P0302   | No. 2 cylinder misfire detected     | No. 2 cylinder misfires.    |   |
| P0303   | No. 3 cylinder misfire detected     | No. 3 cylinder misfires.    |   |
| P0304   | No. 4 cylinder misfire detected     | No. 4 cylinder misfires.    |   |
| P0305   | No. 5 cylinder misfire detected     | No. 5 cylinder misfires.    |   |
| P0306   | No. 6 cylinder misfire detected     | No. 6 cylinder misfires.    |   |

#### DTC CONFIRMATION PROCEDURE

##### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

>> GO TO 2.

##### 2. PERFORM DTC CONFIRMATION PROCEDURE-I

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Restart engine and let it idle for about 15 minutes.
6. Check 1st trip DTC.

Is 1st trip DTC detected?

# P0300, P0301, P0302, P0303, P0304, P0305, P0306 MISFIRE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

- YES >> Go to [EC-771. "Diagnosis Procedure"](#).  
NO >> GO TO 3.

## 3.PERFORM DTC CONFIRMATION PROCEDURE-II

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and drive the vehicle under similar conditions to (1st trip) Freeze Frame Data for a certain time. Refer to the table below.

**Hold the accelerator pedal as steady as possible.**

Similar conditions to (1st trip) Freeze Frame Data mean that the following conditions should be satisfied at the same time.

**CAUTION:**

**Always drive vehicle in safe manner according to traffic conditions and obey all traffic laws when driving.**

|  |  |
|--|--|
| Engine speed                             | Engine speed in the freeze frame data $\pm$ 400 rpm  |
| Vehicle speed                            | Vehicle speed in the freeze frame data $\pm$ 10 km/h (6 MPH)   |
| Base fuel schedule                       | Base fuel schedule in the freeze frame data $\times$ (1 $\pm$ 0.1)   |
| Engine coolant temperature (T) condition | When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).                           |
|  | When the freeze frame data shows higher than or equal to 70 °C (158 °F), T should be higher than or equal to 70 °C (158 °F). |

Driving time varies according to the engine speed in the freeze frame data.

| Engine speed        | Time                      |
|---------------------|---------------------------|
| Around 1,000 rpm    | Approximately 10 minutes  |
| Around 2,000 rpm    | Approximately 5 minutes   |
| More than 3,000 rpm | Approximately 3.5 minutes |

5. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-771. "Diagnosis Procedure"](#).  
NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000007729875

### 1.CHECK FOR INTAKE AIR LEAK AND PCV HOSE

1. Start engine and run it at idle speed.
2. Listen for the sound of the intake air leak.
3. Check PCV hose connection.

Is intake air leak detected?

- YES >> Discover air leak location and repair.  
NO >> GO TO 2.

### 2.CHECK FOR EXHAUST SYSTEM CLOGGING

Stop engine and visually check exhaust tube, three way catalyst and muffler for dents.

Is the inspection result normal?

- YES-1 >> With CONSULT: GO TO 3.  
YES-2 >> Without CONSULT: GO TO 4.  
NO >> Repair or replace it.

### 3.PERFORM POWER BALANCE TEST

 **With CONSULT**

1. Start engine.
2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT.

## P0300, P0301, P0302, P0303, P0304, P0305, P0306 MISFIRE

[VQ37VHR FOR MEXICO]

### < DTC/CIRCUIT DIAGNOSIS >

3. Make sure that each circuit produces a momentary engine speed drop.

Is the inspection result normal?

YES >> GO TO 9.

NO >> GO TO 4.

### 4. CHECK FUNCTION OF FUEL INJECTOR-I

1. Start engine and let it idle.
2. Listen to each fuel injector operation sound.

**Clicking sound should be heard.**

Is the inspection result normal?

YES >> GO TO 5.

NO >> Perform trouble diagnosis for FUEL INJECTOR, refer to [EC-945, "Diagnosis Procedure"](#).

### 5. CHECK FUNCTION OF IGNITION COIL-I

#### CAUTION:

Perform the following procedure in a place where with no combustible objects and good ventilation.

1. Turn ignition switch OFF.
2. Remove fuel pump fuse (1) in IPDM E/R (2) to release fuel pressure.

#### NOTE:

Do not use CONSULT to release fuel pressure, or fuel pressure applies again during the following procedure.

3. Start engine.
4. After engine stalls, crank it two or three times to release all fuel pressure.
5. Turn ignition switch OFF.
6. Remove all ignition coil harness connectors to avoid the electrical discharge from the ignition coils.
7. Remove ignition coil and spark plug of the cylinder to be checked.
8. Crank engine for 5 seconds or more to remove combustion gas in the cylinder.
9. Connect spark plug and harness connector to ignition coil.
10. Fix ignition coil using a rope etc. with gap of 13 - 17 mm (0.52 - 0.66 in) between the edge of the spark plug and grounded metal portion as shown in the figure.
11. Crank engine for about 3 seconds, and check whether spark is generated between the spark plug and the grounded metal portion.

**Spark should be generated.**

#### CAUTION:

- Never place the spark plug and the ignition coil within 50 cm (19.7 in) each other. Be careful not to get an electrical shock while checking, because the electrical discharge voltage becomes 20 kV or more.
- It might damage the ignition coil if the gap of more than 17 mm (0.66 in) is made.

#### NOTE:

When the gap is less than 13 mm (0.52 in), a spark might be generated even if the coil is malfunctioning.

Is the inspection result normal?

YES >> GO TO 9.

NO >> GO TO 6.

**6. CHECK FUNCTION OF IGNITION COIL-II**

1. Turn ignition switch OFF.
2. Disconnect spark plug and connect a non-malfunctioning spark plug.
3. Crank engine for about 3 seconds, and recheck whether spark is generated between the spark plug and the grounded metal portion.

**Spark should be generated.**

Is the inspection result normal?

YES >> GO TO 7.

NO >> Check ignition coil, power transistor and their circuits. Refer to [EC-952. "Diagnosis Procedure"](#).

**7. CHECK SPARK PLUG**

Check the initial spark plug for fouling, etc.

Is the inspection result normal?

YES >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to [EM-26. "Inspection"](#).

NO >> Repair or clean spark plug. Then GO TO 8.

**8. CHECK FUNCTION OF IGNITION COIL-III**

1. Reconnect the initial spark plugs.
2. Crank engine for about 3 seconds, and recheck whether spark is generated between the spark plug and the grounded portion.

**Spark should be generated.**

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to [EM-25. "Removal and Installation"](#).

**9. CHECK COMPRESSION PRESSURE**

Check compression pressure. Refer to [EM-18. "Inspection"](#).

Is the inspection result normal?

YES >> GO TO 10.

NO >> Check pistons, piston rings, valves, valve seats and cylinder head gaskets.

**10. CHECK FUEL PRESSURE**

1. Install all removed parts.
2. Release fuel pressure to zero. Refer to [EC-667. "Work Procedure"](#).
3. Install fuel pressure gauge and check fuel pressure. Refer to [EC-667. "Work Procedure"](#).

**At idle: Approximately 350 kPa (3.57 kg/cm<sup>2</sup>, 51 psi)**

Is the inspection result normal?

YES >> GO TO 12.

NO >> GO TO 11.

**11. DETECT MALFUNCTIONING PART**

Check fuel hoses and fuel tubes for clogging.

Is the inspection result normal?

YES >> Replace "fuel filter and fuel pump assembly".

NO >> Repair or replace.

# P0300, P0301, P0302, P0303, P0304, P0305, P0306 MISFIRE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## 12. CHECK IDLE SPEED AND IGNITION TIMING

For procedure, refer to [EC-663, "Work Procedure"](#).

For specification, refer to [EC-982, "Idle Speed"](#) and [EC-982, "Ignition Timing"](#).

Is the inspection result normal?

YES >> GO TO 13.

NO >> Follow the [EC-663, "Work Procedure"](#).

## 13. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect corresponding A/F sensor 1 harness connector.
3. Disconnect ECM harness connector.
4. Check the continuity between A/F sensor 1 harness connector and ECM harness connector.

| A/F sensor 1 |           |          | ECM       |          | Continuity |
|--------------|-----------|----------|-----------|----------|------------|
| Bank         | Connector | Terminal | Connector | Terminal |            |
| 1            | F74       | 1        | F102      | 57       | Existed    |
|              |           | 2        |           | 61       |            |
| 2            | F75       | 1        |           | 65       |            |
|              |           | 2        |           | 66       |            |

5. Check the continuity between A/F sensor 1 harness connector and ground, or ECM harness connector and ground.

| A/F sensor 1 |           |          | Ground | Continuity  |
|--------------|-----------|----------|--------|-------------|
| Bank         | Connector | Terminal |        |             |
| 1            | F74       | 1        | Ground | Not existed |
|              |           | 2        |        |             |
| 2            | F75       | 1        |        |             |
|              |           | 2        |        |             |

| ECM  |           |          | Ground | Continuity  |
|------|-----------|----------|--------|-------------|
| Bank | Connector | Terminal |        |             |
| 1    | F102      | 57       | Ground | Not existed |
|      |           | 61       |        |             |
| 65   |           |          |        |             |
| 66   |           |          |        |             |
| 2    |           |          |        |             |

6. Also check harness for short to power.

Is the inspection result normal?

YES >> GO TO 14.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 14. CHECK A/F SENSOR 1 HEATER

Refer to [EC-699, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 15.

NO >> Replace (malfunctioning) A/F sensor 1. Refer to [EM-36, "Exploded View"](#).

## 15. CHECK MASS AIR FLOW SENSOR

### With CONSULT

Check mass air flow sensor signal in "DATA MONITOR" mode with CONSULT.

For specification, refer to [EC-982, "Mass Air Flow Sensor"](#).

### With GST

# P0300, P0301, P0302, P0303, P0304, P0305, P0306 MISFIRE

[VQ37VHR FOR MEXICO]

< DTC/CIRCUIT DIAGNOSIS >

Check mass air flow sensor signal in Service \$01 with GST.

For specification, refer to [EC-982, "Mass Air Flow Sensor"](#).

Is the measurement value within the specification?

YES >> GO TO 16.

NO >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or ground. Refer to [EC-706, "Diagnosis Procedure"](#).

## 16.CHECK SYMPTOM TABLE

Check items on the rough idle symptom in [EC-969, "Symptom Table"](#).

Is the inspection result normal?

YES >> GO TO 17.

NO >> Repair or replace.

## 17.ERASE THE 1ST TRIP DTC

Some tests may cause a 1st trip DTC to be set.

Erase the 1st trip DTC from the ECM memory after performing the tests. Refer to [EC-598, "On Board Diagnosis Function"](#) (Without CONSULT) or [EC-601, "CONSULT Function"](#) (With CONSULT).

>> GO TO 18.

## 18.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                   | DTC detected condition                                      | Possible cause   |
|---------|--|---|--|
| P0327   | Knock sensor (bank 1) circuit low input  | An excessively low voltage from the sensor is sent to ECM.  | <ul style="list-style-type: none"> <li>• Harness or connectors (The sensor circuit is open or shorted.)</li> <li>• Knock sensor</li> </ul> |
| P0328   | Knock sensor (bank 1) circuit high input | An excessively high voltage from the sensor is sent to ECM. |  |
| P0332   | Knock sensor (bank 2) circuit low input  | An excessively low voltage from the sensor is sent to ECM.  |  |
| P0333   | Knock sensor (bank 2) circuit high input | An excessively high voltage from the sensor is sent to ECM. |  |

DTC CONFIRMATION PROCEDURE

1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

**TESTING CONDITION:**

**Before performing the following procedure, confirm that battery voltage is more than 10 V at idle.**

>> GO TO 2.

2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and run it for at least 5 seconds at idle speed.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-776, "Diagnosis Procedure"](#).  
 NO >> INSPECTION END

Diagnosis Procedure

INFOID:000000007729877

1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
 NO >> Repair or replace ground connection.

2. CHECK KNOCK SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Disconnect knock sensor harness connector and ECM harness connector.
2. Check the continuity between knock sensor harness connector and ECM harness connector.

| DTC          | Knock sensor |           |          | ECM       |          | Continuity |
|--------------|--------------|-----------|----------|-----------|----------|------------|
|              | Bank         | Connector | Terminal | Connector | Terminal |            |
| P0327, P0328 | 1            | F203      | 2        | F102      | 72       | Existed    |
| P0332, P0333 | 2            | F202      | 2        |           |          |            |

3. Also check harness for short to ground and short to power.

Is the inspection result normal?

< DTC/CIRCUIT DIAGNOSIS >

- YES >> GO TO 4.
- NO >> GO TO 3.

**3. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors F9, F201
- Harness for open or short between knock sensor and ECM

>> Repair open circuit or short to power in harness or connectors.

**4. CHECK KNOCK SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check the continuity between knock sensor harness connector and ECM harness connector.

| DTC          | Knock sensor |           |          | ECM       |          | Continuity |
|--------------|--------------|-----------|----------|-----------|----------|------------|
|              | Bank         | Connector | Terminal | Connector | Terminal |            |
| P0327, P0328 | 1            | F203      | 1        | F102      | 73       | Existed    |
| P0332, P0333 | 2            | F202      | 1        |           | 69       |            |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 6.
- NO >> GO TO 5.

**5. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors F9, F201
- Harness for open or short between ECM and knock sensor

>> Repair open circuit, short to ground or short to power in harness or connectors.

**6. CHECK KNOCK SENSOR**

Refer to [EC-777. "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 7.
- NO >> Replace malfunctioning knock sensor. Refer to [EM-123. "Exploded View"](#).

**7. CHECK INTERMITTENT INCIDENT**

Refer to [GI-44. "Intermittent Incident"](#).

>> INSPECTION END

**Component Inspection**

INFOID:0000000007729878

**1. CHECK KNOCK SENSOR**

1. Turn ignition switch OFF.
2. Disconnect knock sensor harness connector.
3. Check resistance between knock sensor terminals as per the following.

**NOTE:**

**It is necessary to use an ohmmeter which can measure more than 10 MΩ.**

| Terminals | Resistance (kΩ)                    |
|-----------|------------------------------------|
| 1 and 2   | Approx. 532 - 588 [at 20°C (68°F)] |

**CAUTION:**

**Do not use any knock sensors that have been dropped or physically damaged. Use only new ones.**

Is the inspection result normal?

- YES >> INSPECTION END

(Refrigerant pressure sensor circuit is shorted.)</li><li>Crankshaft position sensor (POS)</li><li>Camshaft position sensor (PHASE) (bank 2)</li><li>Accelerator pedal position sensor</li><li>EVAP control system pressure sensor</li><li>Battery current sensor</li><li>Refrigerant pressure sensor</li><li>Signal plate</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

- Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON.
- Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10.5 V with ignition switch ON.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

- Start engine and let it idle for at least 5 seconds.  
If engine does not start, crank engine for at least 2 seconds.
- Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-779, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000007729880

#### 1. CHECK GROUND CONNECTION

- Turn ignition switch OFF.
- Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

#### 2. CHECK CRANKSHAFT POSITION (CKP) SENSOR (POS) POWER SUPPLY CIRCUIT-I

- Disconnect crankshaft position (CKP) sensor (POS) harness connector.
- Turn ignition switch ON.
- Check the voltage between CKP sensor (POS) harness connector and ground.

# P0335 CKP SENSOR (POS)

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| CKP sensor (POS) |          | Ground | Voltage (V) |
|------------------|----------|--------|-------------|
| Connector        | Terminal |        |             |
| F2               | 1        | Ground | Approx. 5   |

Is the inspection result normal?

YES >> GO TO 8.

NO >> GO TO 3.

## 3. CHECK CRANKSHAFT POSITION (CKP) SENSOR (POS) POWER SUPPLY CIRCUIT-II

1. Turn ignition switch ON.
2. Disconnect ECM harness connector.
3. Check the continuity between CKP sensor (POS) harness connector and ECM harness connector.

| CKP sensor (POS) |          | ECM       |          | Continuity |
|------------------|----------|-----------|----------|------------|
| Connector        | Terminal | Connector | Terminal |            |
| F2               | 1        | F101      | 46       | Existed    |

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair open circuit.

## 4. CHECK SENSOR POWER SUPPLY CIRCUIT

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                              |  |                                    |
|-----------|----------|-------------------------------------|--|------------------------------------|
| Connector | Terminal | Name                                | Connector                              | Terminal                           |
| F101      | 46       | CKP sensor (POS)                    | F2                                     | 1                                  |
| F102      | 64       | CMP sensor (PHASE) (bank 2)         | F18                                    | 1                                  |
|           |          | Battery current sensor              | E21                                    |                                    |

|           | 107      | EVAP control system pressure sensor | B73                                    | 3                                  |
|           |          | Refrigerant pressure sensor         | E77                                    | 3                                  |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair short to ground or short to power in harness or connectors.

## 5. CHECK COMPONENTS

Check the following.

- Camshaft position sensor (PHASE) (bank 2) (Refer to [EC-786, "Component Inspection"](#).)
- Battery current sensor (Refer to [EC-870, "Component Inspection"](#).)
- Refrigerant pressure sensor (Refer to [EC-967, "Diagnosis Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace malfunctioning component.

## 6. CHECK APP SENSOR

Refer to [EC-920, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 12.

NO >> GO TO 7.

# P0335 CKP SENSOR (POS)

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## 7. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Go to [EC-920, "Special Repair Requirement"](#).

>> INSPECTION END

## 8. CHECK CKP SENSOR (POS) GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between CKP sensor (POS) harness connector and ECM harness connector.

| CKP sensor (POS) |          | ECM       |          | Continuity |
|------------------|----------|-----------|----------|------------|
| Connector        | Terminal | Connector | Terminal |            |
| F2               | 2        | F101      | 47       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 9.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 9. CHECK CKP SENSOR (POS) INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between CKP sensor (POS) harness connector and ECM harness connector.

| CKP sensor (POS) |          | ECM       |          | Continuity |
|------------------|----------|-----------|----------|------------|
| Connector        | Terminal | Connector | Terminal |            |
| F2               | 3        | F101      | 37       | Existed    |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 10.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 10. CHECK CRANKSHAFT POSITION SENSOR (POS)

Refer to [EC-781, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 11.

NO >> Replace crankshaft position sensor (POS). Refer to [EM-123, "Exploded View"](#).

## 11. CHECK GEAR TOOTH

Visually check for chipping signal plate gear tooth.

Is the inspection result normal?

YES >> GO TO 12.

NO >> Replace the signal plate. Refer to [EM-123, "Exploded View"](#).

## 12. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000007729881

### 1. CHECK CRANKSHAFT POSITION SENSOR (POS)-I

1. Turn ignition switch OFF.
2. Loosen the fixing bolt of the sensor.
3. Disconnect crankshaft position sensor (POS) harness connector.
4. Remove the sensor. Refer to [EM-123, "Exploded View"](#).

## P0335 CKP SENSOR (POS)

[VQ37VHR FOR MEXICO]

< DTC/CIRCUIT DIAGNOSIS >

5. Visually check the sensor for chipping.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace crankshaft position sensor (POS). Refer to [EM-123, "Exploded View"](#).

### 2. CHECK CRANKSHAFT POSITION SENSOR (POS)-II

Check resistance between crankshaft position sensor (POS) terminals as follows.

| Terminals (Polarity) | Resistance ( $\Omega$ )               |
|----------------------|---------------------------------------|
| 1 (+) - 2 (-)        | Except 0 or $\infty$ [at 25°C (77°F)] |
| 1 (+) - 3 (-)        |                                       |
| 2 (+) - 3 (-)        |                                       |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace crankshaft position sensor (POS). Refer to [EM-123, "Exploded View"](#).

# P0340, P0345 CMP SENSOR (PHASE)

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10.5 V with ignition switch ON.

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE-I

1. Start engine and let it idle for at least 5 seconds.  
If engine does not start, crank engine for at least 2 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

YES >> Go to [EC-784, "Diagnosis Procedure"](#).

NO >> GO TO 3.

#### 3. PERFORM DTC CONFIRMATION PROCEDURE-II

1. Maintaining engine speed at more than 800 rpm for at least 5 seconds.
2. Check 1st trip DTC.

# P0340, P0345 CMP SENSOR (PHASE)

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

Is 1st trip DTC detected?

- YES >> Go to [EC-784, "Diagnosis Procedure"](#).
- NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000007729883

### 1. CHECK STARTING SYSTEM

Turn ignition switch to START position.

Does the engine turn over? Does the starter motor operate?

- YES >> GO TO 2.
- NO >> Check starting system. (Refer to [ST-11, "Work Flow \(Heated Steering Wheel\)"](#)).

### 2. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 3.
- NO >> Repair or replace ground connection.

### 3. CHECK CAMSHAFT POSITION (CMP) SENSOR (PHASE) POWER SUPPLY CIRCUIT-I

1. Disconnect camshaft position (CMP) sensor (PHASE) harness connector.
2. Turn ignition switch ON.
3. Check the voltage between CMP sensor (PHASE) harness connector and ground.

| DTC   | CMP sensor (PHASE) |           |          | Ground | Voltage (V) |
|-------|--------------------|-----------|----------|--------|-------------|
|       | Bank               | Connector | Terminal |        |             |
| P0340 | 1                  | F5        | 1        | Ground | Approx. 5   |
| P0345 | 2                  | F18       | 1        |        |             |

Is the inspection result normal?

- YES >> GO TO 9.
- NO-1 >> P0340: Repair open circuit, short to ground or short to power in harness or connectors.
- NO-2 >> P0345: GO TO 4.

### 4. CHECK CAMSHAFT POSITION (CMP) SENSOR (PHASE) POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between CMP sensor (PHASE) harness connector and ECM harness connector.

| CMP sensor (PHASE) |           |          | ECM       |          | Continuity |
|--------------------|-----------|----------|-----------|----------|------------|
| Bank               | Connector | Terminal | Connector | Terminal |            |
| 2                  | F18       | 1        | F102      | 64       | Existed    |

Is the inspection result normal?

- YES >> GO TO 5.
- NO >> Repair open circuit.

### 5. CHECK CAMSHAFT POSITION (CMP) SENSOR (PHASE) POWER SUPPLY CIRCUIT-III

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                      |           |          |
|-----------|----------|-----------------------------|-----------|----------|
| Connector | Terminal | Name                        | Connector | Terminal |
| F101      | 46       | CKP sensor (POS)            | F2        | 1        |
| F102      | 64       | CMP sensor (PHASE) (bank 2) | F18       | 1        |
|           |          | Battery current sensor      | E21       |          |

# P0340, P0345 CMP SENSOR (PHASE)

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

|           |          | EVAP control system pressure sensor | B73                                    | 3                                  |
|           | 107      | Refrigerant pressure sensor         | E77                                    | 3                                  |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 6.

NO >> Repair short to ground or short to power in harness or connectors.

## 6. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to [EC-781, "Component Inspection"](#).)
- Battery current sensor (Refer to [EC-870, "Component Inspection"](#).)
- Refrigerant pressure sensor (Refer to [EC-967, "Diagnosis Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 7.

NO >> Replace malfunctioning component.

## 7. CHECK APP SENSOR

Refer to [EC-920, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 13.

NO >> GO TO 8.

## 8. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Go to [EC-920, "Special Repair Requirement"](#).

>> INSPECTION END

## 9. CHECK CMP SENSOR (PHASE) GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between CMP sensor (PHASE) harness connector and ECM harness connector.

| DTC   | CMP sensor (PHASE) |           |          | ECM       |          | Continuity |
|-------|--------------------|-----------|----------|-----------|----------|------------|
|       | Bank               | Connector | Terminal | Connector | Terminal |            |
| P0340 | 1                  | F5        | 2        | F102      | 96       | Existed    |
| P0345 | 2                  | F18       | 2        |           | 92       |            |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 10.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 10. CHECK CMP SENSOR (PHASE) INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between CMP sensor (PHASE) harness connector and ECM harness connector.

# P0340, P0345 CMP SENSOR (PHASE)

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| DTC   | CMP sensor (PHASE) |           |          | ECM       |          | Continuity |
|-------|--------------------|-----------|----------|-----------|----------|------------|
|       | Bank               | Connector | Terminal | Connector | Terminal |            |
| P0340 | 1                  | F5        | 3        | F102      | 59       | Existed    |
| P0345 | 2                  | F18       | 3        |           | 63       |            |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 11.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 11. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to [EC-786, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 12.

NO >> Replace malfunctioning camshaft position sensor (PHASE). Refer to [EM-52, "Exploded View"](#).

## 12. CHECK CAMSHAFT (INTAKE)

Check the following.

- Accumulation of debris to the signal plate of camshaft front end
- Chipping signal plate of camshaft front end

Is the inspection result normal?

YES >> GO TO 13.

NO >> Remove debris and clean the signal plate of camshaft front end or replace camshaft.

## 13. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000007729884

### 1. CHECK CAMSHAFT POSITION SENSOR (PHASE)-I

1. Turn ignition switch OFF.
2. Loosen the fixing bolt of the sensor.
3. Disconnect camshaft position sensor (PHASE) harness connector.
4. Remove the sensor. Refer to [EM-52, "Exploded View"](#).
5. Visually check the sensor for chipping.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace malfunctioning camshaft position sensor (PHASE). Refer to [EM-52, "Exploded View"](#).

### 2. CHECK CAMSHAFT POSITION SENSOR (PHASE)-II

Check resistance camshaft position sensor (PHASE) terminals as follows.

# P0340, P0345 CMP SENSOR (PHASE)

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| Terminals (Polarity) | Resistance ( $\Omega$ )               |

# P0420, P0430 THREE WAY CATALYST FUNCTION

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## P0420, P0430 THREE WAY CATALYST FUNCTION

### DTC Logic

INFOID:000000007729885

#### DTC DETECTION LOGIC

The ECM monitors the switching frequency ratio of air fuel ratio (A/F) sensor 1 and heated oxygen sensor 2. A three way catalyst 1 with high oxygen storage capacity will indicate a low switching frequency of heated oxygen sensor 2. As oxygen storage capacity decreases, the heated oxygen sensor 2 switching frequency will increase.

When the frequency ratio of A/F sensor 1 and heated oxygen sensor 2 approaches a specified limit value, the three way catalyst 1 malfunction is diagnosed.

| DTC No. | Trouble diagnosis name                              | DTC detecting condition   | Possible cause  |
|---------|---|---|---|
| P0420   | Catalyst system efficiency below threshold (bank 1) | <ul style="list-style-type: none"> <li>Three way catalyst (manifold) does not operate properly.</li> <li>Three way catalyst (manifold) does not have enough oxygen storage capacity.</li> </ul> | <ul style="list-style-type: none"> <li>Three way catalyst (manifold)</li> <li>Exhaust tube</li> <li>Intake air leaks</li> <li>Fuel injector</li> <li>Fuel injector leaks</li> <li>Spark plug</li> <li>Improper ignition timing</li> </ul> |
| P0430   | Catalyst system efficiency below threshold (bank 2) |   |   |

### DTC CONFIRMATION PROCEDURE

#### 1. INSPECTION START

Do you have CONSULT?

Do you have CONSULT?

YES >> GO TO 2.

NO >> GO TO 7.

#### 2. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

**Do not hold engine speed for more than the specified minutes below.**

>> GO TO 3.

#### 3. PERFORM DTC CONFIRMATION PROCEDURE-I

##### With CONSULT

1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
7. Let engine idle for 1 minute.

# P0420, P0430 THREE WAY CATALYST FUNCTION

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

8. Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).  
If not, warm up engine and go to next step when "COOLAN TEMP/S" indication reaches 70°C (158°F).
9. Open engine hood.
10. Select "DTC & SRT CONFIRMATION" then "SRT WORK SUPPORT" mode with CONSULT.
11. Rev engine up to about 2,000 rpm and hold it for 3 consecutive minutes then release the accelerator pedal completely.
12. Check the indication of "CATALYST".

Which is displayed on CONSULT screen?

- CMPLT >> GO TO 6.
- INCMP >> GO TO 4.

### 4.PERFORM DTC CONFIRMATION PROCEDURE-II

1. Wait 5 seconds at idle.
2. Rev engine up to about 2,000 rpm and maintain it until "INCMP" of "CATALYST" changes to "CMPLT" (It will take approximately 5 minutes).

Does the indication change to "CMPLT"?

- YES >> GO TO 6.
- NO >> GO TO 5.

### 5.PERFORM DTC CONFIRMATION PROCEDURE AGAIN

1. Stop engine and cool it down to less than 70°C (158°F).
2. Perform DTC CONFIRMATION PROCEDURE again.

>> GO TO 3.

### 6.PERFORM DTC CONFIRMATION PROCEDURE-III

Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-790, "Diagnosis Procedure"](#).
- NO >> INSPECTION END

### 7.PERFORM COMPONENT FUNCTION CHECK

Perform component function check. Refer to [EC-789, "Component Function Check"](#).

#### NOTE:

Use component function check to check the overall function of the three way catalyst (manifold). During this check, a 1st trip DTC might not be confirmed.

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Go to [EC-790, "Diagnosis Procedure"](#).

## Component Function Check

INFOID:000000007729886

### 1.PERFORM COMPONENT FUNCTION CHECK

#### Without CONSULT

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Open engine hood.
6. Check the voltage between ECM harness connector terminals under the following condition.

# P0420, P0430 THREE WAY CATALYST FUNCTION

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| DTC   | ECM       |                        |          | Condition  | Voltage  |
|-------|-----------|------------------------|----------|--|--|
|       | Connector | +                      | -        |  |  |
|       |           | Terminal               | Terminal |  |  |
| P0420 | F102      | 76<br>[HO2S2 (bank 1)] | 84       | Keeping engine speed at 2,500 rpm constant under no load | The voltage fluctuation cycle takes more than 5 seconds.<br>• 1 cycle: 0.6 - 1.0 → 0 - 0.3 → 0.6 - 1.0 |
| P0430 |           | 80<br>[HO2S2 (bank 2)] |          |  |  |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Go to [EC-790, "Diagnosis Procedure"](#).

## Diagnosis Procedure

INFOID:000000007729887

### 1. CHECK EXHAUST SYSTEM

Visually check exhaust tubes and muffler for dents.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace.

### 2. CHECK EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before the three way catalyst 1.

Is exhaust gas leak detected?

YES >> Repair or replace.

NO >> GO TO 3.

### 3. CHECK INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

Is intake air leak detected?

YES >> Repair or replace.

NO >> GO TO 4.

### 4. CHECK IDLE SPEED AND IGNITION TIMING

For procedure, refer to [EC-663, "Work Procedure"](#).

For specification, refer to [EC-982, "Idle Speed"](#) and [EC-982, "Ignition Timing"](#).

Is the inspection result normal?

YES >> GO TO 5.

NO >> Follow the [EC-663, "Work Procedure"](#).

### 5. CHECK FUEL INJECTORS

1. Stop engine and then turn ignition switch ON.
2. Check the voltage between ECM harness connector terminals as per the following.

# P0420, P0430 THREE WAY CATALYST FUNCTION

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| ECM       |          |           |          | Voltage         |
|-----------|----------|-----------|----------|-----------------|
| +         |          | -         |          |                 |
| Connector | Terminal | Connector | Terminal |                 |
| F102      | 81       | M107      | 128      | Battery voltage |
|           | 82       |           |          |                 |
|           | 85       |           |          |                 |
|           | 86       |           |          |                 |
|           | 89       |           |          |                 |
|           | 90       |           |          |                 |

Is the inspection result normal?

YES >> GO TO 6.

NO >> Perform [EC-945, "Diagnosis Procedure"](#).

## 6. CHECK FUNCTION OF IGNITION COIL-I

### CAUTION:

Perform the following procedure in a place where with no combustible objects and good ventilation.

1. Turn ignition switch OFF.
2. Remove fuel pump fuse (1) in IPDM E/R (2) to release fuel pressure.

### NOTE:

Do not use CONSULT to release fuel pressure, or fuel pressure applies again during the following procedure.

3. Start engine.
4. After engine stalls, crank it two or three times to release all fuel pressure.
5. Turn ignition switch OFF.
6. Remove all ignition coil harness connectors to avoid the electrical discharge from the ignition coils.
7. Remove ignition coil and spark plug of the cylinder to be checked.
8. Crank engine for 5 seconds or more to remove combustion gas in the cylinder.
9. Connect spark plug and harness connector to ignition coil.
10. Fix ignition coil using a rope etc. with gap of 13 - 17 mm (0.52 - 0.66 in) between the edge of the spark plug and grounded metal portion as shown in the figure.
11. Crank engine for about 3 seconds, and check whether spark is generated between the spark plug and the grounded metal portion.

**Spark should be generated.**

### CAUTION:

- Never place the spark plug and the ignition coil within 50 cm (19.7 in) each other. Be careful not to get an electrical shock while checking, because the electrical discharge voltage becomes 20 kV or more.
- It might damage the ignition coil if the gap of more than 17 mm (0.66 in) is made.

### NOTE:

When the gap is less than 13 mm (0.52 in), a spark might be generated even if the coil is malfunctioning.

Is the inspection result normal?

YES >> GO TO 10.

NO >> GO TO 7.

## 7. CHECK FUNCTION OF IGNITION COIL-II

1. Turn ignition switch OFF.

## P0420, P0430 THREE WAY CATALYST FUNCTION

[VQ37VHR FOR MEXICO]

< DTC/CIRCUIT DIAGNOSIS >

2. Disconnect spark plug and connect a non-malfunctioning spark plug.
3. Crank engine for about 3 seconds, and recheck whether spark is generated between the spark plug and the grounded metal portion.

**Spark should be generated.**

Is the inspection result normal?

YES >> GO TO 8.

NO >> Check ignition coil, power transistor and their circuits. Refer to [EC-952. "Diagnosis Procedure"](#).

### 8.CHECK SPARK PLUG

Check the initial spark plug for fouling, etc.

Is the inspection result normal?

YES >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to [EM-26. "Inspection"](#).

NO >> Repair or clean spark plug. Then GO TO 9.

### 9.CHECK FUNCTION OF IGNITION COIL-III

1. Reconnect the initial spark plugs.
2. Crank engine for about three seconds, and recheck whether spark is generated between the spark plug and the grounded portion.

**Spark should be generated.**

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to [EM-25. "Removal and Installation"](#).

### 10.CHECK FUEL INJECTOR

1. Turn ignition switch OFF.
2. Remove fuel injector assembly.  
Refer to [EM-39. "Removal and Installation"](#).  
Keep fuel hose and all fuel injectors connected to fuel tube.
3. Disconnect all ignition coil harness connectors.
4. Reconnect all fuel injector harness connectors disconnected.
5. Turn ignition switch ON.
6. Check that fuel does not drip from fuel injector.

Does fuel drip from fuel injector?

YES >> Replace the fuel injector(s) from which fuel is dripping.

NO >> GO TO 11.

### 11.CHECK INTERMITTENT INCIDENT

Refer to [GI-44. "Intermittent Incident"](#).

Is the inspection result normal?

YES >> Replace three way catalyst assembly. Refer to [EX-5. "VQ37VHR : Exploded View"](#).

NO >> Repair or replace harness or connector.

# P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

### DTC Logic

INFOID:000000007729894

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name  | DTC detecting condition   | Possible cause  |
|---------|---|---|---|
| P0444   | EVAP canister purge volume control solenoid valve circuit open    | An excessively low voltage signal is sent to ECM through the valve  | <ul style="list-style-type: none"> <li>Harness or connectors (The solenoid valve circuit is open or shorted.)</li> <li>EVAP canister purge volume control solenoid valve</li> </ul> |
| P0445   | EVAP canister purge volume control solenoid valve circuit shorted | An excessively high voltage signal is sent to ECM through the valve | <ul style="list-style-type: none"> <li>Harness or connectors (The solenoid valve circuit is shorted.)</li> <li>EVAP canister purge volume control solenoid valve</li> </ul>         |

### DTC CONFIRMATION PROCEDURE

#### 1.CONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

Before performing the following procedure, confirm battery voltage is more than 11 V at idle.

>> GO TO 2.

#### 2.PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and let it idle for at least 13 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-793. "Diagnosis Procedure"](#).  
 NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000007729895

#### 1.CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect EVAP canister purge volume control solenoid valve harness connector.
3. Turn ignition switch ON.
4. Check the voltage between EVAP canister purge volume control solenoid valve harness connector and ground.

| EVAP canister purge volume control solenoid valve |          | Ground | Voltage         |
|---|----------|--------|-----------------|
| Connector   | Terminal |        |                 |
| F7  | 1        | Ground | Battery voltage |

Is the inspection result normal?

- YES >> GO TO 3.  
 NO >> GO TO 2.

#### 2.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E106, M6
- Harness connectors M116, F103
- Harness for open or short between EVAP canister purge volume control solenoid valve and IPDM E/R

# P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

- Harness for open or short between EVAP canister purge volume control solenoid valve and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 3. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between EVAP canister purge volume control solenoid valve harness connector and ECM harness connector.

| EVAP canister purge volume control solenoid valve |          | ECM       |          | Continuity |
|---|----------|-----------|----------|------------|
| Connector   | Terminal | Connector | Terminal |            |
| F7  | 2        | F101      | 21       | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

YES-1 >> With CONSULT: GO TO 4.

YES-2 >> Without CONSULT: GO TO 5.

NO >> Repair open circuit, short to ground or short to power in harness or connectors.

## 4. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

**Ⓟ With CONSULT**

1. Reconnect all harness connectors disconnected.
2. Start engine.
3. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT. Check that engine speed varies according to the valve opening.

Does engine speed vary according to the valve opening?

YES >> GO TO 6.

NO >> GO TO 5.

## 5. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to [EC-794, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace EVAP canister purge volume control solenoid valve. Refer to [EM-31, "Exploded View"](#).

## 6. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000007729896

## 1. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

**Ⓟ With CONSULT**

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Disconnect EVAP purge hoses connected to EVAP canister purge volume control solenoid valve.
4. Turn ignition switch ON.
5. Select "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT.

# P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

- Touch "Qd" and "Qu" on CONSULT screen to adjust "PURG VOL C/V" opening and check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

| Condition<br>(PURG VOL C/V value) | Air passage continuity<br>between (A) and (B) |
|-----------------------------------|---|
| 100%                              | Existed                                       |
| 0%                                | Not existed                                   |

### Without CONSULT

- Turn ignition switch OFF.
- Disconnect EVAP canister purge volume control solenoid valve harness connector.
- Disconnect EVAP purge hoses connected to EVAP canister purge volume control solenoid valve.
- Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

| Condition   | Air passage continuity<br>between (A) and (B) |
|---|---|
| 12 V direct current supply between<br>terminals 1 and 2 | Existed                                       |
| No supply   | Not existed                                   |

### Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace EVAP canister purge volume control solenoid valve. Refer to [EM-31, "Exploded View"](#).

# P0447 EVAP CANISTER VENT CONTROL VALVE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## P0447 EVAP CANISTER VENT CONTROL VALVE

### DTC Logic

INFOID:000000007792872

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                        | DTC detecting condition   | Possible cause   |
|---------|---|---|--|
| P0447   | EVAP canister vent control valve circuit open | An improper voltage signal is sent to ECM through EVAP canister vent control valve. | <ul style="list-style-type: none"><li>• Harness or connectors (The valve circuit is open or shorted.)</li><li>• EVAP canister vent control valve</li></ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

**Before performing the following procedure, confirm battery voltage is more than 11 V at idle.**

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

1. Start engine and wait at least 8 seconds.
2. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-796, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

### Diagnosis Procedure

INFOID:000000007792873

#### 1. INSPECTION START

Do you have CONSULT?

Do you have CONSULT?

- YES >> GO TO 2.  
NO >> GO TO 3.

#### 2. CHECK EVAP CANISTER VENT CONTROL VALVE CIRCUIT

##### With CONSULT

1. Turn ignition switch OFF and then ON.
2. Select "VENT CONTROL/V" in "ACTIVE TEST" mode with CONSULT.
3. Touch "ON/OFF" on CONSULT screen.
4. Check for operating sound of the valve.

**Clicking sound should be heard.**

Is the inspection result normal?

- YES >> GO TO 7.  
NO >> GO TO 3.

#### 3. CHECK EVAP CANISTER VENT CONTROL VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect EVAP canister vent control valve harness connector.
3. Turn ignition switch ON.
4. Check the voltage between EVAP canister vent control valve harness connector and ground.

# P0447 EVAP CANISTER VENT CONTROL VALVE

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| EVAP canister vent control valve |          | Ground | Voltage         |
|----------------------------------|----------|--------|-----------------|
| Connector                        | Terminal |        |                 |
| B74                              | 1        | Ground | Battery voltage |

Is the inspection result normal?

- YES >> GO TO 5.
- NO >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B8, E115
- Harness connectors B71, B72
- Harness for open or short between EVAP canister vent control valve and IPDM E/R

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 5. CHECK EVAP CANISTER VENT CONTROL VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between EVAP canister vent control valve harness connector and ECM harness connector.

| EVAP canister vent control valve |          | ECM       |          | Continuity |
|----------------------------------|----------|-----------|----------|------------|
| Connector                        | Terminal | Connector | Terminal |            |
| B74                              | 2        | M107      | 121      | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 7.
- NO >> GO TO 6.

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M7
- Harness connectors B71, B72
- Harness for open or short between EVAP canister vent control valve and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 7. CHECK RUBBER TUBE FOR CLOGGING

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

Is the inspection result normal?

- YES >> GO TO 8.
- NO >> Clean the rubber tube using an air blower.

## 8. CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-798, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 9.
- NO >> Replace EVAP canister vent control valve. Refer to [FL-13, "Exploded View"](#).

## 9. CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

# P0447 EVAP CANISTER VENT CONTROL VALVE

[VQ37VHR FOR MEXICO]

< DTC/CIRCUIT DIAGNOSIS >

INFOID:000000007792874

## Component Inspection

### 1. CHECK EVAP CANISTER VENT CONTROL VALVE-I

1. Turn ignition switch OFF.
2. Remove EVAP canister vent control valve from EVAP canister. Refer to [FL-13, "Exploded View"](#).
3. Check portion (A) of EVAP canister vent control valve for rust.

Is it rusted?

- YES >> Replace EVAP canister vent control valve. Refer to [FL-13, "Exploded View"](#).
- NO >> GO TO 2.

### 2. CHECK EVAP CANISTER VENT CONTROL VALVE-II

#### Ⓟ With CONSULT

1. Reconnect harness connectors disconnected.
2. Turn ignition switch ON.
3. Perform "VENT CONTROL/V" in "ACTIVE TEST" mode.
4. Check air passage continuity and operation delay time.  
**Make sure that new O-ring is installed properly.**

| Condition VENT CONT/V | Air passage continuity between (A) and (B) |
|-----------------------|--|
| ON                    | Not existed                                |
| OFF                   | Existed                                    |

**Operation takes less than 1 second.**

#### ⓧ Without CONSULT

1. Disconnect EVAP canister vent control valve harness connector.
2. Check air passage continuity and operation delay time under the following conditions.  
**Make sure that new O-ring is installed properly.**

| Condition  | Air passage continuity between (A) and (B) |
|--|--|
| 12 V direct current supply between terminals 1 and 2 | Not existed                                |
| OFF  | Existed                                    |

**Operation takes less than 1 second.**

Is the inspection result normal?

- YES >> GO TO 3.
- NO >> Replace EVAP canister vent control valve. Refer to [FL-13, "Exploded View"](#).

### 3. CHECK EVAP CANISTER VENT CONTROL VALVE-III

#### Ⓟ With CONSULT

1. Clean the air passage [portion (A) to (B)] of EVAP canister vent control valve using an air blower.
2. Perform "VENT CONTROL/V" in "ACTIVE TEST" mode.

# P0447 EVAP CANISTER VENT CONTROL VALVE

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

3. Check air passage continuity and operation delay time.  
**Make sure that new O-ring is installed properly.**

| Condition VENT CONT/V | Air passage continuity between (A) and (B) |
|-----------------------|--|
| ON                    | Not existed                                |
| OFF                   | Existed                                    |

**Operation takes less than 1 second.**

### Without CONSULT

1. Clean the air passage [portion (A) to (B)] of EVAP canister vent control valve using an air blower.
2. Check air passage continuity and operation delay time under the following conditions.

**Make sure that new O-ring is installed properly.**

| Condition  | Air passage continuity between (A) and (B) |
|--|--|
| 12 V direct current supply between terminals 1 and 2 | Not existed                                |
| OFF  | Existed                                    |

**Operation takes less than 1 second.**

Is the inspection result normal?

# P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

### DTC Logic

INFOID:000000007729906

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                        | DTC detecting condition                                    | Possible cause   |
|---------|---|--|--|
| P0452   | EVAP control system pressure sensor low input | An excessively low voltage from the sensor is sent to ECM. | <ul style="list-style-type: none"> <li>• Harness or connectors (EVAP control system pressure sensor circuit is open or shorted.) [CKP sensor (POS) circuit is shorted.] (APP sensor 2 circuit is shorted.) [CMP sensor (PHASE) (bank 2) circuit is open or shorted.] (Battery current sensor circuit is open or shorted.) (Refrigerant pressure sensor circuit is shorted.)</li> <li>• EVAP control system pressure sensor</li> <li>• Crankshaft position sensor (POS)</li> <li>• Accelerator pedal position sensor</li> <li>• Camshaft position sensor (PHASE) (bank 2)</li> <li>• Battery current sensor</li> <li>• Refrigerant pressure sensor</li> </ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

**Always perform test at a temperature of 5°C (41°F) or more.**

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

##### With CONSULT

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Turn ignition switch ON.
6. Select "DATA MONITOR" mode with CONSULT.
7. Make sure that "FUEL T/TMP SE" is more than 0°C (32°F).
8. Start engine and wait at least 20 seconds.
9. Check 1st trip DTC.

##### With GST

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes to ECM harness connector terminals as per the following.

| ECM       |  |                     |
|-----------|--|---------------------|
| Connector | +  | -                   |
|           | Terminal                                     | Terminal            |
| M107      | 106<br>(Fuel tank temperature sensor signal) | 128<br>(ECM ground) |

3. Make sure that the voltage is less than 4.2 V.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Turn ignition switch ON.
6. Turn ignition switch OFF and wait at least 10 seconds.

# P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

7. Start engine and wait at least 20 seconds.
8. Check 1st trip DTC.

Is 1st trip DTC detected?

- YES >> Go to [EC-801, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000007729907

### 1. CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

### 2. CHECK CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check sensor harness connector for water.

**Water should not exist.**

Is the inspection result normal?

- YES >> GO TO 3.  
NO >> Repair or replace harness connector.

### 3. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT-I

1. Turn ignition switch ON.
2. Check the voltage between EVAP control system pressure sensor harness connector and ground.

| EVAP control system pressure sensor |          | Ground | Voltage (V) |
|-------------------------------------|----------|--------|-------------|
| Connector                           | Terminal |        |             |
| B73                                 | 3        | Ground | Approx. 5   |

Is the inspection result normal?

- YES >> GO TO 10.  
NO >> GO TO 4.

### 4. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between EVAP control system pressure sensor harness connector and ECM harness connector.

| EVAP control system pressure sensor |          | ECM       |          | Continuity |
|-------------------------------------|----------|-----------|----------|------------|
| Connector                           | Terminal | Connector | Terminal |            |
| B73                                 | 3        | M107      | 107      | Existed    |

Is the inspection result normal?

- YES >> GO TO 6.  
NO >> GO TO 5.

### 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M7, B1
- Harness connectors B71, B72
- Harness for open between ECM and EVAP control system pressure sensor

>> Repair open circuit.

# P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## 6. CHECK SENSOR POWER SUPPLY CIRCUIT

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                              |  |                                    |
|-----------|----------|-------------------------------------|--|------------------------------------|
| Connector | Terminal | Name                                | Connector                              | Terminal                           |
| F101      | 46       | CKP sensor (POS)                    | F2                                     | 1                                  |
| F102      | 64       | CMP sensor (PHASE) (bank 2)         | F18                                    | 1                                  |
|           |          | Battery current sensor              | E21                                    |                                    |
| M107      | 103      | APP sensor                          | M153 <sup>*1</sup><br>M9 <sup>*2</sup> | 3 <sup>*1</sup><br>6 <sup>*2</sup> |
|           |          | EVAP control system pressure sensor | B73                                    | 3                                  |
|           | 107      | Refrigerant pressure sensor         | E77                                    | 3                                  |

\*1: With ICC

\*2: Without ICC

Is the inspection result normal?

YES >> GO TO 7.

NO >> Repair short to ground or short to power in harness or connectors.

## 7. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to [EC-781, "Component Inspection"](#).)
- Camshaft position sensor (PHASE) (bank 2) (Refer to [EC-786, "Component Inspection"](#).)
- Battery current sensor (Refer to [EC-870, "Component Inspection"](#).)
- Refrigerant pressure sensor (Refer to [EC-967, "Diagnosis Procedure"](#).)

Is the inspection result normal?

YES >> GO TO 8.

NO >> Replace malfunctioning component.

## 8. CHECK APP SENSOR

Refer to [EC-920, "Component Inspection"](#).

Is the inspection result normal?

YES >> GO TO 15.

NO >> GO TO 9.

## 9. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly
2. Go to [EC-920, "Special Repair Requirement"](#).

>> INSPECTION END

## 10. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between EVAP control system pressure sensor harness connector and ECM harness connector.

| EVAP control system pressure sensor |          | ECM       |          | Continuity |
|-------------------------------------|----------|-----------|----------|------------|
| Connector                           | Terminal | Connector | Terminal |            |
| B73                                 | 1        | M107      | 112      | Existed    |

4. Also check harness for short to ground and short to power.

Is the inspection result normal?

# P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

[VQ37VHR FOR MEXICO]

< DTC/CIRCUIT DIAGNOSIS >

- YES >> GO TO 12.
- NO >> GO TO 11.

## 11.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M7
- Harness connectors B71, B72
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 12.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between EVAP control system pressure sensor harness connector and ECM harness connector.

| EVAP control system pressure sensor |          | ECM       |          | Continuity |
|-------------------------------------|----------|-----------|----------|------------|
| Connector                           | Terminal | Connector | Terminal |            |
| B73                                 | 2        | M107      | 102      | Existed    |

2. Also check harness for short to ground and short to power.

Is the inspection result normal?

- YES >> GO TO 14.
- NO >> GO TO 13.

## 13.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M7
- Harness connectors B71, B72
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair open circuit, short to ground or short to power in harness or connectors.

## 14.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-803, "Component Inspection"](#).

Is the inspection result normal?

- YES >> GO TO 15.
- NO >> Replace EVAP control system pressure sensor. Refer to [FL-13, "Exploded View"](#).

## 15.CHECK INTERMITTENT INCIDENT

Refer to [GI-44, "Intermittent Incident"](#).

>> INSPECTION END

## Component Inspection

INFOID:000000007729908

### 1.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

1. Turn ignition switch OFF.
2. Remove EVAP control system pressure sensor with its harness connector.  
**Always replace O-ring with a new one.**
3. Install a vacuum pump to EVAP control system pressure sensor.
4. Turn ignition switch ON and check output voltage between ECM harness connector terminals under the following conditions.

# P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

| ECM       |          |          | Condition<br>[Applied vacuum kPa (kg/cm <sup>2</sup> , psi)] | Voltage (V)                       |
|-----------|----------|----------|--|-----------------------------------|
| Connector | +        | -        |  |                                   |
|           | Terminal | Terminal |  |                                   |
| M107      | 102      | 112      | Not applied  | 1.8 - 4.8                         |
|           |          |          | -26.7 (-0.272, -3.87)  | 2.1 to 2.5 lower than above value |

**CAUTION:**

- Always calibrate the vacuum pump gauge when using it.
- Never apply below -93.3 kPa (-0.952 kg/cm<sup>2</sup>, -13.53 psi) or pressure over 101.3 kPa (1.033 kg/cm<sup>2</sup>, 14.69 psi).

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace EVAP control system pressure sensor. Refer to [FL-13, "Exploded View"](#).

# P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

## P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

### DTC Logic

INFOID:000000007729909

### DTC DETECTION LOGIC

| DTC No. | Trouble diagnosis name                         | DTC detecting condition                                     | Possible cause  |
|---------|--|---|---|
| P0453   | EVAP control system pressure sensor high input | An excessively high voltage from the sensor is sent to ECM. | <ul style="list-style-type: none"> <li>• Harness or connectors (EVAP control system pressure sensor circuit is open or shorted.) [CKP sensor (POS) circuit is shorted.] (APP sensor 2 circuit is shorted.) [CMP sensor (PHASE) (bank 2) circuit is open or shorted.] (Battery current sensor circuit is open or shorted.) (Refrigerant pressure sensor circuit is shorted.)</li> <li>• EVAP control system pressure sensor</li> <li>• Crankshaft position sensor (POS)</li> <li>• Accelerator pedal position sensor</li> <li>• Camshaft position sensor (PHASE) (bank 2)</li> <li>• Battery current sensor</li> <li>• Refrigerant pressure sensor</li> <li>• EVAP canister vent control valve</li> <li>• EVAP canister</li> <li>• Rubber hose from EVAP canister vent control valve to vehicle frame</li> </ul> |

### DTC CONFIRMATION PROCEDURE

#### 1. PRECONDITIONING

If DTC Confirmation Procedure has been previously conducted, always perform the following procedure before conducting the next test.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.

#### TESTING CONDITION:

**Always perform test at a temperature of 5°C (41°F) or more.**

>> GO TO 2.

#### 2. PERFORM DTC CONFIRMATION PROCEDURE

##### With CONSULT

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Turn ignition switch ON.
6. Select "DATA MONITOR" mode with CONSULT.
7. Make sure that "FUEL T/TMP SE" is more than 0°C (32°F).
8. Start engine and wait at least 20 seconds.
9. Check 1st trip DTC.

##### With GST

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes to ECM harness connector terminals as per the following.

| ECM       |  |                     |
|-----------|--|---------------------|
| Connector | +  | -                   |
|           | Terminal                                     | Terminal            |
| M107      | 106<br>(Fuel tank temperature sensor signal) | 128<br>(ECM ground) |

3. Make sure that the voltage is less than 4.2 V.

# P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

[VQ37VHR FOR MEXICO]

## < DTC/CIRCUIT DIAGNOSIS >

4. Turn ignition switch OFF and wait at least 10 seconds.
5. Turn ignition switch ON.
6. Turn ignition switch OFF and wait at least 10 seconds.
7. Start engine and wait at least 20 seconds.
8. Check 1st trip DTC.

### Is 1st trip DTC detected?

- YES >> Go to [EC-806, "Diagnosis Procedure"](#).  
NO >> INSPECTION END

## Diagnosis Procedure

INFOID:000000007729910

### 1.CHECK GROUND CONNECTION

1. Turn ignition switch OFF.
2. Check ground connection M95. Refer to Ground Inspection in [GI-47, "Circuit Inspection"](#).

#### Is the inspection result normal?

- YES >> GO TO 2.  
NO >> Repair or replace ground connection.

### 2.CHECK CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check sensor harness connector for water.

**Water should not exist.**

#### Is the inspection result normal?

- YES >> GO TO 3.  
NO >> Repair or replace harness connector.

### 3.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check the voltage between EVAP control system pressure sensor harness connector and ground.

| EVAP control system pressure sensor |          | Ground | Voltage (V) |
|-------------------------------------|----------|--------|-------------|
| Connector                           | Terminal |        |             |
| B73                                 | 3        | Ground | Approx. 5   |

#### Is the inspection result normal?

- YES >> GO TO 10.  
NO >> GO TO 4.

### 4.CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between EVAP control system pressure sensor harness connector and ECM harness connector.

| EVAP control system pressure sensor |          | ECM       |          | Continuity |
|-------------------------------------|----------|-----------|----------|------------|
| Connector                           | Terminal | Connector | Terminal |            |
| B73                                 | 3        | M107      | 107      | Existed    |

#### Is the inspection result normal?

- YES >> GO TO 6.  
NO >> GO TO 5.

### 5.DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M7, B1
- Harness connectors B71, B72

# P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

< DTC/CIRCUIT DIAGNOSIS >

[VQ37VHR FOR MEXICO]

- Harness for open between ECM and EVAP control system pressure sensor

>> Repair open circuit.

## 6. CHECK SENSOR POWER SUPPLY CIRCUIT

Check harness for short to power and short to ground, between the following terminals.

| ECM       |          | Sensor                              |                |            |
|-----------|----------|-------------------------------------|----------------|------------|
| Connector | Terminal | Name                                | Connector      | Terminal   |
