# < PRECAUTION > PRECAUTION

# PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

# WARNING:

Always observe the following items for preventing accidental activation.

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see "SRS AIR BAG".
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

# PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

# WARNING:

Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

# Precaution for Procedure without Cowl Top Cover

INFOID:000000007229563

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc to prevent damage to windshield.

INFOID:000000006884397

А

В

# < SYSTEM DESCRIPTION >

wiper motor is in near range of the upper or lower reversal position. When detecting the upper or lower reversal position, IPDM E/R turns front wiper main relay ON, front wiper HI/LO relay OFF, and wiper reverse relay OFF. Front wiper motor operates clockwise at LO.

### FRONT WIPER HI OPERATION

• BCM transmits the front wiper request signal (HI) to IPDM E/R via CAN communication according to the front wiper HI operating condition.

Front wiper HI operating condition

- Ignition switch ON
- Front wiper switch HI
- When detecting that front wiper request signal changes from OFF to HI or from LO to HI, IPDM E/R performs LO operation (front wiper motor rotation is clockwise) until detecting front wiper position signal from front wiper motor is in near range of the upper or lower reversal position. When detecting the upper or lower reversal position, IPDM E/R turns front wiper main relay OFF, front wiper HI/LO relay ON, and wiper reverse relay ON. Front wiper motor operates counterclockwise at HI.

### FRONT WIPER AUTO OPERATION

### Rain Detection

Rain level and sensor conditions are detected by rain sensor.

- BCM transmits the vehicle condition signal (vehicle speed, front wiper condition, rain sensor sensitivity setting, etc.) to the rain sensor via the rain sensor serial link.
- Rain sensor judges a wiping speed for front wiper by rain condition and the vehicle conditions. And it transmits the front wiper request signal to the BCM via the rain sensor serial link.

### Auto Wiping Operation

- BCM receives the wiping speed request signal from the rain sensor via the rain sensor serial link.
- BCM controls front wiper operation according to the front wiper request signal. And it transmits the front wiper request signals (LO or HI) to the IPDM E/R via CAN communication line.

Front wiper AUTO operating condition

Ignition switch ON

- Front wiper switch AUTO

### NOTE:

When the front wiper switch is turned to AUTO position, front wiper operates once regardless of rainy conditions.

### Rain Sensor Sensitivity Setting

BCM determines rain sensor sensitivity according to wiper volume dial position.

| Wiper volume dial position | Sensitivity               |
|----------------------------|---------------------------|
| 1                          | High sensitivity          |
| 2                          |                           |
| 3                          | - Medium-high sensitivity |
| 4                          |                           |
| 5                          | Low modium consitivity    |
| 6                          | Low-medium sensitivity    |
| 7                          | Low sensitivity           |

### NOTE:

When the wiper volume dial position is turned up by 1 level under front wiper AUTO operating condition, front wiper operates once.

### Splash Mode Operation

Front wiper is operated at HI regardless of the wiper volume adjustment position, when water drops are instantaneously sprayed over the windshield glass due to water splash from oncoming vehicles or other causes. After that, AUTO operation is performed depending on the amount of water drops.

Splash mode operation conditions

Front wiper switch AUTO

Ignition switch ON

NOTE:

# < SYSTEM DESCRIPTION >

Splash mode is not operated and auto wiping operation is performed, while the vehicle is stopped.

# FRONT WIPER AUTO STOP OPERATION

- BCM stops transmitting the front wiper request signal when the front wiper switch is turned OFF.
- IPDM E/R detects the front wiper position signal from the front wiper motor and detects the front wiper motor position (stop position/except stop position).
- When the front wiper request signal is stopped, IPDM E/R turns ON the front wiper main relay until the front wiper motor returns to the stop position.

### NOTE:

- BCM stops the transmitting of the front wiper request signal when the ignition switch is OFF.
- IPDM E/R turns the front wiper main relay OFF when the ignition switch is OFF.

### FRONT WIPER OPERATION LINKED WITH WASHER

- BCM transmits the front wiper request signal (LO) to IPDM E/R via CAN communication according to the washer linked operating condition of the front wiper.
- BCM transmits the front wiper request signal (LO) so that the front wiper operates approximately 2 times when the front washer switch OFF is detected.

### Washer linked operating condition of front wiper

- Ignition switch ON
- Front washer switch ON (0.4 second or more)
- IPDM E/R turns ON the integrated front wiper main relay according to the front wiper request signal (LO).
- The washer pump is grounded through the combination switch with the front washer switch ON.

### FRONT WIPER DROP WIPE OPERATION

• BCM controls the front wiper to operate once according to the conditions of front wiper drop wipe operation.

Front wiper drop wipe operating condition

- Ignition switch ON
- Front wiper switch OFF
- Front washer switch OFF
- BCM transmits the front wiper request signal (LO) to IPDM E/R with CAN communication so that the front wiper operate once three seconds after front wiper operation linked with washer.
- IPDM E/R turns ON the integrated front wiper main relay according to the front wiper request signal (LO).

### FRONT WIPER SERVICE POSITION OPERATION

• When front wiper switch MIST is operated 2 times, front wiper operates at LO and stops so that front wiper can be locked back.

Front wiper service position operation conditions

- Ignition switch ON.
- Front wiper switch OFF.
- Shift position N or P
- Vehicle speed is 4 km/h or less
- Front wiper operates at LO and stops, when IPDM E/R detects that front wiper request signal from BCM via CAN communication changes from LO to OFF 2 times while the stop position of front wiper position signal is detected (last detection is OFF).

Κ

Μ

Ν

C

Ρ

# < SYSTEM DESCRIPTION >

# WIPER LINKED AUTO LIGHTING FUNCTION

When light switch is in the AUTO position, front wiper operates, and then headlamp illuminates. Refer to <u>EXL-</u> <u>16, "AUTO LIGHT SYSTEM (WITH DTRL) : System Description"</u>.

# FRONT WIPER AND WASHER SYSTEM : Fail-safe

INFOID:000000006884399

# CAN COMMUNICATION CONTROL (IPDM E/R)

When CAN communication with BCM is impossible, IPDM E/R performs fail-safe control. After CAN communication recovers normally, it also returns to normal control.

### If No CAN Communication Is Available With BCM

| Control part      | Fail-safe operation  |  |  |
|-------------------|--|--|--|
| Front wiper motor | <ul> <li>The status just before activation of fail-safe control is maintained until the ignition switch is turned OFF while the front wiper is operating at LO or HI speed.</li> <li>The wiper is operated at LO speed until the ignition switch is turned OFF if the fail-safe control is activated while the front wiper is set in the AUTO mode and the front wiper moto is operating.</li> <li>Returns automatically wiper to stop position when ignition switch is turned ON if fail-safe control is activated while front wiper motor is operated and wiper stop in the other than stop position.</li> </ul> |  |  |

# FRONT WIPER PROTECTION FUNCTION

IPDM E/R detects front wiper stop position by a front wiper stop position signal.

When a front wiper stop position signal is in the conditions listed below, IPDM E/R stops power supply to wiper after repeating a front wiper 10 seconds activation and 20 seconds stop five times.

| Ignition switch | Front wiper switch | Front wiper stop position signal   |
|-----------------|--------------------|--|
| ON              | OFF                | The front wiper stop position signal (stop position) cannot be input for 10 seconds. |
|                 | ON                 | The front wiper stop position signal does not change for 10 seconds.                 |

# NOTE:

This operation status can be confirmed on the IPDM E/R "Data Monitor" that displays "BLOCK" for the item "WIP PROT" while the wiper is stopped.

### FAIL-SAFE CONTROL BY RAIN SENSOR MALFUNCTION

BCM detects the light and rain sensor serial link error and the rain sensor malfunction.

BCM controls the following fail-safe when rain sensor has a malfunction.

- Front wiper switch AUTO and sensing rain drop: The condition just before the activation of fail-safe is maintained until the front wiper switch is turned OFF.
- Front wiper switch AUTO and not sensing rain drop: Front wiper is LO operation until the front wiper switch is turned off.

# < SYSTEM DESCRIPTION > DIAGNOSIS SYSTEM (BCM) COMMON ITEM

# COMMON ITEM : CONSULT Function (BCM - COMMON ITEM)

INFOID:000000007229530

А

В

С

# APPLICATION ITEM

CONSULT performs the following functions via CAN communication with BCM.

| Diagnosis mode           | Function Description   |     |
|--------------------------|--|-----|
| Work Support             | Changes the setting for each system function.  |     |
| Self Diagnostic Result   | Displays the diagnosis results judged by BCM.  | — D |
| CAN Diag Support Monitor | Monitors the reception status of CAN communication viewed from BCM.  |     |
| Data Monitor             | The BCM input/output signals are displayed.  | E   |
| Active Test              | The signals used to activate each device are forcibly supplied from BCM.   |     |
| Ecu Identification       | The BCM part number is displayed.  |     |
| Configuration            | <ul><li>Read and save the vehicle specification.</li><li>Write the vehicle specification when replacing BCM.</li></ul> | F   |

### SYSTEM APPLICATION

BCM can perform the following functions for each system.

NOTE:

It can perform the diagnosis modes except the following for all sub system selection items.

| System   |                           | Diagnosis mode |              |             |   |

| Test item | Operation  | Description  |
|-----------|--|--|
| Hi        |  | Transmits the front wiper request signal (HI) to IPDM E/R via CAN communication to operate the front wiper HI operation.   |
| ER WIPER  | Transmits the front wiper request signal (LO) to IPDM E/R via CAN communication to operate the front wiper LO operation. |  |
|           | INT  | Transmits the front wiper request signal (INT) to IPDM E/R via CAN communication to operate the front wiper INT operation. |
| Off       |  | Stops transmitting the front wiper request signal to stop the front wiper operation.                                       |

Е

# **Diagnosis Description**

INFOID:000000007229533

# AUTO ACTIVE TEST

Description

In auto active test, the IPDM E/R sends a drive signal to the following systems to check their operation.

- Oil pressure warning lamp (only for models with VQ37VHR engine)
- Front wiper (LO, HI)
- Parking lamp
- License plate lamp
- Tail lamp
- Side marker lamp
- Front fog lamp
- Headlamp (LO, HI)
- A/C compressor (magnet clutch)
- Cooling fan (cooling fan control module)

Operation Procedure

### CAUTION:

Wiper arm interferes with hood when wiper is operated while wiper arm is in the raised position. Always perform auto active test without setting wiper arm in the raised position. Always pour water on front windshield glass in advance to auto active test so that damage on front windshield glass surface is prevented.

### NOTE:

Never perform auto active test in the following condition.

- Engine is running
- CONSULT is connected
- 1. Turn the ignition switch OFF.
- 2. Turn the ignition switch ON, and within 20 seconds, press the front door switch (driver side) 10 times. Then turn the ignition switch OFF.

NOTE:

- Close passenger door.
- Within 5 seconds after ignition switch is turned to the ON position and when driver door switch is pressed 6 times or more within 4 seconds, self-diagnosis function for BOSE amp. activates and speaker sounds. After waiting for 5 seconds or more after ignition switch is turned to the ON position and when driver door switch is operated, self-diagnosis function for BOSE amp. does not activate.
- 3. Turn the ignition switch ON within 10 seconds. After that the horn sounds once and the auto active test starts.

### NOTE:

Engine starts when ignition switch is turned ON while brake pedal is depressed.

- 4. The oil pressure warning lamp starts blinking when the auto active test starts.
- 5. After a series of the following operations is repeated 3 times, auto active test is completed.

### NOTE:

- When auto active test has to be cancelled halfway through test, turn the ignition switch OFF.
- When auto active test is not activated, door switch may be the cause. Check door switch. Refer to <u>DLK-60</u>, <u>"Component Function Check"</u>.

### Inspection in Auto Active Test

When auto active test is actuated, the following 6 steps are repeated 3 times.

| Operation sequence | Inspection location  | Operation  |  |
|--------------------|--|--|--|
| 1                  | Oil pressure warning lamp<br>(only for models with VQ37VHR engine) | Blinks continuously during operation of auto active test |  |
| 2                  | Front wiper motor  | LO for 5 seconds $\rightarrow$ HI for 5 seconds          |  |

### < SYSTEM DESCRIPTION >

| Operation sequence | Inspection location   | Operation  | A |
|--------------------|---|--|---|
| 3                  | <ul> <li>Parking lamp</li> <li>License plate lamp</li> <li>Tail lamp</li> <li>Side marker lamp</li> <li>Front fog lamp</li> </ul> | 10 seconds   | В |
| 4                  | Headlamp  | <ul> <li>LO 10 seconds</li> <li>HI ON ⇔ OFF 5 times</li> </ul> | С |
| 5                  | A/C compressor (magnet clutch)  | $ON \Leftrightarrow OFF 5 times$                               |   |
| 6                  | Cooling fan   | MID for 5 seconds $\rightarrow$ HI for 5 seconds               | D |

\*: Outputs duty ratio of 50% for 5 seconds  $\rightarrow$  duty ratio of 100% for 5 seconds on the cooling fan control module.

### Concept of auto active test

- IPDM E/R starts the auto active test with the door switch signals transmitted by BCM via CAN communication. Therefore, the CAN communication line between IPDM E/R and BCM is considered normal if the auto active test starts successfully.
- The auto active test facilitates troubleshooting if any systems controlled by IPDM E/R cannot be operated.

# CONSULT Function (IPDM E/R)

INFOID:000000007229534

# APPLICATION ITEM

# CONSULT performs the following functions via CAN communication with IPDM E/R.

| Diagnosis mode           | Description   |  |
|--------------------------|---|--|
| Ecu Identification       | Allows confirmation of IPDM E/R part number.  |  |
| Self Diagnostic Result   | Displays the diagnosis results judged by IPDM E/R.                                      |  |
| Data Monitor             | Displays the real-time input/output data from IPDM E/R input/output data.               |  |
| Active Test              | IPDM E/R can provide a drive signal to electronic components to check their operations. |  |
| CAN Diag Support Monitor | The results of transmit/receive diagnosis of CAN communication can be read.             |  |

### SELF DIAGNOSTIC RESULT Refer to <u>PCS-25, "DTC Index"</u>.

< BASIC INSPECTION >

# **1.**GET INFORMATION FOR SYMPTOM

- 1. Get detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurs).
- 2. Check operation condition of the function that is malfunctioning.

### >> GO TO 2.

# 2.CHECK DTC

- 1. Check DTC.
- 2. Perform the following procedure if DTC is detected.
- Record DTC and freeze frame data (Print them out using CONSULT.)
- Erase DTC.
- Study the relationship between the cause detected by DTC and the symptom described by the customer.
- 3. Check related service bulletins for information.

### Are any symptoms described and any DTC detected?

Symptom is described, DTC is detected>>GO TO 3. Symptom is described, DTC is not detected>>GO TO 4. Symptom is not described, DTC is detected>>GO TO 5.

### **3.**CONFIRM THE SYMPTOM

Try to confirm the symptom described by the customer. Also study the normal operation and fail-safe related to the symptom. Verify relation between the symptom and the condition when the symptom is detected.

# >> GO TO 5.

# **4.**CONFIRM THE SYMPTOM

Try to confirm the symptom described by the customer. Verify relation between the symptom and the condition when the symptom is detected.

# >> GO TO 6.

# **5.**PERFORM DTC CONFIRMATION PROCEDURE

Perform DTC CONFIRMATION PROCEDURE for the detected DTC, and then check that DTC is detected again. At this time, always connect CONSULT to the vehicle, and check self diagnostic results in real time. If two or more DTCs are detected, refer to <u>BCS-56</u>, "<u>DTC Inspection Priority Chart</u>" (BCM) or <u>PCS-25</u>, "<u>DTC Index</u>" (IPDM E/R), and determine trouble diagnosis order.

### NOTE:

• Freeze frame data is useful if the DTC is not detected.

 Perform Component Function Check if DTC CONFIRMATION PROCEDURE is not included on Service Manual. This simplified check procedure is an effective alternative though DTC cannot be detected during this check.

If the result of Component Function Check is NG, it is the same as the detection of DTC by DTC CONFIR-MATION PROCEDURE.

### Is DTC detected?

YES >> GO TO 7.

NO >> Check according to <u>GI-44, "Intermittent Incident"</u>.

6. Detect malfunctioning system by symptom diagnosis

Detect malfunctioning system according to SYMPTOM DIAGNOSIS based on the confirmed symptom in step 4, and determine the trouble diagnosis order based on possible causes and symptom.

# Is the symptom described?

- YES >> GO TO 7.
- NO >> Monitor input data from related sensors or check voltage of related module terminals using CON-SULT.
- 7. DETECT MALFUNCTIONING PART BY DIAGNOSIS PROCEDURE

# DIAGNOSIS AND REPAIR WORK FLOW

| < BASIC INSPECTION >  |   |
|---|---|
| Inspect according to Diagnosis Procedure of the system.   |   |
| Is malfunctioning part detected?  | А |
| YES >> GO TO 8.   |   |
| NO >> Check according to <u>GI-44, "Intermittent Incident"</u> .  | В |
| 8.REPAIR OR REPLACE THE MALFUNCTIONING PART   |   |
| <ol> <li>Repair or replace the malfunctioning part.</li> <li>Reconnect parts or connectors disconnected during Diagnosis Procedure again after repair and replacement.</li> </ol> | С |
| 3. Check DTC. If DTC is detected, erase it.   |   |
| >> GO TO 9.   | D |
| 9.FINAL CHECK   |   |
| When DTC is detected in step 2, perform DTC CONFIRMATION PROCEDURE again, and then check that the malfunction is repaired securely.   | Е |
| When symptom is described by the customer, refer to confirmed symptom in step 3 or 4, and check that the symptom is not detected.   | F |
| Is DTC detected and does symptom remain?  | F |
| YES-1 >> DTC is detected: GO TO 7.  |   |
| YES-2 >> Symptom remains: GO TO 4.<br>NO >> Before returning the vehicle to the customer, always erase DTC.   | G |
|   |   |
|   | Н |

# DTC/CIRCUIT DIAGNOSIS WIPER AND WASHER FUSE

# **Diagnosis Procedure**

INFOID:000000006884407

# 1.CHECK FUSES

Check that the following fuses are not fusing.

| Unit              | Location | No. | Capacity |
|-------------------|----------|-----|----------|
| Front wiper motor | IPDM E/R | 60  | 30 A     |
| Washer pump       | IPDM E/R | 47  | 10 A     |

Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace the fuse with a new one after repairing the applicable circuit.

# FRONT WIPER POSITION SIGNAL CIRCUIT

# < DTC/CIRCUIT DIAGNOSIS >

# FRONT WIPER POSITION SIGNAL CIRCUIT

# **Component Function Check**

INFOID:000000006884412

# **1.**CHECK FRONT WIPER POSITION SIGNAL

CONSULT DATA MONITOR

1. Select "WIP AUTO STOP" of IPDM E/R data monitor item.

2. Operate the front wiper.

3. With the front wiper operation, check the monitor status.

| Monitor item  | Condition         |                      | Monitor status |
|---------------|-------------------|----------------------|----------------|
| WIP AUTO STOP | Front wiper motor | Stop position        | STOP P         |
|               |                   | Except stop position | ACT P          |

### Is the inspection result normal?

YES >> Front wiper position signal circuit is normal.

NO >> Refer to <u>WW-30. "Diagnosis Procedure"</u>.

# **Diagnosis** Procedure

INFOID:000000006884413

# **1.**CHECK FUSE

- 1. Turn ignition switch OFF.
- 2. Check 10 A fuse, [No. 47, located in IPDM E/R].

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace the blown fuse after repairing the affected circuit if a fuse is blown.

# 2. CHECK FRONT WIPER MOTOR INPUT VOLTAGE

1. Disconnect front wiper motor connector and washer pump connector.

2. Turn ignition switch ON.

3. Check voltage between front wiper motor harness connector and ground.

| (•        | (+)<br>Front wiper motor |        | Voltage (Approx.) |
|-----------|--------------------------|--------|-------------------|
| Front wip |                          |        |                   |
| Connector | Terminal                 |        |                   |
| E42       | 4                        | Ground | Battery voltage   |

Is the inspection result normal?

YES >> GO TO 4.

NO >> GO TO 3.

 ${f 3.}$  CHECK FRONT WIPER MOTOR POSITION SIGNAL POWER SUPPLY CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect IPDM E/R connector.

3. Check continuity between IPDM E/R harness connector and front wiper motor harness connector.

| IPDI      | M E/R    | Front wi  | per motor | Continuity |  |
|-----------|----------|-----------|-----------|------------|--|
| Connector | Terminal | Connector | Terminal  | Continuity |  |
| E7        | 51       | E42       | 4         | Existed    |  |

### 4. Check continuity between IPDM E/R harness connector and ground.

| IPDI      | IPDM E/R           |  | Continuity  |
|-----------|--------------------|--|-------------|
| Connector | Connector Terminal |  | Continuity  |
| E7        | 51                 |  | Not existed |

Is the inspection result normal?

# FRONT WIPER POSITION SIGNAL CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

- YES >> Replace IPDM E/R.
- NO >> Repair or replace harness.

4. CHECK FRONT WIPER MOTOR POSITION SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect IPDM E/R connector.

Check continuity between IPDM E/R harness connector and front wiper motor harness connector. 3.

| IPDM      | 1 E/R    | Front wi  | per motor | Continuity | С      |
|-----------|----------|-----------|-----------|------------|--------|
| Connector | Terminal | Connector | Terminal  | Continuity |        |

# < DTC/CIRCUIT DIAGNOSIS >

# RAIN SENSOR

# Component Function Check

INFOID:000000006884416

INFOID:00000006884417

# 1.CHECK FRONT WIPER AUTO OPERATION

- 1. Clean rain sensor detection area of windshield fully.
- 2. When the front wiper switch is turned to AUTO position, front wiper operates once regardless of a rainy condition.

# Is front wiper (AUTO) operation normally?

- YES >> Rain sensor circuit is normal.
- NO >> Refer to <u>WW-34</u>, "Diagnosis Procedure".

# **Diagnosis Procedure**

# 1.CHECK FUSE

- 1. Turn the ignition switch OFF.
- 2. Check 10Å fuse, [No.6, located in fuse block (J/B)].

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace the blown fuse after repairing the affected circuit if a fuse is blown.

# 2. CHECK RAIN SENSOR POWER SUPPLY

1. Disconnect rain sensor connector.

2. Check voltage between rain sensor harness connector and ground.

|           | (+)      |        |                   |  |
|-----------|----------|--------|-------------------|--|
| Rain      | sensor   | (-)    | Voltage (Approx.) |  |
| Connector | Terminal |        |                   |  |
| R9        | 1        | Ground | Battery voltage   |  |

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair or replace harness.

 ${f 3.}$ CHECK RAIN SENSOR GROUND CIRCUIT

Check continuity between rain sensor harness connector and ground.

| Rains     | sensor             |  | Continuity |  |
|-----------|--------------------|--|------------|--|
| Connector | Connector Terminal |  | Continuity |  |
| R9        | 3                  |  | Existed    |  |

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair or replace harness.

4.CHECK RAIN SENSOR SIGNAL

- 1. Connect rain sensor connector.
- 2. Turn ignition switch ON.
- 3. Check signal between BCM harness connector and ground using oscilloscope.

# **RAIN SENSOR**

## NORMAL OPERATING CONDITION

## < SYMPTOM DIAGNOSIS > NORMAL OPERATING CONDITION

## Description

INFOID:000000006884420 FRONT WIPER MOTOR PROTECTION FUNCTION • IPDM E/R may stop the front wiper to protect the front wiper motor if any obstruction (operation resistance) such as a large amount of snow is detected during the front wiper operation. • At that time turn OFF the front wiper and remove the foreign object. Then wait for approximately 20 seconds or more and reactivate the front wiper. The wiper will operate normally.

#### < SYMPTOM DIAGNOSIS >

# FRONT WIPER DOES NOT OPERATE

## Description

The front wiper does not operate under any operation conditions.

## Diagnosis Procedure

**1.**CHECK WIPER RELAY OPERATION

⑧IPDM E/R AUTO ACTIVE TEST

- 1. Start IPDM E/R auto active test. Refer to <u>WW-14, "Diagnosis Description"</u>.
- 2. Check that the front wiper operates at the LO/HI operation.
- CONSULT ACTIVE TEST
- 1. Turn ignition switch ON.
- 2. Select "FRONT WIPER" of IPDM E/R active test item.
- 3. With operating the test item, check front wiper operation.
  - Lo : Front wiper LO operation
  - Hi : Front wiper HI operation

#### Off : Stop the front wiper.

Is the inspection result normal?

YES >> GO TO 6.

NO >> GO TO 2.

2.CHECK FRONT WIPER MOTOR FUSE

Check front wiper motor fuse. Refer to WW-24, "Diagnosis Procedure".

Is the inspection result normal?

YES >> GO TO 3.

NO >> Replace the blown fuse after repairing the affected circuit if a fuse is blown.

 ${f 3.}$ CHECK FRONT WIPER MOTOR INPUT VOLTAGE

#### CONSULT ACTIVE TEST

- 1. Turn ignition switch OFF.
- 2. Disconnect front wiper motor connector.
- 3. Turn ignition switch ON.
- 4. Select "FRONT WIPER" of IPDM E/R active test item.
- 5. With operating the test item, check voltage between front wiper motor harness connector and ground.

| (+)<br>Front wiper motor |          | (-)    | Condition   |     | Voltage (Approx.) |  |
|--------------------------|----------|--------|-------------|-----|-------------------|--|
| Connector                | Terminal |        |             |     |                   |  |
|                          | 3        | Ground | FRONT WIPER | Lo  | Battery voltage   |  |
| E42                      |          |        |             | Off | 0 V               |  |
| E42                      |          |        |             | Hi  | Pattony voltage   |  |
|                          |          |        |             | Off | Battery voltage   |  |

Is the inspection result normal?

YES >> Replace front wiper motor.

NO >> GO TO 4.

## 4.CHECK FRONT WIPER MOTOR (HI/LO) CIRCUIT

1. Turn ignition switch OFF.

- 2. Disconnect wiper reverse relay.
- Check continuity between front wiper motor harness connector and wiper reverse relay harness connector.

## WW-40

# < REMOVAL AND INSTALLATION > REMOVAL AND INSTALLATION WASHER TANK

Exploded View

INFOID:000000006884423

1. Washer tank inlet2. Washer tankRefer to GI-4, "Components" for the symbols in the figure.

## Removal and Installation

INFOID:000000006884424

## REMOVAL

- 1. Remove washer tank inlet fixing clip (A).
- 2. Pull out washer tank inlet (1) from washer tank.

- 3. Remove front bumper fascia and bumper reinforcement. Refer to <u>EXT-14, "Removal and Installation"</u>.
- 4. Remove fender protector RH (front). Refer to <u>EXT-24</u>, "FENDER PROTECTOR : Removal and Installation".
- 5. Disconnect washer pump connector.
- 6. Disconnect front washer tube.
- 7. Remove washer tank mounting bolts.
- 8. Remove washer tank from the vehicle.

#### INSTALLATION

Note the following item, and then install in the reverse order of removal. **CAUTION:** 

Add water up to the top of the washer tank inlet after installation. Check that there is no leakage.

Inspection and Adjustment

#### **INSPECTION**

Washer Nozzle Inspection Check that air can pass through the hose by blowing forward (toward the nozzle), and check that air cannot pass through by sucking.

#### ADJUSTMENT

Washer Nozzle Spray Position Adjustment Adjust spray positions to match the positions shown in the figure.

Black printed frame line 1.

: Spray area

Unit: mm (in)

|   | Driver side |             |            |             | Passenger side |             |             |            |

#### **CAUTION:**

## FRONT WASHER NOZZLE AND TUBE

#### < REMOVAL AND INSTALLATION >

- Use washer nozzle adjuster\* (A) for nozzle adjustment.
- Never use needle or small pin.

(Washer nozzle adjuster is included with shipment of nozzle) NOTE:

If wax or dust gets into the nozzle, remove wax or dust with a needle or small pin.

INFOID:000000006884431

- 1. Front wiper blade RH
- 2. Front wiper arm RH Front wiper motor
- 4. Front wiper drive assembly
- 7. Front wiper blade LH

Refer to GI-4, "Components" for symbols in the figure.

## Removal and Installation

#### REMOVAL

- 1. Operate the front wiper to move it to the auto stop position.
- 2. Open the hood.
- 3. Remove the front wiper arm cap.
- 4. Remove the front wiper arm mounting nut.
- 5. Raise front wiper arm, and remove front wiper arm from the vehicle.

5.

## INSTALLATION

- Clean wiper arm mount as shown in the figure to prevent nuts 1. from being loosened.
- 2. Operate the front wiper motor to move the front wiper to the auto stop position.
- 3. Adjust the front wiper blade position. Refer to WW-48, "Adjustment".
- 4. Install the front wiper arm by tightening the mounting nuts.
- 5. Inject the washer fluid.
- 6. Operate the front wiper to move it to the auto stop position.
- 7. Check that the front wiper blades stop at the specified position.
- 8. Install the front wiper arm caps.

## Adjustment

#### WIPER BLADE POSITION ADJUSTMENT

• Driver side (L): Clearance between the end of cowl top cover and the wiper blade tip (top of wiper blade center)

# FRONT WIPER BLADE

## **Exploded View**

INFOID:000000006884434

## Removal and Installation

#### REMOVAL

1. Push up the lever (A) of wiper blade (1), while sliding wiper blade toward the direction of the arrow, to remove it from wiper arm (2).

CAUTION:

Be careful not to drop the wiper blade onto the windshield glass.

#### INSTALLATION

- 1. Install wiper blade into wiper arm.
- 2. Install wiper arm.

## Replacement

1. Hold the rip of old wiper refill (1) at the rear end of the wiper blade with long-nose pliers, and pull out the wiper refill to the direction (A).

r refill (1) at the rear end of th

INFOID:000000006884435

INFOID:000000006884436

## FRONT WIPER BLADE

#### < REMOVAL AND INSTALLATION >

- Insert the tip of new wiper refill (1) into the rear end of wiper blade. Slide the wiper refill to the direction (A) while pressing the wiper refill onto the wiper blade rear end.
   NOTE:
  - Insert the wiper refill to be held securely by tab (B) of wiper blade.
  - After the wiper refill is fully inserted, remove the holder<sup>\*</sup> (2).
  - \*: Attached to service parts.
- Insert the wiper refill until the stopper at the rear end of wiper refill fits in the tab. Check that "LOCK" mark on wiper refill is aligned with "▼" mark on wiper blade.
- 4. Untwist the twisted wiper refill (2023) at the rear end of wiper blade, if any.
- 5. Check the following items after replacing wiper refill.
  - Wiper refill is not twisted at all.
  - Wiper refill thoroughly fits in the tab on wiper blade.
  - Wiper refill is inserted from the proper direction.

#### NOTE:

When the vertebra is detached.

- Insert the vertebra (1) into the wiper blade to the same bending direction.
- If a vertebra has a notch, fit it to a protrusion inside the wiper refill.

# RAIN SENSOR

Exploded View

INFOID:000000006884440

INFOID:000000006884441

#### **CAUTION:**

When the rain sensor is removed from windshield, the rain sensor cannot be reused.

- 4. Rain sensor
- A. Metal clip
- ∠\_\_\_ : Pawl
- : Metal clip
- Always replace after every disassembly.

## Removal and Installation

#### REMOVAL

- 1. Remove front camera finisher. Refer to INT-46, "Removal and Installation".
- 2. Remove the inside mirror cover.
- 3. Disconnect rain sensor connector.
- 4. Disengage the both sides of metal clips, and remove the rain sensor from the windshield.

#### **INSTALLATION**

Note the following items, and then install in the reverse order of removal.

#### CAUTION:

- Surface of windshield should be cleaned.
- Never touch gel/adhesive of new part.
- Lock the metal spring clips and install the rain sensor securely.
- To prevent abnormal noise due to the pawls scratch that can occur when reusing inside mirror cover, always replace the inside mirror cover after every disassembly.
