INDEX FOR DTC

DTC No. Index

PFP:00024

UBS000DN

NOTE:

- If DTC U1000 or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000, U1001. Refer to <u>EC-157, "DTC U1000, U1001 CAN COMMUNICATION LINE"</u>.
- If DTC U1010 is displayed with other DTC, first perform the trouble diagnosis for DTC U1010. Refer to <u>EC-160, "DTC U1010 CAN COMMUNICATION"</u>.

*1: 1st trip DTC No. is the same as DTC No.

*2: This number is prescribed by SAE J2012.

*3: In Diagnostic Test Mode II (Self-diagnostic results), this number is controlled by NISSAN.

*4: The troubleshooting for this DTC needs CONSULT-II.

*5: When the fail-safe operations for both self-diagnoses occur, the MIL illuminates.

NOTE:

- If DTC U1000 or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000, U1001. Refer to <u>EC-157, "DTC U1000, U1001 CAN COMMUNICATION LINE"</u>.
- If DTC U1010 is displayed with other DTC, first perform the trouble diagnosis for DTC U1010. Refer to <u>EC-160, "DTC U1010 CAN COMMUNICATION"</u>.

Precautions for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

On Board Diagnostic (OBD) System of Engine and CVT

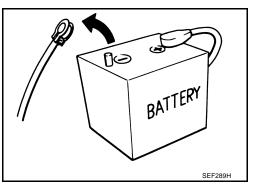

The ECM has an on board diagnostic system. It will light up the malfunction indicator lamp (MIL) to warn the driver of a malfunction causing emission deterioration.

CAUTION:

- Be sure to turn the ignition switch OFF and disconnect the negative battery cable before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MIL to light up.
- Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MIL to light up due to the open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)
- Certain systems and components, especially those related to OBD, may use a new style slidelocking type harness connector. For description and how to disconnect, refer to <u>PG-70, "HAR-NESS CONNECTOR"</u>.
- Be sure to route and secure the harnesses properly after work. The interference of the harness with a bracket, etc. may cause the MIL to light up due to the short circuit.
- Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube
 may cause the MIL to light up due to the malfunction of the EVAP system or fuel injection system,
 etc.
- Be sure to erase the unnecessary malfunction information (repairs completed) from the ECM and TCM (Transmission control module) before returning the vehicle to the customer.

Precaution

- Always use a 12 volt battery as power source.
- Do not attempt to disconnect battery cables while engine is running.
- Before connecting or disconnecting the ECM harness connector, turn ignition switch OFF and disconnect negative battery cable. Failure to do so may damage the ECM because battery voltage is applied to ECM even if ignition switch is turned OFF.
- Before removing parts, turn ignition switch OFF and then disconnect negative battery cable.

- Do not disassemble ECM.
- If a battery cable is disconnected, the memory will return to the ECM value.

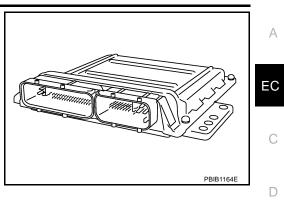

The ECM will now start to self-control at its initial value. Engine operation can vary slightly when the terminal is disconnected. However, this is not an indication of a malfunction. Do not replace parts because of a slight variation.

- If the battery is disconnected, the following emissionrelated diagnostic information will be lost within 24 hours.
- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values
- When connecting ECM harness connector, fasten it securely with levers as far as they will go as shown in the figure.

 When connecting or disconnecting pin connectors into or from ECM, take care not to damage pin terminals (bend or break).

Make sure that there are not any bends or breaks on ECM pin terminal, when connecting pin connectors.

- Securely connect ECM harness connectors.
 A poor connection can cause an extremely high (surge) voltage to develop in coil and condenser, thus resulting in damage to ICs.
- Keep engine control system harness at least 10 cm (4 in) away from adjacent harness, to prevent engine control system malfunctions due to receiving external noise, degraded operation of ICs, etc.
- Keep engine control system parts and harness dry.
- Before replacing ECM, perform ECM Terminals and Reference Value inspection and make sure ECM functions properly. Refer to <u>EC-107, "ECM Terminals and Reference Value"</u>
- Handle mass air flow sensor carefully to avoid damage.
- Do not disassemble mass air flow sensor.
- Do not clean mass air flow sensor with any type of detergent.
- Do not disassemble electric throttle control actuator.
- Even a slight leak in the air intake system can cause serious incidents.
- Do not shock or jar the camshaft position sensor (PHASE), crankshaft position sensor (POS).

Short

- When measuring ECM signals with a circuit tester, never allow the two tester probes to contact. Accidental contact of probes will cause a short circuit and damage the ECM power transistor.
- Do not use ECM ground terminals when measuring input/ output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

 B1 indicates the bank 1, B2 indicates the bank 2 as shown in the figure.

- Do not operate fuel pump when there is no fuel in lines.
- Tighten fuel hose clamps to the specified torque.

- Do not depress accelerator pedal when starting.
- Immediately after starting, do not rev up engine unnecessarily.
- Do not rev up engine just prior to shutdown.

- When installing C.B. ham radio or a mobile phone, be sure . to observe the following as it may adversely affect electronic control systems depending on installation location.
- Keep the antenna as far as possible from the electronic control units.
- Keep the antenna feeder line more than 20 cm (8 in) away from the harness of electronic controls. Do not let them run parallel for a long distance.
- Adjust the antenna and feeder line so that the standingwave radio can be kept smaller.
- Be sure to ground the radio to vehicle body.

Air conditioner switch	Air conditioner operation* ²	_		
Wheel sensor	Vehicle speed*2			

*1: This sensor is not used to control the engine system. This is used only for the on board diagnosis.

*2: This signal is sent to the ECM through CAN communication line.

*3: ECM determines the start signal status by the signals of engine speed and battery voltage.

SYSTEM DESCRIPTION

The amount of fuel injected from the fuel injector is determined by the ECM. The ECM controls the length of time the valve remains open (injection pulse duration). The amount of fuel injected is a program value in the ECM memory. The program value is preset by engine operating conditions. These conditions are determined by input signals (for engine speed and intake air) from both the crankshaft position sensor and the mass air flow sensor.

VARIOUS FUEL INJECTION INCREASE/DECREASE COMPENSATION

In addition, the amount of fuel injected is compensated to improve engine performance under various operating conditions as listed below.

<Fuel increase>

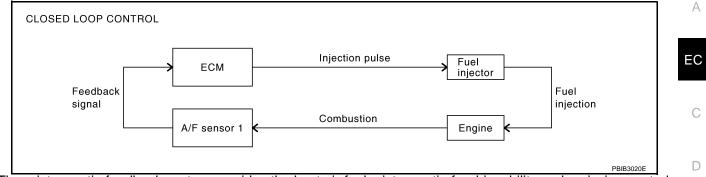

- During warm-up
- When starting the engine
- During acceleration
- Hot-engine operation
- When shift lever is changed from N to D
- High-load, high-speed operation

<Fuel decrease>

- During deceleration
- During high engine speed operation

UBS00K0G

MIXTURE RATIO FEEDBACK CONTROL (CLOSED LOOP CONTROL)

The mixture ratio feedback system provides the best air-fuel mixture ratio for driveability and emission control. The three way catalyst (manifold) can then better reduce CO, HC and NOx emissions. This system uses air fuel ratio (A/F) sensor 1 in the exhaust manifold to monitor whether the engine operation is rich or lean. The ECM adjusts the injection pulse width according to the sensor voltage signal. For more information about air fuel ratio (A/F) sensor 1, refer to EC-229, "DTC P0130, P0150 A/F SENSOR 1". This maintains the mixture ratio within the range of stoichiometric (ideal air-fuel mixture).

This stage is referred to as the closed loop control condition.

Heated oxygen sensor 2 is located downstream of the three way catalyst (manifold). Even if the switching characteristics of air fuel ratio (A/F) sensor 1 shift, the air-fuel ratio is controlled to stoichiometric by the signal from heated oxygen sensor 2.

Open Loop Control

The open loop system condition refers to when the ECM detects any of the following conditions. Feedback control stops in order to maintain stabilized fuel combustion.

- Deceleration and acceleration
- High-load, high-speed operation
- Malfunction of A/F sensor 1 or its circuit
- Insufficient activation of A/F sensor 1 at low engine coolant temperature
- High engine coolant temperature
- During warm-up
- After shifting from N to D
- When starting the engine

MIXTURE RATIO SELF-LEARNING CONTROL

The mixture ratio feedback control system monitors the mixture ratio signal transmitted from A/F sensor 1. This feedback signal is then sent to the ECM. The ECM controls the basic mixture ratio as close to the theoretical mixture ratio as possible. However, the basic mixture ratio is not necessarily controlled as originally designed. Both manufacturing differences (i.e., mass air flow sensor hot wire) and characteristic changes during operation (i.e., fuel injector clogging) directly affect mixture ratio.

Accordingly, the difference between the basic and theoretical mixture ratios is monitored in this system. This is then computed in terms of "injection pulse duration" to automatically compensate for the difference between the two ratios.

"Fuel trim" refers to the feedback compensation value compared against the basic injection duration. Fuel trim includes short term fuel trim and long term fuel trim.

"Short term fuel trim" is the short-term fuel compensation used to maintain the mixture ratio at its theoretical value. The signal from A/F sensor 1 indicates whether the mixture ratio is RICH or LEAN compared to the theoretical value. The signal then triggers a reduction in fuel volume if the mixture ratio is rich, and an increase in fuel volume if it is lean.

"Long term fuel trim" is overall fuel compensation carried out long-term to compensate for continual deviation of the short term fuel trim from the central value. Such deviation will occur due to individual engine differences, wear over time and changes in the usage environment.

ENGINE CONTROL SYSTEM

FUEL INJECTION TIMING

 Sequential multiport fuel injection system 	 Simultaneous multiport fuel injection system
No. 1 cylinder	No. 1 cylinder No. 2 cylinder No. 3 cylinder No. 4 cylinder No. 5 cylinder No. 6 cylinder No. 6 cylinder No. 6 cylinder No. 6 cylinder No. 6 cylinder

Two types of systems are used.

Sequential Multiport Fuel Injection System

Fuel is injected into each cylinder during each engine cycle according to the firing order. This system is used when the engine is running.

Simultaneous Multiport Fuel Injection System

Fuel is injected simultaneously into all six cylinders twice each engine cycle. In other words, pulse signals of the same width are simultaneously transmitted from the ECM.

The six fuel injectors will then receive the signals two times for each engine cycle.

This system is used when the engine is being started and/or if the fail-safe system (CPU) is operating.

FUEL SHUT-OFF

Fuel to each cylinder is cut off during deceleration, operation of the engine at excessively high speeds or operation of the vehicle at excessively high speed.

*1: This signal is sent to the ECM through CAN communication line.

*2: ECM determines the start signal status by the signals of engine speed and battery voltage.

SYSTEM DESCRIPTION

Firing order: 1 - 2 - 3 - 4 - 5 - 6

The ignition timing is controlled by the ECM to maintain the best air-fuel ratio for every running condition of the engine. The ignition timing data is stored in the ECM.

The ECM receives information such as the injection pulse width and camshaft position sensor signal. Computing this information, ignition signals are transmitted to the power transistor.

During the following conditions, the ignition timing is revised by the ECM according to the other data stored in the ECM.

- At starting
- During warm-up
- At idle
- At low battery voltage

UBS00K0H

During acceleration

The knock sensor retard system is designed only for emergencies. The basic ignition timing is programmed within the anti-knocking zone, if recommended fuel is used under dry conditions. The retard system does not operate under normal driving conditions. If engine knocking occurs, the knock sensor monitors the condition. The signal is transmitted to the ECM. The ECM retards the ignition timing to eliminate the knocking condition. EC

Fuel Cut Control (at No Load and High Engine Speed) **INPUT/OUTPUT SIGNAL CHART**

UBSOOKOI

А

Sensor	Input signal to ECM	ECM function	Actuator	_ (
Park/neutral position (PNP) switch	Neutral position			
Accelerator pedal position sensor	Accelerator pedal position			[
Engine coolant temperature sensor	Engine coolant temperature	Fuel cut con-	Fuel injector	
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed	trol		E
Wheel sensor	Vehicle speed*			

*: This signal is sent to the ECM through CAN communication line.

SYSTEM DESCRIPTION

If the engine speed is above 1,800 rpm under no load (for example, the shift position is neutral and engine speed over is 1,800 rpm) fuel will be cut off after some time. The exact time when the fuel is cut off varies based on engine speed.

Fuel cut will be operated until the engine speed reaches 1,500 rpm, then fuel cut will be cancelled.

NOTE:

This function is different from deceleration control listed under EC-24, "Multiport Fuel Injection (MFI) System".

Refrigerant pressure sensor	Refrigerant pressure			
Power steering pressure sensor	Power steering operation			
Wheel sensor	Vehicle speed*1			

*1: This signal is sent to the ECM through CAN communication line.

*2: ECM determines the start signal status by the signals of engine speed and battery voltage.

System Description

This system improves engine operation when the air conditioner is used. Under the following conditions, the air conditioner is turned off.

- When the accelerator pedal is fully depressed.
- When cranking the engine.
- At high engine speeds.
- When the engine coolant temperature becomes excessively high.
- When operating power steering during low engine speed or low vehicle speed.
- When engine speed is excessively low.
- When refrigerant pressure is excessively low or high.

AUTOMATIC SPEED CONTROL DEVICE (ASCD)

AUTOMATIC SPEED CONTROL DEVICE (ASCD)

System Description **INPUT/OUTPUT SIGNAL CHART**

Sensor	Input signal to ECM	ECM function	Actuator	EC
ASCD brake switch	Brake pedal operation			
Stop lamp switch	Brake pedal operation			
ASCD steering switch	ASCD steering switch operation			С
Park/Neutral position (PNP) switch	Gear position	ASCD vehicle speed control	Electric throttle control actuator	
Combination meter	Vehicle speed			D
ТСМ	Powertrain revolution*			
: This signal is sent to the ECM through CAN communication line				E

BASIC ASCD SYSTEM

Refer to Owner's Manual for ASCD operating instructions.

Automatic Speed Control Device (ASCD) allows a driver to keep vehicle at predetermined constant speed without depressing accelerator pedal. Driver can set vehicle speed in advance between approximately 40 km/ h (25 MPH) and 144 km/h (89 MPH).	F
ECM controls throttle angle of electric throttle control actuator to regulate engine speed. Operation status of ASCD is indicated by CRUISE indicator and SET indicator in combination meter. If any malfunction occurs in ASCD system, it automatically deactivates control.	G
NOTE:	Н
Always drive vehicle in safe manner according to traffic conditions and obey all traffic laws.	
SET OPERATION	
Press MAIN switch. (The CRUISE indicator in combination meter illuminates.) When vehicle speed reaches a desired speed between approximately 40 km/h (25 MPH) and 144 km/h (89 MPH), press SET/COAST switch. (Then SET indicator in combination meter illuminates.)	I
ACCELERATE OPERATION	J
If the RESUME/ACCELERATE switch is pressed during cruise control driving, increase the vehicle speed until the switch is released or vehicle speed reaches maximum speed controlled by the system. And then ASCD will keep the new set speed.	K
CANCEL OPERATION	
When any of following conditions exist, cruise operation will be canceled.	1
CANCEL switch is pressed	L
• More than 2 switches at ASCD steering switch are pressed at the same time (Set speed will be cleared)	
Brake pedal is depressed	M
 Shift lever is changed to N, P, R position 	
 Vehicle speed decreased to 13 km/h (8 MPH) lower than the set speed 	

TCS/VDC system is operated

When the ECM detects any of the following conditions, the ECM will cancel the cruise operation and inform the driver by blinking indicator lamp.

Engine coolant temperature is slightly higher than the normal operating temperature, CRUISE lamp may . blink slowly.

When the engine coolant temperature decreases to the normal operating temperature, CRUISE lamp will stop blinking and the cruise operation will be able to work by pressing SET/COAST switch or RESUME/ ACCELERATE switch.

Malfunction for some self-diagnoses regarding ASCD control: SET lamp will blink quickly.

If MAIN switch is turned to OFF during ASCD is activated, all of ASCD operations will be canceled and vehicle speed memory will be erased.

PFP:18930

UBS00K0L

А

COAST OPERATION

When the SET/COAST switch is pressed during cruise control driving, decrease vehicle set speed until the switch is released. And then ASCD will keep the new set speed.

RESUME OPERATION

When the RESUME/ACCELERATE switch is pressed after cancel operation other than pressing MAIN switch is performed, vehicle speed will return to last set speed. To resume vehicle set speed, vehicle condition must meet following conditions.

- Brake pedal is released
- CVT shift lever is in other than P and N positions
- Vehicle speed is greater than 40 km/h (25 MPH) and less than 144 km/h (89 MPH)

Component Description ASCD STEERING SWITCH

Refer to EC-517.

ASCD BRAKE SWITCH

Refer to $\underline{\text{EC-524}}$, and $\underline{\text{EC-605}}$.

STOP LAMP SWITCH

Refer to $\underline{\text{EC-524}}$, $\underline{\text{EC-541}}$ and $\underline{\text{EC-605}}$.

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to $\underline{\text{EC-546}}$, $\underline{\text{EC-552}}$, $\underline{\text{EC-558}}$ and $\underline{\text{EC-563}}$.

ASCD INDICATOR

Refer to EC-612.

UBS00K0M

CAN COMMUNICATION

CAN COMMUNICATION

System Description

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only. Refer to LAN-49, "CAN System Specification Chart", about CAN communication for detail.

EVAPORATIVE EMISSION SYSTEM

EVAPORATIVE EMISSION SYSTEM

Description SYSTEM DESCRIPTION

The evaporative emission system is used to reduce hydrocarbons emitted into the atmosphere from the fuel system. This reduction of hydrocarbons is accomplished by activated charcoals in the EVAP canister.

The fuel vapor in the sealed fuel tank is led into the EVAP canister which contains activated carbon and the vapor is stored there when the engine is not operating or when refueling to the fuel tank.

The vapor in the EVAP canister is purged by the air through the purge line to the intake manifold when the engine is operating. EVAP canister purge volume control solenoid valve is controlled by ECM. When the engine operates, the flow rate of vapor controlled by EVAP canister purge volume control solenoid valve is proportionally regulated as the air flow increases.

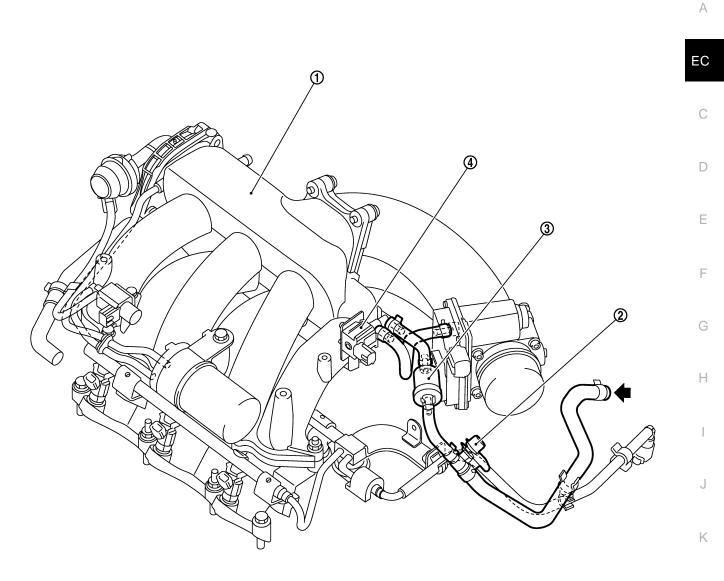

EVAP canister purge volume control solenoid valve also shuts off the vapor purge line during decelerating and idling.

- 4. EVAP canister purge volume control solenoid valve
- 2. EVAP service port
- 3. EVAP purge resonator

NOTE:

Do not use soapy water or any type of solvent while installing vacuum hose or purge hoses.

Component Inspection EVAP CANISTER

Check EVAP canister as follows:

- Block port B. 1.
- Blow air into port A and check that it flows freely out of port C. 2.
- Release blocked port B. 3.
- 4. Apply vacuum pressure to port **B** and check that vacuum pressure exists at the ports A and C.
- 5. Block port **A** and **B**.
- 6. Apply pressure to port **C** and check that there is no leakage.

FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FILLER CAP)

1. Wipe clean valve housing.

Pressure: 15.3 - 20.0 kPa (0.156 - 0.204 kg/cm², 2.22 - 2.90 psi) Vacuum: -6.0 to -3.3 kPa (-0.061 to -0.034 kg/cm², -0.87 to -0.48 psi)

3. If out of specification, replace fuel filler cap as an assembly.

CAUTION:

Use only a genuine fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.

EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EC-399 and EC-407.

FUEL TANK TEMPERATURE SENSOR

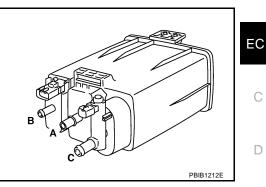

Refer to EC-329 and EC-335.

EVAP CANISTER VENT CONTROL VALVE

Refer to EC-414 and EC-421.

EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to EC-428, EC-431 and EC-437.

Κ

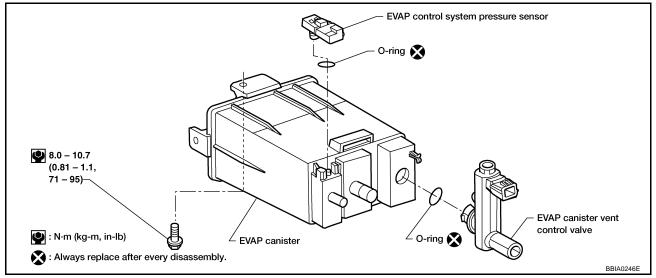

EVAP SERVICE PORT

Positive pressure is delivered to the EVAP system through the EVAP service port. If fuel vapor leakage in the EVAP system occurs, use a leak detector to locate the leak.

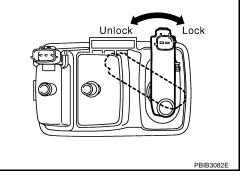

Removal and Installation EVAP CANISTER

Tighten EVAP canister as shown in the figure.

EVAP CANISTER VENT CONTROL VALVE

- 1. Turn EVAP canister vent control valve counterclockwise.
- 2. Remove the EVAP canister vent control valve. Always replace O-ring with a new one.

How to Detect Fuel Vapor Leakage

CAUTION:

• Never use compressed air or a high pressure pump.

• Do not exceed 4.12 kPa (0.042 kg/cm², 0.6 psi) of pressure in EVAP system.

NOTE:

- Do not start engine.
- Improper installation of EVAP service port adapter to the EVAP service port may cause a leak.

B WITH CONSULT-II

- 1. Attach the EVAP service port adapter securely to the EVAP service port.
- 2. Also attach the pressure pump and hose to the EVAP service port adapter.

Revision: May 2006

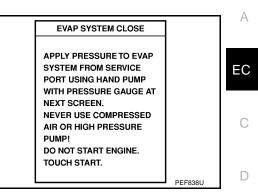

2007 Maxima

UBS00K0R

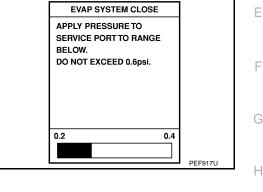

UBS00K0Q

EVAPORATIVE EMISSION SYSTEM

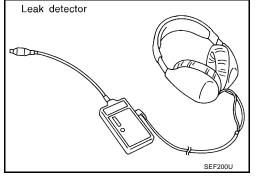

- 3. Turn ignition switch ON.
- 4. Select the "EVAP SYSTEM CLOSE" of "WORK SUPPORT MODE" with CONSULT-II.
- 5. Touch "START". A bar graph (Pressure indicating display) will appear on the screen.

- 6. Apply positive pressure to the EVAP system until the pressure indicator reaches the middle of the bar graph.
- 7. Remove EVAP service port adapter and hose with pressure pump.

8. Locate the leak using a leak detector. Refer to <u>EC-33, "EVAPO-RATIVE EMISSION LINE DRAWING"</u>.

J

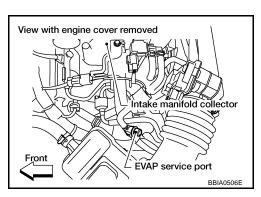

Κ

L

Μ

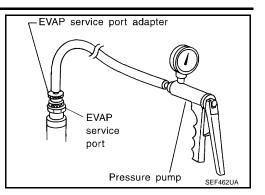

WITHOUT CONSULT-II

1. Attach the EVAP service port adapter securely to the EVAP service port.

EVAPORATIVE EMISSION SYSTEM

2. Also attach the pressure pump with pressure gauge to the EVAP service port adapter.

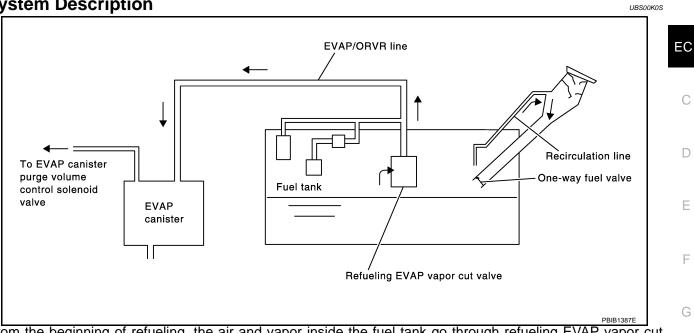

3. Apply battery voltage between the terminals of EVAP canister vent control valve to make a closed EVAP system.

View from under the vehicle with rear crossmember removed	EVAP control system pressure sensor	
	EVAP canister EVAP canister vent control valve	BBIA0526E

- To locate the leak, deliver positive pressure to the EVAP system until pressure gauge points reach 1.38 to 2.76 kPa (0.014 to 0.028 kg/cm², 0.2 to 0.4 psi).
- 5. Remove EVAP service port adapter and hose with pressure pump.
- 6. Locate the leak using a leak detector. Refer to EC-33, "EVAPORATIVE EMISSION LINE DRAWING" .

ON BOARD REFUELING VAPOR RECOVERY (ORVR)

System Description

From the beginning of refueling, the air and vapor inside the fuel tank go through refueling EVAP vapor cut valve and EVAP/ORVR line to the EVAP canister. The vapor is absorbed by the EVAP canister and the air is released to the atmosphere.

When the refueling has reached the full level of the fuel tank, the refueling EVAP vapor cut valve is closed and refueling is stopped because of auto shut-off. The vapor which was absorbed by the EVAP canister is purged during driving.

WARNING:

When conducting inspections below, be sure to observe the following:

- Put a "CAUTION: FLAMMABLE" sign in workshop.
- Do not smoke while servicing fuel system. Keep open flames and sparks away from work area.
- Be sure to furnish the workshop with a CO₂ fire extinguisher.

CAUTION:

- Before removing fuel line parts, carry out the following procedures:
- Put drained fuel in an explosion-proof container and put lid on securely.
- Release fuel pressure from fuel line. Refer to EC-81, "FUEL PRESSURE RELEASE".
- Disconnect battery ground cable.
- Always replace O-ring when the fuel gauge retainer is removed.
- Do not kink or twist hose and tube when they are installed.
- Do not tighten hose and clamps excessively to avoid damaging hoses.
- After installation, run engine and check for fuel leaks at connection.
- Do not attempt to top off the fuel tank after the fuel pump nozzle shuts off automatically. Continued refueling may cause fuel overflow, resulting in fuel spray and possibly a fire.

4. DETECT MALFUNCTIONING PART

Check the EVAP hose between EVAP canister and vehicle frame for clogging or poor connection.

>> Repair or replace EVAP hose.

5. CHECK VENT HOSES AND VENT TUBES

Check hoses and tubes between EVAP canister and refueling EVAP vapor cut valve for clogging, kink, looseness and improper connection.

OK or NG

OK >> GO TO 6. NG >> Repair or replace hoses and tubes.

6. CHECK FILLER NECK TUBE

Check recirculation line for clogging, dents and cracks.

OK or NG

OK >> GO TO 7. NG >> Replace filler neck tube.

7. CHECK REFUELING EVAP VAPOR CUT VALVE

Refer to EC-43, "Component Inspection" .

OK or NG

OK >> GO TO 8. NG >> Replace refueling EVAP vapor cut valve with fuel tank.

8. CHECK FUEL FILLER TUBE

Check filler neck tube and hose connected to the fuel tank for clogging, dents and cracks.

OK or NG

OK >> GO TO 9.

NG >> Replace fuel filler tube.

9. CHECK ONE-WAY FUEL VALVE-I

Check one-way valve for clogging.

OK or NG

OK >> GO TO 10.

NG >> Repair or replace one-way fuel valve with fuel tank.

10. CHECK ONE-WAY FUEL VALVE-II

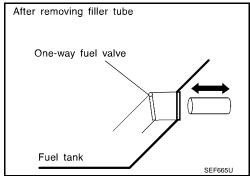

- 1. Make sure that fuel is drained from the tank.
- 2. Remove fuel filler tube and hose.
- Check one-way fuel valve for operation as follows. When a stick is inserted, the valve should open, when removing stick it should close.

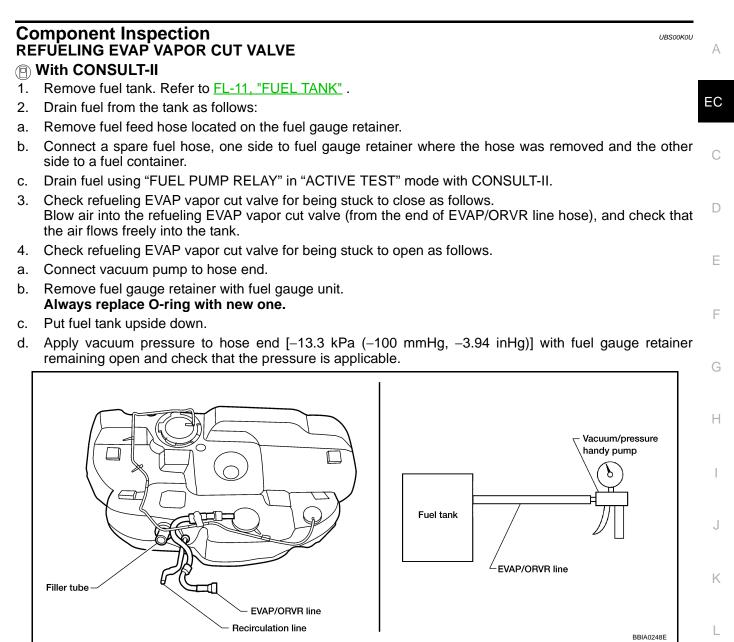

Do not drop any material into the tank.

OK or NG

OK >> INSPECTION END

NG >> Replace fuel filler tube or replace one-way fuel valve with fuel tank.

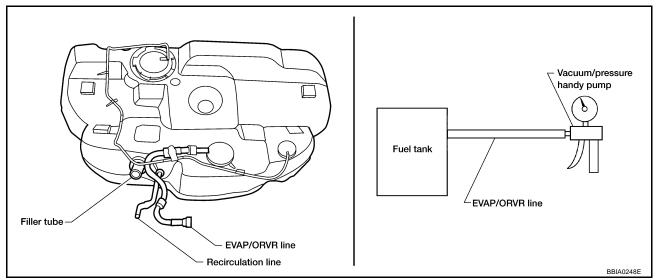

Without CONSULT-II

- 1. Remove fuel tank. Refer to FL-11, "FUEL TANK" .
- 2. Drain fuel from the tank as follows:
- a. Remove fuel gauge retainer.
- b. Drain fuel from the tank using a handy pump into a fuel container.
- Check refueling EVAP vapor cut valve for being stuck to close as follows. Blow air into the refueling EVAP vapor cut valve (from the end of EVAP/ORVR line hose), and check that the air flows freely into the tank.
- 4. Check refueling EVAP vapor cut valve for being stuck to open as follows.
- a. Connect vacuum pump to hose end.
- b. Remove fuel gauge retainer with fuel gauge unit. Always replace O-ring with new one.
- c. Put fuel tank upside down.

Μ

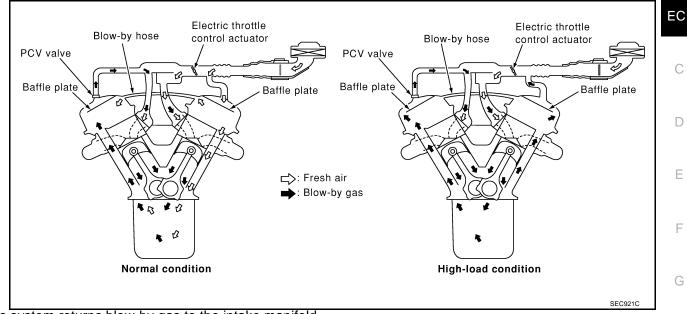

d. Apply vacuum pressure to hose end [-13.3 kPa (-100 mmHg, -3.94 inHg)] with fuel gauge retainer remaining open and check that the pressure is applicable.

POSITIVE CRANKCASE VENTILATION

POSITIVE CRANKCASE VENTILATION

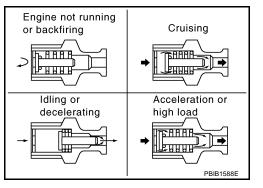

Description SYSTEM DESCRIPTION

This system returns blow-by gas to the intake manifold.

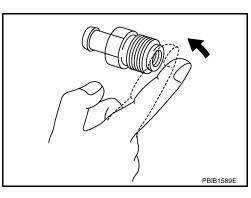

The positive crankcase ventilation (PCV) valve is provided to conduct crankcase blow-by gas to the intake manifold. During partial throttle operation of the engine, the intake manifold sucks the blow-by gas through the PCV valve. Normally, the capacity of the valve is sufficient to handle any blow-by and a small amount of ventilating air. The ventilating air is then drawn from the air inlet tubes into the crankcase. In this process the air passes through the hose connecting air inlet tubes to rocker cover. Under full-throttle condition, the manifold vacuum is insufficient to draw the blow-by flow through the valve. The flow goes through the hose connection in the reverse direction.

On vehicles with an excessively high blow-by, the valve does not meet the requirement. This is because some of the flow will go through the hose connection to the air inlet tubes under all conditions.

Component Inspection PCV (POSITIVE CRANKCASE VENTILATION) VALVE

With engine running at idle, remove PCV valve from rocker cover. A properly working valve makes a hissing noise as air passes through it. A strong vacuum should be felt immediately when a finger is placed over valve inlet.

ON BOARD DIAGNOSTIC (OBD) SYSTEM

Introduction

PFP:00028

UBS00K0Y

UBS00K0Z

The ECM has an on board diagnostic system, which detects malfunctions related to engine sensors or actuators. The ECM also records various emission-related diagnostic information including:

Emission-related diagnostic information	Diagnostic service
Diagnostic Trouble Code (DTC)	Service \$03 of SAE J1979
Freeze Frame data	Service \$02 of SAE J1979
System Readiness Test (SRT) code	Service \$01 of SAE J1979
1st Trip Diagnostic Trouble Code (1st Trip DTC)	Service \$07 of SAE J1979
1st Trip Freeze Frame data	
Test values and Test limits	Service \$06 of SAE J1979
Calibration ID	Service \$09 of SAE J1979

The above information can be checked using procedures listed in the table below.

	×: Applicable —: Not appl							
	DTC	1st trip DTC	Freeze Frame data	1st trip Freeze Frame data	SRT code	SRT status	Test value	
CONSULT-II	×	×	×	×	×	×	—	
GST	×	×	×		×	×	×	
ECM	×	×*	_	—	_	×	—	

*: When DTC and 1st trip DTC simultaneously appear on the display, they cannot be clearly distinguished from each other.

The malfunction indicator lamp (MIL) on the instrument panel lights up when the same malfunction is detected in two consecutive trips (Two trip detection logic), or when the ECM enters fail-safe mode. (Refer to <u>EC-92</u>, <u>"Fail-safe Chart"</u>.)

Two Trip Detection Logic

When a malfunction is detected for the first time, 1st trip DTC and 1st trip Freeze Frame data are stored in the ECM memory. The MIL will not light up at this stage. <1st trip>

If the same malfunction is detected again during the next drive, the DTC and Freeze Frame data are stored in the ECM memory, and the MIL lights up. The MIL lights up at the same time when the DTC is stored. <2nd trip> The "trip" in the "Two Trip Detection Logic" means a driving mode in which self-diagnosis is performed during vehicle operation. Specific on board diagnostic items will cause the ECM to light up or blink the MIL, and store DTC and Freeze Frame data, even in the 1st trip, as shown below.

×: Applicable —: Not applicable

		М	IL		D	ТС	1st trip DTC	
Items	1st trip		2nd trip		1st trip	2nd trip	1st trip	2nd trip
	Blinking	Lighting up	Blinking	Lighting up	displaying	displaying	displaying	display- ing
Misfire (Possible three way cata- lyst damage) — DTC: P0300 - P0306 is being detected	×	_	_	_	_	_	×	_
Misfire (Possible three way cata- lyst damage) — DTC: P0300 - P0306 is being detected	_	_	×	_	_	×	_	_
One trip detection diagnoses (Refer to $\underline{\text{EC-49}}$.)	_	×	_	_	×			_
Except above	—		—	×	—	×	×	

When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting up MIL when there is malfunction on engine control system.

Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.

The fail-safe function also operates when above diagnoses except MIL circuit are detected and demands the driver to repair the malfunction.

Engine operating condition in fail-safe mode

Engine speed will not rise more than 2,500 rpm due to the fuel cut

*1: 1st trip DTC No. is the same as DTC No.

*2: This number is prescribed by SAE J2012.

*3: In Diagnostic Test Mode II (Self-diagnostic results), this number is controlled by NISSAN.

*4: The troubleshooting for this DTC needs CONSULT-II.

*5: When the fail-safe operations for both self-diagnoses occur at the same time, the MIL illuminates.

*6: When the ECM is in the mode of displaying SRT status, MIL may flash. For the details, refer to EC-56, "How to Display SRT Status" .

*7: SRT code will not be set if the self-diagnostic result is NG.

DTC AND 1ST TRIP DTC

The 1st trip DTC (whose number is the same as the DTC number) is displayed for the latest self-diagnostic results obtained. If the ECM memory was cleared previously, and the 1st trip DTC did not reoccur, the 1st trip DTC will not be displayed.

If a malfunction is detected during the 1st trip, the 1st trip DTC is stored in the ECM memory. The MIL will not light up (two trip detection logic). If the same malfunction is not detected in the 2nd trip (meeting the required driving pattern), the 1st trip DTC is cleared from the ECM memory. If the same malfunction is detected in the 2nd trip, both the 1st trip DTC and DTC are stored in the ECM memory and the MIL lights up. In other words, the DTC is stored in the ECM memory and the MIL lights up. In other words, the DTC is stored in the ECM memory and the MIL lights up when the same malfunction occurs in two consecutive trips. If a 1st trip DTC is stored and a non-diagnostic operation is performed between the 1st and 2nd trips, only the 1st trip DTC will continue to be stored. For malfunctions that blink or light up the MIL during the 1st trip, the DTC and 1st trip DTC are stored in the ECM memory.

Procedures for clearing the DTC and the 1st trip DTC from the ECM memory are described in <u>EC-61, "HOW</u> <u>TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"</u>

For malfunctions in which 1st trip DTCs are displayed, refer to <u>EC-49</u>, "<u>EMISSION-RELATED DIAGNOSTIC</u> <u>INFORMATION ITEMS</u>". These items are required by legal regulations to continuously monitor the system/ component. In addition, the items monitored non-continuously are also displayed on CONSULT-II.

1st trip DTC is specified in Service \$07 of SAE J1979. 1st trip DTC detection occurs without lighting up the MIL and therefore does not warn the driver of a malfunction. However, 1st trip DTC detection will not prevent the vehicle from being tested, for example during Inspection/Maintenance (I/M) tests.

When a 1st trip DTC is detected, check, print out or write down and erase (1st trip) DTC and Freeze Frame data as specified in Work Flow procedure Step 2, refer to <u>EC-85</u>, "WORK FLOW". Then perform DTC Confirmation Procedure or Overall Function Check to try to duplicate the malfunction. If the malfunction is duplicated, the item requires repair.

How to Read DTC and 1st Trip DTC

DTC and 1st trip DTC can be read by the following methods.

() With CONSULT-II

With GST

CONSULT-II or GST (Generic Scan Tool) Examples: P0340, P0850, P1148 etc.

These DTCs are prescribed by SAE J2012.

(CONSULT-II also displays the malfunctioning component or system.)

No Tools

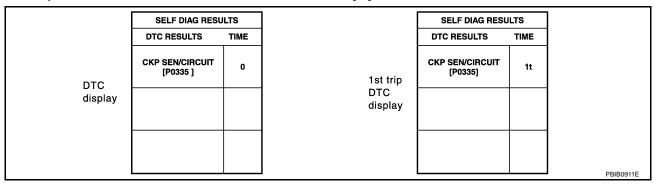

The number of blinks of the MIL in the Diagnostic Test Mode II (Self-Diagnostic Results) indicates the DTC. Example: 0340, 0850, 1148, etc.

These DTCs are controlled by NISSAN.

- 1st trip DTC No. is the same as DTC No.
- Output of a DTC indicates a malfunction. However, GST or the Diagnostic Test Mode II do not indicate whether the malfunction is still occurring or has occurred in the past and has returned to normal. CONSULT-II can identify malfunction status as shown below. Therefore, using CONSULT-II (if available) is recommended.

A sample of CONSULT-II display for DTC and 1st trip DTC is shown below. DTC or 1st trip DTC of a malfunction is displayed in SELF-DIAGNOSTIC RESULTS mode of CONSULT-II. Time data indicates how many times the vehicle was driven after the last detection of a DTC.

If the DTC is being detected currently, the time data will be [0]. If a 1st trip DTC is stored in the ECM, the time data will be [1t].

FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA

The ECM records the driving conditions such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed, vehicle speed, absolute throttle position, base fuel schedule and intake air temperature at the moment a malfunction is detected.

Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data. The data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-II or GST. The 1st trip freeze frame data can only be displayed on the CONSULT-II screen, not on the GST. For details, see <u>EC-120</u>, "Freeze Frame Data and 1st Trip Freeze Frame Data"

Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MIL on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. The ECM has the following priorities to update the data.

Priority		Items				
1	Freeze frame data	eeze frame data Misfire — DTC: P0300 - P0306 Fuel Injection System Function — DTC: P0171, P0172, P0174, P0175				
2		Except the above items (Includes CVT related items)				
3	1st trip freeze frame d	ata				

For example, the EGR malfunction (Priority: 2) was detected and the freeze frame data was stored in the 2nd trip. After that when the misfire (Priority: 1) is detected in another trip, the freeze frame data will be updated from the EGR malfunction to the misfire. The 1st trip freeze frame data is updated each time a different malfunction is detected. There is no priority for 1st trip freeze frame data. However, once freeze frame data or 1st trip freeze frame data can be stored in the ECM). If freeze frame data is stored in the ECM memory and freeze frame data with the same priority occurs later, the first (original) freeze frame data remains unchanged in the ECM memory.

Both 1st trip freeze frame data and freeze frame data (along with the DTCs) are cleared when the ECM memory is erased. Procedures for clearing the ECM memory are described in <u>EC-61, "HOW TO ERASE EMIS-SION-RELATED DIAGNOSTIC INFORMATION"</u>.

SYSTEM READINESS TEST (SRT) CODE

System Readiness Test (SRT) code is specified in Service \$01 of SAE J1979.

А

D

Ε

F

Н

J

Κ

L

As part of an enhanced emissions test for Inspection & Maintenance (I/M), certain states require the status of SRT be used to indicate whether the ECM has completed self-diagnosis of major emission systems and components. Completion must be verified in order for the emissions inspection to proceed.

If a vehicle is rejected for a State emissions inspection due to one or more SRT items indicating "INCMP", use the information in this Service Manual to set the SRT to "CMPLT".

In most cases the ECM will automatically complete its self-diagnosis cycle during normal usage, and the SRT status will indicate "CMPLT" for each application system. Once set as "CMPLT", the SRT status remains "CMPLT" until the self-diagnosis memory is erased.

Occasionally, certain portions of the self-diagnostic test may not be completed as a result of the customer's normal driving pattern; the SRT will indicate "INCMP" for these items.

NOTE:

The SRT will also indicate "INCMP" if the self-diagnosis memory is erased for any reason or if the ECM memory power supply is interrupted for several hours.

If, during the state emissions inspection, the SRT indicates "CMPLT" for all test items, the inspector will continue with the emissions test. However, if the SRT indicates "INCMP" for one or more of the SRT items the vehicle is returned to the customer untested.

NOTE:

If MIL is ON during the state emissions inspection, the vehicle is also returned to the customer untested even though the SRT indicates "CMPLT" for all test items. Therefore, it is important to check SRT ("CMPLT") and DTC (No DTCs) before the inspection.

SRT Item

The table below shows required self-diagnostic items to set the SRT to "CMPLT".

SRT item (CONSULT-II indication)	Performance Priority*1	Required self-diagnostic items to set the SRT to "CMPLT"	Corresponding DTC No.
CATALYST	3	Three way catalyst function	P0420, P0430
	3	EVAP control system purge flow monitoring	P0441
EVAP SYSTEM	2	EVAP control system	P0442
	3	EVAP control system	P0456
HO2S	3	A/F sensor 1	P0133, P0153
		Heated oxygen sensor 2	P0137, P0157
		Heated oxygen sensor 2	P0138, P0158
		Heated oxygen sensor 2	P0139, P0159

*1: If completion of several SRTs is required, perform driving patterns (DTC confirmation procedure), one by one based on the priority for models with CONSULT-II.

SRT Set Timing

SRT is set as "CMPLT" after self-diagnosis has been performed one or more times. Completion of SRT is done regardless of whether the result is OK or NG. The set timing is different between OK and NG results and is shown in the table below.

	Self-diagnosis result		Example						
Self-diagr			$\begin{array}{c c} \mbox{lgnition cycle} \\ \hline \mbox{Diagnosis} & \leftarrow \mbox{ON} \rightarrow & \mbox{OFF} & \leftarrow \mbox{ON} \rightarrow & \mbox{OFF} \\ \end{array}$						
All OK	Case 1	P0400	OK (1)	— (1)	OK (2)	— (2)			
		P0402	OK (1)	— (1)	— (1)	OK (2)			
		P1402	OK (1)	OK (2)	— (2)	— (2)			
		SRT of EGR	"CMPLT"	"CMPLT"	"CMPLT"	"CMPLT"			
	Case 2	P0400	OK (1)	— (1)	— (1)	— (1)			
		P0402	— (0)	— (0)	OK (1)	— (1)			
		P1402	OK (1)	OK (2)	— (2)	— (2)			
		SRT of EGR	"INCMP"	"INCMP"	"CMPLT"	"CMPLT"			

NG exists	Case 3	P0400	ОК	ОК	—	—	^
		P0402	_		_		A
		P1402	NG	_	NG	NG (Consecutive NG)	EC
		(1st trip) DTC	1st trip DTC	_	1st trip DTC	DTC (= MIL ON)	
		SRT of EGR	"INCMP"	"INCMP"	"INCMP"	"CMPLT"	С

OK: Self-diagnosis is carried out and the result is OK.

NG: Self-diagnosis is carried out and the result is NG.

-: Self-diagnosis is not carried out.

When all SRT related self-diagnoses showed OK results in a single cycle (Ignition OFF-ON-OFF), the SRT will indicate "CMPLT". \rightarrow Case 1 above

When all SRT related self-diagnoses showed OK results through several different cycles, the SRT will indicate "CMPLT" at the time the respective self-diagnoses have at least one OK result. \rightarrow Case 2 above

If one or more SRT related self-diagnoses showed NG results in 2 consecutive cycles, the SRT will also indicate "CMPLT". \rightarrow Case 3 above

The table above shows that the minimum number of cycles for setting SRT as "INCMP" is one (1) for each self-diagnosis (Case 1 & 2) or two (2) for one of self-diagnoses (Case 3). However, in preparation for the state emissions inspection, it is unnecessary for each self-diagnosis to be executed twice (Case 3) for the following reasons:

- The SRT will indicate "CMPLT" at the time the respective self-diagnoses have one (1) OK result.
- The emissions inspection requires "CMPLT" of the SRT only with OK self-diagnosis results.
- When, during SRT driving pattern, 1st trip DTC (NG) is detected prior to "CMPLT" of SRT, the self-diagnosis memory must be erased from ECM after repair.
- If the 1st trip DTC is erased, all the SRT will indicate "INCMP".

NOTE:

SRT can be set as "CMPLT" together with the DTC(s). Therefore, DTC check must always be carried out prior to the state emission inspection even though the SRT indicates "CMPLT".

SRT Service Procedure

If a vehicle has failed the state emissions inspection due to one or more SRT items indicating "INCMP", review the flowchart diagnostic sequence on the next page.

Н

Trip DTC"

How to Display SRT Status

B WITH CONSULT-II

Selecting "SRT STATUS" in "DTC CONFIRMATION" mode with CONSULT-II.

For items whose SRT codes are set, a "CMPLT" is displayed on the CONSULT-II screen; for items whose SRT codes are not set, "INCMP" is displayed.

A sample of CONSULT-II display for SRT code is shown at right. "INCMP" means the self-diagnosis is incomplete and SRT is not set. "CMPLT" means the self-diagnosis is complete and SRT is set.

SRT STAT	US	
CATALYST EVAP SYSTEM HO2S HTR HO2S	CMPLT INCMP CMPLT CMPLT	
		SEF935Z

NOTE:

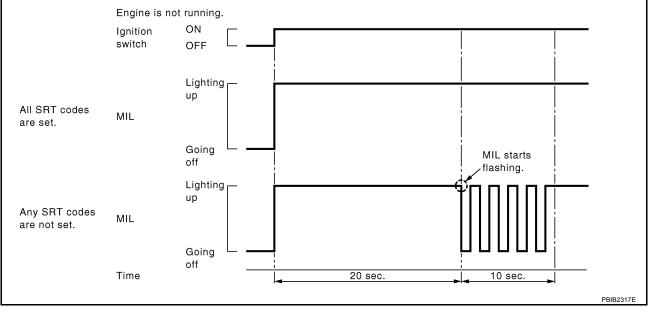

Though displayed on the CONSULT-II screen, "HO2S HTR" is not SRT item.

WITH GST Selecting Service \$01 with GST (Generic Scan Tool)

NO TOOLS

A SRT code itself can not be displayed while only SRT status can be.

- 1. Turn ignition switch ON and wait 20 seconds.
- 2. SRT status is indicated as shown below.
 - When all SRT codes are set, MIL lights up continuously.
 - When any SRT codes are not set, MIL will flash periodically for 10 seconds.

How to Set SRT Code

To set all SRT codes, self-diagnosis for the items indicated above must be performed one or more times. Each diagnosis may require a long period of actual driving under various conditions.

(B) WITH CONSULT-II

Perform corresponding DTC Confirmation Procedure one by one based on Performance Priority in the table on <u>EC-54, "SRT Item"</u>.

WITHOUT CONSULT-II

The most efficient driving pattern in which SRT codes can be properly set is explained on the next page. The driving pattern should be performed one or more times to set all SRT codes.

TEST VALUE AND TEST LIMIT (GST ONLY - NOT APPLICABLE TO CONSULT-II)

The following is the information specified in Service \$06 of SAE J1979.

The test value is a parameter used to determine whether a system/circuit diagnostic test is OK or NG while being monitored by the ECM during self-diagnosis. The test limit is a reference value which is specified as the maximum or minimum value and is compared with the test value being monitored.

These data (test value and test limit) are specified by Test ID (TID) and Component ID (CID) and can be displayed on the GST screen.

ltem	Self-diagnostic test item	DTC	Test value (GST display)		Test limit	Conversion

HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION How to Erase DTC

B WITH CONSULT-II

The emission related diagnostic information in the ECM can be erased by selecting "ERASE" in the "SELF-DIAG RESULTS" mode with CONSULT-II.

If DTCs are displayed for both ECM and TCM (Transmission control module), they need to be erased individually from the ECM and TCM (Transmission control module).

NOTE:

If the DTC is not for CVT related items (see <u>EC-8, "INDEX FOR DTC"</u>), skip steps 2 through 4.

- 1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
- 2. Turn CONSULT-II ON and touch "TRANSMISSION".
- 3. Touch "SELF-DIAG RESULTS".
- 4. Touch "ERASE". [The DTC in the TCM (Transmission control module) will be erased.] Then touch "BACK" twice.
- 5. Touch "ENGINE".
- 6. Touch "SELF-DIAG RESULTS".

М

L

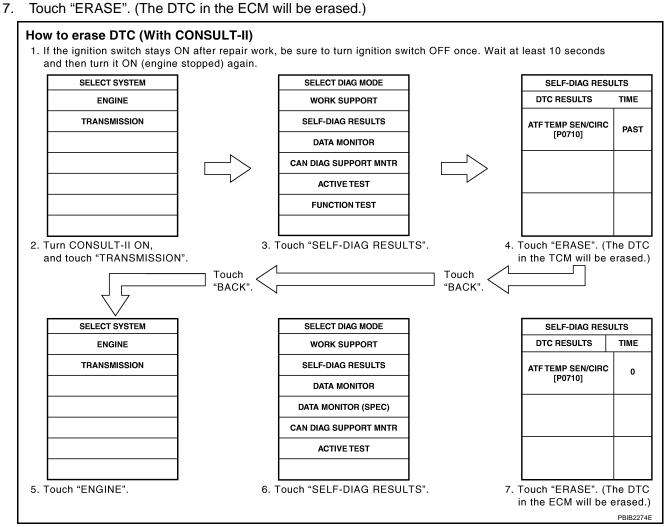

Е

F

Н

J

Κ

WITH GST

The emission related diagnostic information in the ECM can be erased by selecting Service \$04 with GST. **NOTE:**

If the DTC is not for CVT related items (see EC-8, "INDEX FOR DTC"), skip step 2.

- 1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
- 2. Perform <u>CVT-31, "HOW TO ERASE DTC (WITH GST)"</u>. (The DTC in TCM will be erased)
- 3. Select Service \$04 with GST (Generic Scan Tool).

No Tools

NOTE:

If the DTC is not for CVT related items (see <u>EC-8, "INDEX FOR DTC"</u>), skip step 2.

- 1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
- 2. Perform CVT-30, "HOW TO ERASE DTC" . (The DTC in the TCM will be erased.)
- 3. Change the diagnostic test mode from Mode II to Mode I by depressing the accelerator pedal. Refer to <u>EC-64, "HOW TO SWITCH DIAGNOSTIC TEST MODE"</u>.
- If the battery is disconnected, the emission-related diagnostic information will be lost within 24 hours.
- The following data are cleared when the ECM memory is erased.
- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data

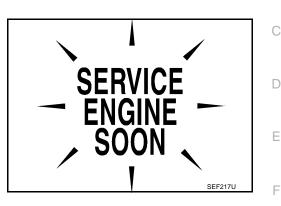

- System readiness test (SRT) codes
- Test values

Actual work procedures are explained using a DTC as an example. Be careful so that not only the DTC, but all of the data listed above, are cleared from the ECM memory during work procedures.

Malfunction Indicator Lamp (MIL) DESCRIPTION

The MIL is located on the instrument panel.

- The MIL will light up when the ignition switch is turned ON without the engine running. This is a bulb check. If the MIL does not light up, refer to <u>DI-39</u>, "WARNING LAMPS", or see <u>EC-662</u>, "MIL AND DATA LINK CONNECTOR".
- 2. When the engine is started, the MIL should go off. If the MIL remains on, the on board diagnostic system has detected an engine system malfunction.

Н

J

Κ

L

Μ

UBS00K11

ON BOARD DIAGNOSTIC SYSTEM FUNCTION

The on board diagnostic system has the following three functions.

Diagnostic Test Mode	KEY and ENG. Status	Function	Explanation of Function
Mode I	Ignition switch in ON position	BULB CHECK	This function checks the MIL bulb for damage (blown, open circuit, etc.). If the MIL does not come on, check MIL circuit.
	Engine running	MALFUNCTION WARNING	 This is a usual driving condition. When a malfunction is detected twice in two consecutive driving cycles (two trip detection logic), the MIL will light up to inform the driver that a malfunction has been detected. The following malfunctions will light up or blink the MIL in the 1st trip. Misfire (Possible three way catalyst damage) One trip detection diagnoses
Mode II	Ignition switch in ON position	SELF-DIAGNOSTIC RESULTS	This function allows DTCs and 1st trip DTCs to be read.

When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting up MIL when there is malfunction on engine control system.

Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.

The fail-safe function also operates when above diagnoses except MIL circuit are detected and demands the driver to repair the malfunction.

Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut

MIL Flashing Without DTC

When any SRT codes are not set, MIL may flash without DTC. For the details, refer to <u>EC-56, "How to Display</u> <u>SRT Status"</u>.

HOW TO SWITCH DIAGNOSTIC TEST MODE

NOTE:

- It is better to count the time accurately with a clock.
- It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.
- Always ECM returns to Diagnostic Test Mode I after ignition switch is turned OFF.

How to Set Diagnostic Test Mode II (Self-diagnostic Results)

- 1. Confirm that accelerator pedal is fully released, turn ignition switch ON and wait 3 seconds.
- 2. Repeat the following procedure quickly five times within 5 seconds.
- a. Fully depress the accelerator pedal.
- b. Fully release the accelerator pedal.
- 3. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 10 seconds until the MIL starts blinking.

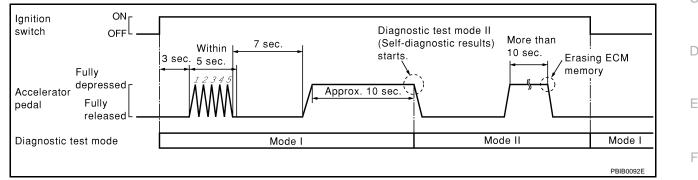

NOTE:

Do not release the accelerator pedal for 10 seconds if MIL may start blinking on the halfway of this 10 seconds. This blinking is displaying SRT status and is continued for another 10 seconds. For the details, refer to <u>EC-56</u>, "<u>How to Display SRT Status</u>".

4. Fully release the accelerator pedal. ECM has entered to Diagnostic Test Mode II (Self-diagnostic results).

NOTE:

Wait until the same DTC (or 1st trip DTC) appears to confirm all DTCs certainly.

How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

- Set ECM in Diagnostic Test Mode II (Self-diagnostic results). Refer to <u>EC-64, "How to Set Diagnostic Test</u> OMOde II (Self-diagnostic Results)".
- Fully depress the accelerator pedal and keep it for more than 10 seconds. The emission-related diagnostic information has been erased from the backup memory in the ECM.
- 3. Fully release the accelerator pedal, and confirm the DTC 0000 is displayed.

DIAGNOSTIC TEST MODE I — BULB CHECK

In this mode, the MIL on the instrument panel should stay ON. If it remains OFF, check the bulb. Refer to <u>DI-</u> <u>39, "WARNING LAMPS"</u> or see <u>EC-662, "MIL AND DATA LINK CONNECTOR"</u>.

DIAGNOSTIC TEST MODE I - MALFUNCTION WARNING

MIL	Condition	
ON	When the malfunction is detected.	
OFF	No malfunction.	K

This DTC number is clarified in Diagnostic Test Mode II (SELF-DIAGNOSTIC RESULTS)

DIAGNOSTIC TEST MODE II — SELF-DIAGNOSTIC RESULTS

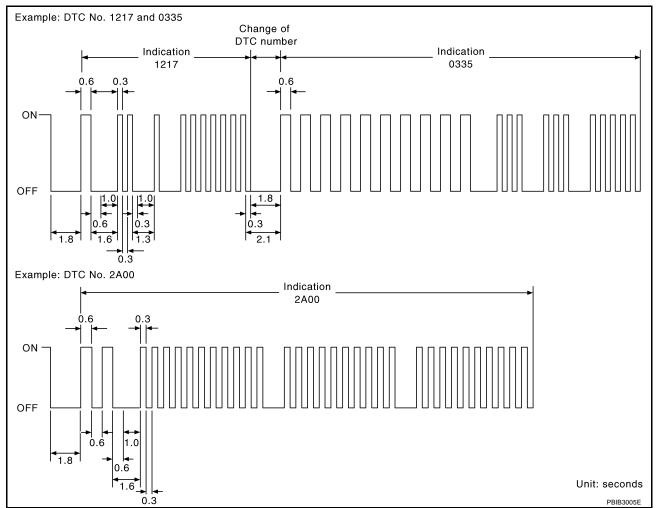

In this mode, the DTC and 1st trip DTC are indicated by the number of blinks of the MIL as shown below. The DTC and 1st trip DTC are displayed at the same time. If the MIL does not illuminate in diagnostic test mode I (Malfunction warning), all displayed items are 1st trip DTCs. If only one code is displayed when the MIL illuminates in diagnostic test mode II (SELF-DIAGNOSTIC RESULTS), it is a DTC; if two or more codes are displayed, they may be either DTCs or 1st trip DTCs. DTC No. is same as that of 1st trip DTC. These uniden-

```
EC
```

Н

А

tified codes can be identified by using the CONSULT-II or GST. A DTC will be used as an example for how to read a code.

A particular trouble code can be identified by the number of four-digit numeral flashes. The "zero" is indicated by the number of ten flashes. The "A" is indicated by the number of eleven flash. The length of time the 1,000th-digit numeral flashes on and off is 1.2 seconds consisting of an ON (0.6-second) - OFF (0.6-second) cycle.

The 100th-digit numeral and lower digit numerals consist of a 0.3-second ON and 0.3-second OFF cycle. A change from one digit numeral to another occurs at an interval of 1.0-second OFF. In other words, the later numeral appears on the display 1.3 seconds after the former numeral has disappeared.

A change from one trouble code to another occurs at an interval of 1.8-second OFF.

In this way, all the detected malfunctions are classified by their DTC numbers. The DTC 0000 refers to no malfunction. (See <u>EC-8, "INDEX FOR DTC"</u>)

How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

The DTC can be erased from the back up memory in the ECM by depressing accelerator pedal. Refer to <u>EC-66, "How to Erase Diagnostic Test Mode II (Self-diagnostic Results)"</u>.

- If the battery is disconnected, the DTC will be lost from the backup memory within 24 hours.
- Be careful not to erase the stored memory before starting trouble diagnoses.

OBD System Operation Chart RELATIONSHIP BETWEEN MIL, 1ST TRIP DTC, DTC, AND DETECTABLE ITEMS

UBS00K12

- When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data are stored in the ECM memory.
- When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data are stored in the ECM memory, and the MIL will come on. For details, refer to <u>EC-48</u>, "Two Trip Detection <u>Logic</u>".

- The MIL will go off after the vehicle is driven 3 times (driving pattern B) with no malfunction. The drive is counted only when the recorded driving pattern is met (as stored in the ECM). If another malfunction occurs while counting, the counter will reset.
- The DTC and the freeze frame data will be stored until the vehicle is driven 40 times (driving pattern A) without the same malfunction recurring (except for Misfire and Fuel Injection System). For Misfire and Fuel Injection System, the DTC and freeze frame data will be stored until the vehicle is driven 80 times (driving pattern C) without the same malfunction recurring. The "TIME" in "SELF-DIAGNOSTIC RESULTS" mode of CONSULT-II will count the number of times the vehicle is driven.
- The 1st trip DTC is not displayed when the self-diagnosis results in OK for the 2nd trip.

SUMMARY CHART

Items	Fuel Injection System	Misfire	Other	[
MIL (goes off)	3 (pattern B)	3 (pattern B)	3 (pattern B)

BASIC SERVICE PROCEDURE

Basic Inspection

- 1. INSPECTION START
- 1. Check service records for any recent repairs that may indicate a related malfunction, or a current need for scheduled maintenance.
- 2. Open engine hood and check the following:
- Harness connectors for improper connections
- Wiring harness for improper connections, pinches and cut
- Vacuum hoses for splits, kinks and improper connections
- Hoses and ducts for leaks
- Air cleaner clogging
- Gasket
- 3. Confirm that electrical or mechanical loads are not applied.
- Headlamp switch is OFF.
- Air conditioner switch is OFF.
- Rear window defogger switch is OFF.
- Steering wheel is in the straight-ahead position, etc.
- Start engine and warm it up until engine coolant temperature indicator points the middle of gauge. Ensure engine stays below 1,000 rpm.

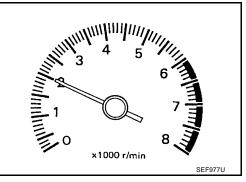

- 5. Run engine at about 2,000 rpm for about 2 minutes under no load.
- 6. Make sure that no DTC is displayed with CONSULT-II or GST.

OK or NG

Accelerator Pedal Released Position Learning DESCRIPTION

Accelerator Pedal Released Position Learning is an operation to learn the fully released position of the accelerator pedal by monitoring the accelerator pedal position sensor output signal. It must be performed each time harness connector of accelerator pedal position sensor or ECM is disconnected.

OPERATION PROCEDURE

- 1. Make sure that accelerator pedal is fully released.
- 2. Turn ignition switch ON and wait at least 2 seconds.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Turn ignition switch ON and wait at least 2 seconds.
- 5. Turn ignition switch OFF and wait at least 10 seconds.

Throttle Valve Closed Position Learning DESCRIPTION

Throttle Valve Closed Position Learning is an operation to learn the fully closed position of the throttle valve by monitoring the throttle position sensor output signal. It must be performed each time harness connector of electric throttle control actuator or ECM is disconnected.

OPERATION PROCEDURE

- 1. Make sure that accelerator pedal is fully released.
- 2. Turn ignition switch ON.
- 3. Turn ignition switch OFF and wait at least 10 seconds. Make sure that throttle valve moves during above 10 seconds by confirming the operating sound.

Idle Air Volume Learning DESCRIPTION

Idle Air Volume Learning is an operation to learn the idle air volume that keeps each engine within the specific range. It must be performed under any of the following conditions:

- Each time electric throttle control actuator or ECM is replaced.
- Idle speed or ignition timing is out of specification.

PREPARATION

Before performing Idle Air Volume Learning, make sure that all of the following conditions are satisfied. Learning will be cancelled if any of the following conditions are missed for even a moment.

- Battery voltage: More than 12.9V (At idle)
- Engine coolant temperature: 70 100°C (158 212°F)
- PNP switch: ON
- Electric load switch: OFF

 (Air conditioner, headlamp, rear window defogger)
 On vehicles equipped with daytime light systems, if the parking brake is applied before the engine is start the headlamp will not be illuminated.
- Steering wheel: Neutral (Straight-ahead position)
- Vehicle speed: Stopped
- Transmission: Warmed-up

- With CONSULT-II: Drive vehicle until "FLUID TEMP SE" in "DATA MONITOR" mode of "CVT" system indicates less than 0.9V.
- Without CONSULT-II: Drive vehicle for 10 minutes.

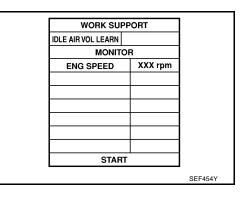

OPERATION PROCEDURE

With CONSULT-II

- 1. Perform EC-79, "Accelerator Pedal Released Position Learning" .
- 2. Perform EC-79, "Throttle Valve Closed Position Learning" .
- 3. Start engine and warm it up to normal operating temperature.
- 4. Check that all items listed under the topic PREPARATION (previously mentioned) are in good order.
- 5. Select "IDLE AIR VOL LEARN" in "WORK SUPPORT" mode.

6. Touch "START" and wait 20 seconds.

- 7. Make sure that "CMPLT" is displayed on CONSULT-II screen. If "CMPLT" is not displayed, Idle Air Volume Learning will not be carried out successfully. In this case, find the cause of the incident by referring to the DIAGNOSTIC PROCEDURE below.
- 8. Rev up the engine 2 or 3 times and make sure that idle speed and ignition timing are within the specifications.

ITEM	SPECIFICATION
Idle speed	600 ± 50 rpm (in P or N position)
Ignition timing	$15 \pm 5^{\circ}$ BTDC (in P or N position)

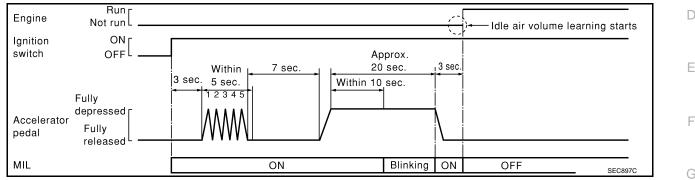

Without CONSULT-II

NOTE:

- It is better to count the time accurately with a clock.
- It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.
- 1. Perform EC-79, "Accelerator Pedal Released Position Learning" .
- 2. Perform EC-79, "Throttle Valve Closed Position Learning" .
- 3. Start engine and warm it up to normal operating temperature.
- 4. Check that all items listed under the topic PREPARATION (previously mentioned) are in good order.
- 5. Turn ignition switch OFF and wait at least 10 seconds.

- 6. Confirm that accelerator pedal is fully released, turn ignition switch ON and wait 3 seconds.
- 7. Repeat the following procedure quickly five times within 5 seconds.
- a. Fully depress the accelerator pedal.
- b. Fully release the accelerator pedal.
- 8. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 20 seconds until the MIL stops blinking and turned ON.
- 9. Fully release the accelerator pedal within 3 seconds after the MIL turned ON.
- 10. Start engine and let it idle.
- 11. Wait 20 seconds.

12. Rev up the engine 2 or 3 times and make sure that idle speed and ignition timing are within the specifications.

ITEM	SPECIFICATION
Idle speed	600 ± 50 rpm (in P or N position)
Ignition timing	$15 \pm 5^{\circ}$ BTDC (in P or N position)

13. If idle speed and ignition timing are not within the specification, Idle Air Volume Learning will not be carried out successfully. In this case, find the cause of the incident by referring to the DIAGNOSTIC PROCE-DURE below.

DIAGNOSTIC PROCEDURE

If idle air volume learning cannot be performed successfully, proceed as follows:

- 1. Check that throttle valve is fully closed.
- 2. Check PCV valve operation.
- 3. Check that downstream of throttle valve is free from air leakage.
- 4. When the above three items check out OK, engine component parts and their installation condition are questionable. Check and eliminate the cause of the incident. It is useful to perform <u>EC-137</u>, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE".
- 5. If any of the following conditions occur after the engine has started, eliminate the cause of the incident and perform Idle Air Volume Learning all over again:
 - Engine stalls.
 - Erroneous idle.

Fuel Pressure Check FUEL PRESSURE RELEASE

With CONSULT-II

1. Turn ignition switch ON.

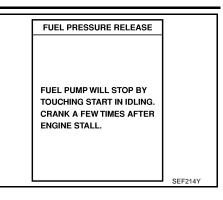

UBS00QB0

А

Н

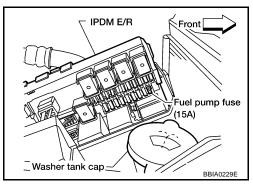

Κ

- Perform "FUEL PRESSURE RELEASE" in "WORK SUPPORT" mode with CONSULT-II.
- 3. Start engine.
- 4. After engine stalls, crank it 2 or 3 times to release all fuel pressure.
- 5. Turn ignition switch OFF.

- 1. Remove fuel pump fuse located in IPDM E/R.
- 2. Start engine.
- 3. After engine stalls, crank it 2 or 3 times to release all fuel pressure.
- 4. Turn ignition switch OFF.
- 5. Reinstall fuel pump fuse after servicing fuel system.

FUEL PRESSURE CHECK

CAUTION:

- Before disconnecting fuel line, release fuel pressure from fuel line to eliminate danger.
- Be careful not to scratch or get the fuel hose connection area dirty when servicing, so that the quick connector o-ring maintains sealability.
- Use Fuel Pressure Gauge Kit J-44321 and Fuel Pressure Adapter J-44321-6 to check fuel pressure.
- Do not perform fuel pressure check with electrical system operating (i.e. lights, rear defogger, A/C, etc.). Fuel pressure gauge may indicate false readings due to varying engine loads and changes in manifold vacuum.

NOTE:

Prepare pans or saucers under the disconnected fuel line because the fuel may spill out. The fuel pressure cannot be completely released because A34 models do not have fuel return system.

- 1. Release fuel pressure to zero. Refer to EC-81, "FUEL PRESSURE RELEASE" .
- 2. Remove fuel hose using Quick Connector Release J-45488. Refer to <u>EM-18, "INTAKE MANIFOLD COL-</u> <u>LECTOR"</u>.
 - Do not twist or kink fuel hose because it is plastic hose.
 - Do not remove fuel hose from quick connector.
 - Keep fuel hose connections clean.
- 3. Install Fuel Pressure Adapter J-44321-6 and Fuel Pressure Gauge (from kit J-44321) as shown in figure.
 - Do not distort or bend fuel rail tube when installing fuel pressure gauge adapter.
 - When reconnecting fuel hose, check the original fuel hose for damage and abnormality.
- 4. Turn ignition switch ON (reactivate fuel pump), and check for fuel leakage.
- 5. Start engine and check for fuel leakage.
- 6. Read the indication of fuel pressure gauge.
 - During fuel pressure check, check for fuel leakage from fuel connection every 3 minutes.

At idling: Approximately 350 kPa (3.57 kg/cm², 51 psi)

- 7. If result is unsatisfactory, go to next step.
- 8. Check the following.
 - Fuel hoses and fuel tubes for clogging

	Fuel filter for clogging	
	Fuel pump	А
	 Fuel pressure regulator for clogging 	
	If OK, replace fuel pressure regulator. If NG, repair or replace.	EC
9.	Before disconnecting Fuel Pressure Gauge and Fuel Pressure Adapter J-44321-6, release fuel pressure to zero. Refer to <u>EC-81, "FUEL PRESSURE RELEASE"</u> .	С

Trouble Diagnosis Introduction INTRODUCTION

The engine has an ECM to control major systems such as fuel control, ignition control, idle air control system, etc. The ECM accepts input signals from sensors and instantly drives actuators. It is essential that both input and output signals are proper and stable. At the same time, it is important that there are no malfunctions such as vacuum leaks, fouled spark plugs, or other malfunctions with the engine.

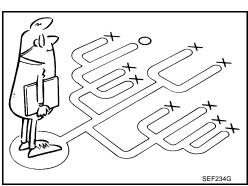

It is much more difficult to diagnose an incident that occurs intermittently rather than continuously. Most intermittent incidents are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.

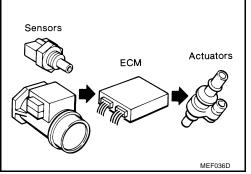

A visual check only may not find the cause of the incidents. A road test with CONSULT-II (or GST) or a circuit tester connected should be performed. Follow the Work Flow on <u>EC-85</u>, "WORK FLOW".

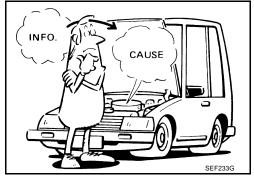

Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a driveability complaint. The customer can supply good information about such incidents, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A Diagnostic Worksheet like the example on <u>EC-89</u>, "Worksheet Sample" should be used.

Start your diagnosis by looking for conventional malfunctions first. This will help troubleshoot driveability malfunctions on an electronically controlled engine vehicle.

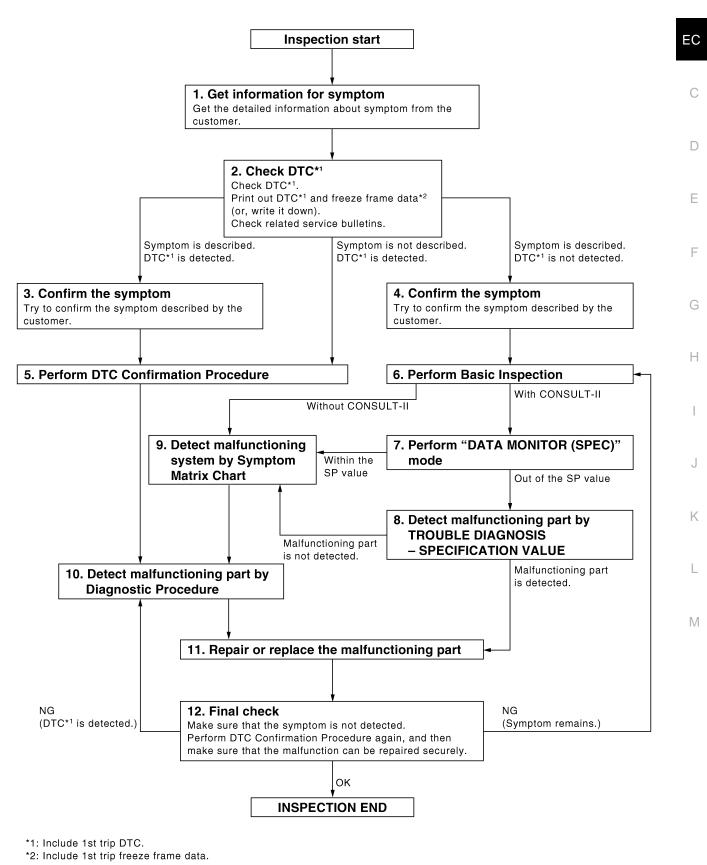

PFP:00004

UBS00K1B

WORK FLOW Overall Sequence

PBIB2267E

А

Detailed Flow

1. GET INFORMATION FOR SYMPTOM

Get the detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurred) using the <u>EC-88, "DIAGNOSTIC WORKSHEET"</u>.

>> GO TO 2.

2. снеск dtc*¹

- 1. Check DTC*¹.
- 2. Perform the following procedure if DTC^{*1} is displayed.
- Record DTC^{*1} and freeze frame data^{*2}. (Print them out with CONSULT-II or GST.)
- Erase DTC*¹. (Refer to <u>EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"</u>.)
- Study the relationship between the cause detected by DTC^{*1} and the symptom described by the customer. (Symptom Matrix Chart is useful. Refer to <u>EC-93</u>, "Symptom Matrix Chart".)
- 3. Check related service bulletins for information.
- Is any symptom described and any DTC detected?

Symptom is described, DTC^{*1} is displayed>>GO TO 3. Symptom is described, DTC^{*1} is not displayed>>GO TO 4. Symptom is not described, DTC^{*1} is displayed>>GO TO 5.

3. CONFIRM THE SYMPTOM

Try to confirm the symptom described by the customer (except MIL ON).

DIAGNOSIS WORK SHEET is useful to verify the incident.

Connect CONSULT-II to the vehicle in "DATA MONITOR (AUTO TRIG)" mode and check real time diagnosis results.

Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 5.

4. CONFIRM THE SYMPTOM

Try to confirm the symptom described by the customer.

DIAGNOSIS WORK SHEET is useful to verify the incident.

Connect CONSULT-II to the vehicle in "DATA MONITOR (AUTO TRIG)" mode and check real time diagnosis results.

Verify relation between the symptom and the condition when the symptom is detected.

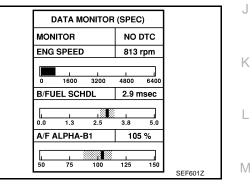

>> GO TO 6.

5. PERFORM DTC CONFIRMATION PROCEDURE

	A
Perform DTC Confirmation Procedure for the displayed DTC ^{*1} , and then make sure that DTC ^{*1} is detected again.	<i>x</i>
At this time, always connect CONSULT-II to the vehicle, and check diagnostic results in real time on "DATA MONITOR (AUTO TRIG)".	EC
If two or more DTCs ^{*1} are detected, refer to <u>EC-90, "DTC Inspection Priority Chart"</u> and determine trouble diagnosis order.	С
NOTE:	
 Freeze frame data^{*2} is useful if the DTC^{*1} is not detected. 	
• Perform Overall Function Check if DTC Confirmation Procedure is not included on Service Manual. This simplified check procedure is an effective alternative though DTC ^{*1} cannot be detected during this check.	D
If the result of Overall Function Check is NG, it is the same as the detection of DTC ^{*1} by DTC Confirma- tion Procedure.	Е
Is DTC* ¹ detected?	
Yes >> GO TO 10. No >> Check according to <u>EC-147, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"</u> .	F
6. PERFORM BASIC INSPECTION	G
Perform <u>EC-72, "Basic Inspection"</u> .	
With CONSULT-II>>GO TO 7. Without CONSULT-II>>GO TO 9.	Η
7. PERFORM DATA MONITOR (SPEC) MODE	
With CONSULT-II Make sure that "MAS A/F SE-B1", "B/FUEL SCHDL", and "A/F ALPHA-B1", "A/F ALPHA-B2" are within the SP value using CON- SULT-II "DATA MONITOR (SPEC)" mode. Refer to EC-138, "Diag- MONITOR NO DTC	J

nostic Procedure". Are they within the SP value?

Yes	>> GO TO 9.
No	>> GO TO 8.

8. DETECT MALFUNCTIONING PART BY TROUBLE DIAGNOSIS - SPECIFICATION VALUE

Detect malfunctioning part according to <u>EC-137, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE"</u>. Is malfunctioning part detected?

Yes >> GO TO 11. No >> GO TO 9.

9. DETECT MALFUNCTIONING SYSTEM BY SYMPTOM MATRIX CHART

Detect malfunctioning system according to <u>EC-93</u>, "Symptom Matrix Chart" based on the confirmed symptom in step 4, and determine the trouble diagnosis order based on possible causes and symptom.

>> GO TO 10.

10. DETECT MALFUNCTIONING PART BY DIAGNOSTIC PROCEDURE

Inspect according to Diagnostic Procedure of the system.

NOTE:

The Diagnostic Procedure in EC section described based on open circuit inspection. A short circuit inspection is also required for the circuit check in the Diagnostic Procedure. For details, refer to Circuit Inspection in <u>GI-26</u>, "How to Perform Efficient Diagnosis for an Electrical Incident".

Is malfunctioning part detected?

- Yes >> GO TO 11.
- No >> Monitor input data from related sensors or check voltage of related ECM terminals using CON-SULT-II. Refer to <u>EC-107</u>, "<u>ECM Terminals and Reference Value</u>", <u>EC-132</u>, "<u>CONSULT-II Reference Value in Data Monitor</u>".

11. REPAIR OR REPLACE THE MALFUNCTIONING PART

- 1. Repair or replace the malfunctioning part.
- 2. Reconnect parts or connectors disconnected during Diagnostic Procedure again after repair and replacement.
- 3. Check DTC. If DTC is displayed, erase it, refer to <u>EC-61, "HOW TO ERASE EMISSION-RELATED DIAG-NOSTIC INFORMATION"</u>.

>> GO TO 12.

12. FINAL CHECK

When DTC was detected in step 2, perform DTC Confirmation Procedure or Overall Function Check again, and then make sure that the malfunction have been repaired securely.

When symptom was described from the customer, refer to confirmed symptom in step 3 or 4, and make sure that the symptom is not detected.

OK or NG

- NG (DTC^{*1} is detected)>>GO TO 10.
- NG (Symptom remains)>>GO TO 6. OK >> 1. Before returning the vel
 - >> 1. Before returning the vehicle to the customer, make sure to erase unnecessary DTC*¹ in ECM and TCM (Transmission Control Module). (Refer to <u>EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"</u> and <u>CVT-30, "HOW TO ERASE DTC"</u>.)
 - 2. If the completion of SRT is needed, drive vehicle under the specific driving pattern. Refer to <u>EC-58, "Driving Pattern"</u>.

3. INSPECTION END

*1: Include 1st trip DTC.

*2: Include 1st trip freeze frame data.

DIAGNOSTIC WORKSHEET

Description

There are many operating conditions that lead to the malfunction of engine components. A good grasp of such conditions can make troubleshooting faster and more accurate.

In general, each customer feels differently about a incident. It is important to fully understand the symptoms or conditions for a customer complaint.

Utilize a diagnostic worksheet like the one on the next page in order to organize all the information for troubleshooting.

Some conditions may cause the MIL to come on steady or blink and DTC to be detected. Examples:

- Vehicle ran out of fuel, which caused the engine to misfire.
- Fuel filler cap was left off or incorrectly screwed on, allowing fuel to evaporate into the atmosphere.

KEY POINTS

- WHAT Vehicle & engine model WHEN Date, Frequencies
- WHERE..... Road conditions
- HOW Operating conditions, Weather conditions, Symptoms

DTC Inspection Priority Chart

UBS000Z8

If some DTCs are displayed at the same time, perform inspections one by one based on the following priority chart.

NOTE:

- If DTC U1000 and/or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000, U1001. Refer to <u>EC-157, "DTC U1000, U1001 CAN COMMUNICATION LINE"</u>.
- If DTC U1010 is displayed with other DTC, first perform the trouble diagnosis for DTC U1010. Refer to <u>EC-160, "DTC U1010 CAN COMMUNICATION"</u>.

Priority	Detected items (DTC)		
1	U1000 U1001 CAN communication line		
	U1010 CAN communication		
	P0101 P0102 P0103 Mass air flow sensor		
	P0112 P0113 P0127 Intake air temperature sensor

• When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting up MIL when there is malfunction on engine control system.

Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.

The fail-safe function also operates when above diagnoses except MIL circuit are detected and demands the driver to repair the malfunction.

Engine operating condition in fail-safe mode Engine speed will not rise more than 2,500 rpm due to the fuel cut

ECM Harness Connector Terminal Layout

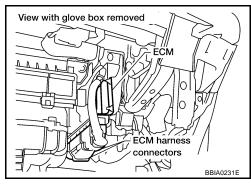

ECM Terminals and Reference Value PREPARATION

- 1. ECM is located behind the glove box. For this inspection, remove glove box.
- 2. Remove ECM harness connector.

- 4. Connect a break-out box (SST) and Y-cable adapter (SST) between the ECM and ECM harness connector.
 - Use extreme care not to touch 2 pins at one time.
 - Data is for comparison and may not be exact.

ECM INSPECTION TABLE

Specification data are reference values and are measured between each terminal and ground. Pulse signal is measured by CONSULT-II.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECMs transistor. Use a ground other than ECM terminals, such as the ground.

TER- MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
1	В	ECM ground	[Engine is running] • Idle speed	Body ground

CONSULT-II Function (ENGINE) FUNCTION

A

G

Н

J

Κ

L

Μ

Diagnostic test mode	Function	
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on the CONSULT-II unit.	EC
Self-diagnostic results	Self-diagnostic results such as 1st trip DTC, DTCs and 1st trip freeze frame data or freeze frame data can be read and erased quickly.*	
Data monitor	Input/Output data in the ECM can be read.	C
Data monitor (SPEC)	Input/Output of the specification for Basic fuel schedule, AFM, A/F feedback control value and the other data monitor items can be read.	D
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.	D
Active test	Diagnostic Test Mode in which CONSULT-II drives some actuators apart from the ECMs and also shifts some parameters in a specified range.	E
DTC & SRT confirmation	The status of system monitoring tests and the self-diagnosis status/result can be confirmed.	
Function test	This mode is used to inform customers when their vehicle condition requires periodic maintenance.	F
ECM part number	ECM part number can be read.	

*: The following emission-related diagnostic information is cleared when the ECM memory is erased.

- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values

 \times : Applicable

*1: This item includes 1st trip DTCs.

*2: This mode includes 1st trip freeze frame data or freeze frame data. The items appear on CONSULT-II screen in freeze frame data mode only if a 1st trip DTC or DTC is detected. For details, refer to <u>EC-120, "Freeze Frame Data and 1st Trip Freeze Frame Data"</u>.
*3: Always "CMPLT" is displayed.

INSPECTION PROCEDURE

Refer to GI-37, "CONSULT-II Start Procedure" .

WORK SUPPORT MODE

Work Item

WORK ITEM	CONDITION	USAGE
FUEL PRESSURE RELEASE	• FUEL PUMP WILL STOP BY TOUCHING "START" DUR- ING IDLING. CRANK A FEW TIMES AFTER ENGINE STALLS.	When releasing fuel pressure from fuel line
IDLE AIR VOL LEARN	• THE IDLE AIR VOLUME THAT KEEPS THE ENGINE WITHIN THE SPECIFIED RANGE IS MEMORIZED IN ECM.	When learning the idle air volume
SELF-LEARNING CONT	• THE COEFFICIENT OF SELF-LEARNING CONTROL MIXTURE RATIO RETURNS TO THE ORIGINAL COEF- FICIENT.	When clearing the coefficient of self-learning control value

L

WORK ITEM	CONDITION	USAGE
EVAP SYSTEM CLOSE	CLOSE THE EVAP CANISTER VENT CONTROL VALVE IN ORDER TO MAKE EVAP SYSTEM CLOSE UNDER THE FOLLOWING CONDITIONS.	When detecting EVAP vapor leak point of EVAP system
	IGN SW ON	
	ENGINE NOT RUNNING	
	• AMBIENT TEMPERATURE IS ABOVE 0°C (32°F).	
	NO VACUUM AND NO HIGH PRESSURE IN EVAP SYS- TEM	
	• FUEL TANK TEMP. IS MORE THAN 0°C (32°F).	
	 WITHIN 10 MINUTES AFTER STARTING "EVAP SYS- TEM CLOSE" 	
	• WHEN TRYING TO EXECUTE "EVAP SYSTEM CLOSE" UNDER THE CONDITION EXCEPT ABOVE, CONSULT- II WILL DISCONTINUE IT AND DISPLAY APPROPRI- ATE INSTRUCTION.	
	NOTE: WHEN STARTING ENGINE, CONSULT-II MAY DISPLAY "BATTERY VOLTAGE IS LOW. CHARGE BATTERY", EVEN IN USING CHARGED BATTERY.	
VIN REGISTRATION	• IN THIS MODE, VIN IS REGISTERED IN ECM	When registering VIN in ECM
TARGET IDLE RPM ADJ*	IDLE CONDITION	When setting target idle speed
TARGET IGN TIM ADJ*	IDLE CONDITION	When adjusting target ignition tim- ing

*: This function is not necessary in the usual service procedure.

SELF-DIAG RESULTS MODE Self Diagnostic Item

Regarding items of "DTC and 1st trip DTC", refer to <u>EC-49, "EMISSION-RELATED DIAGNOSTIC INFORMA-</u><u>TION ITEMS"</u>.

Freeze Frame Data and 1st Trip Freeze Frame Data

Freeze frame data item*	Description
DIAG TROUBLE CODE [PXXXX]	• The engine control component part/control system has a trouble code, it is displayed as "PXXXX". (Refer to <u>EC-8, "INDEX FOR DTC"</u> .)
FUEL SYS-B1	• "Fuel injection system status" at the moment a malfunction is detected is displayed.
FUEL SYS-B2	 One mode in the following is displayed. Mode2: Open loop due to detected system malfunction Mode3: Open loop due to driving conditions (power enrichment, deceleration enleanment) Mode4: Closed loop - using oxygen sensor(s) as feedback for fuel control Mode5: Open loop - has not yet satisfied condition to go to closed loop
CAL/LD VALUE [%]	• The calculated load value at the moment a malfunction is detected is displayed.
COOLANT TEMP [°C] or [°F]	• The engine coolant temperature at the moment a malfunction is detected is displayed.
L-FUEL TRM-B1 [%]	• "Long-term fuel trim" at the moment a malfunction is detected is displayed.
L-FUEL TRM-B2 [%]	• The long-term fuel trim indicates much more gradual feedback compensation to the base fuel schedule than short-term fuel trim.
S-FUEL TRM-B1 [%]	• "Short-term fuel trim" at the moment a malfunction is detected is displayed.
S-FUEL TRM-B2 [%]	 The short-term fuel trim indicates dynamic or instantaneous feedback compensation to the base fuel schedule.
ENGINE SPEED [rpm]	• The engine speed at the moment a malfunction is detected is displayed.
ABSOL TH-P/S [%]	• The throttle valve opening angle at the moment a malfunction is detected is displayed.

Freeze frame data item*	Description	А
VEHICL SPEED [km/h] or [mph]	• The vehicle speed at the moment a malfunction is detected is displayed.	
B/FUEL SCHDL [msec]	• The base fuel schedule at the moment a malfunction is detected is displayed.	EC
INT/A TEMP SE [°C] or [°F]	• The intake air temperature at the moment a malfunction is detected is displayed.	С

*: The items are the same as those of 1st trip freeze frame data.

DATA MONITOR MODE Monitored Item

D

Monitored item [Unit]	ECM INPUT SIGNALS	MAIN SIGNALS	Description	Remarks
ENG SPEED [rpm]	×	×	 Indicates the engine speed computed from the signal of the crankshaft position sensor (POS) and camshaft position sensor (PHASE). 	 Accuracy becomes poor if engine speed drops below the idle rpm. If the signal is interrupted while the engine is running, an abnormal value may be indicated.
MAS A/F SE-B1 [V]	×	×	• The signal voltage of the mass air flow sensor is displayed.	• When the engine is stopped, a cer- tain value is indicated.
B/FUEL SCHDL [msec]		×	• Base fuel schedule indicates the fuel injec- tion pulse width programmed into ECM, prior to any learned on board correction.	
A/F ALPHA-B1 [%]		×	The mean value of the air-fuel ratio feed-	• When the engine is stopped, a cer-
A/F ALPHA-B2 [%]		×	back correction factor per cycle is indi- cated.	tain value is indicated.This data also includes the data for the air-fuel ratio learning control.
COOLAN TEMP/S [°C] or [°F]	×	×	• The engine coolant temperature (deter- mined by the signal voltage of the engine coolant temperature sensor) is displayed.	 When the engine coolant tempera- ture sensor is open or short-cir- cuited, ECM enters fail-safe mode. The engine coolant temperature determined by the ECM is displayed.
A/F SEN1 (B1) [V]	×	×	• The A/F signal computed from the input	
A/F SEN1 (B2) [V]	×		signal of the A/F sensor 1 is displayed.	
HO2S2 (B1) [V]	×		 The signal voltage of the heated oxygen 	
HO2S2 (B2) [V]	×		sensor 2 is displayed.	
HO2S2 MNTR (B1) [RICH/LEAN]	×		• Display of heated oxygen sensor 2 signal: RICH: means the amount of oxygen after	• When the engine is stopped, a cer-
HO2S2 MNTR (B2) [RICH/LEAN]	×		three way catalyst is relatively small. LEAN: means the amount of oxygen after three way catalyst is relatively large.	tain value is indicated.
VHCL SPEED SE [km/h] or [mph]	×	×	• The vehicle speed computed from the vehi- cle speed signal sent from combination meter is displayed.	
BATTERY VOLT [V]	×	×	 The power supply voltage of ECM is dis- played. 	
ACCEL SEN 1 [V]	×	×	• The accelerator pedal position sensor sig-	ACCEL SEN 2 signal is converted by
ACCEL SEN 2 [V]	×		nal voltage is displayed.	ECM internally. Thus, it differs from ECM terminal voltage signal.
THRTL SEN 1 [V]	×	×	The throttle position sensor signal voltage	THRTL SEN 2 signal is converted by ECM interpolly. Thus, it differs from
THRTL SEN 2 [V]	×		is displayed.	ECM internally. Thus, it differs from ECM terminal voltage signal.

Monitored item [Unit]	ECM INPUT SIGNALS	MAIN SIGNALS	Description	Remarks
FUEL T/TMP SE [°C] or [°F]	×		• The fuel temperature (determined by the signal voltage of the fuel tank temperature sensor) is displayed.	
INT/A TEMP SE [°C] or [°F]	×	×	• The intake air temperature (determined by the signal voltage of the intake air temperature sensor) is indicated.	
EVAP SYS PRES [V]	×		• The signal voltage of EVAP control system pressure sensor is displayed.	
FUEL LEVEL SE [V]	×		 The signal voltage of the fuel level sensor is displayed. 	
START SIGNAL [ON/OFF]	×	×	 Indicates start signal status [ON/OFF] com- puted by the ECM according to the signals of engine speed and battery voltage. 	 After starting the engine, [OFF] is displayed regardless of the starter signal.
CLSD THL POS [ON/OFF]	×	×	 Indicates idle position [ON/OFF] computed by ECM according to the accelerator pedal position sensor signal. 	
AIR COND SIG [ON/OFF]	×	×	 Indicates [ON/OFF] condition of the air conditioner switch as determined by the air conditioner signal. 	
P/N POSI SW [ON/OFF]	×	×	 Indicates [ON/OFF] condition from the park/neutral position (PNP) switch signal. 	
PW/ST SIGNAL [ON/OFF]	×	×	• [ON/OFF] condition of the power steering system (determined by the signal voltage of the power steering pressure sensor signal) is indicated.	
LOAD SIGNAL [ON/OFF]	×	×	 Indicates [ON/OFF] condition from the electrical load signal. ON: Rear window defogger switch is ON and/or lighting switch is in 2nd position. OFF: Both rear window defogger switch and lighting switch are OFF. 	
IGNITION SW [ON/OFF]	×		 Indicates [ON/OFF] condition from ignition switch signal. 	
HEATER FAN SW [ON/OFF]	×		 Indicates [ON/OFF] condition from heater fan switch signal. 	
BRAKE SW [ON/OFF]	×		 Indicates [ON/OFF] condition from the stop lamp switch signal. 	
INJ PULSE-B1 [msec]		×	 Indicates the actual fuel injection pulse width compensated by ECM according to 	 When the engine is stopped, a cer-
INJ PULSE-B2 [msec]			the input signals.	tain computed value is indicated.
IGN TIMING [BTDC]		×	 Indicates the ignition timing computed by ECM according to the input signals. 	• When the engine is stopped, a cer- tain value is indicated.
CAL/LD VALUE [%]			 "Calculated load value" indicates the value of the current air flow divided by peak air flow. 	
MASS AIRFLOW [g·m/s]			 Indicates the mass air flow computed by ECM according to the signal voltage of the mass air flow sensor. 	

Monitored item [Unit]	ECM INPUT SIGNALS	MAIN SIGNALS	Description	Remarks	А
PURG VOL C/V [%]			 Indicates the EVAP canister purge volume control solenoid valve control value computed by the ECM according to the input signals. The opening becomes larger as the value increases. 		EC C
INT/V TIM (B1) [°CA] INT/V TIM (B2) [°CA]			 Indicates [°CA] of intake camshaft advanced angle. 		D
INT/V SOL (B1) [%]			• The control condition of the intake valve		
INT/V SOL (B2) [%]			timing control solenoid valve (determined by ECM according to the input signals) is indicated.The advance angle becomes larger as the		E
			value increases.		Г
VIAS S/V [ON/OFF]			 The control condition of the VIAS control solenoid valve (determined by ECM according to the input signals) is indicated. ON: VIAS control solenoid valve is operat- ing. OFF: VIAS control solenoid valve is not operating. 		G
AIR COND RLY [ON/OFF]		×	 The air conditioner relay control condition (determined by ECM according to the input signals) is indicated. 		I
ENGINE MOUNT [IDLE/TRVL]			• The control condition of the electronic con- trolled engine mount (determined by ECM according to the input signals) is indicated. IDLE: Engine speed is below 950 rpm TRVL: Engine speed is above 950 rpm		J
FUEL PUMP RLY [ON/OFF]		×	• Indicates the fuel pump relay control condi- tion determined by ECM according to the input signals.		К
VENT CONT/V [ON/OFF]			• The control condition of the EVAP canister vent control valve (determined by ECM according to the input signals) is indicated. ON: Closed OFF: Open		L
THRTL RELAY [ON/OFF]		×	 Indicates the throttle control motor relay control condition determined by the ECM according to the input signals. 		
COOLING FAN [HI/MID/LOW/OFF]			 The control condition of the cooling fan (determined by ECM according to the input signals) is indicated. HI: High speed operation MID: Middle speed operation LOW: Low speed operation OFF: Stop 		
HO2S2 HTR (B1) [ON/OFF] HO2S2 HTR (B2)			 Indicates [ON/OFF] condition of heated oxygen sensor 2 heater determined by 		
[ON/OFF]			ECM according to the input signals.		
I/P PULLY SPD [rpm]			• Indicates the engine speed computed from the turbine revolution sensor signal.		

Monitored item [Unit]	ECM INPUT SIGNALS	MAIN SIGNALS	Description	Remarks
VEHICLE SPEED [km/h] or [MPH]			 Indicates the vehicle speed computed from the revolution sensor signal. 	
IDL A/V LEARN [YET/CMPLT]			 Display the condition of idle air volume learning YET: Idle Air Volume Learning has not been performed yet. CMPLT: Idle Air Volume Learning has already been performed successfully. 	
TRVL AFTER MIL [km] or [mile]			Distance traveled while MIL is activated.	
A/F S1 HTR (B1) [%]			 A/F sensor 1 heater control value com- puted by ECM according to the input sig- nals. 	
A/F S1 HTR (B2) [%]			 The current flow to the heater becomes larger as the value increases. 	
AC PRESS SEN [V]			 The signal voltage from the refrigerant pressure sensor is displayed. 	
VHCL SPEED SE [km/h] or [mph]			• The vehicle speed computed from the vehi- cle speed signal sent from TCM is dis- played.	
SET VHCL SPD [km/h] or [mph]			• The preset vehicle speed is displayed.	
MAIN SW [ON/OFF]			 Indicates [ON/OFF] condition from MAIN switch signal. 	
CANCEL SW [ON/OFF]			 Indicates [ON/OFF] condition from CAN- CEL switch signal. 	
RESUME/ACC SW [ON/OFF]			 Indicates [ON/OFF] condition from RESUME/ACCELERATE switch signal. 	
SET SW [ON/OFF]			 Indicates [ON/OFF] condition from SET/ COAST switch signal. 	
BRAKE SW1 [ON/OFF]			 Indicates [ON/OFF] condition from ASCD brake switch signal. 	
BRAKE SW2 [ON/OFF]			 Indicates [ON/OFF] condition of stop lamp switch signal. 	
VHCL SPD CUT [NON/CUT]			 Indicates the vehicle cruise condition. NON: Vehicle speed is maintained at the ASCD set speed. CUT: Vehicle speed increased to exces- sively high compared with the ASCD set speed, and ASCD operation is cut off. 	
LO SPEED CUT [NON/CUT]			 Indicates the vehicle cruise condition. NON: Vehicle speed is maintained at the ASCD set speed. CUT: Vehicle speed decreased to exces- sively low compared with the ASCD set speed, and ASCD operation is cut off. 	
AT OD MONITOR [ON/OFF]			 Indicates [ON/OFF] condition of CVT O/D according to the input signal from the TCM. 	
AT OD CANCEL [ON/OFF]			 Indicates [ON/OFF] condition of CVT O/D cancel signal sent from the TCM. 	
CRUISE LAMP [ON/OFF]			 Indicates [ON/OFF] condition of CRUISE lamp determined by the ECM according to the input signals. 	

Monitored item [Unit]	ECM INPUT SIGNALS	MAIN SIGNALS	Description	Remarks	
SET LAMP [ON/OFF]			 Indicates [ON/OFF] condition of SET lamp determined by the ECM according to the input signals. 		Ε
A/F ADJ-B1			Indicates the correction factor stored in		
A/F ADJ-B2			ECM. The factor is calculated from the dif- ference between the target air-fuel ratio stored in ECM and the air-fuel ratio calcu- lated from A/F sensor 1 signal.		
Voltage [V]					
Frequency [msec], [Hz] or [%]				• Only # is displayed if item is unable to be measured.	
DUTY-HI			Voltage, frequency, duty cycle or pulse width measured by the probe	• Figures with #s are temporary ones.	
DUTY-LOW			width measured by the probe.	They are the same figures as an actual piece of data which was just	
PLS WIDTH-HI				previously measured.	
PLS WIDTH-LOW					

NOTE:

Any monitored item that does not match the vehicle being diagnosed is deleted from the display automatically.

DATA MONITOR (SPEC) MODE Monitored Item

Monitored item [Unit]	ECM INPUT SIGNALS	MAIN SIGNALS	Description	Remarks
ENG SPEED [rpm]	×	×	 Indicates the engine speed computed from the signal of the crankshaft position sensor (POS) and camshaft position sensor (PHASE). 	
MAS A/F SE-B1 [V]	×	×	• The signal voltage of the mass air flow sensor specification is displayed.	• When engine is running specification range is indicated.
B/FUEL SCHDL [msec]		×	• Base fuel schedule indicates the fuel injection pulse width programmed into ECM, prior to any learned on board correction.	 When engine is running specification range is indicated.
A/F ALPHA-B1 [%] A/F ALPHA-B2 [%]		×	• The mean value of the air-fuel ratio feed- back correction factor per cycle is indi- cated.	 When engine is running specification range is indicated. This data also includes the data for the air-fuel ratio learning control.

NOTE:

Any monitored item that does not match the vehicle being diagnosed is deleted from the display automatically.

REAL TIME DIAGNOSIS IN DATA MONITOR MODE (RECORDING VEHICLE DATA) Description

CONSULT-II has two kinds of triggers and they can be selected by touching "SETTING" in "DATA MONITOR" mode.

- 1. "AUTO TRIG" (Automatic trigger):
 - The malfunction will be identified on the CONSULT-II screen in real time.

In other words, DTC/1st trip DTC and malfunction item will be displayed if the malfunction is detected by ECM.

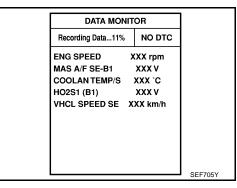

At the moment a malfunction is detected by ECM, "MONI-TOR" in "DATA MONITOR" screen is changed to "Recording Data ... xx%" as shown in the figure, and the data after the malfunction detection is recorded. Then when the percentage reached 100%, "REAL-TIME DIAG" screen is displayed. If "STOP" is touched on the screen during "Recording Data ... xx%", "REAL-TIME DIAG" screen is also displayed.

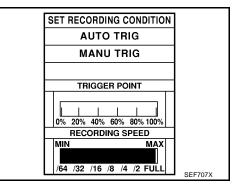

The recording time after the malfunction detection and the recording speed can be changed by "TRIGGER POINT" and "Recording Speed". Refer to CONSULT-II OPERATION MAN-UAL.

2. "MANU TRIG" (Manual trigger):

• DTC/1st trip DTC and malfunction item will not be displayed automatically on CONSULT-II screen even though a malfunction is detected by ECM.

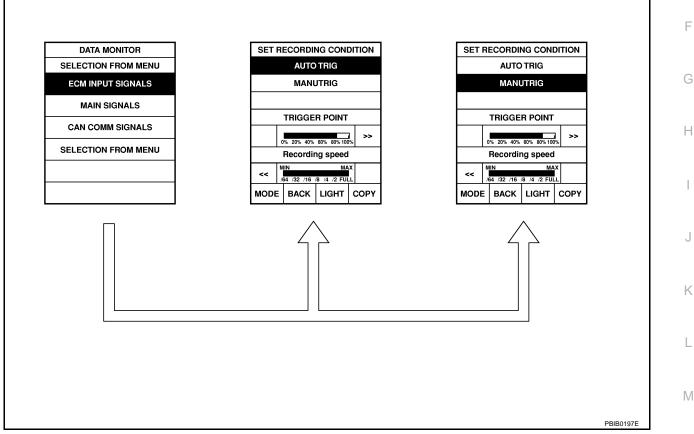

DATA MONITOR can be performed continuously even though a malfunction is detected.

Operation

- 1. "AUTO TRIG"
 - While trying to detect the DTC/1st trip DTC by performing the DTC Confirmation Procedure, be sure to select to "DATA MONITOR (AUTO TRIG)" mode. You can confirm the malfunction at the moment it is detected.
 - While narrowing down the possible causes, CONSULT-II should be set in "DATA MONITOR (AUTO TRIG)" mode, especially in case the incident is intermittent.
 When you are inspecting the circuit by gently shaking (or twisting) the suspicious connectors, components and harness in the DTC Confirmation Procedure, the moment a malfunction is found the DTC/1st trip DTC will be displayed. (Refer to "INCIDENT SIMULATION TESTS" in <u>GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"</u>.)
- 2. "MANU TRIG"
 - If the malfunction is displayed as soon as "DATA MONITOR" is selected, reset CONSULT-II to "MANU TRIG". By selecting "MANU TRIG" you can monitor and store the data. The data can be utilized for further diagnosis, such as a comparison with the value for the normal operating condition.

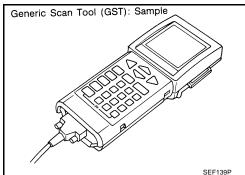

Generic Scan Tool (GST) Function DESCRIPTION

Generic Scan Tool (OBDII scan tool) complying with SAE J1978 has 8 different functions explained below.

ISO9141 is used as the protocol.

The name GST or Generic Scan Tool is used in this service manual.

UBS00K1L

А

EC

D

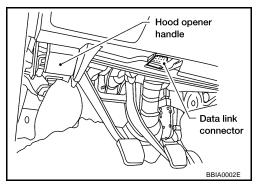

Ε

FUNCTION

Diagnostic test mode		Function	
Service \$01	READINESS TESTS	This diagnostic service gains access to current emission-related data values, including analog inputs and outputs, digital inputs and outputs, and system status information.	
Service \$02	(FREEZE DATA)	This diagnostic service gains access to emission-related data value which were stored by ECM during the freeze frame. For details, refer to EC-53. "FREEZE FRAME DATA AND <u>1ST TRIP FREEZE FRAME DATA"</u> .	
Service \$03	DTCs	This diagnostic service gains access to emission-related power train trouble codes which were stored by ECM.	
		This diagnostic service can clear all emission-related diagnostic information. This includes:	
		Clear number of diagnostic trouble codes (Service \$01)	
o · • • • • •		Clear diagnostic trouble codes (Service \$03)	
Service \$04	CLEAR DIAG INFO	Clear trouble code for freeze frame data (Service \$01)	
		Clear freeze frame data (Service \$02)	
		Reset status of system monitoring test (Service \$01)	
		Clear on board monitoring test results (Service \$06 and \$07)	
Service \$06	(ON BOARD TESTS)	This diagnostic service accesses the results of on board diagnostic monitoring tests of specific components/systems that are not continuously monitored.	
Service \$07	(ON BOARD TESTS)	This diagnostic service enables the off board test drive to obtain test results for emission- related powertrain components/systems that are continuously monitored during normal driving conditions.	
		This diagnostic service can close EVAP system in ignition switch ON position (Engine stopped). When this diagnostic service is performed, the EVAP canister vent control valve can be closed. In the following conditions, this diagnostic service cannot function.	
		Low ambient temperature	
Service \$08		Low battery voltage	
		Engine running	
		Ignition switch OFF	
		Low fuel temperature	
		 Too much pressure is applied to EVAP system 	
Service \$09	(CALIBRATION ID)	This diagnostic service enables the off-board test device to request specific vehicle infor- mation such as Vehicle Identification Number (VIN) and Calibration IDs.	

INSPECTION PROCEDURE

- 1. Turn ignition switch OFF.
- 2. Connect GST to data link connector, which is located under LH dash panel near the hood opener handle.

3. Turn ignition switch ON. А Enter the program according to instruction on the screen or in 4. the operation manual. VTX GENERIC OBD II (*: Regarding GST screens in this section, sample screens are PROGRAM CARD shown.) EC С Press [ENTER] Sample screen* SEF398S D 5. CONSULT-II Reference Value in Data Monitor

Remarks:

Specification data are reference values.
 Specification data are output/input values which are detected or supplied by the ECM at the connector.
 * Specification data may not be directly related to their components signals/values/operations.
 i.e. Adjust ignition timing with a timing light before monitoring IGN TIMING, because the monitor may show the specification data in spite of the ignition timing not being adjusted to the specification data. This IGN TIMING monitors the data calculated by the ECM at calculated by the ECM at the signals input from the camshaft position sensor and other ignition timing related sensors.

*: Accelerator pedal position sensor 2 signal and throttle position sensor 2 signal are converted by ECM internally. Thus, they differ from ECM terminals voltage signal.

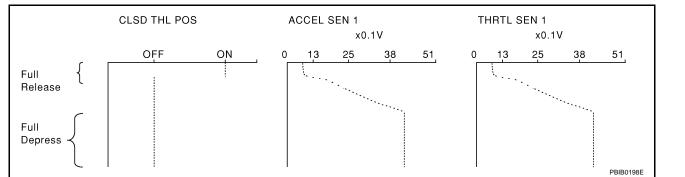

Major Sensor Reference Graph in Data Monitor Mode

The following are the major sensor reference graphs in "DATA MONITOR" mode.

CLSD THL POS, ACCEL SEN 1, THRTL SEN 1

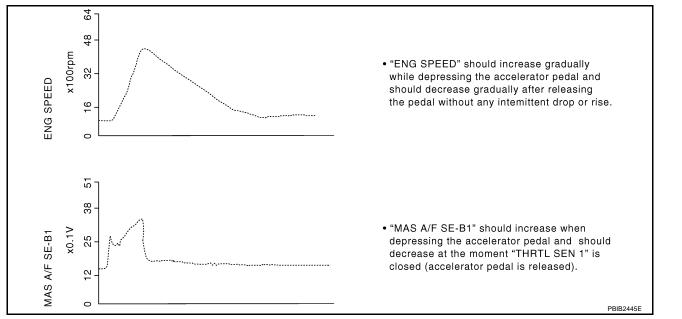

Below is the data for "CLSD THL POS", "ACCEL SEN 1" and "THRTL SEN 1" when depressing the accelerator pedal with the ignition switch ON and with shift lever in D position.

The signal of "ACCEL SEN 1" and "THRTL SEN 1" should rise gradually without any intermittent drop or rise after "CLSD THL POS" is changed from ON to OFF.

ENG SPEED, MAS A/F SE-B1, THRTL SEN 1, HO2S2 (B1), INJ PULSE-B1

Below is the data for "ENG SPEED", "MAS A/F SE-B1", "THRTL SEN 1", "HO2S2 (B1)" and "INJ PULSE-B1" when revving engine quickly up to 4,800 rpm under no load after warming up engine sufficiently. Each value is for reference, the exact value may vary.

De	scription UBS00K10	A
moo TOF "DA	e specification (SP) value indicates the tolerance of the value that is displayed in "DATA MONITOR (SPEC)" de of CONSULT-II during normal operation of the Engine Control System. When the value in "DATA MONI-R (SPEC)" mode is within the SP value, the Engine Control System is confirmed OK. When the value in ATA MONITOR (SPEC)" mode is NOT within the SP value, the Engine Control System may have one or	EC
	re malfunctions. SP value is used to detect malfunctions that may affect the Engine Control System, but will not light the	С
The ●	e SP value will be displayed for the following three items: B/FUEL SCHDL (The fuel injection pulse width programmed into ECM prior to any learned on board cor- rection)	D
•	A/F ALPHA-B1/B2 (The mean value of air-fuel ratio feedback correction factor per cycle) MAS A/F SE-B1 (The signal voltage of the mass air flow sensor)	E
Tes	sting Condition UBSOOK1P	
•	Vehicle driven distance: More than 5,000 km (3,107 miles)	F
•	Barometric pressure: 98.3 - 104.3 kPa (1.003 - 1.064 kg/cm ² , 14.25 - 15.12 psi) Atmospheric temperature: 20 - 30°C (68 - 86°F) Engine coolant temperature: 75 - 95°C (167 - 203°F) Engine speed: Idle	G
•	Transmission: Warmed-up After the engine is warmed up to normal operating temperature, drive vehicle until "FLUID TEMP SE" (CVT fluid temperature sensor signal) indicates more than 60°C (140°F).	Н
•	Electrical load: Not applied Rear window defogger switch, air conditioner switch, lighting switch are OFF. Steering wheel is straight ahead.	I
Ins	spection Procedure	J
1.	TE: form "DATA MONITOR (SPEC)" mode in maximum scale display. Perform EC-72, "Basic Inspection" . Confirm that the testing conditions indicated above are met. Select "B/FUEL SCHDL", "A/F ALPHA-B1", "A/F ALPHA-B2" and "MAS A/F SE-B1" in "DATA MONITOR (SPEC)" mode with CONSULT-II. Make sure that monitor items are within the SP value. If NG, go to EC-138, "Diagnostic Procedure" .	K L M

PBIB2268E

Revision: May 2006

DETAILED PROCEDURE

1. CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

- 1. Start engine.
- 2. Confirm that the testing conditions are met. Refer to EC-138, "Diagnostic Procedure" .
- 3. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "DATA MONITOR (SPEC)" mode, and make sure that the each indication is within the SP value.

NOTE:

Check "A/F ALPHA-B1", "A/F ALPHA-B2" for approximately 1 minute because they may fluctuate. It is NG if the indication is out of the SP value even a little.

OK or NG

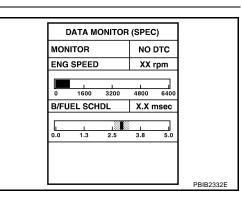

OK >> GO TO 17. NG (Less than the SP value)>>GO TO 2. NG (More than the SP value)>>GO TO 3.

DATA MONITOR (SPEC) MONITOR NO DTC ENG SPEED XXX rpm . 3200 1600 4800 640 A/F ALPHA-B1 XX % 84 C 75 125 100 150 PBIB2369E

2. CHECK "B/FUEL SCHDL"

Select "B/FUEL SCHDL" in "DATA MONITOR (SPEC)" mode, and make sure that the indication is within the SP value. OK or NG

OK >> GO TO 4. NG (More than the SP value)>>GO TO 19.

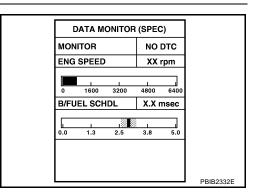

3. CHECK "B/FUEL SCHDL"

Select "B/FUEL SCHDL" in "DATA MONITOR (SPEC)" mode, and make sure that the indication is within the SP value.

OK or NG

OK >> GO TO 6. NG (More than the SP value)>>GO TO 6. NG (Less than the SP value)>>GO TO 25.

4. CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

- 1. Stop the engine.
- 2. Disconnect PCV hose, and then plug it.
- 3. Start engine.
- 4. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "DATA MONITOR (SPEC)" mode, and make sure that the each indication is within the SP value.

OK or NG

OK >> GO TO 5. NG >> GO TO 6.

5. CHANGE ENGINE OIL

- 1. Stop the engine.
- 2. Change engine oil.

NOTE:

This symptom may occur when a large amount of gasoline is mixed with engine oil because of driving conditions (such as when engine oil temperature does not rise enough since a journey distance is too short during winter). The symptom will not be detected after changing engine oil or changing driving condition.

>> INSPECTION END

6. CHECK FUEL PRESSURE

10. DETECT MALFUNCTIONING PART

- 1. Check the following.
- Ignition coil and its circuit (Refer to EC-636, "IGNITION SIGNAL".)
- Fuel injector and its circuit (Refer to EC-622, "FUEL INJECTOR".)
- Intake air leakage
- Low compression pressure (Refer to EM-90, "CHECKING COMPRESSION PRESSURE".)
- If NG, repair or replace the malfunctioning part.
 If OK, replace fuel injector. (It may be caused by leakage from fuel injector or clogging.)

>> GO TO 11.

11. CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

- 1. Start engine.
- 2. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "DATA MONITOR (SPEC)" mode, and make sure that the each indication is within the SP value.

OK or NG

OK >> INSPECTION END

NG >> GO TO 12.

12. CHECK A/F SENSOR 1 FUNCTION

Perform all DTC Confirmation Procedure related with A/F sensor 1.

- For DTC P0130, P0150, refer to <u>EC-230, "DTC Confirmation Procedure"</u>.
- For DTC P0131, P0151, refer to EC-239, "DTC Confirmation Procedure".
- For DTC P0132, P0152, refer to EC-248, "DTC Confirmation Procedure".
- For DTC P0133, P0153, refer to EC-258, "DTC Confirmation Procedure".
- For DTC P2A00, P2A03, refer to EC-594, "DTC Confirmation Procedure".

OK or NG

OK >> GO TO 15. NG >> GO TO 13.

13. CHECK A/F SENSOR 1 CIRCUIT

Perform Diagnostic Procedure according to corresponding DTC.

>> GO TO 14.

14. CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

1. Start engine.

2. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "DATA MONITOR (SPEC)" mode, and make sure that the each indication is within the SP value.

OK or NG

OK >> INSPECTION END

NG >> GO TO 15.

15. DISCONNECT AND RECONNECT ECM HARNESS CONNECTOR

1. Stop the engine.

2. Disconnect ECM harness connector. Check pin terminal and connector for damage, and then reconnect it.

>> GO TO 16.

16. CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

1. Start engine.

 Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "DATA MONITOR (SPEC)" mode, and make sure that the each indication is within the SP value.

OK or NG

OK >> INSPECTION END

NG >> Detect malfunctioning part according to <u>EC-93, "Symptom Matrix Chart"</u>.

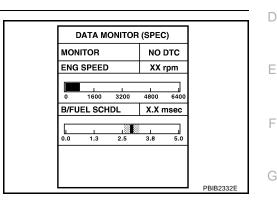

17. CHECK "B/FUEL SCHDL"

Select "B/FUEL SCHDL" in "DATA MONITOR (SPEC)" mode, and make sure that the indication is within the SP value.

OK or NG

OK >> INSPECTION END

NG (More than the SP value)>>GO TO 18. NG (Less than the SP value)>>GO TO 25.

TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT

Description

Intermittent incidents may occur. In many cases, the malfunction resolves itself (the part or circuit function returns to normal without intervention). It is important to realize that the symptoms described in the customer's complaint often do not recur on (1st trip) DTC visits. Realize also that the most frequent cause of intermittent incidents occurrences is poor electrical connections. Because of this, the conditions under which the incident occurred may not be clear. Therefore, circuit checks made as part of the standard diagnostic procedure may not indicate the specific malfunctioning area.

Common Intermittent Incidents Report Situations

STEP in Work Flow	Situation
2	The CONSULT-II is used. The SELF-DIAG RESULTS screen shows time data other than [0] or [1t].
3 or 4	The symptom described by the customer does not recur.
5	(1st trip) DTC does not appear during the DTC Confirmation Procedure.
10	The Diagnostic Procedure for PXXXX does not indicate the malfunctioning area.
Diagnostic Prod 1. INSPECTION ST

Diagnostic Procedure

1. INSPECTION START

Start engine. Is engine running?

Yes or No

Yes >> GO TO 8. No >> GO TO 2.

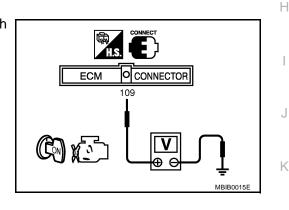

2. CHECK ECM POWER SUPPLY CIRCUIT-I

- 1. Turn ignition switch OFF and then ON.
- 2. Check voltage between ECM terminal 109 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 4. NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector M4
- 10A fuse
- Harness for open or short between ECM and fuse

>> Repair harness or connectors.

Е

F

L

Μ

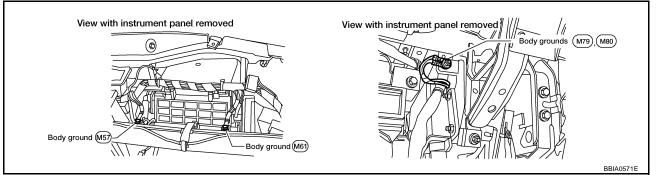

UBS0091Y

А

2007 Maxima

4. CHECK GROUND CONNECTIONS

- 1. Turn ignition switch OFF.
- 2. Loosen and retighten four ground screws on the body. Refer to <u>EC-156, "Ground Inspection"</u>.

OK or NG

OK >> GO TO 5.

NG >> Repair or replace ground connections.

5. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-I

- 1. Disconnect ECM harness connector.
- 2. Check harness continuity between ECM terminals 1, 115, 116 and ground. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 7. NG >> GO TO 6.

6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F58, M70
- Harness for open or short between ECM and ground

>> Repair open circuit or short to power in harness or connectors.

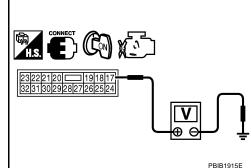

7. CHECK ECM POWER SUPPLY CIRCUIT-II

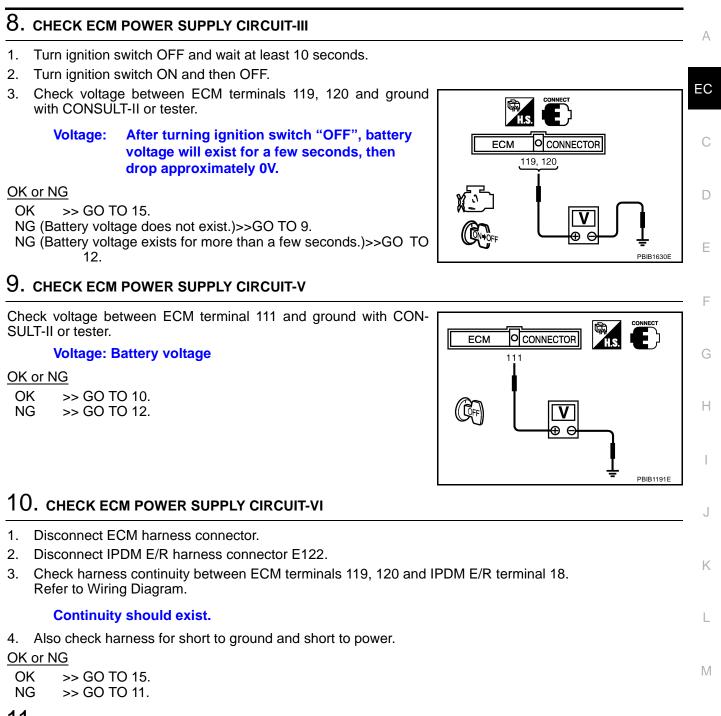

- 1. Reconnect ECM harness connector.
- 2. Turn ignition switch ON.
- 3. Check voltage between IPDM E/R terminal 17 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> Go to <u>EC-636, "IGNITION SIGNAL"</u>. NG >> GO TO 8.

11. DETECT MALFUNCTIONING PART

Check the following.

- Harness or connectors E131, M92
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

12. CHECK ECM POWER SUPPLY CIRCUIT-VII

- 1. Disconnect ECM harness connector.
- 2. Disconnect IPDM E/R harness connector E121.
- 3. Check harness continuity between ECM terminal 111 and IPDM E/R terminal 46. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 14.

NG >> GO TO 13.

13. DETECT MALFUNCTIONING PART

Check the following.

- Harness or connectors E131, M92
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

14. CHECK 15A FUSE

- 1. Disconnect 15A fuse from IPDM E/R.
- 2. Check 15A fuse.

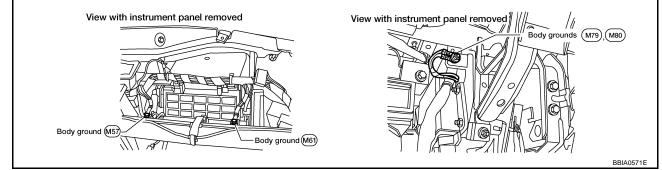

OK or NG

OK >> GO TO 15.

NG >> Replace 15A fuse.

15. CHECK GROUND CONNECTIONS

Loosen and retighten four ground screws on the body. Refer to $\underline{\text{EC-156}}$, "Ground Inspection".

OK or NG

- OK >> GO TO 16.
- NG >> Repair or replace ground connections.

POWER SUPPLY AND GROUND CIRCUIT

16. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-II	А
1. Turn ignition switch OFF.	
2. Disconnect ECM harness connector.	EC
 Check harness continuity between ECM terminals 1, 115, 116 and ground. Refer to Wiring Diagram. 	LC
Continuity should exist.	С
 Also check harness for short to power. OK or NG OK >> GO TO 18. 	D

Ground Inspection

UBS00KK4

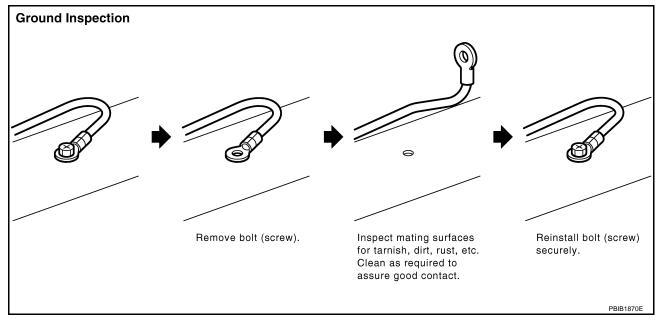

Ground connections are very important to the proper operation of electrical and electronic circuits. Ground connections are often exposed to moisture, dirt and other corrosive elements. The corrosion (rust) can become an unwanted resistance. This unwanted resistance can change the way a circuit works.

Electronically controlled circuits are very sensitive to proper grounding. A loose or corroded ground can drastically affect an electronically controlled circuit. A poor or corroded ground can easily affect the circuit. Even when the ground connection looks clean, there can be a thin film of rust on the surface.

When inspecting a ground connection follow these rules:

- Remove the ground bolt or screw.
- Inspect all mating surfaces for tarnish, dirt, rust, etc.
- Clean as required to assure good contact.
- Reinstall bolt or screw securely.
- Inspect for "add-on" accessories which may be interfering with the ground circuit.
- If several wires are crimped into one ground eyelet terminal, check for proper crimps. Make sure all of the
 wires are clean, securely fastened and providing a good ground path. If multiple wires are cased in one
 eyelet make sure no ground wires have excess wire insulation.

For detailed ground distribution information, refer to PG-32, "Ground Distribution" .

DTC U1000, U1001 CAN COMMUNICATION LINE

Description

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

On Board Diagnosis Logic

Trouble diagnosis DTC No. DTC detecting condition Possible cause name When ECM is not transmitting or receiving U1000*1 Е CAN communication signal of OBD (emission 1000*1 related diagnosis) for 2 seconds or more. Μ

DTC P0011, P0021 IVT CONTROL

Description SYSTEM DESCRIPTION

Sensor	Input signal to ECM	ECM function	Actuator	
Crankshaft position sensor (POS)	Engine aread and pieton position			
Camshaft position sensor (PHASE)	Engine speed and piston position	Intake valve	Intake valve timing control	
Engine coolant temperature sensor	Engine coolant temperature	timing control	solenoid valve	
Wheel sensor	Vehicle speed*			

*: This signal is sent to the ECM through CAN communication line.

This mechanism hydraulically controls cam phases continuously with the fixed operating angle of the intake valve.

The ECM receives signals such as crankshaft position, camshaft position, engine speed, and engine coolant temperature. Then, the ECM sends ON/OFF pulse duty signals to the intake valve timing control solenoid valve depending on driving status. This makes it possible to control the shut/open timing of the intake valve to increase engine torque in low/mid speed range and output in high-speed range.

CONSULT-II Reference Value in Data Monitor Mode

DTC Confirmation Procedure

CAUTION:

Always drive at a safe speed.

NOTE:

- If DTC P0011 or P0021 is displayed with DTC P0075 or P0081, first perform trouble diagnosis for DTC P0075 or P0081. Refer to <u>EC-181, "DTC P0075, P0081 IVT CONTROL SOLENOID VALVE"</u>.
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 10V and 16V at idle.

B WITH CONSULT-II

- 1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-II.
- 2. Start engine and warm it up to the normal operating temperature.
- 3. Maintain the following conditions for at least 6 consecutive seconds.

Hold the accelerator pedal as steady as possible.

ENG SPEED	1,200 - 2,000 rpm (A constant rotation is maintained.)		
COOLAN TEMP/S	More than 60°C (140°F)		
Shift lever	P or N position	<u> </u>	

4. Let engine idle for 10 seconds.

5. If the 1st trip DTC is detected, go to <u>EC-164</u>, "<u>Diagnostic Procedure</u>". If the 1st trip DTC is not detected, go to next step.

6. Maintain the following conditions for at least 20 consecutive seconds.

ENG SPEED	1,400 - 3,175 rpm (A constant rotation is maintained.)
COOLAN TEMP/S	More than 70°C (158°F)
Shift lever	1st or 2nd position
Driving location uphill	Driving vehicle uphill (Increased engine load will help maintain the driving conditions required for this test.)

7. If the 1st trip DTC is detected, go to EC-164, "Diagnostic Procedure" .

WITH GST

Follow the procedure "WITH CONSULT-II" above.

Diagnostic Procedure

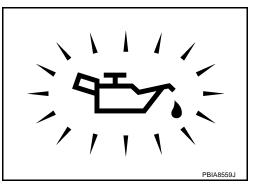

UBS00928

1. CHECK OIL PRESSURE WARNING LAMP

- 1. Start engine.
- Check oil pressure warning lamp and confirm it is not illuminated.

OK or NG

- OK >> GO TO 2.
- KG >> Go to LU-8, "OIL PRESSURE CHECK".

2. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE

Refer to EC-165, "Component Inspection" .

OK or NG

OK >> GO TO 3.

NG >> Replace intake valve timing control solenoid valve.

3. CHECK CRANKSHAFT POSITION SENSOR (POS)

Refer to EC-367, "Component Inspection" .

OK or NG

UBS0092F

DTC P0075, P0081 IVT CONTROL SOLENOID VALVE

Component Description

Intake valve timing control solenoid valve is activated by ON/OFF pulse duty (ratio) signals from the ECM.

The intake valve timing control solenoid valve changes the oil amount and direction of flow through intake valve timing control unit or stops oil flow.

The longer pulse width advances valve angle.

The shorter pulse width retards valve angle.

When ON and OFF pulse widths become equal, the solenoid valve stops oil pressure flow to fix the intake valve angle at the control position.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

DTC P0101 MAF SENSOR

Component Description

The mass air flow sensor is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. The mass air flow sensor controls the temperature of the hot wire to a certain amount. The heat generated by the hot wire is reduced as the intake air flows around it. The more air, the greater the heat loss.

Therefore, the electric current supplied to hot wire is changed to maintain the temperature of the hot wire as air flow increases. The ECM detects the air flow by means of this current change.

DTC Confirmation Procedure

Perform PROCEDURE FOR MALFUNCTION A first.

If the DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION B.

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR MALFUNCTION A

NOTE:

If engine will not start or stops soon, wait at least 10 seconds with engine stopped (Ignition switch ON) instead of running engine at idle speed.

(I) With CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Start engine and warm it up to normal operating temperature.
- 4. Run engine for at least 10 seconds at idle speed.
- 5. If 1st trip DTC is detected, go to EC-192, "Diagnostic Procedure"

Component Inspection MASS AIR FLOW SENSOR

With CONSULT-II

- 1. Reconnect all harness connectors disconnected.
- 2. Start engine and warm it up to normal operating temperature.
- 3. Connect CONSULT-II and select "DATA MONITOR" mode.
- 4. Select "MAS A/F SE-B1" and check indication under the following conditions.

Condition	MAS A/F SE-B1 (V)
Ignition switch ON (Engine stopped.)	Approx. 0.4
Idle (Engine is warmed-up to normal operating temperature.)	1.0 - 1.2
2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.6 - 2.0
Idle to about 4,000 rpm	1.0 - 1.2 to Approx. 2.4*

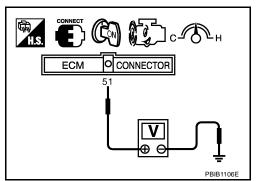

*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

- 5. If the voltage is out of specification, proceed the following.
- a. Check for the cause of uneven air flow through mass air flow sensor. Refer to following.
 - Crushed air ducts
 - Malfunctioning seal of air cleaner element
 - Uneven dirt of air cleaner element
 - Improper specification of intake air system parts
- b. If NG, repair or replace malfunctioning part and perform step 2 to 4 again. If OK, go to next step.
- 6. Turn ignition switch OFF.
- 7. Disconnect mass air flow sensor harness connector and reconnect it again.
- 8. Perform step 2 to 4 again.
- 9. If NG, clean or replace mass air flow sensor.

Without CONSULT-II

- 1. Reconnect all harness connectors disconnected.
- 2. Start engine and warm it up to normal operating temperature.
- Check voltage between ECM terminal 51 (Mass air flow sensor signal) and ground.

Condition	Voltage V
Ignition switch ON (Engine stopped.)	Approx. 0.4
Idle (Engine is warmed-up to normal operating temperature.)	1.0 - 1.2
2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.6 - 2.0
Idle to about 4,000 rpm	1.0 - 1.2 to Approx. 2.4*

Component Inspection MASS AIR FLOW SENSOR

With CONSULT-II

- 1. Reconnect all harness connectors disconnected.
- 2. Start engine and warm it up to normal operating temperature.
- 3. Connect CONSULT-II and select "DATA MONITOR" mode.
- 4. Select "MAS A/F SE-B1" and check indication under the following conditions.

Condition	MAS A/F SE-B1 (V)
Ignition switch ON (Engine stopped.)	Approx. 0.4
Idle (Engine is warmed-up to normal operating temperature.)	1.0 - 1.2
2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.6 - 2.0
Idle to about 4,000 rpm	1.0 - 1.2 to Approx. 2.4*

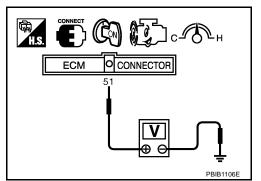

*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

- 5. If the voltage is out of specification, proceed the following.
- a. Check for the cause of uneven air flow through mass air flow sensor. Refer to following.
 - Crushed air ducts
 - Malfunctioning seal of air cleaner element
 - Uneven dirt of air cleaner element
 - Improper specification of intake air system parts
- b. If NG, repair or replace malfunctioning part and perform step 2 to 4 again. If OK, go to next step.
- 6. Turn ignition switch OFF.
- 7. Disconnect mass air flow sensor harness connector and reconnect it again.
- 8. Perform step 2 to 4 again.
- 9. If NG, clean or replace mass air flow sensor.

Without CONSULT-II

- 1. Reconnect all harness connectors disconnected.
- 2. Start engine and warm it up to normal operating temperature.
- Check voltage between ECM terminal 51 (Mass air flow sensor signal) and ground.

Condition	Voltage V
Ignition switch ON (Engine stopped.)	Approx. 0.4
Idle (Engine is warmed-up to normal operating temperature.)	1.0 - 1.2
2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.6 - 2.0
Idle to about 4,000 rpm	1.0 - 1.2 to Approx. 2.4*

*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

- 4. If the voltage is out of specification, proceed the following.
 - Check for the cause of uneven air flow through mass air flow sensor. Refer to following.
 - Crushed air ducts
 - Malfunctioning seal of air cleaner element
 - Uneven dirt of air cleaner element
 - Improper specification of intake air system parts

UBS0092X

DTC P0112, P0113 IAT SENSOR

Component Description

The intake air temperature sensor is built-into mass air flow sensor. The sensor detects intake air temperature and transmits a signal to the ECM.

The temperature sensing unit uses a thermistor which is sensitive to the change in temperature. Electrical resistance of the thermistor decreases in response to the temperature rise.

<Reference data>

Intake air temperature °C (°F)	Voltage* V	Resistance $k\Omega$
25 (77)	3.3	1.800 - 2.200
80 (176)	1.2	0.283 - 0.359

*: This data is reference value and is measured between ECM terminal 34 (Intake air temperature sensor) and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0112 0112	Intake air temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	Harness or connectors (The sensor circuit is open or shorted.)
P0113 0113	Intake air temperature sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	Intake air temperature sensor

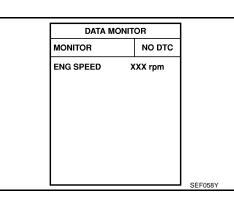

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

B WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Wait at least 5 seconds.
- 4. If 1st trip DTC is detected, go to EC-207, "Diagnostic Procedure"

WITH GST

Follow the procedure "WITH CONSULT-II" above.

UBS0093B

DTC P0122, P0123 TP SENSOR

Component Description

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN 1 THRTL SEN 2*• Ignition switch: ON (Engine stopped)• Shift lever: D	Accelerator pedal: Fully released	More than 0.36V	
	Accelerator pedal: Fully depressed	Less than 4.75V	

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

DTC No. DTC detecting condition Possible cause Trouble diagnosis name P0122 Throttle position sensor An excessively low voltage from the TP sensor • Harness or connectors 0122 2 circuit low input 2 is sent to ECM. (TP sensor 2 circuit is open or shorted.) (APP sensor 2 circuit is shorted.) Electric throttle control actuator P0123 Throttle position sensor An excessively high voltage from the TP sen-(TP sensor 2) sor 2 is sent to ECM. 0123 2 circuit high input Accelerator pedal position sensor (APP sensor 2)

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

DTC P0128 THERMOSTAT FUNCTION

On Board Diagnosis Logic

Engine coolant temperature has not risen enough to open the thermostat even though the engine has run long enough.

This is due to a leak in the seal or the thermostat stuck open.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	
P0128 0128	Thermostat function	The engine coolant temperature does not reach to specified temperature even though the engine has run long enough.	 Thermostat Leakage from sealing portion of thermostat Engine coolant temperature sensor 	

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

- For best results, perform at ambient temperature of -10°C (14°F) or higher.
- For best results, perform at engine coolant temperature of -10°C (14°F) to 60°C (140°F).

(I) WITH CONSULT-II

- 1. Replace thermostat with new one. Refer to CO-21, "THERMOSTAT AND THERMOSTAT HOUSING" . Use only a genuine NISSAN thermostat as a replacement. If an incorrect thermostat is used, the MIL may Н come on.
- 2. Turn ignition switch ON.
- 3. Select "COOLAN TEMP/S" in "DATA MONITOR" mode with CONSULT-II.
- Check that the "COOLAN TEMP/S" is above 60°C (140°F). If it is below 60°C (140°F), go to following step. If it is above 60°C (140°F), stop engine and cool down the engine to less than 60°C (140°F), then retry from step 1.
- 5. Drive vehicle for 10 consecutive minutes under the following conditions.

VHCL SPEED SE	80 - 120 km/h (50 - 75 MPH)

If 1st trip DTC is detected, go to EC-227, "Diagnostic Procedure"

WITH GST

1. Follow the procedure "WITH CONSULT-II" above.

Diagnostic Procedure

1. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to EC-228, "Component Inspection" .

OK or NG

- OK >> INSPECTION END
- NG >> Replace engine coolant temperature sensor.

2. If NG, replace engine coolant temperature sensor.

Refer to CO-21, "THERMOSTAT AND THERMOSTAT HOUSING" .

UBS0093Z

DTC P0130, P0150 A/F SENSOR 1

Component Description

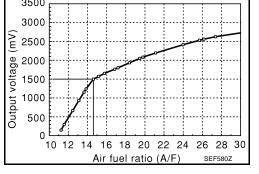

The A/F sensor is a planar dual-cell limit current sensor. The sensor element of the A/F sensor is the combination of a Nernst concentration cell (sensor cell) with an oxygen-pump cell, which transports ions. It has a heater in the element.

The sensor is capable of precise measurement $\lambda = 1$, but also in the lean and rich range. Together with its control electronics, the sensor outputs a clear, continuous signal throughout a wide λ range (0.7 < $\lambda < air$).

The exhaust gas components diffuse through the diffusion gap at the electrode of the oxygen pump and Nernst concentration cell, where they are brought to thermodynamic balance.

An electronic circuit controls the pump current through the oxygenpump cell so that the composition of the exhaust gas in the diffusion gap remains constant at $\lambda = 1$. Therefore, the A/F sensor is able to indicate air/fuel ratio by this pumping of current. In addition, a heater is integrated in the sensor to ensure the required operating temperature of 700 - 800°C (1,292 - 1,472°F).

DTC Confirmation Procedure

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

PROCEDURE FOR MALFUNCTION A

With CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Let engine idle for 2 minutes.
- 4. If 1st trip DTC is detected, go to EC-235, "Diagnostic Procedure"

DATA MON		
MONITOR	NO DTC	:

Follow the procedure "With CONSULT-II" above.

PROCEDURE FOR MALFUNCTION B

Always drive vehicle at a safe speed.

With CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Select "A/F SEN1 (B1)" or "A/F SEN1 (B2)" in "DATA MONITOR" mode with CONSULT-II.
- 3. Check "A/F SEN1 (B1)" or "A/F SEN1 (B2)" indication.

If the indication is constantly approx. 1.5V and does not fluctuates, go to <u>EC-235</u>, "Diagnostic Procedure". If the indication fluctuates around 1.5V, go to next step.

- 4. Select "A/F SEN1 (B1) P1276" (for DTC P0130) or "A/F SEN1 (B2) P1286" (for DTC P0150) of "A/F SEN1" in "DTC WORK SUPPORT" mode with CONSULT-II.
- 5. Touch "START".
- 6. When the following conditions are met, "TESTING" will be displayed on the CONSULT-II screen.

ENG SPEED	1,100 - 3,200 rpm
VHCL SPEED SE	More than 64 km/h (40 MPH)
B/FUEL SCHDL	1.0 - 8.0 msec

Overall Function Check

Use this procedure to check the overall function of the A/F sensor 1 circuit. During this check, a 1st trip DTC might not be confirmed.

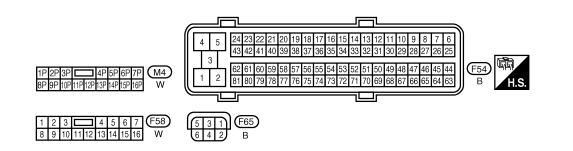

WITH GST

- 1. Start engine and warm it up to normal operating temperature.
- 2. Drive the vehicle at a speed of 80 km/h (50 MPH) for a few minutes in the suitable gear position.

3.	Set D position, then release the accelerator pedal fully until the vehicle speed decreases to 50 km/h (30 MPH).	J
	NOTE: Never apply brake during releasing the accelerator pedal.	Κ
4.	Repeat steps 2 to 3 for five times.	
5.	Stop the vehicle and turn ignition switch OFF.	
6.	Wait at least 10 seconds and restart engine.	

- 7. Repeat steps 2 to 3 for five times.
- 8. Stop the vehicle and connect GST to the vehicle.
- Make sure that no DTC is displayed. If the DTC is displayed, go to <u>EC-235, "Diagnostic Procedure"</u>.

Removal and Installation AIR FUEL RATIO (A/F) SENSOR 1 Refer to EM-27, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

UBS009D0

DTC P0131, P0151 A/F SENSOR 1

Component Description

The A/F sensor is a planar dual-cell limit current sensor. The sensor element of the A/F sensor is the combination of a Nernst concentration cell (sensor cell) with an oxygen-pump cell, which transports ions. It has a heater in the element.

The sensor is capable of precise measurement $\lambda = 1$, but also in the lean and rich range. Together with its control electronics, the sensor outputs a clear, continuous signal throughout a wide λ range (0.7 < λ , < air).

The exhaust gas components diffuse through the diffusion gap at the electrode of the oxygen pump and Nernst concentration cell, where they are brought to thermodynamic balance.

An electronic circuit controls the pump current through the oxygenpump cell so that the composition of the exhaust gas in the diffusion gap remains constant at $\lambda = 1$. Therefore, the A/F sensor is able to indicate air/fuel ratio by this pumping of current. In addition, a heater is integrated in the sensor to ensure the required operating temperature of 700 - 800°C (1,292 - 1,472°F).

Removal and Installation AIR FUEL RATIO (A/F) SENSOR 1 Refer to EM-27, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

UBS009CC

DTC P0133, P0153 A/F SENSOR 1

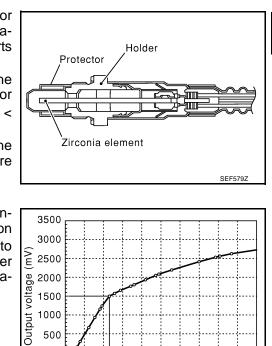

Component Description

The A/F sensor is a planar dual-cell limit current sensor. The sensor element of the A/F sensor is the combination of a Nernst concentration cell (sensor cell) with an oxygen-pump cell, which transports ions. It has a heater in the element.

The sensor is capable of precise measurement $\lambda = 1$, but also in the lean and rich range. Together with its control electronics, the sensor outputs a clear, continuous signal throughout a wide λ range (0.7 < $\lambda < air$).

The exhaust gas components diffuse through the diffusion gap at the electrode of the oxygen pump and Nernst concentration cell, where they are brought to thermodynamic balance.

An electronic circuit controls the pump current through the oxygenpump cell so that the composition of the exhaust gas in the diffusion gap remains constant at $\lambda = 1$. Therefore, the A/F sensor is able to indicate air/fuel ratio by this pumping of current. In addition, a heater is integrated in the sensor to ensure the required operating temperature of 700 - 800°C (1,292 - 1,472°F).

MONITOR ITEM	CON	DITION	SPECIFICATION	
A/F SEN1 (B1) A/F SEN1 (B2)	• Engine: After warming up	Maintaining engine speed at 2,000 rpm	Fluctuates around 1.5V	

On Board Diagnosis Logic

To judge the malfunction of air fuel ratio (A/F) sensor 1, this diagnosis measures response time of the A/F signal computed by ECM from the air fuel ration (A/F) sensor 1 signal. The time is compensated by engine operating (speed and load), fuel feedback control constant, and the air fuel ration (A/F) sensor 1 temperature index. Judgment is based on whether the compensated time (the A/F signal cycling time index) is inordinately long or not.

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

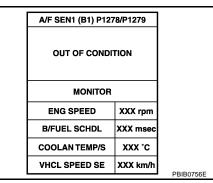

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

(I) WITH CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- 4. Let engine idle for 1 minute.
- 5. Select "A/F SEN1(B1) P1278/P1279" (for DTC P0133) or "A/F SEN1(B1) P1288/P1289" (for DTC P0153) of "A/F SEN1" in "DTC WORK SUPPORT" mode with CONSULT-II.
- Touch "START". If "COMPLETED" appears on CONSULT-II screen, go to step 10.

If "COMPLETED" does not appear on CONSULT-II screen, go to the following step.

- 7. After perform the following procedure, "TESTING" will be displayed on the CONSULT-II screen.
- a. Increase the engine speed up to 4,000 to 5,000 rpm and keep it for 10 seconds.
- b. Fully release accelerator pedal and then let engine idle for about 10 seconds.

If "TESTING" is not displayed after 10 seconds, refer to <u>EC-</u> <u>137, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE"</u>.

- 8. Wait for about 20 seconds at idle at under the condition that "TESTING" is displayed on the CONSULT-II screen.
- Make sure that "TESTING" changes to "COMPLETED".
 If "TESTING" changed to "OUT OF CONDITION", refer to EC-137, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE".
- Make sure that "OK" is displayed after touching "SELF-DIAG RESULT".
 If "NG" is displayed, go to <u>EC-263</u>, "Diagnostic Procedure".

Removal and Installation AIR FUEL RATIO (A/F) SENSOR 1 Refer to EM-27, "EXHAUST MANIFOLD AND THREE WAY CATALYST".

UBS009D8

DTC P0137, P0157 H02S2

Component Description

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas on each bank.

Even if switching characteristics of the A/F sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.

This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.

Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

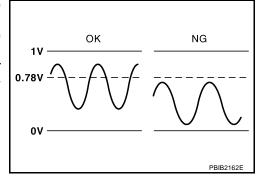

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

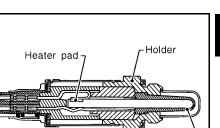

MONITOR ITEM	CONDITION	SPECIFICATION
HO2S2 (B1) HO2S2 (B2)	 Revving engine from idle to 3,000 rpm quickly after the following condi- tions are met 	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S2 MNTR (B1) HO2S2 MNTR (B2)	 Engine: After warming up Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load 	$LEAN \longleftrightarrow RICH$

On Board Diagnosis Logic

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the heated oxygen sensor 1. The oxygen storage capacity of the three way catalyst (manifold) causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the maximum voltage of the sensor is sufficiently high during the various driving condition such as fuelcut.

DTC Confirmation Procedure

NOTE:

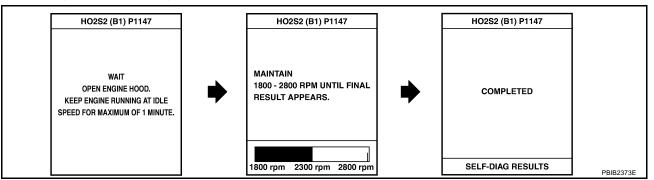

If DTC confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

B WITH CONSULT-II

TESTING CONDITION:

For better results, perform "DTC WORK SUPPORT" at a temperature of 0 to 30 °C (32 to 86 °F).

- 1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-II.
- 2. Start engine and warm it up to the normal operating temperature.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- 5. Let engine idle for 1 minute.
- Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).
 If not, warm up engine and go to next step when "COOLAN TEMP/S" indication reaches to 70°C (158°F).
- 7. Open engine hood.
- 8. Select "HO2S2 (B1) P1147" (for DTC P0137) or "HO2S2 (B2) P1167" (for DTC P0157) of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-II.
- 9. Start engine and following the instruction of CONSULT-II.

NOTE:

It will take at most 10 minutes until "COMPLETED" is displayed.

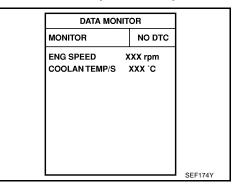

- Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS". If "NG" is displayed, refer to <u>EC-275, "Diagnostic Procedure"</u>. If "CAN NOT BE DIAGNOSED" is displayed, perform the following.
- a. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
- b. Return to step 1.

Overall Function Check

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a 1st trip DTC might not be confirmed.

WITH GST

- 1. Start engine and warm it up to the normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- 4. Let engine idle for 1 minute.
- 5. Set voltmeter probes between ECM terminal 74 [HO2S2 (B1) signal] or 55 [HO2S2 (B2) signal] and ground.

UBS009AU

UBS009AT

6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.

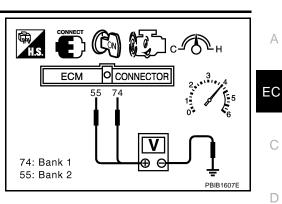

(Depress and release accelerator pedal as soon as possible.) The voltage should be above 0.78V at least once during this procedure.

If the voltage can be confirmed in step 6, step 7 is not necessary.

7. Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position.

The voltage should be above 0.78V at least once during this procedure.

8. If NG, go to EC-275, "Diagnostic Procedure" .

6. Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)/(B2)" as the monitor item with CONSULT-II.

ACTIVE TES		
FUEL INJECTION	25 %	
MONITOR		
ENG SPEED	XXX rpm	
HO2S2 (B1)	XXX V	
HO2S2 (B2)	XXX V	
		PBIB1672E

7. Check "HO2S2 (B1)/(B2)" at idle speed when adjusting "FUEL INJECTION" to ±25%.

"HO2S2 (B1)/(B2)" should be above 0.78V at least once when the "FUEL INJECTION" is +25%. "HO2S2 (B1)/(B2)" should be below 0.18V at least once when the "FUEL INJECTION" is -25%.

CAUTION:

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

Without CONSULT-II

- 1. Start engine and warm it up to the normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- 4. Let engine idle for 1 minute.
- 5. Set voltmeter probes between ECM terminal 74 [HO2S2 (B1) signal] or 55 [HO2S2 (B2) signal] and ground.
- 6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.

(Depress and release accelerator pedal as soon as possible.) The voltage should be above 0.78V at least once during this procedure.

If the voltage is above 0.78V at step 6, step 7 is not necessary.

 Keep vehicle at idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position.
 The voltage should be below 0.18V at least once during this

procedure.

8. If NG, replace malfunctioning heated oxygen sensor 2.

CAUTION:

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

Component Description

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas on each bank.

Even if switching characteristics of the air fuel ratio (A/F) sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.

This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.

Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

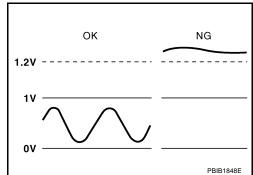

MONITOR ITEM	CONDITION	SPECIFICATION
HO2S2 (B1) HO2S2 (B2)	• Revving engine from idle to 3,000 rpm quickly after the following conditions are met $0 - 0.3V \leftrightarrow Approx. 0.6$ 1.0V	
HO2S2 MNTR (B1) HO2S2 MNTR (B2)	 Engine: After warming up Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load 	$LEAN \leftarrow \rightarrow RICH$

On Board Diagnosis Logic

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/ F) sensor 1. The oxygen storage capacity of the three way catalyst (manifold) causes the longer switching time.

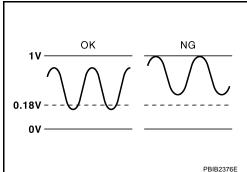

MALFUNCTION A

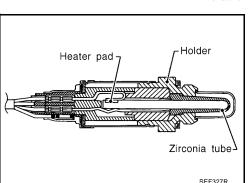

To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the voltage is unusually high during the various driving condition such as fuel-cut.

MALFUNCTION B

To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the minimum voltage of sensor is sufficiently low during the various driving condition such as fuel-cut.

DTC Confirmation Procedure

Perform PROCEDURE FOR MALFUNCTION A first. If DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION B. NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR MALFUNCTION A

(I) With CONSULT-II

- 1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-II.
- 2. Start engine and warm it up to the normal operating temperature.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- 5. Let engine idle for 2 minutes.
- 6. If 1st trip DTC is detected, go to EC-286, "Diagnostic Procedure"

With GST

Follow the procedure "With CONSULT-II" above.

PROCEUDRE FOR MALFUNCTION B

(I) With CONSULT-II

TESTING CONDITION:

For better results, perform "DTC WORK SUPPORT" at a temperature of 0 to 30 °C (32 to 86 °F).

- 1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-II.
- 2. Start engine and warm it up to the normal operating temperature.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- 5. Let engine idle for 1 minute.
- Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).
 If not, warm up engine and go to next step when "COOLAN TEMP/S" indication reaches to 70°C (158°F).
- 7. Open engine hood.
- Select "HO2S2 (B1) P1146" (for DTC P0138) or "HO2S2 (B2) P1166" (for DTC P0158) of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-II.

DATA MONITOR MONITOR NO DTC ENG SPEED XXX rpm COOLAN TEMP/S XXX 'C

Κ

UBS00AOD

Ε

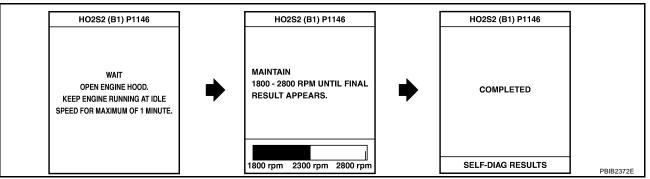

F

Н

9. Start engine and following the instruction of CONSULT-II.

NOTE:

It will take at most 10 minutes until "COMPLETED" is displayed.

- Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS". If "NG" is displayed, refer to <u>EC-286, "Diagnostic Procedure"</u>. If "CAN NOT BE DIAGNOSED" is displayed, perform the following.
- a. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
- b. Return to step 1.

Overall Function Check PROCEDURE FOR MALFUNCTION B

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a 1st trip DTC might not be confirmed.

With GST

- 1. Start engine and warm it up to the normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- 4. Let engine idle for 1 minute.
- 5. Set voltmeter probes between ECM terminal 74 [HO2S2 (B1) signal] or 55 [HO2S2 (B2) signal] and ground.
- 6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.

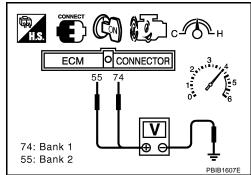

(Depress and release accelerator pedal as soon as possible.) The voltage should be below 0.18V at least once during this procedure.

If the voltage can be confirmed in step 6, step 7 is not necessary.

 Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position.

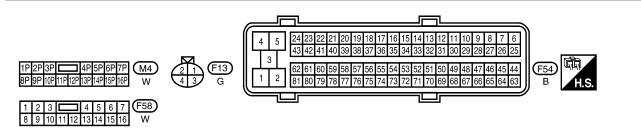

The voltage should be below 0.18V at least once during this procedure.

8. If NG, go to EC-286, "Diagnostic Procedure" .

Refer to EC-147, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> INSPECTION END

PROCEDURE FOR MALFUNCTION B

1. CHECK GROUND CONNECTIONS

- 1. Turn ignition switch OFF.
- 2. Loosen and retighten four ground screws on the body. Refer to <u>EC-156, "Ground Inspection"</u>.

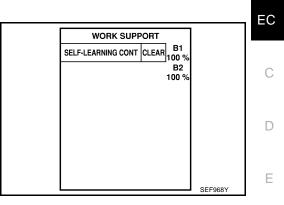

OK or NG

- OK >> GO TO 2.
- NG >> Repair or replace ground connections.

2. CLEAR THE SELF-LEARNING DATA

With CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
- 3. Clear the self-learning control coefficient by touching "CLEAR".
- 4. Run engine for at least 10 minutes at idle speed. Is the 1st trip DTC P0172 or P0175 detected? Is it difficult to start engine?

Without CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF.
- 3. Disconnect mass air flow sensor harness connector.
- 4. Restart engine and let it idle for at least 5 seconds.
- 5. Stop engine and reconnect mass air flow sensor harness connector.
- 6. Make sure DTC P0102 is displayed.
- 7. Erase the DTC memory. Refer to <u>EC-61, "HOW TO ERASE</u> <u>EMISSION-RELATED DIAGNOSTIC INFORMATION"</u>.
- 8. Make sure DTC P0000 is displayed.
- 9. Run engine for at least 10 minutes at idle speed. Is the 1st trip DTC P0172 or P0175 detected? Is it difficult to start engine?

Yes or No

Yes >> Perform trouble diagnosis for DTC P0172, P0175. Refer to <u>EC-317, "DTC P0172, P0175 FUEL</u> <u>INJECTION SYSTEM FUNCTION"</u>.

No >> GO TO 3.

3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

- 1. Turn ignition switch OFF.
- 2. Disconnect ECM harness connector.
- 3. Disconnect heated oxygen sensor 2 harness connector.
- <> : Vehicle front
- Oil pan (view from under vehicle) (1)
- Heated oxygen sensor 2 (bank 1) harness connector (2)
- Heated oxygen sensor 2 (bank 2) harness connector (3)
- 4. Check harness continuity between ECM terminal 78 and HO2S2 terminal 4.

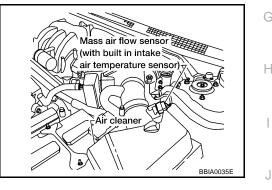

Refer to Wiring Diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

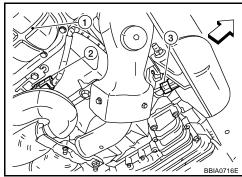

- OK >> GO TO 4.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

MONITOR ITEM	CONDITION	SPECIFICATION
HO2S2 (B1) HO2S2 (B2)	 Revving engine from idle to 3,000 rpm quickly after the following condi- tions are met 	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S2 MNTR (B1) HO2S2 MNTR (B2)	 Engine: After warming up Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load 	$LEAN \leftarrow \rightarrow RICH$

On Board Diagnosis Logic

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the A/F sensor 1. The oxygen storage capacity of the three way catalyst (manifold) causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the switching response of the sensor's voltage is faster than specified during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	
P0139 0139 (Bank 1)	Heated oxygen sensor	It takes more time for the sensor to respond	 Harness or connectors (The sensor circuit is open or shorted) Heated oxygen sensor 2 	Μ
P0159 0159 (Bank 2)	2 circuit slow response	between rich and lean than the specified time.	Fuel pressureFuel injectorIntake air leaks

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

B WITH CONSULT-II

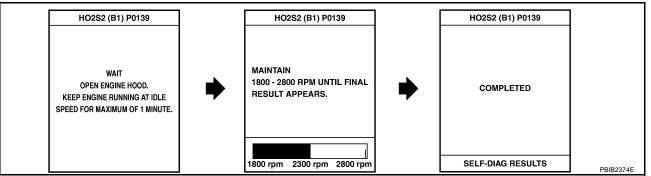

TESTING CONDITION:

For better results, perform "DTC WORK SUPPORT" at a temperature of 0 to 30 °C (32 to 86 °F).

- 1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-II.
- 2. Start engine and warm it up to the normal operating temperature.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- 5. Let engine idle for 1 minute.
- Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).
 If not, warm up engine and go to next step when "COOLAN

TEMP/S" indication reaches to 70°C (158°F).

- 7. Select "HO2S2 (B1) P0139" or "HO2S2 (B2) P0159" of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-II.
- 8. Start engine and following the instruction of CONSULT-II.

NOTE:

It will take at most 10 minutes until "COMPLETED" is displayed.

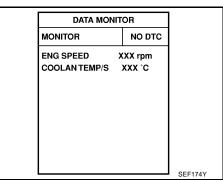

- Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS". If "NG" is displayed, refer to <u>EC-299, "Diagnostic Procedure"</u>. If "CAN NOT BE DIAGNOSED" is displayed, perform the following.
- a. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
- b. Return to step 1.

Overall Function Check

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a 1st trip DTC might not be confirmed.

WITH GST

- 1. Start engine and warm it up to the normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- 4. Let engine idle for 1 minute.
- 5. Set voltmeter probes between ECM terminal 74 [HO2S2 (B1) signal] or 55 [HO2S2 (B2) signal] and ground.

UBS0094D

UBS0094C

6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.(Depress and release accelerator pedal as soon as possible.)

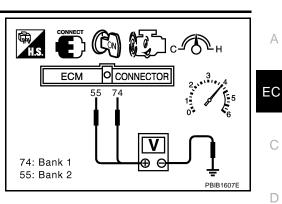

A change of voltage should be more than 0.06V for 1 second during this procedure.

If the voltage can be confirmed in step 6, step 7 is not necessary.

7. Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position.

A change of voltage should be more than 0.06V for 1 second during this procedure.

8. If NG, go to EC-299, "Diagnostic Procedure" .

Diagnostic Procedure 1. CHECK GROUND CONNECTIONS

- 1. Turn ignition switch OFF.
- 2. Loosen and retighten four ground screws on the body. Refer to <u>EC-156</u>, "Ground Inspection".

OK or NG

- OK >> GO TO 2.
- NG >> Repair or replace ground connections.

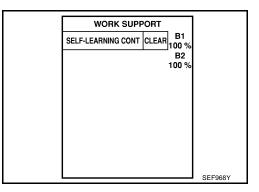

Κ

А

2. CLEAR THE SELF-LEARNING DATA

With CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
- 3. Clear the self-learning control coefficient by touching "CLEAR".
- Run engine for at least 10 minutes at idle speed. Is the 1st trip DTC P0171, P0172, P0174 or P0175 detected? Is it difficult to start engine?

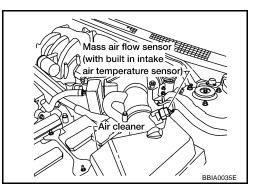

Without CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF.
- 3. Disconnect mass air flow sensor harness connector.
- <> : Vehicle front
- Oil pan (view from under vehicle) (1)
- Heated oxygen sensor 2 (bank 1) harness connector (2)
- Heated oxygen sensor 2 (bank 2) harness connector (3)
- 4. Restart engine and let it idle for at least 5 seconds.
- 5. Stop engine and reconnect mass air flow sensor harness connector.
- 6. Make sure DTC P0102 is displayed.
- 7. Erase the DTC memory. Refer to <u>EC-61, "HOW TO ERASE</u> <u>EMISSION-RELATED DIAGNOSTIC INFORMATION"</u>.
- 8. Make sure DTC P0000 is displayed.
- Run engine for at least 10 minutes at idle speed.
 Is the 1st trip DTC P0171, P0172, P0174 or P0175 detected?
 Is it difficult to start engine?

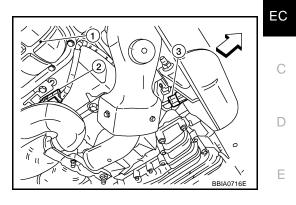

Yes or No

- Yes >> Perform trouble diagnosis for DTC P0171, P0174 or P0172, P0175. Refer to <u>EC-305, "DTC</u> <u>P0171, P0174 FUEL INJECTION SYSTEM FUNCTION"</u> or <u>EC-317, "DTC P0172, P0175 FUEL</u> <u>INJECTION SYSTEM FUNCTION"</u>.
- No >> GO TO 3.

3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

- 1. Turn ignition switch OFF.
- 2. Disconnect ECM harness connector.
- 3. Disconnect heated oxygen sensor 2 harness connector.
- 🗘 : Vehicle front
- Oil pan (view from under vehicle) (1)
- Heated oxygen sensor 2 (bank 1) harness connector (2)

6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.

(Depress and release accelerator pedal as soon as possible.) The voltage should be above 0.78V at least once during this procedure.

If the voltage is above 0.78V at step 6, step 7 is not necessary.

 Keep vehicle at idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position.
 The voltage should be below 0.18V at least once during this.

The voltage should be below 0.18V at least once during this procedure.

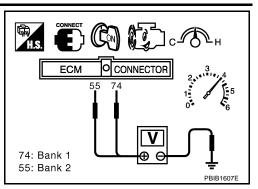

8. If NG, replace heated oxygen sensor 2.

CAUTION:

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

Removal and Installation HEATED OXYGEN SENSOR 2

Refer to EM-27, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

UBS0094H

On Board Diagnosis Logic

With the Air/Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from the A/F sensors 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios. In case the amount of the compensation value is extremely large (The actual mixture ratio is too lean.), the ECM judges the condition as the fuel injection system malfunction and lights up the MIL (2 trip detection logic).

Sensor	Input signal to ECM	ECM function	Actuator
A/F sensor 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)	Fuel injection control	Fuel injector

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	
P0171			Intake air leaks	E
0171			 A/F sensor 1 	
(Bank 1)	,		Fuel injector	
	Fuel injection system too	 The amount of mixture ratio compensation is too 	 Exhaust gas leaks 	F
P0174	P0174 lean 0174 (Bank 2)		 Incorrect fuel pressure 	
• • • •			 Lack of fuel 	
(Bank 2)			 Mass air flow sensor 	G
			 Incorrect PCV hose connection 	

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

B WITH CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON and select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CON-SULT-II.
- 4. Clear the self-learning control coefficient by touching "CLEAR".
- 5. Select "DATA MONITOR" mode with CONSULT-II.
- Start engine again and let it idle for at least 10 minutes. The 1st trip DTC P0171 or P0174 should be detected at this stage, if a malfunction exists. If so, go to <u>EC-311, "Diagnostic</u> <u>Procedure"</u>.

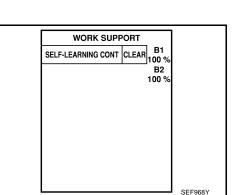

NOTE:

If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.

- a. Turn ignition switch OFF and wait at least 10 seconds.
- b. Start engine and drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for 10 minutes. Refer to the table below.
 Hold the accelerator pedal as steady as possible.

The similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time.

Engine speed	Engine speed in the freeze frame data ±400 rpm	
Vehicle speed	ehicle speed in the freeze frame data \pm 10 km/h (6 MPH)	
Engine coolant temperature (T) condition	When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).	
	When the freeze frame data shows higher than or equal to 70 °C (158 °F), T should be higher than or equal to 70 °C (158 °F).

Μ

- 7. If it is difficult to start engine at step 6, the fuel injection system has a malfunction, too.
- 8. Crank engine while depressing accelerator pedal. If engine starts, go to <u>EC-311, "Diagnostic Procedure"</u>. If engine does not start, check exhaust and intake air leak visually.

WITH GST

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Disconnect mass air flow sensor harness connector.
- 4. Restart engine and let it idle for at least 5 seconds.
- 5. Stop engine and reconnect mass air flow sensor harness connector.
- 6. Select Service \$03 with GST. Make sure DTC P0102 is detected.
- 7. Select Service \$04 with GST and erase the DTC P0102.
- 8. Start engine again and let it idle for at least 10 minutes.
- Select Service \$07 with GST. The 1st trip DTC P0171 or P0174 should be detected at this stage, if a malfunction exists. If so, go to <u>EC-311, "Diagnostic Procedure"</u>.
 NOTE:

If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.

- a. Turn ignition switch OFF and wait at least 10 seconds.
- b. Start engine and drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for 10 minutes. Refer to the table below.

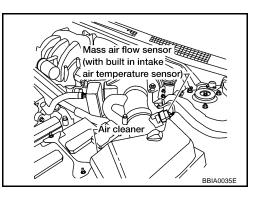

Hold the accelerator pedal as steady as possible.

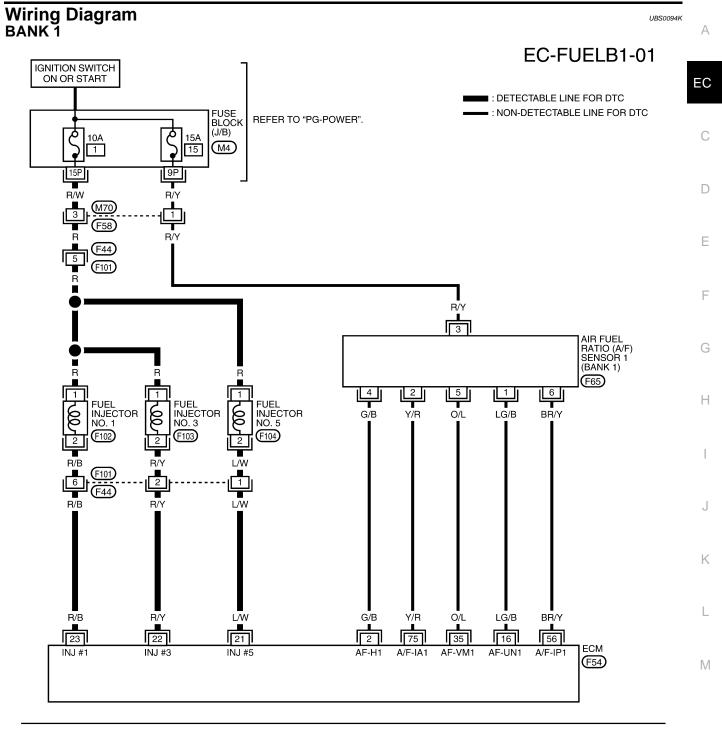

The similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time.

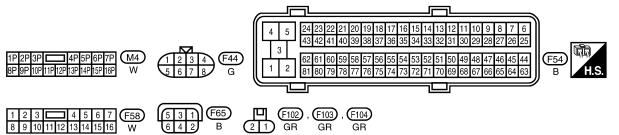

Engine speed	Engine speed in the freeze frame data \pm 400 rpm	
Vehicle speed	/ehicle speed in the freeze frame data \pm 10 km/h (6 MPH)	
Engine coolant temperature (T) condition	When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).	
	When the freeze frame data shows higher than or equal to 70 °C (158 °F), T should be higher than or equal to 70 °C (158 °F).	

10. If it is difficult to start engine at step 8, the fuel injection system has a malfunction.

 Crank engine while depressing accelerator pedal. If engine starts, go to <u>EC-311, "Diagnostic Procedure"</u>. If engine does not start, check exhaust and intake air leak visually.

	(+)	(-)
1	5	6
3	5	2
5	5	1

Operating sound should exist.

OK or NG

OK >> GO TO 12.

NG >> Perform trouble diagnosis for <u>EC-622</u>, "FUEL INJECTOR".

Revision: May 2006

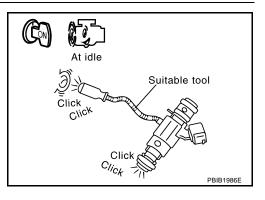

11. CHECK FUNCTION OF FUEL INJECTOR

- 1. Start engine.
- 2. Listen to fuel injectors No.2, No.4, No.6 operating sound.

Clicking noise should exist.

OK or NG

- OK >> GO TO 12.
- NG >> Perform trouble diagnosis for <u>EC-622</u>, "FUEL INJEC-<u>TOR"</u>.

12. CHECK FUEL INJECTOR

- 1. Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
- 2. Turn ignition switch OFF.
- 3. Disconnect all fuel injector harness connectors.
- 4. Remove fuel tube assembly. Refer to <u>EM-40, "FUEL INJECTOR AND FUEL TUBE"</u>. Keep fuel hose and all fuel injectors connected to fuel tube.
- 5. For DTC P0171, reconnect fuel injector harness connectors on bank 1. For DTC P0174, reconnect fuel injector harness connectors on bank 2.
- 6. Disconnect all ignition coil harness connectors.
- 7. Prepare pans or saucers under each fuel injector.
- Crank engine for about 3 seconds. For DTC P0171, make sure that fuel sprays out from fuel injectors on bank 1. For DTC P0174, make sure that fuel sprays out from fuel injectors on bank 2.

Fuel should be sprayed evenly for each fuel injector.

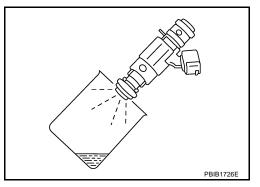

OK or NG

- OK >> GO TO 13.
- NG >> Replace fuel injectors from which fuel does not spray out. Always replace O-ring with new ones.

13. CHECK INTERMITTENT INCIDENT

Refer to EC-147, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> INSPECTION END

On Board Diagnosis Logic

With the Air/Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from the A/F sensors 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios. In case the amount of the compensation value is extremely large (The actual mixture ratio is too rich.), the ECM judges the condition as the fuel injection system malfunction and lights up the MIL (2 trip detection logic).

Sensor	Input signal to ECM	ECM function	Actuator
A/F sensor 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)	Fuel injection control	Fuel injector

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	
P0172			A/F sensor 1	Е
0172 (Bank 1)		• Fuel injection system does not operate properly.	Fuel injector	
. ,	Fuel injection system too	• The amount of mixture ratio compensation is too	 Exhaust gas leaks 	
P0175 0175		large. (The mixture ratio is too rich.)	 Incorrect fuel pressure 	F
(Bank 2)			 Mass air flow sensor 	

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Turn ignition switch ON and select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CON-SULT-II.
- 4. Clear the self-learning control coefficient by touching "CLEAR".
- 5. Select "DATA MONITOR" mode with CONSULT-II.
- Start engine again and let it idle for at least 10 minutes. The 1st trip DTC P0172, P0175 should be detected at this stage, if a malfunction exists. If so, go to <u>EC-323, "Diagnostic Procedure"</u>.

NOTE:

If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.

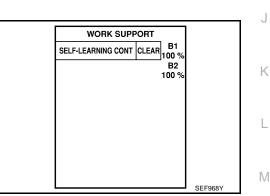

- a. Turn ignition switch OFF and wait at least 10 seconds.
- b. Start engine and drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for 10 minutes. Refer to the table below.
 Hold the accelerator pedal as steady as possible.

The similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time.

Engine speed	Engine speed in the freeze frame data ±400 rpm	
Vehicle speed Vehicle speed in the freeze frame data ± 10 km/h (6 MPH)		
Engine coolant temperature	When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).	
(T) condition	When the freeze frame data shows higher than or equal to 70 °C (158 °F), T should be higher than or equal to 70 °C (158 °F).	

7. If it is difficult to start engine at step 6, the fuel injection system has a malfunction, too.

8. Crank engine while depressing accelerator pedal.

2007 Maxima

UB\$0094M

А

EC

Н

UBS0094N

If engine starts, go to <u>EC-323, "Diagnostic Procedure"</u>. If engine does not start, remove ignition plugs and check for fouling, etc.

WITH GST

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Disconnect mass air flow sensor harness connector. Then restart and run engine for at least 5 seconds at idle speed.
- 4. Stop engine and reconnect mass air flow sensor harness connector.
- 5. Select Service \$03 with GST. Make sure DTC P0102 is detected.
- 6. Select Service \$04 with GST and erase the DTC P0102.
- 7. Start engine again and let it idle for at least 10 minutes.
- Select Service \$07 with GST. The 1st trip DTC P0172 or P0175 should be detected at this stage, if a malfunction exists. If so, go to <u>EC-323</u>, "Diagnostic Procedure".

NOTE:

If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.

- a. Turn ignition switch OFF and wait at least 10 seconds.
- b. Start engine and drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for 10 minutes. Refer to the table below.

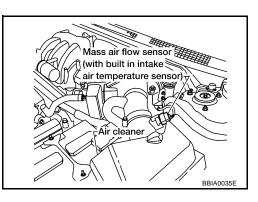

Hold the accelerator pedal as steady as possible.

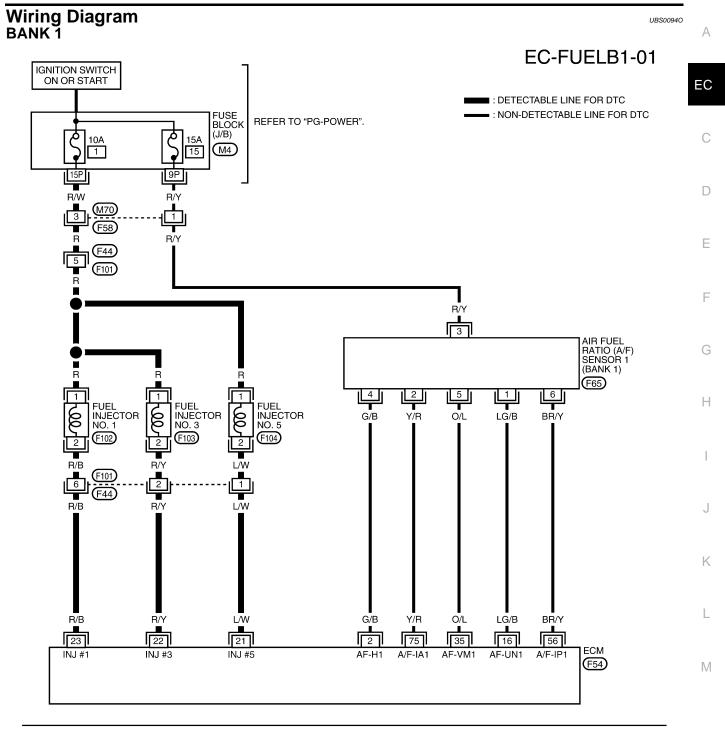

The similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time.

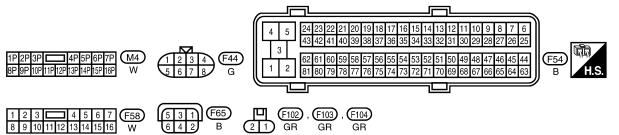

Engine speed	Engine speed in the freeze frame data ±400 rpm	
Vehicle speed	Vehicle speed in the freeze frame data \pm 10 km/h (6 MPH)	
Engine coolant temperature (T) condition	When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).	
	When the freeze frame data shows higher than or equal to 70 °C (158 °F), T should be higher than or equal to 70 °C (158 °F).	

9. If it is difficult to start engine at step 7, the fuel injection system has a malfunction.

 Crank engine while depressing accelerator pedal. If engine starts, go to <u>EC-323, "Diagnostic Procedure"</u>. If engine does not start, remove ignition plugs and check for fouling, etc.

- 1. Start engine.
- 2. Listen to fuel injectors No.2, No.4, No.6 operating sound.

Clicking noise should exist.

OK or NG

- OK >> GO TO 12.
- NG >> Perform trouble diagnosis for <u>EC-622</u>, "FUEL INJEC-<u>TOR"</u>.

12. CHECK FUEL INJECTOR

- 1. Remove fuel injector assembly. Refer to <u>EM-40, "FUEL INJECTOR AND FUEL TUBE"</u>. Keep fuel hose and all fuel injectors connected to fuel tube.
- 2. Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
- 3. Disconnect all fuel injector harness connectors.
- 4. Disconnect all ignition coil harness connectors.
- 5. Prepare pans or saucers under each fuel injectors.
- 6. Crank engine for about 3 seconds.
 - Make sure fuel does not drip from fuel injector.

OK or NG

OK (Does not drip.)>>GO TO 13.

NG (Drips.)>>Replace the fuel injectors from which fuel is dripping. Always replace O-ring with new one.

13. CHECK INTERMITTENT INCIDENT

Refer to EC-147, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> INSPECTION END

DTC P0181 FTT SENSOR

Component Description

The fuel tank temperature sensor is used to detect the fuel temperature inside the fuel tank. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the fuel temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

<Reference data>

Fluid temperature °C (°F)	Voltage* V	Resistance kΩ
20 (68)	3.5	2.3 - 2.7
50 (122)	2.2	0.79 - 0.90

*: This data is reference value and is measured between ECM terminal 107 (Fuel tank temperature sensor) and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	
P0181 0181	Fuel tank temperature sensor circuit range/ performance	Rationally incorrect voltage from the sensor is sent to ECM, compared with the voltage sig- nals from engine coolant temperature sensor and intake air temperature sensor.	 Harness or connectors (The sensor circuit is open or shorted) Fuel tank temperature sensor 	

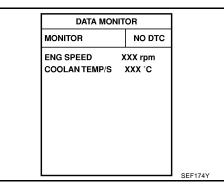

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

B WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- Wait at least 10 seconds. If the result is NG, go to <u>EC-332, "Diagnostic Procedure"</u>. If the result is OK, go to following step.
- Check "COOLAN TEMP/S" value. If "COOLAN TEMP/S" is less than 60°C (140°F), the result will be OK. If "COOLAN TEMP/S" is above 60°C (140°F), go to the following step.
- 5. Cool engine down until "COOLAN TEMP/S" is less than 60°C (140°F).
- 6. Wait at least 10 seconds.
- 7. If 1st trip DTC is detected, go to EC-332, "Diagnostic Procedure" .

DTC P0222, P0223 TP SENSOR

Component Description

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN 1	Ignition switch: ON	Accelerator pedal: Fully released	More than 0.36V
THRTL SEN 2*	(Engine stopped)Shift lever: D	Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

DTC No. DTC detecting condition Possible cause Trouble diagnosis name P0222 Throttle position sensor An excessively low voltage from the TP sensor 1 • Harness or connectors 0222 1 circuit low input is sent to ECM. (TP sensor 1 circuit is open or shorted) (APP sensor 2 circuit is shorted) • Electric throttle control actuator P0223 Throttle position sensor An excessively high voltage from the TP sensor (TP sensor 1) 1 is sent to ECM. 0223 1 circuit high input Accelerator pedal position sensor (APP sensor 2)

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode an the MIL lights up.

Engine operation condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

PFP:16119

UBS00955

UBS00956

DTC Confirmation Procedure

NOTE:

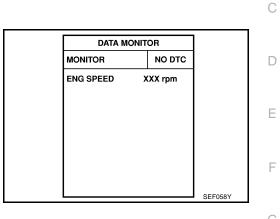

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select DATA MONITOR mode with CONSULT-II.
- 3. Start engine and let it idle for 1 second.
- 4. If DTC is detected, go to EC-343, "Diagnostic Procedure" .

UBS0095B

UBS0095A

DTC P0300 - P0306 MULTIPLE CYLINDER MISFIRE, NO. 1 - 6 CYLINDER MIS-FIRE

On Board Diagnosis Logic

When a misfire occurs, engine speed will fluctuate. If the engine speed fluctuates enough to cause the crank-shaft position (CKP) sensor (POS) signal to vary, ECM can determine that a misfire is occurring.

Sensor	Input Signal to ECM	ECM function	
Crankshaft position sensor (POS)	Engine speed	On board diagnosis of misfire	C

The misfire detection logic consists of the following two conditions.

1. One Trip Detection Logic (Three Way Catalyst Damage)

On the first trip that a misfire condition occurs that can damage the three way catalyst (TWC) due to overheating, the MIL will blink.

When a misfire condition occurs, the ECM monitors the CKP sensor signal every 200 engine revolutions for a change.

When the misfire condition decreases to a level that will not damage the TWC, the MIL will turn off. If another misfire condition occurs that can damage the TWC on a second trip, the MIL will blink. When the misfire condition decreases to a level that will not damage the TWC, the MIL will remain on. If another misfire condition occurs that can damage the TWC, the MIL will begin to blink again.

2. Two Trip Detection Logic (Exhaust quality deterioration)

For misfire conditions that will not damage the TWC (but will affect vehicle emissions), the MIL will only light when the misfire is detected on a second trip. During this condition, the ECM monitors the CKP sensor signal every 1,000 engine revolutions.

A misfire malfunction can be detected on any one cylinder or on multiple cylinders.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0300 0300	Multiple cylinder misfire detected	Multiple cylinder misfire.	Improper spark plug
P0301 0301	No.1 cylinder misfire detected	No. 1 cylinder misfires.	Insufficient compression Incorrect fuel pressure
P0302 0302	No. 2 cylinder misfire detected	No. 2 cylinder misfires.	The fuel injector circuit is open or shorted Such a starter
P0303 0303	No. 3 cylinder misfire detected	No. 3 cylinder misfires.	 Fuel injector Intake air leak The ignition signal circuit is open or shorted Lack of fuel Signal plate Air fuel ratio (A/E) connect 1
P0304 0304	No. 4 cylinder misfire detected	No. 4 cylinder misfires.	
P0305 0305	No. 5 cylinder misfire detected	No. 5 cylinder misfires.	
P0306 0306	No. 6 cylinder misfire detected	No. 6 cylinder misfires.	 Air fuel ratio (A/F) sensor 1 Incorrect PCV hose connection

DTC Confirmation Procedure

CAUTION:

Always drive vehicle in safe manner according to traffic conditions and obey all traffic laws when driving.

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

А

Е

F

Н

UBS00K1T

B WITH CONSULT-II

- 1. Turn ignition switch ON, and select "DATA MONITOR" mode with CONSULT-II.
- 2. Start engine and warm it up to normal operating temperature.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Restart engine and let it idle for about 15 minutes.
- 5. If 1st trip DTC is detected, go to EC-348, "Diagnostic Procedure"

NOTE:

If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.

- a. Turn ignition switch OFF and wait at least 10 seconds.
- b. Start engine and drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for a certain time. Refer to the table below.

Hold the accelerator pedal as steady as possible.

The similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time.

Engine speed	Engine speed in the freeze frame data \pm 400 rpm	
Vehicle speed	Vehicle speed in the freeze frame data \pm 10 km/h (6 MPH)	
Engine coolant temperature	When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).	
(T) condition	When the freeze frame data shows higher than or equal to 70 $^{\circ}$ C (158 $^{\circ}$ F), T should be higher than or equal to 70 $^{\circ}$ C (158 $^{\circ}$ F).	

The time to driving varies according to the engine speed in the freeze frame data.

Engine speed	Time	
Around 1,000 rpm	Approximately 10 minutes	
Around 2,000 rpm	Approximately 5 minutes	
More than 3,000 rpm	Approximately 3.5 minutes	

WITH GST

Follow the procedure "WITH CONSULT-II" above.

Diagnostic Procedure

1. CHECK FOR INTAKE AIR LEAK AND PCV HOSE

- 1. Start engine and run it at idle speed.
- 2. Listen for the sound of the intake air leak.
- 3. Check PCV hose connection.

OK or NG

OK >> GO TO 2.

NG >> Discover air leak location and repair.

2. CHECK FOR EXHAUST SYSTEM CLOGGING

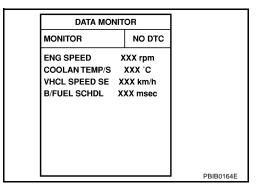

Stop engine and visually check exhaust tube, three way catalyst and muffler for dents.

<u>OK or NG</u>

OK (With CONSULT-II)>>GO TO 3.

OK (Without CONSULT-II)>>GO TO 4.

NG >> Repair or replace it.

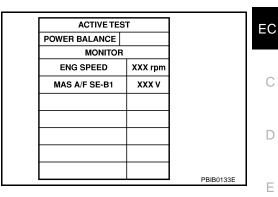

UBS00K1U

3. PERFORM POWER BALANCE TEST

With CONSULT-II

- 1. Perform "POWER BALANCE" in "ACTIVE TEST" mode.
- 2. Is there any cylinder which does not produce a momentary engine speed drop?

А

F

Н

Yes or No

Yes >> GO TO 4. No >> GO TO 11.

4. CHECK FUNCTION OF FUEL INJECTOR-I

- 1. Stop engine.
- 2. Disconnect harness connector F44 (1), F101 (2).
- 3. Turn ignition switch ON.
- <a>: Vehicle front
- Intake manifold collector (3)

4. Check voltage between harness connector F44 terminal 5 and ground with CONSULT-II or tester.

Voltage: Battery voltage

- 5. Turn ignition switch OFF.
- 6. Disconnect ECM harness connector.
- Check harness continuity between harness connector F44 terminal and ECM terminal as follows. Refer to Wiring Diagram.

Cylinder	Harness connector F44 terminal	ECM terminal
1	6	23
3	2	22
5	1	21

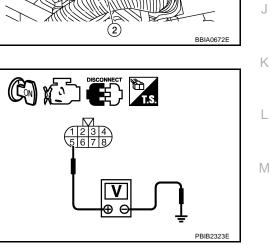

Continuity should exist.

8. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.

NG >> Perform trouble diagnosis for FUEL INJECTOR, refer to <u>EC-622</u>, "FUEL INJECTOR".

5. CHECK FUNCTION OF FUEL INJECTOR-II

Provide battery voltage between harness connector F101 as follows and then interrupt it. Listen to each fuel injector operating sound.

Cylinder	Harness connector F101 terminal		
Cylinder	(+)	()	
1	5	6	
3	5	2	
5	5	1	

Operating sound should exist.

OK or NG

OK >> GO TO 6.

NG >> Perform trouble diagnosis for FUEL INJECTOR, refer to EC-622, "FUEL INJECTOR".

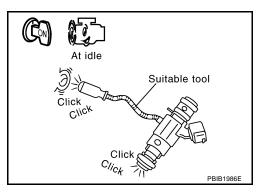

6. CHECK FUNCTION OF FUEL INJECTOR-III

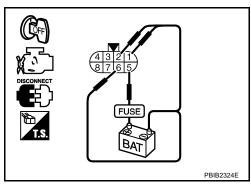

- 1. Reconnect all harness connector disconnected.
- 2. Start engine.
- 3. Listen to fuel injectors No. 2, No. 4, No.6 operating sound.

Clicking noise should exist.

OK or NG

- OK >> GO TO 7.
- NG >> Perform trouble diagnosis for FUEL INJECTOR CIR-CUIT, refer to <u>EC-622, "FUEL INJECTOR"</u>.

7. CHECK FUNCTION OF IGNITION COIL-I

CAUTION:

Do the following procedure in the place where ventilation is good without the combustible.

- 1. Turn ignition switch OFF.
- 2. Remove fuel pump fuse in IPDM E/R to release fuel pressure. **NOTE:**

Do not use CONSULT-II to release fuel pressure, or fuel pressure applies again during the following procedure.

- 3. Start engine.
- 4. After engine stalls, crank it two or three times to release all fuel pressure.
- 5. Turn ignition switch OFF.
- 6. Remove all ignition coil harness connectors to avoid the electrical discharge from the ignition coils.
- 7. Remove ignition coil and spark plug of the cylinder to be checked.
- 8. Crank engine for 5 seconds or more to remove combustion gas in the cylinder.
- 9. Connect spark plug and harness connector to ignition coil.
- 10. Fix ignition coil using a rope etc. with gap of 13 17 mm between the edge of the spark plug and grounded metal portion as shown in the figure.
- 11. Crank engine for about 3 seconds, and check whether spark is generated between the spark plug and the grounded metal portion.

Spark should be generated.

CAUTION:

- Do not approach to the spark plug and the ignition coil within 50cm. Be careful not to get an electrical shock while checking, because the electrical discharge voltage becomes 20kV or more.
- It might cause to damage the ignition coil if the gap of more than 17 mm is taken. NOTE:

When the gap is less than 13 mm, the spark might be generated even if the coil is malfunctioning.

OK or NG

OK >> GO TO 11. NG >> GO TO 8.

8. CHECK FUNCTION OF IGNITION COIL-II

- 1. Turn ignition switch OFF.
- 2. Disconnect spark plug and connect a known-good spark plug.
- 3. Crank engine for about 3 seconds, and recheck whether spark is generated between the spark plug and the grounded metal portion.

Spark should be generated.

OK or NG

OK >> GO TO 9.

NG >> Check ignition coil, power transistor and their circuits. Refer to EC-636, "IGNITION SIGNAL".

9. CHECK SPARK PLUG

Check the initial spark plug for fouling, etc.

OK or NG

- OK >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to <u>MA-17</u>, <u>"Changing Spark Plugs</u> (<u>Platinum - Tipped Type)</u>".
- NG >> 1. Repair or clean spark plug. 2. GO TO 10.

10. CHECK FUNCTION OF IGNITION COIL-III

- 1. Reconnect the initial spark plugs.
- 2. Crank engine for about three seconds, and recheck whether spark is generated between the spark plug and the grounded portion.

Spark should be generated.

OK or NG

OK >> INSPECTION END

NG >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to <u>MA-17, "Changing</u> <u>Spark Plugs (Platinum - Tipped Type)"</u>.

11. CHECK COMPRESSION PRESSURE

Check compression pressure. Refer to EM-90, "CHECKING COMPRESSION PRESSURE" .

OK or NG

OK >> GO TO 12.

NG >> Check pistons, piston rings, valves, valve seats and cylinder head gaskets.

12. CHECK FUEL PRESSURE

- 1. Install all removed parts.
- 2. Release fuel pressure to zero. Refer to EC-81, "FUEL PRESSURE RELEASE" .
- 3. Install fuel pressure gauge and check fuel pressure. Refer to EC-82, "FUEL PRESSURE CHECK" .

At idling: Approximately 350 kPa (3.57 kg/cm², 51 psi)

OK or NG

OK >> GO TO 14. NG >> GO TO 13.

13. DETECT MALFUNCTIONING PART

Check the following.

- Fuel pump and circuit (Refer to EC-630, "FUEL PUMP" .)
- Fuel pressure regulator (Refer to EC-82, "FUEL PRESSURE CHECK".)
- Fuel lines
- Fuel filter for clogging

>> Repair or replace.

14. CHECK IGNITION TIMING				
Check the followin	g items. Refer to EC-72, "Basic Inspection" .			
Items	Specifications	EC		
Target idle speed	600 ± 50 rpm (in P or N position)			
Ignition timing	$15 \pm 5^{\circ}$ BTDC (in P or N position)

OK or NG OK >> GO TO 19. NG >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or ground. Refer to EC-188, "DTC P0101 MAF SENSOR".	J
19. CHECK SYMPTOM MATRIX CHART	
Check items on the rough idle symptom in <u>EC-93, "Symptom Matrix Chart"</u> . <u>OK or NG</u> OK >> GO TO 20. NG >> Repair or replace. 20. ERASE THE 1ST TRIP DTC	L

Some tests may cause a 1st trip DTC to be set. Erase the 1st trip DTC from the ECM memory after performing the tests. Refer to <u>EC-61, "HOW TO ERASE</u> <u>EMISSION-RELATED DIAGNOSTIC INFORMATION"</u>.

>> GO TO 21.

21. CHECK INTERMITTENT INCIDENT

Refer to EC-147, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT".

>> INSPECTION END

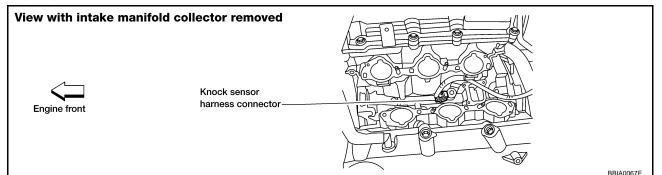

DTC P0327, P0328 KS

PFP:22060

UBS0095F

Component Description

The knock sensor is attached to the cylinder block. It senses engine knocking using a piezoelectric element. A knocking vibration from the cylinder block is sensed as vibrational pressure. This pressure is converted into a voltage signal and sent to the ECM.

On Board Diagnosis Logic

UBS0095G

UB\$0095H

The MIL will not light up for these diagnoses.

DTC No.	Trouble diagnosis name	DTC detected condition	Possible cause	
P0327 0327	Knock sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	 Harness or connectors (The sensor circuit is open or shorted.) Knock sensor 	
P0328 0328	Knock sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.		

DTC Confirmation Procedure

NOTE:

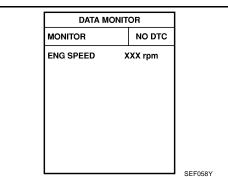

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

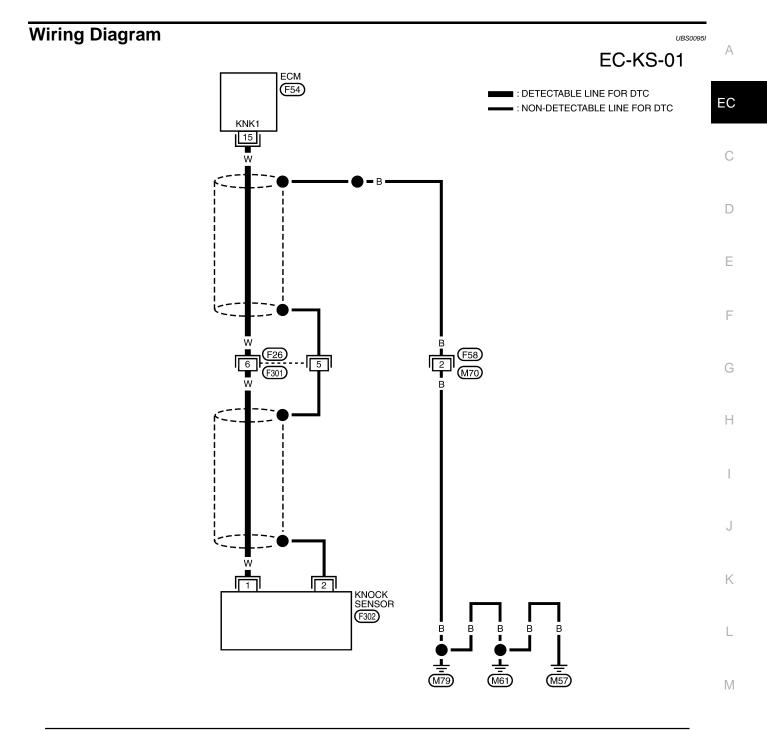

(I) WITH CONSULT-II

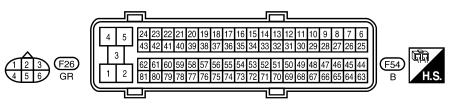

- 1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-II.
- 2. Start engine and run it for at least 5 seconds at idle speed.
- 3. If 1st trip DTC is detected, go to EC-358, "Diagnostic Procedure"

WITH GST

Follow the procedure "WITH CONSULT-II" above.

BBWA2050E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TER- MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
15	W	Knock sensor	[Engine is running] • Idle speed	Approximately 2.5V

Diagnostic Procedure 1. CHECK KNOCK SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT-I

UBS0095J

- 1. Turn ignition switch OFF.
- 2. Disconnect ECM harness connector.
- 3. Check resistance between ECM terminal 15 and ground. Refer to Wiring Diagram. **NOTE:**

It is necessary to use an ohmmeter which can measure more than 10 M $\!\Omega.$

Resistance: Approximately 532 - 588 kΩ [at 20°C (68°F)]

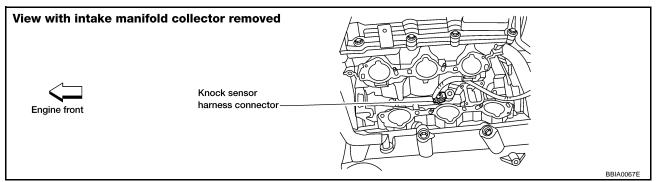

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5. NG >> GO TO 2.

2. CHECK KNOCK SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT-II

1. Disconnect knock sensor harness connector.

2. Check harness continuity between ECM terminal 15 and knock sensor terminal 1. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4. NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F26, F301
- Harness for open or short between ECM and knock sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK KNOCK SENSOR

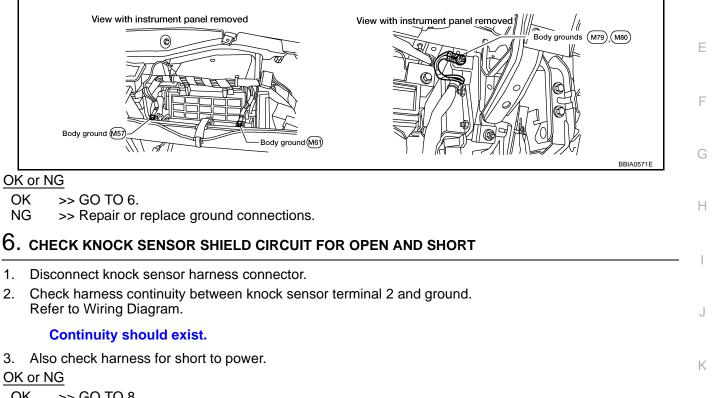

Refer to EC-360, "Component Inspection" .

OK or NG

OK >> GO TO 5. NG >> Replace knock sensor.

5. CHECK GROUND CONNECTIONS

Loosen and retighten four ground screws on the body. Refer to $\underline{\text{EC-156}}$, "Ground Inspection".

OK >> GO TO 8. NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F26, F301
- Harness connectors F58, M70
- Harness for open or short between knock sensor and ground

>> Repair open circuit or short power in harness or connectors.

8. CHECK INTERMITTENT INCIDENT

Refer to EC-147, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> INSPECTION END

А

EC

M

Component Inspection KNOCK SENSOR

Check resistance between knock sensor terminal 1 and ground. **NOTE:**

It is necessary to use an ohmmeter which can measure more than 10 $\text{M}\Omega.$

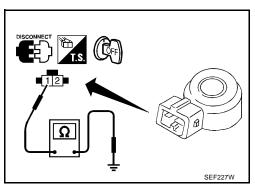

Resistance: Approximately 532 - 588 kΩ [at 20°C (68°F)]

CAUTION:

Do not use any knock sensors that have been dropped or physically damaged. Use only new ones.

Removal and Installation KNOCK SENSOR

Refer to EM-113, "CYLINDER BLOCK" .

UBS0095L

UBS0095K

Component Description

The crankshaft position sensor (POS) is located on the oil pan facing the gear teeth (cogs) of the signal plate. It detects the fluctuation of the engine revolution.

The sensor consists of a permanent magnet and Hall IC.

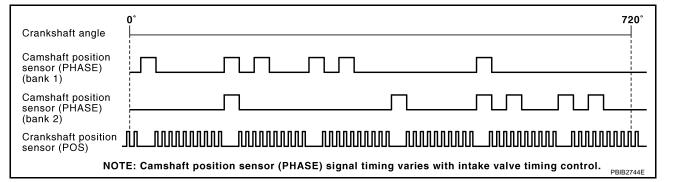

When the engine is running, the high and low parts of the teeth cause the gap with the sensor to change.

The changing gap causes the magnetic field near the sensor to change.

Due to the changing magnetic field, the voltage from the sensor changes.

The ECM receives the voltage signal and detects the fluctuation of the engine revolution.

The ECM receives the signals as shown in the figure.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
ENG SPEED	• Run engine and compare CONSULT-II value with the tachometer indication.	Almost the same speed as the tachometer indication

On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	
		• The crankshaft position sensor (POS) signal is not detected by the ECM during the first few seconds of engine cranking.	Harness or connectors	L
P0335 0335	Crankshaft position sensor (POS) circuit	• The proper pulse signal from the crankshaft position sensor (POS) is not sent to ECM while the engine is running.	(The sensor circuit is open or shorted)Crankshaft position sensor (POS)Signal plate	Μ
		 The crankshaft position sensor (POS) signal is not in the normal pattern during engine running. 		

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10.5V with ignition switch ON.

Diagnostic Procedure

UBS0095R

1. CHECK GROUND CONNECTIONS

- 1. Turn ignition switch OFF.
- 2. Loosen and retighten four ground screws on the body. Refer to <u>EC-156</u>, "Ground Inspection".

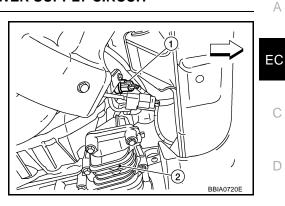

OK or NG

- OK >> GO TO 2.
- NG >> Repair or replace ground connections.

2. CHECK CRANKSHAFT POSITION (CKP) SENSOR (POS) POWER SUPPLY CIRCUIT

- 1. Disconnect crankshaft position (CKP) sensor (POS) (1) harness connector.
- <> : Vehicle front
- CVT oil pan (2)

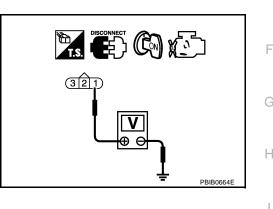

- 2. Turn ignition switch ON.
- 3. Check voltage between CKP sensor (POS) terminal 1 and ground with CONSULT-II or tester.

Voltage: Battery voltage

3. DETECT MALFUNCTIONING PART

OK or NG

OK >> GO TO 4. NG >> GO TO 3.

Ε

Μ

Check the following. Harness connectors F58, M70 Harness connectors E131, M92 Harness for open or short between crankshaft position sensor (POS) and ECM Harness for open or short between crankshaft position sensor (POS) and IPDM E/R > Repair open circuit or short to ground or short to power in harness or connectors. 4. CHECK CKP SENSOR (POS) GROUND CIRCUIT FOR OPEN AND SHORT

- 1. Turn ignition switch OFF.
- 2. Check harness continuity between CKP sensor (POS) terminal 3 and ground. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 6. NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F58, M70
- Harness for open or short between crankshaft position sensor (POS) and ground

>> Repair open circuit or short to power in harness or connectors.

EC-365

6. CHECK CKP SENSOR (POS) INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

- 1. Disconnect ECM harness connector.
- 2. Check harness continuity between ECM terminal 13 and CKP sensor (POS) terminal 2. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 7.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

7. CHECK CRANKSHAFT POSITION SENSOR (POS)

Refer to EC-367, "Component Inspection" .

OK or NG

OK >> GO TO 8.

NG >> Replace crankshaft position sensor (POS).

8. CHECK GEAR TOOTH

Visually check for chipping signal plate gear tooth.

OK or NG

OK >> GO TO 9. NG >> Replace the signal plate.

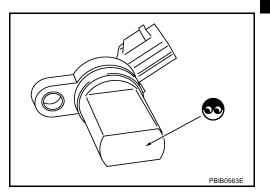

9. CHECK INTERMITTENT INCIDENT

Refer to EC-147, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> INSPECTION END

Component Inspection CRANKSHAFT POSITION SENSOR (POS)

- 1. Loosen the fixing bolt of the sensor.
- 2. Disconnect crankshaft position sensor (POS) harness connector.
- 3. Remove the sensor.
- 4. Visually check the sensor for chipping.

Revision: May 2006

DTC P0340, P0345 CMP SENSOR (PHASE)

Component Description

The camshaft position sensor (PHASE) senses the retraction of intake valve camshaft to identify a particular cylinder. The camshaft position sensor (PHASE) senses the piston position.

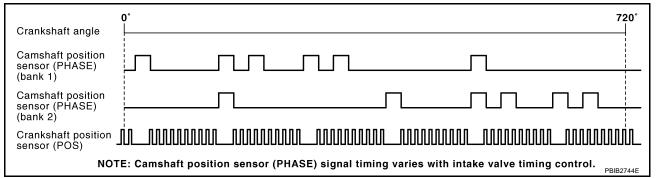

When the crankshaft position sensor (POS) system becomes inoperative, the camshaft position sensor (PHASE) provides various controls of engine parts instead, utilizing timing of cylinder identification signals.

The sensor consists of a permanent magnet and Hall IC.

When engine is running, the high and low parts of the teeth cause the gap with the sensor to change.

The changing gap causes the magnetic field near the sensor to change.

Due to the changing magnetic field, the voltage from the sensor changes. The ECM receives the signals as shown in the figure.

On Board Diagnosis Logic

DTC No. Trouble diagnosis name DTC detecting condition Possible cause P0340 Harness or connectors 0340 (The sensor circuit is open or shorted) The cylinder No. signal is not sent to ECM (Bank 1) Camshaft position sensor (PHASE) for the first few seconds during engine cranking. Camshaft (Intake) Camshaft position sensor • The cylinder No. signal is not sent to ECM Starter motor (Refer to SC-10, "START-(PHASE) circuit P0345 during engine running. ING SYSTEM" .) 0345 • The cylinder No. signal is not in the normal Starting system circuit (Refer to <u>SC-10</u>, (Bank 2) pattern during engine running. "STARTING SYSTEM" .) Dead (Weak) battery

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10.5V with ignition switch ON.

B WITH CONSULT-II

1. Turn ignition switch ON.

PFP:23731

PBIB0562E

UBS0095W

DTC P0340, P0345 CMP SENSOR (PHASE)

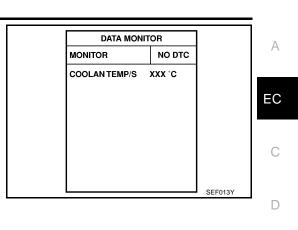

- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Crank engine for at least 2 seconds and run it for at least 5 seconds at idle speed.
- 4. If 1st trip DTC is detected, go to EC-373, "Diagnostic Procedure"

If 1st trip DTC is not detected, go to next step.

- 5. Maintaining engine speed at more than 800 rpm for at least 5 seconds.
- 6. If 1st trip DTC is detected, go to EC-373, "Diagnostic Procedure"

WITH GST

Follow the procedure "WITH CONSULT-II" above.

On Board Diagnosis Logic

The ECM monitors the switching frequency ratio of air fuel ratio (A/F) sensor 1 and heated oxygen sensor 2.

A three way catalyst (manifold) with high oxygen storage capacity will indicate a low switching frequency of heated oxygen sensor 2. As oxygen storage capacity decreases, the heated oxygen sensor 2 switching frequency will increase.

When the frequency ratio of air fuel ratio (A/F) sensor 1 and heated oxygen sensor 2 approaches a specified limit value, the three way catalyst (manifold) malfunction is diagnosed.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0420 0420			Three way catalyst (manifold) Evbount tube
(Bank 1)		• Three way catalyst (manifold) does not oper-	Exhaust tubeIntake air leaks
P0430	Catalyst system effi- ciency below threshold		Fuel injector
0430 (Bank 2)			Fuel injector leaksSpark plug
(Darik Z)			 Improper ignition timing

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

B WITH CONSULT-II

TESTING CONDITION:

Do not hold engine speed for more than the specified minutes below.

- Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-II.
- 2. Start engine and warm it up to the normal operating temperature.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- 5. Let engine idle for 1 minute.
- 6. Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).

If not, warm up engine and go to next step when "COOLAN TEMP/S" indication reaches to 70°C (158°F).

7. Open engine hood.

Select "SELF-DIAG RESULTS" mode with CONSULT-II. Confirm that the 1st trip DTC is not detected.

If the 1st trip DTC is detected, go to <u>EC-380</u>, "Diagnostic Procedure" .

Overall Function Check

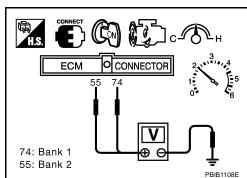

Use this procedure to check the overall function of the three way catalyst (manifold). During this check, a 1st trip DTC might not be confirmed.

WITH GST

- 1. Start engine and warm it up to the normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- 4. Let engine idle for 1 minute.
- 5. Open engine hood.
- Set voltmeter probe between ECM terminals 74 [HO2S2 (bank 1) signal], 55 [HO2S2 (bank 2) signal] and ground.
- 7. Keep engine speed at 2,500 rpm constant under no load.
- 8. Make sure that the voltage does not vary for more than 5 seconds.

If the voltage fluctuation cycle takes less than 5 seconds, go to <u>EC-380, "Diagnostic Procedure"</u>.

• 1 cycle: 0.6 - 1.0 \rightarrow 0 - 0.3 \rightarrow 0.6 - 1.0

Ε

F

Diagnostic Procedure

1. CHECK EXHAUST SYSTEM

Visually check exhaust tubes and muffler for dent.

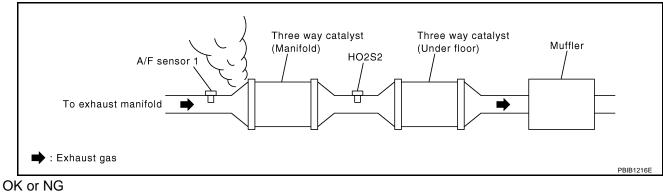

OK or NG

OK >> GO TO 2. NG >> Repair or replace.

2. CHECK EXHAUST GAS LEAK

1. Start engine and run it at idle.

2. Listen for an exhaust gas leak before the three way catalyst (manifold).

OK >> GO TO 3.

NG >> Repair or replace.

3. CHECK INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

OK or NG

OK >> GO TO 4. NG >> Repair or replace.

4. CHECK IGNITION TIMING

Check the following items. Refer to EC-72, "Basic Inspection" .

Items	Specifications
Target idle speed	600 ± 50 rpm (in P or N position)
Ignition timing	$15\pm5^\circ$ BTDC (in P or N position)

OK or NG

OK >> GO TO 5.

NG >> Follow the <u>EC-72</u>, "Basic Inspection".

UBS0096Q

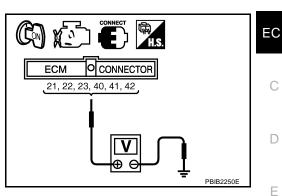

5. CHECK FUEL INJECTORS

- 1. Stop engine and then turn ignition switch ON.
- Check voltage between ECM terminals 21, 22, 23, 40, 41, 42 and ground with CONSULT-II or tester. Refer to Wiring Diagram for fuel injectors, <u>EC-623</u>.

Voltage: Battery voltage

OK or NG

- OK >> GO TO 6.
- NG >> Perform <u>EC-624, "Diagnostic Procedure"</u>.

6. CHECK FUNCTION OF IGNITION COIL-I

CAUTION:

Do the following procedure in the place where ventilation is good without the combustible.

- 1. Turn ignition switch OFF.
- Remove fuel pump fuse in IPDM E/R to release fuel pressure.
 NOTE:

Do not use CONSULT-II to release fuel pressure, or fuel pressure applies again during the following procedure.

- 3. Start engine.
- 4. After engine stalls, crank it 2 or 3 times to release all fuel pressure.
- 5. Turn ignition switch OFF.
- 6. Remove all ignition coil harness connectors to avoid the electrical discharge from the ignition coils.
- 7. Remove ignition coil and spark plug of the cylinder to be checked.
- 8. Crank engine for five seconds or more to remove combustion gas in the cylinder.
- 9. Connect spark plug and harness connector to ignition coil.
- 10. Fix ignition coil using a rope etc. with gap of 13 17 mm between the edge of the spark plug and grounded metal portion as shown in the figure.
- 11. Crank engine for about three seconds, and check whether spark is generated between the spark plug and the grounded metal portion.

Spark should be generated.

CAUTION:

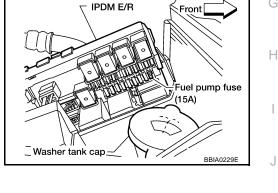

- Do not approach to the spark plug and the ignition coil within 50cm. Be careful not to get an electrical shock while checking, because the electrical discharge voltage becomes 20kV or more.
- It might cause to damage the ignition coil if the gap of more than 17 mm is taken. NOTE:

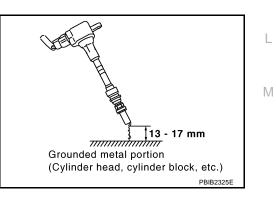

When the gap is less than 13 mm, the spark might be generated even if the coil is malfunctioning. OK or NG

<u>OK OF ING</u>

OK >> GO TO 10. NG >> GO TO 7.

G >> GO 107.

А

F

Κ

7. CHECK FUNCTION OF IGNITION COIL-II

- 1. Turn ignition switch OFF.
- 2. Disconnect spark plug and connect a known-good spark plug.
- 3. Crank engine for about 3 seconds, and recheck whether spark is generated between the spark plug and the grounded metal portion.

Spark should be generated.

OK or NG

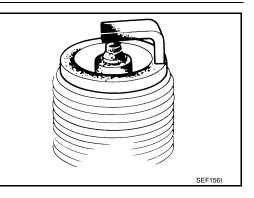

- OK >> GO TO 8.
- NG >> Check ignition coil, power transistor and their circuits. Refer to EC-636, "IGNITION SIGNAL".

8. CHECK SPARK PLUG

Check the initial spark plug for fouling, etc.

OK or NG

- OK >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to <u>MA-17</u>, "<u>Changing Spark Plugs</u> (<u>Platinum - Tipped Type</u>)".
- NG >> 1. Repair or clean spark plug. 2. GO TO 9.

9. CHECK FUNCTION OF IGNITION COIL-III

- 1. Reconnect the initial spark plugs.
- 2. Crank engine for about three seconds, and recheck whether spark is generated between the spark plug and the grounded portion.

Spark should be generated.

OK or NG

- OK >> INSPECTION END
- NG >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to <u>EM-38, "SPARK</u> <u>PLUG (PLATINUM-TIPPED TYPE)"</u>.

10. CHECK INJECTOR

- 1. Turn ignition switch OFF.
- Remove fuel injector assembly. Refer to <u>EM-40</u>, "FUEL INJECTOR AND FUEL TUBE". Keep fuel hose and all fuel injectors connected to fuel tube.
- 3. Reconnect all fuel injector harness connectors.
- 4. Disconnect all ignition coil harness connectors.
- 5. Turn ignition switch ON. Make sure fuel does not drip from fuel injector.
- OK or NG

OK (Does not drip.)>>GO TO 11.

NG (Drips.)>>Replace the fuel injector(s) from which fuel is dripping.

11. CHECK INTERMITTENT INCIDENT	A
Refer to EC-147, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

DTC P0441 EVAP CONTROL SYSTEM

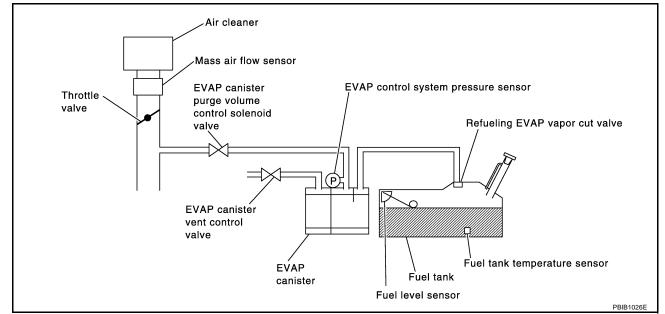

PFP:14950

System Description

UBS0096R

NOTE:

If DTC P0441 is displayed with other DTC such as P2122, P2123, P2127, P2128 or P2138, first perform trouble diagnosis for other DTC.

In this evaporative emission (EVAP) control system, purge flow occurs during non-closed throttle conditions. Purge volume is related to air intake volume. Under normal purge conditions (non-closed throttle), the EVAP canister purge volume control solenoid valve is open to admit purge flow. Purge flow exposes the EVAP control system pressure sensor to intake manifold vacuum.

On Board Diagnosis Logic

UBS0096S

Under normal conditions (non-closed throttle), sensor output voltage indicates if pressure drop and purge flow are adequate. If not, a malfunction is determined.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	
			 EVAP canister purge volume control solenoid valve stuck closed 	
				 EVAP control system pressure sensor and the circuit

Overall Function Check

Use this procedure to check the overall monitoring function of the EVAP control system purge flow monitoring. During this check, a 1st trip DTC might not be confirmed.

WITH GST

- 1. Lift up drive wheels.
- 2. Start engine (TCS switch or VDC switch OFF) and warm it up to normal operating temperature.
- 3. Turn ignition switch OFF, wait at least 10 seconds.
- 4. Start engine and wait at least 70 seconds.

UBS0096U

DTC P0441 EVAP CONTROL SYSTEM

- 5. Set voltmeter probes to ECM terminals 32 (EVAP control system pressure sensor signal) and ground.
- 6. Check EVAP control system pressure sensor value at idle speed and note it.
- 7. Establish and maintain the following conditions for at least 1 minute.

Air conditioner switch	ON
Headlamp switch	ON
Rear window defogger switch	ON
Engine speed	Approx. 3,000 rpm
Gear position	Any position other than P, N or R

- 8. Verify that EVAP control system pressure sensor value stays 0.1V less than the value at idle speed (measured at step 6) for at least 1 second.
- 9. If NG, go to EC-386, "Diagnostic Procedure" .

Diagnostic Procedure

1. CHECK EVAP CANISTER

- 1. Turn ignition switch OFF.
- 2. Check EVAP canister for cracks.

OK or NG

OK (With CONSULT-II)>>GO TO 2. OK (Without CONSULT-II)>>GO TO 3. NG >> Replace EVAP canister.

2. CHECK PURGE FLOW

With CONSULT-II

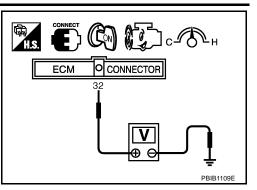

- Disconnect vacuum hose connected to EVAP canister purge volume control solenoid valve at EVAP service port and install vacuum gauge. For the location of EVAP service port, refer to <u>EC-33</u>, "EVAPORATIVE <u>EMISSION LINE DRAWING"</u>.
- 2. Start engine and let it idle.
- 3. Select "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II.
- 4. Rev engine up to 2,000 rpm.
- 5. Touch "Qd" and "Qu" on CONSULT-II screen to adjust "PURG VOL CONT/V" opening and check vacuum existence.

PURG VOL CONT/V	Vacuum
100%	Should exist.

DTC P0442 EVAP CONTROL SYSTEM

On Board Diagnosis Logic

This diagnosis detects leaks in the EVAP purge line using engine intake manifold vacuum.

If pressure does not increase, the ECM will check for leaks in the line between the fuel tank and EVAP canister purge volume control solenoid valve, under the following "Vacuum test" conditions.

The EVAP canister vent control valve is closed to shut the EVAP purge line off. The EVAP canister purge volume control solenoid valve will then be opened to depressurize the EVAP purge line using intake manifold vacuum. After this occurs, the EVAP canister purge volume control solenoid valve will be closed.

*1: ECM determines the start signal status by the signals of engine speed and battery voltage.

*2: This signal is sent to the ECM through CAN communication line.

This system controls flow rate of fuel vapor from the EVAP canister. The opening of the vapor by-pass passage in the EVAP canister purge volume control solenoid valve changes to control the flow rate. The EVAP canister purge volume control solenoid valve repeats ON/OFF operation according to the signal sent from the ECM. The opening of the valve varies for optimum engine control. The optimum value stored in the ECM is determined by considering various engine conditions. When the engine is operating, the flow rate of fuel vapor from the EVAP canister is regulated as the air flow changes.

COMPONENT DESCRIPTION

The EVAP canister purge volume control solenoid valve uses a ON/ OFF duty to control the flow rate of fuel vapor from the EVAP canister. The EVAP canister purge volume control solenoid valve is moved by ON/OFF pulses from the ECM. The longer the ON pulse, the greater the amount of fuel vapor that will flow through the valve.

CONSULT-II Reference Value in Data Monitor Mode

DTC Confirmation Procedure

NOTE:

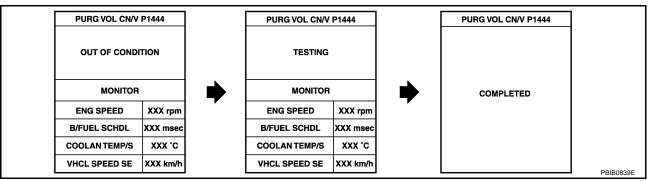

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Always perform test at a temperature of 5°C (41°F) or more.

WITH CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Turn ignition switch ON.
- 4. Select "PURG VOL CN/V P1444" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-II.
- 5. Touch "START".

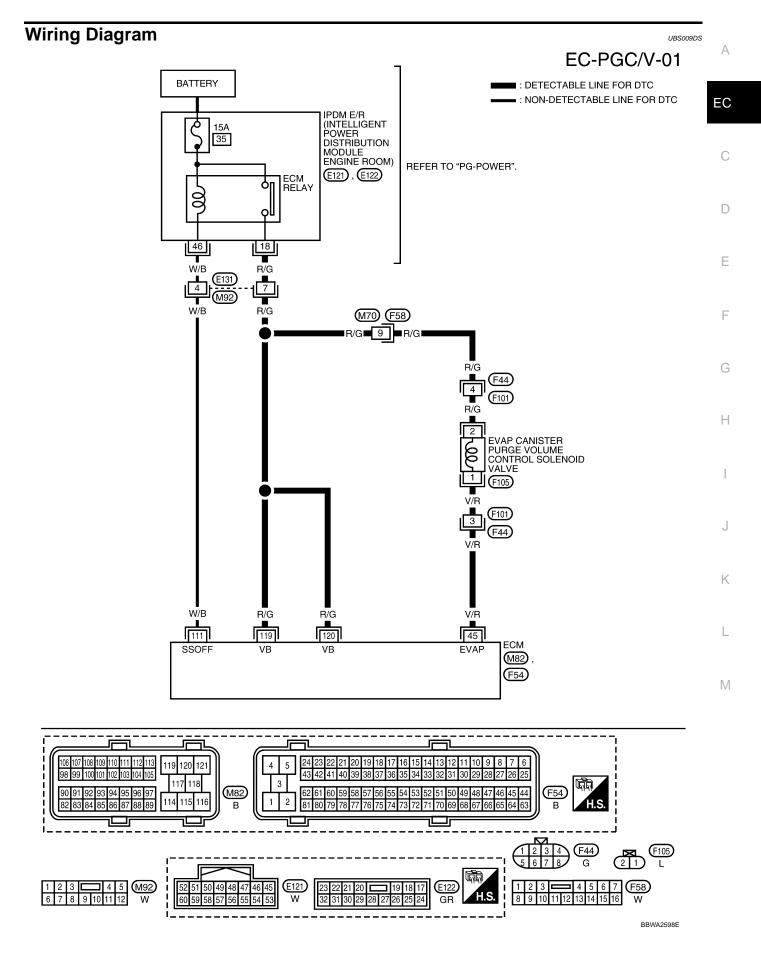

6. Start engine and let it idle until "TESTING" on CONSULT-II changes to "COMPLETED". (It will take approximately 10 seconds.)

If "TESTING" is not displayed after 5 minutes, retry from step 2.

7. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS". If "NG" is displayed, refer to <u>EC-403, "Diagnostic Procedure"</u>.

WITH GST

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Start engine and let it idle for at least 20 seconds.
- 4. Select Service \$07 with GST.
- 5. If 1st trip DTC is detected, go to EC-403, "Diagnostic Procedure" .

Specification data are reference values and are measured between each terminal and ground. Pulse signal is measured by CONSULT-II.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

DTC Confirmation Procedure

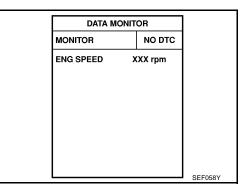

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test. **TESTING CONDITION:**

Before performing the following procedure, confirm battery voltage is more than 11V at idle.

B WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Start engine and let it idle for at least 13 seconds.
- 4. If 1st trip DTC is detected, go to <u>EC-411, "Diagnostic Procedure"</u>

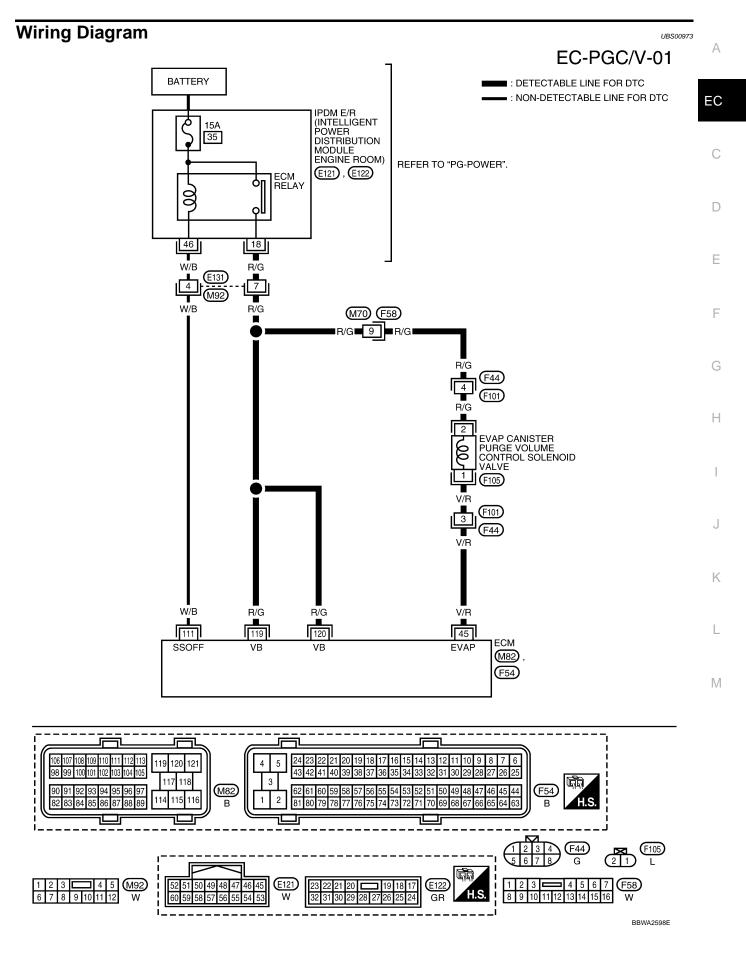

WITH GST

Follow the procedure "WITH CONSULT-II" above.

UBS00972

UBS00971

Specification data are reference values and are measured between each terminal and ground. Pulse signal is measured by CONSULT-II.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

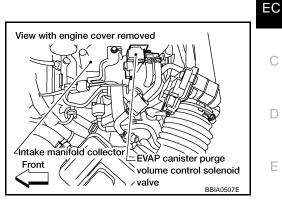

TER- MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)

DTC P0447 EVAP CANISTER VENT CONTROL VALVE

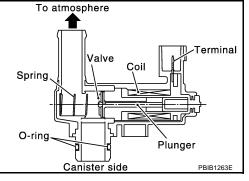

Component Description

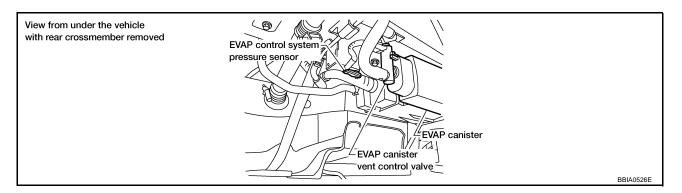

The EVAP canister vent control valve is located on the EVAP canister and is used to seal the canister vent.

This solenoid valve responds to signals from the ECM. When the ECM sends an ON signal, the coil in the solenoid valve is energized. A plunger will then move to seal the canister vent. The ability to seal the vent is necessary for the on board diagnosis of other evaporative emission control system components.

This solenoid valve is used only for diagnosis, and usually remains opened.

When the vent is closed, under normal purge conditions, the evaporative emission control system is depressurized and allows EVAP Control System diagnosis.

DTC P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

Component Description

The EVAP control system pressure sensor detects pressure in the purge line. The sensor output voltage to the ECM increases as pressure increases.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION	J
EVAP SYS PRES	Ignition switch: ON	Approx. 1.8 - 4.8V	

On Board Diagnosis Logic

NOTE:

If DTC P0453 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to EC-486, "DTC P0643 SENSOR POWER SUPPLY" .

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	
P0453 0453	EVAP control system pressure sensor high input	An excessively high voltage from the sensor is sent to ECM.	 Harness or connectors (The sensor circuit is open or shorted.) EVAP control system pressure sensor EVAP canister vent control valve EVAP canister Rubber hose from EVAP canister vent control valve to vehicle frame 	Ν

DTC Confirmation Procedure

NOTE:

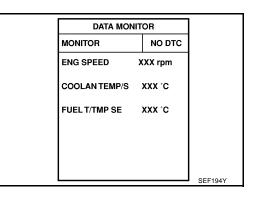

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Always perform test at a temperature of 5°C (41°F) or more.

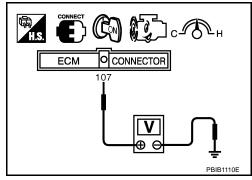

(E) WITH CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Turn ignition switch ON.
- 4. Select "DATA MONITOR" mode with CONSULT-II.
- 5. Make sure that "FUEL T/TMP SE" is more than 0°C (32°F).
- 6. Start engine and wait at least 10 seconds.
- 7. If 1st trip DTC is detected, go to EC-440, "Diagnostic Procedure"

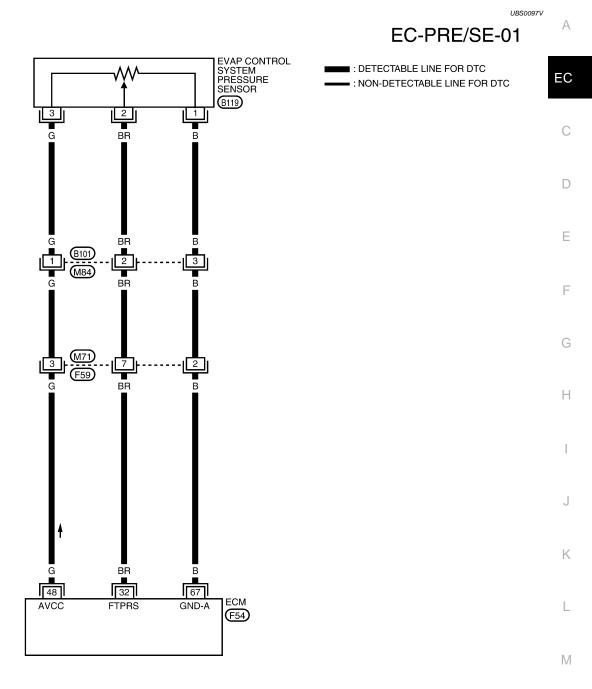

WITH GST

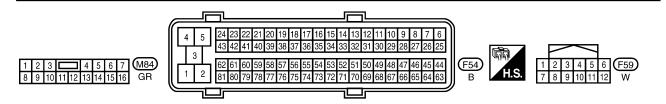

- 1. Start engine and warm it up to normal operating temperature.
- 2. Check that voltage between ECM terminal 107 (Fuel tank temperature sensor signal) and ground is less than 4.2V.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Start engine and wait at least 10 seconds.
- 5. Select Service \$07 with GST. If 1st trip DTC is detected, go to <u>EC-440, "Diagnostic Procedure"</u>

UBS0097U

Wiring Diagram

BBWA2600E

DTC P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

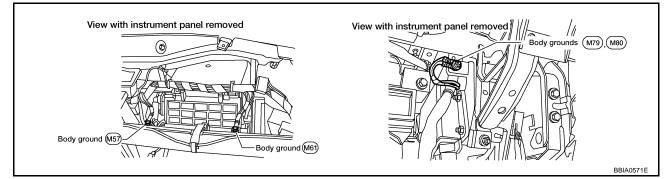

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TER- MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
32	BR	EVAP control system pres- sure sensor	[Ignition switch: ON]	Approximately 1.8 - 4.8V
48	G	Sensor power supply (EVAP control system pres- sure sensor)	[Ignition switch: ON]	Approximately 5V
67	В	Sensor ground	[Engine is running] • Warm-up condition • Idle speed	Approximately 0V

Diagnostic Procedure

1. CHECK GROUND CONNECTIONS

- 1. Turn ignition switch OFF.
- 2. Loosen and retighten four ground screws on the body. Refer to <u>EC-156, "Ground Inspection"</u>.

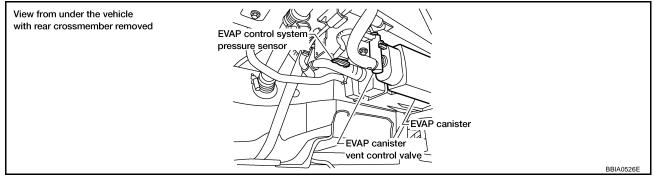

OK or NG

OK >> GO TO 2.

NG >> Repair or replace ground connections.

2. CHECK CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.

2. Check sensor harness connector for water.

Water should not exist.

OK or NG

OK >> GO TO 3.

NG >> Repair or replace harness connector.

UB\$0097W

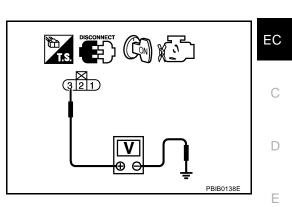

3. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT

- 1. Turn ignition switch ON.
- 2. Check voltage between EVAP control system pressure sensor terminal 3 and ground with CONSULT-II or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 5. NG >> GO TO 4.

Diagnostic Procedure

UBS00980

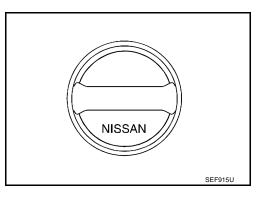

1. CHECK FUEL FILLER CAP DESIGN

- 1. Turn ignition switch OFF.
- 2. Check for genuine NISSAN fuel filler cap design.

OK or NG

OK >> GO TO 2.

NG >> Replace with genuine NISSAN fuel filler cap.

2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

OK or NG

OK >> GO TO 3.

NG >> 1. Open fuel filler cap, then clean cap and fuel filler neck threads using air blower. 2. Retighten until ratcheting sound is heard.

3. CHECK FUEL FILLER CAP FUNCTION

Check for air releasing sound while opening the fuel filler cap.

OK or NG

OK >> GO TO 5. NG >> GO TO 4.

4. CHECK FUEL TANK VACUUM RELIEF VALVE

Refer to EC-35, "FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FILLER CAP)" .

OK or NG

OK >> GO TO 5.

NG >> Replace fuel filler cap with a genuine one.

DTC P0455 EVAP CONTROL SYSTEM

5.	CHECK EVAP PURGE LI	١E
----	---------------------	----

Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks, improper connection or disconnection.

Refer to <u>EC-33, "EVAPORATIVE EMISSION LINE DRAWING"</u>. OK or NG

OK >> GO TO 6.

NG >> Repair or reconnect the hose.

6. CLEAN EVAP PURGE LINE

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 7.

7. CHECK EVAP CANISTER VENT CONTROL VALVE

Check the following.

- EVAP canister vent control valve is installed properly. Refer to <u>EC-36, "Removal and Installation"</u>.
- EVAP canister vent control valve. Refer to <u>EC-419</u>, "Component Inspection".

OK or NG

OK >> GO TO 8.

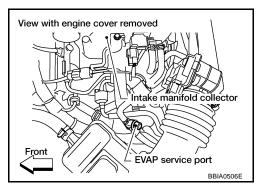

NG >> Repair or replace EVAP canister vent control valve and O-ring.

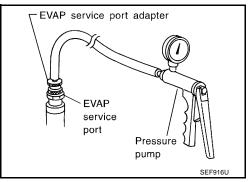

8. INSTALL THE PRESSURE PUMP

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely.

NOTE:

Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.

DTC P0456 EVAP CONTROL SYSTEM

On Board Diagnosis Logic

This diagnosis detects very small leaks in the EVAP line between fuel tank and EVAP canister purge volume control solenoid valve, using the intake manifold vacuum in the same way as conventional EVAP small leak diagnosis.

If ECM judges a leak which corresponds to a very small leak, the very small leak P0456 will be detected. If ECM judges a leak equivalent to a small leak, EVAP small leak P0442 will be detected.

If ECM judges there are no leaks, the diagnosis will be OK.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
			Incorrect fuel tank vacuum relief valve
			 Incorrect fuel filler cap used
			• Fuel filler cap remains open or fails to close.
	Evaporative emission control system very small leak (negative pressure check)	 EVAP system has a very small leak. EVAP system does not operate properly. 	 Foreign matter caught in fuel filler cap.
			 Leak is in line between intake manifold and EVAP canister purge volume control solenoid valve.
			• Foreign matter caught in EVAP canister vent control valve.
			• EVAP canister or fuel tank leaks
			• EVAP purge line (pipe and rubber tube) leaks
			• EVAP purge line rubber tube bent
DOAFC			Loose or disconnected rubber tube
P0456 0456			• EVAP canister vent control valve and the circuit

Overall Function Check

Use this procedure to check the overall function of the EVAP very small leak function. During this check, a DTC might not be confirmed.

CAUTION:

- Never use compressed air, doing so may damage the EVAP system.
- Do not start engine.
- Do not exceeded 4.12 kPa (0.042 kg/cm², 0.6 psi).
- Attach the EVAP service port adapter securely to the EVAP service port.

Adapter for EVAP service port

- 2. Set the pressure pump and a hose.
- 3. Also set a vacuum gauge via 3-way connector and a hose.
- 4. Turn ignition switch ON.
- 5. Connect GST and select Service \$08.
- 6. Using Service \$08 control the EVAP canister vent control valve (close).
- 7. Apply pressure and make sure the following conditions are satisfied.

Pressure to be applied: 2.7 kPa (20 mmHg, 0.79 inHg) Time to be waited after the pressure drawn in to the EVAP system and the pressure to be dropped: 60 seconds and the pressure should not be dropped more than 0.4 kPa (3 mmHg, 0.12 inHg). If NG, go to EC-455, "Diagnostic Procedure". If OK, go to next step.

- 8. Disconnect GST.
- 9. Start engine and warm it up to normal operating temperature.
- 10. Turn ignition switch OFF and wait at least 10 seconds.
- 11. Restart engine and let it idle for 90 seconds.
- 12. Keep engine speed at 2,000 rpm for 30 seconds.
- 13. Turn ignition switch OFF.

NOTE:

For more information, refer to GST instruction manual.

UBS00983

DTC P0456 EVAP CONTROL SYSTEM

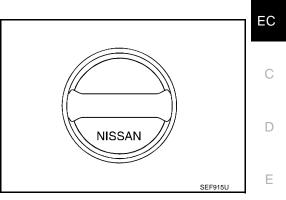

Diagnostic Procedure

1. CHECK FUEL FILLER CAP DESIGN

- 1. Turn ignition switch OFF.
- 2. Check for genuine NISSAN fuel filler cap design.

OK or NG

- OK >> GO TO 2.
- NG >> Replace with genuine NISSAN fuel filler cap.

UBS00984

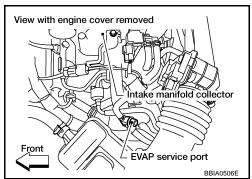

А

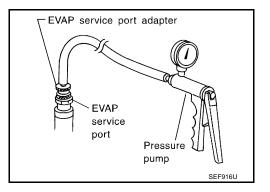

2. CHECK FUEL FILLER CAP INSTALLATION

	F
Check that the cap is tightened properly by rotating the cap clockwise.	
OK or NG	
OK >> GO TO 3.	G
NG >> 1. Open fuel filler cap, then clean cap and fuel filler neck threads using air blower.	0
2. Retighten until ratcheting sound is heard.	
3. CHECK FUEL FILLER CAP FUNCTION	Н
Check for air releasing sound while opening the fuel filler cap.	
OK or NG	
OK >> GO TO 5.	
NG >> GO TO 4.	
4. CHECK FUEL TANK VACUUM RELIEF VALVE	J
Refer to EC-35, "FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FILLER CAP)".	
OK or NG	K
OK >> GO TO 5.	
NG >> Replace fuel filler cap with a genuine one.	1
	L
	N.4
	M

5. INSTALL THE PRESSURE PUMP

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely. For the location of EVAP service port, refer to <u>EC-33</u>, "EVAPORATIVE EMISSION LINE <u>DRAWING</u>".

NOTE:

Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.

With CONSULT-II>>GO TO 6. Without CONSULT-II>>GO TO 7.

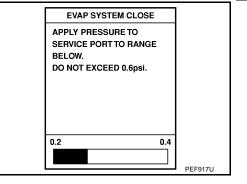

6. CHECK FOR EVAP LEAK

With CONSULT-II

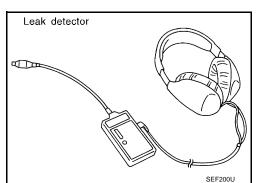

- 1. Turn ignition switch ON.
- 2. Select "EVAP SYSTEM CLOSE" of "WORK SUPPORT" mode with CONSULT-II.
- 3. Touch "START" and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.

CAUTION:

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm², 0.6 psi) of pressure in the system.

te the EVAP leak. For the leak nanual for more details. <u>EMISSION LINE DRAWING</u>.

 Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to <u>EC-33, "EVAPORATIVE EMISSION LINE DRAWING"</u>.

OK or NG

- OK >> GO TO 8.
- NG >> Repair or replace.

7. CHECK FOR EVAP LEAK

Without CONSULT-II

- 1. Turn ignition switch OFF.
- 2. Apply 12 volts DC to EVAP canister vent control valve. The valve will close. (Continue to apply 12 volts until the end of test.)

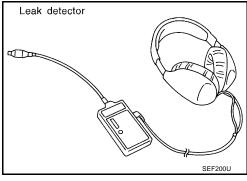

3. Pressurize the EVAP line using pressure pump with 1.3 to 2.7 kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

CAUTION:

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm², 0.6 psi) of pressure in the system.
- 4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to EC-33, "EVAPORATIVE EMISSION LINE DRAWING".

OK or NG

- OK >> GO TO 8.
- NG >> Repair or replace.

8. CHECK EVAP CANISTER VENT CONTROL VALVE

Check the following.

- EVAP canister vent control valve is installed properly. Refer to <u>EC-36, "Removal and Installation"</u>.
- EVAP canister vent control valve.
 Refer to <u>EC-419, "Component Inspection"</u>.

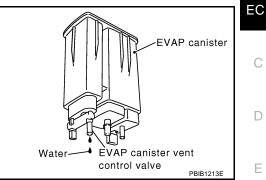

OK or NG

- OK >> GO TO 9.
- NG >> Repair or replace EVAP canister vent control valve and O-ring.

9. CHECK IF EVAP CANISTER SATURATED WITH WATER

- 1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
- 2. Does water drain from the EVAP canister?
- Yes or No

Yes >> GO TO 10. No (With CONSULT-II)>>GO TO 12. No (Without CONSULT-II)>>GO TO 13.

DTC P0460 FUEL LEVEL SENSOR

Component Description

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the "unified meter and A/C amp.". The "unified meter and A/C amp." sends the fuel level sensor signal to the ECM through CAN communication line.

It consists of two parts, one is mechanical float and the other is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

On Board Diagnosis Logic

NOTE:

- If DTC P0460 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to <u>EC-157, "DTC U1000, U1001 CAN COMMUNICATION LINE"</u>.
- If DTC P0460 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to <u>EC-160, "DTC U1010 CAN COMMUNICATION"</u>.

When the vehicle is parked, naturally the fuel level in the fuel tank is stable. It means that output signal of the fuel level sensor does not change. If ECM senses sloshing signal from the sensor, fuel level sensor malfunction is detected.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0460 0460	Fuel level sensor circuit noise	Even though the vehicle is parked, a signal being varied is sent from the fuel level sensor to ECM.	 Harness or connectors (The CAN communication line is open or shorted) Harness or connectors (The sensor circuit is open or shorted) Unified meter and A/C amp. Fuel level sensor

DTC Confirmation Procedure

NOTE:

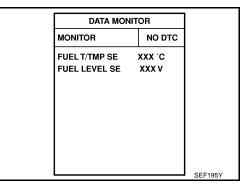

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.

Follow the procedure "WITH CONSULT-II" above.

- 3. Start engine and wait maximum of 2 consecutive minutes.
- 4. If 1st trip DTC is detected, go to EC-463, "Diagnostic Procedure"

DTC P0461 FUEL LEVEL SENSOR

Component Description

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the "unified meter and A/C amp.". The "unified meter and A/C amp." sends the fuel level sensor signal to the ECM through CAN communication line.

It consists of two parts, one is mechanical float and the other is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

On Board Diagnosis Logic

NOTE:

- If DTC P0461 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to <u>EC-157, "DTC U1000, U1001 CAN COMMUNICATION LINE"</u>.
- If DTC P0461 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to <u>EC-160, "DTC U1010 CAN COMMUNICATION"</u>.

Driving long distances naturally affect fuel gauge level.

This diagnosis detects the fuel gauge malfunction of the gauge not moving even after a long distance has been driven.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0461 0461	Fuel level sensor circuit range/performance	The output signal of the fuel level sensor does not change within the specified range even though the vehicle has been driven a long dis- tance.	 Harness or connectors (The CAN communication line is open or shorted) Harness or connectors (The sensor circuit is open or shorted) Unified meter and A/C amp. Fuel level sensor

Overall Function Check

Use this procedure to check the overall function of the fuel level sensor function. During this check, a 1st trip DTC might not be confirmed.

WARNING:

When performing following procedure, be sure to observe the handling of the fuel. Refer to <u>FL-11</u>, <u>"FUEL TANK"</u>.

TESTING CONDITION:

Before starting overall function check, preparation of draining fuel and refilling fuel is required.

WITH CONSULT-II

NOTE:

Start from step 10, if it is possible to confirm that the fuel cannot be drained by 30 ℓ (7-7/8 US gal, 6-5/ 8 Imp gal) in advance.

EC-464

- 1. Prepare a fuel container and a spare hose.
- 2. Release fuel pressure from fuel line, refer to EC-81, "FUEL PRESSURE RELEASE" .
- 3. Remove the fuel feed hose on the fuel level sensor unit.
- 4. Connect a spare fuel hose where the fuel feed hose was removed.
- 5. Turn ignition switch OFF and wait at least 10 seconds then turn ON.
- 6. Select "FUEL LEVEL SE" in "DATA MONITOR" mode with CONSULT-II.

DTC P0500 VSS

Description

PFP:32702

UBS0098K

UBS0098L

UBS0098N

NOTE:

- If DTC P0500 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to <u>EC-157, "DTC U1000, U1001 CAN COMMUNICATION LINE"</u>.
- If DTC P0500 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to <u>EC-160, "DTC U1010 CAN COMMUNICATION"</u>.

The vehicle speed signal is sent to the "unified meter and A/C amp." from the "ABS actuator and electric unit (control unit)" by CAN communication line. The "unified meter and A/C amp." then sends the signal to the ECM by CAN communication line.

On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0500 0500	Vehicle speed sensor	The almost 0 km/h (0 MPH) signal from vehicle speed sensor is sent to ECM even when vehicle is being driven.	 Harness or connectors (The CAN communication line is open or shorted)
			 Harness or connectors (The vehicle speed signal circuit is open or shorted)
			Wheel sensor
			 Unified meter and A/C amp.
			ABS actuator and electric unit (control unit)

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode.

Detected items	Engine operating condition in fail-safe mode
Vehicle speed sensor	When the fail-safe system for vehicle speed sensor is activated, the cooling fan operates (High) while engine is running.

DTC Confirmation Procedure

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Steps 1 and 2 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

B WITH CONSULT-II

- 1. Start engine (TCS switch or VDC switch OFF).
- Read "VHCL SPEED SE" in "DATA MONITOR" mode with CONSULT-II. The vehicle speed on CONSULT-II should exceed 10 km/h (6 MPH) when rotating wheels with suitable gear position. If NG, go to <u>EC-469, "Diagnostic Procedure"</u>. If OK, go to following step.
- 3. Select "DATA MONITOR" mode with CONSULT-II.
- 4. Warm engine up to normal operating temperature.

5. Maintain the following conditio	ns for at least 60 consecutive sec-		1
onds.		DATA MONITOR MONITOR NO DTC	/
ENG SPEED	1,400 - 6,000 rpm	ENG SPEED XXX rpm

DTC P0506 ISC SYSTEM

Description

NOTE:

If DTC P0506 is displayed with other DTC, first perform the trouble diagnosis for the other DTC.

The ECM controls the engine idle speed to a specified level through the fine adjustment of the air, which is let into the intake manifold, by operating the electric throttle control actuator. The operating of the throttle valve is varied to allow for optimum control of the engine idling speed. The ECM calculates the actual engine speed from signals of crankshaft position sensor (POS) and camshaft position sensor (PHASE).

The ECM controls the electric throttle control actuator so that the engine speed coincides with the target value memorized in the ECM. The target engine speed is the lowest speed at which the engine can operate steadily. The optimum value stored in the ECM is determined by taking into consideration various engine conditions, such as during warming up, deceleration, and engine load (air conditioner, power steering and cooling fan operation, etc.).

On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0506 0506	Idle speed control system RPM lower than expected	The idle speed is less than the target idle speed by 100 rpm or more.	Electric throttle control actuatorIntake air leak

DTC Confirmation Procedure

NOTE:

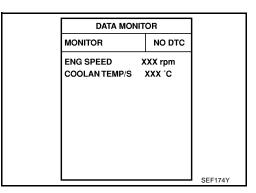

- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
- If the target idle speed is out of the specified value, perform <u>EC-79, "Idle Air Volume Learning"</u>, before conducting DTC Confirmation Procedure. For the target idle speed, refer to <u>EC-664, "SER-VICE DATA AND SPECIFICATIONS (SDS)"</u>.

TESTING CONDITION:

- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.
- Always perform the test at a temperature above –10°C (14°F).

B WITH CONSULT-II

- 1. Open engine hood.
- 2. Start engine and warm it up to normal operating temperature.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Turn ignition switch ON again and select "DATA MONITOR" mode with CONSULT-II.
- 5. Start engine and run it for at least 1 minute at idle speed.
- 6. If 1st trip DTC is detected, go to EC-471, "Diagnostic Procedure"

DTC Confirmation Procedure

NOTE:

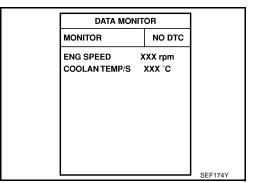

- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
- If the target idle speed is out of the specified value, perform <u>EC-79, "Idle Air Volume Learning"</u>, before conducting DTC Confirmation Procedure. For the target idle speed, refer to <u>EC-664, "SER-VICE DATA AND SPECIFICATIONS (SDS)"</u>.

TESTING CONDITION:

- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.
- Always perform the test at a temperature above –10°C (14°F).

WITH CONSULT-II

- 1. Open engine hood.
- 2. Start engine and warm it up to normal operating temperature.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Turn ignition switch ON again and select "DATA MONITOR" mode with CONSULT-II.
- 5. Start engine and run it for at least 1 minute at idle speed.
- 6. If 1st trip DTC is detected, go to EC-473, "Diagnostic Procedure"

WITH GST

Follow the procedure "WITH CONSULT-II" above.

DTC P0550 PSP SENSOR

Component Description

Power steering pressure (PSP) sensor is installed to the power steering high-pressure tube and detects a power steering load. This sensor is a potentiometer which transforms the power steering load into output voltage, and emits the voltage signal to the ECM. The ECM controls the electric throttle control actuator and adjusts the throttle valve opening angle to increase the engine speed and adjusts the idle speed for the increased load.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
PW/ST SIGNAL	• Engine: After warming up, idle the engine	Steering wheel: Not being turned	OFF
		Steering wheel: Being turned	ON

On Board Diagnosis Logic

The MIL will not light up for this diagnosis.

NOTE:

If DTC P0550 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to EC-486, "DTC P0643 SENSOR POWER SUPPLY" .

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0550	Power steering pres-	An excessively low or high voltage from the sensor is sent to ECM.	 Harness or connectors
0550	sure sensor circuit		(The sensor circuit is open or shorted) Power steering pressure sensor

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

(I) WITH CONSULT-II

- 1. Turn ignition switch ON.
- Select "DATA MONITOR" mode with CONSULT-II. 2.
- 3. Start engine and let it idle for at least 5 seconds.
- If 1st trip DTC is detected, go to EC-476, "Diagnostic Procedure" 4.

DTC P0605 ECM

Component Description

The ECM consists of a microcomputer and connectors for signal input and output and for power supply. The ECM controls the engine.

On Board Diagnosis Logic

This self-diagnosis has one or two trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause	F
		A)	ECM calculation function is malfunctioning.		
P0605 0605	Engine control module	B)	ECM EEP-ROM system is malfunctioning.	• ECM	G
0000		C)	ECM self shut-off function is malfunctioning.		

FAIL-SAFE MODE

ECM enters fail-safe mode when the malfunction A is detected.

Detected items	Engine operation condition in fail-safe mode	
Malfunction A	 ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring. ECM deactivates ASCD operation. 	

DTC Confirmation Procedure

Perform PROCEDURE FOR MALFUNCTION A first. If the 1st trip DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION B. If there is no malfunction on PROCEDURE FOR MALFUNCTION Κ **B**, perform PROCEDURE FOR MALFUNCTION C.

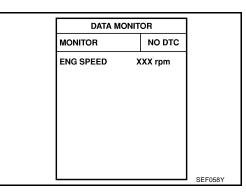

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at L least 10 seconds before conducting the next test.

PROCEDURE FOR MALFUNCTION A

DTC P1211 TCS CONTROL UNIT

Description

The malfunction information related to TCS is transferred through the CAN communication line from "ABS actuator and electric unit (control unit)" to ECM.

Be sure to erase the malfunction information such as DTC not only for "ABS actuator and electric unit (control unit)" but also for ECM after TCS related repair.

On Board Diagnosis Logic

Freeze frame data is not stored in the ECM for this self-diagnosis. The MIL will not light up for this self-diagnosis.

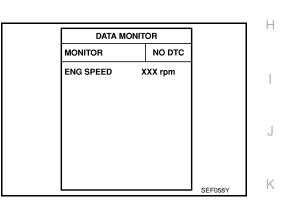

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	
P1211 1211	TCS control unit	ECM receives a malfunction information from ABS actuator and electric unit (control unit).	 ABS actuator and electric unit (control unit) TCS related parts 	E

DTC Confirmation Procedure

TESTING CONDITION: Before performing the following procedure, confirm that battery voltage is more than 10.5V at idle.

B WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Start engine and let it idle for at least 60 seconds.
- 4. If 1st trip DTC is detected, go to EC-497, "Diagnostic Procedure"

WITH GST

Follow the procedure "WITH CONSULT-II" above.

DTC P1212 TCS COMMUNICATION LINE

Description

NOTE:

- If DTC P1212 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to <u>EC-157, "DTC U1000, U1001 CAN COMMUNICATION LINE"</u>.
- If DTC P1212 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to <u>EC-160, "DTC U1010 CAN COMMUNICATION"</u>.

This CAN communication line is used to control the smooth engine operation during the TCS operation. Pulse signals are exchanged between ECM and "ABS actuator and electric unit (control unit)".

Be sure to erase the malfunction information such as DTC not only for "ABS actuator and electric unit (control unit)" but also for ECM after TCS related repair.

On Board Diagnosis Logic

UBS009B8

UBS009B9

UBS00KP5

The MIL will not light up for this self-diagnosis. Freeze frame data is not stored in the ECM for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1212 1212	TCS communication line	ECM can not receive the information from ABS actuator and electric unit (control unit) continuously.	 Harness or connectors (The CAN communication line is open or shorted.) ABS actuator and electric unit (control unit). Dead (Weak) battery

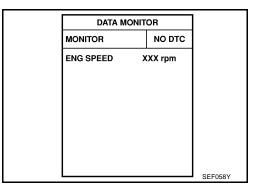

DTC Confirmation Procedure

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10.5V at idle.

(I) WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Start engine and let it idle for at least 10 seconds.
- 4. If 1st trip DTC is detected, go to <u>EC-498, "Diagnostic Procedure"</u>

WITH GST

Follow the procedure "WITH CONSULT-II" above.

Diagnostic Procedure

Go to BRC-10, "TROUBLE DIAGNOSIS" or BRC-54, "TROUBLE DIAGNOSIS" .

UBS009B7

DTC P1217 ENGINE OVER TEMPERATURE

Description

SYSTEM DESCRIPTION

NOTE:

- If DTC P1217 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to <u>EC-157, "DTC U1000, U1001 CAN COMMUNICATION LINE"</u>.
- If DTC P1217 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to <u>EC-160, "DTC U1010 CAN COMMUNICATION"</u>.

Cooling Fan Control

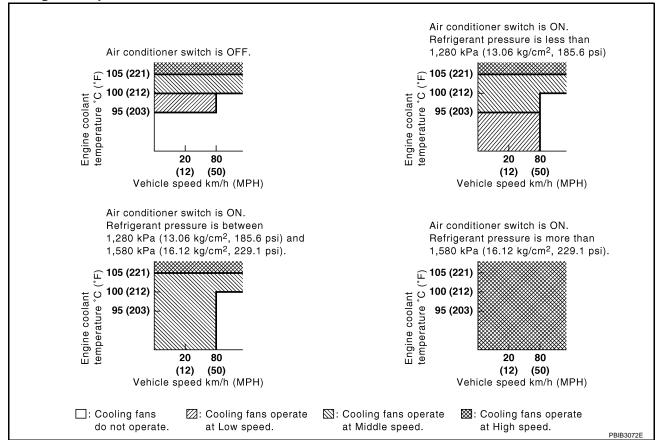

Sensor	Input Signal to ECM	ECM function	Actuator	
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*1			
Battery	Battery voltage*1			
Wheel sensor	Vehicle speed* ²	Cooling fan	IPDM E/R (Cooling fan relay)	
Engine coolant temperature sensor	Engine coolant temperature		(Obbining fair relay)	
Air conditioner switch	Air conditioner ON signal* ²			
Refrigerant pressure sensor	Refrigerant pressure			

*1: The ECM determines the start signal status by the signals of engine speed and battery voltage.

*2: This signal is sent to ECM through CAN communication line.

The ECM controls the cooling fan corresponding to the vehicle speed, engine coolant temperature, refrigerant pressure, and air conditioner ON signal. The control system has 4-step control [HIGH/MIDDLE/LOW/OFF]. The ECM controls cooling fan relays through CAN communication line.

Cooling Fan Operation

		Engine coolant temperature is 105°C (221°F) or more	н

UBS009BC

On Board Diagnosis Logic

If the cooling fan or another component in the cooling system malfunctions, engine coolant temperature will rise.

When the engine coolant temperature reaches an abnormally high temperature condition, a malfunction is indicated.

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	
P1217 1217	Engine over temperature (Overheat)	 Cooling fan does not operate properly (Overheat). Cooling fan system does not operate properly (Overheat). Engine coolant was not added to the system using the proper filling method. Engine coolant level is not within the specified range. 	 Harness or connectors (The cooling fan circuit is open or shorted.) IPDM E/R (Cooling fan relay) Cooling fan Radiator hose Radiator Radiator cap Water pump Thermostat 	
		opooliida rango.	For more information, refer to <u>EC-509, "Main</u> 12 Causes of Overheating".	

CAUTION:

When a malfunction is indicated, be sure to replace the coolant. Refer to <u>MA-13, "Changing Engine</u> <u>Coolant"</u>. Also, replace the engine oil. Refer to <u>MA-15, "Changing Engine Oil"</u>.

- Fill radiator with coolant up to specified level with a filling speed of 2 liters per minute. Be sure to use coolant with the proper mixture ratio. Refer to <u>MA-10, "ANTI-FREEZE COOLANT MIXTURE</u> <u>RATIO"</u>.
- 2. After refilling coolant, run engine to ensure that no water-flow noise is emitted.

Overall Function Check

Use this procedure to check the overall function of the cooling fan. During this check, a DTC might not be confirmed.

WARNING:

Never remove the radiator cap when the engine is hot. Serious burns could be caused by high pressure fluid escaping from the radiator.

Wrap a thick cloth around cap. Carefully remove the cap by turning it a quarter turn to allow built-up pressure to escape. Then turn the cap all the way off.

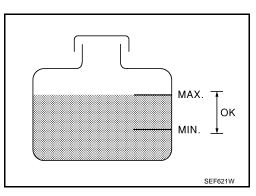

WITH CONSULT-II

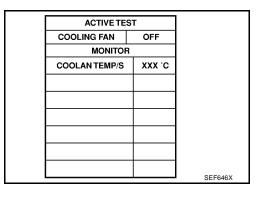

- Check the coolant level in the reservoir tank and radiator. Allow engine to cool before checking coolant level. If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to <u>EC-505</u>, "Diagnostic Procedure".
- Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to <u>EC-505</u>, <u>"Diagnostic Procedure"</u>.

Perform "COOLING FAN" in "ACTIVE TEST" mode with CON-

If the results are NG, go to EC-505, "Diagnostic Procedure".

3. Turn ignition switch ON.

2. DETECT MALFUNCTIONING PART

Check the following.

- 40A fusible link
- Harness for open or short between IPDM E/R and battery

>> Repair open circuit or short to ground in harness or connectors.

3. CHECK IPDM E/R GROUND CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Check harness continuity between IPDM E/R terminals 16, 38, 60 and ground. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to power.

OK or NG

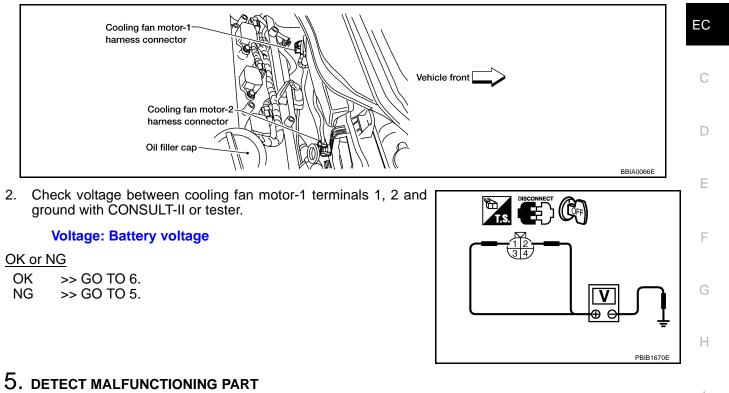

OK >> GO TO 4.

NG >> Repair open circuit or short to power in harness or connectors.

EC-506

4. CHECK COOLING FAN MOTOR-1 CIRCUIT-I

1. Disconnect cooling fan motor-1 harness connector.

Check the following.

- 40A fusible link
- Harness for open or short between cooling fan motor-1 and battery

>> Repair open circuit or short to ground in harness or connectors.

6. CHECK COOLING FAN MOTOR-1 CIRCUIT-II

- 1. Turn ignition switch OFF.
- 2. Disconnect IPDM E/R harness connector E118.
- Check harness continuity between the following terminals. Cooling fan motor-1 terminal 3 and IPDM E/R terminal 8 Cooling fan motor-1 terminal 4 and IPDM E/R terminals 11, 12 Refer to Wiring diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

А

J

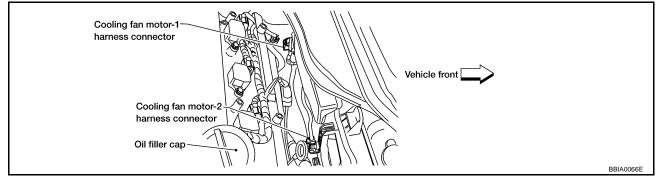

Κ

L

Μ

7. CHECK COOLING FAN MOTOR-2 CIRCUIT-I

- 1. Turn ignition switch OFF.
- 2. Disconnect cooling fan motor-2 harness connector.

3. Check harness continuity between cooling fan motor-2 terminals 3, 4 and ground. Refer to Wiring diagram.

Continuity should exist.

- 4. Also check harness for short to power.
- OK or NG

OK >> GO TO 8.

NG >> Repair open circuit or short to power in harness or connectors.

8. CHECK COOLING FAN MOTOR-2 CIRCUIT-II

 Check harness continuity between the following terminals. Cooling fan motor-2 terminal 1 and IPDM E/R terminal 13 Cooling fan motor-2 terminal 2 and IPDM E/R terminals 10, 14 Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 9.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

9. CHECK COOLING FAN MOTORS

Refer to EC-509, "Component Inspection" .

OK or NG

OK >> GO TO 10.

NG >> Replace cooling fan motors.

10. CHECK INTERMITTENT INCIDENT

Perform EC-147, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

- OK >> Replace IPDM E/R. Refer to <u>PG-18</u>, "IPDM E/R (INTELLIGENT POWER DISTRIBUTION MOD-<u>ULE ENGINE ROOM)"</u>.
- NG >> Repair or replace harness or connector.

DTC P1217 ENGINE OVER TEMPERATURE

Cooling fan motor should operate. If NG, replace cooling fan motor.

DTC P1225 TP SENSOR

Component Description

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

The MIL will not light up for this diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1225 1225	Closed throttle position learning performance	Closed throttle position learning value is excessively low.	Electric throttle control actuator (TP sensor 1 and 2)

DTC Confirmation Procedure

NOTE:

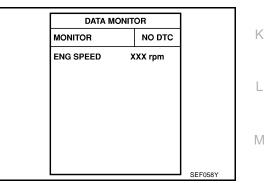

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

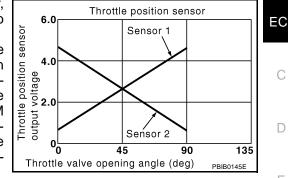

WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Turn ignition switch ON.

DTC P1572 ASCD BRAKE SWITCH

Component Description

When the brake pedal is depressed, ASCD brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by this input of two kinds (ON/OFF signal). Refer to <u>EC-29</u>, "AUTOMATIC SPEED CONTROL DEVICE (ASCD)" for the ASCD function.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM		CONDITION	SPECIFICATION
BRAKE SW1	 Ignition switch: ON 	Brake pedal: Fully released	ON
(ASCD brake switch)	• Ignition switch. ON	Brake pedal: Slightly depressed	OFF
BRAKE SW2	 Ignition switch: ON 	Brake pedal: Fully released	OFF
(Stop lamp switch)	• Ignition switch. ON	Brake pedal: Slightly depressed	ON

On Board Diagnosis Logic

This self-diagnosis has the one trip detection logic.

The MIL will not light up for this diagnosis.

NOTE:

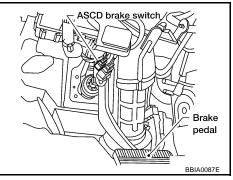

- If DTC P 1572 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to <u>EC-483, "DTC P0605 ECM"</u>.
- This self-diagnosis has the one trip detection logic. When malfunction A is detected, DTC is not stored in ECM memory. And in that case, 1st trip DTC and 1st trip freeze frame data are displayed. 1st trip DTC is erased when ignition switch OFF. And even when malfunction A is detected in two consecutive trips, DTC is not stored in ECM memory.

DTC No.	Trouble Diagnosis Name		DTC Detecting Condition	Possible Cause
		A)	When the vehicle speed is above 30km/h (19 MPH), ON signals from the stop lamp switch and the ASCD brake switch are sent to ECM at the same time.	 Harness or connectors (The stop lamp switch circuit is shorted.) Harness or connectors (The ASCD brake switch circuit is shorted.)
P1572 1572	ASCD brake switch	B)	ASCD brake switch signal is not sent to ECM for extremely long time while the vehi- cle is driving	 Stop lamp switch ASCD brake switch Incorrect stop lamp switch installation Incorrect ASCD brake switch installation ECM

DTC Confirmation Procedure

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
- Procedure for malfunction B is not described here. It takes extremely long time to complete procedure for malfunction B. By performing procedure for malfunction A, the incident that causes malfunction B can be detected.

TESTING CONDITION:

Steps 4 and 5 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a D road test is expected to be easier, it is unnecessary to lift the vehicle.

WITH CONSULT-II

- 1. Start engine (TCS switch or VDC switch OFF).
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Press CRUISE switch and make sure that CRUISE indicator lights up.
- 4. Drive the vehicle for at least 5 consecutive seconds under the following condition.

VHCL SPEED SE	More than 30 km/h (19 MPH)
Shift lever	Suitable position

If DTC is detected, go to <u>EC-527</u>, "<u>Diagnostic Procedure</u>". If DTC is not detected, go to the following step.

5. Drive the vehicle for at least 5 consecutive seconds under the following condition.

6. If DTC is detected, go to EC-527, "Diagnostic Procedure" .

WITH GST

Follow the procedure "WITH CONSULT-II" above.

DATA MOI	NITOR	
MONITOR	NO DTC	
ENG SPEED	XXX rpm	
VHCL SPEED SE	XXX km/h	
CRUISE LAMP	ON	
BRAKE SW 1	ON	
BRAKE SW 2	OFF

DTC P1574 ASCD VEHICLE SPEED SENSOR

DTC P1574 ASCD VEHICLE SPEED SENSOR

Component Description

The ECM receives two vehicle speed signals via CAN communication line. One is sent from "unified meter and A/C amp." and the other is from TCM (Transmission control module). The ECM uses these signals for ASCD control. Refer to <u>EC-29</u>, "<u>AUTOMATIC SPEED CONTROL DEVICE (ASCD)</u>" for ASCD functions.

On Board Diagnosis Logic

This self-diagnosis has the one trip detection logic. The MIL will not light up for this diagnosis.

NOTE:

- If DTC P1574 is displayed with DTC U1000, U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to <u>EC-157, "DTC U1000, U1001 CAN COMMUNICATION LINE"</u>.
- If DTC P1574 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to <u>EC-160, "DTC U1010 CAN COMMUNICATION"</u>.
- If DTC P1574 is displayed with DTC P0500, first perform the trouble diagnosis for DTC P0500. Refer to <u>EC-468, "DTC P0500 VSS"</u>
- If DTC P1574 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to <u>EC-483, "DTC P0605 ECM"</u>

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P1574 ASCD vehicle speed 1574 sensor		ECM detects a difference between two vehicle speed signals is out of the specified range.	Harness or connectors (The CAN communication line is open or shorted.)

DTC P1800 VIAS CONTROL SOLENOID VALVE

Component Description

The VIAS control solenoid valve (2) cuts the intake manifold vacuum signal for power valve control. It responds to ON/OFF signals from the ECM. When the solenoid is off, the vacuum signal from the intake manifold is cut. When the ECM sends an ON signal the coil pulls the plunger downward and feeds the vacuum signal to the power valve actuator (1).

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
VIAS S/V	• Engine: After warming up	1,800 - 3,600 rpm	ON
		Except above conditions	OFF

On Board Diagnosis Logic

The MIL will not light up for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1800 1800	VIAS control solenoid valve circuit	An excessively low or high voltage signal is sent to ECM through the valve	 Harness or connectors (The solenoid valve circuit is open or shorted.) VIAS control solenoid valve

DTC Confirmation Procedure

NOTE:

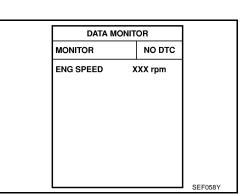

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 11V at idle.

B WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Start engine and let it idle for at least 5 seconds.
- 4. If 1st trip DTC is detected, go to EC-538, "Diagnostic Procedure"

DTC P2100, P2103 THROTTLE CONTROL MOTOR RELAY

Component Description

Power supply for the throttle control motor is provided to the ECM via throttle control motor relay. The throttle control motor relay is ON/OFF controlled by the ECM. When the ignition switch is turned ON, the ECM sends an ON signal to throttle control motor relay and battery voltage is provided to the ECM. When the ignition switch is turned OFF, the ECM sends an OFF signal to throttle control motor relay and battery voltage is not provided to the ECM.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
THRTL RELAY	Ignition switch: ON	ON

On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2100 2100	Throttle control motor relay circuit open	ECM detects a voltage of power source for throttle control motor is excessively low.	 Harness or connectors (Throttle control motor relay circuit is open) Throttle control motor relay
P2103 2103	Throttle control motor relay circuit short	ECM detects the throttle control motor relay is stuck ON.	 Harness or connectors (Throttle control motor relay circuit is shorted) Throttle control motor relay

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR DTC P2100

With CONSULT-II

- 1. Turn ignition switch ON and wait at least 2 seconds.
- 2. Select "DATA MONITOR"" mode with CONSULT-II.
- 3. Start engine and let it idle for 5 seconds.
- 4. If DTC is detected, go to EC-549, "Diagnostic Procedure".

DTC P2101 ELECTRIC THROTTLE CONTROL FUNCTION

Description

NOTE:

If DTC P2101 is displayed with DTC P2100 or P2119, first perform the trouble diagnosis for DTC P2100 or P2119. Refer to <u>EC-546, "DTC P2100, P2103 THROTTLE CONTROL MOTOR RELAY"</u> or <u>EC-563,</u> "DTC P2119 ELECTRIC THROTTLE CONTROL ACTUATOR".

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc.

The throttle control motor is operated by the ECM and it opens and closes the throttle valve.

The current opening angle of the throttle valve is detected by the throttle position sensor and it provides feedback to the ECM to control the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2101 2101	Electric throttle control performance	Electric throttle control function does not oper- ate properly.	 Harness or connectors (Throttle control motor circuit is open or shorted) Electric throttle control actuator

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

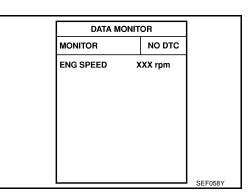

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

(I) WITH CONSULT-II

- 1. Turn ignition switch ON and wait at least 2 seconds.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Start engine and let it idle for 5 seconds.
- 4. If DTC is detected, go to <u>EC-554</u>, "Diagnostic Procedure".

WITH GST

Follow the procedure "WITH CONSULT-II" above.

UBS009AG

DTC P2119 ELECTRIC THROTTLE CONTROL ACTUATOR

Component Description

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle control motor is operated by the ECM and it opens and closes the throttle valve. The throttle position sensor detects the throttle valve position, and the opening and closing speed of the throttle valve and feeds the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P2119	Electric throttle control	A)	Electric throttle control actuator does not func- tion properly due to the return spring malfunc- tion.	
	actuator	B)	Throttle valve opening angle in fail-safe mode is not in specified range.	Electric throttle control actuator
	-	C)	ECM detect the throttle valve is stuck open.	

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Detected items	Engine operating condition in fail-safe mode	F
Malfunction A	The ECM controls the electric throttle actuator by regulating the throttle opening around the idle position. The engine speed will not rise more than 2,000 rpm.	
Malfunction B	ECM controls the electric throttle control actuator by regulating the throttle opening to 20 degrees or less.	
Malfunction C	While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in N or P position, and engine speed will not exceed 1,000 rpm or more.	

DTC Confirmation Procedure

NOTE:

- Perform PROCEDURE FOR MALFUNCTION A AND B first. If the DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION C.
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

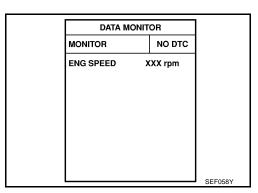

PROCEDURE FOR MALFUNCTION A AND B

With CONSULT-II

- 1. Turn ignition witch ON and wait at least 1 second.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Set shift lever to D position and wait at least 3 seconds.
- 4. Set shift lever to P position.

DTC P2122, P2123 APP SENSOR

Component Description

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.

Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.

Idle position of the accelerator pedal is determined by the ECM

receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION	_
ACCEL SEN 1	Ignition switch: ON	Accelerator pedal: Fully released	0.65 - 0.87V	_ (
ACCEL SEN I	(Engine stopped)	Accelerator pedal: Fully depressed	More than 4.3V	_
ACCEL SEN 2*	Ignition switch: ON	Accelerator pedal: Fully released	0.56 - 0.96V	ŀ
	(Engine stopped)	Accelerator pedal: Fully depressed	More than 4.0V	
CLSD THL POS	Ignition switch: ON	Accelerator pedal: Fully released	ON	_
CLOD THE POS	(Engine stopped)	Accelerator pedal: Slightly depressed	OFF	

*: Accelerator pedal position sensor 2 signal is converted by ECM internally. Thus, it differ from ECM terminal voltage.

On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

NOTE:

If DTC P2122 or P2123 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to <u>EC-486, "DTC P0643 SENSOR POWER SUPPLY"</u>.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	L
P2122 2122	Accelerator pedal position sensor 1 circuit low input	An excessively low voltage from the APP sensor 1 is sent to ECM.	Harness or connectors (APP sensor 1 circuit is open or	
P2123 2123	Accelerator pedal position sensor 1 circuit high input	An excessively high voltage from the APP sensor 1 is sent to ECM.	 shorted.) Accelerator pedal position sensor (APP sensor 1) 	Μ

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

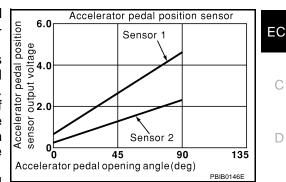

Engine operating condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

EC-565

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

DTC P2127, P2128 APP SENSOR

Component Description

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.

Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.

Idle position of the accelerator pedal is determined by the ECM

receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN 1	Ignition switch: ON	Accelerator pedal: Fully released	0.65 - 0.87V
ACCEL SEN I	(Engine stopped)	Accelerator pedal: Fully depressed	More than 4.3V
ACCEL SEN 2*	Ignition switch: ON	Accelerator pedal: Fully released	0.56 - 0.96V
ACCEL SEN 2	(Engine stopped)	Accelerator pedal: Fully depressed	More than 4.0V
CLSD THL POS	Ignition switch: ON	Accelerator pedal: Fully released	ON
CLOD THE POS	(Engine stopped)	Accelerator pedal: Slightly depressed	OFF

*: Accelerator pedal position sensor 2 signal is converted by ECM internally. Thus, it differ from ECM terminal voltage.

On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2127 2127	Accelerator pedal position sensor 2 circuit low input	An excessively low voltage from the APP sensor 2 is sent to ECM.	Harness or connectors (APP sensor 2 circuit is open or
P2128 2128	Accelerator pedal position sensor 2 circuit high input	An excessively high voltage from the APP sensor 2 is sent to ECM.	shorted.) (TP sensor circuit is shorted.)
			 Accelerator pedal position sensor (APP sensor 2)
			 Electric throttle control actuator (TP sensor 1 and 2)

FAIL-SAFE MODE

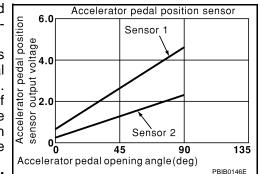

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

Revision: May 2006

DTC P2A00, P2A03 A/F SENSOR 1

Component Description

The A/F sensor is a planar dual-cell limit current sensor. The sensor element of the A/F sensor is the combination of a Nernst concentration cell (sensor cell) with an oxygen-pump cell, which transports ions. It has a heater in the element.

The sensor is capable of precise measurement $\lambda = 1$, but also in the lean and rich range. Together with its control electronics, the sensor outputs a clear, continuous signal throughout a wide λ range (0.7 < λ < air).

The exhaust gas components diffuse through the diffusion gap at the electrode of the oxygen pump and Nernst concentration cell, where they are brought to thermodynamic balance.

An electronic circuit controls the pump current through the oxygenpump cell so that the composition of the exhaust gas in the diffusion gap remains constant at $\lambda = 1$. Therefore, the A/F sensor is able to indicate air/fuel ratio by this pumping of current. In addition, a heater is integrated in the sensor to ensure the required operating temperature of 700 - 800°C (1,292 - 1,472°F).

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
A/F SEN1 (B1) A/F SEN1 (B2)	• Engine: After warming up	Maintaining engine speed at 2,000 rpm	Fluctuates around 1.5V

On Board Diagnosis Logic

To judge the malfunction, the A/F signal computed by ECM from the air fuel ratio (A/F) sensor 1 signal is monitored not to be shifted to LEAN side or RICH side.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible Cause
P2A00 2A00 (Bank 1) P2A03 2A03 (Bank 2)	Air fuel ratio (A/F) sensor 1 circuit range/performance	 The output voltage computed by ECM from the A/F sensor 1 signal is shifted to the lean side for a specified period. The A/F signal computed by ECM from the A/F sensor 1 signal is shifted to the rich side for a specified period. 	 Air fuel ratio (A/F) sensor 1 Air fuel ratio (A/F) sensor 1 heater Fuel pressure Fuel injector Intake air leaks

DTC Confirmation Procedure

NOTE:

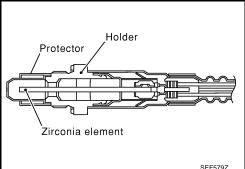

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

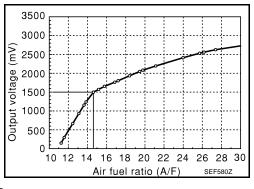

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

B WITH CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Turn ignition switch ON and select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CON-SULT-II.

UBS00AMN

UBSOOKPO

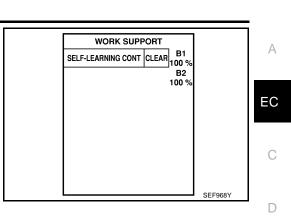

UBSOOKPA

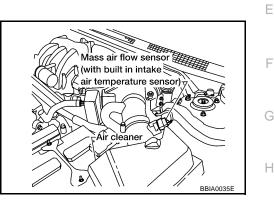

DTC P2A00, P2A03 A/F SENSOR 1

- Clear the self-learning coefficient by touching "CLEAR". 4.
- 5. Turn ignition switch OFF and wait at least 10 seconds.
- Start engine and keep the engine speed between 3,500 and 6. 4,000 rpm for 1 minute under no load.
- 7. Let engine idle for 1 minute.
- 8. Keep engine speed between 2,500 and 3,000 rpm for 20 minutes.
- If 1st trip DTC is detected, go to EC-599, "Diagnostic Procedure" 9.

WITH GST **(ST**)

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Disconnect mass air flow sensor harness connector.
- 4. Start engine and let it idle for at least 5 seconds.
- 5. Stop engine and reconnect mass air flow sensor harness connector.
- Select Service \$03 with GST and make sure that DTC P0102 is 6. detected.
- 7. Select Service \$04 with GST and erase the DTC P0102.
- 8. Start engine and keep the engine speed between 3,500 and 4,000 rpm for 1 minute under no load.
- Let engine idle for 1 minute.
- 10. Keep engine speed between 2,500 and 3,000 rpm for 20 minutes.
- 11. Select Service \$07 with GST. If 1st trip DTC is detected, go to EC-599, "Diagnostic Procedure".

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

Diagnostic Procedure 1. CHECK GROUND CONNECTIONS

- 1. Turn ignition switch OFF.
- 2. Loosen and retighten four ground screws on the body. Refer to <u>EC-156, "Ground Inspection"</u>.

OK or NG

- OK >> GO TO 2.
- NG >> Repair or replace ground connections.

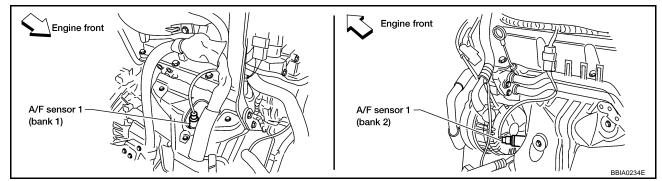

А

UBS00KPC

Н

2. RETIGHTEN AIR FUEL RATIO (A/F) SENSOR 1

Loosen and retighten the air fuel ratio (A/F) sensor 1.

Tightening torque: 40 - 60 N-m (4.1 - 6.1 kg-m, 30 - 44 ft-lb)

>> GO TO 3.

3. CHECK FOR INTAKE AIR LEAK

- 1. Start engine and run it at idle.
- 2. Listen for an intake air leak after the mass air flow sensor.

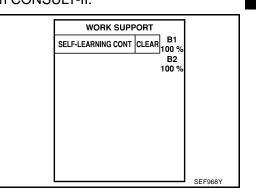

OK or NG

- OK >> GO TO 4.
- NG >> Repair or replace.

4. CLEAR THE SELF-LEARNING DATA.

With CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
- 3. Clear the self-learning control coefficient by touching "CLEAR".
- Run engine for at least 10 minutes at idle speed. Is the 1st trip DTC P0171, P0172, P0174 or P0175 detected? Is it difficult to start engine?

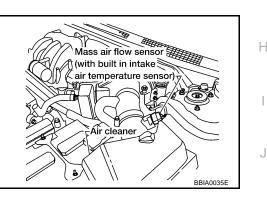

Without CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF.
- 3. Disconnect mass air flow sensor harness connector.
- 4. Restart engine and let it idle for at least 5 seconds.
- 5. Stop engine and reconnect mass air flow sensor harness connector.
- 6. Make sure DTC P0102 is displayed.
- 7. Erase the DTC memory. Refer to <u>EC-61, "HOW TO ERASE</u> <u>EMISSION-RELATED DIAGNOSTIC INFORMATION"</u>.
- 8. Make sure DTC P0000 is displayed.
- Run engine for at least 10 minutes at idle speed.
 Is the 1st trip DTC P0171, P0172, P0174 or P0175 detected?
 Is it difficult to start engine?

Yes or No

- Yes >> Perform trouble diagnosis for DTC P0171, P0174 or P0172, P0175. Refer to <u>EC-305, "DTC</u> <u>P0171, P0174 FUEL INJECTION SYSTEM FUNCTION"</u> or <u>EC-317, "DTC P0172, P0175 FUEL</u> <u>INJECTION SYSTEM FUNCTION"</u>.
- No >> GO TO 5.

EC

Ε

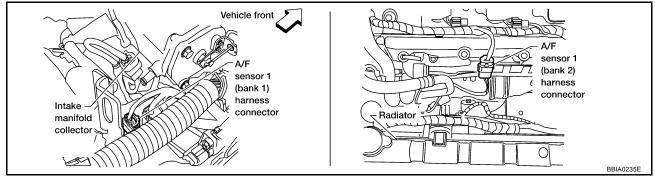

F

Κ

Μ

5. CHECK HARNESS CONNECTOR

- 1. Turn ignition switch OFF.
- 2. Disconnect A/F sensor 1 harness connector.

3. Check harness connector for water. Water should not exist.

OK or NG

OK >> GO TO 6.

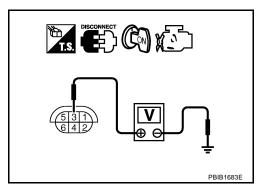

NG >> Repair or replace harness connector.

6. CHECK AIR FUEL RATIO (A/F) SENSOR 1 POWER SUPPLY CIRCUIT

- 1. Turn ignition switch ON.
- 2. Check voltage between A/F sensor 1 terminal 3 and ground with CONSULT-II or tester.

Voltage: Battery voltage

- OK or NG
- OK >> GO TO 8.
- NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M70, F58
- Fuse block (J/B) connector M4
- 15A fuse
- Harness for open or short between A/F sensor 1 and fuse

>> Repair or replace harness or connectors.

8. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect ECM harness connector.
- 3. Check harness continuity between the following terminals. Refer to Wiring Diagram.

	A/F sensor 1 terminal	ECM terminal
	1	16
Bank 1	2	75
	5	35
	6	56
	1	76
Bank 2	2	77
	5	57
	6	58

Continuity should exist.

4. Check harness continuity between the following terminals and ground. Refer to Wiring Diagram.

Bank 1		Bank 2	
A/F sensor 1 terminal	ECM terminal	A/F sensor 1 terminal	ECM terminal
1	16	1	76
2	75	2	77
5	35	5	57
6	56	6	58

Continuity should not exist.

5. Also check harness for short to power.

<u>OK or NG</u>

OK >> GO TO 9.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

9. CHECK A/F SENSOR 1 HEATER

Refer to EC-172, "Component Inspection" .

OK or NG

OK >> GO TO 10. NG >> GO TO 11.

10. CHECK INTERMITTENT INCIDENT

Perform EC-147, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> GO TO 11.

NG >> Repair or replace.

11. REPLACE A/F SENSOR 1

Replace malfunctioning A/F sensor 1.

CAUTION:

- Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new A/F sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

>> INSPECTION END

Removal and Installation AIR FUEL RATIO (A/F) SENSOR 1

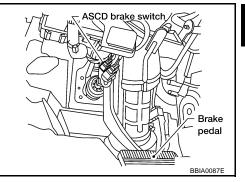

UBS009CK

Refer to EM-27, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

ASCD BRAKE SWITCH

Component Description

When the brake pedal is depressed, ASCD brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by this input of two kinds (ON/OFF signal). Refer to <u>EC-29</u>, "AUTOMATIC SPEED CONTROL DEVICE (ASCD)" for the ASCD function.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

Diagnostic Procedure

1. INSPECTION START

Do you have CONSULT-II? Yes or No

Yes >> GO TO 2. No >> GO TO 3.

2. CHECK OVERALL FUNCTION

With CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "ENGINE MOUNTING" in "ACTIVE TEST" mode with CONSULT-II and touch "ON/OFF" on the CONSULT-II screen.
- 3. Check that the motor operating sound is heard from front electronic controlled engine mount and rear electronic controlled engine mount for about 0.5 seconds according to the switching condition of "ENGINE MOUNTING".

OK or NG

- OK >> INSPECTION END
- NG >> GO TO 4.

3. CHECK OVERALL FUNCTION

Without CONSULT-II

- 1. Make sure that gear position is P or N.
- 2. Start engine and let it idle.
- 3. Change the engine speed from idle to more than 1,000 rpm and then return to idle (with vehicle stopped).
- 4. Check that the motor operating sound is heard from front electronic controlled engine mount for and rear electronic controlled engine mount about 0.5 seconds when changing engine speed. It is better to hear the operating sound around the left side front wheel house.

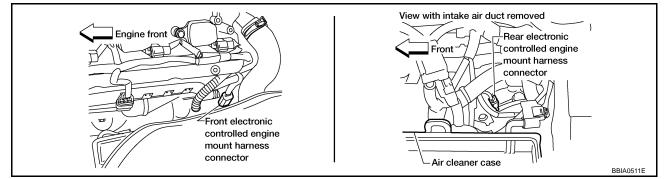

OK or NG

OK >> INSPECTION END

NG >> GO TO 4.

4. CHECK ELECTRONIC CONTROLLED ENGINE MOUNT POWER SUPPLY CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect front electronic controlled engine mount harness connector and rear electronic controlled engine mount harness connector.

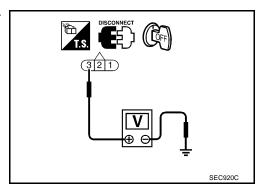

3. Check voltage between electronic controlled engine mount terminal 3 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK	>> GO TO 6.
NG	>> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M71, F59
- Fuse block (J/B) connector M4
- 10A fuse
- Harness for open and short between electronic controlled engine mount and battery

>> Repair harness or connectors.

6. CHECK ELECTRONIC CONTROLLED ENGINE MOUNT OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

- 1. Turn ignition switch OFF.
- 2. Disconnect ECM harness connector.
- 3. Check harness continuity between ECM terminals and electronic engine mount terminals as follows. Refer to Wiring Diagram.

ECM terminal	Front electronic controlled engine mount terminal	Rear electronic controlled engine mount terminal	С
8	1	1	_
9	2	2	D

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

7. CHECK ELECTRONIC CONTROLLED ENGINE MOUNT

		G
Visuall	ly check front and rear electronic controlled engine mount.

Component Description

The fuel injector is a small, precise solenoid valve. When the ECM supplies a ground to the fuel injector circuit, the coil in the fuel injector is energized. The energized coil pulls the ball valve back and allows fuel to flow through the fuel injector into the intake manifold. The amount of fuel injected depends upon the injection pulse duration. Pulse duration is the length of time the fuel injector remains open. The ECM controls the injection pulse duration based on engine fuel needs.

CONSULT-II Reference Value in Data Monitor Mode

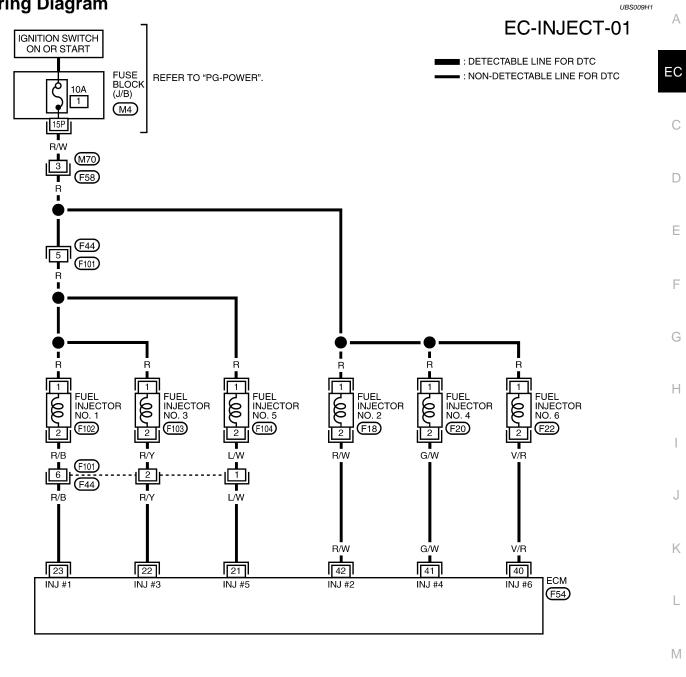

Specification data are reference values.

3. CHECK FUNCTION OF FUEL INJECTOR-I

Without CONSULT-II

- 1. Stop engine.
- 2. Disconnect harness connector F44 (1), F101 (2).
- : Vehicle front
- Intake manifold collector (3)
- 3. Turn ignition switch ON.

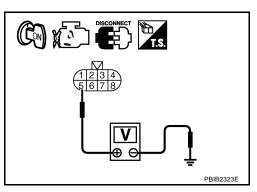

4. Check voltage between harness connector F44 terminal 5 and ground with CONSULT-II or tester.

Voltage: Battery voltage

- 5. Turn ignition switch OFF.
- 6. Disconnect ECM harness connector.
- Check harness continuity between harness connector F44 and ECM as follows.
 Befor to Wiring Diagram

Refer to Wiring Diagram.

Cylinder	Harness connector F44 terminal	ECM terminal
1	6	23
3	2	22
5	1	21

Continuity should exist.

8. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5. NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M70, F58
- Fuse block (J/B) connector M4
- 10A fuse
- Harness for open or short between harness connector F44 and fuse
- Harness for open or short between harness connector F44 and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK FUNCTION OF FUEL INJECTOR-II

Provide battery voltage between harness connector F101 as follows and then interrupt it. Listen to each fuel injector operating sound.

Cylinder	Harness connector F101 terminal	
	(+)	()
1	5	6
3	5	2
5	5	1

Operating sound should exist.

OK or NG

OK >> GO TO 6. NG >> GO TO 7.

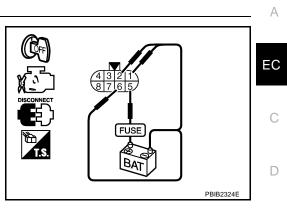

6. CHECK FUNCTION OF FUEL INJECTOR-III

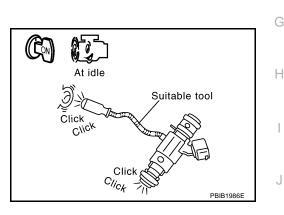

- 1. Reconnect all harness connector disconnected.
- 2. Start engine.
- 3. Listen to fuel injectors No. 2, No. 4, No.6 operating sound.

Clicking noise should exist.

Description SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*	Fuel pump control	Fuel pump relay
Battery	Battery voltage*		

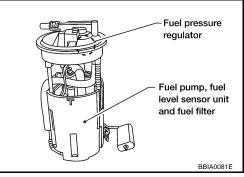

*: ECM determines the start signal status by the signals of engine speed and battery voltage.

The ECM activates the fuel pump for 1 second after the ignition switch is turned ON to improve engine startability. If the ECM receives a engine speed signal from the camshaft position sensor (PHASE), it knows that the engine is rotating, and causes the pump to operate. If the engine speed signal is not received when the ignition switch is ON, the engine stalls. The ECM stops pump operation and prevents battery discharging, thereby improving safety. The ECM does not directly drive the fuel pump. It controls the ON/OFF fuel pump relay, which in turn controls the fuel pump.

Condition	Fuel pump operation	
Ignition switch is turned to ON.	Operates for 1 second	
Engine running and cranking	Operates	
When engine is stopped	Stops in 1.5 seconds	
Except as shown above	Stops	

COMPONENT DESCRIPTION

A turbine type design fuel pump is used in the fuel tank.

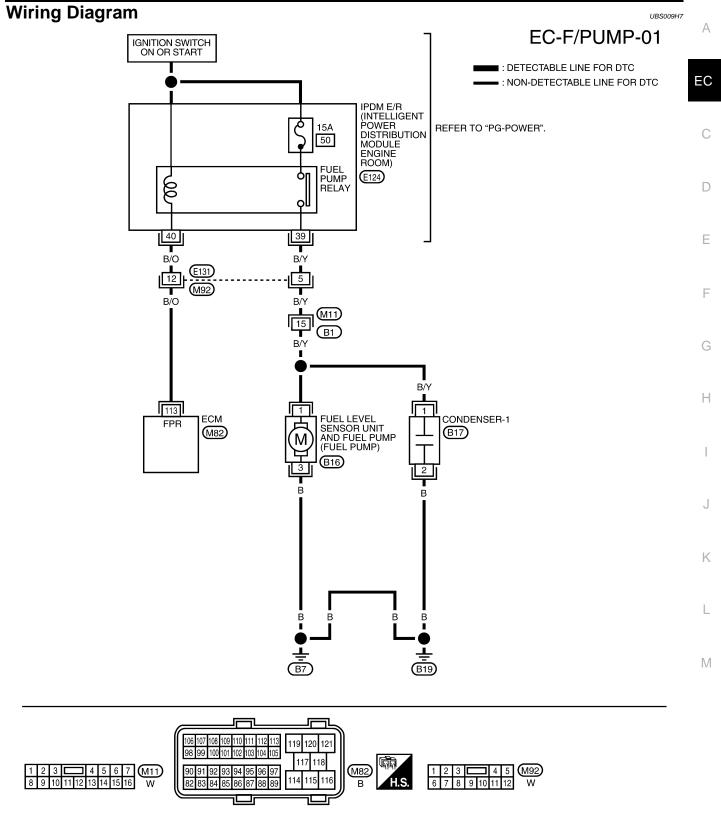

CONSULT-II Reference Value in Data Monitor Mode

UBS009H6

Specification data are reference values.

MONITOR ITEM CONDITION		SPECIFICATION
FUEL PUMP RLY	 For 1 second after turning ignition switch ON Engine running or cranking 	ON

Component Description IGNITION COIL & POWER TRANSISTOR

The ignition signal from the ECM is sent to and amplified by the power transistor. The power transistor turns ON and OFF the ignition coil primary circuit. This ON/OFF operation induces the proper high voltage in the coil secondary circuit.

Revision: May 2006

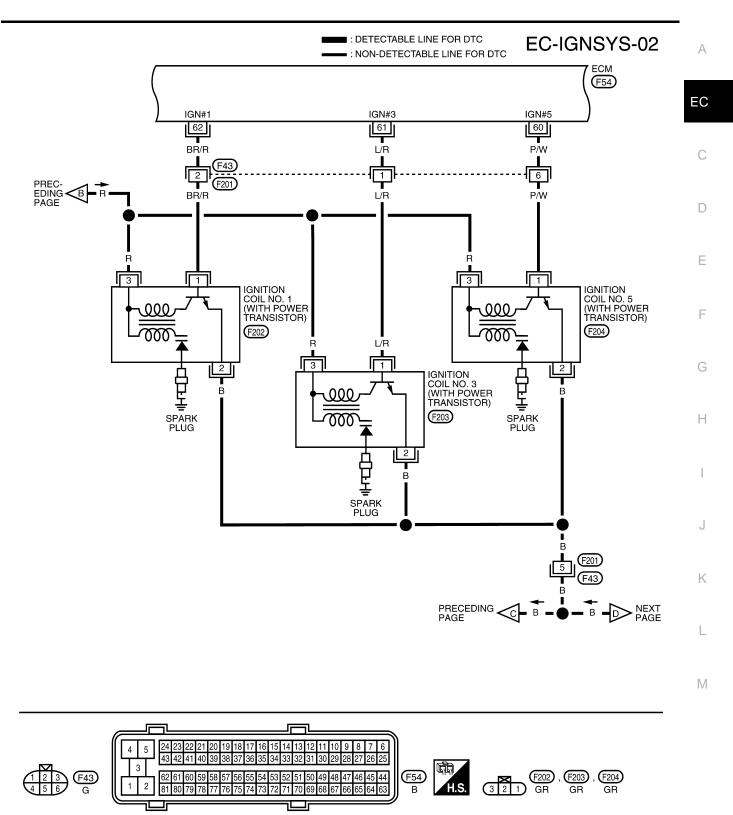

2007 Maxima

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

Component Inspection IGNITION COIL WITH POWER TRANSISTOR

CAUTION:

Do the following procedure in the place where ventilation is good without the combustible.

- Turn ignition switch OFF. 1.
- 2. Disconnect ignition coil harness connector.
- 3. Check resistance between ignition coil terminals as follows.

Terminal No. (Polarity)	Resistance Ω [at 25°C (77°F)]
1 and 2	Except 0 or ∞
1 and 3	Except 0
2 and 3	Except 0

- If NG, replace ignition coil with power transistor. 4. If OK, go to next step.
- Turn ignition switch OFF. 5.
- Reconnect all harness connectors disconnected. 6.
- 7. Remove fuel pump fuse located in IPDM E/R to release fuel pressure.

NOTE:

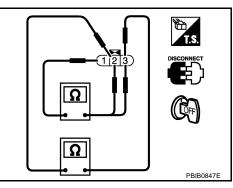

Do not use CONSULT-II to release fuel pressure, or fuel pressure applies again during the following procedure.

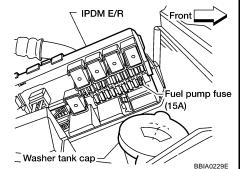

- 8. Start engine.
- 9. After engine stalls, crank it two or three times to release all fuel pressure.
- 10. Turn ignition switch OFF.
- 11. Remove all ignition coil harness connectors to avoid the electrical discharge from the ignition coils.
- 12. Remove ignition coil and spark plug of the cylinder to be checked.
- 13. Crank engine for 5 seconds or more to remove combustion gas in the cylinder.
- 14. Connect spark plug and harness connector to ignition coil.
- 15. Fix ignition coil using a rope etc. with gap of 13 17 mm between the edge of the spark plug and grounded metal portion as shown in the figure.
- 16. Crank engine for about 3 seconds, and check whether spark is generated between the spark plug and the grounded metal portion.

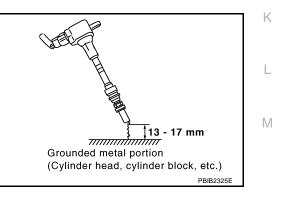

Spark should be generated.

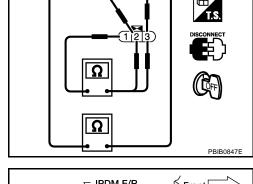

CAUTION:

- Do not approach to the spark plug and the ignition coil within 50cm. Be careful not to get an electrical shock while checking, because the electrical discharge voltage becomes 20kV or more.
- It might cause to damage the ignition coil if the gap of more than 17 mm is taken. NOTE:
- When the gap is less than 13 mm, the spark might be generated even if the coil is malfunctioning.
- 17. If NG, replace ignition coil with power transistor.

REFRIGERANT PRESSURE SENSOR

Component Description

The refrigerant pressure sensor is installed at the condenser of the air conditioner system. The sensor uses an electrostatic volume pressure transducer to convert refrigerant pressure to voltage. The voltage signal is sent to ECM, and ECM controls cooling fan system.

When VIAS control signal is " VIAS control solenoid valve signal "ON VIAS control solenoid valve VIAS control solenoid valve VIAS control solenoid valve Power valve actu Power valve actu Power valve One-way valve			Power valve	"OFF" ECM	
				DBIE1922E	

When the engine is running at medium speed, the ECM sends the ON signal to the VIAS control solenoid valve. This signal introduces the intake manifold vacuum into the power valve actuator and therefore closes the power valve.

Under this condition, the effective intake manifold length is equivalent to the total length of passage A and passage B. This long intake manifold provides increased amount of intake air, which results in improved suction efficiency and higher torque.

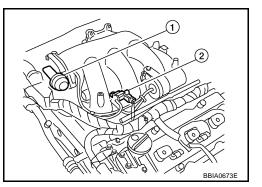

When engine is running at low or high speed, the ECM sends the OFF signal to the VIAS control solenoid valve and the power valve is opened.

Under this condition, the effective intake manifold length is equivalent to the length of passage B. This shortened intake manifold length results in enhanced engine output due to reduced suction resistance under high speeds.

COMPONENT DESCRIPTION

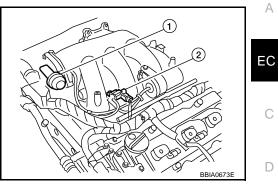

Power Valve

The power valve is installed in intake manifold collector and used to control the suction passage of the variable induction air control system. It is set in the fully closed or fully opened position by the power valve actuator (1) operated by the vacuum stored in the surge tank. The vacuum in the surge tank is controlled by the VIAS control solenoid valve (2).

VIAS Control Solenoid Valve

The VIAS control solenoid valve (2) cuts the intake manifold vacuum signal for power valve control. It responds to ON/OFF signals from the ECM. When the solenoid is off, the vacuum signal from the intake manifold is cut. When the ECM sends an ON signal the coil pulls the plunger downward and feeds the vacuum signal to the power valve actuator (1).

CONSULT-II Reference Value in Data Monitor Mode

2. CHECK VACUUM EXISTENCE

(B) With CONSULT-II

- 1. Stop engine and disconnect vacuum hose connected to power valve actuator.
- 2. Install the vacuum gauge as shown in the figure.
- 3. Start engine and let it idle.
- 4. Perform "VIAS SOL VALVE" in "ACTIVE TEST" mode with CONSULT-II.
- 5. Turn VIAS control solenoid valve ON and OFF, and check vacuum existence under the following conditions.

- Vehicle front
- 1. Power valve actuator
- 2. VIAS control solenoid valve
- A: Vacuum gauge

VIAS SOL VALVE	Vacuum
ON	Should exist.
OFF	Should not exist.

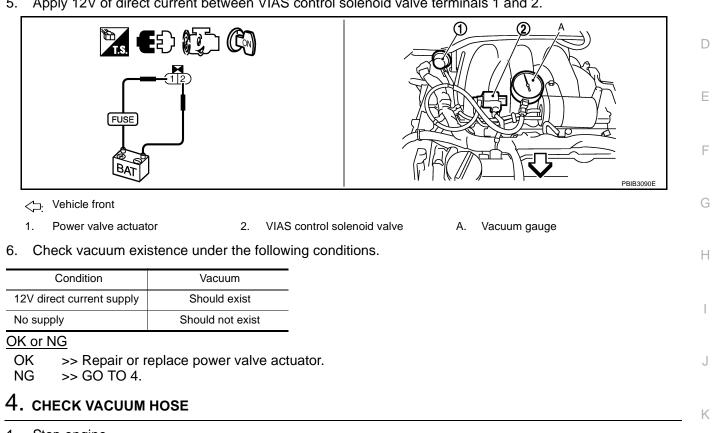

OK or NG

- OK >> Repair or replace power valve actuator.
- NG >> GO TO 4.

3. CHECK VACUUM EXISTENCE

Without CONSULT-II

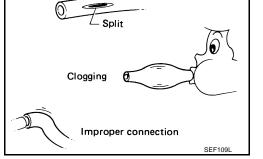

- Stop engine and disconnect vacuum hose connected to power valve actuator. 1.
- 2. Install the vacuum gauge as shown in the figure.
- 3. Disconnect VIAS control solenoid valve harness connector.
- 4. Start engine and let it idle.
- 5. Apply 12V of direct current between VIAS control solenoid valve terminals 1 and 2.

- 1. Stop engine.
- 2. Check hoses and tubes between intake manifold and power valve actuator for crack, clogging, improper connection or disconnection. Refer to EC-104, "Vacuum Hose Drawing" .

OK or NG

- OK >> GO TO 5.
- NG >> Repair hoses or tubes.

5. CHECK VACUUM TANK

Refer to EC-661, "Component Inspection" .

OK or NG

- OK >> GO TO 6.
- NG >> Replace vacuum tank.

6. CHECK VIAS CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect VIAS control solenoid valve (2) harness connector.
- Power valve actuator (1)
- 3. Turn ignition switch ON.

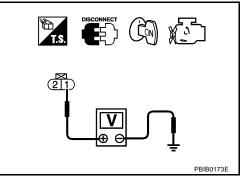

4. Check voltage between terminal 1 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 8. NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E131, M92
- Harness connectors M70, F58
- Harness for open or short between VIAS control solenoid valve and IPDM E/R
- Harness for open or short between VIAS control solenoid valve and ECM

>> Repair harness or connectors.

8. CHECK VIAS CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

- 1. Turn ignition switch OFF.
- 2. Disconnect ECM harness connector.
- 3. Check harness continuity between ECM terminal 29 and VIAS control solenoid valve terminal 2. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 9.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

9. CHECK VIAS CONTROL SOLENOID VALVE

Refer to EC-661, "Component Inspection" .

OK or NG

OK >> GO TO 10.

NG >> Replace VIAS control solenoid valve.

VIAS

10. CHECK INTERMITTENT INCIDENT

Refer to EC-147, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> INSPECTION END

Component Inspection VIAS CONTROL SOLENOID VALVE

(P) With CONSULT-II

- 1. Reconnect harness connectors disconnected.
- 2. Turn ignition switch ON.
- 3. Perform "VIAS SOL VALVE" in "ACTIVE TEST" mode.
- 4. Check air passage continuity and operation delay time under the following conditions.

Condition VIAS SOL VALVE	Air passage continuity between A and B	Air passage continuity between A and C
ON	Yes	No
OFF	No	Yes

Operation takes less than 1 second.

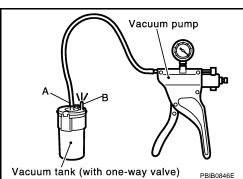

Check air passage continuity and operation delay time under the following conditions.

Condition	Air passage continuity between A and B	Air passage continuity between A and C
12V direct current supply between terminals 1 and 2	Yes	No
No supply	No	Yes

Operation takes less than 1 second.

VACUUM TANK

- 1. Disconnect vacuum hose connected to vacuum tank.
- 2. Connect a vacuum pump to the center port of vacuum tank.
- 3. Apply vacuum and make sure that vacuum exists at the other port.
