PEDAL HEIGHT

The pedal height measurement is gauged from the angle section of the floorboard to the center of the clutch pedal pad as illustrated.

Adjust the pedal height by loosening the lock-nut on the pedal stopper, clutch switch or ASCD switch and turning the adjusting bolt to provide the following specified heights:

- Z24i and KA24E engines: 9.29–9.69 in. (236–246mm)
- VG30i and VG30E engines: 8.94–9.33 in. (227–237mm)
