PRECAUTIONS

Precautions for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

Precautions for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER" used along with a seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. The SRS composition which is available to NISSAN MODEL R50 is as follows:

• For a frontal collision

The Supplemental Restraint System consists of driver air bag module (located in the center of the steering wheel), front passenger air bag module (located on the instrument panel on passenger side), seat belt LC pre-tensioners, a diagnosis sensor unit, warning lamp, wiring harness and spiral cable.

• For a side collision The Supplemental Restraint System consists of side air bag module (located in the outer side of front seat), side curtain air bag module (locating in the headlining side of front and rear seat), satellite sensor, diagnosis sensor unit (one of components of air bags for a frontal collision), wiring harness, warning lamp (one of components of air bags for a frontal collision).

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harness connector (and by yellow harness protector or yellow insulation tape before the harness connectors).

Special Service Tool

Special Service Tool

NAMA0002

NAMA0045

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description	
KV10115801 (J38956) Oil filter cap wrench	NT375	Removing oil filter a: 64.3 mm (2.531 in)

Commercial Service Tool

Tool name (Kent-Moore No.)	Description
Belt tension gauge (BT3373-F)	Checking drive belt tension
	AMA126

MA

GENERAL MAINTENANCE

General maintenance includes those items which should be checked during the normal day-to-day operation of the vehicle. They are essential if the vehicle is to continue operating properly. The owners can perform checks and inspections themselves or they can have their NISSAN dealers do them.

OUTSIDE THE VEHICLE

The maintenance items listed here should be performed from time to time, unless otherwise specified.

Item		Reference page	EN
Tires	Check the pressure with a gauge, including the spare, at least once a month and always prior to a long distance trips. Adjust to the specified pressure if necessary. Check carefully for damage, cuts or excessive wear.	_	LC
Wheel nuts	When checking the tires, make sure no nuts are missing, and check for any loose nuts. Tighten if necessary.	_	EC
Tire rotation	Tires should be rotated every 12,000 km (7,500 miles).	MA-26	
Wheel alignment and balance	If the vehicle pulls to either side while driving on a straight and level road, or if you detect uneven or abnormal tire wear, there may be a need for wheel alignment. If the steering wheel or seat vibrates at normal highway speeds, wheel balancing may be needed.	MA-26, SU-8, "Front Wheel Alignment"	FE
Windshield wiper blades	Check for cracks or wear if they do not wipe properly.	_	ПЛE
Doors and engine hood	Check that all doors and the engine hood operate smoothly as well as the trunk lid and back hatch. Also make sure that all latches lock securely. Lubricate if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released. When driving in areas using road salt or other corrosive materials, check lubrication frequently.	MA-30	M° AT TTE

INSIDE THE VEHICLE

The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, cleaning the vehicle, etc.

Item		Reference page	A
Lamps	Make sure that the headlamps, stop lamps, tail lamps, turn signal lamps, and other lamps are all operating properly and installed securely. Also check headlamp aim.	_	S
Warning lamps and buzzers/chimes	Make sure that all warning lamps and buzzers/chimes are operating properly.	_	B
Windshield wiper and washer	Check that the wipers and washer operate properly and that the wipers do not streak.	_	. S
Windshield defroster	Check that the air comes out of the defroster outlets properly and in sufficient quantity when operating the heater or air conditioning.	_	
Steering wheel	Check that it has the specified play. Be sure to check for changes in the steering condition, such as excessive play, hard steering or strange noises. Free play: Less than 35 mm (1.38 in)	_	. B
Seats	Check seat position controls such as seat adjusters, seatback recliner, etc. to make sure they operate smoothly and that all latches lock securely in every position. Check that the head restrains move up and down smoothly and that the locks (if equipped) hold securely in all latched positions. Check that the latches lock securely for folding-down rear seatbacks.		. d
Seat belts	Check that all parts of the seat belt system (e.g. buckles, anchors, adjusters and retractors) operate properly and smoothly and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.	MA-31 RS-8, "Seat Belt Inspec- tion"	S(
Clutch pedal	Make sure the pedal operates smoothly and check that it has the proper free play.	CL-6, "Adjusting Clutch Pedal"	
Brakes	Check that the brake does not pull the vehicle to one side when applied.	_	

GENERAL MAINTENANCE

Item		Reference page
Brake pedal and booster	Check the pedal for smooth operation and make sure it has the proper dis- tance under it when depressed fully. Check the brake booster function. Be sure to keep floor mats away from the pedal.	Refer to BR-13, "Brake Pedal and Bracket" and "Brake Booster"
Parking brake	Check that the lever has the proper travel and make sure that the vehicle is held securely on a fairly steep hill when only the parking brake is applied.	Refer to BR-31, "Parking Brake Control"
Automatic transmis- sion "Park" mecha- nism	Check that the lock release button on the selector lever operates properly and smoothly. On a fairly steep hill check that the vehicle is held securely with the selector lever in the "P" position without applying any brakes.	_

UNDER THE HOOD AND VEHICLE

The maintenance items listed here should be checked periodically (e.g. each time you check the engine oil or refuel).

Item		Reference page
Windshield washer fluid	Check that there is adequate fluid in the tank.	_
Engine coolant level	Check the coolant level when the engine is cold.	MA-16
Radiator and hoses	Check the front of the radiator and clean off any dirt, insects, leaves, etc., that may have accumulated. Make sure the hoses have no cracks, deformation, deterioration or loose connections.	_
Brake and clutch fluid levels	Make sure that the brake and clutch fluid levels are between the "MAX" and "MIN" lines on the reservoir.	MA-22, 27
Battery	Check the fluid level in each cell. It should be between the "MAX" and "MIN" lines. Vehicles operated in high temperatures or under severe conditions require frequent checks of the battery fluid level.	—
Engine drive belts	Make sure that no belt is frayed, worn, cracked or oily.	MA-14
Engine oil level	Check the level on the dipstick after parking the vehicle on a level spot and turning off the engine.	MA-18
Power steering fluid level and lines	Check the level on the dipstick with the engine off. Check the lines for improper attachment, leaks, cracks, etc.	MA-29
Automatic transmis- sion fluid level	Check the level on the dipstick after putting the selector lever in "P" with the engine idling.	MA-23
Exhaust system	Make sure there are no loose supports, cracks or holes. If the sound of the exhaust seems unusual or there is a smell of exhaust fumes, immediately locate the trouble and correct it.	MA-22
Underbody	The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these substances, otherwise rust will form on the floor pan, frame, fuel lines and around the exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, being careful to clean those areas where mud and dirt can easily accumulate.	_
Fluid leaks	Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks or gasoline fumes are evident, check for the cause and correct it immediately.	

PERIODIC MAINTENANCE

Two different maintenance schedules are provided, and should be used, depending upon the conditions in which the vehicle is mainly operated. After 60,000 miles (96,000 km) or 48 months, continue the periodic maintenance at the same mileage/time intervals.

	Follow Periodic Maintenance Schedule 1 if your driving habits frequently	Emission Control		MA
Schedule 1	 Repeated short trips of less than 5 miles (8 km). Repeated short trips of less than 10 miles (16 km) with outside temperatures remaining below freezing. Operating in hot weather in stop-and-go "rush hour" traffic. Extensive idling and/or low speed driving for long distances, such as police, 	System Maintenance	MA-8	EM
		Chassis and Body Maintenance		LC
			MA-9	EC
	Follow Periodic Maintenance Schedule 2 if none of the driving conditions shown in Schedule 1 apply to your driving habits.	Emission Control System Maintenance	MA-10	FE
		Chassis and Body Maintenance	MA-11	CL

Maintenance for off-road driving (

Whenever you drive off-road through sand, mud or water, more frequent maintenance may be required of the following items:	MT
 ▲ Brake pads and discs ▲ Brake lining and drums ▲ Brake lines and hoses ▲ With a lines and hoses 	AT
 Wheel bearing grease Differential, transmission and transfer oil Steering linkage Propeller shaft and drive shafts 	TF
 ▲ Air cleaner filter ▲ Clutch housing 	PD

Applied pushing force		98 N (10 kg, 22 lb)			—	

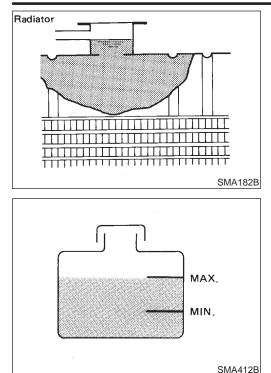

Belt deflection and tension

*1 If belt tension gauge cannot be installed at check points shown, check drive belt tension at a different location on the belt.

ENGINE MAINTENANCE

Changing Engine Coolant (Cont'd)

ENGINE MAINTENANCE

-REFILLING ENGINE COOLANT-

- 1. Install reservoir tank if removed, and radiator drain plug.
- 2. Close and tighten cylinder block drain plugs securely if removed.
- Apply sealant to the thread of cylinder block drain plugs.
 ? 7.8 11.8 N·m (0.8 1.2 kg-m, 69 104 in-lb) Front side

◯ : 17.6 - 21.6 N·m (1.8 - 2.2 kg-m, 13 - 15 ft-lb) Right side

Use Genuine Thread Sealant or equyivalent. Refer to GI-53.

- 3. Fill radiator slowly with coolant.
 - If air relief plug was removed, fill until coolant spills from the air relief plug, then install air relief plug.
- 4. Fill reservoir tank if removed with coolant up to the MAX level and install radiator cap.

Use Genuine NISSAN antifreeze coolant or equivalent mixed with demineralized water/distilled water.

For coolant mixture ratio, refer to "RECOMMENDED FLUIDS AND LUBRICANTS", MA-13.

Coolant capacity (Without reservoir tank): 8.6 ℓ (9-1/8 US qt, 7-5/8 Imp qt) Reservoir tank capacity (for MAX level): 0.6 ℓ (5/8 US qt, 1/2 Imp qt)

Pour coolant through coolant filler neck slowly to allow air in system to escape.

- 5. Warm up engine to normal operating temperature with radiator cap installed.
- 6. Run engine at 2,500 rpm for 10 seconds and return to idle speed.
- Repeat 2 or 3 times.

Watch coolant temperature gauge so as not to overheat the engine.

- 7. Stop engine and cool it down.
- Cool down using a fan to reduce the time.
- 8. Refill reservoir tank to Max line with coolant.
- 9. Repeat steps 5 through step 8 two or more times until coolant level no longer drops.
- 10. Check cooling system for leaks with engine running.
- 11. Warm up engine, and check for sound of coolant flow while running engine from idle up to 3,000 rpm with heater temperature control set at several positions between COOL and HOT.
- Sound may be noticeable at heater water cock.
- 12. If sound is heard, bleed air from cooling system by repeating steps 5 through 8 until coolant level no longer drops.
- Clean excess coolant from engine.

-FLUSHING COOLING SYSTEM-

NAMA0050S03

- 1. Open air relief plug.
- 2. Fill radiator with water until water spills from the air relief holes, then close air relief plugs. Fill radiator and reservoir tank with water and reinstall radiator cap.
- 3. Run engine and warm it up to normal operating temperature.
- 4. Rev engine two or three times under no-load.
- 5. Stop engine and wait until it cools down.
- 6. Drain water.

ENGINE MAINTENANCE

MA

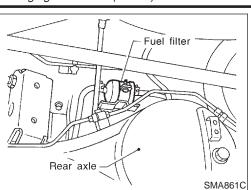

EM

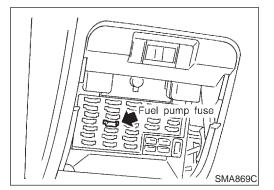

7. Repeat steps 1 through 6 until clear water begins to drain from GI radiator.

7. Check type and gap of new spark plug. Spark plug type (Platinum-tipped type):

	Symbol	Make
Standard type	PLFR5A-11	NGK
Cold type	PLFR6A-11	NGK
Hot type	PLFR4A-11	NGK

Gap (Nominal): 1.1 mm (0.043 in) Spark plug:

◯ : 19.6 - 29.4 N⋅m (2.0 - 2.9 kg-m, 15 - 22 ft-lb)

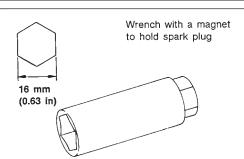

Use standard type spark plug for normal condition.

The hot type spark plug is suitable when fouling may occur with the standard type spark plug such as:

- frequent engine starts •
- low ambient temperatures

The cold type spark plug is suitable when spark knock may occur with the standard type spark plug such as:

- extended highway driving
- frequent high engine revolution
