NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM	- F 46
Description	46
ON BOARD DIAGNOSTIC (OBD) SYSTEM	47 _G
Introduction	
Two Trip Detection Logic	
Emission-related Diagnostic Information	48
Malfunction Indicator Lamp (MIL)	
OBD System Operation Chart	
BASIC SERVICE PROCEDURE	
Basic Inspection	70
Idle Speed and Ignition Timing Check	
VIN Registration	
Accelerator Pedal Released Position Learning	77 J
Throttle Valve Closed Position Learning	77
Idle Air Volume Learning	77
Fuel Pressure Check	79 _K
TROUBLE DIAGNOSIS	81 👘
Trouble Diagnosis Introduction	
DTC Inspection Priority Chart	87
Fail-safe Chart	89 🛛 🗋
Symptom Matrix Chart	
Engine Control Component Parts Location	
Vacuum Hose Drawing	101 M
Circuit Diagram	
ECM Harness Connector Terminal Layout	
ECM Terminals and Reference Value

INDEX FOR DTC

DTC No. Index

PFP:00024

UBS00K2Z

NOTE:

- If DTC U1000 or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000, U1001. Refer to <u>EC-153, "DTC U1000, U1001 CAN COMMUNICATION LINE"</u>.
- If DTC U1010 is displayed with other DTC, first perform the trouble diagnosis for DTC U1010. Refer to <u>EC-156, "DTC U1010 CAN COMMUNICATION"</u>.

PRECAUTIONS

PRECAUTIONS

Precautions for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

On Board Diagnostic (OBD) System of Engine and A/T

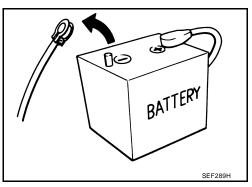

The ECM has an on board diagnostic system. It will light up the malfunction indicator lamp (MIL) to warn the driver of a malfunction causing emission deterioration.

CAUTION:

- Be sure to turn the ignition switch OFF and disconnect the negative battery cable before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MIL to light up.
- Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MIL to light up due to the open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)
- Certain systems and components, especially those related to OBD, may use a new style slidelocking type harness connector. For description and how to disconnect, refer to <u>PG-76, "HAR-NESS CONNECTOR"</u>.
- Be sure to route and secure the harnesses properly after work. The interference of the harness with a bracket, etc. may cause the MIL to light up due to the short circuit.
- Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube
 may cause the MIL to light up due to the malfunction of the EVAP system or fuel injection system,
 etc.
- Be sure to erase the unnecessary malfunction information (repairs completed) from the ECM and TCM (Transmission control module) before returning the vehicle to the customer.

Precaution

- Always use a 12 volt battery as power source.
- Do not attempt to disconnect battery cables while engine is running.
- Before connecting or disconnecting the ECM harness connector, turn ignition switch OFF and disconnect negative battery cable. Failure to do so may damage the ECM because battery voltage is applied to ECM even if ignition switch is turned OFF.
- Before removing parts, turn ignition switch OFF and then disconnect negative battery cable.

UBS00K32

UBS00K33

- Do not disassemble ECM.
- If a battery cable is disconnected, the memory will return to the ECM value.

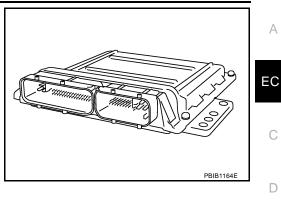

The ECM will now start to self-control at its initial value. Engine operation can vary slightly when the terminal is disconnected. However, this is not an indication of a malfunction. Do not replace parts because of a slight variation.

- If the battery is disconnected, the following emissionrelated diagnostic information will be lost within 24 hours.
- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values
- When connecting ECM harness connector, fasten it securely with levers as far as they will go as shown in the figure.

 When connecting or disconnecting pin connectors into or from ECM, take care not to damage pin terminals (bend or break).

Make sure that there are not any bends or breaks on ECM pin terminal, when connecting pin connectors.

- Securely connect ECM harness connectors.
 A poor connection can cause an extremely high (surge) voltage to develop in coil and condenser, thus resulting in damage to ICs.
- Keep engine control system harness at least 10 cm (4 in) away from adjacent harness, to prevent engine control system malfunctions due to receiving external noise, degraded operation of ICs, etc.
- Keep engine control system parts and harness dry.
- Before replacing ECM, perform "ECM Terminals and Reference Value" inspection and make sure ECM functions properly. Refer to <u>EC-104, "ECM Terminals and Reference Value"</u>
- Handle mass air flow sensor carefully to avoid damage.
- Do not clean mass air flow sensor with any type of detergent.
- Do not disassemble electric throttle control actuator.
- Even a slight leak in the air intake system can cause serious incidents.
- Do not shock or jar the camshaft position sensor (PHASE), crankshaft position sensor (POS).

• After performing each TROUBLE DIAGNOSIS, perform DTC Confirmation Procedure or Overall Function Check. The DTC should not be displayed in the DTC Confirmation Procedure if the repair is completed. The Overall Function Check should be a good result if the repair is completed.

Solenoid valve

Short

- When measuring ECM signals with a circuit tester, never allow the two tester probes to contact. Accidental contact of probes will cause a short circuit and damage the ECM power transistor.
- Do not use ECM ground terminals when measuring input/ output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

• B1 indicates the bank 1, B2 indicates the bank 2 as shown in the figure.

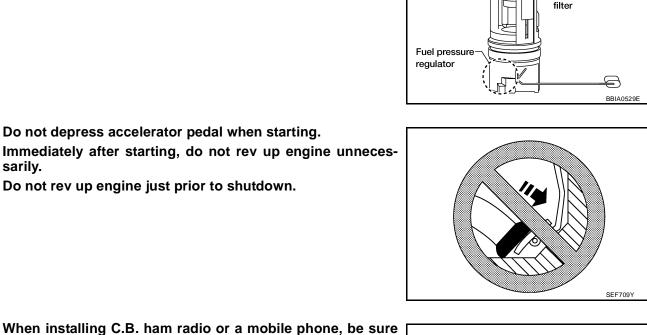

- Do not operate fuel pump when there is no fuel in lines.
- Tighten fuel hose clamps to the specified torque.

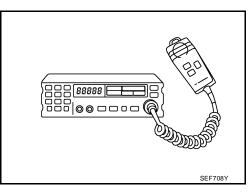

Do not depress accelerator pedal when starting.

Do not rev up engine just prior to shutdown.

sarily.

- When installing C.B. ham radio or a mobile phone, be sure . to observe the following as it may adversely affect elec-
- tronic control systems depending on installation location.
- Keep the antenna as far as possible from the electronic control units.
- Keep the antenna feeder line more than 20 cm (8 in) away from the harness of electronic controls. Do not let them run parallel for a long distance.
- Adjust the antenna and feeder line so that the standingwave radio can be kept smaller.
- Be sure to ground the radio to vehicle body.

Power steering pressure sensor	Power steering operation			
Heated oxygen sensor 2*1	Density of oxygen in exhaust gas			
Air conditioner switch	Air conditioner operation* ²			
Wheel sensor	Vehicle speed*2			

*1: This sensor is not used to control the engine system under normal conditions.

*2: This signal is sent to the ECM through CAN communication line.

*3: ECM determines the start signal status by the signals of engine speed and battery voltage.

SYSTEM DESCRIPTION

The amount of fuel injected from the fuel injector is determined by the ECM. The ECM controls the length of time the valve remains open (injection pulse duration). The amount of fuel injected is a program value in the ECM memory. The program value is preset by engine operating conditions. These conditions are determined by input signals (for engine speed and intake air) from both the crankshaft position sensor and the mass air flow sensor.

VARIOUS FUEL INJECTION INCREASE/DECREASE COMPENSATION

In addition, the amount of fuel injected is compensated to improve engine performance under various operating conditions as listed below.

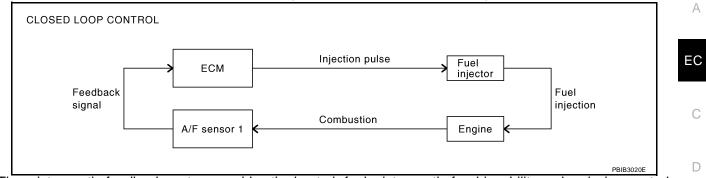

<Fuel increase>

- During warm-up
- When starting the engine
- During acceleration
- Hot-engine operation
- When selector lever is changed from N to D
- High-load, high-speed operation

<Fuel decrease>

- During deceleration
- During high engine speed operation

MIXTURE RATIO FEEDBACK CONTROL (CLOSED LOOP CONTROL)

The mixture ratio feedback system provides the best air-fuel mixture ratio for driveability and emission control. The three way catalyst (manifold) can then better reduce CO, HC and NOx emissions. This system uses air fuel ratio (A/F) sensor 1 in the exhaust manifold to monitor whether the engine operation is rich or lean. The ECM adjusts the injection pulse width according to the sensor voltage signal. For more information about air fuel ratio (A/F) sensor 1, refer to EC-237, "DTC P0131, P0151 A/F SENSOR 1". This maintains the mixture ratio within the range of stoichiometric (ideal air-fuel mixture).

This stage is referred to as the closed loop control condition.

Heated oxygen sensor 2 is located downstream of the three way catalyst (manifold). Even if the switching characteristics of air fuel ratio (A/F) sensor 1 shift, the air-fuel ratio is controlled to stoichiometric by the signal from heated oxygen sensor 2.

Open Loop Control

The open loop system condition refers to when the ECM detects any of the following conditions. Feedback control stops in order to maintain stabilized fuel combustion.

- Deceleration and acceleration
- High-load, high-speed operation
- Malfunction of air fuel ratio (A/F) sensor 1 or its circuit
- Insufficient activation of air fuel ratio (A/F) sensor 1 at low engine coolant temperature
- High engine coolant temperature
- During warm-up
- After shifting from N to D
- When starting the engine

MIXTURE RATIO SELF-LEARNING CONTROL

The mixture ratio feedback control system monitors the mixture ratio signal transmitted from air fuel ratio (A/F) sensor 1. This feedback signal is then sent to the ECM. The ECM controls the basic mixture ratio as close to the theoretical mixture ratio as possible. However, the basic mixture ratio is not necessarily controlled as originally designed. Both manufacturing differences (i.e., mass air flow sensor hot wire) and characteristic changes during operation (i.e., fuel injector clogging) directly affect mixture ratio.

Accordingly, the difference between the basic and theoretical mixture ratios is monitored in this system. This is then computed in terms of "injection pulse duration" to automatically compensate for the difference between the two ratios.

"Fuel trim" refers to the feedback compensation value compared against the basic injection duration. Fuel trim includes short term fuel trim and long term fuel trim.

"Short term fuel trim" is the short-term fuel compensation used to maintain the mixture ratio at its theoretical value. The signal from air fuel ratio (A/F) sensor 1 indicates whether the mixture ratio is RICH or LEAN compared to the theoretical value. The signal then triggers a reduction in fuel volume if the mixture ratio is rich, and an increase in fuel volume if it is lean.

"Long term fuel trim" is overall fuel compensation carried out long-term to compensate for continual deviation of the short term fuel trim from the central value. Such deviation will occur due to individual engine differences, wear over time and changes in the usage environment.

ENGINE CONTROL SYSTEM

FUEL INJECTION TIMING

 Sequential multiport fuel injection system 	 Simultaneous multiport fuel injection system
No. 1 cylinder	No. 1 cylinder No. 2 cylinder No. 3 cylinder No. 4 cylinder No. 5 cylinder No. 6 cylinder No. 6 cylinder No. 6 cylinder No. 6 cylinder No. 6 cylinder

Two types of systems are used.

Sequential Multiport Fuel Injection System

Fuel is injected into each cylinder during each engine cycle according to the firing order. This system is used when the engine is running.

Simultaneous Multiport Fuel Injection System

Fuel is injected simultaneously into all six cylinders twice each engine cycle. In other words, pulse signals of the same width are simultaneously transmitted from the ECM.

The six fuel injectors will then receive the signals two times for each engine cycle.

This system is used when the engine is being started and/or if the fail-safe system (CPU) is operating.

FUEL SHUT-OFF

Fuel to each cylinder is cut off during deceleration, operation of the engine at excessively high speeds or operation of the vehicle at excessively high speeds.

Electronic Ignition (EI) System INPUT/OUTPUT SIGNAL CHART

Sensor	Input Signal to ECM	ECM function	Actuator

Knock sensor	Engine knocking		
Park/neutral position (PNP) switch	Gear position		
Battery	Battery voltage*2		
Wheel sensor	Vehicle speed*1		

*1: This signal is sent to the ECM through CAN communication line.

*2: ECM determines the start signal status by the signals of engine speed and battery voltage.

SYSTEM DESCRIPTION

Firing order: 1-2-3-4-5-6

The ignition timing is controlled by the ECM to maintain the best air-fuel ratio for every running condition of the engine. The ignition timing data is stored in the ECM.

The ECM receives information such as the injection pulse width and camshaft position sensor (PHASE) signal. Computing this information, ignition signals are transmitted to the power transistor.

During the following conditions, the ignition timing is revised by the ECM according to the other data stored in the ECM.

- At starting
- During warm-up
- At idle
- At low battery voltage

UBS00K39

During acceleration

The knock sensor retard system is designed only for emergencies. The basic ignition timing is programmed within the anti-knocking zone, if recommended fuel is used under dry conditions. The retard system does not operate under normal driving conditions. If engine knocking occurs, the knock sensor monitors the condition. The signal is transmitted to the ECM. The ECM retards the ignition timing to eliminate the knocking condition. EC

Fuel Cut Control (at No Load and High Engine Speed) **INPUT/OUTPUT SIGNAL CHART**

UBS00K3A

А

Sensor	Input Signal to ECM	ECM function	Actuator	
Park/neutral position (PNP) switch	Neutral position		Fuel cut con-	
Accelerator pedal position sensor	Accelerator pedal position			
Engine coolant temperature sensor	Engine coolant temperature	Fuel cut con-		
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed	trol		
Wheel sensor	Vehicle speed*			

*: This signal is sent to the ECM through CAN communication line.

SYSTEM DESCRIPTION

If the engine speed is above 1,800 rpm under no load (for example, the shift position is neutral and engine speed is over 1,800 rpm) fuel will be cut off after some time. The exact time when the fuel is cut off varies based on engine speed.

Fuel cut will be operated until the engine speed reaches 1,500 rpm, then fuel cut will be cancelled.

NOTE:

This function is different from deceleration control listed under EC-24, "Multiport Fuel Injection (MFI) System".

AUTOMATIC SPEED CONTROL DEVICE (ASCD)

AUTOMATIC SPEED CONTROL DEVICE (ASCD)

System Description INPUT/OUTPUT SIGNAL CHART

Sensor	Input signal to ECM	ECM function	Actuator	EC
ASCD brake switch	Brake pedal operation			
Stop lamp switch	Brake pedal operation	ASCD vehicle speed control		
ASCD steering switch	ASCD steering switch operation		Electric throttle control	С
Park/Neutral position (PNP) switch	Gear position		actuator	
Wheel sensor	Vehicle speed*			D
TCM	Powertrain revolution*			
: This signal is sent to the ECM through CAN communication line.				E

BASIC ASCD SYSTEM

Refer to Owner's Manual for ASCD operating instructions

Refer to Owner's Mandal for AGOD operating instructions.	
Automatic Speed Control Device (ASCD) allows a driver to keep vehicle at predetermined constant speed without depressing accelerator pedal. Driver can set vehicle speed in advance between approximately 40 km/	F
h (25 MPH) and 144 km/h (89 MPH).	
ECM controls throttle angle of electric throttle control actuator to regulate engine speed.	G
Operation status of ASCD is indicated by CRUISE indicator and SET indicator in combination meter. If any	0
malfunction occurs in ASCD system, it automatically deactivates control.	
NOTE:	Н
Always drive vehicle in safe manner according to traffic conditions and obey all traffic laws.	
SET OPERATION	
Press MAIN switch. (The CRUISE indicator in combination meter illuminates.)	
When vehicle speed reaches a desired speed between approximately 40 km/h (25 MPH) and 144 km/h (89	
MPH), press SET/COAST switch. (Then SET indicator in combination meter illuminates.)	
ACCELERATE OPERATION	J
If the RESUME/ACCELERATE switch is pressed during cruise control driving, increase the vehicle speed until	
the switch is released or vehicle speed reaches maximum speed controlled by the system.	
And then ASCD will keep the new set speed.	Κ

CANCEL OPERATION

When any of following conditions exist, cruise operation will be canceled.

- CANCEL switch is pressed
- More than 2 switches at ASCD steering switch are pressed at the same time (Set speed will be cleared)
- Brake pedal is depressed
- Selector lever is changed to N, P, R position
- Vehicle speed decreased to 13 km/h (8 MPH) lower than the set speed
- VDC system is operated

When the ECM detects any of the following conditions, the ECM will cancel the cruise operation and inform the driver by blinking indicator lamp.

Engine coolant temperature is slightly higher than the normal operating temperature, CRUISE lamp may blink slowly.

When the engine coolant temperature decreases to the normal operating temperature. CRUISE lamp will stop blinking and the cruise operation will be able to work by depressing SET/COAST switch or RESUME/ ACCELERATE switch.

Malfunction for some self-diagnoses regarding ASCD control: SET lamp will blink quickly.

If MAIN switch is turned to OFF during ASCD is activated, all of ASCD operations will be canceled and vehicle speed memory will be erased.

PFP:18930

А UBS00K3D

L

Μ

COAST OPERATION

When the SET/COAST switch is pressed during cruise control driving, decrease vehicle set speed until the switch is released. And then ASCD will keep the new set speed.

RESUME OPERATION

When the RESUME/ACCELERATE switch is pressed after cancel operation other than depressing MAIN switch is performed, vehicle speed will return to last set speed. To resume vehicle set speed, vehicle condition must meet following conditions.

- Brake pedal is released
- Selector lever is in other than P and N positions
- Vehicle speed is greater than 40 km/h (25 MPH) and less than 144 km/h (89 MPH)

ASCD INDICATOR

Refer to EC-628.

UBS00K3E

CAN COMMUNICATION

CAN COMMUNICATION

System Description

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only. Refer to LAN-25, "CAN COMMUNICATION", about CAN communication for detail.

EVAPORATIVE EMISSION SYSTEM

EVAPORATIVE EMISSION SYSTEM

PFP:14950

Description

The evaporative emission system is used to reduce hydrocarbons emitted into the atmosphere from the fuel system. This reduction of hydrocarbons is accomplished by activated charcoals in the EVAP canister.

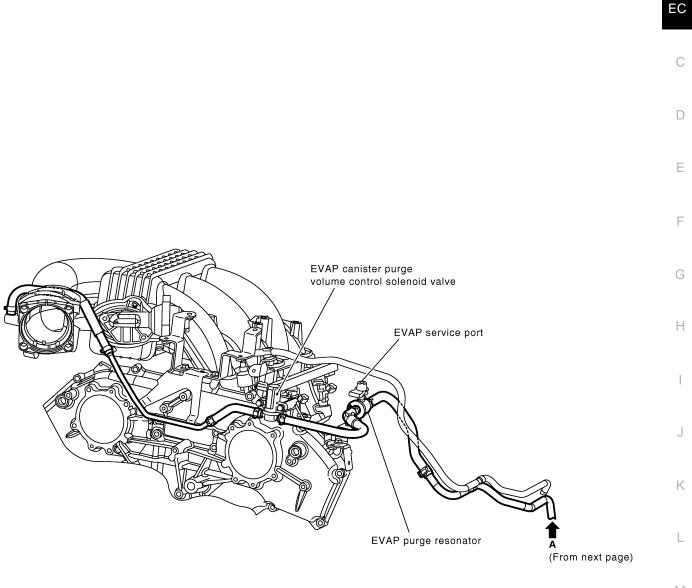

The fuel vapor in the sealed fuel tank is led into the EVAP canister which contains activated carbon and the vapor is stored there when the engine is not operating or when refueling to the fuel tank.

The vapor in the EVAP canister is purged by the air through the purge line to the intake manifold when the engine is operating. EVAP canister purge volume control solenoid valve is controlled by ECM. When the engine operates, the flow rate of vapor controlled by EVAP canister purge volume control solenoid valve is proportionally regulated as the air flow increases.

EVAP canister purge volume control solenoid valve also shuts off the vapor purge line during decelerating.

EVAPORATIVE EMISSION SYSTEM

EVAPORATIVE EMISSION LINE DRAWING

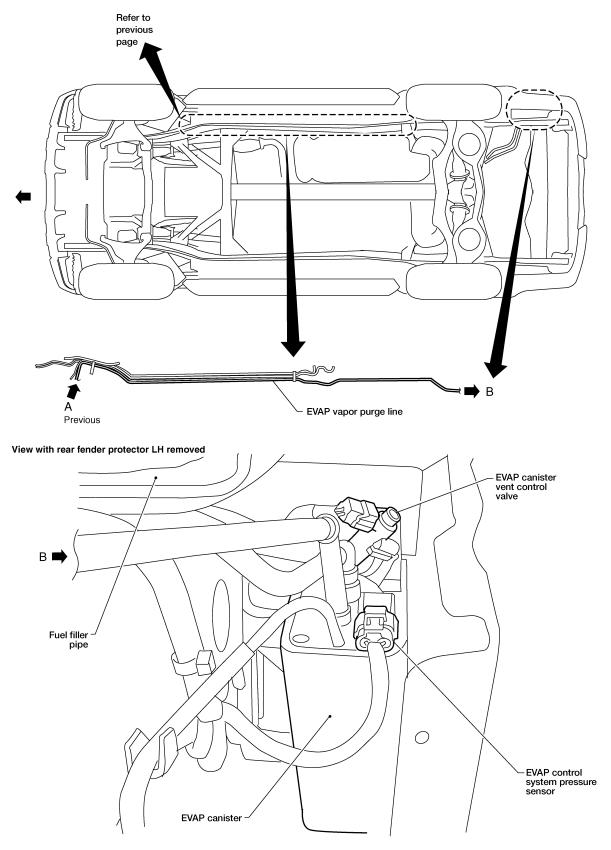

Μ

А

NOTE: Do not use soapy water or any type of solvent while installing vacuum hose or purge hoses.

PBIB2528E

BBIA0565E

Component Inspection EVAP CANISTER

Check EVAP canister as follows:

- 1. Block port **B**.
- 2. Blow air into port A and check that it flows freely out of port C.
- 3. Release blocked port B.
- 4. Apply vacuum pressure to port **B** and check that vacuum pressure exists at the ports A and C.
- 5. Block port A and B.
- 6. Apply pressure to port **C** and check that there is no leakage.

FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FULLER CAP)

1. Wipe clean valve housing.

Check valve opening pressure and vacuum. 2.

> **Pressure:** 15.3 - 20.0 kPa (0.156 - 0.204 kg/cm², 2.22 - 2.90 psi) Vacuum: -6.0 to -3.3 kPa (-0.061 to -0.034 kg/cm², -0.87 to -0.48 psi)

3. If out of specification, replace fuel filler cap as an assembly.

CAUTION:

Use only a genuine fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.

EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EC-407, "Component Inspection".

FUEL TANK TEMPERATURE SENSOR

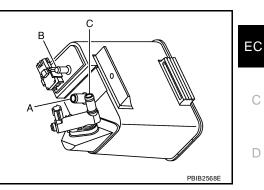

Refer to EC-333, "Component Inspection" .

EVAP CANISTER VENT CONTROL VALVE

Refer to EC-414. "Component Inspection".

Κ

EVAP SERVICE PORT

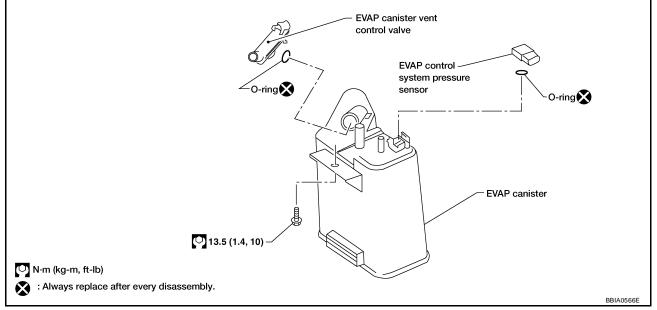

Positive pressure is delivered to the EVAP system through the EVAP service port. If fuel vapor leakage in the EVAP system occurs, use a leak detector to locate the leak.

UBS00K3I

Removal and Installation EVAP CANISTER

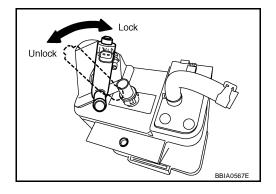

Tighten EVAP canister as shown in the figure.

EVAP CANISTER VENT CONTROL VALVE

- 1. Turn EVAP canister vent control valve counterclockwise.
- 2. Remove the EVAP canister vent control valve.

Always replace O-ring with a new one.

How to Detect Fuel Vapor Leakage

CAUTION:

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm², 0.6 psi) of pressure in EVAP system.

NOTE:

- Do not start engine.
- Improper installation of EVAP service port adapter to the EVAP service port may cause a leak.

UBS00K3.I

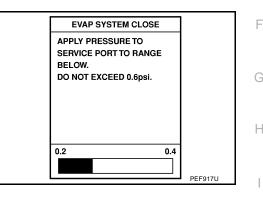

EVAPORATIVE EMISSION SYSTEM

(P) WITH CONSULT-II

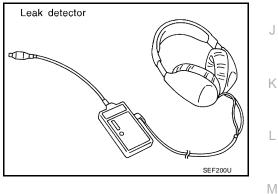

- Attach the EVAP service port adapter securely to the EVAP service port. 1.
- 2. Also attach the pressure pump and hose to the EVAP service port adapter.
- 3. Turn ignition switch ON.
- 4. Select the "EVAP SYSTEM CLOSE" of "WORK SUPPORT MODE" with CONSULT-II.
- 5. Touch "START". A bar graph (Pressure indicating display) will appear on the screen.

		EC
EVAP SYSTEM CLOSE		
APPLY PRESSURE TO EVAP SYSTEM FROM SERVICE PORT USING HAND PUMP WITH PRESSURE GAUGE AT NEXT SCREEN.		С
NEVER USE COMPRESSED AIR OR HIGH PRESSURE PUMP!		D
DO NOT START ENGINE. TOUCH START.		E
	PEF838U	

- 6. Apply positive pressure to the EVAP system until the pressure indicator reaches the middle of the bar graph.
- 7. Remove EVAP service port adapter and hose with pressure pump.

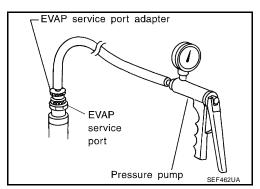

8. Locate the leak using a leak detector. Refer to EC-33, "EVAPO-RATIVE EMISSION LINE DRAWING" .

WITHOUT CONSULT-II

- Attach the EVAP service port adapter securely to the EVAP ser-1. vice port.
- 2. Also attach the pressure pump with pressure gauge to the EVAP service port adapter.

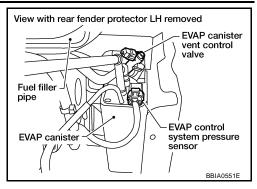

А

Κ

L

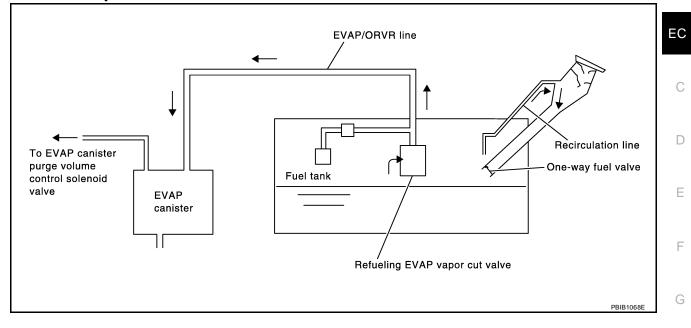

- 3. Apply battery voltage between the terminals of EVAP canister vent control valve to make a closed EVAP system.
- To locate the leak, deliver positive pressure to the EVAP system until pressure gauge points reach 1.38 to 2.76 kPa (0.014 to 0.028 kg/cm², 0.2 to 0.4 psi).
- 5. Remove EVAP service port adapter and hose with pressure pump.
- 6. Locate the leak using a leak detector. Refer to <u>EC-33</u>, "EVAPO-<u>RATIVE EMISSION LINE DRAWING"</u>.

ON BOARD REFUELING VAPOR RECOVERY (ORVR)

ON BOARD REFUELING VAPOR RECOVERY (ORVR)

System Description

From the beginning of refueling, the air and vapor inside the fuel tank go through refueling EVAP vapor cut valve and EVAP/ORVR line to the EVAP canister. The vapor is absorbed by the EVAP canister and the air is released to the atmosphere.

When the refueling has reached the full level of the fuel tank, the refueling EVAP vapor cut valve is closed and refueling is stopped because of auto shut-off. The vapor which was absorbed by the EVAP canister is purged during driving.

WARNING:

When conducting inspections below, be sure to observe the following:

- Put a "CAUTION: INFLAMMABLE" sign in workshop.
- Do not smoke while servicing fuel system. Keep open flames and sparks away from work area.
- Be sure to furnish the workshop with a CO₂ fire extinguisher.

CAUTION:

- Before removing fuel line parts, carry out the following procedures:
- Put drained fuel in an explosion-proof container and put lid on securely.
- Release fuel pressure from fuel line. Refer to EC-79, "FUEL PRESSURE RELEASE" .
- Disconnect battery negative cable.
- Always replace O-ring when the fuel gauge retainer is removed.
- Do not kink or twist hose and tube when they are installed.
- Do not tighten hose and clamps excessively to avoid damaging hoses.
- After installation, run engine and check for fuel leaks at connection.
- Do not attempt to top off the fuel tank after the fuel pump nozzle shuts off automatically. Continued refueling may cause fuel overflow, resulting in fuel spray and possibly a fire.

POSITIVE CRANKCASE VENTILATION

POSITIVE CRANKCASE VENTILATION

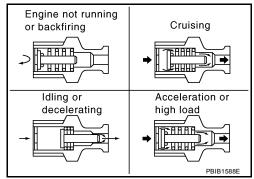

Description SYSTEM DESCRIPTION

This system returns blow-by gas to the intake manifold.

The positive crankcase ventilation (PCV) valve is provided to conduct crankcase blow-by gas to the intake manifold. During partial throttle operation of the engine, the intake manifold sucks the blow-by gas through the PCV valve. Normally, the capacity of the valve is sufficient to handle any blow-by and a small amount of ventilating air. The ventilating air is then drawn from the air inlet tubes into the crankcase. In this process the air passes through the hose connecting air inlet tubes to rocker cover. Under full-throttle condition, the manifold vacuum is insufficient to draw the blow-by flow through the valve. The flow goes through the hose connection in the reverse direction.

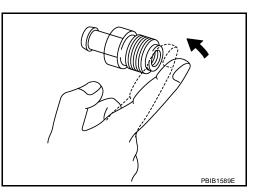

On vehicles with an excessively high blow-by, the valve does not meet the requirement. This is because some of the flow will go through the hose connection to the air inlet tubes under all conditions.

UBS00K30

Component Inspection PCV (POSITIVE CRANKCASE VENTILATION) VALVE

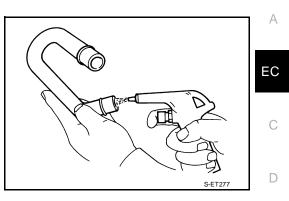

With engine running at idle, remove PCV valve from rocker cover. A properly working valve makes a hissing noise as air passes through it. A strong vacuum should be felt immediately when a finger is placed over valve inlet.

PFP:11810

PCV VALVE VENTILATION HOSE

- 1. Check hoses and hose connections for leaks.
- 2. Disconnect all hoses and clean with compressed air. If any hose cannot be freed of obstructions, replace.

NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)

Description

- If the security indicator lights up with the ignition switch in the ON position or "NATS MALFUNCTION" is displayed on "SELF-DIAG RESULTS" screen, perform self-diagnostic results mode with CONSULT-II using NATS program card. Refer to <u>BL-100, "NVIS(NISSAN Vehicle Immobilizer System-NATS)"</u>.
- Confirm no self-diagnostic results of NVIS (NATS) is displayed before touching "ERASE" in "SELF-DIAG RESULTS" mode with CONSULT-II.
- When replacing ECM, initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs must be carried out with CONSULT-II using NATS program card.

Therefore, be sure to receive all keys from vehicle owner. Regarding the procedures of NVIS (NATS) initialization and all NVIS (NATS) ignition key ID registration, refer to CONSULT-II Operation Manual, IVIS/NVIS.

ON BOARD DIAGNOSTIC (OBD) SYSTEM

Introduction

The ECM has an on board diagnostic system, which detects malfunctions related to engine sensors or actuators. The ECM also records various emission-related diagnostic information including:

Emission-related diagnostic information	SAE Mode	
Diagnostic Trouble Code (DTC)	Service \$03 of SAE J1979	
Freeze Frame data	Service \$02 of SAE J1979	
System Readiness Test (SRT) code	Service \$01 of SAE J1979	
1st Trip Diagnostic Trouble Code (1st Trip DTC)	Service \$07 of SAE J1979	
1st Trip Freeze Frame data		
Test values and Test limits	Service \$06 of SAE J1979	
Calibration ID	Service \$09 of SAE J1979	

The above information can be checked using procedures listed in the table below.

	DTC	1st trip DTC	Freeze Frame data	1st trip Freeze Frame data	SRT code	SRT status	Test value
CONSULT-II	×	×	×	×	×	×	_
GST	×	×	×	—	×	×	×
ECM	×	×*		_	_	×	_

*: When DTC and 1st trip DTC simultaneously appear on the display, they cannot be clearly distinguished from each other.

The malfunction indicator lamp (MIL) on the instrument panel lights up when the same malfunction is detected in two consecutive trips (Two trip detection logic), or when the ECM enters fail-safe mode. (Refer to $\underline{EC-89}$.)

Two Trip Detection Logic

When a malfunction is detected for the first time, 1st trip DTC and 1st trip Freeze Frame data are stored in the ECM memory. The MIL will not light up at this stage. <1st trip>

If the same malfunction is detected again during the next drive, the DTC and Freeze Frame data are stored in the ECM memory, and the MIL lights up. The MIL lights up at the same time when the DTC is stored. <2nd trip> The "trip" in the "Two Trip Detection Logic" means a driving mode in which self-diagnosis is performed during vehicle operation. Specific on board diagnostic items will cause the ECM to light up or blink the MIL, and store DTC and Freeze Frame data, even in the 1st trip, as shown below.

×: Applicable —: Not applicable

		М	IL		D	тс	1st trip DTC	
Items	1st	1st trip		2nd trip		2nd trip	1st trip	2nd trip
	Blinking	Lighting up	Blinking	Lighting up	1st trip displaying	displaying	displaying	display- ing
Misfire (Possible three way cata- lyst damage) — DTC: P0300 - P0306 is being detected	×	_	_	_	_	_	×	_
Misfire (Possible three way cata- lyst damage) — DTC: P0300 - P0306 is being detected	_	_	×	_	_	×	_	_
One trip detection diagnoses (Refer to EC-48 .)	_	×	_	_	×	_		_
Except above	—	_	_	×	_	×	×	_

When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting up MIL when there is malfunction on engine control system.

Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.

А

EC

F

Н

L

Μ

UBS00K3R

The fail-safe function also operates when above diagnoses except MIL circuit are detected and demands the driver to repair the malfunction.

Engine operating condition in fail-safe mode

Engine speed will not rise more than 2,500 rpm due to the fuel cut

*1: 1st trip DTC No. is the same as DTC No.

*2: This number is prescribed by SAE J2012.

*3: In Diagnostic Test Mode II (Self-diagnostic results), this number is controlled by NISSAN.

*4: SRT code will not be set if the self-diagnostic result is NG.

*5: The troubleshooting for this DTC need CONSULT-II.

*6: When the fail-safe operations for both self-diagnoses occur at the same time, the MIL illuminates.

*7: When the ECM is in the mode of displaying SRT status, MIL may flash. For the details, refer to EC-55, "How to Display SRT Status".

DTC AND 1ST TRIP DTC

The 1st trip DTC (whose number is the same as the DTC number) is displayed for the latest self-diagnostic result obtained. If the ECM memory was cleared previously, and the 1st trip DTC did not reoccur, the 1st trip DTC will not be displayed.

If a malfunction is detected during the 1st trip, the 1st trip DTC is stored in the ECM memory. The MIL will not light up (two trip detection logic). If the same malfunction is not detected in the 2nd trip (meeting the required driving pattern), the 1st trip DTC is cleared from the ECM memory. If the same malfunction is detected in the 2nd trip, both the 1st trip DTC and DTC are stored in the ECM memory and the MIL lights up. In other words, the DTC is stored in the ECM memory and the MIL lights up. In other words, the DTC is stored in the ECM memory and the MIL lights up when the same malfunction occurs in two consecutive trips. If a 1st trip DTC is stored and a non-diagnostic operation is performed between the 1st and 2nd trips, only the 1st trip DTC will continue to be stored. For malfunctions that blink or light up the MIL during the 1st trip, the DTC and 1st trip DTC are stored in the ECM memory.

Procedures for clearing the DTC and the 1st trip DTC from the ECM memory are described in <u>EC-60, "HOW</u> <u>TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"</u>

For malfunctions in which 1st trip DTCs are displayed, refer to <u>EC-48</u>, "<u>EMISSION-RELATED DIAGNOSTIC</u> <u>INFORMATION ITEMS</u>". These items are required by legal regulations to continuously monitor the system/ component. In addition, the items monitored non-continuously are also displayed on CONSULT-II.

1st trip DTC is specified in Service \$07 of SAE J1979. 1st trip DTC detection occurs without lighting up the MIL and therefore does not warn the driver of a malfunction. However, 1st trip DTC detection will not prevent the vehicle from being tested, for example during Inspection/Maintenance (I/M) tests.

When a 1st trip DTC is detected, check, print out or write down and erase (1st trip) DTC and Freeze Frame data as specified in Work Flow procedure Step 2, refer to <u>EC-82, "WORK FLOW"</u>. Then perform DTC Confirmation Procedure or Overall Function Check to try to duplicate the malfunction. If the malfunction is duplicated, the item requires repair.

How to Read DTC and 1st Trip DTC

DTC and 1st trip DTC can be read by the following methods.

With CONSULT-II

() With GST

CONSULT-II or GST (Generic Scan Tool) Examples: P0340, P0850, P1148, etc.

These DTCs are prescribed by SAE J2012.

(CONSULT-II also displays the malfunctioning component or system.)

No Tools

The number of blinks of the MIL in the Diagnostic Test Mode II (Self-Diagnostic Results) indicates the DTC. Example: 0340, 0850, 1148, etc.

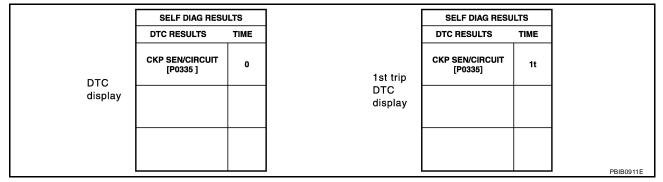

These DTCs are controlled by NISSAN.

- 1st trip DTC No. is the same as DTC No.
- Output of a DTC indicates a malfunction. However, GST or the Diagnostic Test Mode II do not indicate whether the malfunction is still occurring or has occurred in the past and has returned to normal. CONSULT-II can identify malfunction status as shown below. Therefore, using CONSULT-II (if available) is recommended.

A sample of CONSULT-II display for DTC and 1st trip DTC is shown below. DTC or 1st trip DTC of a malfunction is displayed in SELF-DIAGNOSTIC RESULTS mode of CONSULT-II. Time data indicates how many times the vehicle was driven after the last detection of a DTC.

If the DTC is being detected currently, the time data will be [0].

If a 1st trip DTC is stored in the ECM, the time data will be [1t].

FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA

The ECM records the driving conditions such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed, vehicle speed, base fuel schedule and intake air temperature at the moment a malfunction is detected.

Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data. The data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-II or GST. The 1st trip freeze frame data can only be displayed on the CONSULT-II screen, not on the GST. For details, see <u>EC-116</u>, "Freeze Frame Data and 1st Trip Freeze Frame Data".

Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MIL on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. The ECM has the following priorities to update the data.

Priority		Items	
1	Freeze frame data	Misfire — DTC: P0300 - P0306 Fuel Injection System Function — DTC: P0171, P0172, P0174, P0175	~
2		Except the above items (Includes A/T related items)	EC
3	1st trip freeze frame d	ata	

For example, the EGR malfunction (Priority: 2) was detected and the freeze frame data was stored in the 2nd trip. After that when the misfire (Priority: 1) is detected in another trip, the freeze frame data will be updated from the EGR malfunction to the misfire. The 1st trip freeze frame data is updated each time a different malfunction is detected. There is no priority for 1st trip freeze frame data. However, once freeze frame data is stored in the ECM memory, 1st trip freeze data is no longer stored (because only one freeze frame data or 1st trip freeze frame data can be stored in the ECM). If freeze frame data is stored in the ECM memory and freeze frame data with the same priority occurs later, the first (original) freeze frame data remains unchanged in the ECM memory.

Both 1st trip freeze frame data and freeze frame data (along with the DTCs) are cleared when the ECM memory is erased. Procedures for clearing the ECM memory are described in <u>EC-60, "HOW TO ERASE EMIS-SION-RELATED DIAGNOSTIC INFORMATION"</u>.

SYSTEM READINESS TEST (SRT) CODE

System Readiness Test (SRT) code is specified in Service \$01 of SAE J1979.

As part of an enhanced emissions test for Inspection & Maintenance (I/M), certain states require the status of SRT be used to indicate whether the ECM has completed self-diagnosis of major emission systems and components. Completion must be verified in order for the emissions inspection to proceed.

If a vehicle is rejected for a State emissions inspection due to one or more SRT items indicating "INCMP", use the information in this Service Manual to set the SRT to "CMPLT".

In most cases the ECM will automatically complete its self-diagnosis cycle during normal usage, and the SRT status will indicate "CMPLT" for each application system. Once set as "CMPLT", the SRT status remains "CMPLT" until the self-diagnosis memory is erased.

Occasionally, certain portions of the self-diagnostic test may not be completed as a result of the customer's normal driving pattern; the SRT will indicate "INCMP" for these items.

NOTE:

The SRT will also indicate "INCMP" if the self-diagnosis memory is erased for any reason or if the ECM memory power supply is interrupted for several hours.

If, during the state emissions inspection, the SRT indicates "CMPLT" for all test items, the inspector will continue with the emissions test. However, if the SRT indicates "INCMP" for one or more of the SRT items the vehicle is returned to the customer untested.

NOTE:

If MIL is ON during the state emissions inspection, the vehicle is also returned to the customer untested even though the SRT indicates "CMPLT" for all test items. Therefore, it is important to check SRT ("CMPLT") and DTC (No DTCs) before the inspection.

SRT Item

The table below shows required self-diagnostic items to set the SRT to "CMPLT".

SRT item (CONSULT-II indica- tion)	Perfor- mance Pri- ority*1	Required self-diagnostic items to set the SRT to "CMPLT"	Corresponding DTC No.
CATALYST	2	Three way catalyst function	P0420, P0430
	2	EVAP control system purge flow monitoring	P0441
EVAP SYSTEM	1	EVAP control system	P0442
	2	EVAP control system	P0456
		Air fuel ratio (A/F) sensor 1	P0133, P0153
HO2S	4	Heated oxygen sensor 2	P0137, P0157
11020		Heated oxygen sensor 2	P0138, P0158
		Heated oxygen sensor 2	P0139, P0159

*1: If completion of several SRTs is required, perform driving patterns (DTC confirmation procedure), one by one based on the priority for models with CONSULT-II.

F

Κ

L

Μ

SRT Set Timing

SRT is set as "CMPLT" after self-diagnosis has been performed one or more times. Completion of SRT is done regardless of whether the result is OK or NG. The set timing is different between OK and NG results and is shown in the table below.

			Example					
Self-diag	Self-diagnosis result		Ignition cycle					
		Diagnosis	$\leftarrow ON \rightarrow O$	$PFF \leftarrow ON \rightarrow O$	$OFF \leftarrow ON \rightarrow OPF$	$OFF \leftarrow ON \rightarrow$		
All OK	Case 1	P0400	OK (1)	— (1)	OK (2)	— (2)		
		P0402	OK (1)	— (1)	— (1)	OK (2)		
		P1402	OK (1)	OK (2)	— (2)	— (2)		
		SRT of EGR	"CMPLT"	"CMPLT"	"CMPLT"	"CMPLT"		
	Case 2	P0400	OK (1)	— (1)	— (1)	— (1)		
		P0402	— (0)	— (0)	OK (1)	— (1)		
		P1402	OK (1)	OK (2)	— (2)	— (2)		
		SRT of EGR	"INCMP"	"INCMP"	"CMPLT"	"CMPLT"		
NG exists	Case 3	P0400	OK	ОК	_	_		
		P0402	—	—	_	_		
		P1402	NG	_	NG	NG (Consecutive NG)		
		(1st trip) DTC	1st trip DTC	—	1st trip DTC	DTC (= MIL ON)		
		SRT of EGR	"INCMP"	"INCMP"	"INCMP"	"CMPLT"		

OK: Self-diagnosis is carried out and the result is OK.

NG: Self-diagnosis is carried out and the result is NG.

—: Self-diagnosis is not carried out.

When all SRT related self-diagnoses showed OK results in a single cycle (Ignition OFF-ON-OFF), the SRT will indicate "CMPLT". \rightarrow Case 1 above

When all SRT related self-diagnoses showed OK results through several different cycles, the SRT will indicate "CMPLT" at the time the respective self-diagnoses have at least one OK result. \rightarrow Case 2 above

If one or more SRT related self-diagnoses showed NG results in 2 consecutive cycles, the SRT will also indicate "CMPLT". \rightarrow Case 3 above

The table above shows that the minimum number of cycles for setting SRT as "INCMP" is one (1) for each self-diagnosis (Case 1 & 2) or two (2) for one of self-diagnoses (Case 3). However, in preparation for the state emissions inspection, it is unnecessary for each self-diagnosis to be executed twice (Case 3) for the following reasons:

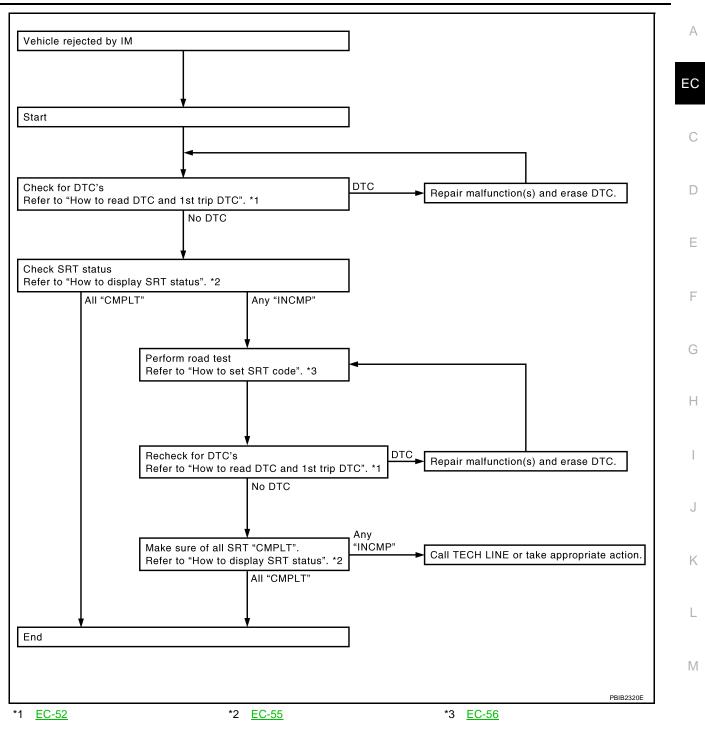

- The SRT will indicate "CMPLT" at the time the respective self-diagnoses have one (1) OK result.
- The emissions inspection requires "CMPLT" of the SRT only with OK self-diagnosis results.
- When, during SRT driving pattern, 1st trip DTC (NG) is detected prior to "CMPLT" of SRT, the self-diagnosis memory must be erased from ECM after repair.
- If the 1st trip DTC is erased, all the SRT will indicate "INCMP".

NOTE:

SRT can be set as "CMPLT" together with the DTC(s). Therefore, DTC check must always be carried out prior to the state emission inspection even though the SRT indicates "CMPLT".

SRT Service Procedure

If a vehicle has failed the state emissions inspection due to one or more SRT items indicating "INCMP", review the flowchart diagnostic sequence on the next page.

How to Display SRT Status

WITH CONSULT-II

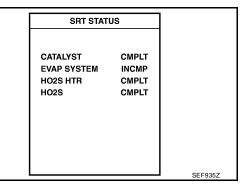

Selecting "SRT STATUS" in "DTC CONFIRMATION" mode with CONSULT-II.

For items whose SRT codes are set, a "CMPLT" is displayed on the CONSULT-II screen; for items whose SRT codes are not set, "INCMP" is displayed.

A sample of CONSULT-II display for SRT code is shown at right. "INCMP" means the self-diagnosis is incomplete and SRT is not set. "CMPLT" means the self-diagnosis is complete and SRT is set.

NOTE:

Though displayed on the CONSULT-II screen, "HO2S HTR" is not SRT item.

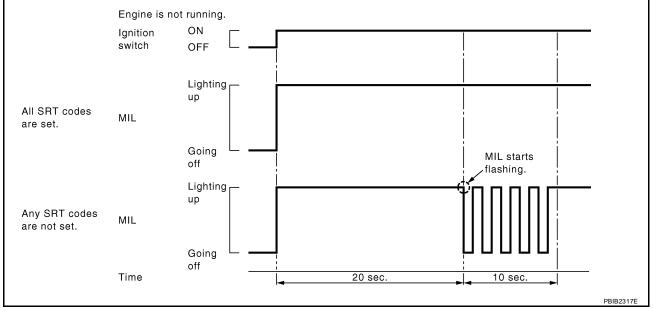

I WITH GST

Selecting Service \$01 with GST (Generic Scan Tool)

NO TOOLS

Ă SRT code itself can no be displayed while only SRT status can be.

- 1. Turn ignition switch ON and wait 20 seconds.
- 2. SRT status is indicated as shown below.
 - When all SRT codes are set, MIL lights up continuously.
 - When any SRT codes are not set, MIL will flash periodically for 10 seconds.

How to Set SRT Code

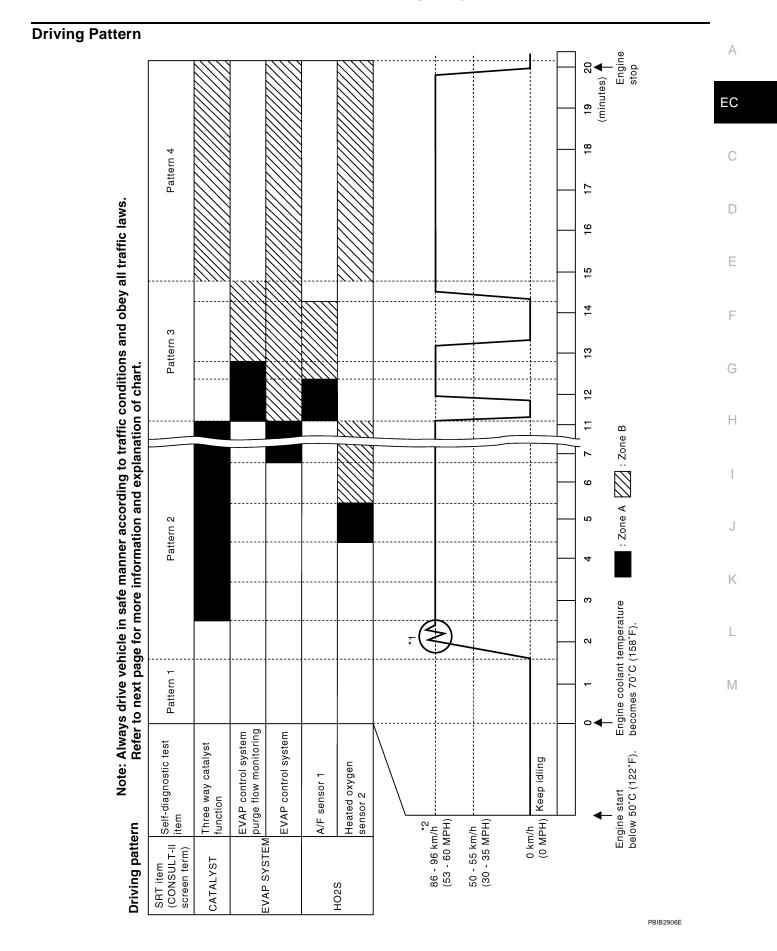

To set all SRT codes, self-diagnosis for the items indicated above must be performed one or more times. Each diagnosis may require a long period of actual driving under various conditions.

WITH CONSULT-II

Perform corresponding DTC Confirmation Procedure one by one based on Performance Priority in the table on <u>EC-53, "SRT Item"</u>.

WITHOUT CONSULT-II

The most efficient driving pattern in which SRT codes can be properly set is explained on the next page. The driving pattern should be performed one or more times to set all SRT codes.

• The time required for each diagnosis varies with road surface conditions, weather, altitude, individual driving habits, etc.

Zone A refers to the range where the time, required for the diagnosis under normal conditions*, is the shortest.

Zone B refers to the range where the diagnosis can still be performed if the diagnosis is not completed within zone A.

*: Normal conditions refer to the following:

- Sea level
- Flat road
- Ambient air temperature: 20 30°C (68 86°F)
- Diagnosis is performed as quickly as possible under normal conditions.
 Under different conditions [For example: ambient air temperature other than 20 30°C (68 86°F)], diagnosis may also be performed.

Pattern 1:

- The engine is started at the engine coolant temperature of -10 to 35°C (14 to 95°F) (where the voltage between the ECM terminal 73 and ground is 3.0 - 4.3V).
- The engine must be operated at idle speed until the engine coolant temperature is greater than 70°C (158°F) (where the voltage between the ECM terminal 73 and ground is lower than 1.4V).
- The engine is started at the fuel tank temperature of warmer than 0°C (32°F) (where the voltage between the ECM terminal 107 and ground is less than 4.1V).

Pattern 2:

• When steady-state driving is performed again even after it is interrupted, each diagnosis can be conducted. In this case, the time required for diagnosis may be extended.

Pattern 3:

- Operate vehicle following the driving pattern shown in the figure.
- Replace the accelerator pedal during decelerating vehicle speed from 90km/h (56MPH) to 0km/h (0MPH).

Pattern 4:

- The accelerator pedal must be held very steady during steadystate driving.
- If the accelerator pedal is moved, the test must be conducted all over again.

*1: Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH), then release the accelerator pedal and keep it released for more than 10 seconds. Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH) again.

*2: Checking the vehicle speed with GST is advised.

Suggested Transmission Gear Position

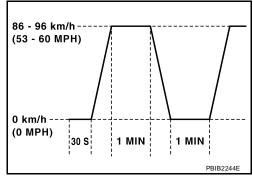

Set the selector lever in the D position with the overdrive switch turned ON.

TEST VALUE AND TEST LIMIT (GST ONLY — NOT APPLICABLE TO CONSULT-II)

The following is the information specified in Service \$06 of SAE J1979.

The test value is a parameter used to determine whether a system/circuit diagnostic test is OK or NG while being monitored by the ECM during self-diagnosis. The test limit is a reference value which is specified as the maximum or minimum value and is compared with the test value being monitored.

These data (test value and test limit) are specified by Test ID (TID) and Component ID (CID) and can be displayed on the GST screen.

Item	Self-diagnostic test item	DTC	Test v (GST d	/alue lisplay)	Test limit	Conversion	
			TID	CID			_
	Three way catalyst function (Bank 1)	P0420	01H	01H	Max.	1/128

HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION

How to Erase DTC

With CONSULT-II

The emission related diagnostic information in the ECM can be erased by selecting "ERASE" in the "SELF-DIAG RESULTS" mode with CONSULT-II.

If DTCs are displayed for both ECM and TCM (Transmission control module), they need to be erased individually from the ECM and TCM (Transmission control module).

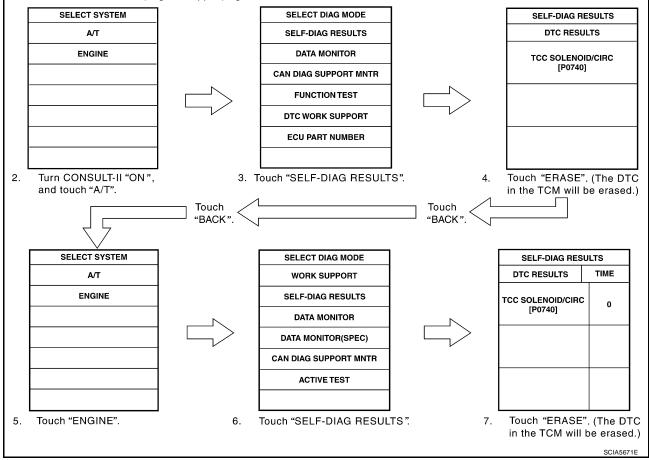

NOTE:

If the DTC is not for A/T related items (see EC-8), skip steps 2 through 4.

- 1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
- 2. Turn CONSULT-II ON and touch "A/T".
- 3. Touch "SELF-DIAG RESULTS".
- 4. Touch "ERASE". [The DTC in the TCM (Transmission control module) will be erased.] Then touch "BACK" twice.
- 5. Touch "ENGINE".
- 6. Touch "SELF-DIAG RESULTS".
- 7. Touch "ERASE". (The DTC in the ECM will be erased.)

How to erase DTC (With CONSULT-II)

1. If the ignition switch stays "ON" after repair work, be sure to turn ignition switch "OFF" once. Wait at least 10 seconds and then turn it "ON" (engine stopped) again.

(a) With GST

The emission related diagnostic information in the ECM can be erased by selecting Service \$04 with GST. **NOTE:**

If the DTC is not for A/T related items (see <u>EC-8</u>), skip step 2.

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.

- 2. Perform AT-42, "HOW TO ERASE DTC (WITH GST)" . (The DTC in TCM will be erased.) А 3. Select Service \$04 with GST (Generic Scan Tool). (MS) No Tools NOTE: EC If the DTC is not for A/T related items (see EC-8), skip step 2. 1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again. Perform AT-43, "HOW TO ERASE DTC (NO TOOLS)" . (The DTC in TCM will be erased.) 2. Change the diagnostic test mode from Mode II to Mode I by depressing the accelerator pedal. Refer to EC-62, "HOW TO SWITCH DIAGNOSTIC TEST MODE" . If the battery is disconnected, the emission-related diagnostic information will be lost within 24 hours. The following data are cleared when the ECM memory is erased. Е Diagnostic trouble codes 1st trip diagnostic trouble codes Freeze frame data F 1st trip freeze frame data System readiness test (SRT) codes Test values Actual work procedures are explained using a DTC as an example. Be careful so that not only the DTC, but all of the data listed above, are cleared from the ECM memory during work procedures. Н Malfunction Indicator Lamp (MIL) UBS00K3T DESCRIPTION The MIL is located on the instrument panel. 1. The MIL will light up when the ignition switch is turned ON without the engine running. This is a bulb check. If the MIL does not light up, refer to DI-33, "WARNING LAMPS" SERV or see EC-673.
 - When the engine is started, the MIL should go off. If the MIL remains on, the on board diagnostic system has detected an engine system malfunction.

Μ

ON BOARD DIAGNOSTIC SYSTEM FUNCTION

The on board diagnostic system has the following three functions.

Diagnostic Test Mode	KEY and ENG. Status	Function	Explanation of Function
Mode I	Ignition switch in ON position	BULB CHECK	This function checks the MIL bulb for damage (blown, open circuit, etc.). If the MIL does not come on, check MIL circuit.
	Engine running	MALFUNCTION WARNING	 This is a usual driving condition. When a malfunction is detected twice in two consecutive driving cycles (two trip detection logic), the MIL will light up to inform the driver that a malfunction has been detected. The following malfunctions will light up or blink the MIL in the 1st trip. Misfire (Possible three way catalyst damage) One trip detection diagnoses
Mode II	Ignition switch in ON position CON Engine stopped	SELF-DIAGNOSTIC RESULTS	This function allows DTCs and 1st trip DTCs to be read.

When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting up MIL when there is malfunction on engine control system.

Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.

The fail-safe function also operates when above diagnoses except MIL circuit are detected and demands the driver to repair the malfunction.

MIL Flashing Without DTC

When any SRT codes are not set, MIL may flash without DTC. For the details, refer to $\underline{\text{EC-55}}$, "How to Display <u>SRT Status</u>".

HOW TO SWITCH DIAGNOSTIC TEST MODE

NOTE:

- It is better to count the time accurately with a clock.
- It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.
- Always ECM returns to Diagnostic Test Mode I after ignition switch is turned OFF.

How to Set Diagnostic Test Mode II (Self-diagnostic Results)

- 1. Confirm that accelerator pedal is fully released, turn ignition switch ON and wait 3 seconds.
- 2. Repeat the following procedure quickly five times within 5 seconds.
- a. Fully depress the accelerator pedal.
- b. Fully release the accelerator pedal.
- 3. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 10 seconds until the MIL starts blinking.

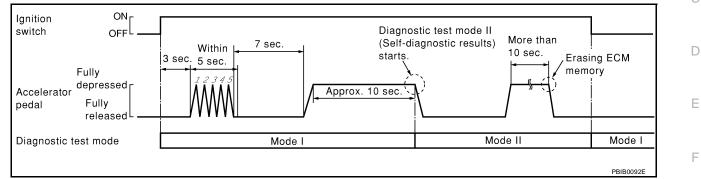

NOTE:

Do not release the accelerator pedal for 10 seconds if MIL may start blinking on the halfway of this 10 seconds. This blinking is displaying SRT status and is continued for another 10 seconds. For the details, refer to <u>EC-56</u>, "<u>How to Set SRT Code</u>".

 Fully release the accelerator pedal. ECM has entered to Diagnostic Test Mode II (Self-diagnostic results).

NOTE:

Wait until the same DTC (or 1st trip DTC) appears to confirm all DTCs certainly.

How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

- Set ECM in Diagnostic Test Mode II (Self-diagnostic results). Refer to <u>EC-62</u>, "How to Set Diagnostic Test O <u>Mode II (Self-diagnostic Results)</u>".
- Fully depress the accelerator pedal and keep it for more than 10 seconds. The emission-related diagnostic information has been erased from the backup memory in the ECM.
- 3. Fully release the accelerator pedal, and confirm the DTC 0000 is displayed.

DIAGNOSTIC TEST MODE I — BULB CHECK

In this mode, the MIL on the instrument panel should stay ON. If it remains OFF, check the bulb. Refer to <u>DI-</u> <u>33, "WARNING LAMPS"</u> or see <u>EC-673</u>.

DIAGNOSTIC TEST MODE I — MALFUNCTION WARNING

MIL	Condition	
ON	When the malfunction is detected.	
OFF	No malfunction.	K

This DTC number is clarified in Diagnostic Test Mode II (SELF-DIAGNOSTIC RESULTS)

DIAGNOSTIC TEST MODE II — SELF-DIAGNOSTIC RESULTS

In this mode, the DTC and 1st trip DTC are indicated by the number of blinks of the MIL as shown below. The DTC and 1st trip DTC are displayed at the same time. If the MIL does not illuminate in diagnostic test mode I (Malfunction warning), all displayed items are 1st trip DTCs. If only one code is displayed when the MIL illuminates in diagnostic test mode II (SELF-DIAGNOSTIC RESULTS), it is a DTC; if two or more codes are displayed, they may be either DTCs or 1st trip DTCs. DTC No. is same as that of 1st trip DTC. These uniden-

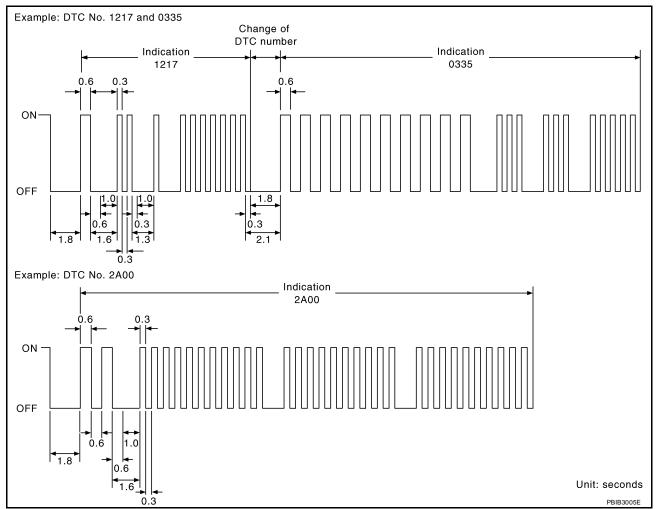

```
EC
```

Н

L

А

tified codes can be identified by using the CONSULT-II or GST. A DTC will be used as an example for how to read a code.

A particular trouble code can be identified by the number of four-digit numeral flashes. The "zero" is indicated by the number of ten flashes. The "A" is indicated by the number of eleven flash. The length of time the 1,000th-digit numeral flashes on and off is 1.2 seconds consisting of an ON (0.6-second) - OFF (0.6-second) cycle.

The 100th-digit numeral and lower digit numerals consist of a 0.3-second ON and 0.3-second OFF cycle. A change from one digit numeral to another occurs at an interval of 1.0-second OFF. In other words, the later numeral appears on the display 1.3 seconds after the former numeral has disappeared.

A change from one trouble code to another occurs at an interval of 1.8-second OFF.

In this way, all the detected malfunctions are classified by their DTC numbers. The DTC 0000 refers to no malfunction. (See <u>EC-8, "INDEX FOR DTC"</u>)

How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

The DTC can be erased from the back up memory in the ECM by depressing accelerator pedal. Refer to <u>EC-</u> 62, "How to Set Diagnostic Test Mode II (Self-diagnostic Results)".

- If the battery is disconnected, the DTC will be lost from the backup memory within 24 hours.
- Be careful not to erase the stored memory before starting trouble diagnoses.

OBD System Operation Chart RELATIONSHIP BETWEEN MIL, 1ST TRIP DTC, DTC, AND DETECTABLE ITEMS

UBS00K3U

- When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data are stored in the ECM memory.
- When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data are stored in the ECM memory, and the MIL will come on. For details, refer to <u>EC-47</u>, "Two Trip Detection <u>Logic</u>".

- The MIL will go off after the vehicle is driven 3 times with no malfunction. The drive is counted only when the recorded driving pattern is met (as stored in the ECM). If another malfunction occurs while counting, the counter will reset.
- The DTC and the freeze frame data will be stored until the vehicle is driven 40 times (driving pattern A) without the same malfunction recurring (except for Misfire and Fuel Injection System). For Misfire and Fuel Injection System, the DTC and freeze frame data will be stored until the vehicle is driven 80 times (driving pattern C) without the same malfunction recurring. The "TIME" in "SELF-DIAGNOSTIC RESULTS" mode of CONSULT-II will count the number of times the vehicle is driven.
- The 1st trip DTC is not displayed when the self-diagnosis results in OK for the 2nd trip.

SUMMARY CHART

Items	Fuel Injection System	Misfire	Other	[
MIL (goes off)	3 (pattern B)	3 (pattern B)	3 (pattern B)	_
DTC, Freeze Frame Data (no display)	80 (pattern C)	80 (pattern C)	40 (pattern A)	[
1st Trip DTC (clear)	1 (pattern C), *1	1 (pattern C), *1	1 (pattern B)	
1st Trip Freeze Frame Data (clear)	*1, *2	*1, *2	1 (pattern B)	-

For details about patterns B and C under "Fuel Injection System" and "Misfire", see EC-67.

For details about patterns A and B under Other, see $\underline{EC-69}$.

*1: Clear timing is at the moment OK is detected.

*2: Clear timing is when the same malfunction is detected in the 2nd trip.

RELATIONSHIP BETWEEN MIL, DTC, 1ST TRIP DTC AND DRIVING PATTERNS FOR "MISFIRE " <EXHAUST QUALITY DETERIORATION>, "FUEL INJECTION SYSTEM"

- the 1st trip freeze frame data will be stored in ECM.
- *8: 1st trip DTC will be cleared when vehicle is driven once (pattern C) without the same malfunction after DTC is stored in ECM.

EC-66

the moment OK is detected.

remain in ECM.)

*7: When the same malfunction is

without the same malfunction. (The

DTC and the freeze frame data still

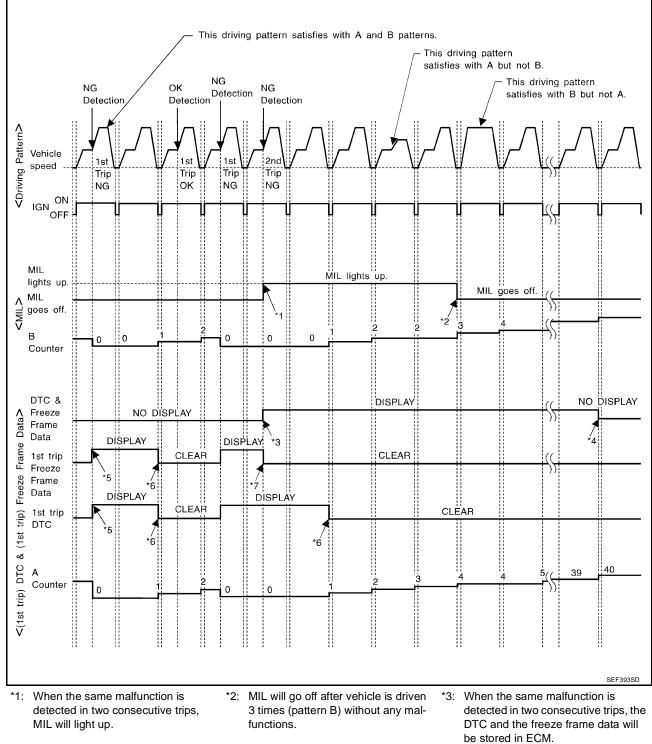

detected in the 2nd trip, the 1st trip

freeze frame data will be cleared.

EXPLANATION FOR DRIVING PATTERNS FOR "MISFIRE < EXHAUST QUALITY DETERIORA-	
TION>", "FUEL INJECTION SYSTEM"	А
<driving b="" pattern=""></driving>	
Driving pattern B means the vehicle operation as follows: All components and systems should be monitored at least once by the OBD system.	EC
• The B counter will be cleared when the malfunction is detected once regardless of the driving pattern.	
 The B counter will be counted up when driving pattern B is satisfied without any malfunction. 	0
 The MIL will go off when the B counter reaches 3. (*2 in "OBD SYSTEM OPERATION CHART") 	С
<driving c="" pattern=""></driving>	
Driving pattern C means the vehicle operation as follows: The following conditions should be satisfied at the same time: Engine speed: (Engine speed in the freeze frame data) ±375 rpm	D
Calculated load value: (Calculated load value in the freeze frame data) x (1±0.1) [%] Engine coolant temperature (T) condition:	Е
 When the freeze frame data shows lower than 70°C (158°F), T should be lower than 70°C (158°F). 	
 When the freeze frame data shows higher than or equal to 70°C (158°F), T should be higher than or equal to 70°C (158°F). 	F
Example:	
If the stored freeze frame data is as follows: Engine speed: 850 rpm, Calculated load value: 30%, Engine coolant temperature: 80°C (176°F) To be satisfied with driving pattern C, the vehicle should run under the following conditions: Engine speed: 475 - 1,225 rpm, Calculated load value: 27 - 33%, Engine coolant temperature: more than 70°C	G
(158°F)	Н
• The C counter will be cleared when the malfunction is detected regardless of vehicle conditions above.	
• The C counter will be counted up when vehicle conditions above is satisfied without the same malfunction.	
The DTC will not be displayed after C counter reaches 80.	I
• The 1st trip DTC will be cleared when C counter is counted once without the same malfunction after DTC is stored in ECM.	
	J
	K
	L

Μ

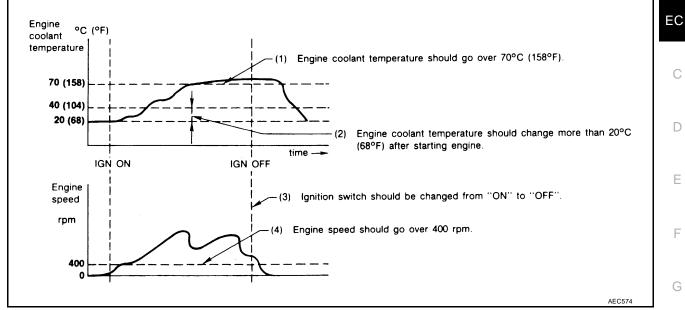

RELATIONSHIP BETWEEN MIL, DTC, 1ST TRIP DTC AND DRIVING PATTERNS EXCEPT FOR "MISFIRE < EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM"

- *4: The DTC and the freeze frame data will not be displayed any longer after vehicle is driven 40 times (pattern A) without the same malfunction. (The DTC and the freeze frame data still remain in ECM.)
- *7: When the same malfunction is detected in the 2nd trip, the 1st trip freeze frame data will be cleared.
- *5: When a malfunction is detected for
 - the first time, the 1st trip DTC and the 1st trip freeze frame data will be stored in ECM.
- *6: 1st trip DTC will be cleared after vehicle is driven once (pattern B) without the same malfunction.

EXPLANATION FOR DRIVING PATTERNS <u>EXCEPT</u> FOR "MISFIRE < EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM"

<Driving Pattern A>

- The A counter will be cleared when the malfunction is detected regardless of (1) (4).
- The A counter will be counted up when (1) (4) are satisfied without the same malfunction.
- The DTC will not be displayed after the A counter reaches 40.

<Driving Pattern B>

Driving pattern B means the vehicle operation as follows:

- All components and systems should be monitored at least once by the OBD system.
- The B counter will be cleared when the malfunction is detected once regardless of the driving pattern.
- The B counter will be counted up when driving pattern B is satisfied without any malfunctions.
- The MIL will go off when the B counter reaches 3 (*2 in OBD SYSTEM OPERATION CHART).

BASIC SERVICE PROCEDURE

Basic Inspection

- 1. INSPECTION START
- 1. Check service records for any recent repairs that may indicate a related malfunction, or a current need for scheduled maintenance.
- 2. Open engine hood and check the following:
- Harness connectors for improper connections
- Wiring harness for improper connections, pinches and cut
- Vacuum hoses for splits, kinks and improper connections
- Hoses and ducts for leaks
- Air cleaner clogging
- Gasket
- 3. Confirm that electrical or mechanical loads are not applied.
- Headlamp switch is OFF.
- Air conditioner switch is OFF.
- Rear window defogger switch is OFF.
- Steering wheel is in the straight-ahead position, etc.
- 4. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge. Ensure engine stays below 1,000 rpm.

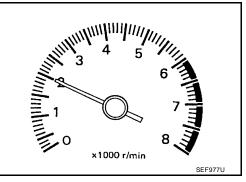

- 5. Run engine at about 2,000 rpm for about 2 minutes under no load.
- 6. Make sure that no DTC is displayed with CONSULT-II or GST.

OK or NG

OK >> GO TO 3. NG >> GO TO 2.

2. REPAIR OR REPLACE

Repair or replace components as necessary according to corresponding Diagnostic Procedure.

>> GO TO 3.

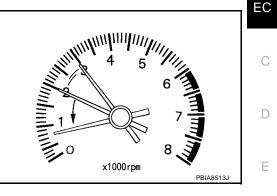

PFP:00018

UBS00K3V

3. CHECK TARGET IDLE SPEED

With CONSULT-II

- 1. Run engine at about 2,000 rpm for about 2 minutes under no load.
- 2. Rev engine (2,000 to 3,000 rpm) two or three times under no load, then run engine at idle speed for about 1 minute.

А

Κ

L

Μ

3. Read idle speed in "DATA MONITOR" mode with CONSULT-II. Refer to <u>EC-75, "IDLE SPEED"</u>.

Idle Speed and Ignition Timing Check

With CONSULT-II

Check idle speed in "DATA MONITOR" mode with CONSULT-II.

UBS00K3W

А

F

Κ

L

Μ

With GST

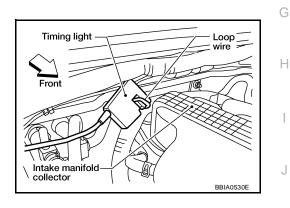

Check idle speed with GST.

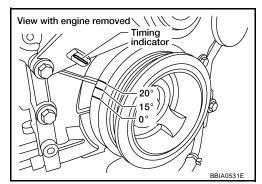

IGNITION TIMING

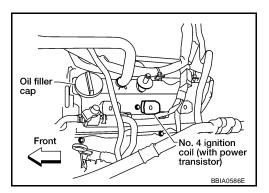

Any of following two methods may be used.

Method A

1. Attach timing light to loop wire as shown.

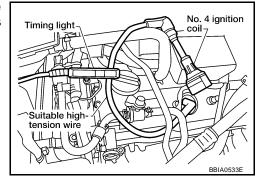

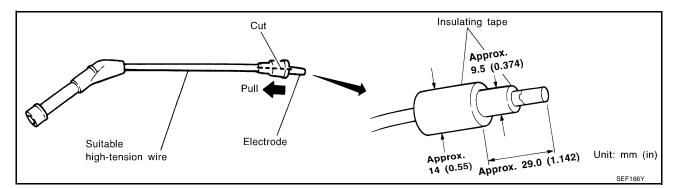

Method B

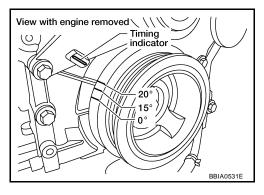

1. Remove No. 4 ignition coil.

2. Connect No. 4 ignition coil and No. 4 spark plug with suitable high-tension wire as shown, and attach timing light clamp to this wire.

3. Check ignition timing.

VIN Registration DESCRIPTION

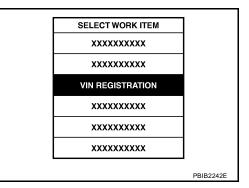

VIN Registration is an operation to registering VIN in ECM. It must be performed each time ECM is replaced. **NOTE:**

Accurate VIN which is registered in ECM may be required for Inspection & Maintenance (I/M).

OPERATION PROCEDURE

With CONSULT-II

- 1. Check the VIN of the vehicle and note it. Refer to GI-48, "IDENTIFICATION INFORMATION" .
- 2. Turn ignition switch ON and engine stopped.
- 3. Select "VIN REGISTRATION" in "WORK SUPPORT" mode.
- 4. Follow the instruction of CONSULT-II display.

UBS00K3Y

Accelerator Pedal Released Position Learning DESCRIPTION

Accelerator Pedal Released Position Learning is an operation to learn the fully released position of the accelerator pedal by monitoring the accelerator pedal position sensor output signal. It must be performed each time harness connector of accelerator pedal position sensor or ECM is disconnected.

OPERATION PROCEDURE

- 1. Make sure that accelerator pedal is fully released.
- 2. Turn ignition switch ON and wait at least 2 seconds.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Turn ignition switch ON and wait at least 2 seconds.
- 5. Turn ignition switch OFF and wait at least 10 seconds.

Throttle Valve Closed Position Learning DESCRIPTION

Throttle Valve Closed Position Learning is an operation to learn the fully closed position of the throttle valve by monitoring the throttle position sensor output signal. It must be performed each time harness connector of electric throttle control actuator or ECM is disconnected.

OPERATION PROCEDURE

- 1. Make sure that accelerator pedal is fully released.
- 2. Turn ignition switch ON.
- Turn ignition switch OFF and wait at least 10 seconds. Make sure that throttle valve moves during above 10 seconds by confirming the operating sound.

Idle Air Volume Learning DESCRIPTION

Idle Air Volume Learning is an operation to learn the idle air volume that keeps each engine within the specific range. It must be performed under any of the following conditions:

- Each time electric throttle control actuator or ECM is replaced.
- Idle speed or ignition timing is out of specification.

PREPARATION

Before performing Idle Air Volume Learning, make sure that all of the following conditions are satisfied. Learning will be cancelled if any of the following conditions are missed for even a moment.

- Battery voltage: More than 12.9V (At idle)
- Engine coolant temperature: 70 100°C (158 212°F)
- PNP switch: ON
- Electric load switch: OFF
 - (Air conditioner, headlamp, rear window defogger)

On vehicles equipped with daytime light systems, if the parking brake is applied before the engine ^M is started the headlamp will not be illuminated.

- Steering wheel: Neutral (Straight-ahead position)
- Vehicle speed: Stopped
- Transmission: Warmed-up
- With CONSULT-II: Drive vehicle until "ATF TEMP SE" in "DATA MONITOR" mode of "A/T" system indicates less than 0.9V.
- Without CONSULT-II: Drive vehicle for 10 minutes.

OPERATION PROCEDURE

With CONSULT-II

- 1. Perform EC-77, "Accelerator Pedal Released Position Learning" .
- 2. Perform EC-77, "Throttle Valve Closed Position Learning" .
- 3. Start engine and warm it up to normal operating temperature.
- 4. Check that all items listed under the topic PREPARATION (previously mentioned) are in good order.

UBS00K3Z

UBS00K40

UBS00K41

А

EC

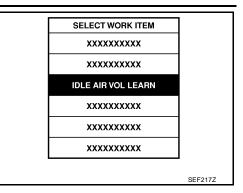

F

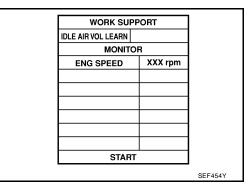

Н

L

BASIC SERVICE PROCEDURE

5. Select "IDLE AIR VOL LEARN" in "WORK SUPPORT" mode.

6. Touch "START" and wait 20 seconds.

- 7. Make sure that "CMPLT" is displayed on CONSULT-II screen. If "CMPLT" is not displayed, Idle Air Volume Learning will not be carried out successfully. In this case, find the cause of the incident by referring to the Diagnostic Procedure below.
- 8. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications.

ITEM	SPECIFICATION
Idle speed	625 ± 50 rpm (in P or N position)
Ignition timing	$15 \pm 5^{\circ}$ BTDC (in P or N position)

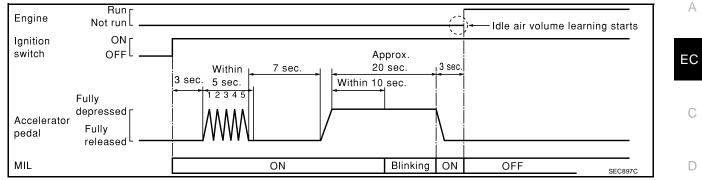

Without CONSULT-II

NOTE:

- It is better to count the time accurately with a clock.
- It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.
- 1. Perform EC-77, "Accelerator Pedal Released Position Learning" .
- 2. Perform EC-77, "Throttle Valve Closed Position Learning" .
- 3. Start engine and warm it up to normal operating temperature.
- 4. Check that all items listed under the topic PREPARATION (previously mentioned) are in good order.
- 5. Turn ignition switch OFF and wait at least 10 seconds.
- 6. Confirm that accelerator pedal is fully released, then turn ignition switch ON and wait 3 seconds.
- 7. Repeat the following procedure quickly five times within 5 seconds.
- a. Fully depress the accelerator pedal.
- b. Fully release the accelerator pedal.
- 8. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 20 seconds until the MIL stops blinking and turned ON.
- 9. Fully release the accelerator pedal within 3 seconds after the MIL turned ON.
- 10. Start engine and let it idle.

BASIC SERVICE PROCEDURE

11. Wait 20 seconds.

12. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications.

ITEM	SPECIFICATION
Idle speed	625 ± 50 rpm (in P or N position)
Ignition timing	$15 \pm 5^{\circ}$ BTDC (in P or N position)

13. If idle speed and ignition timing are not within the specification, Idle Air Volume Learning will not be carried out successfully. In this case, find the cause of the incident by referring to the DIAGNOSTIC PROCE-DURE below.

DIAGNOSTIC PROCEDURE

If idle air volume learning cannot be performed successfully, proceed as follows:

- 1. Check that throttle valve is fully closed.
- 2. Check PCV valve operation.
- 3. Check that downstream of throttle valve is free from air leakage.
- 4. When the above three items check out OK, engine component parts and their installation condition are questionable. Check and eliminate the cause of the incident. It is useful to perform <u>EC-134</u>, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE".
- 5. If any of the following conditions occur after the engine has started, eliminate the cause of the incident and perform Idle Air Volume Learning all over again:
 - Engine stalls.
 - Erroneous idle.

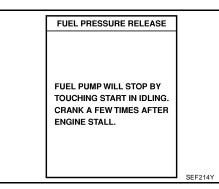

Fuel Pressure Check FUEL PRESSURE RELEASE

(P) With CONSULT-II

1. Turn ignition switch ON.

 Perform "FUEL PRESSURE RELEASE" in "WORK SUPPORT" mode with CONSULT-II.

- 3. Start engine.
- 4. After engine stalls, crank it two or three times to release all fuel pressure.
- 5. Turn ignition switch OFF.

Е

F

Н

Κ

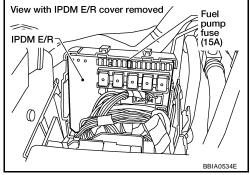

L

Μ

UBS00K42

Without CONSULT-II

- 1. Remove fuel pump fuse located in IPDM E/R.
- 2. Start engine.
- 3. After engine stalls, crank it two or three times to release all fuel pressure.
- 4. Turn ignition switch OFF.
- 5. Reinstall fuel pump fuse after servicing fuel system.

FUEL PRESSURE CHECK

CAUTION:

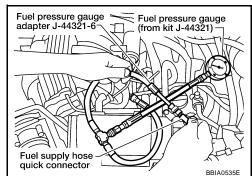

Be careful not to scratch or get the fuel hose connection area dirty when servicing, so that the quick connector o-ring maintains sealability.

NOTE:

- Prepare pans or saucers under the disconnected fuel line because the fuel may spill out. The fuel pressure cannot be completely released because R51 models do not have fuel return system.
- Use Fuel Pressure Gauge Kit J-44321 and Fuel Pressure Adapter J-44321-6 to check fuel pressure.
- 1. Release fuel pressure to zero. Refer to EC-79, "FUEL PRESSURE RELEASE" .
- 2. Remove fuel hose using Quick Connector Release J-45488. Refer to EM-20, "INTAKE MANIFOLD" .
 - Do not twist or kink fuel hose because it is plastic hose.
 - Do not remove fuel hose from quick connector.
 - Keep fuel hose connections clean.
- 3. Install Fuel Pressure Adapter J-44321-6 and Fuel Pressure Gauge (from kit J-44321) as shown in figure.
 - Do not distort or bend fuel rail tube when installing fuel pressure gauge adapter.
 - When reconnecting fuel hose, check the original fuel hose for damage and abnormality.
- 4. Turn ignition switch ON (reactivate fuel pump), and check for fuel leakage.
- 5. Start engine and check for fuel leakage.
- 6. Read the indication of fuel pressure gauge.
 - During fuel pressure check, check for fuel leakage from fuel connection every 3 minutes.

At idling: Approximately 350 kPa (3.57 kg/cm², 51 psi)

- 7. If result is unsatisfactory, go to next step.
- 8. Check the following.
 - Fuel hoses and fuel tubes for clogging
 - Fuel filter for clogging
 - Fuel pump
 - Fuel pressure regulator for clogging
 - If OK, replace fuel pressure regulator.
 - If NG, repair or replace.
- Before disconnecting Fuel Pressure Gauge and Fuel Pressure Adapter J-44321-6, release fuel pressure to zero. Refer to <u>EC-79, "FUEL PRESSURE RELEASE"</u>.

Trouble Diagnosis Introduction INTRODUCTION

The engine has an ECM to control major systems such as fuel control, ignition control, idle air control system, etc. The ECM accepts input signals from sensors and instantly drives actuators. It is essential that both input and output signals are proper and stable. At the same time, it is important that there are no malfunctions such as vacuum leaks, fouled spark plugs, or other malfunctions with the engine.

It is much more difficult to diagnose an incident that occurs intermittently rather than continuously. Most intermittent incidents are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.

A visual check only may not find the cause of the incidents. A road test with CONSULT-II (or GST) or a circuit tester connected should be performed. Follow the Work Flow on <u>EC-82</u>.

Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a driveability complaint. The customer can supply good information about such incidents, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A Diagnostic Worksheet like the example on $\underline{EC-86}$ should be used.

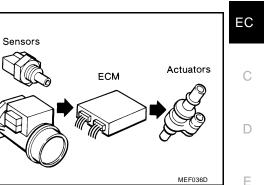

Start your diagnosis by looking for conventional malfunctions first. This will help troubleshoot driveability malfunctions on an electronically controlled engine vehicle. F

WORK FLOW Overall Sequence

PBIB2267E

Detailed Flow

1. GET INFORMATION FOR SYMPTOM

Get the detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurred) using the <u>EC-85, "DIAGNOSTIC WORKSHEET"</u>.

>> GO TO 2.

2. снеск dтс^{∗1}

- 1. Check DTC^{*1}.
- 2. Perform the following procedure if DTC^{*1} is displayed.
- Record DTC^{*1} and freeze frame data^{*2}. (Print them out with CONSULT-II or GST.)
- Erase DTC*¹. (Refer to <u>EC-60, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"</u>
 .)
- Study the relationship between the cause detected by DTC^{*1} and the symptom described by the customer. (Symptom Matrix Chart is useful. Refer to <u>EC-90</u>.)
- 3. Check related service bulletins for information.

Is any symptom described and any DTC detected?

Symptom is described, DTC^{*1} is displayed>>GO TO 3. Symptom is described, DTC^{*1} is not displayed>>GO TO 4. Symptom is not described, DTC^{*1} is displayed>>GO TO 5.

3. CONFIRM THE SYMPTOM

Try to confirm the symptom described by the customer (except MIL ON).

DIAGNOSIS WORK SHEET is useful to verify the incident.

Connect CONSULT-II to the vehicle in "DATA MONITOR (AUTO TRIG)" mode and check real time diagnosis results.

Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 5.

4. CONFIRM THE SYMPTOM

Try to confirm the symptom described by the customer.

DIAGNOSIS WORK SHEET is useful to verify the incident.

Connect CONSULT-II to the vehicle in "DATA MONITOR (AUTO TRIG)" mode and check real time diagnosis results.

Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 6.

А

Ε

Н

. 1

Κ

5. PERFORM DTC CONFIRMATION PROCEDURE

Perform DTC Confirmation Procedure for the displayed DTC^{*1}, and then make sure that DTC^{*1} is detected again.

At this time, always connect CONSULT-II to the vehicle, and check diagnostic results in real time on "DATA MONITOR (AUTO TRIG)".

If two or more DTCs^{*1} are detected, refer to <u>EC-87, "DTC Inspection Priority Chart"</u> and determine trouble diagnosis order.

NOTE:

- Freeze frame data^{*2} is useful if the DTC^{*1} is not detected.
- Perform Overall Function Check if DTC Confirmation Procedure is not included on Service Manual. This simplified check procedure is an effective alternative though DTC^{*1} cannot be detected during this check.

If the result of Overall Function Check is NG, it is the same as the detection of DTC^{*1} by DTC Confirmation Procedure.

Is DTC*1 detected?

Yes >> GO TO 10.

No >> Check according to EC-144, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT".

6. PERFORM BASIC INSPECTION

Perform EC-70, "Basic Inspection" .

With CONSULT-II>>GO TO 7. Without CONSULT-II>>GO TO 9.

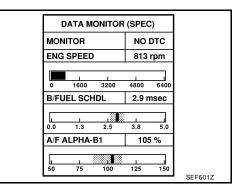

/. PERFORM DATA MONITOR (SPEC) MODE

With CONSULT-II

Make sure that "MAS A/F SE-B1", "B/FUEL SCHDL", and "A/F ALPHA-B1", "A/F ALPHA-B2" are within the SP value using CON-SULT-II "DATA MONITOR (SPEC)" mode. Refer to <u>EC-135</u>, "Diagnostic Procedure".

Are they within the SP value?

Yes >> GO TO 9. No >> GO TO 8.

8. DETECT MALFUNCTIONING PART BY TROUBLE DIAGNOSIS - SPECIFICATION VALUE

Detect malfunctioning part according to <u>EC-134</u>, <u>"TROUBLE DIAGNOSIS - SPECIFICATION VALUE"</u>. Is malfunctioning part detected?

Yes >> GO TO 11. No >> GO TO 9.

9. DETECT MALFUNCTIONING SYSTEM BY SYMPTOM MATRIX CHART

Detect malfunctioning system according to <u>EC-90, "Symptom Matrix Chart"</u> based on the confirmed symptom in step 4, and determine the trouble diagnosis order based on possible causes and symptom.

>> GO TO 10.

10)	. DETECT MALFUNCTIONING PART BY DIAGNOSTIC PROCEDURE	
----	---	--	--

Inspect according to Diagnostic Procedure of the system.

NOTE:

The Diagnostic Procedure in EC section described based on open circuit inspection. A short circuit inspection is also required for the circuit check in the Diagnostic Procedure. For details, refer to Circuit Inspection in <u>GI-27</u>, "How to Perform Efficient Diagnosis for an Electrical Incident".

Is malfunctioning part detected?

 Yes >> GO TO 11.
 No >> Monitor input data from related sensors or check voltage of related ECM terminals using CON-SULT-II. Refer to <u>EC-128, "CONSULT-II Reference Value in Data Monitor"</u>, <u>EC-104, "ECM Terminals and Reference Value"</u>.

11. REPAIR OR REPLACE THE MALFUNCTIONING PART

- 1. Repair or replace the malfunctioning part.
- 2. Reconnect parts or connectors disconnected during Diagnostic Procedure again after repair and replacement.
- 3. Check DTC. If DTC is displayed, erase it, refer to <u>EC-60, "HOW TO ERASE EMISSION-RELATED DIAG-NOSTIC INFORMATION"</u>.

>> GO TO 12.

12. FINAL CHECK

When DTC was detected in step 2, perform DTC Confirmation Procedure or Overall Function Check again, and then make sure that the malfunction have been repaired securely.

When symptom was described from the customer, refer to confirmed symptom in step 3 or 4, and make sure that the symptom is not detected.

OK or NG

NG (DTC *1 is detected)>>GO TO 10.

NG (Symptom remains)>>GO TO 6.

- OK >> 1. Before returning the vehicle to the customer, make sure to erase unnecessary DTC*¹ in ECM and TCM (Transmission Control Module). (Refer to <u>EC-60, "HOW TO ERASE EMISSION-</u> K <u>RELATED DIAGNOSTIC INFORMATION"</u> and <u>AT-41, "HOW TO ERASE DTC"</u>.)
 - 2. If the completion of SRT is needed, drive vehicle under the specific driving pattern. Refer to <u>EC-57</u>, "Driving Pattern".

3. INSPECTION END

*1: Include 1st trip DTC.

*2: Include 1st trip freeze frame data.

DIAGNOSTIC WORKSHEET

Description

There are many operating conditions that lead to the malfunction of engine components. A good grasp of such conditions can make troubleshooting faster and more accurate.

In general, each customer feels differently about a incident. It is important to fully understand the symptoms or conditions for a customer complaint.

Utilize a diagnostic worksheet like the one on the next page in order to organize all the information for troubleshooting.

Some conditions may cause the MIL to come on steady or blink and DTC to be detected. Examples:

- Vehicle ran out of fuel, which caused the engine to misfire.
- Fuel filler cap was left off or incorrectly screwed on, allowing fuel to evaporate into the atmosphere.

Fail-safe Chart

When the DTC listed below is detected, the ECM enters fail-safe mode and the MIL lights up.

DTC No.	Detected items Engine operating condition in fail-safe mode										
P0102 P0103	Mass air flow sensor circuit	Engine speed will not rise more than 2,400 rpm due to the fuel cut.									
P0117 P0118	Engine coolant tempera- ture sensor circuit	Engine coolant temperature will be determined by ECM based on the time after turning ignition switch ON or START. CONSULT-II displays the engine coolant temperature decided by ECM.									
		Condition	Engine coolant temperature decided (CONSULT-II display)								
		Just as ignition switch is turned ON or START	40°C (104°F)								
		More than approx. 4 minutes after ignition ON or START	80°C (176°F)								
		Except as shown above	40 - 80°C (104 - 176°F) (Depends on the time)								
		When the fail-safe system for engine coolant temperature sensor is activated, the cooling fan operates while engine is running.									
P0122 P0123 P0222 P0223 P2135	Throttle position sensor	order for the idle position to be with									
P0643	Sensor power supply		CM stops the electric throttle control actuator control, throttle valve is maintained at a ked opening (approx. 5 degrees) by the return spring.								
P2100 P2103	Throttle control motor relay	ECM stops the electric throttle cont fixed opening (approx. 5 degrees) b	rol actuator control, throttle valve is maintained at a by the return spring.								
P2101	Electric throttle control function	ECM stops the electric throttle cont fixed opening (approx. 5 degrees) b	rol actuator control, throttle valve is maintained at a by the return spring.								
P2118	Throttle control motor	ECM stops the electric throttle cont fixed opening (approx. 5 degrees) b	rol actuator control, throttle valve is maintained at a by the return spring.								
P2119	Electric throttle control actuator	malfunction:)	tor does not function properly due to the return spring ctuator by regulating the throttle opening around the not rise more than 2,000 rpm.								
			in fail-safe mode is not in specified range:) ontrol actuator by regulating the throttle opening to 20								
		 (When ECM detects the throttle valve is stuck open:) While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in N or P position, and engine speed will not exceed 1,000 rpm or more. 									
P2122 P2123 P2127 P2128 P2138	Accelerator pedal position sensor	order for the idle position to be with	le control actuator in regulating the throttle opening in in +10 degrees. eed of the throttle valve to be slower than the normal								

• When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting up MIL when there is malfunction on engine control system.

Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.

The fail-safe function also operates when above diagnoses except MIL circuit are detected and demands the driver to repair the malfunction.

Engine speed will not rise more than 2,500 rpm due to the fuel cut

Engine operating condition in fail-safe mode

ECM Harness Connector Terminal Layout

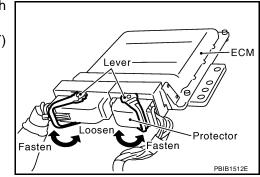

ECM Terminals and Reference Value PREPARATION

- 1. ECM located in the engine room passenger side behind reservoir tank.
- 2. Remove ECM harness connector.

- 3. When disconnecting ECM harness connector, loosen it with levers as far as they will go as shown in the figure.
- 4. Connect a break-out box (SST) and Y-cable adapter (SST) between the ECM and ECM harness connector.
 - Use extreme care not to touch 2 pins at one time.
 - Data is for comparison and may not be exact.

ECM INSPECTION TABLE

Specification data are reference values and are measured between each terminal and ground. Pulse signal is measured by CONSULT-II.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECMs transistor. Use a ground other than ECM terminals, such as the ground.

			 Accelerator pedal: Fully depressed 	
107	Y	Fuel tank temperature sen- sor	[Engine is running]	Approximately 0 - 4.8V Output voltage varies with fuel tank temperature.
			[Ignition switch: ON]	Approximately 0V
108	LG	ASCD brake switch	Brake pedal: Slightly depressed	
			[Ignition switch: ON]	BATTERY VOLTAGE (11 - 14V)
			Brake pedal: Fully released	
			[Ignition switch: OFF]	0V
109	W/R	Ignition switch	[Ignition switch: ON]	BATTERY VOLTAGE (11 - 14V)
			[Engine is running] [Ignition switch: OFF]	0 - 1.5V
111	BR	ECM relay (Self shut-off)	For a few seconds after turning ignition switch OFF	-
			[Ignition switch: OFF]	BATTERY VOLTAGE
			 More than a few seconds after turning igni- tion switch OFF 	(11 - 14V)

TER- MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)	А
113	V	Fuel pump relay	 [Ignition switch: ON] For 1 second after turning ignition switch ON [Engine is running] 	0 - 1.5V	EC
115			 [Ignition switch: ON] More than 1 second after turning ignition switch ON 	BATTERY VOLTAGE (11 - 14V)	С
115 116	B GR	ECM ground	[Engine is running] • Idle speed	Body ground	D
117	G	EVAP canister vent control valve	[Ignition switch: ON]	BATTERY VOLTAGE (11 - 14V)	_
119 120	R P	Power supply for ECM	[Ignition switch: ON]	BATTERY VOLTAGE (11 - 14V)	E
121	R/B	Power supply for ECM (Back-up)	[Ignition switch: OFF]	BATTERY VOLTAGE (11 - 14V)	F

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

*: Before measuring the terminal voltage, confirm that the battery is fully charged. Refer to SC-5, "SPECIFIC GRAVITY CHECK" .

CONSULT-II Function (ENGINE) FUNCTION

Diagnostic test mode Function Н This mode enables a technician to adjust some devices faster and more accurately by following the Work support indications on the CONSULT-II unit. Self-diagnostic results such as 1st trip DTC, DTCs and 1st trip freeze frame data or freeze frame data Self-diagnostic results can be read and erased quickly.* Input/Output data in the ECM can be read. Data monitor Input/Output of the specification for Basic fuel schedule, AFM, A/F feedback control value and the Data monitor (SPEC) other data monitor items can be read. CAN diagnostic support The results of transmit/receive diagnosis of CAN communication can be read. Κ monitor Diagnostic Test Mode in which CONSULT-II drives some actuators apart from the ECMs and also Active test shifts some parameters in a specified range. Function test This mode is used to inform customers when their vehicle condition requires periodic maintenance. DTC & SRT confirmation The status of system monitoring tests and the self-diagnosis status/result can be confirmed. ECM part number ECM part number can be read. Μ

*: The following emission-related diagnostic information is cleared when the ECM memory is erased.

- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values

X: Applicable

*1: This item includes 1st trip DTCs.

J *2: This mode includes 1st trip freeze frame data or freeze frame data. The items appear on CONSULT-II screen in freeze frame data mode only if a 1st trip DTC or DTC is detected. For details, refer to EC-116 .

*3: Always "CMPLT" is displayed.

INSPECTION PROCEDURE

Refer to GI-38, "CONSULT-II Start Procedure" .

WORK SUPPORT MODE

Work Item

WORK ITEM	CONDITION	USAGE
FUEL PRESSURE RELEASE	• FUEL PUMP WILL STOP BY TOUCHING "START" DUR- ING IDLING. CRANK A FEW TIMES AFTER ENGINE STALLS.	When releasing fuel pressure from fuel line
IDLE AIR VOL LEARN	• THE IDLE AIR VOLUME THAT KEEPS THE ENGINE WITHIN THE SPECIFIED RANGE IS MEMORIZED IN ECM.	When learning the idle air volume
SELF-LEARNING CONT	• THE COEFFICIENT OF SELF-LEARNING CONTROL MIXTURE RATIO RETURNS TO THE ORIGINAL COEF- FICIENT.	When clearing the coefficient of self-learning control value

L

Μ

Κ

WORK ITEM	CONDITION	USAGE
EVAP SYSTEM CLOSE	CLOSE THE EVAP CANISTER VENT CONTROL VALVE IN ORDER TO MAKE EVAP SYSTEM CLOSE UNDER THE FOLLOWING CONDITIONS.	When detecting EVAP vapor leak point of EVAP system
	• IGN SW ON	
	ENGINE NOT RUNNING	
	 AMBIENT TEMPERATURE IS ABOVE 0°C (32°F). 	
	NO VACUUM AND NO HIGH PRESSURE IN EVAP SYS- TEM	
	• FUEL TANK TEMP. IS MORE THAN 0°C (32°F).	
	WITHIN 10 MINUTES AFTER STARTING "EVAP SYS- TEM CLOSE"	
	• WHEN TRYING TO EXECUTE "EVAP SYSTEM CLOSE" UNDER THE CONDITION EXCEPT ABOVE, CONSULT- II WILL DISCONTINUE IT AND DISPLAY APPROPRI- ATE INSTRUCTION.	
	NOTE: WHEN STARTING ENGINE, CONSULT-II MAY DISPLAY "BATTERY VOLTAGE IS LOW. CHARGE BATTERY", EVEN IN USING CHARGED BATTERY.	
VIN REGISTRATION	• IN THE MODE, VIN IS REGISTERED IN ECM.	When registering VIN in ECM
TARGET IDLE RPM ADJ*	IDLE CONDITION	When setting target idle speed
TARGET IGN TIM ADJ*	IDLE CONDITION	When adjusting target ignition tim- ing

*: This function is not necessary in the usual service procedure.

SELF-DIAG RESULTS MODE Self Diagnostic Item

Regarding items of DTC and 1st trip DTC, refer to <u>EC-48</u>, "EMISSION-RELATED DIAGNOSTIC INFORMA-<u>TION ITEMS</u>".

Freeze Frame Data and 1st Trip Freeze Frame Data

Freeze frame data item*	Description
DIAG TROUBLE CODE [PXXXX]	• The engine control component part/control system has a trouble code, it is displayed as PXXXX. (Refer to <u>EC-8</u> , "INDEX FOR DTC".)
FUEL SYS-B1	• "Fuel injection system status" at the moment a malfunction is detected is displayed.
FUEL SYS-B2	 One mode in the following is displayed. Mode2: Open loop due to detected system malfunction Mode3: Open loop due to driving conditions (power enrichment, deceleration enleanment) Mode4: Closed loop - using oxygen sensor(s) as feedback for fuel control Mode5: Open loop - has not yet satisfied condition to go to closed loop
CAL/LD VALUE [%]	• The calculated load value at the moment a malfunction is detected is displayed.
COOLANT TEMP [°C] or [°F]	• The engine coolant temperature at the moment a malfunction is detected is displayed.
L-FUEL TRM-B1 [%]	• "Long-term fuel trim" at the moment a malfunction is detected is displayed.
L-FUEL TRM-B2 [%]	 The long-term fuel trim indicates much more gradual feedback compensation to the base fuel schedule than short-term fuel trim.
S-FUEL TRM-B1 [%]	• "Short-term fuel trim" at the moment a malfunction is detected is displayed.
S-FUEL TRM-B2 [%]	• The short-term fuel trim indicates dynamic or instantaneous feedback compensation to the base fuel schedule.
ENGINE SPEED [rpm]	• The engine speed at the moment a malfunction is detected is displayed.
VEHICL SPEED [km/ h] or [mph]	• The vehicle speed at the moment a malfunction is detected is displayed.

Freeze frame data item*	Description	A
B/FUEL SCHDL [msec]	• The base fuel schedule at the moment a malfunction is detected is displayed.	
INT/A TEMP SE [°C] or [°F]	• The intake air temperature at the moment a malfunction is detected is displayed.	EC
*. The items are the sam	e as those of 1st trin freeze frame data	

: The items are the same as those of 1st trip freeze frame data.

DATA MONITOR MODE **Monitored Item**

				×: Applicable
Monitored item [Unit]	ECM INPUT SIG- NALS	MAIN SIG- NALS	Description Remarks	
ENG SPEED [rpm]	×	×	 Indicates the engine speed computed from the signal of the crankshaft position sensor (POS) and camshaft position sensor (PHASE). Accuracy becomes poor if engine speed drops below the idle rpr If the signal is interrupted while engine is running, an abnormative may be indicated. 	
MAS A/F SE-B1 [V]	×	×	• The signal voltage of the mass air flow sensor is displayed.	• When the engine is stopped, a cer- tain value is indicated.
B/FUEL SCHDL [msec]		×	• "Base fuel schedule" indicates the fuel injec- tion pulse width programmed into ECM, prior to any learned on board correction.	
A/F ALPHA-B1 [%]		×		• When the engine is stopped, a cer-
A/F ALPHA-B2 [%]		×	• The mean value of the air-fuel ratio feedback correction factor per cycle is indicated.	 tain value is indicated. This data also includes the data for the air-fuel ratio learning control.
COOLAN TEMP/S [°C] or [°F]	×	×	The engine coolant temperature (determined by the signal voltage of the engine coolant temperature sensor) is displayed. When the engine coolant temperature ECM enters fail-safe mode. engine coolant temperature mined by the ECM is displayed.	
A/F SEN1 (B1) [V]	×	×	• The A/F signal computed from the input signal	
A/F SEN1 (B2) [V]	×		of the Air fuel ratio (A/F) sensor 1 is displayed.	
HO2S2 (B1) [V]	×		• The signal voltage of the heated oxygen sen-	
HO2S2 (B2) [V]	×		sor 2 is displayed.	
HO2S2 MNTR (B1) [RICH/LEAN]	×		Display of heated oxygen sensor 2 signal: RICH: Means the amount of oxygen after three way establish a relatively amount.	 When the engine is stopped, a cer-
HO2S2 MNTR (B2) [RICH/LEAN]	×		three way catalyst is relatively small. LEAN: Means the amount of oxygen after three way catalyst is relatively large.	tain value is indicated.
VHCL SPEED SE [km/h] or [mph]	×	×	• The vehicle speed computed from the vehicle speed signal sent from combination meter is displayed.	
BATTERY VOLT [V]	×	×	• The power supply voltage of ECM is displayed.	
ACCEL SEN 1 [V]	×	×	The accelerator pedal position sensor signal	ACCEL SEN 2 signal is converted by
ACCEL SEN 2 [V]	×		voltage is displayed. ECM internally. Thus, it difference is displayed.	
THRTL SEN 1 [V]	×	×	• The throttle position sensor signal voltage is	THRTL SEN 2 signal is converted by ECM internally. Thus, it differe from
THRTL SEN 2 [V]	×		displayed.	ECM internally. Thus, it differs from ECM terminal voltage signal.
FUEL T/TMP SE [°C] or [°F]	×		• The fuel temperature (determined by the sig- nal voltage of the fuel tank temperature sen- sor) is displayed.	

С

Monitored item [Unit]	ECM INPUT SIG- NALS	MAIN SIG- NALS	Description	Remarks
INT/A TEMP SE [°C] or [°F]	×	×	• The intake air temperature (determined by the signal voltage of the intake air temperature sensor) is indicated.	
EVAP SYS PRES [V]	×		 The signal voltage of EVAP control system pressure sensor is displayed. 	
FUEL LEVEL SE [V]	×		 The signal voltage of the fuel level sensor is displayed. 	
START SIGNAL [ON/OFF]	×	×	 Indicates start signal status [ON/OFF] com- puted by the ECM according to the signals of engine speed and battery voltage. 	 After starting the engine, [OFF] is displayed regardless of the starter signal.
CLSD THL POS [ON/OFF]	×	×	 Indicates idle position [ON/OFF] computed by ECM according to the accelerator pedal posi- tion sensor signal. 	
AIR COND SIG [ON/OFF]	×	×	 Indicates [ON/OFF] condition of the air condi- tioner switch as determined by the air condi- tioner signal. 	
P/N POSI SW [ON/OFF]	×	×	 Indicates [ON/OFF] condition from the park/ neutral position (PNP) switch signal. 	
PW/ST SIGNAL [ON/OFF]	×	×	• [ON/OFF] condition of the power steering sys- tem (determined by the signal voltage of the power steering pressure sensor signal) is indi- cated.	
LOAD SIGNAL [ON/OFF]	×	×	 Indicates [ON/OFF] condition from the electrical load signal. ON: Rear window defogger switch is ON and/or lighting switch is in 2nd position. OFF: Both rear window defogger switch and lighting switch are OFF. 	
IGNITION SW [ON/OFF]	×		 Indicates [ON/OFF] condition from ignition switch signal. 	
HEATER FAN SW [ON/OFF]	×		 Indicates [ON/OFF] condition from the heater fan switch signal. 	
BRAKE SW [ON/OFF]	×		 Indicates [ON/OFF] condition from the stop lamp switch signal. 	
INJ PULSE-B1 [msec]		×	 Indicates the actual fuel injection pulse width compensated by ECM according to the input 	• When the engine is stopped, a cer-
INJ PULSE-B2 [msec]			signals.	tain computed value is indicated.
IGN TIMING [BTDC]		×	• Indicates the ignition timing computed by ECM according to the input signals.	• When the engine is stopped, a cer- tain value is indicated.
CAL/LD VALUE [%]			• Calculated load value indicates the value of the current air flow divided by peak air flow.	
MASS AIRFLOW [g·m/s]			• Indicates the mass air flow computed by ECM according to the signal voltage of the mass air flow sensor.	
PURG VOL C/V [%]			• Indicates the EVAP canister purge volume control solenoid valve control value computed by the ECM according to the input signals.	
			 The opening becomes larger as the value increases. 	

Monitored item [Unit]	ECM INPUT SIG- NALS	MAIN SIG- NALS	Description	Remarks	А
INT/V TIM (B1) [°CA] INT/V TIM (B2)			 Indicates [°CA] of intake camshaft advanced angle. 		EC
[°CA]			-		С
INT/V SOL (B1) [%]			 The control condition of the intake valve timing control solenoid valve (determined by ECM according to the input signals) is indicated. The advance angle becomes larger as the value increases. 		D
VIAS/SV [ON/OFF]			 The control condition of the VIAS control sole- noid valve (determined by ECM according to the input signals) is indicated. ON: VIAS control solenoid valve is operating. OFF: VIAS control solenoid valve is not oper- ating. 		E
AIR COND RLY [ON/OFF]		×	• The air conditioner relay control condition (determined by ECM according to the input signals) is indicated.		G
FUEL PUMP RLY [ON/OFF]		×	• Indicates the fuel pump relay control condition determined by ECM according to the input signals.		Н
VENT CONT/V [ON/OFF]			 The control condition of the EVAP canister vent control valve (determined by ECM according to the input signals) is indicated. ON: Closed OFF: Open 		I
THRTL RELAY [ON/OFF]		×	 Indicates the throttle control motor relay con- trol condition determined by the ECM accord- ing to the input signals. 		J
COOLING FAN [HI/LOW/OFF]		×	 The control condition of the cooling fan (determined by ECM according to the input signals) is indicated. HI: High speed operation LOW: Low speed operation OFF: Stop 		K
HO2S2 HTR (B1) [ON/OFF] HO2S2 HTR (B2) [ON/OFF]			 Indicates [ON/OFF] condition of heated oxy- gen sensor 2 heater determined by ECM according to the input signals. 		Μ
I/P PULLY SPD [rpm]			• Indicates the engine speed computed from the turbine revolution sensor signal.		
VEHICLE SPEED [km/h] or [MPH]			 Indicates the vehicle speed computed from the revolution sensor signal. Display the condition of idle air volume learn- 		
IDL A/V LEARN [YET/CMPLT]			ing YET: Idle air volume learning has not been performed yet. CMPLT: Idle air volume learning has already been performed successfully.		
TRVL AFTER MIL [km] or [mile]			• Distance traveled while MIL is activated.		

Monitored item [Unit]	ECM INPUT SIG- NALS	MAIN SIG- NALS	Description	Remarks
A/F S1 HTR (B1) [%] A/F S1 HTR (B2) [%]			 Air fuel ratio (A/F) sensor 1 heater control value computed by ECM according to the input signals. The current flow to the heater becomes larger as the value increases. 	
AC PRESS SEN [V]			 The signal voltage from the refrigerant pressure sensor is displayed. 	
VHCL SPEED SE [km/h] or [mph]			• The vehicle speed computed from the vehicle speed signal sent from TCM is displayed.	
SET VHCL SPD [km/h] or [mph]			• The preset vehicle speed is displayed.	
MAIN SW [ON/OFF]			 Indicates [ON/OFF] condition from MAIN switch signal. 	
CANCEL SW [ON/OFF]			 Indicates [ON/OFF] condition from CANCEL switch signal. 	
RESUME/ACC SW [ON/OFF]			 Indicates [ON/OFF] condition from RESUME/ ACCELERATE switch signal. 	
SET SW [ON/OFF]			 Indicates [ON/OFF] condition from SET/ COAST switch signal. 	
BRAKE SW1 [ON/OFF]			 Indicates [ON/OFF] condition from ASCD brake switch signal. 	
BRAKE SW2 [ON/OFF]			 Indicates [ON/OFF] condition of stop lamp switch signal. 	
VHCL SPD CUT [NON/CUT]			 Indicates the vehicle cruise condition. NON: Vehicle speed is maintained at the ASCD set speed. CUT: Vehicle speed increased to excessively high compared with the ASCD set speed, and ASCD operation is cut off. 	
LO SPEED CUT [NON/CUT]			 Indicates the vehicle cruise condition. NON: Vehicle speed is maintained at the ASCD set speed. CUT: Vehicle speed decreased to excessively low compared with the ASCD set speed, and ASCD operation is cut off. 	
AT OD MONITOR [ON/OFF]			 Indicates [ON/OFF] condition of A/T O/D according to the input signal from the TCM. 	
AT OD CANCEL [ON/OFF]			 Indicates [ON/OFF] condition of A/T O/D can- cel signal sent from the TCM. 	
CRUISE LAMP [ON/OFF]			 Indicates [ON/OFF] condition of CRUISE lamp determined by the ECM according to the input signals. 	
SET LAMP [ON/OFF]			 Indicates [ON/OFF] condition of SET lamp determined by the ECM according to the input signals. 	
ALT DUTY [%]			• Indicates the duty ratio of the power genera- tion command value. The ratio is calculated by ECM based on the battery current sensor sig- nal.	
BAT CUR SEN [mV]			• The signal voltage of battery current sensor is displayed.	

Monitored item [Unit]	ECM INPUT SIG- NALS	MAIN SIG- NALS	Description Remarks		А
ALT DUTY SIG [ON/OFF]			• The control condition of the power generation voltage variable control (determined by ECM according to the input signals) is indicated. ON: Power generation voltage variable control is active		EC
			OFF: Power generation voltage variable con- trol is inactive.		
A/F ADJ-B1			• Indicates the correction factor stored in ECM.		С
A/F ADJ-B2			The factor is calculated from the difference between the target air-fuel ratio stored in ECM and the air-fuel ratio calculated from A/F sen- sor 1 signal.		E
Voltage [V]					
Frequency [msec], [Hz] or [%]				 Only # is displayed if item is unable to be measured. 	F
DUTY-HI			 Voltage, frequency, duty cycle or pulse width 	• Figures with #s are temporary ones.	
DUTY-LOW			measured by the probe.	They are the same figures as an actual piece of data which was just	
PLS WIDTH-HI				previously measured.	0
PLS WIDTH-LOW					

NOTE:

Any monitored item that does not match the vehicle being diagnosed is deleted from the display automatically.

DATA MONITOR (SPEC) MODE **Monitored Item**

Monitored item [Unit]	ECM INPUT SIG- NALS	MAIN SIG- NALS	Description	Remarks	J
ENG SPEED [rpm]	×	×	 Indicates the engine speed computed from the signal of the crankshaft position sensor (POS) and camshaft position sensor (PHASE). 		K
MAS A/F SE-B1 [V]	×	×	• The signal voltage of the mass air flow sensor specification is displayed.	When engine is running specification range is indicated.	L
B/FUEL SCHDL [msec]		×	 "Base fuel schedule" indicates the fuel injection pulse width programmed into ECM, prior to any learned on board cor- rection. 	 When engine is running specification range is indicated. 	Μ
A/F ALPHA-B1 [%] A/F ALPHA-B2 [%]		×	• The mean value of the air-fuel ratio feed- back correction factor per cycle is indi- cated.	 When engine is running specification range is indicated. This data also includes the data for the air-fuel ratio learning control. 	

NOTE:

Any monitored item that does not match the vehicle being diagnosed is deleted from the display automatically.

ACTIVE TEST MODE Test Item

TEST ITEM	CONDITION	JUDGEMENT	CHECK ITEM (REMEDY)
FUEL INJEC- TION	 Engine: Return to the original trouble condition Change the amount of fuel injection using CONSULT-II. 	If trouble symptom disappears, see CHECK ITEM.	 Harness and connectors Fuel injector Air fuel ratio (A/F) sensor 1
IGNITION TIM- ING	 Engine: Return to the original trouble condition Timing light: Set Retard the ignition timing using CONSULT-II. 	If trouble symptom disappears, see CHECK ITEM.	Perform Idle Air Volume Learning.
POWER BAL- ANCE	 Engine: After warming up, idle the engine. A/C switch: OFF Shift lever: P or N Cut off each fuel injector signal one at a time using CONSULT-II. 	Engine runs rough or dies.	 Harness and connectors Compression Fuel injector Power transistor Spark plug Ignition coil
COOLING FAN*	 Ignition switch: ON Turn the cooling fan HI, LOW and OFF using CONSULT-II. 	Cooling fan moves and stops.	 Harness and connectors Cooling fan motor IPDM E/R
ENG COOLANT TEMP	 Engine: Return to the original trouble condition Change the engine coolant temperature using CONSULT-II. 	If trouble symptom disappears, see CHECK ITEM.	 Harness and connectors Engine coolant temperature sensor Fuel injector
FUEL PUMP RELAY	 Ignition switch: ON (Engine stopped) Turn the fuel pump relay ON and OFF using CONSULT-II and listen to operating sound. 	Fuel pump relay makes the operat- ing sound.	Harness and connectorsFuel pump relay
VIAS SOL VALVE	 Ignition switch: ON Turn solenoid valve ON and OFF with CONSULT-II and listen for operating sound. 	Solenoid valve makes an operating sound.	Harness and connectorsSolenoid valve
PURG VOL CONT/V	 Engine: After warming up, run engine at 1,500 rpm. Change the EVAP canister purge volume control solenoid valve opening percent using CON- SULT-II. 	Engine speed changes according to the opening percent.	Harness and connectorsSolenoid valve
FUEL/T TEMP SEN	• Change the fuel tank temperature	using CONSULT-II.	
VENT CON- TROL/V	 Ignition switch: ON (Engine stopped) Turn solenoid valve ON and OFF with the CONSULT-II and listen to operating sound. 	Solenoid valve makes an operating sound.	Harness and connectorsSolenoid valve
V/T ASSIGN ANGLE	 Engine: Return to the original trouble condition Change intake valve timing using CONSULT-II. 	If trouble symptom disappears, see CHECK ITEM.	 Harness and connectors Intake valve timing control sole- noid valve
ALTERNATOR DUTY	 Engine: Idle Change duty ratio using CON- SULT-II. 	Battery voltage changes.	 Harness and connectors IPDM E/R Alternator

*: Leaving cooling fan OFF with CONSULT-II while engine is running may cause the engine to overheat.

REAL TIME DIAGNOSIS IN DATA MONITOR MODE (RECORDING VEHICLE DATA) Description

CONSULT-II has two kinds of triggers and they can be selected by touching "SETTING" in "DATA MONITOR" mode.

- 1. "AUTO TRIG" (Automatic trigger):
 - The malfunction will be identified on the CONSULT-II screen in real time.

In other words, DTC/1st trip DTC and malfunction item will be displayed if the malfunction is detected by ECM.

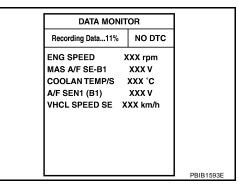

At the moment a malfunction is detected by ECM, "MONI-TOR" in "DATA MONITOR" screen is changed to "Recording Data... xx%" as shown at right, and the data after the malfunction detection is recorded. Then when the percentage reached 100%, "REAL-TIME DIAG" screen is displayed. If "STOP" is touched on the screen during "Recording Data... xx%", "REAL-TIME DIAG" screen is also displayed.

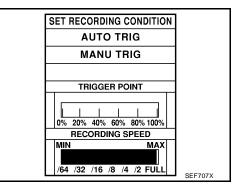

The recording time after the malfunction detection and the recording speed can be changed by "TRIGGER POINT" and "Recording Speed". Refer to CONSULT-II OPERATION MAN-UAL.

2. "MANU TRIG" (Manual trigger):

• DTC/1st trip DTC and malfunction item will not be displayed automatically on CONSULT-II screen even though a malfunction is detected by ECM.

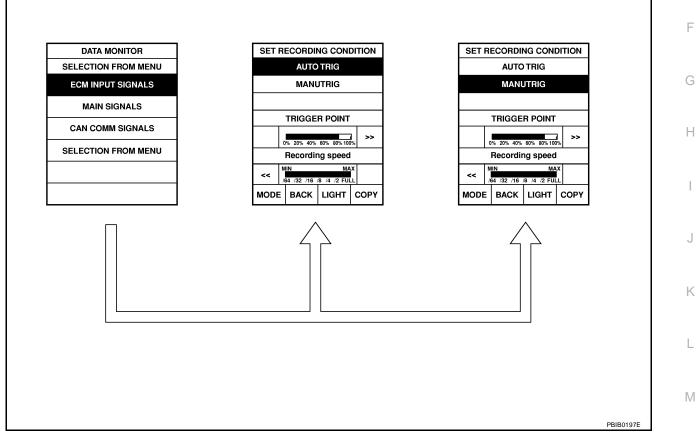

DATA MONITOR can be performed continuously even though a malfunction is detected.

Operation

- 1. "AUTO TRIG"
 - While trying to detect the DTC/1st trip DTC by performing the DTC Confirmation Procedure, be sure to select to "DATA MONITOR (AUTO TRIG)" mode. You can confirm the malfunction at the moment it is detected.
 - While narrowing down the possible causes, CONSULT-II should be set in "DATA MONITOR (AUTO TRIG)" mode, especially in case the incident is intermittent.
 When you are inspecting the circuit by gently shaking (or twisting) the suspicious connectors, components and harness in the DTC Confirmation Procedure, the moment a malfunction is found the DTC/1st trip DTC will be displayed. (Refer to "INCIDENT SIMULATION TESTS" in <u>GI-27, "How to Perform Efficient Diagnosis for an Electrical Incident"</u>.)
- 2. "MANU TRIG"
 - If the malfunction is displayed as soon as "DATA MONITOR" is selected, reset CONSULT-II to "MANU TRIG". By selecting "MANU TRIG" you can monitor and store the data. The data can be utilized for further diagnosis, such as a comparison with the value for the normal operating condition.

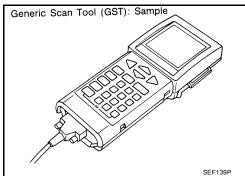

Generic Scan Tool (GST) Function DESCRIPTION

Generic Scan Tool (OBDII scan tool) complying with SAE J1978 has 8 different functions explained below.

ISO9141 is used as the protocol.

The name GST or Generic Scan Tool is used in this service manual.

А

EC

Е

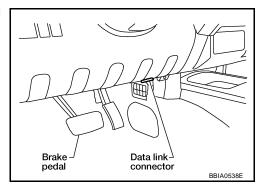

UBS00K4D

FUNCTION

Diag	gnostic test mode	Function
Service \$01	READINESS TESTS	This diagnostic service gains access to current emission-related data values, including analog inputs and outputs, digital inputs and outputs, and system status information.
Service \$02	(FREEZE DATA)	This diagnostic service gains access to emission-related data value which were stored by ECM during the freeze frame. For details, refer to EC-116, "Freeze Frame Data and 1st Trip Freeze Frame Data".
Service \$03	DTCs	This mode gains access to emission-related power train trouble codes which were stored by ECM.
		This diagnostic service can clear all emission-related diagnostic information. This includes:
		Clear number of diagnostic trouble codes (Service \$01)
a 1 b 1		Clear diagnostic trouble codes (Service \$03)
Service \$04	CLEAR DIAG INFO	Clear trouble code for freeze frame data (Service \$01)
		Clear freeze frame data (Service \$02)
		Reset status of system monitoring test (Service \$01)
		Clear on board monitoring test results (Service \$06 and Service \$07)
Service \$06	(ON BOARD TESTS)	This diagnostic service accesses the results of on board diagnostic monitoring tests of specific components/systems that are not continuously monitored.
Service \$07	(ON BOARD TESTS)	This diagnostic service enables the off board test drive to obtain test results for emission- related power train components/systems that are continuously monitored during normal driving conditions.
		This diagnostic service can close EVAP system in ignition switch ON position (Engine stopped). When this diagnostic service is performed, EVAP canister vent control valve open can be closed. In the following conditions, this mode cannot function.
		Low ambient temperature
Service \$08	—	Low battery voltage
		Engine running
		Ignition switch OFF
		Low fuel temperature
		 Too much pressure is applied to EVAP system
Service \$09	(CALIBRATION ID)	This diagnostic service enables the off-board test device to request specific vehicle infor- mation such as Vehicle Identification Number (VIN) and Calibration IDs.

INSPECTION PROCEDURE

- 1. Turn ignition switch OFF.
- 2. Connect GST to data link connector, which is located under LH dash panel near the hood opener handle.

3. Turn ignition switch ON. А 4. Enter the program according to instruction on the screen or in the operation manual. VTX GENERIC OBD II (*: Regarding GST screens in this section, sample screens are PROGRAM CARD shown.) EC Press [ENTER] SEF398S Sample screen* D 5. Perform each diagnostic mode according to each service proce-**OBD II FUNCTIONS** dure. For further information, see the GST Operation Manual of F0: DATA LIST Е F1: FREEZE DATA the tool maker. CONSULT-II Reference Value in Data Monitor

Remarks:

Remarks:
Specification data are reference values.
Specification data are output/input values which are detected or supplied by the ECM at the connector.
* Specification data may not be directly related to their components signals/values/operations.
i.e. Adjust ignition timing with a timing light before monitoring IGN TIMING, because the monitor may show the specification data in spite of the ignition timing not being adjusted to the specification data. This IGN TIMING monitors the data calculated by the ECM at the signals input from the camshaft position sensor and other ignition timing related sensors.

MONITOR ITEM	COI	NDITION	SPECIFICATION			
ENG SPEED	 Run engine and compare CONSL tion. 	Almost the same speed as the tachometer indication.				
MAS A/F SE-B1	See EC-134, "TROUBLE DIAGNOS

Major Sensor Reference Graph in Data Monitor Mode

The following are the major sensor reference graphs in "DATA MONITOR" mode.

CLSD THL POS, ACCEL SEN 1, THRTL SEN 1

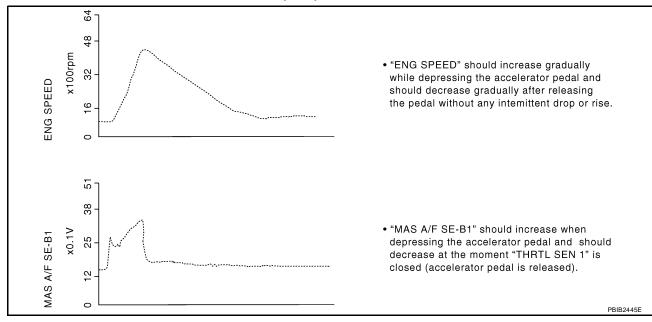

Below is the data for "CLSD THL POS", "ACCEL SEN 1" and "THRTL SEN 1" when depressing the accelerator pedal with the ignition switch ON and with selector lever in D position.

The signal of "ACCEL SEN 1" and "THRTL SEN 1" should rise gradually without any intermittent drop or rise after "CLSD THL POS" is changed from ON to OFF.

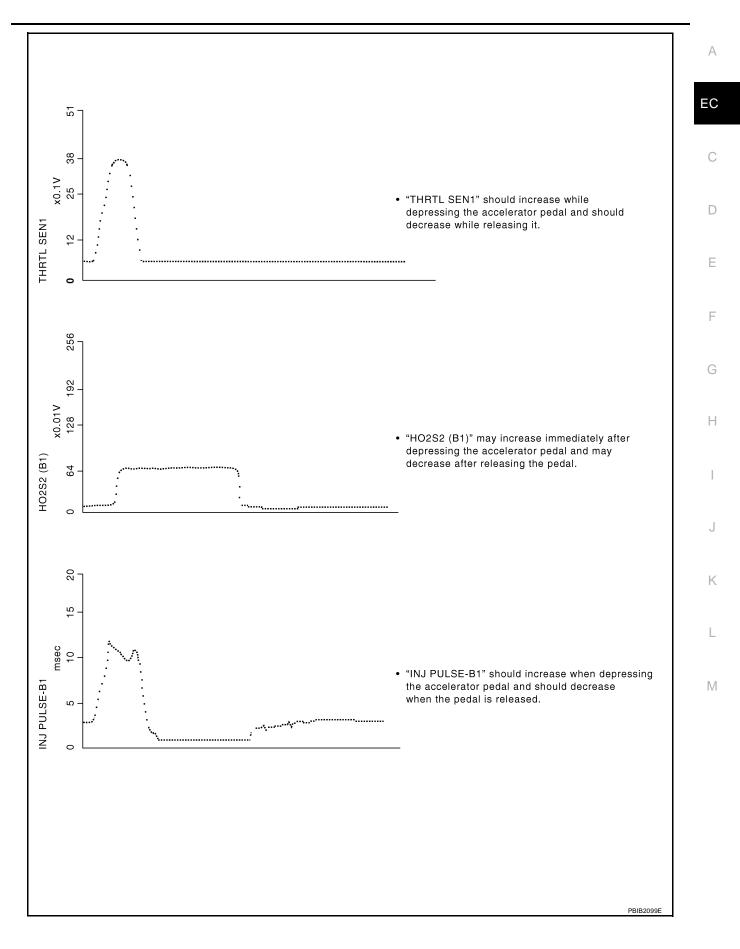

ENG SPEED, MAS A/F SE-B1, THRTL SEN 1, HO2S2 (B1), INJ PULSE-B1

Below is the data for "ENG SPEED", "MAS A/F SE-B1", "THRTL SEN 1", "HO2S2 (B1)" and "INJ PULSE-B1" when revving engine quickly up to 4,800 rpm under no load after warming up engine sufficiently. Each value is for reference, the exact value may vary.

UBS00K4F

TROUBLE DIAGNOSIS - SPECIFICATION VALUE

Description

The specification (SP) value indicates the tolerance of the value that is displayed in "DATA MONITOR (SPEC)" mode of CONSULT-II during normal operation of the Engine Control System. When the value in "DATA MONI-TOR (SPEC)" mode is within the SP value, the Engine Control System is confirmed OK. When the value in "DATA MONITOR (SPEC)" mode is NOT within the SP value, the Engine Control System may have one or more malfunctions.

The SP value is used to detect malfunctions that may affect the Engine Control System, but will not light the MIL.

The SP value will be displayed for the following three items:

- B/FUEL SCHDL (The fuel injection pulse width programmed into ECM prior to any learned on board correction)
- A/F ALPHA-B1/B2 (The mean value of air-fuel ratio feedback correction factor per cycle)
- MAS A/F SE-B1 (The signal voltage of the mass air flow sensor)

Testing Condition

- Vehicle driven distance: More than 5,000 km (3,107 miles)
- Barometric pressure: 98.3 104.3 kPa (1.003 1.064 kg/cm², 14.25 15.12 psi)
- Atmospheric temperature: 20 30°C (68 86°F)
- Engine coolant temperature: 75 95°C (167 203°F)
- Transmission: Warmed-up*¹
- Electrical load: Not applied*2
- Engine speed: Idle

*1: After the engine is warmed up to normal operating temperature, drive vehicle until "FLUID TEMP SE" (A/T fluid temperature sensor signal) indicates more than 60°C (140°F).

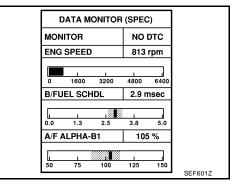

*2: Rear window defogger switch, air conditioner switch, lighting switch are OFF. Steering wheel is straight ahead.

Inspection Procedure

NOTE:

Perform "DATA MONITOR (SPEC)" mode in maximum scale display.

- 1. Perform EC-70, "Basic Inspection" .
- 2. Confirm that the testing conditions indicated above are met.
- 3. Select "B/FUEL SCHDL", "A/F ALPHA-B1", "A/F ALPHA-B2" and "MAS A/F SE-B1" in "DATA MONITOR (SPEC)" mode with CONSULT-II.
- 4. Make sure that monitor items are within the SP value.
- 5. If NG, go to EC-135, "Diagnostic Procedure" .

4. CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

- 1. Stop the engine.
- 2. Disconnect PCV hose, and then plug it.
- 3. Start engine.
- 4. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "DATA MONITOR (SPEC)" mode, and make sure that the each indication is within the SP value.

OK or NG

OK >> GO TO 5. NG >> GO TO 6.

5. CHANGE ENGINE OIL

- 1. Stop the engine.
- 2. Change engine oil.

NOTE:

This symptom may occur when a large amount of gasoline is mixed with engine oil because of driving conditions (such as when engine oil temperature does not rise enough since a journey distance is too short during winter). The symptom will not be detected after changing engine oil or changing driving condition.

>> INSPECTION END

6. CHECK FUEL PRESSURE

Check fuel pressure. (Refer to EC-79, "Fuel Pressure Check" .)

OK or NG

OK >> GO TO 9.

NG (Fuel pressure is too high)>>Replace fuel pressure regulator, refer to $\underline{EC-79}$. GO TO 8. NG (Fuel pressure is too low)>>GO TO 7.

7. DETECT MALFUNCTIONING PART

- 1. Check the following.
- Clogged and bent fuel hose and fuel tube
- Clogged fuel filter
- Fuel pump and its circuit (Refer to <u>EC-640</u>.)
- If NG, repair or replace the malfunctioning part. (Refer to <u>EC-79</u>.) If OK, replace fuel pressure regulator.

>> GO TO 8.

8. CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

1. Start engine.

2. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "DATA MONITOR (SPEC)" mode, and make sure that the each indication is within the SP value.

OK or NG

```
OK >> INSPECTION END
```

NG >> GO TO 9.

9. PERFORM POWER BALANCE TEST

- 1. Perform "POWER BALANCE" in "ACTIVE TEST" mode.
- 2. Make sure that the each cylinder produces a momentary engine speed drop.

OK or NG

OK >> GO TO 12. NG >> GO TO 10.

14. снеск "а/ғ аlpha-b1", "а/ғ аlpha-b2"	IVI
 Start engine. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "DATA MONITOR (SPEC)" mode, and make sure that the each indication is within the SP value. 	
OK or NG OK >> INSPECTION END NG >> GO TO 15.	
15. DISCONNECT AND RECONNECT ECM HARNESS CONNECTOR	

1. Stop the engine.

2. Disconnect ECM harness connector. Check pin terminal and connector for damage, and then reconnect it.

>> GO TO 16.

16. CHECK "A/F ALPHA-B1", "A/F ALPHA-B2"

- 1. Start engine.
- 2. Select "A/F ALPHA-B1", "A/F ALPHA-B2" in "DATA MONITOR (SPEC)" mode, and make sure that the each indication is within the SP value.

OK or NG

OK >> INSPECTION END

NG >> Detect malfunctioning part according to <u>EC-90, "Symptom Matrix Chart"</u>.

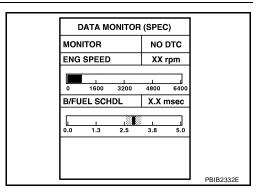

17. CHECK "B/FUEL SCHDL"

Select "B/FUEL SCHDL" in "DATA MONITOR (SPEC)" mode, and make sure that the indication is within the SP value.

OK or NG

OK >> INSPECTION END

NG (More than the SP value)>>GO TO 18. NG (Less than the SP value)>>GO TO 25.

18. DETECT MALFUNCTIONING PART

- 1. Check for the cause of large engine friction. Refer to the following.
- Engine oil level is too high
- Engine oil viscosity
- Belt tension of power steering, alternator, A/C compressor, etc. is excessive
- Noise from engine
- Noise from transmission, etc.
- 2. Check for the cause of insufficient combustion. Refer to the following.
- Valve clearance malfunction
- Intake valve timing control function malfunction
- Camshaft sprocket installation malfunction, etc.

>> Repair or replace malfunctioning part, and then GO TO 30.

19. CHECK INTAKE SYSTEM

Check for the cause of uneven air flow through mass air flow sensor. Refer to the following.

- Crushed air ducts
- Malfunctioning seal of air cleaner element
- Uneven dirt of air cleaner element
- Improper specification of intake air system

OK or NG

OK >> GO TO 21.

NG >> Repair or replace malfunctioning part, and then GO TO 20.

O. CHECK "A/F ALPHA-B1", "A/F ALPHA-B2", AND "B/FUEL SCHDL"	
Select "A/F ALPHA-B1", "A/F ALPHA-B2", and "B/FUEL SCHDL" in "DATA MONITOR (SPEC)" mode, and make sure that the each indication is within the SP value. OK or NG	EC
OK >> INSPECTION END NG ("B/FUEL SCHDL" is more, "A/F ALPHA-B1", "A/F ALPHA-B2" are less than the SP value)>>GO TO 21. 21. DISCONNECT AND RECONNECT MASS AIR FLOW SENSOR HARNESS CONNECTOR	С
 Stop the engine. Disconnect mass air flow sensor harness connector. Check pin terminal and connector for damage and then reconnect it again. 	D

TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT

TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT

Description

Intermittent incidents may occur. In many cases, the malfunction resolves itself (the part or circuit function returns to normal without intervention). It is important to realize that the symptoms described in the customer's complaint often do not recur on (1st trip) DTC visits. Realize also that the most frequent cause of intermittent incidents occurrences is poor electrical connections. Because of this, the conditions under which the incident occurred may not be clear. Therefore, circuit checks made as part of the standard diagnostic procedure may not indicate the specific malfunctioning area.

Common Intermittent Incidents Report Situations

STEP in Work Flow	Situation
2	The CONSULT-II is used. The SELF-DIAG RESULTS screen shows time data other than [0] or [1t].
3 or 4	The symptom described by the customer does not recur.
5	(1st trip) DTC does not appear during the DTC Confirmation Procedure.
10	The Diagnostic Procedure for PXXXX does not indicate the malfunctioning area.

Diagnostic Procedure

1. INSPECTION START

Erase (1st trip) DTCs. Refer to EC-60, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMA-TION" .

>> GO TO 2.

Diagnostic Procedure

1. INSPECTION START

Start engine. **Is engine running?**

Yes or No

Yes >> GO TO 8. No >> GO TO 2.

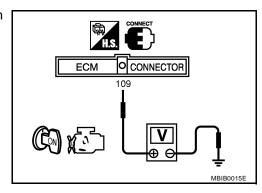

2. CHECK ECM POWER SUPPLY CIRCUIT-I

- 1. Turn ignition switch OFF and then ON.
- 2. Check voltage between ECM terminal 109 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 4. NG >> GO TO 3.

UBS00K4N

3. DETECT MALFUNCTIONING PART

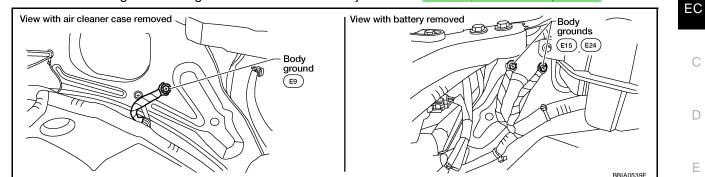

Check the following.

- Harness connectors M31, E152
- Fuse block (J/B) connector M4
- 10A fuse
- Harness for open or short between ECM and fuse

>> Repair harness or connectors.

4. CHECK GROUND CONNECTIONS

- 1. Turn ignition switch OFF.
- 2. Loosen and retighten three ground screws on the body. Refer to EC-151, "Ground Inspection" .

OK or NG

OK >> GO TO 5.

NG >> Repair or replace ground connections.

5. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-I

- 1. Disconnect ECM harness connector.
- 2. Check harness continuity between ECM terminals 1, 115, 116 and ground. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 7. NG >> GO TO 6.

6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F32, E2
- Harness for open or short between ECM and ground

>> Repair open circuit or short to power in harness or connectors.

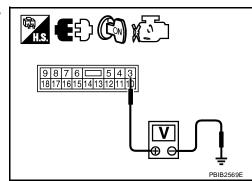

7. CHECK ECM POWER SUPPLY CIRCUIT-II

- 1. Reconnect ECM harness connector.
- 2. Turn ignition switch ON.
- 3. Check voltage between IPDM E/R connector E119 terminal 3 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

- OK >> Go to EC-646, "IGNITION SIGNAL".
- NG >> GO TO 8.

А

F

Н

Κ

L

Μ

8. CHECK ECM POWER SUPPLY CIRCUIT-III

- 1. Turn ignition switch OFF and wait at least 10 seconds.
- 2. Turn ignition switch ON and then OFF.
- 3. Check voltage between ECM terminals 119, 120 and ground with CONSULT-II or tester.

Voltage: After turning ignition switch OFF, battery voltage will exist for a few seconds, then drop approximately 0V.

OK or NG

OK >> GO TO 13.

NG (Battery voltage does not exist.)>>GO TO 9.

NG (Battery voltage exists for more than a few seconds.)>>GO TO 11.

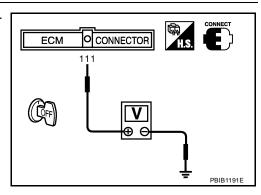

9. CHECK ECM POWER SUPPLY CIRCUIT-IV

Check voltage between ECM terminal 111 and ground with CON-SULT-II or tester.

Voltage: Battery voltage

OK or NG

OK	>> GO TO 10.
NG	>> GO TO 11.

10. CHECK ECM POWER SUPPLY CIRCUIT-V

- Disconnect ECM harness connector. 1.
- 2. Disconnect IPDM E/R harness connector E119.
- 3 Check harness continuity between ECM terminals 119, 120 and IPDM E/R terminal 4. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 16.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

11. CHECK ECM POWER SUPPLY CIRCUIT-VI

- Disconnect ECM harness connector. 1.
- 2. Disconnect IPDM E/R harness connector E119.
- Check harness continuity between ECM terminal 111 and IPDM E/R terminal 7. 3. Refer to Wiring Diagram.

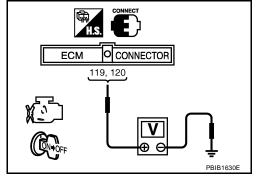

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 12.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

EC-150

12. CHECK 20A FUSE

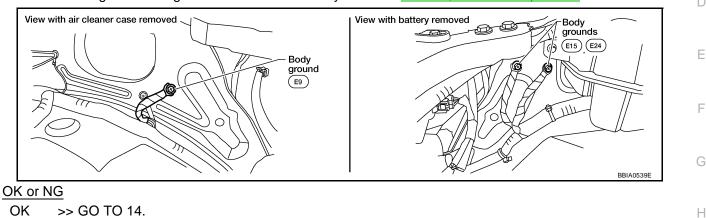

- 1. Disconnect 20 A fuse from IPDM E/R.
- 2. Check 20A fuse.

OK or NG

- OK >> GO TO 16.
- NG >> Replace 20A fuse.

13. CHECK GROUND CONNECTIONS

Loosen and retighten three ground screws on the body. Refer to EC-151, "Ground Inspection" .

OK >> GO TO 14.

NG >> Repair or replace ground connections.

14. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-II

1. Check harness continuity between ECM terminals 1, 115, 116 and ground. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to power.

OK or NG

OK >> GO TO 16. NG >> GO TO 15.

15. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F32, E2
- Harness for open or short between ECM and ground

>> Repair open circuit or short to power in harness or connectors.

16. CHECK INTERMITTENT INCIDENT

Refer to EC-144, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace IPDM E/R.

NG >> Repair open circuit or short to power in harness or connectors.

Ground Inspection

UBS00K40

Ground connections are very important to the proper operation of electrical and electronic circuits. Ground connections are often exposed to moisture, dirt and other corrosive elements. The corrosion (rust) can become an unwanted resistance. This unwanted resistance can change the way a circuit works.

EC

Κ

L

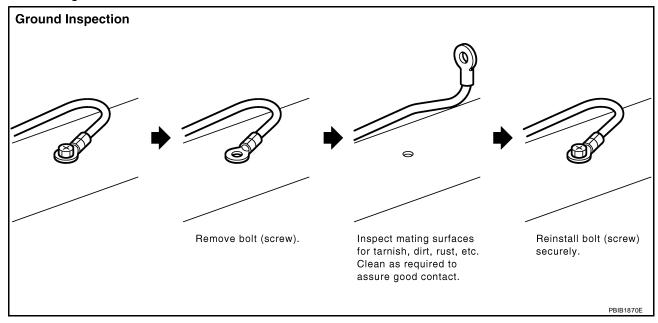

Μ

POWER SUPPLY AND GROUND CIRCUIT

Electronically controlled circuits are very sensitive to proper grounding. A loose or corroded ground can drastically affect an electronically controlled circuit. A poor or corroded ground can easily affect the circuit. Even when the ground connection looks clean, there can be a thin film of rust on the surface. When inspecting a ground connection follow these rules:

- Remove the ground bolt or screw.
- Inspect all mating surfaces for tarnish, dirt, rust, etc.
- Clean as required to assure good contact.
- Reinstall bolt or screw securely.
- Inspect for "add-on" accessories which may be interfering with the ground circuit.
- If several wires are crimped into one ground eyelet terminal, check for proper crimps. Make sure all of the
 wires are clean, securely fastened and providing a good ground path. If multiple wires are cased in one
 eyelet make sure no ground wires have excess wire insulation.

For detailed ground distribution information, refer to PG-35, "Ground Distribution" .

DTC U1000, U1001 CAN COMMUNICATION LINE

Description

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
U1000* ¹ 1000* ¹	CAN communication line	• ECM cannot communicate to other control units.	 Harness or connectors (CAN communication line is open or shorted)
U1001* ² 1001* ²		• ECM cannot communicate for more than the specified time.	

*1: This self-diagnosis has the one trip detection logic.

*2: The MIL will not light up for this diagnosis.

DTC Confirmation Procedure

- 1. Turn ignition switch ON and wait at least 3 seconds.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. If 1st trip DTC is detected, go to EC-155, "Diagnostic Procedure" .

M

DTC P0011, P0021 IVT CONTROL

Description SYSTEM DESCRIPTION

Sensor	Input signal to ECM	ECM function	Actuator	
Crankshaft position sensor (POS)	Engine aread and pictor position	Intake valve timing control		
Camshaft position sensor (PHASE)	Engine speed and piston position		Intake valve timing control	
Engine coolant temperature sensor	Engine coolant temperature		solenoid valve	
Wheel sensor	Vehicle speed*			

*: This signal is sent to the ECM through CAN communication line

This mechanism hydraulically controls cam phases continuously with the fixed operating angle of the intake valve.

The ECM receives signals such as crankshaft position, camshaft position, engine speed, and engine coolant temperature. Then, the ECM sends ON/OFF pulse duty signals to the intake valve timing control solenoid valve depending on driving status. This makes it possible to control the shut/open timing of the intake valve to increase engine torque in low/mid speed range and output in high-speed range.

CONSULT-II Reference Value in Data Monitor Mode

Intake valve timing control	The signal is not energized to the solenoid valve and the valve control does not function.	F

DTC Confirmation Procedure

CAUTION:

Always drive at a safe speed.

NOTE:

- If DTC P0011 or P0021 is displayed with DTC P0075 or P0081, first perform trouble diagnosis for DTC P0075 or P0081. Refer to <u>EC-179, "DTC P0075, P0081 IVT CONTROL SOLENOID VALVE"</u>.
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 10V and 16V at idle.

B WITH CONSULT-II

- 1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-II.
- 2. Start engine and warm it up to the normal operating temperature.
- 3. Maintain the following conditions for at least 6 consecutive seconds. Hold the accelerator pedal as steady as possible.

ENG SPEED	1,200 - 2,000 rpm
COOLAN TEMP/S	More than 60°C (140°F)
B/FUEL SCHDL	More than 3.5 msec
Selector lever	P or N position

- 4. Stop vehicle with engine running and let engine idle for 10 seconds.
- 5. If the 1st trip DTC is detected, go to <u>EC-160, "Diagnostic Procedure"</u>. If the 1st trip DTC is not detected, go to next step.
- 6. Maintain the following conditions for at least 20 consecutive seconds.

ENG SPEED	1,700 - 3,175 rpm (A constant rotation is maintained.)
COOLAN TEMP/S	70 - 105°C (158 - 221°F)
Selector lever	1st or 2nd position
Driving location uphill	Driving vehicle uphill (Increased engine load will help maintain the driving conditions required for this test.)

Description SYSTEM DESCRIPTION

Sensor	Input signal to ECM	ECM function	Actuator
Camshaft position sensor (PHASE) Crankshaft position sensor (POS)	Engine speed	Heated oxygen sensor 2	
Engine coolant temperature sensor	Engine coolant temperature	heater control	Heated oxygen sensor 2 heater
Mass air flow sensor	Amount of intake air		

The ECM performs ON/OFF control of the heated oxygen sensor 2 heater corresponding to the engine speed, amount of intake air and engine coolant temperature.

OPERATION

Engine speed rpm	Heated oxygen sensor 2 heater
Above 3,600	OFF
Below 3,600 rpm after the following conditions are met.	
Engine: After warming up	ON
• Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load	

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
HO2S2 HTR (B1)	 Engine speed: Below 3,600 rpm after the following conditions are met. Engine: After warming up Keeping the engine speed between 3 500 and 4 000 rpm for 1 minute and 	ON

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 10.5V and 16V at idle.

WITH CONSULT-II

- 1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-II.
- 2. Start engine and warm it up to the normal operating temperature.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Start the engine and keep the engine speed between 3,500 rpm and 4,000 rpm for at least 1 minute under no load.
- 5. Let engine idle for 1 minute.
- 6. If 1st trip DTC is detected, go to EC-175, "Diagnostic Procedure"

WITH GST

Follow the procedure "WITH CONSULT-II" above.

UBS00K58

DTC P0075, P0081 IVT CONTROL SOLENOID VALVE

Component Description

Intake valve timing control solenoid valve is activated by ON/OFF pulse duty (ratio) signals from the ECM.

The intake valve timing control solenoid valve changes the oil amount and direction of flow through intake valve timing control unit or stops oil flow.

The longer pulse width advances valve angle.

The shorter pulse width retards valve angle.

When ON and OFF pulse widths become equal, the solenoid valve stops oil pressure flow to fix the intake valve angle at the control position.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CON	IDITION	SPECIFICATION	F

DTC P0101 MAF SENSOR

Component Description

The mass air flow sensor (1) is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. The mass air flow sensor controls the temperature of the hot wire to a certain amount. The heat generated by the hot wire is reduced as the intake air flows around it. The more air, the greater the heat loss.

Therefore, the electric current supplied to hot wire is changed to maintain the temperature of the hot wire as air flow increases. The ECM detects the air flow by means of this current change.

CONSULT-II Reference Value in Data Monitor Mode

DTC Confirmation Procedure

Perform PROCEDURE FOR MALFUNCTION A first.

If the DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION B.

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

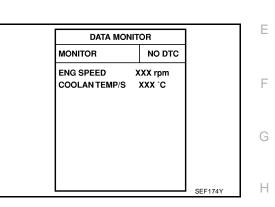

PROCEDURE FOR MALFUNCTION A

NOTE:

If engine will not start or stops soon, wait at least 10 seconds with engine stopped (Ignition switch ON) instead of running engine at idle speed.

With CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Start engine and warm it up to normal operating temperature.
- 4. Run engine for at least 10 seconds at idle speed.
- 5. If 1st trip DTC is detected, go to EC-190, "Diagnostic Procedure"

UBS00K5C

D

Κ

L

Μ

With GST

Follow the procedure "With CONSULT-II" above.

PROCEDURE FOR MALFUNCTION B

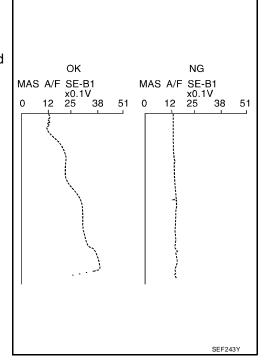

CAUTION:

Always drive vehicle at a safe speed.

With CONSULT-II

- 1. Turn ignition switch ON.
- Start engine and warm it up to normal operating temperature.
 If engine cannot be started, go to <u>EC-190, "Diagnostic Procedure"</u>.
- 3. Select "DATA MONITOR" mode with CONSULT-II.
- 4. Check the voltage of "MAS A/F SE-B1" with "DATA MONITOR".
- 5. Increases engine speed to about 4,000 rpm.
- 6. Monitor the linear voltage rise in response to engine speed increases.

If NG, go to <u>EC-190, "Diagnostic Procedure"</u>. If OK, go to following step.

DTC P0101 MAF SENSOR

7. Maintain the following conditions for at least 10 consecutive seconds.

ENG SPEED	More than 2,000 rpm
THRTL SEN 1	More than 3V
THRTL SEN 2	More than 3V
Selector lever	Suitable position
Driving location	Driving vehicle uphill (Increased engine load) will help maintain the driving conditions required for this test.

Removal and Installation MASS AIR FLOW SENSOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

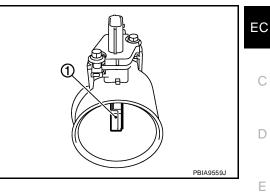

UBS00K5H

DTC P0102, P0103 MAF SENSOR

Component Description

The mass air flow sensor (1) is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. The mass air flow sensor controls the temperature of the hot wire to a certain amount. The heat generated by the hot wire is reduced as the intake air flows around it. The more air, the greater the heat loss.

Therefore, the electric current is supplied to hot wire is changed to maintain the temperature of the hot wire as air flow increases. The ECM detects the air flow by means of this current change.

CONSULT-II Reference Value in Data Monitor Mode

ENGINE COOLANT TEMPERATURE SENSOR

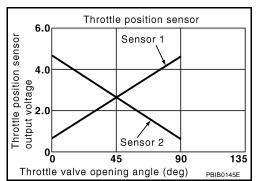

Refer to CO-24, "WATER INLET AND THERMOSTAT ASSEMBLY" .

DTC P0122, P0123 TP SENSOR

Component Description

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN 1	Ignition switch: ON	Accelerator pedal: Fully released	More than 0.36V
THRTL SEN 2*	(Engine stopped)Shift lever: D	Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

DTC No. DTC detecting condition Possible cause Trouble diagnosis name P0122 Throttle position sensor An excessively low voltage from the TP sensor • Harness or connectors 0122 2 circuit low input 2 is sent to ECM. (The TP sensor 2 circuit is open or shorted.) (The APP sensor 2 circuit is shorted.) Electric throttle control actuator P0123 An excessively high voltage from the TP sen-Throttle position sensor (TP sensor 2) 2 circuit high input sor 2 is sent to ECM. 0123 Accelerator pedal position sensor (APP sensor 2)

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

DTC Confirmation Procedure

NOTE:

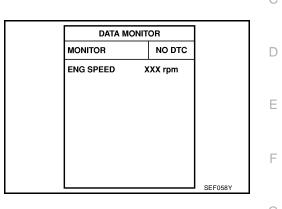

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

(P) WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Start engine and let it idle for 1 second.
- 4. If DTC is detected, go to EC-215, "Diagnostic Procedure" .

WITH GST

Follow the procedure "WITH CONSULT-II" above.

DTC P0127 IAT SENSOR

Component Description

The intake air temperature sensor is built into mass air flow sensor (1). The sensor detects intake air temperature and transmits a signal to the ECM.

The temperature sensing unit uses a thermistor which is sensitive to the change in temperature. Electrical resistance of the thermistor decreases in response to the temperature rise.

<Reference data>

Intake air temperature °C (°F)	Voltage* V	Resistance $k\Omega$
25 (77)	3.3	1.800 - 2.200
80 (176)	1.2	0.283 - 0.359

*: This data is reference value and is measured between ECM terminal 34 (Intake air temperature sensor) and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

DTC P0130, P0150 A/F SENSOR 1

DTC P0130, P0150 A/F SENSOR 1

Component Description

The air fuel ratio (A/F) sensor 1 is a planar dual-cell limit current sensor. The sensor element of the A/F sensor 1 is the combination of a Nernst concentration cell (sensor cell) with an oxygen-pump cell, which transports ions. It has a heater in the element.

The sensor is capable of precise measurement $\lambda = 1$, but also in the lean and rich range. Together with its control electronics, the sensor outputs a clear, continuous signal throughout a wide λ range (0.7 < λ < air).

The exhaust gas components diffuse through the diffusion gap at the electrode of the oxygen pump and Nernst concentration cell, where they are brought to thermodynamic balance.

An electronic circuit controls the pump current through the oxygenpump cell so that the composition of the exhaust gas in the diffusion gap remains constant at $\lambda = 1$. Therefore, the A/F sensor 1 is able to indicate air/fuel ratio by this pumping of current. In addition, a heater is integrated in the sensor to ensure the required operating temperature of 700 - 800°C (1,292 - 1,472°F).

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
A/F SEN1 (B1) A/F SEN1 (B2)	Engine: After warming up Maintaining engine speed at 2,000 rpm		Fluctuates around 1.5V

On Board Diagnosis Logic

To judge the malfunction, the diagnosis checks that the A/F signal computed by ECM from the A/F sensor 1 signal fluctuates according to fuel feedback control.

DTC P0130, P0150 A/F SENSOR 1

Removal and Installation AIR FUEL RATIO (A/F) SENSOR 1 Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST".

UBS00KF1

DTC P0131, P0151 A/F SENSOR 1

Component Description

The air fuel ratio (A/F) sensor 1 is a planar dual-cell limit current sensor. The sensor element of the A/F sensor 1 is the combination of a Nernst concentration cell (sensor cell) with an oxygen-pump cell, which transports ions. It has a heater in the element.

The sensor is capable of precise measurement $\lambda = 1$, but also in the lean and rich range. Together with its control electronics, the sensor outputs a clear, continuous signal throughout a wide λ range (0.7 < λ < air).

The exhaust gas components diffuse through the diffusion gap at the electrode of the oxygen pump and Nernst concentration cell, where they are brought to thermodynamic balance.

An electronic circuit controls the pump current through the oxygenpump cell so that the composition of the exhaust gas in the diffusion gap remains constant at $\lambda = 1$. Therefore, the A/F sensor 1 is able to indicate air/fuel ratio by this pumping of current. In addition, a heater is integrated in the sensor to ensure the required operating temperature of 700 - 800°C (1,292 - 1,472°F).

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

On Board Diagnosis Logic

To judge the malfunction of A/F sensor 1, this diagnosis measures response time of the A/F signal computed by ECM from the A/F sensor 1 signal. The time is compensated by engine operating (speed and load), fuel feedback control constant, and the A/F sensor 1 temperature index. Judgment is based on whether the compensated time (the A/F signal cycling time index) is inordinately long or not.

UBS00KF8

DTC P0137, P0157 HO2S2

DTC P0137, P0157 HO2S2

Component Description

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas on each bank.

Even if switching characteristics of the air fuel ratio (A/F) sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.

This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.

Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

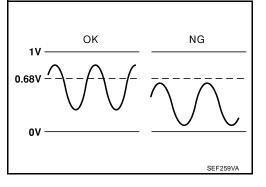

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

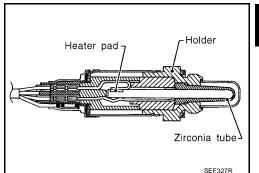

MONITOR ITEM	CONDITION	SPECIFICATION
HO2S2 (B1) HO2S2 (B2)	 Revving engine from idle to 3,000 rpm quickly after the following condi- tions are met 	$0 - 0.3V \leftrightarrow Approx. 0.6 - 1.0V$
HO2S2 MNTR (B1) HO2S2 MNTR (B2)	 Engine: After warming up Keeping engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load. 	$LEAN \leftarrow \rightarrow RICH$

On Board Diagnosis Logic

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/F) sensor 1. The oxygen storage capacity of the three way catalyst (manifold) causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the maximum voltage of the sensor is sufficiently high during the various driving condition such as fuelcut.

DTC Confirmation Procedure

NOTE:

If DTC confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

B WITH CONSULT-II

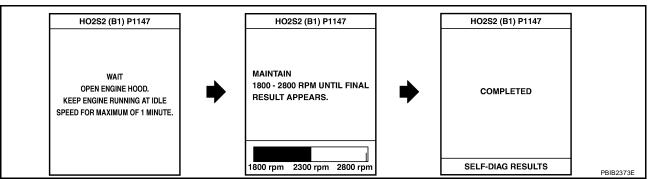

TESTING CONDITION:

For better results, perform DTC WORK SUPPORT at a temperature of 0 to 30 °C (32 to 86 °F).

- 1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-II.
- 2. Start engine and warm it up to the normal operating temperature.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- 5. Let engine idle for 1 minute.
- Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).
 If not, warm up engine and go to next step when "COOLAN

TEMP/S" indication reaches to 70°C (158°F).

- 7. Open engine hood.
- 8. Select "HO2S2 (B1) P1147" (for DTC P0137) or "HO2S2 (B2) P1167" (for DTC P0157) of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-II.
- 9. Start engine and following the instruction of CONSULT-II.

NOTE:

It will take at most 10 minutes until "COMPLETED" is displayed.

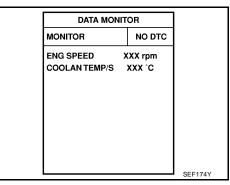

- Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS". If "NG" is displayed, refer to <u>EC-273, "Diagnostic Procedure"</u>. If "CAN NOT BE DIAGNOSED" is displayed, perform the following.
- a. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
- b. Return to step 1.

Overall Function Check

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a 1st trip DTC might not be confirmed.

WITH GST

- 1. Start engine and warm it up to the normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- 4. Let engine idle for 1 minute.
- 5. Set voltmeter probes between ECM terminal 74 [HO2S2 (B1) signal] or 55 [HO2S2 (B2) signal] and ground.

UBS00KD1

UBS00KD2

6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.

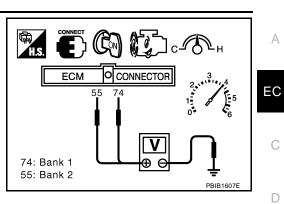

(Depress and release accelerator pedal as soon as possible.) The voltage should be above 0.68V at least once during this procedure.

If the voltage can be confirmed in step 6, step 7 is not necessary.

 Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position with "OD" OFF.

The voltage should be above 0.68V at least once during this procedure.

8. If NG, go to EC-273, "Diagnostic Procedure" .

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

UBS00K70

DTC P0139, P0159 HO2S2

DTC P0139, P0159 HO2S2

Component Description

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas on each bank.

Even if switching characteristics of the air fuel ratio (A/F) sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.

This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.

Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

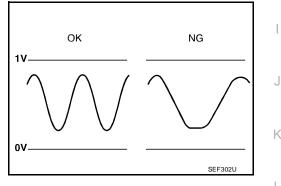

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
HO2S2 (B1) HO2S2 (B2)	 Revving engine from idle to 3,000 rpm quickly after the following condi- tions are met 	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S2 MNTR (B1) HO2S2 MNTR (B2)	 Engine: After warming up Keeping engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load. 	$LEAN \longleftrightarrow RICH$

On Board Diagnosis Logic

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/F) sensor 1. The oxygen storage capacity before the three way catalyst (manifold) causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the switching response of the sensor's voltage is faster than specified during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	1
P0139 0139 (Bank 1)	139	It takes more time for the sensor to respond	 Harness or connectors (The sensor circuit is open or shorted) Heated oxygen sensor 2 	Μ

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

B WITH CONSULT-II

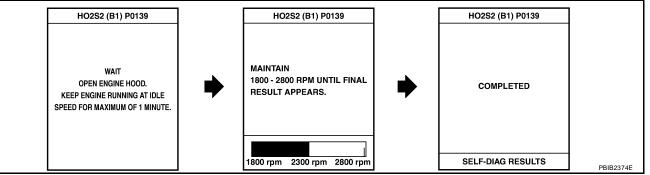

TESTING CONDITION:

For better results, perform DTC WORK SUPPORT at a temperature of 0 to 30 °C (32 to 86 °F).

- 1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-II.
- 2. Start engine and warm it up to the normal operating temperature.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- 5. Let engine idle for 1 minute.
- Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).
 If not, warm up engine and go to next step when "COOLAN

TEMP/S" indication reaches to 70°C (158°F).

- 7. Select "HO2S2 (B1) P0139" or "HO2S2 (B2) P0159" of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-II.
- 8. Start engine and following the instruction of CONSULT-II.

NOTE:

If will take at most 10 minutes until "COMPLETED" is displayed.

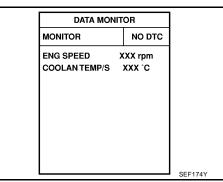

- Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS". If "NG" is displayed, refer to <u>EC-299, "Diagnostic Procedure"</u>. If "CAN NOT BE DIAGNOSED" is displayed, perform the following.
- a. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
- b. Return to step 1.

Overall Function Check

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a 1st trip DTC might not be confirmed.

WITH GST

- 1. Start engine and warm it up to the normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
- 4. Let engine idle for 1 minute.
- 5. Set voltmeter probes between ECM terminal 74 [HO2S2 (B1) signal] or 55 [HO2S2 (B2) signal] and ground.

UBS00K75

UBS00K74

 Check the voltage when revving up to 4,000 rpm under no load at least 10 times. (Depress and release accelerator pedal as soon as possible.)

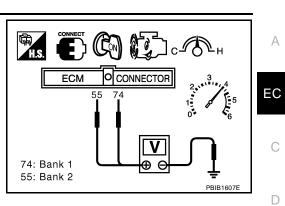

A change of voltage should be more than 0.06V for 1 second during this procedure. If the voltage can be confirmed in step 6, step 7 is not nec-

If the voltage can be confirmed in step 6, step 7 is not necessary.

 Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position with "OD" OFF.

A change of voltage should be more than 0.06V for 1 second during this procedure.

8. If NG, go to EC-299, "Diagnostic Procedure" .

UBS00K79

On Board Diagnosis Logic

With the Air-Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from the air fuel ratio (A/F) sensor 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios.

In case the amount of the compensation value is extremely large (the actual mixture ratio is too lean.), the ECM judges the condition as the fuel injection system malfunction and lights up the MIL (2 trip detection logic).

Sensor	Input signal to ECM	ECM function	Actuator	
A/F sensor 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)	Fuel injection control	Fuel injector	I

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

B WITH CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Turn ignition switch ON and select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CON-KSULT-II.
- 4. Clear the self-learning control coefficient by touching "CLEAR".
- 5. Select "DATA MONITOR" mode with CONSULT-II.
- Start engine again and let it idle for at least 10 minutes. The 1st trip DTC P0171 or P0174 should be detected at this stage, if a malfunction exists. If so, go to <u>EC-311, "Diagnostic</u> <u>Procedure"</u>.

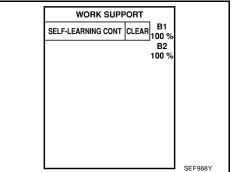

NOTE:

If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.

- a. Turn ignition switch OFF and wait at least 10 seconds.
- b. Start engine and drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for 10 minutes. Refer to the table below.
 Hold the accelerator pedal as steady as possible.

The similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time.

Engine speed	Engine speed in the freeze frame data ±400 rpm
Vehicle speed	Vehicle speed in the freeze frame data \pm 10 km/h (6 MPH)

J

L

Μ

PFP:16600

А

Engine coolant temperature (T) condition	When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).
	When the freeze frame data shows higher than or equal to 70 °C (158 °F), T should be higher than or equal to 70 °C (158 °F).

- 7. If it is difficult to start engine at step 6, the fuel injection system has a malfunction, too.
- 8. Crank engine while depressing accelerator pedal. If engine starts, go to <u>EC-311, "Diagnostic Procedure"</u>. If engine does not start, check exhaust and intake air leak visually.

WITH GST

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Disconnect mass air flow sensor harness connector.
- 4. Restart engine and let it idle for at least 5 seconds.
- 5. Stop engine and reconnect mass air flow sensor harness connector.
- 6. Select Service \$03 with GST. Make sure DTC P0102 is detected.
- 7. Select Service \$04 with GST and erase the DTC P0102.
- 8. Start engine again and let it idle for at least 10 minutes.
- Select Service \$07 with GST. The 1st trip DTC P0171 or P0174 should be detected at this stage, if a malfunction exists. If so, go to <u>EC-311, "Diagnostic Procedure"</u>.

NOTE:

If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.

- a. Turn ignition switch OFF and wait at least 10 seconds.
- b. Start engine and drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for 10 minutes. Refer to the table below.

Hold the accelerator pedal as steady as possible.

The similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time.

Engine speed	Engine speed in the freeze frame data ±400 rpm	
Vehicle speed	Vehicle speed in the freeze frame data \pm 10 km/h (6 MPH)	
Engine coolant temperature (T) condition	When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).	
	When the freeze frame data shows higher than or equal to 70 $^{\circ}$ C (158 $^{\circ}$ F), T should be higher than or equal to 70 $^{\circ}$ C (158 $^{\circ}$ F).	

10. If it is difficult to start engine at step 8, the fuel injection system has a malfunction.

11. Crank engine while depressing accelerator pedal. If engine starts, go to <u>EC-311, "Diagnostic Procedure"</u>. If engine does not start, check exhaust and intake air leak visually.

Diagnostic Procedure

1. CHECK EXHAUST GAS LEAK

UBS00K7D

А

EC

J

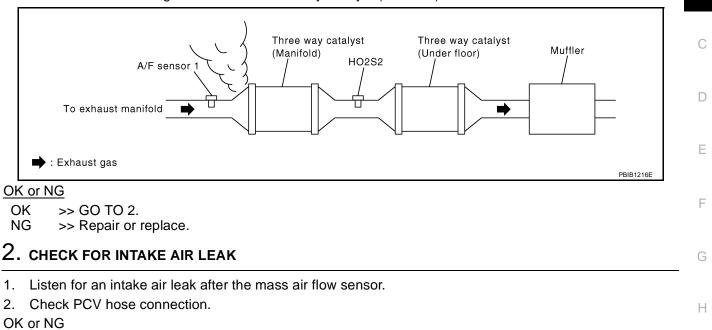

Κ

L

Μ

1. Start engine and run it at idle.

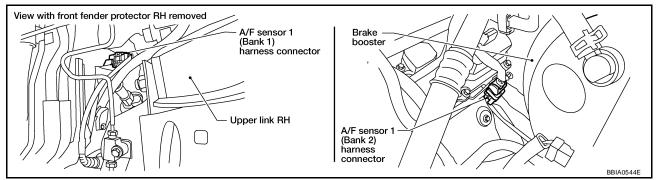

2. Listen for an exhaust gas leak before three way catalyst (manifold).

- OK >> GO TO 3.
- NG >> Repair or replace.

3. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect corresponding A/F sensor 1 harness connector.

- 3. Disconnect ECM harness connector.
- 4. Check harness continuity between A/F sensor 1 terminal and ECM terminal as follows. Refer to Wiring Diagram.

	A/F sensor 1 terminal	ECM terminal
	1	16
Bank 1	2	75
	5	35
	6	56
	1	76
Bank 2	2	77
	5	57
	6	58

Continuity should exist.

5. Check harness continuity between the following terminals and ground. Refer to Wiring Diagram.

Bank 1		Bai	nk 2
A/F sensor 1 terminal	ECM terminal	A/F sensor 1 terminal	ECM terminal
1	16	1	76
2	75	2	77
5	35	5	57
6	56	6	58

Continuity should not exist.

- 6. Also check harness for short to power.
- OK or NG
- OK >> GO TO 4.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK FUEL PRESSURE	А
 Release fuel pressure to zero. Refer to <u>EC-79, "FUEL PRESSURE RELEASE"</u>. Install fuel pressure gauge and check fuel pressure. Refer to <u>EC-80, "FUEL PRESSURE CHECK"</u>. 	EC
At idling: 350 kPa (3.57 kg/cm ² , 51 psi)	LO
OK or NG OK (With CONSULT-II)>>GO TO 6. OK (Without CONSULT-II)>>GO TO 7. NG >> GO TO 5.	С
5. DETECT MALFUNCTIONING PART	D
 Check the following. Fuel pump and circuit (Refer to <u>EC-640, "FUEL PUMP"</u>.) Fuel pressure regulator (Refer to <u>EC-80, "FUEL PRESSURE CHECK"</u>.) 	E
Fuel linesFuel filter for clogging	F
>> Repair or replace.	G
6. CHECK MASS AIR FLOW SENSOR	
With CONSULT-II	Η
 Install all removed parts. Check "MASS AIR FLOW" in "DATA MONITOR" mode with CONSULT-II. 	1
2.0 - 6.0 g·m/sec: at idling	
7.0 - 20.0 g⋅m/sec: at 2,500 rpm OK or NG	J
OK >> GO TO 8. NG >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or ground. Refer to <u>EC-186</u> .	K
7. CHECK MASS AIR FLOW SENSOR	
With GST	L
 Install all removed parts. Check mass air flow sensor signal in Service \$01 with GST. 	M
2.0 - 6.0 g⋅m/sec: at idling 7.0 - 20.0 g⋅m/sec: at 2,500 rpm	

OK or NG

OK (P0171)>>GO TO 9.

OK (P0174)>>GO TO 11.

NG >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or ground. Refer to <u>EC-186</u>.

8. CHECK FUNCTION OF FUEL INJECTOR

() With CONSULT-II

- 1. Start engine.
- 2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT-II.
- 3. Make sure that each circuit produces a momentary engine speed drop.

ACTIVE TES	ST	
POWER BALANCE		
MONITOF	1	
ENG SPEED	XXX rpm	
MAS A/F SE-B1	xxx v	
		PBIB0133E

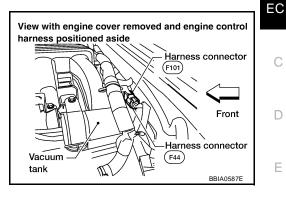

OK or NG

- OK >> GO TO 12.
- NG \rightarrow >> Perform trouble diagnosis for FUEL INJECTOR, refer to <u>EC-633</u>.

9. CHECK FUNCTION OF FUEL INJECTOR-I

Without CONSULT-II

- 1. Stop engine.
- 2. Disconnect harness connector F44, F101
- 3. Turn ignition switch ON.

А

F

Н

Κ

L

Μ

4. Check voltage between harness connector F44 terminal 3 and ground with CONSULT-II or tester.

Voltage: Battery voltage

- 5. Turn ignition switch OFF.
- 6. Disconnect ECM harness connector.
- Check harness continuity between harness connector F44 and ECM as follows.
 Befor to Wiring Diagram

Refer to Wiring Diagram.

Cylinder	Harness connector F44 terminal	ECM terminal
1	2	23
3	1	22
5	4	21

Continuity should exist.

8. Also check harness for short to ground and short to power.

OK or NG

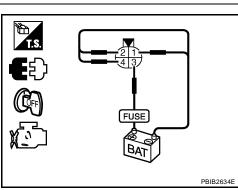

OK >> GO TO 10.

NG >> Perform trouble diagnosis for FUEL INJECTOR, refer to EC-633.

10. CHECK FUNCTION OF FUEL INJECTOR-II

Provide battery voltage between harness connector F101 as follows and then interrupt it. Listen to each fuel injector operating sound.

Cylinder	Harness connector F101 terminal		
Cylinder	(+)	()	
1	3	2	
3	3	1	
5	3	4	

Operating sound should exist.

OK or NG

OK >> GO TO 12.

NG \rightarrow >> Perform trouble diagnosis for FUEL INJECTOR, refer to <u>EC-633</u>.

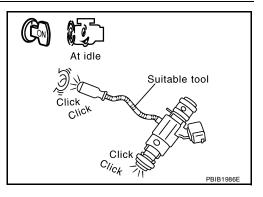

11. CHECK FUNCTION OF FUEL INJECTOR

- 1. Start engine.
- 2. Listen to fuel injectors No.2, No.4, No.6 operating sound.

Clicking noise should exist.

OK or NG

- OK >> GO TO 12.
- NG >> Perform trouble diagnosis for FUEL INJECTOR, refer to $\underline{\text{EC-633}}$.

12. CHECK FUEL INJECTOR

- 1. Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
- 2. Turn ignition switch OFF.
- 3. Disconnect all injector harness connectors.
- 4. Remove fuel tube assembly. Refer to <u>EM-35, "FUEL INJECTOR AND FUEL TUBE"</u>. Keep fuel hose and all fuel injectors connected to fuel tube.
- 5. For DTC P0171, reconnect fuel injector harness connectors on bank 1. For DTC P0174, reconnect fuel injector harness connectors on bank 2.
- 6. Disconnect all ignition coil harness connectors.
- 7. Prepare pans or saucers under each fuel injector.
- Crank engine for about 3 seconds. For DTC P0171, make sure that fuel sprays out from fuel injectors on bank 1. For DTC P0174, make sure that fuel sprays out from fuel injectors on bank 2.

Fuel should be sprayed evenly for each fuel injector.

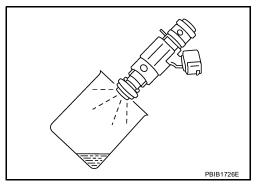

OK or NG

- OK >> GO TO 13.
- NG >> Replace fuel injectors from which fuel does not spray out. Always replace O-ring with new ones.

13. CHECK INTERMITTENT INCIDENT

Refer to EC-144, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> INSPECTION END

On Board Diagnosis Logic

With the Air-Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from the air fuel ratio (A/F) sensor 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios.

In case the amount of the compensation value is extremely large (the actual mixture ratio is too rich.), the ECM judges the condition as the fuel injection system malfunction and lights up the MIL (2 trip detection logic).

Sensor	Input signal to ECM	ECM function	Actuator	
A/F sensor 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)	Fuel injection control	Fuel injector	I

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	E

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- Turn ignition switch ON and select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CON-SULT-II.
- 4. Clear the self-learning control coefficient by touching "CLEAR".
- 5. Select "DATA MONITOR" mode with CONSULT-II.
- Start engine again and let it idle for at least 10 minutes. The 1st trip DTC P0172, P0175 should be detected at this stage, if a malfunction exists. If so, go to <u>EC-323</u>, "<u>Diagnostic Procedure</u>".

NOTE:

If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.

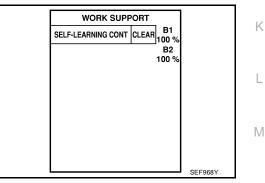

- a. Turn ignition switch OFF and wait at least 10 seconds.
- b. Start engine and drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for a certain time. Refer to the table below.
 Hold the accelerator pedal as steady as possible.

The similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time.

Engine speed	Engine speed in the freeze frame data \pm 400 rpm	
Vehicle speed	Vehicle speed in the freeze frame data \pm 10 km/h (6 MPH)	
Engine coolant temperature (T) condition	When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).	
	When the freeze frame data shows higher than or equal to 70 °C (158 °F), T should be higher than or equal to 70 °C (158 °F).	

7. If it is difficult to start engine at step 6, the fuel injection system has a malfunction, too.

EC-317

А

Ε

F

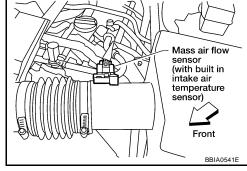

Н

UBS00K7F

 Crank engine while depressing accelerator pedal. If engine starts, go to <u>EC-323</u>, "<u>Diagnostic Procedure</u>". If engine does not start, remove ignition plugs and check for fouling, etc.

WITH GST

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Disconnect mass air flow sensor harness connector. Then restart and run engine for at least 5 seconds at idle speed.
- 4. Stop engine and reconnect mass air flow sensor harness connector.
- 5. Select Service \$03 with GST. Make sure DTC P0102 is detected.
- 6. Select Service \$04 with GST and erase the DTC P0102.
- 7. Start engine again and let it idle for at least 10 minutes.
- Select Service \$07 with GST. The 1st trip DTC P0172 or P0175 should be detected at this stage, if a malfunction exists. If so, go to <u>EC-323</u>, "<u>Diagnostic Procedure</u>".

NOTE:

If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.

- a. Turn ignition switch OFF and wait at least 10 seconds.
- b. Start engine and drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for a certain time. Refer to the table below.

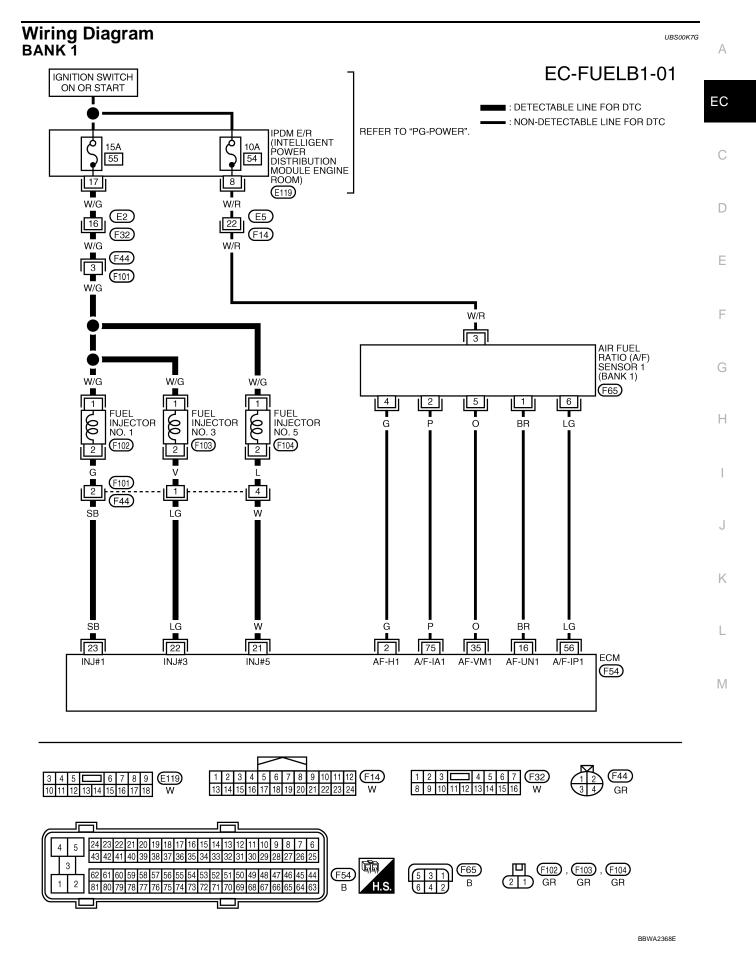

Hold the accelerator pedal as steady as possible.

The similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time.

Engine speed	gine speed Engine speed in the freeze frame data ± 400 rpm	
Vehicle speedVehicle speed in the freeze frame data \pm 10 km/h (6 MPH)		
Engine coolant temperature	When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).	
(T) condition	When the freeze frame data shows higher than or equal to 70 °C (158 °F), T should be higher than or equal to 70 °C (158 °F).	

9. If it is difficult to start engine at step 7, the fuel injection system has a malfunction.

 Crank engine while depressing accelerator pedal. If engine starts, go to <u>EC-323</u>, "<u>Diagnostic Procedure</u>". If engine does not start, remove ignition plugs and check for fouling, etc.

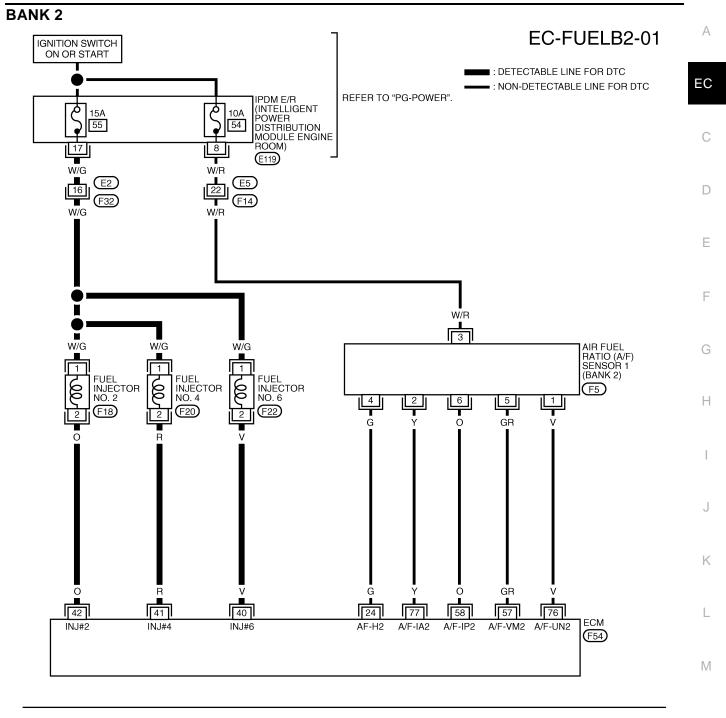

Specification data are reference values and are measured between each terminal and ground. Pulse signal is measured by CONSULT-II.

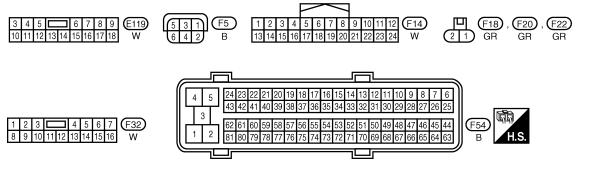

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECMs transistor. Use a ground other than ECM terminals, such as the ground.

>> INSPECTION END

DTC P0181 FTT SENSOR

Component Description

The fuel tank temperature sensor is used to detect the fuel temperature inside the fuel tank. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the fuel temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

<Reference data>

Fluid temperature °C (°F)	Voltage* V	Resistance kΩ
20 (68)	3.5	2.3 - 2.7
50 (122)	2.2	0.79 - 0.90

*: This data is reference value and is measured between ECM terminal 107 (fuel tank temperature sensor) and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0181 0181	Fuel tank temperature sensor circuit range/ performance	Rationally incorrect voltage from the sensor is sent to ECM, compared with the voltage sig- nals from engine coolant temperature sensor and intake air temperature sensor.	 Harness or connectors (The sensor circuit is open or shorted) Fuel tank temperature sensor

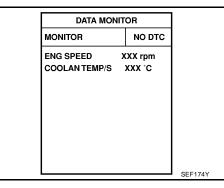

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

B WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- Wait at least 10 seconds. If the result is NG, go to <u>EC-332, "Diagnostic Procedure"</u>. If the result is OK, go to following step.
- Check "COOLAN TEMP/S" value. If "COOLAN TEMP/S" is less than 60°C (140°F), the result will be OK. If "COOLAN TEMP/S" is above 60°C (140°F), go to the following step.
- 5. Cool engine down until "COOLAN TEMP/S" is less than 60°C (140°F).
- 6. Wait at least 10 seconds.
- 7. If 1st trip DTC is detected, go to EC-332, "Diagnostic Procedure" .

UBS00K7N

DTC P0182, P0183 FTT SENSOR

Component Description

The fuel tank temperature sensor is used to detect the fuel temperature inside the fuel tank. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the fuel temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

<Reference data>

Fluid temperature °C (°F)	Voltage* V	Resistance kΩ
20 (68)	3.5	2.3 - 2.7
50 (122)	2.2	0.79 - 0.90

*: This data is reference value and is measured between ECM terminal 107 (fuel tank temperature sensor) and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0182 0182	Fuel tank temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	 Harness or connectors (The sensor circuit is open or shorted.)
P0183 0183	Fuel tank temperature sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	Fuel tank temperature sensor

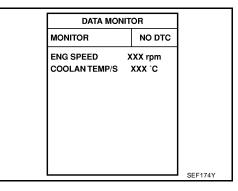

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

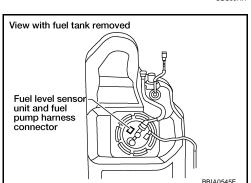

WITH CONSULT-II

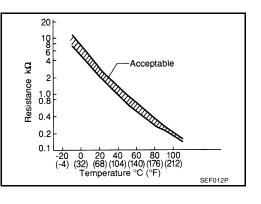

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Wait at least 5 seconds.
- 4. If 1st trip DTC is detected, go to EC-336, "Diagnostic Procedure"

WITH GST

Follow the procedure "WITH CONSULT-II" above.

DTC P0222, P0223 TP SENSOR

Component Description

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN 1	Ignition switch: ON	Accelerator pedal: Fully released	More than 0.36V
THRTL SEN 2*	(Engine stopped)Shift lever: D	Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

DTC No. DTC detecting condition Possible cause Trouble diagnosis name P0222 Throttle position sensor An excessively low voltage from the TP sensor • Harness or connectors 0222 1 circuit low input 1 is sent to ECM. (The TP sensor 1 circuit is open or shorted.) (The APP sensor 2 circuit is shorted.) Electric throttle control actuator P0223 An excessively high voltage from the TP sen-Throttle position sensor (TP sensor 1) 1 circuit high input sor 1 is sent to ECM. 0223 Accelerator pedal position sensor. (APP sensor 2)

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

UBS00K7X

DTC Confirmation Procedure

NOTE:

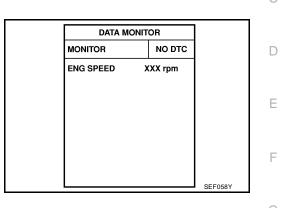

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

(P) WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Start engine and let it idle for 1 second.
- 4. If DTC is detected, go to EC-341, "Diagnostic Procedure" .

WITH GST

Follow the procedure "WITH CONSULT-II" above.

Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .

UBS00K83

DTC P0300 - P0306 MULTIPLE CYLINDER MISFIRE, NO. 1 - 6 CYLINDER MIS-FIRE

On Board Diagnosis Logic

When a misfire occurs, engine speed will fluctuate. If the engine speed fluctuates enough to cause the crank-shaft position (CKP) sensor (POS) signal to vary, ECM can determine that a misfire is occurring.

Sensor	Input Signal to ECM	ECM function	
Crankshaft position sensor (POS)	Engine speed	On board diagnosis of misfire	С

The misfire detection logic consists of the following two conditions.

1. One Trip Detection Logic (Three Way Catalyst Damage)

On the first trip that a misfire condition occurs that can damage the three way catalyst (TWC) due to overheating, the MIL will blink.

When a misfire condition occurs, the ECM monitors the CKP sensor signal every 200 engine revolutions for a change.

When the misfire condition decreases to a level that will not damage the TWC, the MIL will turn off. If another misfire condition occurs that can damage the TWC on a second trip, the MIL will blink. When the misfire condition decreases to a level that will not damage the TWC, the MIL will remain on. If another misfire condition occurs that can damage the TWC, the MIL will begin to blink again.

2. Two Trip Detection Logic (Exhaust quality deterioration)

For misfire conditions that will not damage the TWC (but will affect vehicle emissions), the MIL will only light when the misfire is detected on a second trip. During this condition, the ECM monitors the CKP sensor signal every 1,000 engine revolutions.

A misfire malfunction can be detected on any one cylinder or on multiple cylinders.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0300 0300	Multiple cylinder misfire detected	Multiple cylinder misfire.	Improper spark plug
P0301 0301	No.1 cylinder misfire detected	No. 1 cylinder misfires.	Insufficient compressionIncorrect fuel pressure
P0302 0302	No. 2 cylinder misfire detected	No. 2 cylinder misfires.	The fuel injector is open or shortedFuel injector
P0303 0303	No. 3 cylinder misfire detected	No. 3 cylinder misfires.	Intake air leakThe ignition signal circuit is open or
P0304 0304	No. 4 cylinder misfire detected	No. 4 cylinder misfires.	shorted • Lack of fuel
P0305 0305	No. 5 cylinder misfire detected	No. 5 cylinder misfires.	Signal plateAir fuel ratio (A/F) sensor 1
P0306 0306	No. 6 cylinder misfire detected	No. 6 cylinder misfires.	Incorrect PCV hose connection

DTC Confirmation Procedure

CAUTION:

Always drive vehicle in safe manner according to traffic conditions and obey all traffic laws when driving.

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

А

Е

F

Н

B WITH CONSULT-II

- 1. Turn ignition switch ON, and select "DATA MONITOR" mode with CONSULT-II.
- 2. Start engine and warm it up to normal operating temperature.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Restart engine and let it idle for about 15 minutes.
- 5. If 1st trip DTC is detected, go to EC-346, "Diagnostic Procedure"

NOTE:

If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.

- a. Turn ignition switch OFF and wait at least 10 seconds.
- b. Start engine and drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for a certain time. Refer to the table below.

Hold the accelerator pedal as steady as possible.

The similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time.

Engine speed	Engine speed in the freeze frame data \pm 400 rpm	
Vehicle speed	Vehicle speed in the freeze frame data \pm 10 km/h (6 MPH)	
Engine coolant temperature	When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).	
(T) condition	When the freeze frame data shows higher than or equal to 70 °C (158 °F), T should be higher than or equal to 70 °C (158 °F).	

The time to driving varies according to the engine speed in the freeze frame data.

Engine speed	Time	
Around 1,000 rpm	Approximately 10 minutes	
Around 2,000 rpm	Approximately 5 minutes	
More than 3,000 rpm	Approximately 3.5 minutes	

WITH GST

Follow the procedure "WITH CONSULT-II" above.

Diagnostic Procedure

1. CHECK FOR INTAKE AIR LEAK AND PCV HOSE

- 1. Start engine and run it at idle speed.
- 2. Listen for the sound of the intake air leak.
- 3. Check PCV hose connection.

OK or NG

OK >> GO TO 2.

NG >> Discover air leak location and repair.

2. CHECK FOR EXHAUST SYSTEM CLOGGING

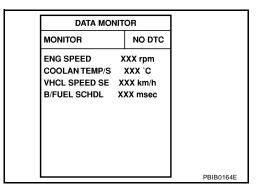

Stop engine and visually check exhaust tube, three way catalyst and muffler for dents.

OK or NG

OK (With CONSULT-II)>>GO TO 3.

OK (Without CONSULT-II)>>GO TO 4.

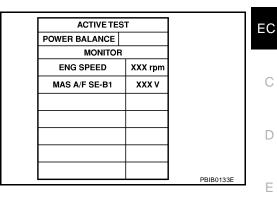

NG >> Repair or replace it.

3. PERFORM POWER BALANCE TEST

With CONSULT-II

- 1. Perform "POWER BALANCE" in "ACTIVE TEST" mode.
- 2. Is there any cylinder which does not produce a momentary engine speed drop?

Yes or No

Yes >> GO TO 4. No >> GO TO 10.

4. CHECK FUNCTION OF FUEL INJECTOR-I

Stop engine.

- 1. Disconnect harness connector F44, F101.
- 2. Turn ignition switch ON.

Voltage: Battery voltage

- 4. Turn ignition switch OFF.
- 5. Disconnect ECM harness connector.
- Check harness continuity between harness connector F44 and ECM as follows.
 Befor to Wiring Diagram

Relei	to winnig	Diagram.	

Cylinder	Harness connector F44 terminal	ECM terminal	
1	2	23	
3	1	22	
5	4	21	

Continuity should exist.

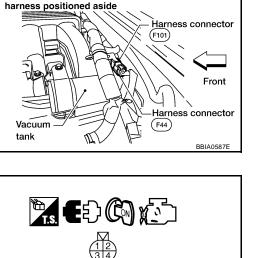

7. Also check harness for short to ground and short to power.

OK or NG

5. CHECK FUNCTION OF FUEL INJECTOR-II

Provide battery voltage between harness connector F101 as follows and then interrupt it. Listen to each fuel injector operating sound.

Cylinder	Harness connector F101 terminal		
Cyllider	(+)	()	
1	3	2	
3	3	1	
5	3	4	

Operating sound should exist.

OK or NG

OK >> GO TO 6.

NG \rightarrow Perform trouble diagnosis for FUEL INJECTOR, refer to <u>EC-633</u>.

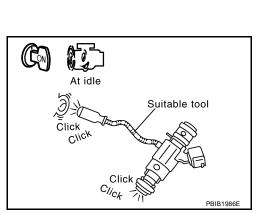

6. CHECK FUNCTION OF FUEL INJECTOR-III

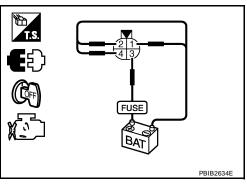

- 1. Reconnect all harness connector disconnected.
- 2. Start engine.
- 3. Listen to fuel injectors No. 2, No. 4, No.6 operating sound.

Clicking noise should exist.

OK or NG

- OK >> GO TO 7.
- NG >> Perform trouble diagnosis for FUEL INJECTOR, refer to $\underline{\text{EC-633}}$.

/. CHECK FUNCTION OF IGNITION COIL-I

CAUTION:

Do the following procedure in the place where ventilation is good without the combustible.

- 1. Turn ignition switch OFF.
- 2. Remove fuel pump fuse in IPDM E/R to release fuel pressure. NOTE:

Do not use CONSULT-II to release fuel pressure, or fuel pressure applies again during the following procedure.

- 3. Start engine.
- 4. After engine stalls, crank it two or three times to release all fuel pressure.
- 5. Turn ignition switch OFF.
- Remove all ignition coil harness connectors to avoid the electrical discharge from the ignition coils.
- 7. Remove ignition coil and spark plug of the cylinder to be checked.
- 8. Crank engine for five seconds or more to remove combustion gas in the cylinder.
- Connect spark plug and harness connector to ignition coil.
- 10. Fix ignition coil using a rope etc. with gap of 13 17 mm between the edge of the spark plug and grounded metal portion as shown in the figure.
- 11. Crank engine for about three seconds, and check whether spark is generated between the spark plug and the grounded metal portion.

Spark should be generated.

CAUTION:

- Do not approach to the spark plug and the ignition coil within 50cm. Be careful not to get an electrical shock while checking, because the electrical discharge voltage becomes 20kV or more.
- It might cause to damage the ignition coil if the gap of more than 17 mm is taken. NOTE:

When the gap is less than 13 mm, the spark might be generated even if the coil is malfunctioning.

OK or NG

OK >> GO TO 11. NG >> GO TO 8.

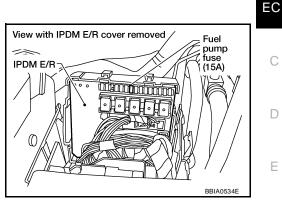

8. CHECK FUNCTION OF IGNITION COIL-II

- 1. Turn ignition switch OFF.
- 2. Disconnect spark plug and connect a known-good spark plug.
- Crank engine for about three seconds, and recheck whether spark is generated between the spark plug 3. and the grounded metal portion.

Spark should be generated.

OK or NG

- OK >> GO TO 9.
- NG >> Check ignition coil, power transistor and their circuits. Refer to EC-646.

А

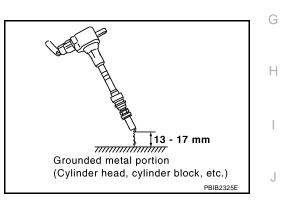

Ε

F

Κ

L

Μ

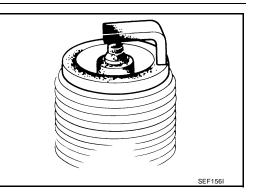

9. CHECK SPARK PLUG

Check the initial spark plug for fouling, etc.

OK or NG

- OK >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to <u>MA-19, "Changing Spark Plugs"</u>
- NG >> 1. Repair or clean spark plug. 2. GO TO 10.

10. CHECK FUNCTION OF IGNITION COIL-III

- 1. Reconnect the initial spark plugs.
- 2. Crank engine for about three seconds, and recheck whether spark is generated between the spark plug and the grounded portion.

Spark should be generated.

OK or NG

OK >> INSPECTION END

NG >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to <u>MA-19</u>, "<u>Changing</u> <u>Spark Plugs</u>".

11. CHECK COMPRESSION PRESSURE

Check compression pressure. Refer to EM-92, "CHECKING COMPRESSION PRESSURE" .

OK or NG

OK >> GO TO 12.

NG >> Check pistons, piston rings, valves, valve seats and cylinder head gaskets.

12. CHECK FUEL PRESSURE

- 1. Install all removed parts.
- 2. Release fuel pressure to zero. Refer to EC-79, "FUEL PRESSURE RELEASE" .
- 3. Install fuel pressure gauge and check fuel pressure. Refer to EC-80, "FUEL PRESSURE CHECK" .

At idle: Approx. 350 kPa (3.57 kg/cm², 51 psi)

OK or NG

OK >> GO TO 14. NG >> GO TO 13.

13. DETECT MALFUNCTIONING PART

Check the following.

- Fuel pump and circuit (Refer to EC-640, "FUEL PUMP" .)
- Fuel pressure regulator (Refer to EC-80, "FUEL PRESSURE CHECK" .)
- Fuel lines
- Fuel filter for clogging

>> Repair or replace.

11			
14. CHECK IGNITION TIMING			
Check the followin	g items. Refer to EC-70, "Basic Inspection" .		
Items	Specifications	EC	
Target idle speed	625 ± 50 rpm (in P or N position)		
Ignition timing	$15 \pm 5^{\circ}$ BTDC (in P or N position)

DTC P0327, P0328, P0332, P0333 KS

Component Description

The knock sensor is attached to the cylinder block. It senses engine knocking using a piezoelectric element. A knocking vibration from the cylinder block is sensed as vibrational pressure. This pressure is converted into a voltage signal and sent to the ECM.

On Board Diagnosis Logic

The MIL will not light up for these diagnoses.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0327 0327 (Bank 1)	Knock sensor circuit low	An excessively low voltage from the sensor	
P0332 0332 (Bank 2)	input	is sent to ECM.	 Harness or connectors (The sensor circuit is open or shorted.)
P0328 0328 (Bank 1)	Knock sensor circuit high	An excessively high voltage from the sensor	Knock sensor
P0333 0333 (Bank 2)	input	is sent to ECM.	

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

- 1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-II.
- 2. Start engine and run it for at least 5 seconds at idle speed.
- 3. If 1st trip DTC is detected, go to EC-356, "Diagnostic Procedure"

DTC P0335 CKP SENSOR (POS)

Component Description

The crankshaft position sensor (POS) is located on the oil pan facing the gear teeth (cogs) of the signal plate. It detects the fluctuation of the engine revolution.

The sensor consists of a permanent magnet and Hall IC.

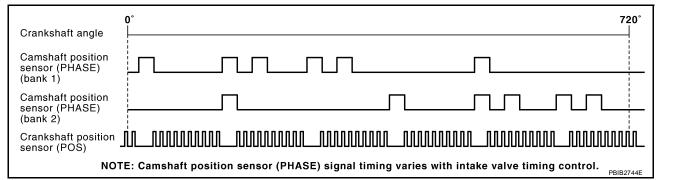

When the engine is running, the high and low parts of the teeth cause the gap with the sensor to change.

The changing gap causes the magnetic field near the sensor to change.

Due to the changing magnetic field, the voltage from the sensor changes.

The ECM receives the voltage signal and detects the fluctuation of the engine revolution.

ECM receives the signals as shown in the figure.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION

DTC P0340, P0345 CMP SENSOR (PHASE)

Component Description

The camshaft position sensor (PHASE) senses the retraction of intake valve camshaft to identify a particular cylinder. The camshaft position sensor (PHASE) senses the piston position.

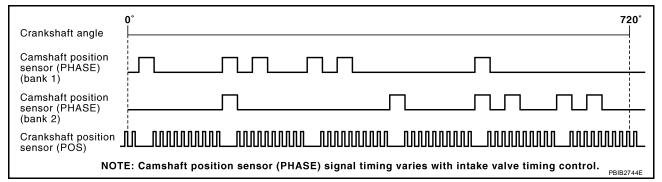

When the crankshaft position sensor (POS) system becomes inoperative, the camshaft position sensor (PHASE) provides various controls of engine parts instead, utilizing timing of cylinder identification signals.

The sensor consists of a permanent magnet and Hall IC.

When engine is running, the high and low parts of the teeth cause the gap with the sensor to change.

The changing gap causes the magnetic field near the sensor to change.

Due to the changing magnetic field, the voltage from the sensor changes. ECM receives the signals as shown in the figure.

DTC P0420, P0430 THREE WAY CATALYST FUNCTION

On Board Diagnosis Logic

The ECM monitors the switching frequency ratio of air fuel ratio (A/F) sensor 1 and heated oxygen sensor 2.

A three way catalyst (manifold) with high oxygen storage capacity will indicate a low switching frequency of heated oxygen sensor 2. As oxygen storage capacity decreases, the heated oxygen sensor 2 switching frequency will increase.

When the frequency ratio of air fuel ratio (A/F) sensor 1 and heated oxygen sensor 2 approaches a specified limit value, the three way catalyst (manifold) malfunction is diagnosed.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause

5. CHECK FUEL INJECTOR

- 1. Stop engine and then turn ignition switch ON.
- Check voltage between ECM terminals 21, 22, 23, 40, 41, 42 and ground with CONSULT-II or tester. Refer to Wiring Diagram for FUEL INJECTOR, <u>EC-634</u>.

Battery voltage should exist.

OK or NG

- OK >> GO TO 6.
- NG >> Perform <u>EC-635</u>, "Diagnostic Procedure" .

6. CHECK FUNCTION OF IGNITION COIL-I

CAUTION:

Do the following procedure in the place where ventilation is good without the combustible.

- 1. Turn ignition switch OFF.
- 2. Remove fuel pump fuse in IPDM E/R to release fuel pressure. **NOTE:**

Do not use CONSULT-II to release fuel pressure, or fuel pressure applies again during the following procedure.

- 3. Start engine.
- 4. After engine stalls, crank it two or three times to release all fuel pressure.
- 5. Turn ignition switch OFF.
- 6. Remove all ignition coil harness connectors to avoid the electrical discharge from the ignition coils.
- 7. Remove ignition coil and spark plug of the cylinder to be checked.
- 8. Crank engine for five seconds or more to remove combustion gas in the cylinder.
- 9. Connect spark plug and harness connector to ignition coil.
- 10. Fix ignition coil using a rope etc. with gap of 13 17 mm between the edge of the spark plug and grounded metal portion as shown in the figure.
- 11. Crank engine for about three seconds, and check whether spark is generated between the spark plug and the grounded metal portion.

Spark should be generated.

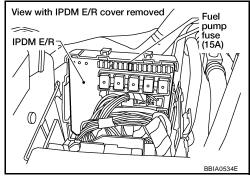

CAUTION:

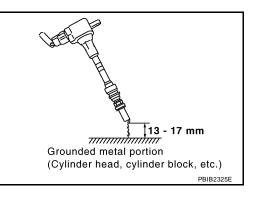

- Do not approach to the spark plug and the ignition coil within 50cm. Be careful not to get an electrical shock while checking, because the electrical discharge voltage becomes 20kV or more.
- It might cause to damage the ignition coil if the gap of more than 17 mm is taken. NOTE:

When the gap is less than 13 mm, the spark might be generated even if the coil is malfunctioning. OK or NG

OK >> GO TO 10.

NG >> GO TO 7.

 Disconnect spark plug and connect a known-good spark plug. Crank engine for about three seconds, and recheck whether spark is generated between the and the grounded metal portion. 	
	ne spark plug
Spark should be generated.	
<u>DK or NG</u> OK >> GO TO 8. NG >> Check ignition coil, power transistor and their circuits. Refer to <u>EC-646</u> .	
3. CHECK SPARK PLUG	
Check the initial spark plug for fouling, etc.	<u> </u>
OK >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to MA-19, "Changing Spark Plugs"	5
NG >> 1. Repair or clean spark plug. 2. GO TO 9.

9. CHECK FUNCTION OF IGNITION COIL-III	0211001
1. Reconnect the initial spark plugs.	
 Crank engine for about three seconds, and recheck whether spark is generated between the and the grounded portion. 	ne spark plug
Spark should be generated.	
OK >> INSPECTION END NG >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to MA-1 Spark Plugs" .	<u>9, "Changing</u>
10. CHECK FUEL INJECTOR	
 Turn ignition switch OFF. Remove fuel injector assembly. Refer to <u>EM-35, "FUEL INJECTOR AND FUEL TUBE"</u>. Keep fuel hose and all fuel injectors connected to fuel tube. 	
3. Reconnect all fuel injector harness connectors.	
4. Disconnect all ignition coil harness connectors.	
5. Turn ignition switch ON.	
Make sure fuel does not drip from fuel injector.	
Make sure fuel does not drip from fuel injector. <u>OK or NG</u>	

11. CHECK INTERMITTENT INCIDENT

Refer to EC-144, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

Trouble is fixed.>>INSPECTION END

Trouble is not fixed.>>Replace three way catalyst (manifold).

System Description

PFP:14950

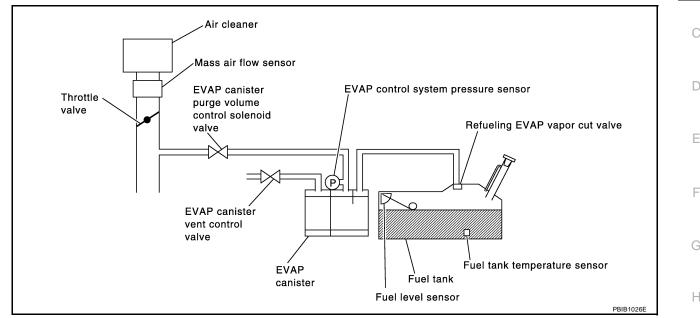

UBS00K8Z

Κ

А

NOTE:

If DTC P0441 is displayed with other DTC such as P2122, P2123, P2127, P2128 or P2138, first perform trouble diagnosis for other DTC.

In this evaporative emission (EVAP) control system, purge flow occurs during non-closed throttle conditions. Purge volume is related to air intake volume. Under normal purge conditions (non-closed throttle), the EVAP canister purge volume control solenoid valve is open to admit purge flow. Purge flow exposes the EVAP control system pressure sensor to intake manifold vacuum.

On Board Diagnosis Logic

Under normal conditions (non-closed throttle), sensor output voltage indicates if pressure drop and purge flow are adequate. If not, a malfunction is determined.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	-	
			 EVAP canister purge volume control solenoid valve stuck closed 	-	
			 EVAP control system pressure sensor and the circuit 		
		EVAP control system does not operate prop-	 Loose, disconnected or improper con- nection of rubber tube 		
P0441	EVAP control system	erly, EVAP control system has a leak between intake manifold and EVAP control system pres- sure sensor.	 Blocked rubber tube 		
0441	incorrect purge flow		 Cracked EVAP canister 		
				 EVAP canister purge volume control solenoid valve circuit 	
			 Accelerator pedal position sensor 		
			 Blocked purge port 		
			 EVAP canister vent control valve 		

DTC Confirmation Procedure

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test. **TESTING CONDITION:**

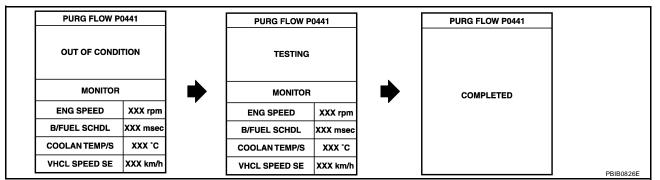

LIBS00K90

Always perform test at a temperature of 5°C (41°F) or more.

WITH CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Start engine and let it idle for at least 70 seconds.
- 4. Select "PURG FLOW P0441" of "EVAPORATIVE SYSTEM" in "DTC CONFIRMATION" mode with CON-SULT-II.
- 5. Touch "START".
 - If "COMPLETED" is displayed, go to step 7.
- 6. When the following conditions are met, "TESTING" will be displayed on the CONSULT-II screen. Maintain the conditions continuously until "TESTING" changes to "COMPLETED". (It will take at least 35 seconds.)

Selector lever	Suitable position
VHCL SPEED SE	32 - 120 km/h (20 - 75 MPH)
ENG SPEED	500 - 3,000 rpm
B/FUEL SCHDL	1.3 - 9.0 msec
COOLAN TEMP/S	70 - 100°C (158 - 212°F)

If "TESTING" is not changed for a long time, retry from step 2.

7. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS". If "NG" is displayed, refer to <u>EC-</u> <u>383, "Diagnostic Procedure"</u>.

Overall Function Check

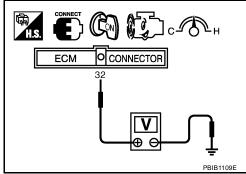

UBS00K91

Use this procedure to check the overall monitoring function of the EVAP control system purge flow monitoring. During this check, a 1st trip DTC might not be confirmed.

WITH GST

- 1. Lift up drive wheels.
- 2. Start engine (TCS switch or VDC switch OFF) and warm it up to normal operating temperature.
- 3. Turn ignition switch OFF, wait at least 10 seconds.
- 4. Start engine and wait at least 70 seconds.
- 5. Set voltmeter probes to ECM terminals 32 (EVAP control system pressure sensor signal) and ground.
- 6. Check EVAP control system pressure sensor value at idle speed and note it.
- 7. Establish and maintain the following conditions for at least 1 minute.

Air conditioner switch	ON
Headlamp switch	ON
Rear window defogger switch	ON
Engine speed	Approx. 3,000 rpm
Gear position	Any position other than P, N or R

- Verify that EVAP control system pressure sensor value stays 0.1V less than the value at idle speed (mea-8. sured at step 6) for at least 1 second.
- 9. If NG, go to EC-383, "Diagnostic Procedure".

Diagnostic Procedure

1. CHECK EVAP CANISTER

- Turn ignition switch OFF. 1.
- 2. Check EVAP canister for cracks.

OK or NG

OK (With CONSULT-II)>>GO TO 2. OK (Without CONSULT-II)>>GO TO 3. NG >> Replace EVAP canister.

2. CHECK PURGE FLOW

(P) With CONSULT-II

1. Disconnect vacuum hose connected to EVAP canister purge volume control solenoid valve at EVAP service port and install vacuum gauge. For the location of EVAP service port, refer to EC-33, "EVAPORATIVE EMISSION LINE DRAWING" .

2. Start engine and let it idle.

- Select "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II.
- 4. Rev engine up to 2,000 rpm.
- Touch "Qd" and "Qu" on CONSULT-II screen to adjust "PURG 5. VOL CONT/V" opening and check vacuum existence.

On Board Diagnosis Logic

Throttle

This diagnosis detects leaks in the EVAP purge line using engine intake manifold vacuum.

Air cleaner

EVAP canister

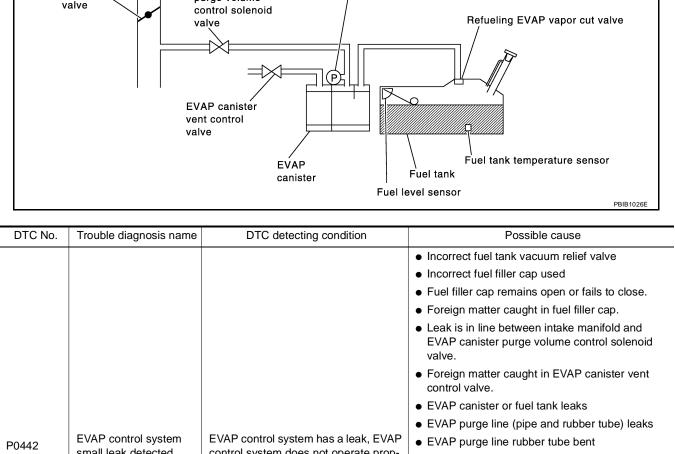

purge volume

Mass air flow sensor

If pressure does not increase, the ECM will check for leaks in the line between the fuel tank and EVAP canister purge volume control solenoid valve, under the following Vacuum test conditions.

The EVAP canister vent control valve is closed to shut the EVAP purge line off. The EVAP canister purge volume control solenoid valve will then be opened to depressurize the EVAP purge line using intake manifold vacuum. After this occurs, the EVAP canister purge volume control solenoid valve will be closed.

CAUTION:

- Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, А the MIL may come on.
- If the fuel filler cap is not tightened properly, the MIL may come on.
- Use only a genuine NISSAN rubber tube as a replacement.

DTC Confirmation Procedure

NOTE:

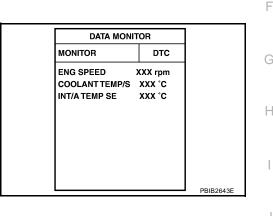

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

- Perform "DTC WORK SUPPORT" when the fuel level is between 1/4 and 3/4 full, and vehicle is placed on flat level surface.
- Always perform test at a temperature of 0 to 30°C (32 to 86°F).

WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-II.

- 4. Make sure that the following conditions are met. COOLAN TEMP/S: 0 - 70°C (32 - 158°F) INT/A TEMP SE: 0 - 30°C (32 - 86°F)
- Κ 5. Select "EVP SML LEAK P0442/P1442" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-II.

Follow the instruction displayed.

6. Make sure that "OK" is displayed. If "NG" is displayed, refer to EC-388, "Diagnostic Procedure". NOTE: Make sure that EVAP hoses are connected to EVAP canister purge volume control solenoid valve properly. SELF-DIAG RESULTS NO DTC DETECTED. FURTHER TESTING MAY BE REQUIRED. SEC763C

WITH GST

NOTE:

Be sure to read the explanation of EC-57, "Driving Pattern" before driving vehicle.

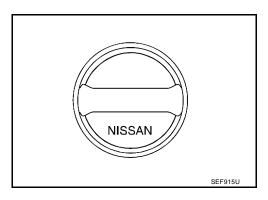

- 1. Start engine.
- 2. Drive vehicle according to EC-57, "Driving Pattern" .
- 3. Stop vehicle.
- 4. Turn ignition switch OFF, wait at least 10 seconds, and then turn ON.
- 5. Select Service \$07 with GST.
- If P0442 is displayed on the screen, go to <u>EC-388, "Diagnostic Procedure"</u>.
- If P0441 is displayed on the screen, go to <u>EC-383, "Diagnostic Procedure"</u>.

Diagnostic Procedure

- 1. CHECK FUEL FILLER CAP DESIGN
- 1. Turn ignition switch OFF.
- 2. Check for genuine NISSAN fuel filler cap design.

OK or NG

- OK >> GO TO 2.
- NG >> Replace with genuine NISSAN fuel filler cap.

2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

- OK or NG
- OK >> GO TO 3.
- NG >> 1. Open fuel filler cap, then clean cap and fuel filler neck threads using air blower.
 - 2. Retighten until ratcheting sound is heard.

3. CHECK FUEL FILLER CAP FUNCTION

Check for air releasing sound while opening the fuel filler cap.

OK or NG

OK >> GO TO 5. NG >> GO TO 4. UBS00K95

4. CHECK FUEL TANK VACUUM RELIEF VALVE

Refer to EC-35, "FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FULLER CAP)" .

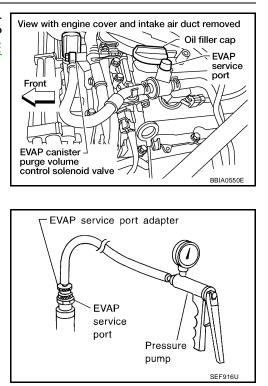

OK or NG

OK >> GO TO 5.

NG >> Replace fuel filler cap with a genuine one.

5. INSTALL THE PRESSURE PUMP

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely. For the location of EVAP service port, refer to <u>EC-33</u>, "EVAPORATIVE EMISSION LINE DRAWING".

NOTE: Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.

6. CHECK FOR EVAP LEAK

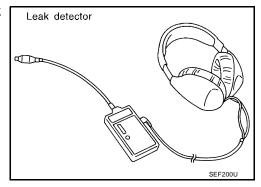

(P) With CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "EVAP SYSTEM CLOSE" of "WORK SUPPORT" mode with CONSULT-II.
- 3. Touch "START" and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.

CAUTION:

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm², 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to EC-33, "EVAPORATIVE EMISSION LINE DRAWING" .

OK or NG

- OK >> GO TO 8.
- NG >> Repair or replace.

1. CHECK FOR EVAP LEAK

Without CONSULT-II

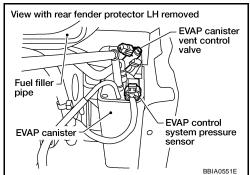

- Turn ignition switch OFF.
- Apply 12 volts DC to EVAP canister vent control valve. The 2. valve will close. (Continue to apply 12 volts until the end of test.)
- Pressurize the EVAP line using pressure pump with 1.3 to 2.7 3. kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

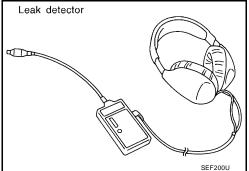

CAUTION:

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm², 0.6 psi) of pressure in the system.
- 4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to EC-33, "EVAPORATIVE EMISSION LINE DRAWING" .

OK or NG

- >> GO TO 8. OK
- NG >> Repair or replace.

8. CHECK EVAP CANISTER VENT CONTROL VALVE

Check the following.

- EVAP canister vent control valve is installed properly. Refer to <u>EC-36, "Removal and Installation"</u>.
- EVAP canister vent control valve. Refer to <u>EC-414, "Component Inspection"</u>.

OK or NG

OK >> GO TO 9.

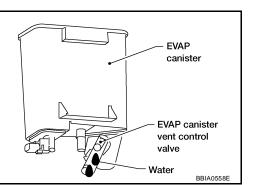

NG >> Repair or replace EVAP canister vent control valve and O-ring.

9. CHECK IF EVAP CANISTER SATURATED WITH WATER

- 1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
- 2. Does water drain from the EVAP canister?

Fuel tank temperature sensor	Fuel temperature in fuel tank		
Wheel sensor	Vehicle speed* ²		

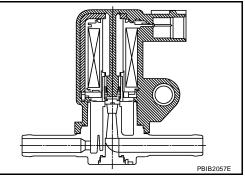

*1: ECM determines the start signal status by the signals of engine speed and battery voltage.

*2: This signal is sent to the ECM through CAN communication line.

This system controls flow rate of fuel vapor from the EVAP canister. The opening of the vapor by-pass passage in the EVAP canister purge volume control solenoid valve changes to control the flow rate. The EVAP canister purge volume control solenoid valve repeats ON/OFF operation according to the signal sent from the ECM. The opening of the valve varies for optimum engine control. The optimum value stored in the ECM is determined by considering various engine conditions. When the engine is operating, the flow rate of fuel vapor from the EVAP canister is regulated as the air flow changes.

COMPONENT DESCRIPTION

The EVAP canister purge volume control solenoid valve uses a ON/ OFF duty to control the flow rate of fuel vapor from the EVAP canister. The EVAP canister purge volume control solenoid valve is moved by ON/OFF pulses from the ECM. The longer the ON pulse, the greater the amount of fuel vapor that will flow through the valve.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

Diagnostic Procedure

UBS00KFL

1. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE POWER SUPPLY CIR-CUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect EVAP canister purge volume control solenoid valve harness connector.
- 3. Turn ignition switch ON.

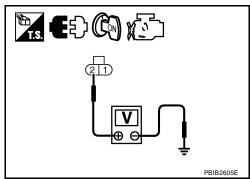

4. Check voltage between EVAP canister purge volume control solenoid valve terminal 2 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 3. NG >> GO TO 2.

2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E2, F32
- Harness for open or short between EVAP canister purge volume control solenoid valve and IPDM E/R
- Harness for open or short between EVAP canister purge volume control solenoid valve and ECM

>> Repair harness or connectors.

$3. \ \mbox{check evap canister purge volume control solenoid valve output signal circuit for open and short$

- 1. Turn ignition switch OFF.
- 2. Disconnect ECM harness connector.
- 3. Check harness continuity between ECM terminal 45 and EVAP canister purge volume control solenoid valve terminal 1. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 4.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CON	NECTOR
 Disconnect EVAP control system pressure sensor harness conne Check connectors for water. 	A
Water should not exist.	EC

DTC P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Description SYSTEM DESCRIPTION

UBS00K96

Sensor	Input signal to ECM	ECM function	Actuator	
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed ^{*1}			
Mass air flow sensor	Amount of intake air	_		
Engine coolant temperature sensor	Engine coolant temperature			
Battery	Battery voltage*1		EVAP canister purge vol- ume control solenoid valve	
Throttle position sensor	Throttle position	EVAP canister		
Accelerator pedal position sensor	Accelerator pedal position			
Air fuel ratio (A/F) sensor 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)			
Fuel tank temperature sensor	Fuel temperature in fuel tank			
Wheel sensor	Vehicle speed* ²			

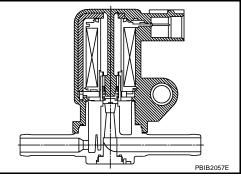

*1: ECM determines the start signal status by the signals of engine speed and battery voltage.

*2: This signal is sent to the ECM through CAN communication line.

This system controls flow rate of fuel vapor from the EVAP canister. The opening of the vapor by-pass passage in the EVAP canister purge volume control solenoid valve changes to control the flow rate. The EVAP canister purge volume control solenoid valve repeats ON/OFF operation according to the signal sent from the ECM. The opening of the valve varies for optimum engine control. The optimum value stored in the ECM is determined by considering various engine conditions. When the engine is operating, the flow rate of fuel vapor from the EVAP canister is regulated as the air flow changes.

COMPONENT DESCRIPTION

The EVAP canister purge volume control solenoid valve uses a ON/ OFF duty to control the flow rate of fuel vapor from the EVAP canister. The EVAP canister purge volume control solenoid valve is moved by ON/OFF pulses from the ECM. The longer the ON pulse, the greater the amount of fuel vapor that will flow through the valve.

UBS00K9D

DTC P0447 EVAP CANISTER VENT CONTROL VALVE

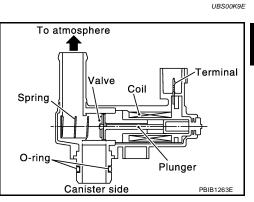

Component Description

The EVAP canister vent control valve is located on the EVAP canister and is used to seal the canister vent.

This solenoid valve responds to signals from the ECM. When the ECM sends an ON signal, the coil in the solenoid valve is energized. A plunger will then move to seal the canister vent. The ability to seal the vent is necessary for the on board diagnosis of other evaporative emission control system components.

This solenoid valve is used only for diagnosis, and usually remains opened.

When the vent is closed, under normal purge conditions, the evaporative emission control system is depressurized and allows EVAP Control System diagnosis.

Component Inspection EVAP CONTROL SYSTEM PRESSURE SENSOR

- 1. Remove EVAP control system pressure sensor with its harness connector connected from EVAP canister. **Do not reuse the O-ring, replace it with a new one.**
- 2. Install a vacuum pump to EVAP control system pressure sensor.
- 3. Turn ignition switch ON and check output voltage between ECM terminal 32 and ground under the following conditions.

Applied vacuum kPa (mmHg, inHg)	Voltage V
Not applied	1.8 - 4.8
-26.7 (-200, -7.87)	2.1 to 2.5V lower than above value

CAUTION:

- Always calibrate the vacuum pump gauge when using it.
- Do not apply below -93.3 kPa (-700 mmHg, -27.56 inHg) or pressure over 101.3 kPa (760 mmHg, 29.92 inHg).
- 4. If NG, replace EVAP control system pressure sensor.

UBS00K9Q

DTC P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

Component Description

The EVAP control system pressure sensor detects pressure in the purge line. The sensor output voltage to the ECM increases as pressure increases.

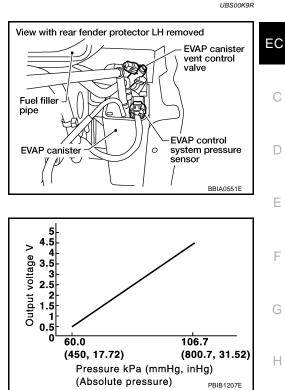

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION	J
EVAP SYS PRES	Ignition switch: ON	Approx. 1.8 - 4.8V	

On Board Diagnosis Logic

If DTC P0452 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to <u>EC-479, "DTC P0643 SENSOR POWER SUPPLY"</u>.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	L
P0452 0452	EVAP control system pressure sensor low input	An excessively low voltage from the sensor is sent to ECM.	 Harness or connectors (The sensor circuit is open or shorted.) EVAP control system pressure sensor 	M

DTC Confirmation Procedure

NOTE:

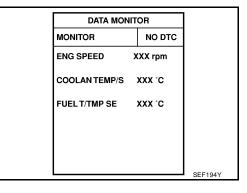

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Always perform test at a temperature of 5°C (41°F) or more.

WITH CONSULT-II

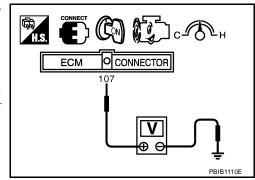

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF and wait at least 10 seconds.
- 3. Turn ignition switch ON.
- 4. Select "DATA MONITOR" mode with CONSULT-II.
- 5. Make sure that "FUEL T/TMP SE" is more than 0°C (32°F).
- Start engine and wait at least 20 seconds. If 1st trip DTC is detected, go to <u>EC-428</u>, "Diagnostic Procedure"

WITH GST

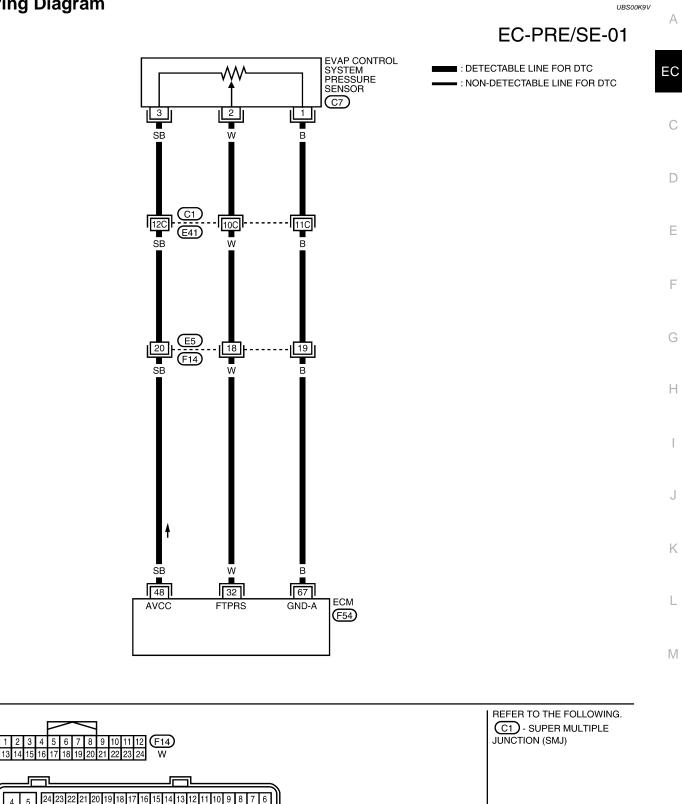

.

- 1. Start engine and warm it up to normal operating temperature.
- 2. Check that voltage between ECM terminal 107 (Fuel tank temperature sensor signal) and ground is less than 4.2V.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Start engine and wait at least 20 seconds.
- Select Service \$07 with GST. If 1st trip DTC is detected, go to <u>EC-428</u>, "Diagnostic Procedure"

Component Inspection EVAP CONTROL SYSTEM PRESSURE SENSOR

UBS00KA4

- 1. Remove EVAP control system pressure sensor with its harness connector connected from EVAP canister. Always replace O-ring with a new one.
- 2. Install a vacuum pump to EVAP control system pressure sensor.
- 3. Turn ignition switch ON and check output voltage between ECM terminal 32 and ground under the following conditions.

Applied vacuum kPa (mmHg, inHg)	Voltage V	
Not applied	1.8 - 4.8	
-26.7 (-200, -7.87)	2.1 to 2.5V lower than above value	

CAUTION:

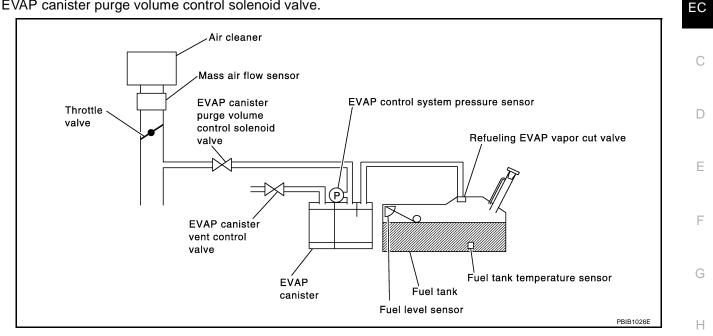

- Always calibrate the vacuum pump gauge when using it.
- Do not apply below -93.3 kPa (-700 mmHg, -27.56 inHg) or pressure over 101.3 kPa (760 mmHg, 29.92 inHg).
- 4. If NG, replace EVAP control system pressure sensor.

DTC P0455 EVAP CONTROL SYSTEM

On Board Diagnosis Logic

This diagnosis detects a very large leak (fuel filler cap fell off etc.) in EVAP system between the fuel tank and EVAP canister purge volume control solenoid valve.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
			• Fuel filler cap remains open or fails to close.
			 Incorrect fuel tank vacuum relief valve
			 Incorrect fuel filler cap used
			 Foreign matter caught in fuel filler cap.
	EVAP control system gross leak detected		 Leak is in line between intake manifold and EVAP canister purge volume control solenoid valve.
			 Foreign matter caught in EVAP canister vent control valve.
			 EVAP canister or fuel tank leaks
P0455 0455		SUCD as fuel filler cap fell off EVAP control sys-	 EVAP purge line (pipe and rubber tube) leaks
			 EVAP purge line rubber tube bent.
			 Loose or disconnected rubber tube
			• EVAP canister vent control valve and the circuit
			 EVAP canister purge volume control solenoid valve and the circuit
			 Fuel tank temperature sensor
			 O-ring of EVAP canister vent control valve is missing or damaged.
			EVAP control system pressure sensor
			 Refueling EVAP vapor cut valve
			 ORVR system leaks

CAUTION:

- Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.
- If the fuel filler cap is not tightened properly, the MIL may come on.
- Use only a genuine NISSAN rubber tube as a replacement.

DTC Confirmation Procedure

UBS00KA6

CAUTION:

Never remove fuel filler cap during the DTC Confirmation Procedure.

NOTE:

- Make sure that EVAP hoses are connected to EVAP canister purge volume control solenoid valve properly.
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

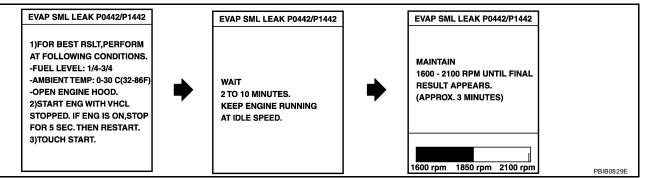

TESTING CONDITION:

- Perform "DTC WORK SUPPORT" when the fuel level is between 1/4 and 3/4 full and vehicle is placed on flat level surface.
- Open engine hood before conducting the following procedures.

WITH CONSULT-II

- 1. Tighten fuel filler cap securely until ratcheting sound is heard.
- 2. Turn ignition switch ON.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-II.
- Make sure that the following conditions are met. COOLAN TEMP/S: 0 - 70°C (32 - 158°F) INT/A TEMP SE: 0 - 60°C (32 - 140°F)
- Select "EVP SML LEAK P0442/P1442" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-II.

Follow the instruction displayed.

NOTE:

If the engine speed cannot be maintained within the range displayed on the CONSULT-II screen, go to $\underline{\text{EC-70}}$, "Basic Inspection".

 Make sure that "OK" is displayed. If "NG" is displayed, select "SELF-DIAG RESULTS" mode and make sure that "EVAP GROSS LEAK [P0455]" is displayed. If it is displayed, refer to <u>EC-441, "Diagnostic Procedure"</u>. If P0442 is displayed, perform Diagnostic Procedure for DTC P0442 <u>EC-388, "Diagnostic Procedure"</u>.

EVAP SML LEAK P0442/P1442	
ок	
SELF-DIAG RESULTS	
NO DTC DETECTED. FURTHER TESTING MAY BE REQUIRED.

DTC P0456 EVAP CONTROL SYSTEM

DTC P0456 EVAP CONTROL SYSTEM

On Board Diagnosis Logic

This diagnosis detects very small leaks in the EVAP line between fuel tank and EVAP canister purge volume control solenoid valve, using the intake manifold vacuum in the same way as conventional EVAP small leak diagnosis.

If ECM judges a leak which corresponds to a very small leak, the very small leak P0456 will be detected. If ECM judges a leak equivalent to a small leak, EVAP small leak P0442 will be detected. If ECM judges there are no leaks, the diagnosis will be OK.

DTC P0456 EVAP CONTROL SYSTEM

CA	UTION: Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used,
•	the MIL may come on.
•	If the fuel filler cap is not tightened properly, the MIL may come on.
•	Use only a genuine NISSAN rubber tube as a replacement.
D٦	C Confirmation Procedure
NC	DTE:
•	If DTC P0456 is displayed with P0442, first perform trouble diagnosis for DTC P0456.
•	After repair, make sure that the hoses and clips are installed properly.
•	If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
ΤE	STING CONDITION:
•	Open engine hood before conducting following procedure.
•	If any of following conditions are met just before the DTC confirmation procedure, leave the vehi- cle for more than 1 hour.
-	Fuel filler cap is removed.
-	Fuel is refilled or drained.
-	EVAP component parts is/are removed.
•	Before performing the following procedure, confirm that battery voltage is more than 11V at idle.
A	WITH CONSULT-II
1.	Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-II.
2.	Make sure the following conditions are met.
	COOLAN TEMP/S: 0 - 32°C (32 - 90°F) FUEL T/TMP SE: 0 - 35°C (32 - 95°F)
	INT A/TEMP SE: More than 0°C (32°F)
	If NG, turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle) or refilling/draining
	fuel until the output voltage condition of the "FUEL LEVEL SE" meets within the range above and leave the vehicle for more than 1 hour. Then start from step 1).
3.	Turn ignition switch OFF and wait at least 10 seconds.
3. 4.	Turn ignition switch ON.
5.	Select "EVP V/S LEAK P0456/P1456" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode
0.	with CONSULT-II.
	Follow the instruction displayed.
Γ	EVAP V/S LEAK P0456/P1456 EVAP V/S LEAK P0456/P1456
	CHECK FUEL LEVEL SENSOR(V). SEE SERVICE MANUAL FOR
	SPECIFICATION. IS THE VOLTAGE WITHIN THE

1800-2800 RPM UNTIL FINAL RESULT

MAINTAIN

APPEARS.

- If the engine speed cannot be maintained within the range displayed on CONSULT-II screen, go to EC-70, "Basic Inspection" .
- Make sure that EVAP hoses are connected to EVAP canister purge volume control solenoid valve properly.

Overall Function Check

Use this procedure to check the overall function of the EVAP very small leak function. During this check, a 1st trip DTC might not be confirmed.

CAUTION:

- Never use compressed air, doing so may damage the EVAP system.
- Do not start engine.
- Do not exceeded 4.12 kPa (0.042 kg/cm², 0.6 psi).
- 1. Attach the EVAP service port adapter securely to the EVAP service port.

- 2. Set the pressure pump and a hose.
- 3. Also set a vacuum gauge via 3-way connector and a hose.
- 4. Turn ignition switch ON.
- 5. Connect GST and select Service \$08.
- 6. Using Service \$08 control the EVAP canister vent control valve (close).
- 7. Apply pressure and make sure the following conditions are satisfied.

Pressure to be applied: 2.7 kPa (20 mmHg, 0.79 inHg) Time to be waited after the pressure drawn in to the EVAP system and the pressure to be dropped: 60 seconds and

the pressure should not be dropped more than 0.4 kPa (3 mmHg, 0.12 inHg). If NG, go to EC-449, "Diagnostic Procedure". If OK, go to next step.

- 8. Disconnect GST.
- 9. Start engine and warm it up to normal operating temperature.
- 10. Turn ignition switch OFF and wait at least 10 seconds.
- 11. Restart engine and let it idle for 90 seconds.
- 12. Keep engine speed at 2,000 rpm for 30 seconds.
- 13. Turn ignition switch OFF.

NOTE:

For more information, refer to GST instruction manual.

UBS00KAA

DTC P0456 EVAP CONTROL SYSTEM

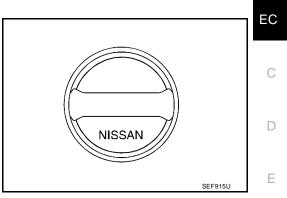

Diagnostic Procedure

1. CHECK FUEL FILLER CAP DESIGN

- 1. Turn ignition switch OFF.
- 2. Check for genuine NISSAN fuel filler cap design.

OK or NG

- OK >> GO TO 2.
- NG >> Replace with genuine NISSAN fuel filler cap.

UBS00KAB

А

$2. \ \mathsf{CHECK} \ \mathsf{FUEL} \ \mathsf{FILLER} \ \mathsf{CAP} \ \mathsf{INSTALLATION}$

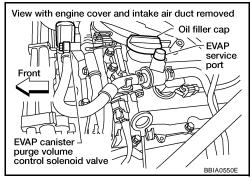

Check that the cap is tightened properly by rotating the cap clockwise.	
OK or NG	
 OK >> GO TO 3. NG >> 1. Open fuel filler cap, then clean cap and fuel filler neck threads using air blower. 2. Retighten until ratcheting sound is heard. 	G
3. CHECK FUEL FILLER CAP FUNCTION	Н
Check for air releasing sound while opening the fuel filler cap.	
OK or NG	I
OK >> GO TO 5. NG >> GO TO 4.	
4. CHECK FUEL TANK VACUUM RELIEF VALVE	J
Refer to <u>EC-35, "FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FULLER CAP)"</u> . <u>OK or NG</u>	K
OK >> GO TO 5. NG >> Replace fuel filler cap with a genuine one.	L
	M

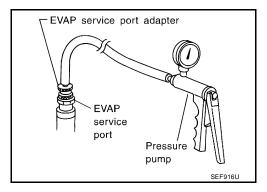

5. INSTALL THE PRESSURE PUMP

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely. For the location of EVAP service port, refer to <u>EC-33</u>, <u>"EVAPORATIVE EMISSION LINE</u> <u>DRAWING"</u>.

NOTE:

Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.

With CONSULT-II>>GO TO 6. Without CONSULT-II>>GO TO 7.

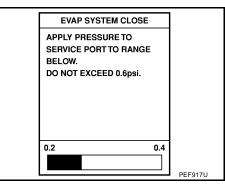

6. CHECK FOR EVAP LEAK

(P) With CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "EVAP SYSTEM CLOSE" of "WORK SUPPORT" mode with CONSULT-II.
- 3. Touch "START" and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.

CAUTION:

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm², 0.6 psi) of pressure in the system.

 Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to <u>EC-33</u>, "EVAPORATIVE EMISSION LINE DRAWING".

OK or NG

OK >> GO TO 8.

NG >> Repair or replace.

/. CHECK FOR EVAP LEAK

Without CONSULT-II

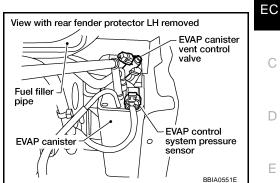

- 1. Turn ignition switch OFF.
- 2. Apply 12 volts DC to EVAP canister vent control valve. The valve will close. (Continue to apply 12 volts until the end of test.)
- 3. Pressurize the EVAP line using pressure pump with 1.3 to 2.7 kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

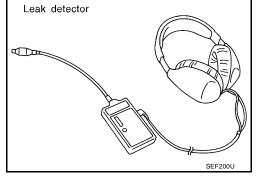

CAUTION:

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm², 0.6 psi) of pressure in the system.
- 4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to EC-33. "EVAPORATIVE EMISSION LINE DRAWING" .

OK or NG

- OK >> GO TO 8.
- NG >> Repair or replace.

8. CHECK EVAP CANISTER VENT CONTROL VALVE

Check the following.

- EVAP canister vent control valve is installed properly. Refer to EC-36, "Removal and Installation" .
- EVAP canister vent control valve. Refer to EC-414, "Component Inspection" .

OK or NG

NG

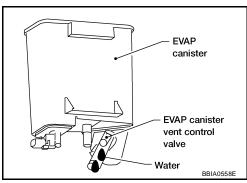

- OK >> GO TO 9.
 - >> Repair or replace EVAP canister vent control valve and O-ring.

9. CHECK IF EVAP CANISTER SATURATED WITH WATER

- 1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
- 2. Does water drain from the EVAP canister?

Yes or No

Yes >> GO TO 10. No (With CONSULT-II)>>GO TO 12. No (Without CONSULT-II)>>GO TO 13.

DTC P0460 FUEL LEVEL SENSOR

Component Description

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the combination meter. The combination meter sends the fuel level sensor signal to the ECM through CAN communication line.

It consists of two parts, one is mechanical float and the other is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

On Board Diagnosis Logic

NOTE:

- If DTC P0460 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-153, "DTC U1000, U1001 CAN COMMUNICATION LINE" .
- If DTC P0460 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to EC-156, "DTC U1010 CAN COMMUNICATION" .

When the vehicle is parked, naturally the fuel level in the fuel tank is stable. It means that output signal of the fuel level sensor does not change. If ECM senses sloshing signal from the sensor, fuel level sensor malfunction is detected.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
_		Even though the vehicle is parked, a signal	 Harness or connectors (The CAN communication line is open or shorted)
P0460 0460	Fuel level sensor circuit noise	being varied is sent from the fuel level sensor to ECM.	 Harness or connectors (The sensor circuit is open or shorted)
			Combination meter
			Fuel level sensor

DTC Confirmation Procedure

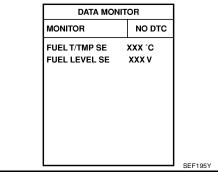

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

EC-455

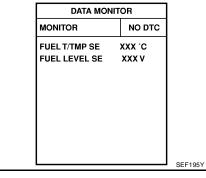

(P) WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- Start engine and wait maximum of 2 consecutive minutes. 3.
- If 1st trip DTC is detected, go to EC-456, "Diagnostic Procedure" 4.

DTC P0461 FUEL LEVEL SENSOR

Component Description

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the combination meter. The combination meter sends the fuel level sensor signal to the ECM through CAN communication line.

It consists of two parts, one is mechanical float and the other is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

On Board Diagnosis Logic

NOTE:

- If DTC P0461 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to <u>EC-153, "DTC U1000, U1001 CAN COMMUNICATION LINE"</u>.
- If DTC P0461 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to <u>EC-156, "DTC U1010 CAN COMMUNICATION"</u>.

Driving long distances naturally affect fuel gauge level.

This diagnosis detects the fuel gauge malfunction of the gauge not moving even after a long distance has been driven.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	
P0461 0461	Fuel level sensor circuit range/performance	The output signal of the fuel level sensor does not change within the specified range even though the vehicle has been driven a long dis- tance.	 Harness or connectors (The CAN communication line is open or shorted) Harness or connectors (The sensor circuit is open or shorted) Combination meter Fuel level sensor 	J

Overall Function Check

Use this procedure to check the overall function of the fuel level sensor function. During this check, a 1st trip DTC might not be confirmed.

WARNING:

When performing following procedure, be sure to observe the handling of the fuel. Refer to <u>FL-12.</u> <u>"FUEL TANK"</u>.

TESTING CONDITION:

Before starting overall function check, preparation of draining fuel and refilling fuel is required.

WITH CONSULT-II

NOTE:

Start from step 10, if it is possible to confirm that the fuel cannot be drained by 30 ℓ (7-7/8 US gal, 6-5/ 8 Imp gal) in advance.

EC-457

- 1. Prepare a fuel container and a spare hose.
- 2. Release fuel pressure from fuel line, refer to EC-79, "FUEL PRESSURE RELEASE" .
- 3. Remove the fuel feed hose on the fuel level sensor unit.
- 4. Connect a spare fuel hose where the fuel feed hose was removed.
- 5. Turn ignition switch OFF and wait at least 10 seconds then turn ON.
- 6. Select "FUEL LEVEL SE" in "DATA MONITOR" mode with CONSULT-II.

DTC P0506 ISC SYSTEM

Description

NOTE:

If DTC P0506 is displayed with other DTC, first perform the trouble diagnosis for the other DTC.

The ECM controls the engine idle speed to a specified level through the fine adjustment of the air, which is let into the intake manifold, by operating the electric throttle control actuator. The operating of the throttle valve is varied to allow for optimum control of the engine idling speed. The crankshaft position sensor (POS) detects the actual engine speed and sends a signal to the ECM.

The ECM controls the electric throttle control actuator so that the engine speed coincides with the target value memorized in the ECM. The target engine speed is the lowest speed at which the engine can operate steadily. The optimum value stored in the ECM is determined by taking into consideration various engine conditions, such as during warming up, deceleration, and engine load (air conditioner, power steering and cooling fan operation, etc.).

On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	
P0506 0506	Idle speed control sys- tem RPM lower than expected	The idle speed is less than the target idle speed by 100 rpm or more.	Electric throttle control actuatorIntake air leak	F

DTC Confirmation Procedure

NOTE:

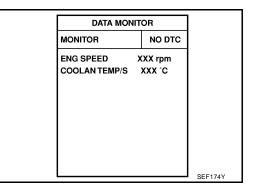

- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
- If the target idle speed is out of the specified value, perform, <u>EC-77</u>, <u>"Idle Air Volume Learning"</u>, before conducting DTC Confirmation Procedure. For the target idle speed, refer to the <u>EC-675</u>, <u>"SERVICE DATA AND SPECIFICATIONS (SDS)"</u>.

TESTING CONDITION:

- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.
- Always perform the test at a temperature above –10°C (14°F).

B WITH CONSULT-II

- 1. Open engine hood.
- 2. Start engine and warm it up to normal operating temperature.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Turn ignition switch ON again and select "DATA MONITOR" mode with CONSULT-II.
- 5. Start engine and run it for at least 1 minute at idle speed.
- 6. If 1st trip DTC is detected, go to EC-464, "Diagnostic Procedure"

DTC P0507 ISC SYSTEM

Description

NOTE:

If DTC P0507 is displayed with other DTC, first perform the trouble diagnosis for the other DTC.

The ECM controls the engine idle speed to a specified level through the fine adjustment of the air, which is let into the intake manifold, by operating the electric throttle control actuator. The operating of the throttle valve is varied to allow for optimum control of the engine idling speed. The crankshaft position sensor (POS) detects the actual engine speed and sends a signal to the ECM.

The ECM controls the electric throttle control actuator so that the engine speed coincides with the target value memorized in the ECM. The target engine speed is the lowest speed at which the engine can operate steadily. The optimum value stored in the ECM is determined by taking into consideration various engine conditions, such as during warming up, deceleration, and engine load (air conditioner, power steering and cooling fan operation, etc.).

On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	
P0507 0507	Idle speed control sys- tem RPM higher than expected	The idle speed is more than the target idle speed by 200 rpm or more.	 Electric throttle control actuator Intake air leak PCV system 	F

DTC Confirmation Procedure

NOTE:

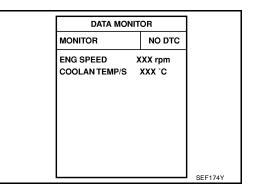

- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait H at least 10 seconds before conducting the next test.
- If the target idle speed is out of the specified value, perform, <u>EC-77, "Idle Air Volume Learning"</u>, before conducting DTC Confirmation Procedure. For the target idle speed, refer to the <u>EC-675,</u> <u>"SERVICE DATA AND SPECIFICATIONS (SDS)"</u>.

TESTING CONDITION:

- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.
- Always perform the test at a temperature above -10°C (14°F).

WITH CONSULT-II

- 1. Open engine hood.

DTC P0550 PSP SENSOR

Component Description

Power steering pressure (PSP) sensor is installed to the power steering high-pressure tube and detects a power steering load. This sensor is a potentiometer which transforms the power steering load into output voltage, and emits the voltage signal to the ECM. The ECM controls the electric throttle control actuator and adjusts the throttle valve opening angle to increase the engine speed and adjusts the idle speed for the increased load.

DTC P0605 ECM

Revision: February 2007

With GST

Component Description

The ECM consists of a microcomputer and connectors for signal input and output and for power supply. The ECM controls the engine.

On Board Diagnosis Logic

This self-diagnosis has one or two trip detection logic.

DTC No.	Trouble diagnosis name		DTC detecting condition	Possible cause
P0605 0605	Engine control module	A)	ECM calculation function is malfunctioning.	
		B)	ECM EEP-ROM system is malfunctioning.	• ECM
		C)	ECM self shut-off function is malfunctioning.	

FAIL-SAFE MODE

ECM enters fail-safe mode when the malfunction A is detected.

Detected items	Engine operation condition in fail-safe mode
Malfunction A	 ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring. ECM deactivates ASCD operation.

DTC Confirmation Procedure

Perform PROCEDURE FOR MALFUNCTION A first. If the 1st trip DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION B. If there is no malfunction on PROCEDURE FOR MALFUNCTION B, perform PROCEDURE FOR MALFUNCTION C.

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

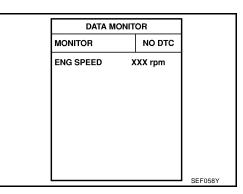

PROCEDURE FOR MALFUNCTION A

With CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.

Follow the procedure "With CONSULT-II" above.

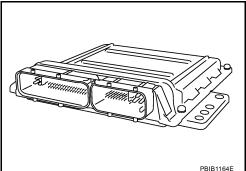

3. If 1st trip DTC is detected, go to EC-477, "Diagnostic Procedure"

PFP:23710

UBS00KBD

DTC P0643 SENSOR POWER SUPPLY

DTC P0643 SENSOR POWER SUPPLY

On Board Diagnosis Logic

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	E
P0643 0643	Sensor power supply circuit short	ECM detects a voltage of power source for sensor is excessively low or high.	 Harness or connectors (APP sensor 1 circuit is shorted.) (PSP sensor circuit is shorted.) (Refrigerant pressure sensor circuit is shorted.) (Battery current sensor circuit is shorted.) (EVAP control system pressure sensor circuit is shorted.) Accelerator pedal position sensor (APP sensor 1) EVAP control system pressure sensor Power steering pressure sensor Refrigerant pressure sensor Battery current sensor 	

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode

ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

DTC Confirmation Procedure

NOTE:

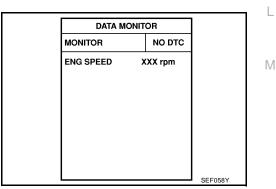

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

(I) WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Start engine and let it idle for 1 second.
- 4. If DTC is detected, go to EC-482, "Diagnostic Procedure".

Diagnostic Procedure

1. СНЕСК DTC WITH TCM

Refer to AT-44, "TROUBLE DIAGNOSIS" .

OK or NG

OK >> GO TO 2. NG >> Repair or replace.

2. CHECK STARTING SYSTEM

Turn ignition switch OFF, then turn it to START. **Does starter motor operate?**

Yes or No

Yes >> GO TO 3. No >> Refer to <u>SC-8, "STARTING SYSTEM"</u>.

3. CHECK PNP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT-I

- 1. Turn ignition switch OFF.
- 2. Disconnect A/T assembly harness connector.
- 3. Disconnect combination meter harness connector.
- 4. Check harness continuity between A/T assembly terminal 9 and combination meter terminal 17. Refer to Wiring Diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5. NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M31, E152
- Harness connectors E5, F14
- Harness for open or short between A/T assembly and combination meter.

>> Repair open circuit or short to ground or short to power in harness or connectors.

UBS00KGJ

5.	CHECK PNP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT-II	A
1. 2.	Disconnect ECM harness connector. Check harness continuity between ECM terminal 102 and combination meter terminal 7. Refer to Wiring Diagram.	EC
	Continuity should exist.

DTC P1148, P1168 CLOSED LOOP CONTROL

DTC P1148, P1168 CLOSED LOOP CONTROL

On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1148 1148 (Bank 1)	Closed loop control	The closed loop control function for bank 1 does not operate even when vehicle is driving in the specified condition.	 Harness or connectors [The air fuel ratio (A/F) sensor 1 circuit is open or shorted.]
P1168 1168 (Bank 2)	function	The closed loop control function for bank 2 does not operate even when vehicle is driving in the specified condition.	 Air fuel ratio (A/F) sensor 1 Air fuel ratio (A/F) sensor 1 heater

DTC P1148 or P1168 is displayed with another DTC for air fuel ratio (A/F) sensor 1. Perform the trouble diagnosis for the corresponding DTC.

PFP:22690

DTC P1211 TCS CONTROL UNIT

Description

The malfunction information related to TCS is transferred through the CAN communication line from "ABS actuator and electric unit (control unit)" to ECM.

Be sure to erase the malfunction information such as DTC not only for "ABS actuator and electric unit (control unit)" but also for ECM after TCS related repair.

On Board Diagnosis Logic

Freeze frame data is not stored in the ECM for this self-diagnosis. The MIL will not light up for this selfdiagnosis.

				D
DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	
P1211 1211	TCS control unit	ECM receives a malfunction information from "ABS actuator and electric unit (Control unit)".	 ABS actuator and electric unit (control unit) TCS related parts 	Е

DTC Confirmation Procedure

TESTING CONDITION: Before performing the following procedure, confirm that battery voltage is more than 10.5V at idle.

(P) WITH CONSULT-II

- Turn ignition switch ON. 1.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- Start engine and let it idle for at least 60 seconds. 3.
- If 1st trip DTC is detected, go to EC-491, "Diagnostic Procedure" 4.

WITH GST

Follow the procedure "WITH CONSULT-II" above.

Diagnostic Procedure

Go to BRC-12, "TROUBLE DIAGNOSIS" or BRC-75, "TROUBLE DIAGNOSIS".

DTC P1212 TCS COMMUNICATION LINE

Description

NOTE:

- If DTC P1212 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to <u>EC-153, "DTC U1000, U1001 CAN COMMUNICATION LINE"</u>.
- If DTC P1212 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to <u>EC-156, "DTC U1010 CAN COMMUNICATION"</u>.

This CAN communication line is used to control the smooth engine operation during the TCS operation. Pulse signals are exchanged between ECM and "ABS actuator and electric unit (control unit)". **Be sure to erase the malfunction information such as DTC not only for "ABS actuator and electric unit**

(control unit)" but also for ECM after TCS related repair.

DTC P1217 ENGINE OVER TEMPERATURE

Description

SYSTEM DESCRIPTION

NOTE:

- If DTC P1217 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to <u>EC-153, "DTC U1000, U1001 CAN COMMUNICATION LINE"</u>.
- If DTC P1217 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to <u>EC-156, "DTC U1010 CAN COMMUNICATION"</u>.

Cooling Fan Control

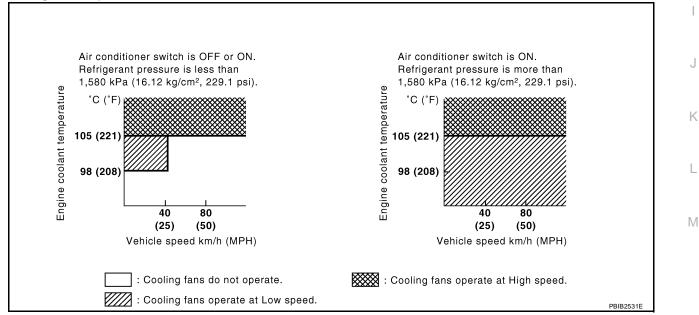

Sensor	Input Signal to ECM	ECM function	Actuator	
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*1			
Battery	Battery voltage*1			
Wheel sensor	Vehicle speed*2	Cooling fan	IPDM E/R (Cooling fan relays)	
Engine coolant temperature sensor	Engine coolant temperature	control		
Air conditioner switch	Air conditioner ON signal* ²			
Refrigerant pressure sensor	Refrigerant pressure			

*1: The ECM determines the start signal status by the signals of engine speed and battery voltage.

*2: This signal is sent to ECM through CAN communication line.

The ECM controls the cooling fan corresponding to the vehicle speed, engine coolant temperature, refrigerant pressure, and air conditioner ON signal. The control system has 3-step control [HIGH/LOW/OFF].

Cooling Fan Operation

UBS00KDG

А

EC

Cooling Fan Relay Operation

The ECM controls cooling fan relays in the IPDM E/R through CAN communication line.

Cooling for speed	Cooling fan relay		
Cooling fan speed	LO	HI	
Stop (OFF)	OFF	OFF	
Low (LOW)	ON	OFF	
High (HI)	ON	ON	

COMPONENT DESCRIPTION

Cooling Fan Motor

The cooling fan operates at each speed when the current flows in the cooling fan motor as follows.

Cooling fan speed	Cooling fan motor terminals		
Cooling fair speed	(+)	(–)	
Low (LOW)	1	3 and 4	
	2	3 and 4	
High (HI)	1 and 2	3 and 4	

CONSULT-II Reference Value in Data Monitor Mode

UB\$00KDH

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
	• Engine: After warming up idle	Air conditioner switch: OFF	OFF
AIR COND SIG	 Engine: After warming up, idle the engine 	Air conditioner switch: ON (Compressor operates.)	ON
	 Engine: After warming up, idle the engine Air conditioner switch: OFF 	Engine coolant temperature: 97°C (207°F) or less	OFF
COOLING FAN		Engine coolant temperature: Between 98°C (208°F) and 104°C (219°F)	LOW
		Engine coolant temperature: 105°C (221°F) or more	н

On Board Diagnosis Logic

If the cooling fan or another component in the cooling system malfunctions, engine coolant temperature will rise.

When the engine coolant temperature reaches an abnormally high temperature condition, a malfunction is indicated.

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
			 Harness or connectors (The cooling fan circuit is open or shorted.) IPDM E/R
P1217 1217	Engine over tempera- ture (Overheat)	 Cooling fan does not operate properly (Overheat). Cooling fan system does not operate properly (Overheat). Engine coolant level was not added to the system using the proper filling method. Engine coolant is not within the specified range. 	 Cooling fan Cooling fan (Crankshaft driven) Radiator hose Radiator Radiator cap Reservoir tank Reservoir tank cap Water pump Thermostat For more information, refer to <u>EC-501,</u>

CAUTION:

When a malfunction is indicated, be sure to replace the coolant. Refer to <u>CO-10, "Changing Engine</u> <u>Coolant"</u>. Also, replace the engine oil. Refer to <u>LU-9, "Changing Engine Oil"</u>.

- 1. Fill radiator with coolant up to specified level with a filling speed of 2 liters per minute. Be sure to use coolant with the proper mixture ratio. Refer to <u>MA-12</u>, <u>"ANTI-FREEZE COOLANT MIXTURE</u> <u>RATIO"</u>.
- 2. After refilling coolant, run engine to ensure that no water-flow noise is emitted.

Overall Function Check

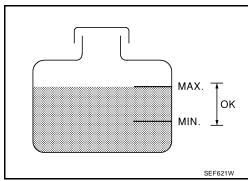

Use this procedure to check the overall function of the cooling fan. During this check, a DTC might not be con-

WARNING:

Never remove the radiator cap and/or reservoir tank cap when the engine is hot. Serious burns could be caused by high pressure fluid escaping from the radiator and/or reservoir tank.

Wrap a thick cloth around cap. Carefully remove the cap by turning it a quarter turn to allow built-up pressure to escape. Then turn the cap all the way off.

- Check the coolant level in the reservoir tank and radiator.
 Allow engine to cool before checking coolant level. If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to <u>EC-499</u>, <u>"Diagnostic Procedure"</u>.
- Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to <u>EC-499</u>, <u>"Diagnostic Procedure"</u>.
- 3. Turn ignition switch ON.

Low	2	3 and 4
High	1 and 2	3 and 4

UBS00KDN

Cooling fan motor should operate.

If NG, replace cooling fan motor.

DTC P1225 TP SENSOR

Component Description

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

The MIL will not light up for this diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1225 1225	Closed throttle position learning performance	Closed throttle position learning value is excessively low.	• Electric throttle control actuator (TP sensor 1 and 2)

DTC Confirmation Procedure

NOTE:

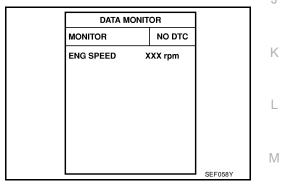

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

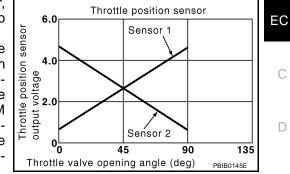

WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Turn ignition switch OFF and wait at least 10 seconds.
- 4. Turn ignition switch ON.
- 5. If 1st trip DTC is detected, go to EC-504, "Diagnostic Procedure"

WITH GST

Follow the procedure "WITH CONSULT-II" above.

UBS00KDX

UBS00KDW

Component Description

The power generation voltage variable control enables fuel consumption to be decreased by reducing the engine load which is caused by the power generation of the generator. The battery current sensor is installed to the battery cable at the negative terminal. The sensor measures the charging/discharging current of the battery. Based on the sensor signal, ECM judges whether or not the power generation voltage variable control is performed. When performing the power generation voltage variable control, ECM calculates the target power generation voltage based on the sensor signal. And ECM sends the calculated value as the power generation command value to IPDM E/R. For the details of the power generation voltage variable control, refer to SC section.

CAUTION:

Do not connect the electrical component or the ground wire directly to the battery terminal. The connection causes the malfunction of the power generation voltage variable control, and then the battery discharge may occur.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION

DTC P1551, P1552 BATTERY CURRENT SENSOR

Component Description

The power generation voltage variable control enables fuel consumption to be decreased by reducing the engine load which is caused by the power generation of the generator. The battery current sensor is installed to the battery cable at the negative terminal. The sensor measures the charging/discharging current of the battery. Based on the sensor signal, ECM judges whether or not the power generation voltage variable control is performed. When performing the power generation voltage variable control, ECM calculates the target power generation voltage based on the sensor signal. And ECM sends the calculated value as the power generation command value to IPDM E/R. For the details of the power generation voltage variable control, refer to SC section.

CAUTION:

Do not connect the electrical component or the ground wire directly to the battery terminal. The connection causes the malfunction of the power generation voltage variable control, and then the battery discharge may occur.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
BAT CUR SEN	 Engine speed: Idle Battery: Fully charged* Shift lever: P or N Air conditioner switch: OFF 	Approx. 2,600 - 3,500mV
	No load	

*: Before measuring the terminal voltage, confirm that the battery is fully charged. Refer to SC-5, "SPECIFIC GRAVITY CHECK".

On Board Diagnosis Logic

The MIL will not light up for this diagnosis.

NOTE:

If DTC P1551 or P1552 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to EC-479, "DTC P0643 SENSOR POWER SUPPLY" .

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1551 1551	Battery current sensor circuit low input	An excessively low voltage from the sen- sor is sent to ECM.	Harness or connectors (The sensor circuit is open or shorted.)
P1552 1552	Battery current sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	Battery current sensor

DTC Confirmation Procedure

UB\$00KTN

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 8V with ignition switch ON

DTC P1572 ASCD BRAKE SWITCH

Component Description

When the brake pedal is depressed, ASCD brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by this input of two kinds (ON/OFF signal). Refer to <u>EC-29</u>, "AUTOMATIC SPEED CONTROL DEVICE (ASCD)" for the ASCD function.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
BRAKE SW1		Brake pedal: Fully released	ON
(ASCD brake switch)	Ignition switch: ON	Brake pedal: Slightly depressed	OFF
BRAKE SW2		Brake pedal: Fully released	OFF
(Stop lamp switch)	Ignition switch: ON	Brake pedal: Slightly depressed	ON

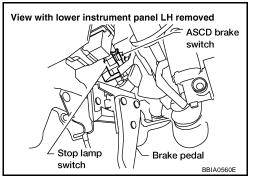

On Board Diagnosis Logic

This self-diagnosis has the one trip detection logic. The MIL will not light up for this diagnosis. NOTE:

- If DTC P 1572 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to <u>EC-476, "DTC P0605 ECM"</u>.
- This self-diagnosis has the one trip detection logic. When malfunction A is detected, DTC is not stored in ECM memory. And in that case, 1st trip DTC and 1st trip freeze frame data are displayed. 1st trip DTC is erased when ignition switch OFF. And even when malfunction A is detected in two consecutive trips, DTC is not stored in ECM memory.

DTC No.	Trouble Diagnosis Name		DTC Detecting Condition	Possible Cause
		A)	When the vehicle speed is above 30km/h (19 MPH), ON signals from the stop lamp switch and the ASCD brake switch are sent to ECM at the same time.	 Harness or connectors (The stop lamp switch circuit is shorted.) Harness or connectors (The ASCD brake switch circuit is shorted.)
P1572 1572	ASCD brake switch	B)	ASCD brake switch signal is not sent to ECM for extremely long time while the vehi- cle is driving	 Stop lamp switch ASCD brake switch Incorrect stop lamp switch installation Incorrect ASCD brake switch installation ECM

DTC Confirmation Procedure

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

- EC If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
- Procedure for malfunction B is not described here. It takes extremely long time to complete procedure for malfunction B. By performing procedure for malfunction A, the incident that causes malfunction B can be detected.

TESTING CONDITION:

Steps 4 and 5 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

(P) WITH CONSULT-II

- 1. Start engine (VDC switch OFF).
- Select "DATA MONITOR" mode with CONSULT-II. 2.
- Press MAIN switch and make sure that CRUISE indicator lights 3. up.
- 4. Drive the vehicle for at least 5 consecutive seconds under the following condition.

VHCL SPEED SE M	/lore than 30 km/h (19 MPH)
Selector lever Su	Suitable position

If DTC is detected, go to EC-545, "Diagnostic Procedure" . If DTC is not detected, go to the following step.

Drive the vehicle for at least 5 consecutive seconds under the 5.

following condition.	
VHCL SPEED SE	More than 30 km/h (19 MPH)
Selector lever	Suitable position
Driving location	Depress the brake pedal for more than five seconds so as not to come off from the above-mentioned vehicle speed

6. If DTC is detected, go to EC-545, "Diagnostic Procedure"

WITH GST

Follow the procedure "WITH CONSULT-II" above.

HONITOD	
MONITOR	NO DTO
ENG SPEED	XXX rpm
VHCL SPEED SE	XXX km/h
CRUISE LAMP	ON
BRAKE SW 1	ON

DTC P1574 ASCD VEHICLE SPEED SENSOR

DTC P1574 ASCD VEHICLE SPEED SENSOR

Component Description

The ECM receives two vehicle speed sensor signals via CAN communication line. One is sent from combination meter, and the other is from TCM (Transmission control module). The ECM uses these signals for ASCD control. Refer to <u>EC-29</u>, "<u>AUTOMATIC SPEED CONTROL DEVICE (ASCD)</u>" for ASCD functions.

On Board Diagnosis Logic

This self-diagnosis has the one trip detection logic.

The MIL will not light up for this diagnosis.

NOTE:

- If DTC P1574 is displayed with DTC U1000, U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to <u>EC-153, "DTC U1000, U1001 CAN COMMUNICATION LINE"</u>.
- If DTC P1574 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to <u>EC-156, "DTC U1010 CAN COMMUNICATION"</u>.
- If DTC P1574 is displayed with DTC P0500, first perform the trouble diagnosis for DTC P0500. Refer to <u>EC-461, "DTC P0500 VSS"</u>.
- If DTC P1574 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to <u>EC-476, "DTC P0605 ECM"</u>.

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P1574 1574	ASCD vehicle speed sensor	ECM detects a difference between two vehicle speed signals is out of the specified range.	 Harness or connectors (The CAN communication line is open or shorted.) Combination meter ABS actuator and electric unit (control unit) Wheel sensor TCM ECM

DTC Confirmation Procedure

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Step 3 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

WITH CONSULT-II

- 1. Start engine.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Drive the vehicle at more than 40 km/h (25 MPH).
- 4. If DTC is detected, go to EC-551, "Diagnostic Procedure".

DTC P1800 VIAS CONTROL SOLENOID VALVE

Component Description

The VIAS control solenoid valve cuts the intake manifold vacuum signal for power valve control. It responds to ON/OFF signals from the ECM. When the solenoid is off, the vacuum signal from the intake manifold is cut. When the ECM sends an ON signal the coil pulls the plunger downward and feeds the vacuum signal to the power valve actuator.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION	F
VIAS S/V	 Engine: After warming up 	2,200 - 3,300 rpm	ON	
VIAG G/V		Except above conditions	OFF	C

On Board Diagnosis Logic

The MIL will not light up for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1800 1800	VIAS control solenoid valve cir- cuit	An excessively low or high voltage signal is sent to ECM through the valve	 Harness or connectors (The solenoid valve circuit is open or shorted.) VIAS control solenoid valve

DTC Confirmation Procedure

NOTE:

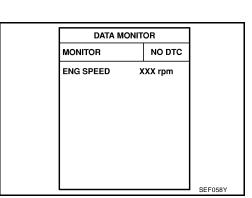

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 11V at idle.

B WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Start engine and let it idle for at least 5 seconds.
- 4. If 1st trip DTC is detected, go to EC-555, "Diagnostic Procedure"

DTC P1805 BRAKE SWITCH

Description

Brake switch signal is applied to the ECM through the stop lamp switch when the brake pedal is depressed. This signal is used mainly to decrease the engine speed when the vehicle is driving.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
BRAKE SW	 Ignition switch: ON 	Brake pedal: Fully released	OFF
		Brake pedal: Slightly depressed	ON

On Board Diagnosis Logic

The MIL will not light up for this diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1805 1805	Brake switch	A brake switch signal is not sent to ECM for extremely long time while the vehicle is driving.	 Harness or connectors (Stop lamp switch circuit is open or shorted.) Stop lamp switch

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode.

Engine operating condition in fail-safe mode		
ECM controls the electric throttle control actuator by regulating the throttle opening to a small range. Therefore, acceleration will be poor.		
Vehicle condition Driving condition		
When engine is idling Normal		
When accelerating Poor acceleration		

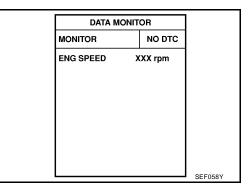

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

(I) WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Fully depress the brake pedal for at least 5 seconds.
- 3. Erase the DTC with CONSULT-II.
- 4. Select "DATA MONITOR" mode with CONSULT-II.
- 5. If 1st trip DTC is detected, go to EC-560, "Diagnostic Procedure"

DTC P2100, P2103 THROTTLE CONTROL MOTOR RELAY

Component Description

Power supply for the throttle control motor is provided to the ECM via throttle control motor relay. The throttle control motor relay is ON/OFF controlled by the ECM. When the ignition switch is turned ON, the ECM sends an ON signal to throttle control motor relay and battery voltage is provided to the ECM. When the ignition switch is turned OFF, the ECM sends an OFF signal to throttle control motor relay and battery voltage is not provided to the ECM.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION	
THRTL RELAY	Ignition switch: ON	ON	

On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	F
P2100 2100	Throttle control motor relay circuit open	ECM detects a voltage of power source for throttle control motor is excessively low.	 Harness or connectors (Throttle control motor relay circuit is open) Throttle control motor relay 	G
P2103 2103	Throttle control motor relay circuit short	ECM detects the throttle control motor relay is stuck ON.	 Harness or connectors (Throttle control motor relay circuit is shorted) Throttle control motor relay 	H

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

DTC Confirmation Procedure

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR DTC P2100

With CONSULT-II

- 1. Turn ignition switch ON and wait at least 2 seconds.
- Select "DATA MONITOR""mode with CONSULT-II. 2.
- Start engine and let it idle for 5 seconds. 3.
- If DTC is detected, go to EC-566, "Diagnostic Procedure". 4.

Diagnostic Procedure 1. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY CIRCUIT-I

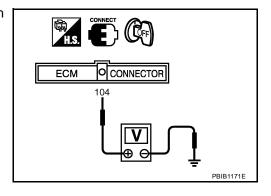

UBS00KCH

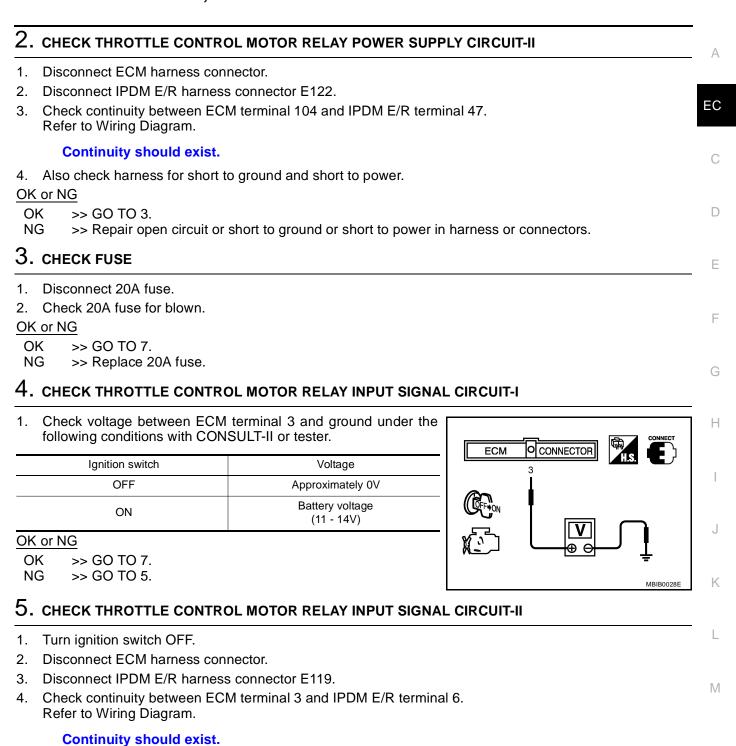

- 1. Turn ignition switch OFF.
- 2. Check voltage between ECM terminal 104 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 4. NG >> GO TO 2.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7. NG >> GO TO 6.

6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E2, F32
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

7. CHECK INTERMITTENT INCIDENT

Refer to EC-144, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

- OK >> Replace IPDM E/R. Refer to <u>PG-18</u>, "IPDM E/R (INTELLIGENT POWER DISTRIBUTION MOD-<u>ULE ENGINE ROOM)"</u>.
- NG >> Repair or replace harness or connectors.

Description

NOTE:

If DTC P2101 is displayed with DTC P2100 or P2119, first perform the trouble diagnosis for DTC P2100 or P2119. Refer to <u>EC-563</u> or <u>EC-580</u>.

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc.

The throttle control motor is operated by the ECM and it opens and closes the throttle valve.

The current opening angle of the throttle valve is detected by the throttle position sensor and it provides feedback to the ECM to control the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause	b
P2101 2101	Electric throttle control performance	Electric throttle control function does not oper- ate properly.	 Harness or connectors (Throttle control motor circuit is open or shorted) Electric throttle control actuator 	F

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

DTC Confirmation Procedure

NOTE:

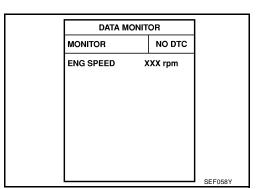

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 11V when the engine is running.

WITH CONSULT-II

- 1. Turn ignition switch ON and wait at least 2 seconds.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Start engine and let it idle for 5 seconds.
- 4. If DTC is detected, go to EC-571, "Diagnostic Procedure" .

DTC P2119 ELECTRIC THROTTLE CONTROL ACTUATOR

Component Description

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle control motor is operated by the ECM and it opens and closes the throttle valve. The throttle position sensor detects the throttle valve position, and the opening and closing speed of the throt-

tle valve and feeds the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

UBS00KC2

UBS00KC3

PFP:16119

UBS00KC1

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P2119	Electric throttle control	A)	Electric throttle control actuator does not func- tion properly due to the return spring malfunc- tion.	
2119	actuator	B)	Throttle valve opening angle in fail-safe mode is not in specified range.	Electric throttle control actuator
		C)	ECM detect the throttle valve is stuck open.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Detected items	Engine operating condition in fail-safe mode
Malfunction A	The ECM controls the electric throttle actuator by regulating the throttle opening around the idle position. The engine speed will not rise more than 2,000 rpm.
Malfunction B	ECM controls the electric throttle control actuator by regulating the throttle opening to 20 degrees or less.
Malfunction C	While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in N or P position, and engine speed will not exceed 1,000 rpm or more.

DTC Confirmation Procedure

NOTE:

- Perform PROCEDURE FOR MALFUNCTION A AND B first. If the DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION C.
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

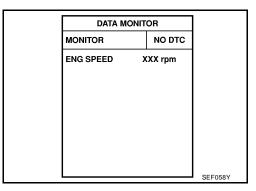

PROCEDURE FOR MALFUNCTION A AND B

With CONSULT-II

- 1. Turn ignition switch ON and wait at least 1 second.
- 2. Select "DATA MONITOR" mode with CONSULT-II.

UBS00KC4

DTC P2122, P2123 APP SENSOR

Component Description

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.

Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.

Idle position of the accelerator pedal is determined by the ECM

receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN 1	Ignition switch: ON	Accelerator pedal: Fully released	0.65 - 0.87V
ACCEL SEN I	(Engine stopped)	Accelerator pedal: Fully depressed	More than 4.3V
ACCEL SEN 2*	Ignition switch: ON	Accelerator pedal: Fully released	0.56 - 0.96V
ACCEL SEN 2	(Engine stopped)	Accelerator pedal: Fully depressed	More than 4.0V
CLSD THL POS	Ignition switch: ON	Accelerator pedal: Fully released	ON
CLOD THE FUS	(Engine stopped)	Accelerator pedal: Slightly depressed	OFF

*: Accelerator pedal position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage.

On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

If DTC P2122 or P2123 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to <u>EC-479, "DTC P0643 SENSOR POWER SUPPLY"</u>.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2122 2122	Accelerator pedal posi- tion sensor 1 circuit low input	An excessively low voltage from the APP sen- sor 1 is sent to ECM.	 Harness or connectors (The APP sensor 1 circuit is open or shorted.)
P2123 2123	Accelerator pedal posi- tion sensor 1 circuit high input	An excessively high voltage from the APP sensor 1 is sent to ECM.	,

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

Component Description

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.

Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.

Idle position of the accelerator pedal is determined by the ECM

receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN 1	 Ignition switch: ON 	Accelerator pedal: Fully released	0.65 - 0.87V
ACCEL SEN I	(Engine stopped)	Accelerator pedal: Fully depressed	More than 4.3V
ACCEL SEN 2*	Ignition switch: ON	Accelerator pedal: Fully released	0.56 - 0.96V
ACCEL SEN 2	(Engine stopped)	Accelerator pedal: Fully depressed	More than 4.0V
CLSD THL POS	Ignition switch: ON	Accelerator pedal: Fully released	ON
CLOD THE FOO	(Engine stopped)	Accelerator pedal: Slightly depressed	OFF

*: Accelerator pedal position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage.

On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2127 2127	Accelerator pedal posi- tion sensor 2 circuit low input	An excessively low voltage from the APP sensor 2 is sent to ECM.	Harness or connectors (The APP sensor 2 circuit is open or shorted.) (The TP sensor 2 circuit is open or shorted.)
P2128 2128	Accelerator pedal posi- tion sensor 2 circuit high input	An excessively high voltage from the APP sensor 2 is sent to ECM.	 (The TP sensor circuit shorted.) Accelerator pedal position sensor (APP sensor 2) Electric throttle control actuator (TP sensor 1 and 2)

FAIL-SAFE MODE

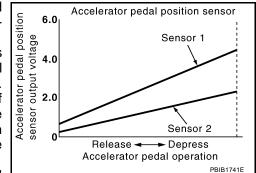

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

DTC Confirmation Procedure

NOTE:

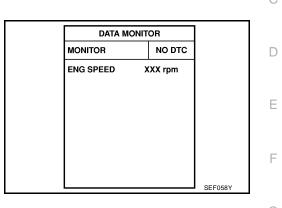

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

(P) WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode with CONSULT-II.
- 3. Start engine and let it idle for 1 second.
- 4. If DTC is detected, go to EC-591, "Diagnostic Procedure" .

WITH GST

Follow the procedure "WITH CONSULT-II" above.

DTC P2A00, P2A03 A/F SENSOR 1

Component Description

The air fuel ratio (A/F) sensor is a planar dual-cell limit current sensor. The sensor element of the A/F sensor is the combination of a Nernst concentration cell (sensor cell) with an oxygen-pump cell, which transports ions. It has a heater in the element.

The sensor is capable of precise measurement $\lambda = 1$, but also in the lean and rich range. Together with its control electronics, the sensor outputs a clear, continuous signal throughout a wide λ range (0.7 < λ < air).

The exhaust gas components diffuse through the diffusion gap at the electrode of the oxygen pump and Nernst concentration cell, where they are brought to thermodynamic balance.

An electronic circuit controls the pump current through the oxygenpump cell so that the composition of the exhaust gas in the diffusion gap remains constant at $\lambda = 1$. Therefore, the A/F sensor is able to indicate air/fuel ratio by this pumping of current. In addition, a heater is integrated in the sensor to ensure the required operating temperature of 700 - 800°C (1,292 - 1,472°F).

CONSULT-II Reference Value in Data Monitor Mode

Diagnostic Procedure 1. CHECK GROUND CONNECTIONS

UBS00KEL

- 1. Turn ignition switch OFF.
- 2. Loosen and retighten three ground screws on the body. Refer to EC-151, "Ground Inspection" .

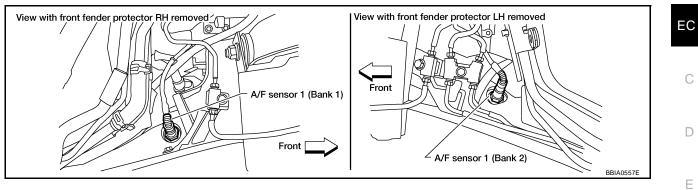

OK or NG

- OK >> GO TO 2.
- NG >> Repair or replace ground connections.

2. RETIGHTEN AIR FUEL RATIO (A/F) SENSOR 1

Loosen and retighten the air fuel ratio (A/F) sensor 1.

Tightening torque: 50 N-m (5.1 kg-m, 37 ft-lb)

>> GO TO 3.

3. CHECK FOR INTAKE AIR LEAK

1. Start engine and run it at idle.

2. Listen for an intake air leak after the mass air flow sensor.

OK or NG

- OK >> GO TO 4.
- NG >> Repair or replace.

M

L

А

F

Н

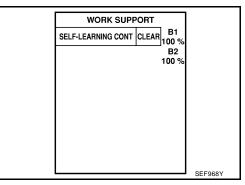

J

Κ

4. CLEAR THE SELF-LEARNING DATA.

With CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
- 3. Clear the self-learning control coefficient by touching "CLEAR".
- Run engine for at least 10 minutes at idle speed.
 Is the 1st trip DTC P0171, P0172, P0174 or P0175 detected?
 Is it difficult to start engine?

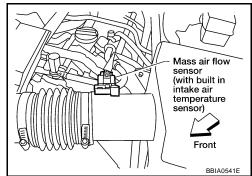

Without CONSULT-II

- 1. Start engine and warm it up to normal operating temperature.
- 2. Turn ignition switch OFF.
- 3. Disconnect mass air flow sensor harness connector.
- 4. Restart engine and let it idle for at least 3 seconds.
- 5. Stop engine and reconnect mass air flow sensor harness connector.
- 6. Make sure DTC P0102 is displayed.
- 7. Erase the DTC memory. Refer to <u>EC-60</u>, "HOW TO ERASE <u>EMISSION-RELATED DIAGNOSTIC INFORMATION"</u>.
- 8. Make sure DTC P0000 is displayed.
- Run engine for at least 10 minutes at idle speed.
 Is the 1st trip DTC P0171, P0172 or P0174, P0175 detected?
 Is it difficult to start engine?

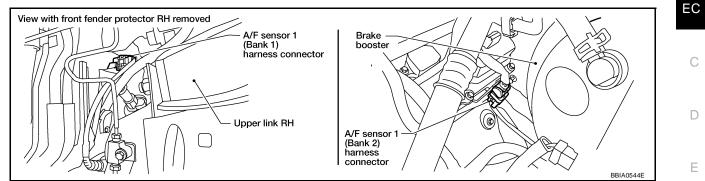

Yes or No

- Yes >> Perform trouble diagnosis for DTC P0171, P0174 or P0172, P0175. Refer to <u>EC-305, "DTC</u> <u>P0171, P0174 FUEL INJECTION SYSTEM FUNCTION"</u> or <u>EC-317, "DTC P0172, P0175 FUEL</u> <u>INJECTION SYSTEM FUNCTION"</u>.
- No >> GO TO 5.

5. CHECK HARNESS CONNECTOR

- 1. Turn ignition switch OFF.
- 2. Disconnect A/F sensor 1 harness connector.

3. Check harness connector for water.

Water should not exit.

OK or NG

OK >> GO TO 6.

NG >> Repair or replace harness connector.

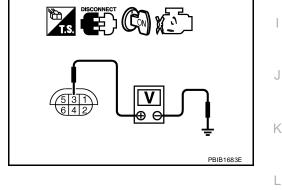

6. CHECK A/F SENSOR 1 POWER SUPPLY CIRCUIT

- 1. Turn ignition switch ON.
- 2. Check voltage between A/F sensor 1 terminal 3 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 8. NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E5, F14
- IPDM E/R connector E119
- 10A fuse
- Harness for open or short between A/F sensor 1 and fuse

>> Repair or replace harness or connectors.

G

Н

Μ

F

А

8. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect ECM harness connector.
- 3. Check harness continuity between A/F sensor 1 terminal and ECM terminal as follows. Refer to Wiring Diagram.

	A/F sensor 1 terminal	ECM terminal
	1	16
Bank1	2	75
Daliki	5	35
	6	56
	1	76
Bank 2	2	77
Dalik Z	5	57
	6	58

Continuity should exist.

4. Check harness continuity between the following terminals and ground. Refer to Wiring Diagram.

Bai	nk 1	Bank 2	
A/F sensor 1 terminal	ECM terminal	A/F sensor 1 terminal	ECM terminal
1	16	1	76
2	75	2	77
5	35	5	57
6	56	6	58

Continuity should not exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 9.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

9. CHECK A/F SENSOR 1 HEATER

Refer to EC-169, "Component Inspection" .

<u>OK or NG</u> OK >> GO TO 10.

NG >> GO TO 11.

10. CHECK INTERMITTENT INCIDENT

Perform EC-144, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

- OK >> GO TO 11.
- NG >> Repair or replace.

11. REPLACE A/F SENSOR 1

Replace A/F sensor 1.

CAUTION:

- Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a EC hard surface such as a concrete floor; use a new one.
- Before installing new A/F sensor, clean exhaust system threads using Heated Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

>> GO TO 12.

12. CONFIRM A/F ADJUSTMENT DATA

- 1. Turn ignition switch ON.
- 2. Select "A/F ADJ-B1" and "A/F ADJ-B2" in "DATA MONITOR" mode with CONSULT-II.
- 3. Make sure that "0" is displayed on CONSULT-II screen.

OK or NG

OK >> INSPECTION END

ASCD INDICATOR

ASCD INDICATOR

Component Description

ASCD indicator lamp illuminates to indicate ASCD operation status. Lamp has two indicators, CRUISE and SET, and is integrated in combination meter.

CRUISE indicator illuminates when MAIN switch on ASCD steering switch is turned ON to indicated that ASCD system is ready for operation.

SET indicator illuminates when following conditions are met.

- CRUISE indicator is illuminated.
- SET/COAST switch on ASCD steering switch is turned ON while vehicle speed is within the range of ASCD setting.

SET indicator remains lit during ASCD control. Refer to <u>EC-29, "AUTOMATIC SPEED CONTROL DEVICE (ASCD)"</u> for the ASCD function.

CONSULT-II Reference Value in Data Monitor Mode

FUEL INJECTOR

Component Description

The fuel injector is a small, precise solenoid valve. When the ECM supplies a ground to the fuel injector, the coil in the fuel injector is energized. The energized coil pulls the ball valve back and allows fuel to flow through the fuel injector into the intake manifold. The amount of fuel injected depends upon the injection pulse duration. Pulse duration is the length of time the fuel injector remains open. The ECM controls the injection pulse duration based on engine fuel needs.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

3. CHECK FUNCTION OF FUEL INJECTOR-I

Without CONSULT-II

- 1. Stop engine.
- 2. Disconnect harness connector F44, F101.
- 3. Turn ignition switch ON.

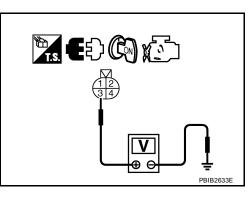

4. Check voltage between harness connector F44 terminal 3 and ground with CONSULT-II or tester.

Voltage: Battery voltage

- 5. Turn ignition switch OFF.
- 6. Disconnect ECM harness connector.
- Check harness continuity between harness connector F44 and ECM as follows.
 Defect to Wining Diagram

Refer to Wiring Diagram.

Cylinder	Harness connector F44 terminal	ECM terminal
1	2	23
3	1	22
5	4	21

Continuity should exist.

8. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5. NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E2, F32
- IPDM E/R harness connector E119
- 15A fuse
- Harness for open or short between harness connector F44 and fuse
- Harness for open or short between harness connector F101 and fuel injector

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK FUNCTION OF FUEL INJECTOR-II

Provide battery voltage between harness connector F101 as follows and then interrupt it. Listen to each fuel injector operating sound.

Cylinder	Harness connector F101 terminal		
	(+)	(—)	
1	3	2	
3	3	1	
5	3	4	

Operating sound should exist.

OK or NG

OK >> GO TO 6. NG >> GO TO 7.

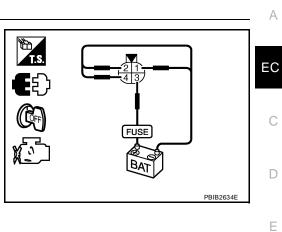

6. CHECK FUNCTION OF FUEL INJECTOR-III

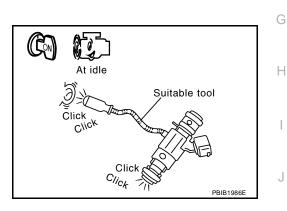

- 1. Reconnect all harness connector disconnected.
- 2. Start engine.
- 3. Listen to fuel injectors No. 2, No. 4, No.6 operating sound.

Clicking noise should exist.

OK or NG

OK >> **INSPECTION END** NG >> GO TO 7.

FUEL PUMP

Description SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM Function	Actuator		
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*	Fuel pump control	Fuel pump relay		
Battery	Battery voltage*				

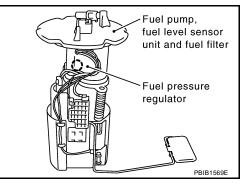

*: ECM determines the start signal status by the signals of engine speed and battery voltage.

The ECM activates the fuel pump for several seconds after the ignition switch is turned ON to improve engine start ability. If the ECM receives a engine speed signal from the camshaft position sensor (PHASE), it knows that the engine is rotating, and causes the pump to operate. If the engine speed signal is not received when the ignition switch is ON, the engine stalls. The ECM stops pump operation and prevents battery discharging, thereby improving safety. The ECM does not directly drive the fuel pump. It controls the ON/OFF fuel pump relay, which in turn controls the fuel pump.

Condition	Fuel pump operation	
Ignition switch is turned to ON.	Operates for 1 second.	
Engine running and cranking	Operates.	
When engine is stopped	Stops in 1.5 seconds.	
Except as shown above	Stops.	

COMPONENT DESCRIPTION

A turbine type design fuel pump is used in the fuel tank.

IGNITION SIGNAL

Component Description IGNITION COIL & POWER TRANSISTOR

The ignition signal from the ECM is sent to and amplified by the power transistor. The power transistor turns ON and OFF the ignition coil primary circuit. This ON/OFF operation induces the proper high voltage in the coil secondary circuit.

IGNITION SIGNAL

BBWA2376E

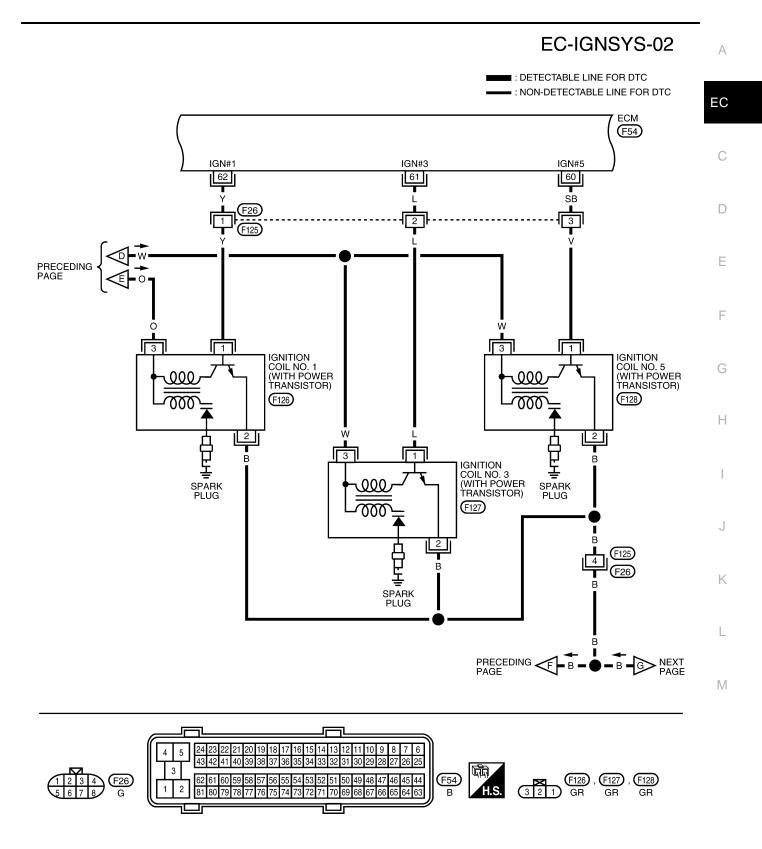

IGNITION SIGNAL

17. CHECK INTERMITTENT INCIDENT

Refer to EC-144, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> INSPECTION END

Component Inspection IGNITION COIL WITH POWER TRANSISTOR CAUTION:

Do the following procedure in the place where ventilation is good without the combustible.

- 1. Turn ignition switch OFF.
- 2. Disconnect ignition coil harness connector.
- 3. Check resistance between ignition coil terminals as follows.

Terminal No. (Polarity)	Resistance Ω [at 25°C (77°F)]
1 and 2	Except 0 or ∞
1 and 3	Execut 0
2 and 3	Except 0

- 4. If NG, Replace ignition coil with power transistor. If OK, go to next step.
- 5. Turn ignition switch OFF.
- 6. Reconnect all harness connectors disconnected.
- Remove fuel pump fuse in IPDM E/R to release fuel pressure.
 NOTE:

Do not use CONSULT-II to release fuel pressure, or fuel pressure applies again during the following procedure.

- 8. Start engine.
- 9. After engine stalls, crank it two or three times to release all fuel pressure.
- 10. Turn ignition switch OFF.
- 11. Remove ignition coil harness connectors to avoid the electrical discharge from the ignition coils.
- 12. Remove ignition coil and spark plug of the cylinder to be checked.
- 13. Crank engine for five seconds or more to remove combustion gas in the cylinder.
- 14. Connect spark plug and harness connector to ignition coil.
- 15. Fix ignition coil using a rope etc. with gap of 13 17 mm between the edge of the spark plug and grounded metal portion as shown in the figure.
- 16. Crank engine for about three seconds, and check whether spark is generated between the spark plug and the grounded part.

Spark should be generated.

CAUTION:

• Do not approach to the spark plug and the ignition coil within 50cm. Be careful not to get an electrical shock while checking, because the electrical discharge voltage becomes 20kV or more.

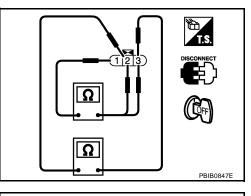

• It might cause to damage the ignition coil if the gap of more than 17 mm is taken. NOTE:

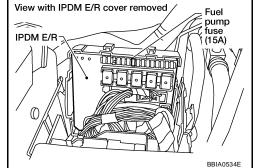

When the gap is less than 13 mm, the spark might be generated even if the coil is malfunctioning.

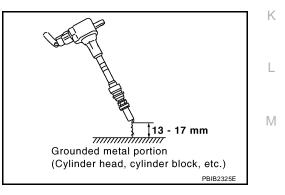

17. If NG, Replace ignition coil with power transistor.

CONDENSER-1

- 1. Turn ignition switch OFF.
- 2. Disconnect condenser-1 harness connector.

Battery Battery voltage*	
When VIAS control signal is "ON". VIAS control solenoid valve signal "ON" VIAS control solenoid valve VIAS control solenoid valve Vacuum tank Power valve One-way valve VIAS control solenoid valve VIAS control s	卧 Air flow

When the engine is running at medium speed, the ECM sends the ON signal to the VIAS control solenoid valve. This signal introduces the intake manifold vacuum into the power valve actuator and therefore closes the power valve.

Under this condition, the effective intake manifold length is equivalent to the total length of passage A and passage B. This long intake manifold provides increased amount of intake air, which results in improved suction efficiency and higher torque.

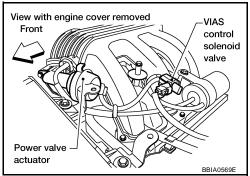

When engine is running at low or high speed, the ECM sends the OFF signal to the VIAS control solenoid valve and the power valve is opened.

Under this condition, the effective intake manifold length is equivalent to the length of passage B. This shortened intake manifold length results in enhanced engine output due to reduced suction resistance under high speeds.

COMPONENT DESCRIPTION

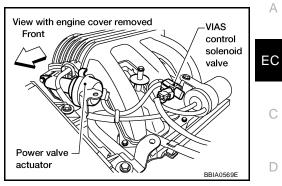

Power Valve

The power valve is installed in intake manifold collector and used to control the suction passage of the variable induction air control system. It is set in the fully closed or fully opened position by the power valve actuator operated by the vacuum stored in the surge tank. The vacuum in the surge tank is controlled by the VIAS control solenoid valve.

VIAS Control Solenoid Valve

The VIAS control solenoid valve cuts the intake manifold vacuum signal for power valve control. It responds to ON/OFF signals from the ECM. When the solenoid is off, the vacuum signal from the intake manifold is cut. When the ECM sends an ON signal the coil pulls the plunger downward and feeds the vacuum signal to the power valve actuator.

>> Repair harness or connectors.

8. Check vias control solenoid valve output signal circuit for open and short

- 1. Turn ignition switch OFF.
- 2. Disconnect ECM harness connector.
- 3. Check harness continuity between ECM terminal 29 and VIAS control solenoid valve terminal 2. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 9.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

Revision: February 2007

9. CHECK VIAS CONTROL SOLENOID VALVE

Refer to EC-671, "Component Inspection" .

OK or NG

OK >> GO TO 10.

NG >> Replace VIAS control solenoid valve.

10. CHECK INTERMITTENT INCIDENT

Refer to EC-144, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> INSPECTION END

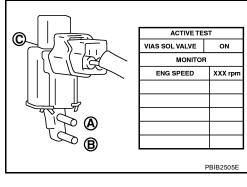

Component Inspection VIAS CONTROL SOLENOID VALVE

With CONSULT-II

- 1. Reconnect harness connectors disconnected.
- 2. Turn ignition switch ON.
- 3. Perform "VIAS SOL VALVE" in "ACTIVE TEST" mode.
- 4. Check air passage continuity and operation delay time under the following conditions.

Condition VIAS SOL VALVE	Air passage continuity between (A) and (B)	Air passage continuity between (A) and (C)
ON	Yes	No
OFF	No	Yes

Operation takes less than 1 second.

Without CONSULT-II

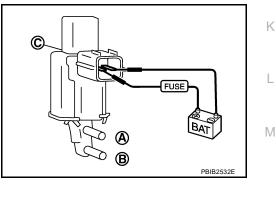

Check air passage continuity and operation delay time under the following conditions.

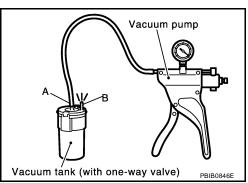

Condition	Air passage continuity between (A) and (B)	Air passage continuity between (A) and (C)
12V direct current supply between terminals 1 and 2	Yes	No
No supply	No	Yes

Operation takes less than 1 second.

VACUUM TANK

- 1. Disconnect vacuum hose connected to vacuum tank.
- 2. Connect a vacuum pump to the port (A) of vacuum tank.
- 3. Apply vacuum and make sure that vacuum exists at the port (B).

MIL AND DATA LINK CONNECTOR

SERVICE DATA AND SPECIFICATIONS (SDS)

SERVICE DATA ANI	D SPECIFICATIONS (SD	S) PFP:00030	
Fuel Pressure		UBSOOKI	
Fuel pressure at idling kPa (kg/cm ² , psi)		Approximately 350 (3.57, 51)	
Idle Speed and Ignit	tion Timing	UBSooKJ	
Target idle speed	No load* (in P or N position	on) 625 ± 50 rpm	
Air conditioner: ON	In P or N position	775 rpm or more	
Ignition timing	In P or N position	$15\pm5^\circ$ BTDC	
 *: Under the following conditions: Air conditioner switch: OFF Electric load: OFF (Lights, hea Steering wheel: Kept in straighter 	ater fan & rear window defogger)		
Calculated Load Val		UBS00KJ	
	ndition	Calculated load value% (Using CONSULT-II or GST)	
At idle		5 - 35	
At 2,500 rpm		5 - 35	
Mass Air Flow Sens	sor	UBS00KJ	
Supply voltage		Battery voltage (11 - 14V)	
Output voltage at idle		0.9 - 1.2*V	
Mass air flow (Using CONSULT	-II or GST)	2.0 - 6.0 g·m/sec at idle* 7.0 - 20.0 g·m/sec at 2,500 rpm*	
*: Engine is warmed up to normal	l operating temperature and running unc	ler no load.	
Intake Air Temperat	ure Sensor	UBS00KJ	
Temperature °C (°F)		Resistance kΩ	
25 (77)		1.800 - 2.200	
Engine Coolant Terr	nperature Sensor	UBS00KJ	
Temperature °C (°F)		Resistance kΩ	
20 (68)		2.1 - 2.9	
50 (122)		0.68 - 1.00	
90 (194)		0.236 - 0.260	
Air Fuel Ratio (A/F)	Sensor 1 Heater	UBS00KJ	
Resistance [at 25°C (77°F)]		2.3 - 4.3Ω	
Heated Oxygen sen	sor 2 Heater	UBS00KJ	
Resistance [at 25°C (77°F)]		9.9 - 13.3Ω	
Crankshaft Position	Sensor (POS)	UBSooKJ	
Refer to EC-365, "Compon	ent Inspection"		
Camshaft Position S	Sensor (PHASE)	UBS00KJ	
Refer to EC-374, "Compon	ι γ		
Throttle Control Mo		UBSOOKJ	
Resistance [at 25°C (77°F)]		Approximately 1 - 15Ω	

SERVICE DATA AND SPECIFICATIONS (SDS)

Fuel Injector	UBS00KJA
Resistance [at 10 - 60°C (50 - 140°F)]	11.1 - 14.5Ω
Fuel Pump	UBS00KJB
Resistance [at 25°C (77°F)]	0.2 - 5.0Ω
