DIAGNOSIS AND REPAIR WORKFLOW

How to Perform Trouble Diagnosis For Quick And Accurate Repair

INFOID:000000001366682

WORK FLOW

**1.**LISTEN TO CUSTOMER COMPLAINT

Listen to customer complaint. Get detailed information about the conditions and environment when the symptom occurs.

>> GO TO 2

2. CHECK FOR SERVICE BULLETINS

Check for any service bulletins.

>> GO TO 3.

3. VERIFY THE SYMPTOM WITH OPERATIONAL CHECK

Verify the symptom with operational check. Refer to HAC-123, "Operational Check".

Can a symptom be duplicated?

YES >> GO TO 4 NO >> GO TO 5

**4.**GO TO APPROPRIATE TROUBLE DIAGNOSIS

Go to appropriate trouble diagnosis. Refer to HAC-171, "Symptom Matrix Chart".

Can a symptom be duplicated?

>> GO TO 5.

**5.**PERFORM THE A/C AUTO AMP SELF-DIAGNOSIS

Perform A/C auto amp. self-diagnosis. Refer to HAC-23. "A/C Auto Amp. Self-Diagnosis".

>> If any diagnostic trouble codes set. Refer to <u>HAC-24. "A/C System Self-Diagnosis Code Chart"</u>. >> Confirm the repair by performing operational check. Refer to <u>HAC-123. "Operational Check"</u>.

#### **INSPECTION AND ADJUSTMENT**

< BASIC INSPECTION > [AUTOMATIC AIR CONDITIONER]	
INSPECTION AND ADJUSTMENT	
Operational Check (Front)	r
The purpose of the operational check is to confirm that the system operates properly.	
Conditions : Engine running and at normal operating temperature	
CHECKING MEMORY FUNCTION	
1. Set the temperature to 32°C (90°F).	
2. Press the OFF switch.	
3. Turn ignition switch OFF.	
4. Turn ignition switch ON.	
5. Press the AUTO switch.	
6. Confirm that the set temperature remains at previous temperature.	
7. Press the OFF switch.	
If NG, go to trouble diagnosis procedure for <u>HAC-119, "Memory Function Check"</u> .	
If OK, continue with next check.	
CHECKING BLOWER	
1. Press the blower speed control switch (+) once, blower should operate on low speed. The fan display should have one bar lit (on display).	
2. Press the blower speed control switch (+) again, and continue checking blower speed and fan display until all speeds are checked.	
3. Leave blower on maximum speed.	ŀ
If NG, go to trouble diagnosis procedure for <u>HAC-147, "Front Blower Motor Diagnosis Procedure"</u> . If OK, continue with next check.	
CHECKING DISCHARGE AIR	
1. Press MODE switch four times and the DEF $\mathbf{G}$ switch.	
2. Each position indicator should change shape (on display).	
<ol> <li>Confirm that discharge air comes out according to the air distribution table. Refer to <u>HAC-17</u>, "Discharge <u>Air Flow (Front)</u>"</li> </ol>	
Mode door position is checked in the next step.	
If NG, go to trouble diagnosis procedure for <u>HAC-136, "Mode Door Motor (Front) Diagnosis Procedure"</u> . If OK, continue the check.	
NOTE:	
Confirm that the compressor clutch is engaged (sound or visual inspection) and intake door position is at fresh when the FOOT, DEF or D/F is selected.	
CHECKING RECIRCULATION (*, * ONLY)	
1. Press recirculation (	
2. Press recirculation (	
3. Listen for intake door position change (blower sound should change slightly).	
If NG, go to trouble diagnosis procedure for <u>HAC-144, "Intake Door Motor Diagnosis Procedure"</u> . If OK, continue the check.	
NOTE:	
Confirm that the compressor clutch is engaged (sound or visual inspection) and intake door position is at fresh when the FOOT, DEF or D/F is selected. REC ( $\frown$ ) is not allowed in DEF ( $\textcircled$ ) D/F ( $\textcircled$ ) or FOOT ( $\checkmark$ ).	
CHECKING TEMPERATURE DECREASE	

# CHECKING TEMPERATURE DECREASE

- 1. Rotate temperature control dial (drive or passenger) counterclockwise until 18°C (60°F) is displayed.
- 2. Check for cold air at appropriate discharge air outlets.

#### **INSPECTION AND ADJUSTMENT**

#### < BASIC INSPECTION >

#### [AUTOMATIC AIR CONDITIONER]

If NG, listen for sound of air mix door motor operation. If OK, go to trouble diagnosis procedure for <u>HAC-172</u>, <u>"Component Function Check"</u>. If air mix door motor appears to be malfunctioning, go to <u>HAC-32</u>, "Air Mix Door <u>Motor Component Function Check"</u>.

If OK, continue the check.

#### CHECKING TEMPERATURE INCREASE

- 1. Rotate temperature control dial clockwise (drive or passenger) until 32°C (90°F) is displayed.
- 2. Check for hot air at appropriate discharge air outlets.

If NG, listen for sound of air mix door motor operation. If OK, go to trouble diagnosis procedure for <u>HAC-181</u>, <u>"Component Function Check"</u>. If air mix door motor appears to be malfunctioning, go to <u>HAC-32</u>, "Air Mix Door <u>Motor Component Function Check"</u>.

If OK, continue with next check.

#### CHECK A/C SWITCH

- 1. Press A/C switch when AUTO switch is ON, or in manual mode.
- 2. A/C switch indicator will turn ON.
  - Confirm that the compressor clutch engages (sound or visual inspection).

#### NOTE:

If current mode setting is DEF or D/F, compressor clutch will already be engaged and cannot be turned off. If NG, go to trouble diagnosis procedure for <u>HAC-152</u>, "<u>Magnet Clutch Diagnosis Procedure</u>". If OK, continue with next check.

#### CHECKING AUTO MODE

- 1. Press AUTO switch.
- 2. Display should indicate AUTO.
  - If ambient temperature is warm, and selected temperature is cool, confirm that the compressor clutch engages (sound or visual inspection). (Discharge air and blower speed will depend on ambient, in-vehicle, and set temperatures.)

If NG, go to trouble diagnosis procedure for <u>HAC-160</u>, "Front Air Control Power and Ground Diagnosis Proce-<u>dure</u>", then if necessary, trouble diagnosis procedure for <u>HAC-152</u>, "<u>Magnet Clutch Diagnosis Procedure</u>". If all operational checks are OK (symptom cannot be duplicated), go to malfunction Simulation Tests in <u>HAC-122</u>, "<u>How to Perform Trouble Diagnosis For Quick And Accurate Repair</u>" and perform tests as outlined to simulate driving conditions environment. If symptom appears. Refer to <u>HAC-171</u>, "<u>Symptom Matrix Chart</u>", and perform applicable trouble diagnosis procedures.

#### **Operational Check (Rear)**

INFOID:000000001366684

The purpose of the operational check is to confirm that the system operates properly.

#### Conditions : Engine running and at normal operating temperature

#### CHECKING REAR BLOWER MOTOR

- 1. Turn the ignition switch ON.
- 2. Rotate rear air control (front) blower control dial to low speed.
- 3. Rotate the blower control dial clockwise and continue checking blower speed until all speeds are checked.
- 4. Leave blower on maximum speed.
- 5. Press the REAR CTRL switch from the rear air control (front).
- 6. Rotate rear air control (rear) blower control dial to low speed.
- 7. Rotate the blower control dial clockwise and continue checking blower speed until all speeds are checked.
- 8. Leave blower on maximum speed.

If NG, go to trouble diagnosis procedure for <u>HAC-52</u>, "<u>Rear Blower motor Component Function Check</u>". If OK, continue with next check.

#### CHECKING REAR TEMPERATURE DECREASE

- 1. Press the REAR CTRL switch (indicator off).
- 2. Rotate the rear air control (front) temperature control dial counterclockwise to maximum cold.
- 3. Check for cold air at appropriate discharge air outlets.

#### INSPECTION AND ADJUSTMENT

#### < BASIC INSPECTION >

#### [AUTOMATIC AIR CONDITIONER]

- 4. Press the REAR CTRL switch (indicator on) from the rear air control (front).
- 5. Rotate the rear air control (rear) temperature control dial counterclockwise to maximum cold.
- 6. Check for cold air at appropriate discharge air outlets.

If NG, listen for sound of air mix door motor operation. If OK, go to trouble diagnosis procedure for <u>HAC-140</u>, <u>"Air Mix Door Motor Component Function Check"</u>. If air mix door motor appears to be malfunctioning, go to <u>HAC-64</u>, <u>"Rear Air Control (Rear) Diagnosis Procedure"</u>. If OK, continue with next check.

#### CHECKING REAR TEMPERATURE INCREASE

- 1. Press the REAR CTRL switch (indicator off).
- 2. Rotate the rear air control (front) temperature control dial clockwise to maximum heat.
- 3. Check for hot air at appropriate discharge air outlets.
- 4. Press the REAR CTRL switch (indictor on) from the rear air control (front).
- 5. Rotate the rear air control (rear) temperature control dial clockwise to maximum heat.
- 6. Check for hot air at appropriate discharge air outlets.

If NG, listen for sound of air mix door motor operation. If OK, go to trouble diagnosis procedure for <u>HAC-115</u>, <u>"Component Function Check"</u>. If air mix door motor appears to be malfunctioning, go to <u>HAC-64</u>, <u>"Rear Air</u> <u>Control (Rear) Diagnosis Procedure"</u>.

If NG, go to trouble diagnosis procedure for <u>HAC-181</u>, "Component Function Check".

If all operational checks are OK (symptom cannot be duplicated), go to <u>HAC-122</u>, "How to <u>Perform Trouble</u> <u>Diagnosis For Quick And Accurate Repair</u>" and perform tests as outlined. If symptom appears, refer to <u>HAC-121</u>, "Symptom Matrix Chart" and perform applicable trouble diagnosis procedures.

#### DISPLAY SCREEN

Displays the operational status of the system.

#### AUTO SWITCH

- Pressing the AUTO switch will illuminate the LED and "Auto" will be visible on the display. The A/C indicator will illuminate.
- The A/C compressor, intake door, air mix doors, outlet doors and blower speed are automatically controlled so that the in-vehicle temperature will reach, and be maintained at the set temperature selected by the operator.
- When pressing AUTO switch, air inlet, air outlet, blower speed, and discharge air temperature are automatically controlled.
- A partial AUTO mode can be achieved by only changing the blower speed or by changing the mode position. If both the blower speed and the mode positions are changed, the AUTO mode will be cancelled.

#### TEMPERATURE CONTROL DIAL (DRIVER)

Increases or decreases the set temperature.

#### TEMPERATURE CONTROL DIAL (PASSENGER)

Increases or decreases the set temperature.

#### RECIRCULATION (

- When REC switch is ON, REC switch indicator turns ON, and air inlet is set to REC.
- When REC switch is turned OFF, or when compressor is turned from ON to OFF, REC switch is automatically turned OFF. REC mode can be re-entered by pressing REC switch again.
- REC switch is not operated when DEF switch is turned ON, at the D/F position, or in floor position.

#### DEFROSTER (@) SWITCH

Positions the air outlet doors to the defrost position. Also positions the intake doors to the outside air position, and turns A/C compressor ON.

#### REAR WINDOW DEFOGGER SWITCH

When switch is ON, rear window and door mirrors are defogged.

#### OFF SWITCH

The A/C compressor and blower are OFF, the intake doors are set to the outside air position, and the air outlet doors are set to the foot (75% foot and 25% defrost) position.

#### A/C SWITCH

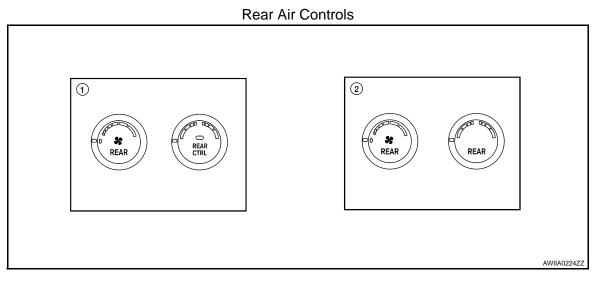

The compressor is ON or OFF. (Pressing the A/C switch when the AUTO switch is ON will turn off the A/C switch and compressor.)

#### MODE SWITCH

Controls the air discharge outlets.

#### < FUNCTION DIAGNOSIS >

#### FRONT BLOWER CONTROL SWITCHES Manually control the blower speed.

Rear air control (front) 2. Rear air control (rear)

#### TEMPERATURE CONTROL DIAL (TEMPERATURE AND MODE CONTROL)

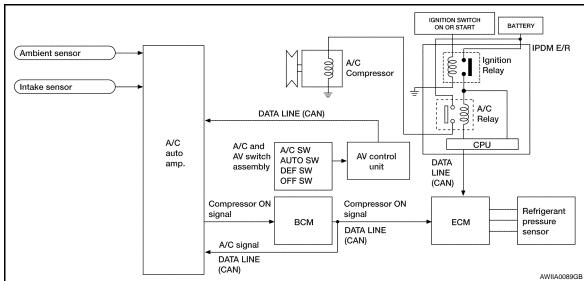

The temperature increases or decreases the set temperature. The mode also changes from foot at full hot setting, to foot/vent at mid-range (warm) setting, and then to vent at full cold setting.

#### REAR BLOWER CONTROL DIAL (FRONT)

When the REAR CTRL switch is in the off (indicator off) the rear air control (front) controls the rear blower motor speed regardless of the rear air control (rear) blower control dial (rear) position. The rear air control (front) controls the blower motor speed.

#### REAR BLOWER CONTROL DIAL (REAR)

When the REAR CTRL switch is on (indicator on) the rear air control (rear) controls the rear blower motor speed regardless of the rear air control (front) blower control dial (front) position. The rear air control (rear) controls the blower motor speed.

#### MAGNET CLUTCH CONTROL

1.

When A/C switch or DEF switch is pressed, A/C auto amp. inputs compressor ON signal to BCM. BCM sends compressor ON signal to ECM and A/C auto amp., via CAN communication line.

#### < FUNCTION DIAGNOSIS >

#### [AUTOMATIC AIR CONDITIONER]

ECM judges whether compressor can be turned ON, based on each sensor status (refrigerant pressure sensor signal, throttle angle sensor, etc.). If it judges compressor can be turned ON, it sends compressor ON signal to IPDM E/R, via CAN communication line.

Upon receipt of compressor ON signal from ECM, IPDM E/R turns air conditioner relay ON to operate compressor.

FAN ON SIG	"ON/OFF"	Displays "FAN (ON)/FAN (OFF)" status as judged from blower motor switch signal.

#### SELF-DIAGNOSIS FUNCTION

#### A/C Auto Amp. Self-Diagnosis

#### A/C SYSTEM SELF-DIAGNOSIS FUNCTION

The self-diagnosis function is built into the A/C auto amp. to quickly locate the cause of malfunctions.

#### DESCRIPTION

The self-diagnostic system diagnoses sensors, CAN system, and battery voltage on A/C auto amp. Refer to applicable sections (items) for details. Fault codes (if any are present) will be displayed in the ambient temperature display area. Refer to HAC-24, "A/C System Self-Diagnosis Code Chart".

#### SELF-DIAGNOSTIC MODE

#### NOTE:

Radio must be OFF.

- Turn the ignition switch ON. 1.
- On the A/C and AV switch assembly, press the "SETTING" but-2. ton and twist the volume knob clockwise and counterclockwise until the Self-Diagnosis screen shows on the display.
- 3. Scroll down to "Confirmation/Adjustment" and press the "ENTER" button.
- 4. Scroll down to "Climate Control" and press the "ENTER" button.
- 5. The fan bars will flash on the display during the self-test, and then the fault codes will display in the ambient temperature area. They will continue scrolling until diagnostic mode is exited.
- Exit by pressing the "BACK" button on A/C and AV switch 6 assembly until display returns to its normal operation screen. HVAC system will be OFF or by turning the ignition switch OFF.

🚖 Status

The self-diagnostic system diagnoses sensors, CAN system, and battery voltage on A/C auto amp. Refer to applicable sections (items) for details. Fault codes (if any are present) will be displayed in the ambient temperature display area. Refer to HAC-24, "A/C System Self-Diagnosis Code Chart".

#### COMPONENT DIAGNOSIS А MODE DOOR MOTOR System Description INFOID:000000001366701 В SYSTEM DESCRIPTION **Component Parts** Mode door control system components are: A/C auto amp. D A/C and AV switch assembly Mode door motor (front) PBR (built into mode door motor) In-vehicle sensor Ambient sensor Optical sensor Intake sensor

#### System Operation

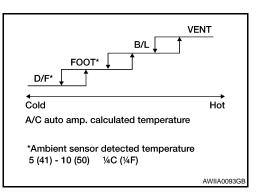

The mode door position (vent, B/L, foot, D/F, and defrost) is set by the A/C auto amp. by means of the mode door motor (front). When a mode door position is selected on the A/C auto amp., voltage is applied to one circuit of the mode door motor (front) while ground is applied to the other circuit, causing the mode door motor (front) to rotate. The direction of rotation is determined by which circuit has voltage applied to it, and which one has ground applied to it. The A/C auto amp. monitors the mode door position by measuring the voltage signal on the PBR circuit.

In AUTO mode the mode door position is set by the A/C auto amp. which determines the proper position based on inputs from the in-vehicle sensor, ambient sensor, optical sensor, intake sensor, and the temperature selected by the driver or passenger.

Mode Door Control Specification COMPONENT DESCRIPTION

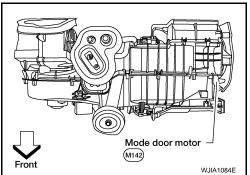

Mode Door Motor (Front)

#### < COMPONENT DIAGNOSIS >

The mode door motor (front) is attached to the heater & cooling unit assembly. It rotates so that air is discharged from the outlet as indicated by the A/C auto amp. Motor rotation is conveyed to a link which activates the mode door.

#### [AUTOMATIC AIR CONDITIONER]

Mode Door Motor (Front) Component Function Check

INFOID:000000001366702

#### INSPECTION FLOW

1.CONFIRM SYMPTOM BY PERFORMING OPERATIONAL CHECK - DISCHARGE AIR

- 1. Press mode switch four times and then press the 👾 (DEF) switch. Each position indicator should change shape (on display).
- 2. Confirm that discharge air comes out according to the air distribution table. Refer to <u>HAC-131</u>, "<u>Discharge</u> <u>Air Flow</u>".
  - NOTE:

Confirm that the compressor clutch is engaged (visual inspection) and intake door position is at FRESH when FOOT ( $\downarrow$ ), DEF ( $\P$ ) or D/F ( $\P$ ) is selected.

Can a symptom be duplicated?

YES >> GO TO 3.

NO >> GO TO 2.

2. PERFORM COMPLETE OPERATIONAL CHECK

Perform a complete operational check and check for any symptoms. Refer to <u>HAC-123, "Operational Check"</u>. <u>Can a symptom be duplicated?</u>

YES >> Refer to HAC-122, "How to Perform Trouble Diagnosis For Quick And Accurate Repair".

NO >> System OK.

**3.**CHECK FOR SERVICE BULLETINS

Check for any service bulletins.

>> GO TO 4.

**4.**CHECK MODE DOOR OPERATION

Check and verify mode door mechanism for smooth operation in each mode.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair as necessary.

**5.**PERFORM A/C AUTO AMP. SELF-DIAGNOSIS

Perform self-diagnosis to check for any codes. Refer to <u>HAC-23, "A/C Auto Amp. Self-Diagnosis"</u>.

Are any self-diagnosis codes present?

YES >> Refer to HAC-24, "A/C System Self-Diagnosis Code Chart".

NO >> GO TO 6.

**6.**PERFORM A/C AND AV SWITCH ASSEMBLY SELF-DIAGNOSIS

Perform self-diagnosis to check the A/C and AV switch assembly. Refer to <u>HAC-23, "A/C and AV Switch</u> <u>Assembly Self-Diagnosis"</u>.

Is the inspection result normal?

YES >> Replace A/C and AV switch assembly. Refer to <u>VTL-8, "Removal and Installation"</u>.

NO >> GO TO 6.

< COMPONENT DIAGNOSIS >	[AUTOMATIC AIR CONDITIONER]	
7. CHECK THE MODE DOOR MOTOR (FRONT) PBR CIRCUIT		А
Perform diagnostic procedure for the mode door motor (front). Refer <u>Component Function Check</u> ".	to HAC-135, "Mode Door Motor (Front)	A
Is the inspection result normal?		В
YES >> GO TO 8. NO >> Repair PBR circuit or replace motor. Refer to <u>HAC-136, "I</u> <u>cedure"</u> .	<u> Mode Door Motor (Front) Diagnosis Pro-</u>	
8.RECHECK FOR CODES		C
Perform A/C auto amp. self-diagnosis. Refer to HAC-23. "A/C Auto Ar	mp_Self-Diagnosis"	
Are any self-diagnostic codes present?	<u>np. con Diagnosio</u> .	D
YES >> Refer to <u>HAC-24, "A/C System Self-Diagnosis Code Char</u> NO >> GO TO 9.	<u>t"</u> .	
9.RECHECK FOR SYMPTOMS		E
Perform a complete operational check and check for any symptoms.	Refer to HAC-123, "Operational Check".	
Does another symptom exist?		F
YES >> Repair as necessary.		
NO >> Replace A/C auto amp. Refer to <u>VTL-8, "Removal and Ins</u>	stallation".

[AUTOMATIC AIR CONDITIONER]

#### System Description INFOID:000000001366704 SYSTEM DESCRIPTION SYMPTOM: Discharge air temperature does not change. Air mix door motor does not operate. SYSTEM DESCRIPTION **Component Parts** Air mix door control system components are: A/C auto amp. A/C and AV switch assembly Air mix door motors (driver, passenger, and rear) PBR (built-into air mix door motors) In-vehicle sensor Ambient sensor Optical sensor

Intake sensor

#### System Operation

The A/C auto amp. receives data from the temperature selected by the driver side, passenger side, and rear. The A/C auto amp. then applies a voltage to one circuit of the appropriate air mix door motor, while ground is applied to the other circuit, causing the appropriate air mix door motor to rotate. The direction of rotation is determined by which circuit has voltage applied to it, and which one has ground applied to it. The A/C auto amp. monitors the air mix door positions by measuring the voltage signal on the PBR circuits of each door. In AUTO mode the air mix, intake, mode door, and defrost door positions are set by the A/C auto amp. which HAC determines the proper position based on inputs from the in-vehicle sensor, ambient sensor, optical sensor, intake sensor, and the temperature selected by the driver and front and rear passengers.

Subsequently, HOT/COLD or DEFROST/VENT or FRESH/RECIRCULATION operation is selected. The new door position data is returned to the A/C auto amp.

Air Mix Door Control Specification

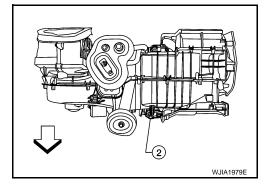

#### COMPONENT DESCRIPTION

Air Mix Door Motors (front)

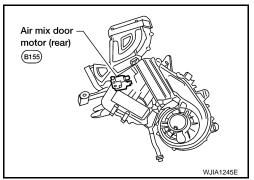

The driver (2) and passenger (1) air mix door motors are attached to the front heater & cooling unit assembly. These motors rotate so that the air mix door is opened or closed to a position set by the A/C auto amp. Motor rotation is then conveyed through a shaft and the air mix door position is then fed back to the A/C auto amp. by the PBR built into the air mix door motors.

Air Mix Door Motor (rear)

The air mix door motor (rear) (1) is attached to the rear heater & cooling unit assembly. These motors rotate so that the air mix door is opened or closed to a position set by the front (or rear) air control. Motor rotation is then conveyed through a shaft and the air mix door position is then fed back to the A/C auto amp. by the PBR built into the air mix door motors.

# Air Mix Door Motor Component Function Check

#### INSPECTION FLOW

**1.**CONFIRM SYMPTOM BY PERFORMING OPERATIONAL CHECK - TEMPERATURE INCREASE

- 1. Turn the temperature control dial (driver) clockwise until 32°C (90°F) is displayed.
- 2. Check for hot air at discharge air outlets.

# HAC-32

SYMPTOM: • Discharge air temperature does not change.

< COMPONENT DIAGNOSIS >

< COMPONENT DIAGNOSIS >

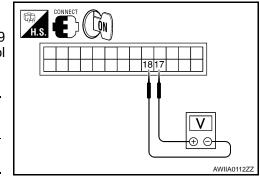

• Air mix door motor does not operate.

#### DIAGNOSTIC PROCEDURE FOR AIR MIX DOOR MOTOR (DRIVER)

#### **1.**CHECK A/C AUTO AMP. FOR POWER AND GROUND

- 1. Turn ignition switch ON.
- 2. Rotate temperature control dial (driver) to 32°C (90°F).
- Check voltage between A/C auto amp. harness connector M49 terminal 17 and terminal 18 while rotating temperature control dial (driver) to 18°C (60°F).

Connector	Terminals		Condition	Voltage
	(+)	(-)	Condition	(Approx.)
A/C auto amp.: M49	17	18	Rotate temp control dial	Battery voltage

Is the inspection result normal?

YES >> GO TO 4.

NO >> GO TO 3.

# 2.check air mix door motor (driver) circuits for short to ground

- 1. Turn ignition switch OFF.
- 2. Disconnect the A/C auto amp. harness connector.
- 3. Check continuity between A/C auto amp. harness connector M49 terminal 17, 18 and ground.
  - 17 Ground 18 - Ground
- : Continuity should not exist.
- : Continuity should not exist.

#### Is the inspection result normal?

- YES >> Replace A/C auto amp. Refer to <u>VTL-8, "Removal and</u> <u>Installation"</u>.
- NO >> Repair or replace harness as necessary.

# $\mathbf{3.}$ Check A/C auto AMP. For power and ground

- 1. Turn ignition switch ON.
- 2. Rotate temperature control dial (driver) to 32°C (90°F).
- Check voltage between A/C auto amp. harness connector M49 terminal 17 and terminal 18 while rotating temperature control dial (driver) to 18°C (60°F).

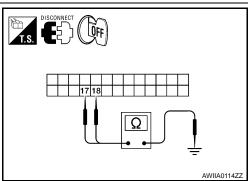

Connector	Terminals		Condition	Voltage
	(+)	(-)	Condition	(Approx.)
A/C auto amp.: M49	18	17	Rotate temp control dial	Battery voltage

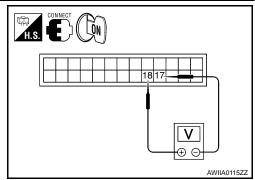

#### Is the inspection result normal?

YES >> GO TO 5.

NO >> Replace A/C auto amp. Refer to <u>VTL-8, "Removal and Installation"</u>.

**4.**CHECK AIR MIX DOOR MOTOR (DRIVER) CIRCUITS FOR OPEN

#### < COMPONENT DIAGNOSIS >

- 1. Turn ignition switch OFF.
- 2. Disconnect the A/C auto amp. harness connector.
- 3. Check continuity between A/C auto amp. harness connector M49 terminal 17 and terminal 18.

#### Continuity should exist.

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 6.

# **5.** CHECK AIR MIX DOOR MOTOR (DRIVER) CIRCUITS FOR OPEN

- Disconnect the air mix door motor (driver) harness connector. 1.
- 2. Check continuity between A/C auto amp. harness connector M49 (A) terminal 17, 18 and the air mix door motor (driver) harness connector M147 (B) terminal 5, 6.
- - 17 6

#### : Continuity should exist.

: Continuity should exist.

#### Is the inspection result normal?

- YES >> Replace air mix door motor (driver). Refer to VTL-29. "Removal and Installation".
- NO >> Repair or replace harness as necessary.

6.CHECK A/C AUTO AMP. FOR PBR POWER AND GROUND

- 1. Reconnect A/C auto amp. harness connector.
- 2. Turn ignition switch ON.
- 3. Check voltage between A/C auto amp. harness connector M50 (A) terminal 28 and M49 (B) terminal 3.

Connector	Terminals		Voltage (Ap-
Connector	(+)	(-)	prox.)
A/C auto amp.: M50, M49	28	3	5V

Is the inspection result normal?

#### INTAKE DOOR MOTOR System Description INFOID:000000001366708 SYSTEM DESCRIPTION SYMTOM: Intake door motor does not operate normally. Intake door does not change. SYSTEM DESCRIPTION **Component Parts** Intake door control system components are: A/C auto amp. A/C and AV switch assembly Intake door motor (PRB built into the intake door motor) In-vehicle sensor Ambient sensor

- Optical sensor
- Intake sensor

#### System Operation

The intake door control determines the intake door position based on the position of the recirculation switch. When the recirculation switch is depressed the intake door motor rotates closing off the fresh air inlet and recirculating the cabin air. If the recirculation switch is depressed again, the intake door motor rotates in the opposite direction, again allowing fresh air into the cabin.

In the AUTO mode, the A/C auto amp. determines the intake door position based on the ambient temperature, the intake air temperature and the in-vehicle temperature. When the DEF, D/F, FLOOR or OFF switches are pushed, the A/C auto amp. sets the intake door at the fresh position.

#### Intake Door Control Specification

	FRESH 40 - 60% FRESH/
RECIRCULATION	
<b>∢</b> Cold	→ Hot
	culated temperature

#### < COMPONENT DIAGNOSIS >

#### COMPONENT DESCRIPTION

#### Intake door motor

The intake door motor is attached to the intake unit. It rotates so that air is drawn from inlets set by the A/C auto amp. Motor rotation is conveyed to a lever which activates the intake door.

Intake Door Motor Component Function Check

INFOID:000000001366709

INSPECTION FLOW

1.CONFIRM SYMPTOM BY PERFORMING OPERATIONAL CHECK - REC (

1. Press the mode switch to vent mode( $\checkmark$ ).

2. Press REC ( ) switch. The REC ( ) indicator should illuminate.

3. Press REC ( ) switch again. The REC ( ) indicator should go out.

4. Listen for intake door position change (you should hear blower sound changes slightly).

Can a symptom be duplicated?

YES >> GO TO 3.

#### < COMPONENT DIAGNOSIS >

#### **BLOWER MOTOR CONTROL SYSTEM**

#### System Description

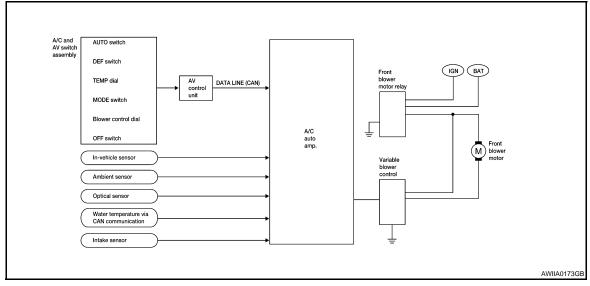

#### SYSTEM DESCRIPTION

#### **Component Parts**

Blower speed control system components are:

- A/C auto amp.
- A/C and AV switch assembly
- Variable blower control
- Front blower motor relay
- Front blower motor
- In-vehicle sensor
- Ambient sensor
- · Optical sensor
- Intake sensor

System Operation

Automatic Mode

In the automatic mode, the blower motor speed is calculated by the A/C auto amp. and variable blower control based on input from the in-vehicle sensor, optical sensor, intake sensor and ambient sensor, and potentio temperature control (PTC).

When the air flow is increased, the blower motor speed is adjusted gradually to prevent a sudden increase in M air flow.

In addition to manual air flow control and the usual automatic air flow control, starting air flow control, low water temperature starting control and high passenger compartment temperature starting control are available.

#### Starting Blower Speed Control

Start up from cold soak condition (Automatic mode).

In a cold start up condition where the engine coolant temperature is below 50°C (122°F), the blower will not operate at blower speed 1 for a short period of time (up to 210 seconds). The exact start delay time varies depending on the ambient and engine coolant temperatures.

In the most extreme case (very low ambient temperature) the blower starting delay will be 210 seconds as described above. After the coolant temperature reaches 50°C (122°F), or the 210 seconds has elapsed, the blower speed will increase to the objective blower speed.

Start up from usual operating or hot soak condition (Automatic mode).

The blower will begin operation momentarily after the AUTO switch is pushed. The blower speed will gradually rise to the objective speed over a time period of 3 seconds or less (actual time depends on the objective blower speed).

**HAC-45** 

INFOID:000000001366714

L

#### < COMPONENT DIAGNOSIS >

#### Blower Speed Compensation - Sunload

When the in-vehicle temperature and the set temperature are very close, the blower will be operating at low speed. The speed will vary depending on the sunload. During conditions of low or no sunload, the blower operates at low speed. During high sunload conditions, the A/C auto amp. causes the blower speed to increase.

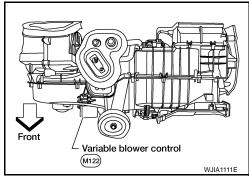

**Blower Speed Control Specification** 

#### COMPONENT DESCRIPTION

#### Variable Blower Control

The variable blower control is located on the cooling unit. The variable blower control receives a gate voltage from the A/C auto amp. to steplessly maintain the blower motor voltage in the 0 to 5 volt range (approx.).

INEOID:000000001366715

#### < COMPONENT DIAGNOSIS >

Check 15A fuses [No. 24 and 27 (Located in the fuse and fusible link box)].

#### Fuses are good.

Is the inspection result normal?

YES >> GO TO 3.

NO >> GO TO 9.

2. CHECK FRONT BLOWER MOTOR POWER SUPPLY CIRCUIT

#### 1. Turn ignition switch OFF.

- 2. Disconnect front blower motor connector.
- 3. Turn ignition switch ON.
- 4. Press the A/C switch.
- 5. Press the front blower control "+" switch to maximum speed.
- 6. Check voltage between front blower motor harness connector M62 terminal 2 and ground.

#### 2 - Ground

: Battery voltage

Is the inspection result normal?

YES >> GO TO 10. NO >> GO TO 3.

3.CHECK FRONT BLOWER MOTOR RELAY (SWITCH SIDE) POWER SUPPLY CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect front blower motor relay.
- 3. Check voltage between front blower motor relay harness connector E22 terminals 5, 7 and ground.
  - 5 Ground
  - 7 Ground
- : Battery voltage
- : Battery voltage
- Is the inspection result normal?
- YES >> GO TO 4.
- NO >> Repair harness or connector.

**4.**CHECK FRONT BLOWER MOTOR RELAY

Turn ignition switch OFF.

Check front blower motor relay. Refer to HAC-151, "Front Blower Motor Component Inspection".

Is the inspection result normal?

YES >> GO TO 5.

NO >> Replace front blower motor relay.

 ${f 5.}$ CHECK FRONT BLOWER MOTOR RELAY (SWITCH SIDE) CIRCUIT FOR OPEN

Check continuity between front blower motor relay harness connector E22 terminals 3, 6 and front blower motor harness connector M62 terminal 2.

#### 3, 6 - 2

: Continuity should exist.

Is the inspection result normal?

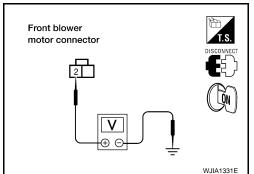

YES >> GO TO 6.

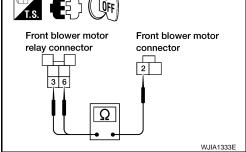

NO >> Repair harness or connector.

6. CHECK VARIABLE BLOWER CONTROL POWER SUPPLY CIRCUIT FOR OPEN

-	
	↓ _ WJIA1634E

#### < COMPONENT DIAGNOSIS >

- 1. Disconnect variable blower control harness connector.
- Check continuity between front blower motor relay harness connector E22 (A) terminals 3, 6 and variable blower control harness connector M122 (B) terminal 4.

#### 3, 6 - 4

: Continuity should exist.

Is the inspection result normal?

YES >> GO TO 7.

NO >> Repair harness or connector.

#### **7.**CHECK VARIABLE BLOWER CONTROL SIGNAL CIRCUIT

- 1. Disconnect A/C auto amp. connector.
- Check continuity between A/C auto amp. harness connector M49 (B) terminal 13 and variable blower control harness connector M122 (A) terminal 3.
  - 13 3

#### : Continuity should exist.

Is the inspection result normal?

- YES >> GO TO 8.
- NO >> Repair harness or connector.

 ${f 8.}$  CHECK FRONT BLOWER MOTOR RELAY (COIL SIDE) POWER SUPPLY

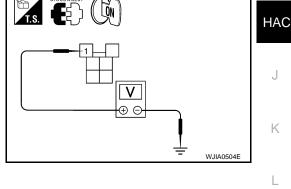

- 1. Turn ignition switch ON.
- Check voltage between front blower motor relay harness connector E22 terminal 1 and ground.

#### 1 - Ground

: Battery voltage

Is the inspection result normal?

- YES >> GO TO 9.
- NO >> Repair front blower motor ground circuit or connector.

Ω

#### **9.**REPLACE FUSES

- 1. Replace fuses.
- 2. Activate the front blower motor.

#### Does the fuse blow?

YES >> GO TO 10.

NO >> Inspection End.

10. Check front blower motor power supply circuit for short

- 1. Turn ignition switch OFF.
- 2. Disconnect front blower motor connector and variable blower control connector.
- 3. Check continuity between variable blower control harness connector M122 terminal 4 and ground.

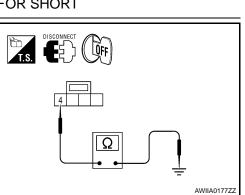

#### 4 - Ground

: Continuity should not exist.

#### Is the inspection result normal?

- YES >> GO TO 11.
- NO >> Repair harness or connector.

11. CHECK VARIABLE BLOWER CONTROL SIGNAL CIRCUIT

#### **BLOWER MOTOR CONTROL SYSTEM** [AUTOMATIC AIR CONDITIONER]

#### < COMPONENT DIAGNOSIS >

- Disconnect A/C auto amp. connector. 1.
- 2. Check continuity between A/C auto amp. harness connector M49 (B) terminal 13 and variable blower control harness connector M122 (A) terminal 3.

#### 13 - 3

: Continuity should exist.

Is the inspection result normal?

- YES >> GO TO 12.
- NO >> Repair harness or connector.

#### 12. CHECK FRONT BLOWER MOTOR

Check front blower motor. Refer to HAC-151, "Front Blower Motor Component Inspection".

Is the inspection result normal?

- YES >> GO TO 13.
- >> Replace front blower motor. Refer to VTL-13, "Removal and Installation". NO

13. CHECK BLOWER MOTOR GROUND CIRCUIT

Check continuity between front blower motor harness connector M62 terminal 1 and variable blower control harness connector M122 terminal 2.

#### 1 - 2

#### : Continuity should exist.

Is the inspection result normal?

YES >> GO TO 14.

NO >> Repair harness or connector.

#### 14.CHECK VARIABLE BLOWER CONTROL GROUND CIRCUIT

Check continuity between variable blower control harness connector M122 terminal 1 and ground.

#### 1 - Ground

#### : Continuity should exist.

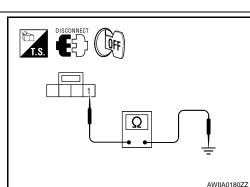

Is the inspection result normal?

- YES >> Replace variable blower control. Refer to VTL-15, "Removal and Installation".
- NO >> Repair harness or connector.

#### **Rear Blower Motor Description**

#### SYSTEM DESCRIPTION

#### **Component Parts**

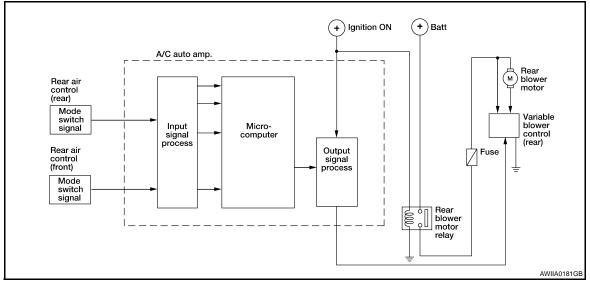

Rear blower speed control system components are:

- A/C auto amp.
- A/C and AV switch assembly
- Rear air control (front)
- Rear air control (rear)
- Variable blower control (rear)
- Rear blower motor
- Rear blower motor relay

HAC-51

#### < COMPONENT DIAGNOSIS >

#### System Operation

#### Rear Blower Control

When the rear blower control dial (front) REAR CTRL switch is pressed (indicator on), it allows the rear air control (rear) to control the rear blower motor speed. If the REAR CTRL switch is off (indicator off), the rear air control (front) controls the rear blower motor speed regardless of the rear air control (rear) position.

#### Rear Blower motor Component Function Check

INFOID:000000001366719

#### SYMPTOM:

- Rear blower motor does not operate from the rear air control (front) and the rear air control (rear).
- Rear blower motor operates from rear air control (front) only.
- Rear blower motor operates from rear air control (rear) only.
- Rear blower motor speed does not match the rear air control (front) speed selected.
- Rear blower motor speed does not match the rear air control (rear) speed selected.
- Rear blower motor operates in high all the time when controlled from the rear air control (front).
- Rear blower motor operates in high all the time when controlled from the rear air control (rear).

#### **INSPECTION FLOW**

#### **1.**CONFIRM SYMPTOM BY PERFORMING OPERATIONAL CHECK - REAR AIR CONTROL (FRONT)

- 1. Press AUTO switch.
- 2. Turn the rear air control (front) blower control dial to the lowest speed and check for rear blower operation (REAR CTRL indicator off).
- 3. Continue checking that rear blower speed increases as the rear blower control dial is rotated clockwise.

#### Does the rear blower motor operate correctly?

YES >> GO TO 3.

2. CONFIRM SYMPTOM BY PERFORMING OPERATIONAL CHECK - REAR AIR CONTROL (REAR)

- 1. Press the REAR CTRL switch (indicator on) on the rear air control (front) to send control of the rear blower motor back the rear air control (rear).
- 2. Turn the rear air control (rear) blower control dial to the lowest speed and check for rear blower operation.

3. Continue checking that rear blower speed increases as the rear blower control dial is rotated clockwise.

Does the rear blower motor operate correctly?

- YES >> Rear blower motor does not operate at any speed from the rear air control (front). Refer to <u>HAC-53</u>, "Rear Air Control (Front) Diagnosis Procedure #1".
  - Rear blower motor operates in high speed all the time or does not match the rear air control (front) speed selected. Refer to <u>HAC-54</u>, "Rear Air Control (Rear) Diagnosis Procedure #2".
- NO >> Rear blower motor does not operate from the rear air control (front) and the rear air control (rear). Refer to <u>HAC-55</u>, "Rear Air Control (Rear) Diagnosis Procedure #3"

#### < COMPONENT DIAGNOSIS >

Check circuit continuity between terminals by supplying 12 volts and ground to coil side terminals of relays.

**Rear Blower Motor** 

Check that there are no foreign particles inside the intake unit. Apply 12 volts to terminal 2 and ground to terminal 1 and ensure that the blower motor rotates freely and quietly.

Rear Air Control System Description

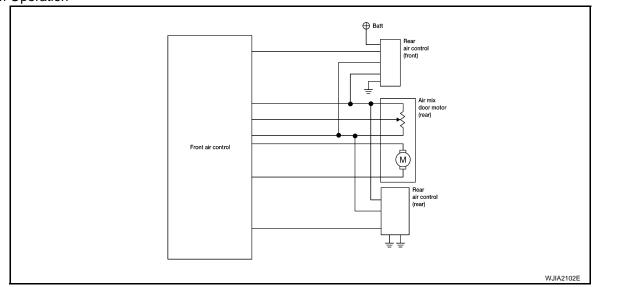

#### SYSTEM DESCRIPTION

Component Parts

Rear air control system components are:

- A/C auto amp.
- Rear air control (front)
- Rear air control (rear)
- Air mix door motor (rear)

System Operation

#### Rear Air Control

When the REAR CTRL indicator is off the rear air control (front) will control all rear blower motor speeds and the rear temperature/mode operations. When the REAR CTRL switch is pressed (indicator on), the rear air control (rear) will control all the rear blower motor speeds and the rear temperature/mode operations.

#### Rear Air Control Component Function Check

SYMPTOM:

• Temperature cannot be adjusted from the rear air control.

#### INSPECTION FLOW

#### 1.CONFIRM SYMPTOM BY PERFORMING REAR AIR CONTROL (FRONT) OPERATIONAL CHECK

- 1. Press AUTO switch (rear air controls only operate when front blower is on).
- 2. Turn the rear blower motor to maximum speed from the rear air control (front).
- 3. Turn rear air control (front) temperature/mode control dial clockwise and then counterclockwise (REAR CTRL indicator off).
- Check for hot air at rear floor discharge air outlets in the maximum heat position and cold air at rear roof discharge air outlets in the maximum cold position.

Does the rear air control (front) operate properly?

YES >> GO TO 2.

#### 2.CONFIRM SYMPTOM BY PERFORMING REAR AIR CONTROL (REAR) OPERATIONAL CHECK

- 1. Press the REAR CTRL switch on rear air control (front) to send control to the rear air control (rear).
- 2. Turn the rear blower motor to maximum speed from the rear air control (rear).
- 3. Turn rear air control (rear) temperature/mode control dial slowly clockwise and then counterclockwise (REAR CTRL indicator on).

#### MAGNET CLUTCH

#### System Description

SYSTEM DESCRIPTION

The A/C auto amp. controls compressor operation based on ambient and intake temperature and a signal from ECM.

#### Low Temperature Protection Control

The A/C auto amp. will turn the compressor ON or OFF as determined by a signal detected by the intake sensor and the ambient sensor.

When intake air temperature is higher than the preset value, the compressor turns ON. The compressor turns OFF when intake air temperature is lower than the preset value. That preset value is dependent on the ambient temperature, refer to the following table.

	VK56D	VK56DE Model		VQ40DE Model	
Ambient temperature °C (°F)	Compressor ON intake temperature °C (°F)	Compressor OFF intake temperature °C (°F)	Compressor ON intake temperature °C (°F)	Compressor OFF intake temperature °C (°F)

INFOID:000000001404888

INFOID:000000001404889

[AUTOMATIC AIR CONDITIONER]

#### System Description (VQ40DE)

#### SYSTEM DESCRIPTION

Component Parts

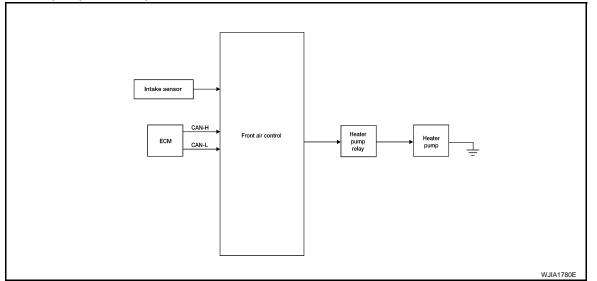

Heater pump control system components are:

- A/C auto amp.
- Heater pump relay
- Heater pump
- Intake sensor

#### System Operation

The heater pump improves heater performance specifically at idle conditions. It is designed to operate in either of the following 2 situations:

- Front blower motor set to maximum speed and temperature control dial (driver or passenger) set to full hot 32° C (90° F) or
- Engine coolant temperature (signal via CAN communication) minus heater core outlet temperature (intake sensor input to A/C auto amp.) is greater than 20° C (68° F). If the difference is less than 16° C (61° F), the heater pump will not operate unless the conditions in item No. 1 above are met.

#### Diagnosis Procedure (VQ40DE)

#### DIAGNOSTIC PROCEDURE FOR HEATER PUMP CIRCUIT

# 1.CHECK POWER SUPPLY TO HEATER PUMP

1. Disconnect heater pump connector.

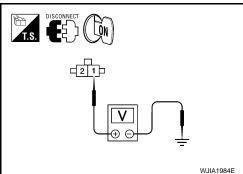

- 2. Turn ignition switch ON.
- 3. Set front blower motor to maximum speed.
- 4. Turn temperature control dial (passenger or driver) to full hot 32° C (90° F).
- 5. Check voltage between heater pump harness connector E141 terminal 1 and ground.

#### 

[AUTOMATIC AIR CONDITIONER]

#### < COMPONENT DIAGNOSIS > AMBIENT SENSOR

#### Component Description

#### COMPONENT DESCRIPTION

#### Ambient Sensor

Ambient sensor (1) is attached to the radiator core support (left side). It detects ambient temperature and converts it into a value which is then input into the A/C auto amp.

• ⇐: Front

#### AMBIENT TEMPERATURE INPUT PROCESS

The A/C auto amp. includes a processing circuit for the ambient sensor input. However, when the temperature detected by the ambient sensor increases quickly, the processing circuit retards the A/C auto amp. function. It only allows the A/C auto amp. to recognize an ambient temperature increase of 0.33°C (0.6°F) per 100 seconds.

This prevents constant adjustments due to momentary conditions, such as stopping after high speed driving. Although the actual ambient temperature has not changed, the temperature detected by the ambient sensor will increase. This is because the heat from the engine compartment can radiate to the front grille area, location of the ambient sensor.

#### Ambient Sensor Diagnosis Procedure

#### DIAGNOSTIC PROCEDURE FOR AMBIENT SENSOR

SYMPTOM: Ambient sensor circuit is open or shorted. (40 or 41 is indicated on A/C auto amp. as a result of conducting the A/C auto amp. self-diagnosis)

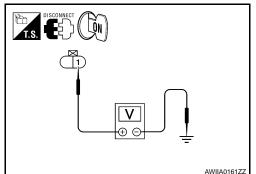

- 1. Disconnect ambient sensor connector.
- 2. Turn ignition switch ON.
- 3. Check voltage between ambient sensor harness connector E1 terminal 1 and ground.

INFOID:000000001366737

[AUTOMATIC AIR CONDITIONER]

# < COMPONENT DIAGNOSIS >

# OPTICAL SENSOR

Component Description

#### COMPONENT DESCRIPTION

The optical sensor is located in the center of the defroster grille. It detects sunload entering through windshield by means of a photo diode. The sensor converts the sunload into a current value which is then input into the A/C auto amp.

# (1) AWIIA016977

#### **OPTICAL INPUT PROCESS**

The A/C auto amp. includes a processing circuit which averages the variations in detected sunload over a period of time. This prevents adjustments in the ATC system operation due to small or quick variations in detected sunload.

For example, consider driving along a road bordered by an occasional group of large trees. The sunload detected by the optical sensor will vary whenever the trees obstruct the sunlight. The processing circuit averages the detected sunload over a period of time, so that the (insignificant) effect of the trees momentarily obstructing the sunlight does not cause any change in the ATC system operation. On the other hand, shortly after entering a long tunnel, the system will recognize the change in sunload, and the system will react accordingly. HAC

#### **Optical Sensor Diagnosis Procedure**

#### DIAGNOSTIC PROCEDURE FOR OPTICAL SENSOR

SYMPTOM: Optical sensor circuit is open or shorted. Using the CONSULT-III, DTC B257F or B2580 is displayed. Without a CON-SULT-III, code 50 or 52 is indicated on A/C auto amp. as a result of conducting self-diagnosis.

# 1. CHECK CIRCUIT CONTINUITY BETWEEN OPTICAL SENSOR AND A/C AUTO AMP.

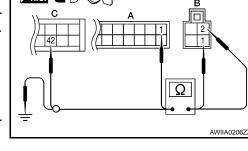

- 1. Turn ignition switch OFF.
- 2. Disconnect A/C auto amp. connector and optical sensor connector.
- 3. Check continuity between optical sensor harness connector M145 (B) terminals 1 and 2 and A/C auto amp. harness connector M50 (C) terminal 42 and M49 (A) terminal 1.
  - 1 1 2 - 42

: Continuity should exist.

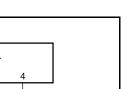

: Continuity should exist.

**HAC-83** 

4. Check continuity between optical sensor harness connector M145 terminal 1 and 2 and ground.

NO >> Repair harness or connector.

**2.**CHECK CIRCUIT CONTINUITY BETWEEN OPTICAL SENSOR AND BCM

- 1. Disconnect BCM connector.
- Check continuity between optical sensor harness connector M145 (B) terminal 3 and 4 and BCM harness connector M18 (A) terminal 18 and M20 (C) terminal 58.
  - 3 18

4 - 58

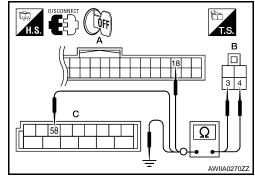

#### : Continuity should exist. : Continuity should exist.

3. Check continuity between optical sensor harness connector M145 (A) terminal 4 and ground.

Is the inspection result normal?

- YES >> Replace optical sensor. Refer to <u>VTL-11, "Removal and Installation"</u>.
- NO >> Repair harness or connector.

#### < COMPONENT DIAGNOSIS >

# [AUTOMATIC AIR CONDITIONER]

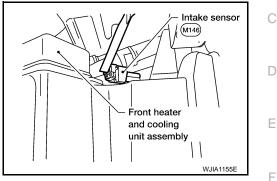

# INTAKE SENSOR

System Description

#### COMPONENT DESCRIPTION

#### Intake Sensor

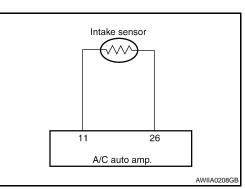

The intake sensor is located on the heater & cooling unit assembly. It converts temperature of air after if passes through the evaporator into a resistance value which is then input to the A/C auto amp.

#### Intake Sensor Diagnosis Procedure

#### DIAGNOSTIC PROCEDURE FOR INTAKE SENSOR

SYMPTOM: Intake sensor circuit is open or shorted. Using the CON-SULT-III, DTC B2581 or B2582 is displayed. Without a CONSULT-III, code 56 or 57 is indicated on A/C auto amp. as a result of conducting self-diagnosis.

Intake sensor connector

2

# 1. CHECK VOLTAGE BETWEEN INTAKE SENSOR AND GROUND

- 1 Disconnect intake sensor connector.
- Turn ignition switch ON. 2.
- 3. Check voltage between intake sensor harness connector M146 terminal 2 and ground.

#### 2 - Ground

#### : Approx. 5V

Is the inspection result normal?

- YES >> GO TO 3.
- NO >> GO TO 4.

#### 2.CHECK CIRCUIT CONTINUITY BETWEEN INTAKE SENSOR AND A/C AUTO AMP.

- 1. Turn ignition switch OFF.
- Disconnect A/C auto amp. connector.
- 3. Check continuity between intake sensor harness connector M146 (B) terminal 1 and A/C auto amp. harness connector M49 (A) terminal 21.

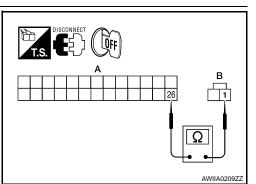

#### : Continuity should exist.

# 3. CHECK INTAKE SENSOR

Check intake sensor. Refer to HAC-86. "Intake Sensor Component Inspection".

Is the inspection result normal?

- YES >> 1. Replace A/C auto amp. Refer to <u>VTL-8. "Removal and Installation"</u>.
- 2. Go to <u>HAC-23, "A/C Auto Amp. Self-Diagnosis"</u> and perform self-diagnosis. NO >> 1. Replace intake sensor. Refer to XXXX.
- 2. Go to <u>HAC-23</u>, "A/C Auto Amp. Self-Diagnosis" and perform self-diagnosis.

**4.**CHECK CIRCUIT CONTINUITY BETWEEN INTAKE SENSOR AND A/C AUTO AMP.

#### 1. Turn ignition switch OFF.

- 2. Disconnect A/C auto amp. connector.
- Check continuity between intake sensor harness connector M146 (B) terminal 2 and A/C auto amp. harness connector M49 (A) terminal 11.

#### 2 - 11 : Continuity should exist.

 Check continuity between intake sensor harness connector M146 terminal 2 and ground.

#### 2 - Ground

#### : Continuity should not exist.

Is the inspection result normal?

- YES >> 1. Replace A/C auto amp. Refer to <u>VTL-8, "Removal and Installation"</u>.
  - 2. Go to HAC-23, "A/C Auto Amp. Self-Diagnosis" and perform self-diagnosis.
- NO >> Repair harness or connector.

#### Intake Sensor Component Inspection

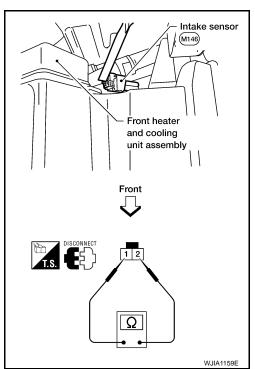

#### COMPONENT INSPECTION

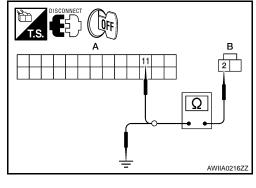

Intake Sensor

After disconnecting intake sensor connector, measure resistance between terminals 1 and 2 at sensor harness side, using the table below.

Temperature °C (°F)	Resistance $k\Omega$
-15 (5)	209.0
-10 (14)	160.0
-5 (23)	123.0
0 (32)	95.8
5 (41)	74.9
10 (50)	58.9
15 (59)	46.7
20 (68)	37.3
25 (77)	30.0
30 (86)	24.2
35 (95)	19.7
40 (104)	16.1
45 (113)	13.2

If NG, replace intake sensor. Refer to <u>VTL-12, "Removal and Installa-</u> tion".

INFOID:000000001366742

#### POWER SUPPLY AND GROUND CIRCUIT FOR CONTROLLER [AUTOMATIC AIR CONDITIONER] < COMPONENT DIAGNOSIS >

# POWER SUPPLY AND GROUND CIRCUIT FOR CONTROLLER

# **Component Description**

#### COMPONENT DESCRIPTION

#### A/C auto amp.

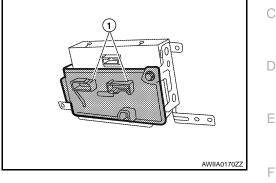

The A/C auto amp. (1) has a built-in microcomputer which processes information sent from various sensors needed for air conditioner operation. The air mix door motors, mode door motor, intake door motor, defroster door motor, blower motor and compressor are then controlled.

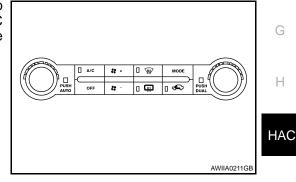

The A/C auto amp. is unitized with control mechanisms. When the various switches and temperature dials are operated, data is input to the A/C auto amp.

Self-diagnostic functions are also built into the A/C auto amp. to provide quick check of malfunctions in the auto air conditioner system.

#### Potentio Temperature Control (PTC)

There are two PTCs (driver and passenger) built into the A/C auto amp. They can be set at an interval of 0.5°C (1.0°F) in the 18°C (60°F) to 32°C (90°F) temperature range by rotating the temperature dial. The set temperature is displayed.

INFOID:000000001366744

# A/C Auto Amp. Component Function Check

SYMPTOM: A/C system does not come on.

#### **INSPECTION FLOW**

#### 1.CONFIRM SYMPTOM BY PERFORMING OPERATIONAL CHECK - AUTO MODE

Press AUTO switch. 1. L Display should indicate AUTO. Confirm that the compressor clutch engages (sound or visual inspection). (Discharge air and blower speed will depend on ambient, in-vehicle and set temperatures.) Can a symptom be duplicated? Μ YES >> GO TO 3. NO >> GO TO 2. 2. PERFORM COMPLETE OPERATIONAL CHECK Ν Perform a complete operational check and check for any symptoms. Refer to HAC-123, "Operational Check". Can a symptom be duplicated? YFS >> Refer to HAC-122, "How to Perform Trouble Diagnosis For Quick And Accurate Repair". NO >> System OK. 3.CHECK FOR SERVICE BULLETINS Ρ

Check for any service bulletins.

>> GO TO 4.

**4.**CHECK POWER AND GROUND CIRCUIT

Check main power supply and ground circuit. Refer to HAC-160, "Front Air Control Power and Ground Diagnosis Procedure".

A/C Auto Amp Power and Ground Diagnosis Procedure

INFOID:000000001366745

#### DIAGNOSTIC PROCEDURE FOR A/C SYSTEM

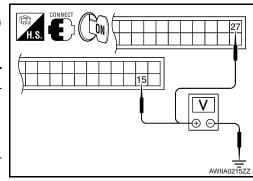

SYMPTOM: A/C system does not come on.

# **1.** CHECK POWER SUPPLY CIRCUITS FOR A/C AUTO AMP.

- 1. Disconnect A/C auto amp. connectors.
- Check voltage between A/C auto amp. harness connector M49 (B) terminal 15 and M50 (A) terminal 27, and ground.

	Terminals		Ignition switch position					
	(+)							
A/C auto amp. con- nector	Terminal No.	(-)	OFF	ACC	ON			
M49	15	Ground	Approx. 0V	Approx. 0V	Battery voltage			
M50	27	Ground	Battery voltage	Battery voltage	Battery voltage			

#### Is the inspection result normal?

YES >> GO TO 3. NO >> Check 1

- >> Check 10A fuses [Nos. 8 and 19, located in the fuse block (J/B)]. Refer to <u>HAC-89, "A/C Auto Amp. Terminals Reference Values"</u>.
  - If fuses are OK, check harness for open circuit. Repair or replace as necessary.
  - If fuses are NG, replace fuse and check harness for short circuit. Repair or replace as necessary.

# 2. CHECK GROUND CIRCUIT FOR A/C AUTO AMP.

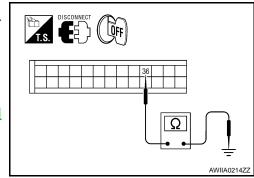

- 1. Turn ignition switch OFF.
- Check continuity between A/C auto amp. harness connector M50 terminal 36 and ground.

#### 36 - Ground

: Continuity should exist.

Is the inspection result normal?

- OK >> Replace A/C auto amp. Refer to <u>VTL-8, "Removal and</u> <u>Installation"</u>.
- NG >> Repair harness or connector.

Rear blower motor operation is malfunction- ing.	Go to Trouble Diagnosis Procedure for Rear Blower Motor.	<u>HAC-52</u>					
Rear discharge air temperature and/or air outlet does not change.	Go to Trouble Diagnosis Procedure for Rear Air Control system.	HAC-61					
Magnet clutch does not engage.	Go to Trouble Diagnosis Procedure for Magnet Clutch.	HAC-152					
Insufficient cooling	Go to Trouble Diagnosis Procedure for Insufficient Cooling.	HAC-172					
Insufficient heating	Go to Trouble Diagnosis Procedure for Insufficient Heating.	HAC-181					
Noise	Go to Trouble Diagnosis Procedure for Noise.	HAC-183					
Self-diagnosis cannot be performed.	Go to Trouble Diagnosis Procedure for Self-diagnosis.	HAC-159					
Memory function does not operate.	Go to Trouble Diagnosis Procedure for Memory Function.	HAC-119					

Does water valve operate correctly?

INSUFFICIENT COOLING
Component Function Check
SYMPTOM: Insufficient cooling
INSPECTION FLOW
<b>1.</b> CONFIRM SYMPTOM BY PERFORMING OPERATIONAL CHECK - TEMPERATURE DECREASE
1. Press the AUTO switch.
<ol> <li>Turn temperature control dial (driver) counterclockwise until 16° C (60° F) is displayed.</li> <li>Check for cold air at discharge air outlets.</li> </ol>
Can the symptom be duplicated?
YES >> GO TO 3. NO >> GO TO 2.
2. CHECK FOR ANY SYMPTOMS
Perform a complete operational check for any symptoms. Refer to <u>HAC-123</u> , "Operational Check".
Does another symptom exist?
YES >> Refer to <u>HAC-171, "Symptom Matrix Chart"</u> .
NO >> System OK. 3.CHECK FOR SERVICE BULLETINS
Check for any service bulletins.
Check for any service bulletins.
>> GO TO 3.
4.PERFORM SELF-DIAGNOSIS
Perform self-diagnosis Refer to HAC-23, "A/C Auto Amp. Self-Diagnosis".
<u>Is the inspection result normal?</u> YES >> GO TO 5.
NO >> Refer to <u>HAC-24, "A/C System Self-Diagnosis Code Chart"</u> .
5. CHECK DRIVE BELTS
Check compressor belt tension. Refer to <u>EM-13, "Checking Drive Belts"</u> (VQ40DE) or <u>EM-153, "Checking Drive Belts"</u> (VK56DE).
Is the inspection result normal?
OK >> GO TO 6.
NG >> Adjust or replace compressor belt. Refer to <u>EM-13, "Tension Adjustment"</u> , <u>EM-13, "Removal and Installation"</u> (VQ40DE) or <u>EM-153, "Removal and Installation"</u> (VK56DE).
6. CHECK AIR MIX DOOR OPERATION
Check and verify air mix door mechanism for smooth operation. Refer to HAC-140, "Air Mix Door Motor Com-
ponent Function Check" Does air mix door operate correctly?
YES >> GO TO 7.
NO >> Check air mix door motor circuit. Refer to <u>HAC-141</u> , "Air Mix Door Motor Diagnosis Procedure" or <u>HAC-37</u> , "Air Mix Door Motor (Passenger) Diagnosis Procedure".
7. CHECK COOLING FAN MOTOR OPERATION
Check and verify cooling fan motor for smooth operation.
Does cooling fan motor operate correctly?
YES >> GO TO 8. NO >> Check cooling fan motor.
8. CHECK WATER VALVE OPERATION (VK56DE ONLY)

Check and verify water valve for smooth operation. Refer to HAC-72, "Water Valve Description (VK56DE)".

# INSUFFICIENT COOLING

< SYMPTOM DIAGNOSIS >

YES >> GO TO 8.

NO >> Check water valve circuit. Refer to <u>HAC-72, "Water Valve Diagnosis Procedure (VK56DE)"</u>.

**9.**CHECK RECOVERY/RECYCLING EQUIPMENT BEFORE USAGE

Check recovery/recycling equipment before connecting to vehicle. Verify there is no pressure in the recovery/ recycling equipment by checking the gauges. If pressure exists, recover refrigerant from equipment lines.

>> GO TO 9.

**10.**CHECK REFRIGERANT PURITY

1. Connect recovery/recycling equipment to vehicle.

2. Confirm refrigerant purity in supply tank using recovery/recycling and refrigerant identifier.

Is the inspection result normal?

YES >> GO TO 10.

NO >> Check contaminated refrigerant. Refer to <u>HAC-185, "Working with HFC-134a (R-134a)"</u>.

11.CHECK FOR EVAPORATOR FREEZE UP

Start engine and run A/C. Check for evaporator freeze up.

Does evaporator freeze up?

YES >> Perform performance test diagnoses. Refer to <u>HAC-173, "Performance Test Diagnoses"</u>. NO >> GO TO 11.

12.CHECK REFRIGERANT PRESSURE

Check refrigerant pressure with manifold gauge connected. Refer to HAC-176, "Test Reading".

Is the inspection result normal?

YES >> Perform performance test diagnoses. Refer to <u>HAC-173, "Performance Test Diagnoses"</u>. NO >> GO TO 12.

NO >> GO 10 12.

**13.**CHECK AIR DUCTS

Check ducts for air leaks.

Is the inspection result normal?

YES >> System OK.

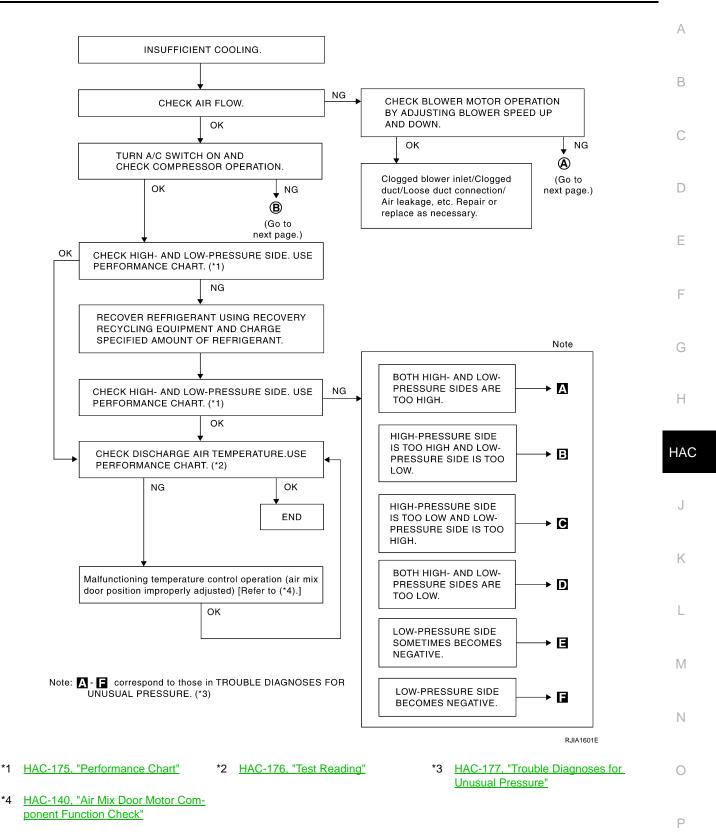

NO >> Repair air leaks.

### Recirculating-to-discharge Air Temperature Table

Inside air (Recirculating ai	r) at blower assembly inlet		
Relative humidity %	Air temperature °C (°F)	Discharge air temperature at center ventilator °C (°F)	Н
	20 (68)	5.3 - 6.5 (42 - 44)	
-	25 (77)	9.7 - 11.5 (49 - 53)	HA
50 - 60	30 (86)	13.8 - 16.3 (57 - 61)	
-	35 (95)	18.0 - 21.2 (64 - 70)	
	40 (104)	22.2 - 25.7 (72 - 78)	J
	20 (68)	6.5 - 7.7 (44 - 46)	
-	25 (77)	11.5 - 13.3 (53 - 56)	K
60 - 70	30 (86)	16.3 - 18.8 (61 - 66)	
-	35 (95)	21.2 - 24.0 (70 - 75)	
-	40 (104)	25.7 - 29.2 (78 - 85)	

### Ambient Air Temperature-to-operating Pressure Table

Ambient air		High-pressure (Discharge side)	Low-pressure (Suction side)
Relative humidity %	Air temperature °C (°F)	kPa (kg/cm <sup>2</sup> , psi)	kPa (kg/cm <sup>2</sup> , psi)
	20 (68)	680 - 840 (6.94 - 8.57, 98.6 - 121.8)	160 - 198 (1.63 - 2.02, 23.2 - 28.7)
-	25 (77)	800 - 985 (8.16 - 10.05, 116.0 - 142.8)	198 - 245 (2.02 - 2.50, 28.7 - 35.5)
50 - 70	30 (86)	940 - 1,150 (9.59 - 11.73, 136.3 - 166.8)	225 - 278 (2.30 - 2.84, 32.6 - 40.3)
-	35 (95)	1,160 - 1,410 (11.83 - 14.38, 168.2 - 204.5)	273 - 335 (2.78 - 3.42, 39.6 - 48.6)
40 (104)	1,325 - 1,620 (13.52 - 16.52, 192.1 - 234.9)	325 - 398 (3.32 - 4.06, 47.1 - 57.7)	

### < SYMPTOM DIAGNOSIS >

### **Trouble Diagnoses for Unusual Pressure**

Whenever system's high and/or low side pressure is unusual, diagnose using a manifold gauge. The marker above the gauge scale in the following tables indicates the standard (usual) pressure range. Since the standard (usual) pressure, however, differs from vehicle to vehicle, refer to above table (Ambient air temperature-to-operating pressure table).

Both High- and Low-pressure Sides are Too High

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
Both high- and low-pressure sides are too high.	Pressure is reduced soon af- ter water is splashed on con- denser.	Excessive refrigerant charge in refrigeration cycle	Reduce refrigerant until speci- fied pressure is obtained.
	Air suction by cooling fan is in- sufficient.	<ul> <li>Insufficient condenser cooling performance</li> <li>↓</li> <li>1. Condenser fins are clogged.</li> <li>2. Improper fan rotation of cooling fan</li> </ul>	<ul> <li>Clean condenser.</li> <li>Check and repair cooling fan if necessary.</li> </ul>
	<ul> <li>Low-pressure pipe is not cold.</li> <li>When compressor is stopped high-pressure value quickly drops by approximately 196 kPa (2 kg/cm<sup>2</sup>, 28 psi). It then decreases gradually thereafter.</li> </ul>	Poor heat exchange in con- denser (After compressor operation stops, high-pressure decreas- es too slowly.) ↓ Air in refrigeration cycle	Evacuate and recharge system.
	Engine tends to overheat.	Engine cooling systems mal- function.	Check and repair engine cool- ing system.
	<ul> <li>An area of the low-pressure pipe is colder than areas near the evaporator outlet.</li> <li>Plates are sometimes cov- ered with frost.</li> </ul>	<ul> <li>Excessive liquid refrigerant on low-pressure side</li> <li>Excessive refrigerant dis- charge flow</li> <li>Expansion valve is open a lit- tle compared with the speci- fication.</li> <li>↓</li> <li>Improper expansion valve ad- justment</li> </ul>	Replace expansion valve.

High-pressure Side is Too High and Low-pressure Side is Too Low

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
High-pressure side is too high and low-pressure side is too low.	Upper side of condenser and high-pressure side are hot, however, liquid tank is not so hot.	High-pressure tube or parts lo- cated between compressor and condenser are clogged or crushed.	<ul> <li>Check and repair or replace malfunctioning parts.</li> <li>Check oil for contamination.</li> </ul>

High-pressure Side is Too Low and Low-pressure Side is Too High

### < SYMPTOM DIAGNOSIS >

### [AUTOMATIC AIR CONDITIONER]

Gauge indication	Refrigerant cycle	Probable cause	Corrective action	
High-pressure side is too low and low-pressure side is too high.	High- and low-pressure sides become equal soon after com- pressor operation stops.	Compressor pressure opera- tion is improper. ↓ Damaged inside compressor packings.	Replace compressor.	
	No temperature difference be- tween high- and low-pressure sides.	Compressor pressure opera- tion is improper. ↓ Damaged inside compressor packings.	Replace compressor.	

Both High- and Low-pressure Sides are Too Low

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
Both high- and low-pressure sides are too low.	<ul> <li>There is a big temperature difference between liquid tank outlet and inlet. Outlet temperature is extremely low.</li> <li>Liquid tank inlet and expan- sion valve are frosted.</li> </ul>	Liquid tank inside is slightly clogged.	<ul> <li>Replace liquid tank.</li> <li>Check oil for contamination.</li> </ul>
	<ul> <li>Temperature of expansion valve inlet is extremely low as compared with areas near liquid tank.</li> <li>Expansion valve inlet may be frosted.</li> <li>Temperature difference oc- curs somewhere in high- pressure side.</li> </ul>	High-pressure pipe located be- tween liquid tank and expan- sion valve is clogged.	<ul> <li>Check and repair malfunc- tioning parts.</li> <li>Check oil for contamination.</li> </ul>
	Expansion valve and liquid tank are warm or only cool when touched.	Low refrigerant charge. ↓ Leaking fittings or compo- nents.	Check refrigerant system for leaks. Refer to <u>HA-29</u> , "Check- ing System for Leaks Using the <u>Fluorescent Dye Leak Detec-</u> tor" or <u>HA-31</u> , "Electronic Re- frigerant Leak Detector".
	There is a big temperature dif- ference between expansion valve inlet and outlet while the valve itself is frosted.	<ul> <li>Expansion valve closes a little compared with the specification.</li> <li>↓</li> <li>1. Improper expansion valve adjustment.</li> <li>2. Malfunctioning expansion valve.</li> <li>3. Outlet and inlet may be clogged.</li> </ul>	<ul> <li>Remove foreign particles by using compressed air.</li> <li>Check oil for contamination.</li> </ul>
	An area of the low-pressure pipe is colder than areas near the evaporator outlet.	Low-pressure pipe is clogged or crushed.	<ul><li>Check and repair malfunctioning parts.</li><li>Check oil for contamination.</li></ul>
	Air flow volume is too low.	Evaporator is frozen.	<ul> <li>Check intake sensor circuit. Refer to <u>HAC-157</u>, "Intake <u>Sensor Diagnosis Proce-</u> <u>dure"</u>.</li> <li>Repair evaporator fins.</li> <li>Replace evaporator.</li> <li>Refer to <u>HAC-146</u>, "Front <u>Blower Motor Component</u> <u>Function Check"</u>.</li> </ul>

Low-pressure Side Sometimes Becomes Negative

### < SYMPTOM DIAGNOSIS >

### **INSUFFICIENT COOLING**

### [AUTOMATIC AIR CONDITIONER]

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
Low-pressure side sometimes be- comes negative.	<ul> <li>Air conditioning system does not function and does not cy- clically cool the compart- ment air.</li> <li>The system constantly func- tions for a certain period of time after compressor is stopped and restarted.</li> </ul>	Refrigerant does not discharge cyclically. ↓ Moisture is frozen at expan- sion valve outlet and inlet. ↓ Water is mixed with refrigerant.	<ul> <li>Drain water from refrigerant or replace refrigerant.</li> <li>Replace liquid tank.</li> </ul>

### Low-pressure Side Becomes Negative

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
Low-pressure side becomes nega- tive.	Liquid tank or front/rear side of expansion valve's pipe is frost- ed or dewed.	High-pressure side is closed and refrigerant does not flow. ↓ Expansion valve or liquid tank is frosted.	<ul> <li>Leave the system at rest until no frost is present. Start it again to check whether or not the malfunction is caused by water or foreign particles.</li> <li>If water is the cause, initially cooling is okay. Then the water freezes causing a blockage. Drain water from refrigerant or replace refrigerant.</li> <li>If due to foreign particles, remove expansion valve and remove the particles with dry and compressed air (not shop air).</li> <li>If either of the above methods cannot correct the malfunction, replace expansion valve.</li> <li>Replace liquid tank.</li> <li>Check oil for contamination.</li> </ul>

### **INSUFFICIENT HEATING** А Component Function Check INFOID:000000001366754 SYMPTOM: Insufficient heating В INSPECTION FLOW **1.** CONFIRM SYMPTOM BY PERFORMING OPERATIONAL CHECK - TEMPERATURE INCREASE 1 Press the AUTO switch. Turn the temperature control dial (driver) clockwise until 32° C (90° F) is displayed. 2. Check for hot air at discharge air outlets. 3. Can this symptom be duplicated? YES >> GO TO 2. NO >> Perform complete system operational check. Refer to HAC-123, "Operational Check". E 2.CHECK FOR SERVICE BULLETINS Check for any service bulletins. F >> GO TO 3. ${f 3.}$ PERFORM SELF-DIAGNOSIS Perform self-diagnosis. Refer to HAC-23, "A/C Auto Amp. Self-Diagnosis". Is the inspection results normal? Н YES >> GO TO 4. NO >> Refer to HAC-24, "A/C System Self-Diagnosis Code Chart". 4.CHECK ENGINE COOLING SYSTEM HAC Check for proper engine coolant level. Refer to CO-11, "System Inspection" (VQ40DE) or CO-38, "System 1. Inspection" (VK56DE). Check hoses for leaks or kinks. 2. Check radiator cap. Refer to CO-18, "Checking Radiator" (VQ40DE) or CO-45, "Checking Radiator" 3. (VK56DE). 4. Check for air in cooling system. Κ >> GO TO 5. 5.CHECK AIR MIX DOOR OPERATION Check the operation of the air mix door. Is the inspection result normal? YES >> GO TO 6. M NO >> Check the air mix door motor circuit. Refer to HAC-140, "Air Mix Door Motor Component Function Check". **6.**CHECK AIR DUCTS Ν Check for disconnected or leaking air ducts. Is the inspection result normal? YES >> GO TO 7. NO >> Repair all disconnected or leaking air ducts. 7.CHECK HEATER HOSE TEMPERATURES P 1. Start engine and warm it up to normal operating temperature. Touch both the inlet and outlet heater hoses. 2. Is the inspection result normal? >> Hot inlet hose and a warm outlet hose: GO TO 8. YES NO >> • Inlet hose cold: GO TO 11.

• Both hoses warm: GO TO 9.

< SYMPTOM DIAGNOSIS >

### 8. CHECK ENGINE COOLANT SYSTEM

Check engine control temperature sensor.

Is the inspection result normal?

- YES >> System OK.
- NO >> Repair or replace as necessary. Retest.
- **9.**CHECK HEATER HOSES

Check heater hoses for proper installation.

Is the inspection result normal?

- YES >> System OK.
- NO >> 1. Back flush heater core.
  - 2. Drain the water from the system.
  - 3. Refill system with new engine coolant. Refer to <u>CO-12, "Changing Engine Coolant"</u> (VQ40DE) or <u>CO-39, "Changing Engine Coolant"</u> (VK56DE).
  - 4. GO TO 10 to retest.

**10.**CHECK HEATER HOSE TEMPERATURES

- 1. Start engine and warm it up to normal operating temperature.
- 2. Touch both the inlet and outlet heater hoses.

Is the inspection result normal?

- YES >> System OK.
- NO >> Replace heater core. Refer to <u>VTL-26</u>, "Removal and Installation".
- **11.**CHECK HEATER PUMP (VQ40DE ONLY)

Check the operation of the heater pump valve. Refer to <u>HAC-76. "Component Inspection (VQ40DE)"</u>. <u>Is the inspection result normal?</u>

- YES >> System OK.
- NO >> Replace heater pump. Refer to <u>HA-58, "Removal and Installation"</u>.

### < SYMPTOM DIAGNOSIS > NOISE

### А **Component Function Check** INFOID:000000001366755 SYMPTOM: Noise В **INSPECTION FLOW** 1. Confirm symptom by performing the following operational check. Perform a complete operational check for any symptoms. Refer to <u>HAC-123, "Operational Check"</u> . <u>Does another symptom exist?</u>	
YES >> Refer to <u>HAC-122</u> , "How to Perform Trouble Diagnosis For Quick And Accurate Repair".	0
NO >> Replace A/C auto amp. Refer to <u>VTL-8, "Removal and Installation"</u> .	
	Ρ

### < PRECAUTION >

### PRECAUTION PRECAUTIONS

### Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSION-ER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SR and SB section of this Service Manual.

### WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SR section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

Working with HFC-134a (R-134a)

INFOID:000000001366758

### WARNING:

- CFC-12 (R-12) refrigerant and HFC-134a (R-134a) refrigerant are not compatible. If the refrigerants are mixed compressor failure is likely to occur. Refer to <u>HA-3</u>, <u>"Contaminated Refrigerant"</u>. To determine the purity of HFC-134a (R-134a) in the vehicle and recovery tank, use Refrigerant Recovery/ Recycling Recharging equipment and Refrigerant Identifier.
- Use only specified oil for the HFC-134a (R-134a) A/C system and HFC-134a (R-134a) components. If oil other than that specified is used, compressor failure is likely to occur.
- The specified HFC-134a (R-134a) oil rapidly absorbs moisture from the atmosphere. The following handling precautions must be observed:
- When removing refrigerant components from a vehicle, immediately cap (seal) the component to minimize the entry of moisture from the atmosphere.
- When installing refrigerant components to a vehicle, do not remove the caps (unseal) until just before connecting the components. Connect all refrigerant loop components as quickly as possible to minimize the entry of moisture into system.
- Only use the specified oil from a sealed container. Immediately reseal containers of oil. Without proper sealing, oil will become moisture saturated and should not be used.
- Avoid breathing A/C refrigerant and oil vapor or mist. Exposure may irritate eyes, nose and throat. Remove HFC-134a (R-134a) from the A/C system using certified service equipment meeting requirements of SAE J2210 [HFC-134a (R-134a) recycling equipment], or J2209 [HFC-134a (R-134a) recycling equipment], If accidental system discharge occurs, ventilate work area before resuming service. Additional health and safety information may be obtained from refrigerant and oil manufacturers.
- Do not allow A/C oil to come in contact with styrofoam parts. Damage may result.

### CONTAMINATED REFRIGERANT

If a refrigerant other than pure HFC-134a (R-134a) is identified in a vehicle, your options are:

- Explain to the customer that environmental regulations prohibit the release of contaminated refrigerant into the atmosphere.
- Explain that recovery of the contaminated refrigerant could damage your service equipment and refrigerant supply.
- Suggest the customer return the vehicle to the location of previous service where the contamination may have occurred.
- If you choose to perform the repair, recover the refrigerant using only **dedicated equipment and containers. Do not recover contaminated refrigerant into your existing service equipment.** If your facility does

### PRECAUTIONS

### [AUTOMATIC AIR CONDITIONER]

not have dedicated recovery equipment, you may contact a local refrigerant product retailer for available service. This refrigerant must be disposed of in accordance with all federal and local regulations. In addition, replacement of all refrigerant system components on the vehicle is recommended.

 If the vehicle is within the warranty period, the air conditioner warranty is void. Please contact NISSAN Customer Affairs for further assistance.

### Precaution for Service Equipment

### MANIFOLD GAUGE SET

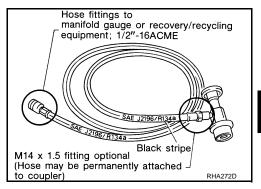

< PRECAUTION >

Be certain that the gauge face indicates R-134a or 134a. Make sure the gauge set has 1/2"-16 ACME threaded connections for service hoses. Confirm the set has been used only with refrigerant HFC-134a (R-134a) along with specified oil.

### SERVICE HOSES

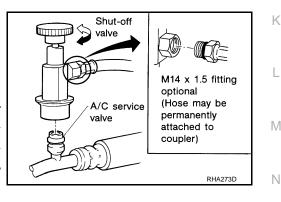

Be certain that the service hoses display the markings described (colored hose with black stripe). All hoses must include positive shutoff devices (either manual or automatic) near the end of the hoses opposite the manifold gauge.

### SERVICE COUPLERS

Never attempt to connect HFC-134a (R-134a) service couplers to a CFC-12 (R-12) A/C system. The HFC-134a (R-134a) couplers will not properly connect to the CFC-12 (R-12) system. However, if an improper connection is attempted, discharging and contamination may occur.

**1.**LISTEN TO CUSTOMER COMPLAINT

Listen to customer complaint. Get detailed information about the conditions and environment when the symptom occurs.

### >> GO TO 2

2. CHECK FOR SERVICE BULLETINS

Check for any service bulletins.

### >> GO TO 3.

### $\mathbf{3.}$ verify the symptom with operational check

Verify the symptom with operational check. Refer to HAC-123, "Operational Check".

Can a symptom be duplicated?

- YES >> Go to trouble diagnosis. Refer to <u>HAC-171, "Symptom Matrix Chart"</u>
- NO >> System OK.

### **INSPECTION AND ADJUSTMENT**

INSPECTION AND ADJUSTMENT	
Operational Check	A
The purpose of the operational check is to confirm that the system operates properly.	В
Conditions : Engine running and at normal operating temperature	
CHECKING BLOWER	С
<ol> <li>Turn blower control dial clockwise. Blower should operate on low speed.</li> <li>Turn the blower control dial again, and continue checking each blower speed until all speeds are checked.</li> <li>Leave blower on speed 4.</li> <li>If NG, go to trouble diagnosis procedure for <u>HAC-147</u>. "Front Blower Motor Diagnosis Procedure".</li> <li>If OK, continue with next check.</li> </ol>	D
CHECKING DISCHARGE AIR	E
1. Turn the mode switch to each position.	
<ol> <li>Confirm that discharge air comes out according to the air distribution table. Refer to <u>HAC-131</u>, "<u>Discharge</u> <u>Air Flow</u>".</li> </ol>	F
Mode door position is checked in the next step. If NG, go to trouble diagnosis procedure for <u>HAC-136, "Mode Door Motor (Front) Diagnosis Procedure"</u> . If OK, continue with next check.	G
<b>NOTE:</b> Confirm that the A/C compressor clutch is engaged (sound or visual inspection) and intake door position is at fresh when the DEF ( $\mathbf{W}$ ) or D/F ( $\mathbf{W}$ ) is selected.	Η
CHECKING RECIRCULATION	HAC
1. Press recirculation (	
<ol> <li>Press recirculation ( ) switch one more time. Recirculation indicator should go off.</li> <li>Listen for intake door position change (blower sound should change slightly).</li> </ol>	J
<ol> <li>Listen for intake door position change (blower sound should change slightly).</li> <li>If NG, go to trouble diagnosis procedure for <u>HAC-144</u>. "Intake Door Motor Diagnosis Procedure".</li> <li>If OK, continue with next check.</li> <li><b>NOTE:</b></li> <li>Confirm that the compressor clutch is engaged (sound or visual inspection) and intake door position is at fresh</li> </ol>	K
when the DEF or D/F is selected.	I
CHECKING TEMPERATURE DECREASE	L
1. Rotate temperature control dial counterclockwise.	
<ol> <li>Check for cold air at appropriate discharge air outlets.</li> <li>If NG, listen for sound of air mix door motor operation if OK, go to trouble diagnosis procedure for <u>HAC-172</u>, <u>"Component Function Check"</u>. If air mix door motor appears to be malfunctioning, go to <u>HAC-140</u>, "Air Mix <u>Door Motor Component Function Check"</u>.</li> </ol>	M
If OK, continue with next check.	IN
CHECKING TEMPERATURE INCREASE	
<ol> <li>Rotate temperature control dial clockwise.</li> <li>Check for hot air at appropriate discharge air outlets.</li> </ol>	0
If NG, listen for sound of air mix door motor operation. If OK, go to trouble diagnosis procedure for <u>HAC-181</u> , <u>"Component Function Check"</u> . If air mix door motor (front) appears to be malfunctioning, go to <u>HAC-140</u> , "Air <u>Mix Door Motor Component Function Check"</u> . If OK, continue with next check.	Ρ
CHECK A/C SWITCH	

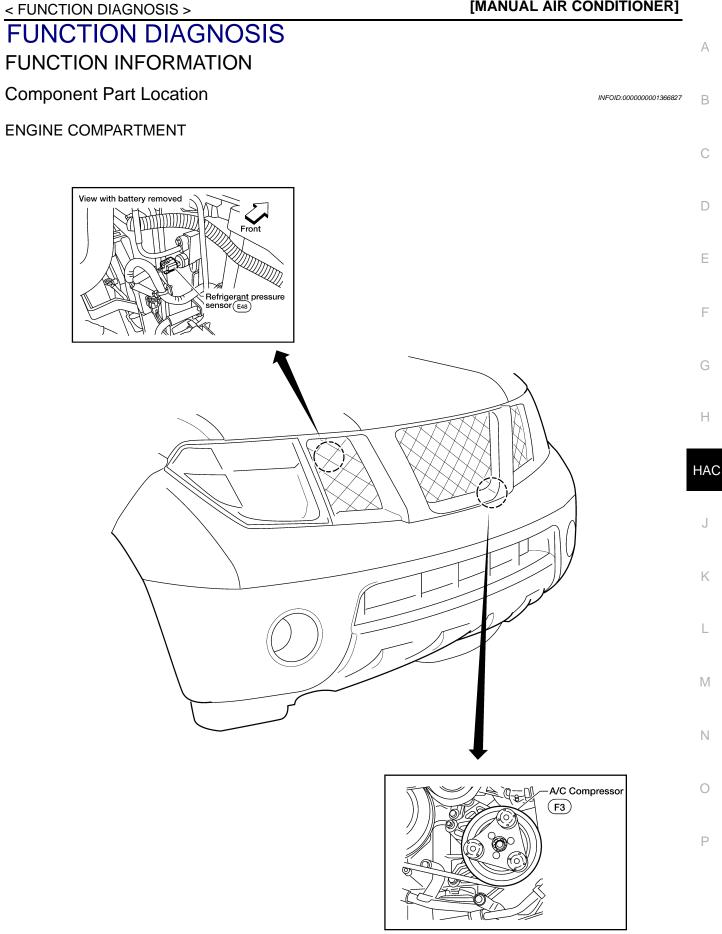

- 1. Press A/C switch with the blower switch ON.
- 2. A/C switch indicator will turn ON.

< BASIC INSPECTION >

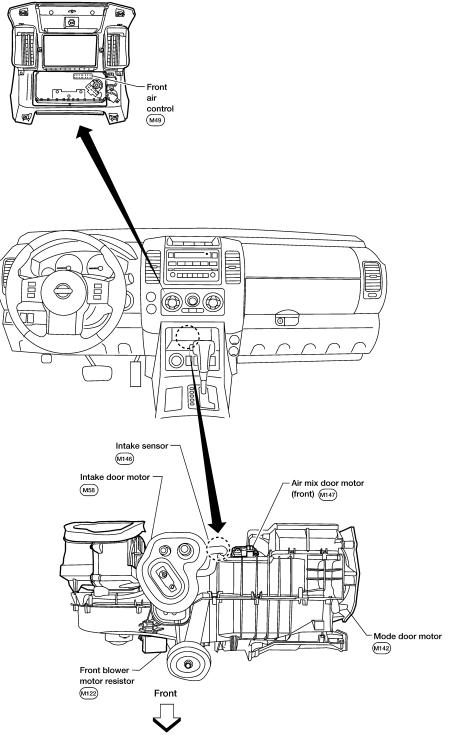

• Confirm that the compressor clutch engages (sound or visual inspection).

< BASIC INSPECTION >

If NG, go to trouble diagnosis procedure for <u>HAC-152</u>, "<u>Magnet Clutch Diagnosis Procedure</u>". If OK, continue with next check.

В

### MANUAL AIR CONDITIONER SYSTEM

### < FUNCTION DIAGNOSIS >

1. Temperature control dial

4.

- Blower control dial
   Recirculation switch
- 3. A/C switch
- 6. Mode dial

### TEMPERATURE CONTROL DIAL (TEMPERATURE CONTROL)

Increases or decreases the set temperature.

### RECIRCULATION (

Rear window defogger switch

- When REC switch is ON, REC switch indicator turns ON, and air inlet is set to REC.
- When REC switch is turned OFF, or when compressor is turned from ON to OFF, REC switch is automatically turned OFF. REC mode can be re-entered by pressing REC switch again.
- REC switch is not operated when DEF switch is turned ON, or at the D/F or FOOT position.

### DEFROSTER (@) SWITCH

Positions the air outlet doors to the defrost position. Also positions the intake doors to the outside air position.

REAR WINDOW DEFOGGER SWITCH When switch is ON, rear window is defogged.

OFF SWITCH (BLOWER SPEED SET TO 0)

The compressor and blower are OFF.

### A/C SWITCH

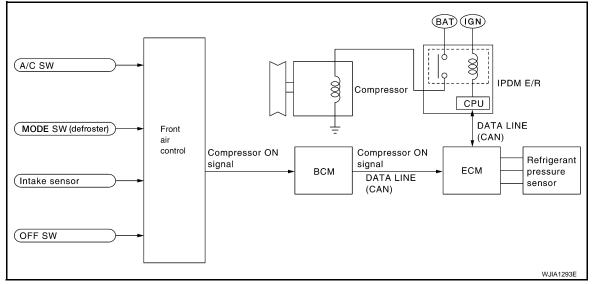

The compressor is ON or OFF. (Pressing the A/C switch will turn off the A/C switch and compressor.)

### MODE DIAL

Controls the air discharge outlets.

FRONT BLOWER CONTROL DIAL Manually controls the four blower speeds.

### MAGNET CLUTCH CONTROL

When the A/C switch is pressed, or the mode dial is turned to the DEF or D/F position, the front air control outputs a compressor ON signal to BCM.

The BCM then sends a compressor ON signal to ECM, via CAN communication line.

ECM judges whether compressor can be turned ON, based on each sensor status (refrigerant pressure sensor signal, throttle angle sensor, etc.). If it judges compressor can be turned ON, it sends compressor ON signal to IPDM E/R, via CAN communication line.

Upon receipt of compressor ON signal from ECM, IPDM E/R turns air conditioner relay ON to operate compressor.

### DIAGNOSIS SYSTEM (BCM) CONSULT-III Function (BCM)

INFOID:000000001366839

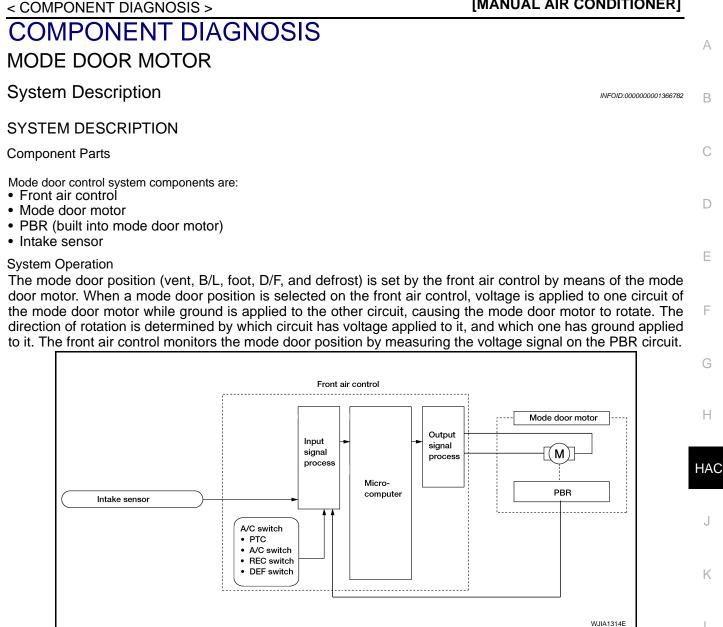

CONSULT-II can display each diagnostic item using the diagnostic test modes shown following.

BCM diagnostic test item	Diagnostic mode	Description			
	WORK SUPPORT	Supports inspections and adjustments. Commands are transmitted to the BCM for setting the status suitable for required operation, input/output signals are received from the BCM and received data is displayed.			
	DATA MONITOR	Displays BCM input/output data in real time.			
Inspection by part	ACTIVE TEST	Operation of electrical loads can be checked by sending drive signal to them.			
	SELF-DIAG RESULTS	Displays BCM self-diagnosis results.			
	CAN DIAG SUPPORT MNTR	The result of transmit/receive diagnosis of CAN communication can be read.			
	ECU PART NUMBER	BCM part number can be read.			
	CONFIGURATION	Performs BCM configuration read/write functions.			

### DATA MONITOR

### **Display Item List**

Monitor item name "operation or unit" Contents		Contents
IGN ON SW	"ON/OFF"	Displays "IGN Position (ON)/OFF, ACC Position (OFF)" status as judged from ignition switch signal.
COMP ON SIG	"ON/OFF"	Displays "COMP (ON)/COMP (OFF)" status as judged from air conditioner switch signal.
FAN ON SIG	"ON/OFF"	Displays "FAN (ON)/FAN (OFF)" status as judged from blower motor switch signal.

### COMPONENT DESCRIPTION

### Mode Door Motor

The mode door motor is attached to the heater and cooling unit assembly. It rotates so that air is discharged from the outlet as indicated by the front air control. Motor rotation is conveyed to a link which activates the mode door.

### AIR MIX DOOR MOTOR

System Description

### SYSTEM DESCRIPTION

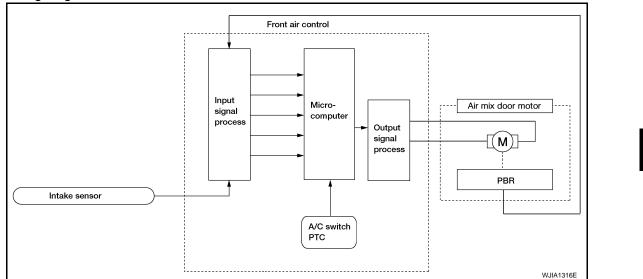

### **Component Parts**

Air\_mix door control system components are:

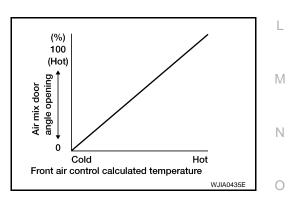

- Front air control
- Air mix door motor
- PBR (built into air mix door motor)
- Intake sensor

### System Operation

The front air control receives data from the temperature selected by the driver. The front air control then applies a voltage to one circuit of the air mix door motor, while ground is applied to the other circuit, causing the air mix door motor to rotate. The direction of rotation is determined by which circuit has voltage applied to it, and which one has ground applied to it. The front air control monitors the air mix door positions by measuring the voltage signal on the PBR circuits of each door.

Air Mix Door Control Specification

### COMPONENT DESCRIPTION

Air Mix Door Motors

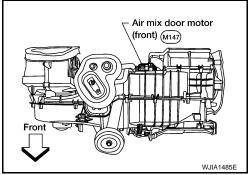

Ρ

### AIR MIX DOOR MOTOR

### < COMPONENT DIAGNOSIS >

The air mix door motor is attached to the front heater and cooling unit assembly. This motor rotates so that the air mix door is opened or closed to a position set by the front air control. Motor rotation is then conveyed through a shaft and the air mix door position is then fed back to the front air control by the PBR built into the air mix door motor.

### < COMPONENT DIAGNOSIS >

### INTAKE DOOR MOTOR

### System Description

### SYSTEM DESCRIPTION

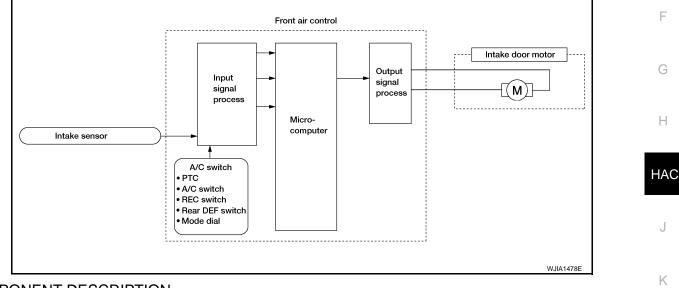

### **Component Parts**

Intake door control system components are:

- Front air control
- Intake door motor
- Intake sensor

### System Operation

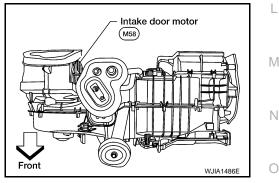

The intake door control determines the intake door position based on the position of the recirculation switch. When the recirculation switch is depressed the intake door motor rotates closing off the fresh air inlet and recirculating the cabin air. If the recirculation switch is depressed again, the intake door motor rotates in the opposite direction, again allowing fresh air into the cabin.

### COMPONENT DESCRIPTION

### Intake door motor

The intake door motor is attached to the intake unit. It rotates so that air is drawn from inlets set by the front air control. Motor rotation is conveyed to a lever which activates the intake door.

### Intake Door Motor Component Function Check

SYMPTOM:

- Intake door does not change.
- Intake door motor does not operate normally.

### INSPECTION FLOW

**1.**CONFIRM SYMPTOM BY PERFORMING OPERATIONAL CHECK - REC (  $\frown$  )

[MANUAL AIR CONDITIONER]

Component Parts

Blower speed control system components are:

- Front air control
- Front blower motor resistor
- Front blower motor
- Front blower relay

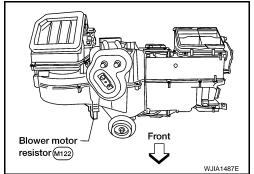

System Operation

#### COMPONENT DESCRIPTION

Blower Motor Resistor

The front blower motor resistor is located on the heater and cooling unit assembly. The front blower motor resistor grounds the front blower motor through a series of 1, 2, or 3 resistors, depending upon speed selected. For high speed operation the front blower motor resistor is circumvented and the front blower motor grounds directly.

# Front Blower Motor Component Function Check

# < COMPONENT DIAGNOSIS >

MAGNET CLUTCH

System Description

SYSTEM DESCRIPTION

The front air control controls compressor operation based on ambient and intake temperature and a signal from ECM.

Low Temperature Protection Control

The front air control will turn the compressor ON or OFF as determined by a signal detected by the intake sensor and the ambient sensor.

When intake air temperature is higher than  $3.5^{\circ}$  C ( $38.3^{\circ}$  F), the compressor turns ON. The compressor turns OFF when intake air temperature is lower than  $2.5^{\circ}$  C ( $36.5^{\circ}$  F).

# Magnet Clutch Component Function Check

INFOID:000000001366809

SYMPTOM: Magnet clutch does not engage.

INSPECTION FLOW

**1.**CONFIRM SYMPTOM BY PERFORMING OPERATIONAL CHECK - MAGNET CLUTCH

1. Rotate blower control dial clockwise.

2. Rotate mode dial to vent (\*) position.

3. Press A/C switch. Confirm that the compressor clutch engages (sound or visual inspection).

Can the symptom be duplicated?

YES >> GO TO 3. NO >> GO TO 2.

2. CHECK FOR ANY SYMPTOMS

Perform a complete operational check for any symptoms. Refer to HAC-123, "Operational Check".

Does another symptom exist?

YES >> Refer to HAC-171, "Symptom Matrix Chart".

NO >> System OK.

**3.**CHECK FOR SERVICE BULLETINS

Check for any service bulletins.

>> GO TO 4.

**4.**CHECK INTAKE SENSOR

Check and verify intake sensor circuit. Refer to HAC-158, "Intake Sensor Component Inspection".

>> GO TO 5.

**5.**RECHECK FOR ANY SYMPTOMS

Perform a complete operational check for any symptoms. Refer to <u>HAC-123, "Operational Check"</u>. <u>Does another symptom exist?</u>

YES >> Refer to <u>HAC-171, "Symptom Matrix Chart"</u>.

NO >> Replace front air control. Refer to XX-XX, "\*\*\*\*\*".

# POWER SUPPLY AND GROUND CIRCUIT FOR CONTROLLER [MANUAL AIR CONDITIONER]

# < COMPONENT DIAGNOSIS >

# POWER SUPPLY AND GROUND CIRCUIT FOR CONTROLLER

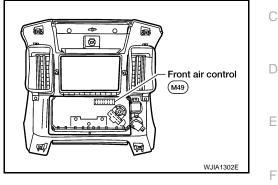

# **Component Description**

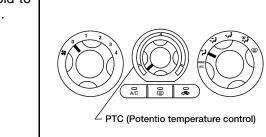

#### COMPONENT DESCRIPTION

#### Front Air Control

The front air control has a built-in microcomputer which processes information sent from various sensors needed for air conditioner operation. The air mix door motor, mode door motor, intake door motor, defroster door motor, blower motor and compressor are then controlled.

The front air control is unitized with control mechanisms. When the various switches and temperature dials are operated, data is input to the front air control.

Potentio Temperature Control (PTC)

The PTC is built into the front air control. It can be set from cold to hot or any intermediate position by rotating the temperature dial.

# Front Air Control Component Function Check

SYMPTOM: A/C system does not come on.

# INSPECTION FLOW

**1.**CONFIRM SYMPTOM BY PERFORMING OPERATIONAL CHECK

- 1. Turn blower control dial to position 1-4, then press A/C switch.

NO >> Repair harness or connector.

#### ECU DIAGNOSIS А AIR CONDITIONER CONTROL System Description INFOID:000000001381668 В The front air control provides regulation of the vehicle's interior temperature. The system is based on the position of the front air controls temperature switch selected by the driver. This is done by utilizing a microcomputer, also referred to as the front air control, which receives input signals from the following two sensors: Intake sensor PBR (position balanced resistor) The front air control uses these signals (including the set position of the temperature switch) to control: D Outlet air volume Air temperature Air distribution Е System Operation INFOID:000000001381717 AIR MIX DOOR CONTROL F The air mix door is controlled so that in-vehicle temperature changed based on the position of the temperature control dial. BLOWER SPEED CONTROL Blower speed is controlled based on front blower switch settings. When blower switch is turned, the blower motor starts and increases air flow volume each time the blower switch is turned counterclockwise, and decreases air flow volume each time the blower switch is turned coun-Н terclockwise. When engine coolant temperature is low, the blower motor operation is delayed to prevent cool air from flowing. HAC INTAKE DOORS CONTROL The intake doors are controlled by the recirculation switch setting, and the mode (defroster) switch setting. MODE DOOR CONTROL The mode door is controlled by the position of the mode dial. DEFROSTER DOOR CONTROL Κ The defroster door is controlled by the defroster dial set to defroster. MAGNET CLUTCH CONTROL L (BAT) (IGN) ç g (A/C SW M Q IPDM E/R g Compressor CPU Ν DATA LINE MODE SW (defroster) Front (CAN) air control Compressor ON Compressor ON Refrigerant signal signal всм ECM pressure DATA LINE (Intake sensor sensor (CAN) Ρ OFF SW WJIA1293E

When the A/C switch is pressed, or the mode dial is turned to the defroster position, the front air control outputs a compressor ON signal to BCM.

The BCM then sends a compressor ON signal to ECM, via CAN communication line.

# HAC-161

#### < ECU DIAGNOSIS >

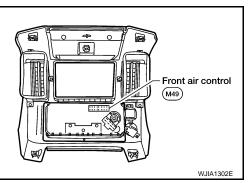

#### [MANUAL AIR CONDITIONER]

ECM judges whether compressor can be turned ON, based on each sensor status (refrigerant pressure sensor signal, throttle angle sensor, etc.). If it judges compressor can be turned ON, it sends compressor ON signal to IPDM E/R, via CAN communication line.

Upon receipt of compressor ON signal from ECM, IPDM E/R turns air conditioner relay ON to operate compressor.

Component Function Check

SYMPTOM: Insufficient cooling

INSPECTION FLOW

1.CONFIRM SYMPTOM BY PERFORMING OPERATIONAL CHECK - TEMPERATURE DECREASE

1. Turn temperature control dial counterclockwise to maximum cold.

2. Check for cold air at discharge air outlets.

Can the symptom be duplicated?

YES >> GO TO 3.

NO >> GO TO 2.

2. CHECK FOR ANY SYMPTOMS

Perform a complete operational check for any symptoms. Refer to XX-XX, "\*\*\*\*\*".

Does another symptom exist?

YES >> Refer to XX-XX, "\*\*\*\*\*".

NO >> System OK.

**3.**CHECK FOR SERVICE BULLETINS

Check for any service bulletins.

>> GO TO 4.

**4.**CHECK DRIVE BELTS

Check compressor belt tension. Refer to XX-XX, "\*\*\*\*\*".

Is the inspection result normal?

YES >> GO TO 5.

NO >> Adjust or replace compressor belt. Refer to XX-XX, "\*\*\*\*\*".

**5.**CHECK AIR MIX DOOR OPERATION

Check and verify air mix door mechanism for smooth operation.

Does air mix door operate correctly?

YES >> GO TO 6.

NO >> Repair or replace air mix door control linkage.

**6.**CHECK COOLING FAN MOTOR OPERATION

Check and verify cooling fan motor for smooth operation. Refer to XX-XX, "\*\*\*\*\*".

Does cooling fan motor operate correctly?

YES >> GO TO 7.

NO >> Check cooling fan motor. Refer to XX-XX, "\*\*\*\*\*".

7. CHECK RECOVERY/RECYCLING EQUIPMENT BEFORE USAGE

Check recovery/recycling equipment before connecting to vehicle. Verify there is no pressure in the recovery/ recycling equipment by checking the gauges. If pressure exists, recover refrigerant from equipment lines.

>> GO TO 8.

**8.**CHECK REFRIGERANT PURITY

1. Connect recovery/recycling equipment to vehicle.

2. Confirm refrigerant purity in supply tank using recovery/recycling and refrigerant identifier.

Is the inspection result normal?

YES >> GO TO 9.

NO >> Check contaminated refrigerant. Refer to XX-XX, "\*\*\*\*\*".

# HAC-172

INFOID:000000001366771

< SYMPTOM DIAGNOSIS >	
0	

9. CHECK FOR EVAPORATOR FREEZE UP	Δ
Start engine and run A/C. Check for evaporator freeze up.	
Does evaporator freeze up?	
<ul> <li>YES &gt;&gt; Perform performance test diagnoses. Refer to XX-XX, "*****".</li> <li>NO &gt;&gt; GO TO 10.</li> </ul>	В
10. CHECK REFRIGERANT PRESSURE	
Check refrigerant pressure with manifold gauge connected. Refer to XX-XX, "*****".	С
<u>OK or NG</u>	
<ul> <li>OK &gt;&gt; Perform performance test diagnoses. Refer to XX-XX, "*****".</li> <li>NG &gt;&gt; GO TO 11.</li> </ul>	D
11.CHECK AIR DUCTS	
Check ducts for air leaks.	E
Is the inspection result normal?	
YES >> System OK. NO >> Repair air leaks.	F

Test Condition

# HAC-175

# < SYMPTOM DIAGNOSIS >

# Testing must be performed as follows:

Vehicle location	Indoors or in the shade (in a well-ventilated place)
Doors	Closed
Door window	Open
Hood	Open
TEMP.	Max. COLD
Mode switch	Ventilation) set
Recirculation (REC) switch	(Recirculation) set
Solution Speed	Max. speed set
Engine speed	Idle speed
Operate the air conditioning system	for 10 minutes before taking measurements.

# Test Reading

INFOID:000000001366774

Inside air (Recirculating ai	r) at blower assembly inlet	Discharge air temperature at center ventilator		
Relative humidity %	Air temperature °C (°F)	°C (°F)

# **Trouble Diagnoses for Unusual Pressure**

#### Trouble Diagnoses for Unusual Pressure

Whenever system's high and/or low side pressure is unusual, diagnose using a manifold gauge. The marker above the gauge scale in the following tables indicates the standard (usual) pressure range. Since the standard (usual) pressure, however, differs from vehicle to vehicle, refer to above table (Ambient air temperature-to-operating pressure table).

Both High- and Low-pressure Sides are Too High

INFOID:000000001366775

Μ

Ν

Ρ

F

#### < SYMPTOM DIAGNOSIS >

# **INSUFFICIENT COOLING**

# [MANUAL AIR CONDITIONER]

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
	Pressure is reduced soon af- ter water is splashed on con- denser.	Excessive refrigerant charge in refrigeration cycle	Reduce refrigerant until speci- fied pressure is obtained.
	Air suction by cooling fan is in- sufficient.	<ul> <li>Insufficient condenser cooling performance</li> <li>↓</li> <li>1. Condenser fins are clogged.</li> <li>2. Improper fan rotation of cooling fan</li> </ul>	<ul> <li>Clean condenser.</li> <li>Check and repair cooling fan if necessary.</li> </ul>
Both high- and low-pressure sides are too high.	<ul> <li>Low-pressure pipe is not cold.</li> <li>When compressor is stopped high-pressure value quickly drops by approximately 196 kPa (2 kg/cm<sup>2</sup>, 28 psi). It then decreases gradually thereafter.</li> </ul>	Poor heat exchange in con- denser (After compressor operation stops, high-pressure decreas- es too slowly.) ↓ Air in refrigeration cycle	Evacuate and recharge system.
₩ ₩ АС359А	Engine tends to overheat.	Engine cooling systems mal- function.	Check and repair engine cool- ing system.
	<ul> <li>An area of the low-pressure pipe is colder than areas near the evaporator outlet.</li> <li>Plates are sometimes cov- ered with frost.</li> </ul>	<ul> <li>Excessive liquid refrigerant on low-pressure side</li> <li>Excessive refrigerant dis- charge flow</li> <li>Expansion valve is open a lit- tle compared with the speci- fication.</li> <li>↓</li> <li>Improper expansion valve ad- justment</li> </ul>	Replace expansion valve.

High-pressure Side is Too High and Low-pressure Side is Too Low

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
High-pressure side is too high and low-pressure side is too low.	Upper side of condenser and high-pressure side are hot, however, liquid tank is not so hot.	High-pressure tube or parts lo- cated between compressor and condenser are clogged or crushed.	<ul> <li>Check and repair or replace malfunctioning parts.</li> <li>Check oil for contamination.</li> </ul>

High-pressure Side is Too Low and Low-pressure Side is Too High

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
High-pressure side is too low and low-pressure side is too high.	High- and low-pressure sides become equal soon after com- pressor operation stops.	Compressor pressure opera- tion is improper. ↓ Damaged inside compressor packings.	Replace compressor.
	No temperature difference be- tween high- and low-pressure sides.	Compressor pressure opera- tion is improper. ↓ Damaged inside compressor packings.	Replace compressor.

Both High- and Low-pressure Sides are Too Low

# < SYMPTOM DIAGNOSIS >

# [MANUAL AIR CONDITIONER]

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
Both high- and low-pressure sides are too low.	<ul> <li>There is a big temperature difference between liquid tank outlet and inlet. Outlet temperature is extremely low.</li> <li>Liquid tank inlet and expansion valve are frosted.</li> </ul>	Liquid tank inside is slightly clogged.	<ul> <li>Replace liquid tank.</li> <li>Check oil for contamination.</li> </ul>
	<ul> <li>Temperature of expansion valve inlet is extremely low as compared with areas near liquid tank.</li> <li>Expansion valve inlet may be frosted.</li> <li>Temperature difference oc- curs somewhere in high- pressure side.</li> </ul>	High-pressure pipe located be- tween liquid tank and expan- sion valve is clogged.	<ul> <li>Check and repair malfunc- tioning parts.</li> <li>Check oil for contamination.</li> </ul>
	Expansion valve and liquid tank are warm or only cool when touched.	Low refrigerant charge. ↓ Leaking fittings or compo- nents.	Check refrigerant system for leaks. Refer to XX-XX, "*****".
	There is a big temperature dif- ference between expansion valve inlet and outlet while the valve itself is frosted.	<ul> <li>Expansion valve closes a little compared with the specification.</li> <li>↓</li> <li>1. Improper expansion valve adjustment.</li> <li>2. Malfunctioning expansion valve.</li> <li>3. Outlet and inlet may be clogged.</li> </ul>	<ul> <li>Remove foreign particles by using compressed air.</li> <li>Check oil for contamination.</li> </ul>
	An area of the low-pressure pipe is colder than areas near the evaporator outlet.	Low-pressure pipe is clogged or crushed.	<ul><li>Check and repair malfunc- tioning parts.</li><li>Check oil for contamination.</li></ul>
	Air flow volume is too low.	Evaporator is frozen.	<ul> <li>Check intake sensor circuit. Refer to XX-XX, "*****".</li> <li>Replace compressor.</li> <li>Repair evaporator fins.</li> <li>Replace evaporator.</li> <li>Refer to XX-XX, "*****".</li> </ul>

# Low-pressure Side Sometimes Becomes Negative

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
ow-pressure side sometimes be- omes negative.	<ul> <li>Air conditioning system does not function and does not cy- clically cool the compart- ment air.</li> <li>The system constantly func- tions for a certain period of time after compressor is stopped and restarted.</li> </ul>	Retriderant does not discharde	<ul> <li>Drain water from refrigerant or replace refrigerant.</li> <li>Replace liquid tank.</li> </ul>

Low-pressure Side Becomes Negative

# < SYMPTOM DIAGNOSIS >

# [MANUAL AIR CONDITIONER]

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
Low-pressure side becomes nega- tive.	Liquid tank or front/rear side of expansion valve's pipe is frost- ed or dewed.	High-pressure side is closed and refrigerant does not flow. ↓ Expansion valve or liquid tank is frosted.	<ul> <li>Leave the system at rest until no frost is present. Start it again to check whether or not the malfunction is caused by water or foreign particles.</li> <li>If water is the cause, initially cooling is okay. Then the water freezes causing a blockage. Drain water from refrigerant or replace refrigerant.</li> <li>If due to foreign particles, remove expansion valve and remove the particles with dry and compressed air (not shop air).</li> <li>If either of the above methods cannot correct the malfunction, replace expansion valve.</li> <li>Replace liquid tank.</li> <li>Check oil for contamination.</li> </ul>

# < PRECAUTION > PRECAUTION PRECAUTIONS

Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSION-ER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SR and SB section of this Service Manual.

#### WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SR section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

Working with HFC-134a (R-134a)

# WARNING:

- CFC-12 (R-12) refrigerant and HFC-134a (R-134a) refrigerant are not compatible. If the refrigerants HAC are mixed compressor failure is likely to occur. Refer to HA-3, "Contaminated Refrigerant". To determine the purity of HFC-134a (R-134a) in the vehicle and recovery tank, use Refrigerant Recovery/ Recycling Recharging equipment and Refrigerant Identifier.
- Use only specified oil for the HFC-134a (R-134a) A/C system and HFC-134a (R-134a) components. If oil other than that specified is used, compressor failure is likely to occur.
- The specified HFC-134a (R-134a) oil rapidly absorbs moisture from the atmosphere. The following handling precautions must be observed:
- When removing refrigerant components from a vehicle, immediately cap (seal) the component to minimize the entry of moisture from the atmosphere.
- When installing refrigerant components to a vehicle, do not remove the caps (unseal) until just before connecting the components. Connect all refrigerant loop components as quickly as possible to minimize the entry of moisture into system.
- Only use the specified oil from a sealed container. Immediately reseal containers of oil. Without proper sealing, oil will become moisture saturated and should not be used.
- Avoid breathing A/C refrigerant and oil vapor or mist. Exposure may irritate eyes, nose and throat. Remove HFC-134a (R-134a) from the A/C system using certified service equipment meeting requirements of SAE J2210 [HFC-134a (R-134a) recycling equipment], or J2209 [HFC-134a (R-134a) recycling equipment], If accidental system discharge occurs, ventilate work area before resuming service. Additional health and safety information may be obtained from refrigerant and oil manufacturers.
- Do not allow A/C oil to come in contact with styrofoam parts. Damage may result.

# CONTAMINATED REFRIGERANT

If a refrigerant other than pure HFC-134a (R-134a) is identified in a vehicle, your options are:

- Explain to the customer that environmental regulations prohibit the release of contaminated refrigerant into the atmosphere.
- Explain that recovery of the contaminated refrigerant could damage your service equipment and refrigerant supply.
- Suggest the customer return the vehicle to the location of previous service where the contamination may have occurred.
- If you choose to perform the repair, recover the refrigerant using only **dedicated equipment and contain**ers. Do not recover contaminated refrigerant into your existing service equipment. If your facility does

# PRECAUTIONS

#### < PRECAUTION >

# [MANUAL AIR CONDITIONER]

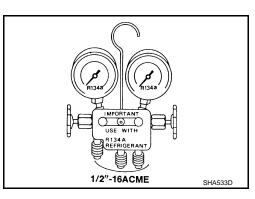

not have dedicated recovery equipment, you may contact a local refrigerant product retailer for available service. This refrigerant must be disposed of in accordance with all federal and local regulations. In addition, replacement of all refrigerant system components on the vehicle is recommended.

• If the vehicle is within the warranty period, the air conditioner warranty is void. Please contact NISSAN Customer Affairs for further assistance.

# Precaution for Service Equipment

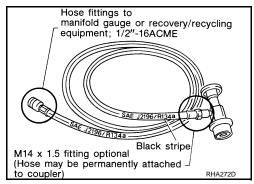

#### MANIFOLD GAUGE SET

Be certain that the gauge face indicates R-134a or 134a. Make sure the gauge set has 1/2"-16 ACME threaded connections for service hoses. Confirm the set has been used only with refrigerant HFC-134a (R-134a) along with specified oil.

# SERVICE HOSES

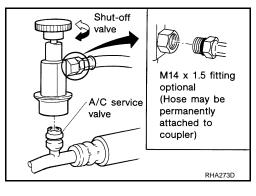

Be certain that the service hoses display the markings described (colored hose with black stripe). All hoses must include positive shutoff devices (either manual or automatic) near the end of the hoses opposite the manifold gauge.

#### SERVICE COUPLERS

Never attempt to connect HFC-134a (R-134a) service couplers to a CFC-12 (R-12) A/C system. The HFC-134a (R-134a) couplers will not properly connect to the CFC-12 (R-12) system. However, if an improper connection is attempted, discharging and contamination may occur.

Shut-off valve rotation	A/C service valve	
Clockwise	Open	
Counterclockwise	Close
