PRECAUTION PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SR and SB section of this Service Manual.

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SR section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

WARNING:

- When working near the Airbag Diagnosis Sensor Unit or other Airbag System sensors with the Ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the Ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

Precaution Necessary for Steering Wheel Rotation After Battery Disconnect

INFOID:000000007347340

NOTE:

- This Procedure is applied only to models with Intelligent Key system and NATS (NISSAN ANTI-THEFT SYS-TEM).
- Remove and install all control units after disconnecting both battery cables with the ignition knob in the "LOCK" position.
- Always use CONSULT to perform self-diagnosis as a part of each function inspection after finishing work. If DTC is detected, perform trouble diagnosis according to self-diagnostic results.

For models equipped with the Intelligent Key system and NATS, an electrically controlled steering lock mechanism is adopted on the key cylinder.

For this reason, if the battery is disconnected or if the battery is discharged, the steering wheel will lock and steering wheel rotation will become impossible.

If steering wheel rotation is required when battery power is interrupted, follow the procedure below before starting the repair operation.

OPERATION PROCEDURE

- Connect both battery cables.
 NOTE: Supply power using jumper cables if battery is discharged.
- 2. Use the Intelligent Key or mechanical key to turn the ignition switch to the "ACC" position. At this time, the steering lock will be released.
- 3. Disconnect both battery cables. The steering lock will remain released and the steering wheel can be rotated.
- 4. Perform the necessary repair operation.

PRECAUTIONS

< PRECAUTION	>
--------------	---

	When the repair work is completed, return the ignition switch to the "LOCK" position before connecting the battery cables. (At this time, the steering lock mechanism will engage.)	А
6.	Perform a self-diagnosis check of all control units using CONSULT.

WT-50, "Adjustment"

< PERIODIC MAINTENANCE >

Item		Reference page
Seats	Check seat position controls such as seat adjusters, seat back recliner, etc. to make sure they operate smoothly and that all latches lock securely in every position. Check that the head restraints move up and down smoothly and that the locks (if equipped) hold securely in all latched positions. Check that the latches lock securely for folding-down rear seat backs.	
Seat belts	Check that all parts of the seat belt system (e.g. buckles, anchors, adjusters and retractors) operate properly and smoothly and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.	SB-9, "Seat Belt Inspec- tion", MA-58, "SEAT BELT, BUCKLES, RE- TRACTORS, ANCHORS AND ADJUSTERS : Checking Seat Belts, Buckles, Retractors, An- chors and Adjusters"
Accelerator pedal	Check the pedal for smooth operation and make sure the pedal does not catch or require uneven effort. Keep the floor mats away from the pedal.	_
Brakes	Check that the brake does not pull the vehicle to one side when applied.	—
Brake pedal and booster	Check the pedal for smooth operation and make sure it has the proper distance under it when depressed fully. Check the brake booster function. Be sure to keep the floor mats away from the pedal.	BR-17. "Inspection and Adjustment - Standard Pedal", BR-18. "Inspec- tion and Adjustment - Ad- justable Pedal", BR-10. "Inspection"
Parking brake	Check that the parking brake control has the proper travel and make sure that the vehicle is held securely on a fairly steep hill when only the parking brake is applied.	PB-5, "On-Vehicle Ser- vice"
Automatic transmis- sion "Park" mecha- nism	Check that the lock release button on the shift selector operates properly and smoothly. On a fairly steep hill check that the vehicle is held securely with the shift selector in the P (Park) position without applying the brakes.	_

UNDER THE HOOD AND VEHICLE

The maintenance items listed here should be checked periodically (e.g. each time you check the engine oil or refuel).

Item		Reference page
Windshield washer fluid	Check that there is adequate fluid in the tank.	_
Engine coolant level	Check the coolant level when the engine is cold.	<u>CO-11</u> (VQ40DE) <u>CO-41</u> (VK56DE)
Radiator and hoses	Check the front of the radiator and clean off any dirt, insects, leaves, etc., that may have accumulated. Make sure the hoses have no cracks, deformation, deterioration or loose connections.	_
Brake fluid level	Make sure that the brake fluid level is between the "MAX" and "MIN" lines on the reservoirs	<u>MA-54</u>
Battery	Check the fluid level in each cell. It should be between the "MAX" and "MIN" lines. Vehicles operated in high temperatures or under severe conditions require frequent checks of the battery fluid level.	_
Engine drive belt	Make sure that no belt is frayed, worn, cracked or oily.	MA-23, "DRIVE BELTS : Checking Drive Belts" (VQ40DE) MA-33, "DRIVE BELTS : Checking Drive Belts" (VK56DE)
Engine oil level	Check the level on the dipstick after parking the vehicle on level ground and turn- ing off the engine.	<u>LU-8</u> (VQ40DE) <u>LU-26</u> (VK56DE)
Power steering fluid level and lines	Check the level on the reservoir with the engine off. Check the lines for improper attachment, leaks, cracks, etc.	MA-56. "POWER STEERING FLUID AND LINES : Checking Fluid Leakage"

< PERIODIC MAINTENANCE >

Item		Reference page	
Automatic transmis- sion fluid level	Check the level on the dipstick after putting the shift selector in P (Park) with the engine idling.	MA-43, "A/T FLUID : Checking the A/T Fluid (ATF)"	-
Exhaust system	Make sure there are no loose supports, cracks or holes. If the sound of the exhaust seems unusual or there is a smell of exhaust fumes, immediately locate the trouble and correct it.	<u>MA-43</u>	-
Underbody	The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these sub- stances, otherwise rust will form on the floor pan, frame, fuel lines and around the exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, being careful to clean those areas where mud and dirt can easily accumulate.		
Fluid leaks	Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks or gasoline fumes are evident, check for the cause and correct it immediately.

EXPLANATION OF GENERAL MAINTENANCE

General maintenance includes those items which should be checked during the normal day-to-day operation of the vehicle. They are essential if the vehicle is to continue operating properly. The owners can perform these checks and inspections themselves or they can have their NISSAN dealers do them.

OUTSIDE THE VEHICLE

The maintenance items listed here should be performed from time to time, unless otherwise specified.

Item		Reference page	
Lamps	Make sure that the headlamps, stop lamps, tail lamps, turn signal lamps, and oth- er lamps are all operating properly and installed securely. Also check headlamp aim. Clean the headlamps on a regular basis.	EXL-4. "Work Flow"	
Tires	Check the pressure with a gauge often and always prior to a long distance trip. Adjust the pressure in all tires, including the spare, to the specified pressure. Check carefully for damage, cuts or excessive wear.	WT-5, "Preliminary Check"	
Windshield wiper blades	Check for cracks or wear if they do not wipe properly.	_	
Doors and engine hood	Check that all doors and the engine hood operate smoothly as well as the trunk lid. Also make sure that all latches lock securely. Lubricate if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released. When driving in areas using road salt or other corrosive materials, check lubrica- tion frequently.	MA-58, "LOCKS, HING- ES AND HOOD LATCH : Lubricating Locks, Hing- es and Hood Latches"	
Tire rotation	Tires should be rotated every 10,000 km (6,000 miles).	MA-52, "WHEELS : Ad- justment"	
Tire Pressure Monitor- ing System (TPMS) transmitter compo- nents	Replace the TPMS transmitter grommet seal, valve core and cap when the tires are replaced due to age or wearor age.	<u>MA-52, "WHEELS : Ad-</u> justment"	
Windshield	Clean the windshield on a regular basis. Check the windshield at least every six months for cracks or other damage. Repair as necessary.	<u>GW-11, "Removal and</u> Installation"	

INSIDE THE VEHICLE

< PERIODIC MAINTENANCE >

The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, cleaning the vehicle, etc.

Item		Reference page
Accelerator pedal	Check the pedal for smooth operation and make sure the pedal does not catch or require uneven effort. Keep the floor mats away from the pedal.	_
Brake pedal	Check the pedal for smooth operation and make sure it has the proper distance under it when depressed fully. Check the brake booster function. Be sure to keep floor mats away from the pedal.	BR-17, "Inspection and Adjustment - Standard Pedal"
Parking brake	Check that the lever has the proper travel and make sure that the vehicle is held securely on a fairly steep hill when only the parking brake is applied.	PB-5, "On-Vehicle Ser- vice"
Warning lamps and chimes	Make sure that all warning lamps and chimes are operating properly.	_
Windshield defogger	Check that the air comes out of the defroster outlets properly and in sufficient quantity when operating the heater or air conditioning.	_
Windshield wiper and washer	Check that the wipers and washer operate properly and that the wipers do not streak.	WW-4, "System Descrip- tion"
Steering wheel	Check that it has the specified play. Check for changes in the steering condition, such as excessive play, hard steering or strange noises. Free play: Less than 35 mm (1.38 in)	_
Seat belts	Check that all parts of the seat belt system (e.g. buckles, anchors, adjusters and retractors) operate properly and smoothly and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.	<u>SB-9, "Seat Belt Inspec-</u> tion"

UNDER THE HOOD AND VEHICLE

The maintenance items listed here should be checked periodically (e.g. each time you check the engine oil or refuel).

Item		Reference page
Windshield wash- er fluid	Check that there is adequate fluid in the tank.	_
Engine coolant level	Check the coolant level when the engine is cold.	CO-11. "System Inspection" (VQ40DE) <u>CO-41. "System Inspec-</u> <u>tion"</u> (VK56DE)
Engine drive belts	Make sure that the drive belt are not frayed, worn, cracked or oily.	<u>MA-23. "DRIVE BELTS :</u> <u>Checking Drive Belts"</u> (VQ40DE) <u>MA-33. "DRIVE BELTS :</u> <u>Checking Drive Belts"</u> (VK56DE)
Engine oil level	Check the level on the dipstick after parking the vehicle on a level ground and turn- ing off the engine.	MA-28, "ENGINE OIL : In- spection" (VQ40DE) MA-37, "ENGINE OIL : In- spection" (VK56DE)
Brake fluid levels	Make sure that the brake and clutch fluid levels are between the "MAX" and "MIN" lines on the reservoirs.	MA-54, "BRAKE FLUID LEVEL AND LEAKS : Checking Brake Fluid Level and Leaks"
Battery	Check the fluid level in each cell. It should be between the "MAX" and "MIN" lines. Vehicles operated in high temperatures or under severe conditions require frequent checks of the battery fluid level.	_
Fluid leaks	Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks or gasoline fumes are evident, check for the cause and correct it immediately.

PERIODIC MAINTENANCE FOR USA AND CANADA

FOR USA AND CANADA : Introduction to Periodic Maintenance

INFOID:000000007347345

А

В

Н

Κ

L

Two different maintenance schedules are provided, and should be used, depending upon the conditions in which the vehicle is mainly operated. After 60,000 miles (96,000 km) or 48 months, continue the periodic maintenance at the same mileage or time intervals, whichever comes first.

	Follow Periodic Maintenance Schedule 1 if your driving habits frequently includes one or more of the following driving conditions:	Emission Control Sys- tem Maintenance	<u>MA-11</u>	[
Schedule 1	 Repeated short trips of less than 5 miles (8 km). Repeated short trips of less than 10 miles (16 km) with outside temperatures remaining below freezing. Operating in hot weather in stop-and-go "rush hour" traffic. Extensive idling and/or low speed driving for long distances, such as police, taxi or door-to-door delivery use. Driving in dusty conditions. Driving on rough, muddy, or salt spread roads. Towing a trailer or using a car-top carrier. 	Chassis and Body Maintenance	<u>MA-11</u>	F
Schedule 2	Follow Periodic Maintenance Schedule 2 if none of the driving conditions shown in Schedule 1 apply to the driving habits.	Emission Control Sys- tem Maintenance	<u>MA-11</u>	(
Schedule 2		Chassis and Body Maintenance	<u>MA-11</u>	L

Maintenance for off-road driving (4WD only)

After driving the vehicle off-road through sand, mud, or water; more frequent maintenance may be required for the following items:

- Brake pads and rotors
- Brake lines and hoses
- ▲ Differential, transfer gear oil and automatic transmission fluid
- ▲ Steering linkage
- Propeller shaft and drive shafts
- ▲ Engine air cleaner filter
- ▲ In-cabin microfilters

Intake and exhaust valve clearance *	NOTE (6)									<u>EM-131</u> (VQ40DE) <u>EM-254</u> (VK56DE)

NOTE:

(1) After 60,000 miles (96,000 km) or 48 months, inspect every 15,000 miles (24,000 km) or 12 months. Replace the drive belts if found damaged, or if the auto tensioner reading reaches the maximum limit.

(2) If operating mainly in dusty conditions, more frequent maintenance may be required.

(3) Maintenance-free item. For service procedures, refer to the FL section.

(4) First replacement interval is 105,000 miles (120,000 km) or 84 months. After first replacement, replace every 75,000 miles (120,000 km) or 60 months.

(5) When adding or replacing coolant, be sure to use only Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent. Genuine NISSAN Long Life Antifreeze Coolant (blue) is pre-diluted to provide antifreeze protection to -34° F (-37° C). If additional freeze protection is needed due to weather where you operate your vehicle, add Genuine NISSAN Long Life Antifreeze/Coolant (blue) concentrate following the directions on the container. If an equivalent coolant other than Genuine NISSAN Long Life Antifreeze/Coolant (blue) is used, follow the coolant manufacturer's instructions to maintain minimum antifreeze protection to -34° F (-37° C). The use of other types of coolant solutions other than Genuine NISSAN Long Life Antifreeze/Coolant (blue) is used.

(6) Periodic maintenance is not required. However, if valve noise increases, inspect valve clearance.

* Maintenance items and intervals with "*" are recommended by NISSAN for reliable vehicle operation. The owner need not perform such maintenance in order to maintain the emission warranty or manufacturer recall liability. Other maintenance items and intervals are required.

In-cabin microfilter					R				R	<u>MA-42</u>	

NOTE:

(1) If towing a trailer, using a car-top carrier, or driving on rough or muddy roads, change (not just inspect) oil at every 30,000 miles (48,000 km) or 24 months. Using automatic transmission fluid other than Genuine NISSAN Matic S ATF or Matic J ATF will cause deterioration in driveability and automatic transmission durability, and may damage the automatic transmission, which is not covered by the NISSAN new vehicle limited warranty.

(2) If towing a trailer, using a car-top carrier, or driving on rough or muddy roads, change (not just inspect) oil at every 30,000 miles (48,000 km) or 24 months.

(3) Refer to "Tire rotation" under the "General maintenance" heading earlier in this section.

Spark plugs (Iridum-tipped type)			Repla	<u>MA-31</u> (VQ40DE) <u>MA-40</u> (VK56DE)						
Intake and exhaust valve clearance*	NOTE (5)									<u>EM-131</u> (VQ40DE) <u>EM-254</u> (VK56DE)

NOTE:

(1) After 60,000 miles (96,000 km) or 48 months, inspect every 15,000 miles (24,000 km) or 12 months. Replace the drive belts if found damaged, or if the auto tensioner reading reaches the maximum limit.

(2) Maintenance-free item. For service procedures, refer to FL section.

(3) First replacement interval is 105,000 miles (120,000 km) or 84 months. After first replacement, replace every 75,000 miles (120,000 km) or 60 months.

(4) When adding or replacing coolant, be sure to use only Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent. Genuine NISSAN Long Life Antifreeze Coolant (blue) is pre-diluted to provide antifreeze protection to -34° F (-37° C). If additional freeze protection is needed due to weather where you operate your vehicle, add Genuine NISSAN Long Life Antifreeze/Coolant (blue) concentrate following the directions on the container. If an equivalent coolant other than Genuine NISSAN Long Life Antifreeze/Coolant (blue) is used, follow the coolant manufacturer's instructions to maintain minimum antifreeze protection to -34° F (-37° C). The use of other types of coolant solutions other than Genuine NISSAN Long Life Antifreeze/Coolant (blue) is used.

(5) Periodic maintenance is not required. However, if valve noise increases, inspect valve clearance.

* Maintenance items and intervals with "*" are recommended by NISSAN for reliable vehicle operation. The owner need not perform such maintenance in order to maintain the emission warranty or manufacturer recall liability. Other maintenance items and intervals are required.

MAINTENANCE UNDER SEVERE DRIVING CONDITIONS

< PERIODIC MAINTENANCE >

The maintenance intervals shown on the preceding pages are for normal operating conditions. If the vehicle is mainly operated under severe driving conditions as shown below, more frequent maintenance must be performed on the following items as shown in the table.

Severe driving conditions

- A Driving under dusty conditions
- B Driving repeatedly short distances
- C Towing a trailer or caravan
- D Extensive idling

E —Driving in extremely adverse weather conditions or in areas where ambient temperatures are either extremely low or extremely high

- F Driving in high humidity or mountainous areas
- G Driving in areas using salt or other corrosive areas
- H Driving on rough and/or muddy roads or in the desert
- I Driving with frequent use of braking or in mountainous areas

Maintenance for off-road driving (4WD only)

Whenever you drive off-road through sand, mud or water, more frequent maintenance may be required of the following items.

- Brake pads and rotors
- Brake lines and hoses
- · Differential gear oil, transfer fluid and automatic transmission fluid
- Steering linkage
- · Propeller shafts and front drive shafts
- Air cleaner filter

*1: For further details, refer to MA-19, "FOR USA AND CANADA : SAE Viscosity Number".

*2: If Genuine NISSAN Matic S ATF is not available, Genuine NISSAN Matic J ATF may also be used. Using automatic transmission fluid other than Genuine NISSAN Matic S ATF or Matic J ATF will cause deterioration in driveability and automatic transmission durability, and may damage the automatic transmission, which is not covered by the NISSAN new vehicle limited warranty.

*3: DEXRONTM VI type ATF may also be used.

*4: Available in mainland U.S.A. through a NISSAN dealer.

< PERIODIC MAINTENANCE >

*5: For further details, see "Air Conditioner Specification Label".

*6: For hot climates, viscosity SAE 90 is suitable for ambient temperatures above 0° C (32° F).

*7: For further details, refer to <u>GI-26. "Precaution for Fuel (Unleaded Premium Gasoline Recommended)"</u>. For improved performance, NISSAN recommends the use of unleaded premium gasoline with an octane rating of at least 91 AKI (RON 96).

*8: Using automatic transmission fluid other than Genuine NISSAN Matic D ATF will cause deterioration in driveability and transfer durability, and may damage the transfer, which is not covered by the NISSAN new vehicle limited warranty.

*9: See a NISSAN dealership for service for synthetic oil.

FOR USA AND CANADA : SAE Viscosity Number

NISSAN recommends the use of an energy conserving oil in order to improve fuel economy. Select only engine oils that meet the American Petroleum Institute (API) certification and International Lubricant Standardization and Approval Commottee (ILSAC) certification and SAE viscosity standard (2). These oils have the API certification mark (1) on the front of the container. Oils which do not have the specified quality label should not be used as they could cause engine damage.

FOR USA AND CANADA : Anti-Freeze Coolant Mixture Ratio

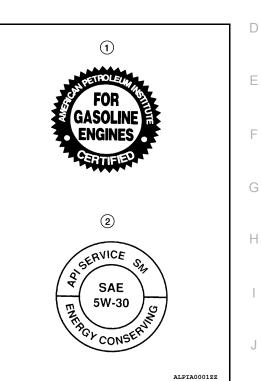

The engine cooling system is filled at the factory with a pre-diluted mixture of 50% Genuine NISSAN Long Life Antifreeze / Coolant (blue) and 50% water to provide year-round anti-freeze and coolant protection. The anti-freeze solution contains rust and corrosion inhibitors. Additional engine cooling system additives are not necessary.

WARNING:

- Never remove the radiator or coolant reservoir cap when the engine is hot. Wait until the engine and radiator cool down. Serious burns could be caused by high pressure fluid escaping from the radiator. See precautions in "If your vehicle overheats" found in the "In case of emergency" section of this manual.
- The radiator is equipped with a pressure type radiator cap. To prevent engine damage, use only a genuine NISSAN radiator cap.

CAUTION:

- When adding or replacing coolant, be sure to use only Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent. Genuine NISSAN Long Life Antifreeze/Coolant (blue) is pre-diluted to provide antifreeze protection to -34° F (-37° C). If additional freeze protection is needed due to weather where you operate your vehicle, add Genuine NISSAN Long Life Antifreeze/Coolant (blue) concentrate following the directions on the container. If an equivalent coolant other than Genuine NISSAN Long Life Antifreeze/Coolant (blue) is used, follow the coolant manufacturer's instructions to maintain minimum antifreeze protection to -34° F (-37° C). The use of other types of coolant solutions other than Genuine NISSAN Long Life Antifreeze/Coolant solutions other than Genuine NISSAN Long Life Antifreeze.
- The life expectancy of the factory-fill coolant is 105,000 miles (168,000 km) or 7 years. Mixing any other type of coolant other than Genuine NISSAN Long Life Antifreeze / Coolant (blue), including

*1: For further details, refer to MA-20, "FOR MEXICO : SAE Viscosity Number".

*2: Use Genuine NISSAN Engine Coolant or equivalent in its quality, in order to avoid possible aluminium corrosion within the engine cooling system caused by the use of non-genuine engine coolant.

Note that any repairs for the incidents within the engine cooling system while using non-genuine engine coolant may not be covered by the warranty even if such incidents occurred during the warranty period.

*3: If Genuine NISSAN Matic S ATF is not available, Genuine NISSAN Matic J ATF may also be used. Using automatic transmission fluid other than Genuine NISSAN Matic S ATF or Genuine NISSAN Matic J ATF will cause deterioration in driveability and automatic transmission durability, and may damage the automatic transmission, which is not covered by the warranty.

*4: See a NISSAN dealership for service for synthetic oil.

*5: DEXRONTM VI type ATF may also be used.

*6: For further details, see "Air conditioner specification label".

*7: Using fluid other than Genuine NISSAN Matic D ATF will cause deterioration in driveability and transfer durability, and may damage the transfer, which is not covered by the warranty.

FOR MEXICO : SAE Viscosity Number

INFOID:000000007347353

GASOLINE ENGINE

August 2012

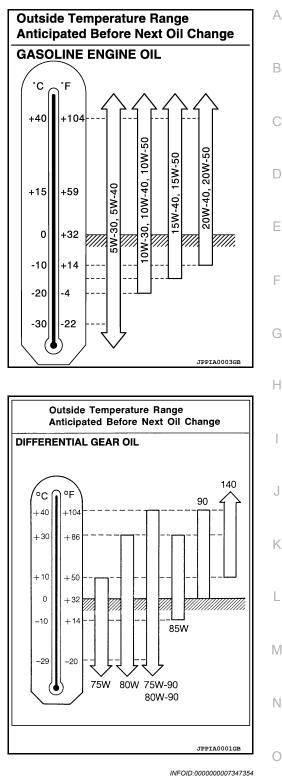

< PERIODIC MAINTENANCE >

DIFFERENTIAL GEAR OIL

80W-90 for the front final drive is preferable.

10W-30 is preferable. •

If 10W-30 is not available, select the viscosity, from the chart, that is suitable for the outside temperature range.

FOR MEXICO : Engine Coolant Mixture Ratio

The engine cooling system is filled at the factory with a high-guality, year-round and extended life engine coolant. The high guality engine coolant contains the specific solutions effective for the anti-corrosion and the antifreeze function. Therefore, additional cooling system additives are not necessary.

WARNING:

Never remove the radiator cap when the engine is hot. Serious burns could be caused by high pressure fluid escaping from the radiator. Wait until the engine and radiator cool down.

DRIVE BELTS : Exploded View INFOID:000000007347355 В 8 $\overline{(7)}$ $(\mathbf{1})$ (6) D 2 Ε 3 (4) (5) LBIA0427F 1 Drive belt 2. Power steering oil pump pulley 3. Generator pulley Crankshaft pulley 5. A/C compressor 6. Cooling fan pulley 4 Н 7. Idler pulley 8. Drive belt tensioner

DRIVE BELTS : Checking Drive Belts

WARNING:

Be sure to perform when the engine is stopped.

- 1. Remove air duct and resonator assembly when inspecting drive belt. Refer to <u>EM-26</u>, "<u>Removal and</u> <u>Installation</u>".
- 2. Make sure that the auto tensioner indicator is within the allowable working range (A) as shown.
- 3. Visually check entire belt for wear, damage or cracks.
- If the indicator is out of the allowable range or drive belt is damaged, replace the drive belt. Refer to <u>EM-14</u>, <u>"Removal and</u> <u>Installation"</u>.

ENGINE COOLANT

ENGINE COOLANT : System Inspection

INFOID:000000007347357

Ο

MA

INFOID:000000007347356

WARNING:

- Never remove the radiator/reservoir cap when the engine is hot. Serious burns could occur from high pressure fluid escaping from the radiator or reservoir.
- Wrap a thick cloth around the cap. Slowly push down and turn it a quarter turn to allow built-up pressure to escape. Carefully remove the cap by pushing down and turning it all the way.

CHECKING COOLING SYSTEM HOSES

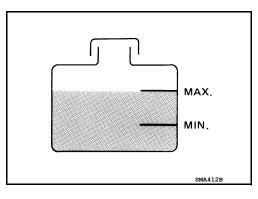

Check hoses for the following:

- Improper attachment
- Leaks

- Cracks
- Damage
- Loose connections
- Chafing
- Deterioration

CHECKING RESERVOIR LEVEL

- Check if the engine coolant reservoir tank level is within MIN to MAX when the engine is cool.
- Adjust engine coolant level as necessary.

ENGINE COOLANT : Changing Engine Coolant

INFOID:000000007347358

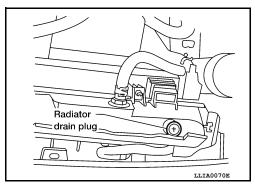

WARNING:

- To avoid being scalded, never change the coolant when the engine is hot.
- Wrap a thick cloth around the cap to carefully remove the cap. First, turn the cap a quarter of a turn to release any built-up pressure, then push down and turn the cap all the way to remove it.

DRAINING ENGINE COOLANT

- 1. Turn ignition switch ON and set temperature control lever all the way to HOT position or the highest temperature position. Wait 10 seconds and turn ignition switch OFF.
- 2. Remove the engine front under cover using power tool. Refer to EXT-15. "Removal and Installation".
- Open the radiator drain plug at the bottom of the radiator, and remove the reservoir cap. This is the only step required when partially draining the cooling system (radiator only).
 CAUTION:

Do not allow the coolant to contact the drive belts.

< PERIODIC MAINTENANCE >

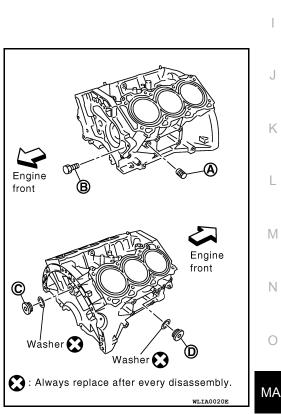

4. When draining all of the coolant in the system for engine removal or repair, it is necessary to drain the cylinder block. Remove the cylinder block drain plugs (A), (B), (C), (D) and block heater if equipped, to drain the cylinder block as shown. NOTE:

For Canada, the (D) cylinder block drain plug as shown, is not a cylinder block drain plug but a block heater.

- 5. Remove the reservoir tank to drain the engine coolant, then clean the reservoir tank before installing it.
- Check the drained coolant for contaminants such as rust, corrosion or discoloration. If the coolant is contaminated, flush the engine cooling system. Refer to <u>MA-24, "ENGINE COOLANT :</u> <u>Changing Engine Coolant"</u>.

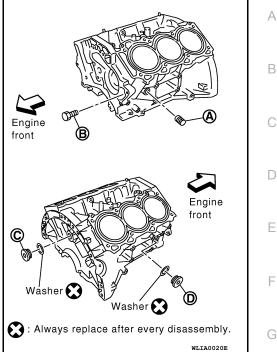

REFILLING ENGINE COOLANT

- 1. Close the radiator drain plug. Install the reservoir tank, cylinder block drain plugs (A), (B), (C), (D) and block heater (if equipped), if removed for a total system drain or for engine removal or repair.
 - The radiator must be completely empty of coolant and water.
 - Apply sealant to the threads of the cylinder block drain plugs (A), (B), (C), (D). Use Genuine High Performance Thread Sealant or equivalent. Refer to <u>GI-14</u>, "<u>Recommended Chemical Products and Sealants</u>".

Block Plug and Block Heater Installation

	Part	Washer	Tightening Torque
Α		No	Refer to EM-105, "Disassembly and Assembly".
B	Reuse	No	Refer to EM-105, "Disassembly and Assembly".
Б	New	NO	Refer to EM-105. "Disassembly and Assembly".

Н

< PERIODIC MAINTENANCE >

	Part	Washer	Tightening Torque
С		Yes	Refer to EM-105, "Disassembly and Assembly".
	Plug	Yes	Refer to EM-105. "Disassembly and Assembly".
D	Block heater	165	Refer to EM-105. "Disassembly and Assembly".

- 2. Set the vehicle heater controls to the full HOT and heater ON position. Turn the vehicle ignition ON with the engine OFF as necessary to activate the heater mode.
- 3. Remove the vented reservoir cap and replace it with a non-vented reservoir cap before filling the cooling system.
- Install the Tool by installing the radiator cap adapter onto the radiator neck opening. Then attach the gauge body assembly with the refill tube and the venturi assembly to the radiator cap adapter.

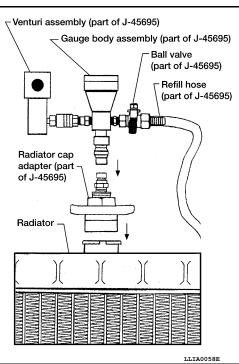

Tool number : KV991J0070 (J-45695)

- 5. Insert the refill hose into the coolant mixture container that is placed at floor level. Make sure the ball valve is in the closed position.
 - Use recommended coolant or equivalent.

Refer to <u>MA-18</u>, "FOR USA AND CANADA : Fluids and Lubricants" (United States and Canada), <u>MA-20</u>, "FOR MEXICO : <u>Fluids and Lubricants"</u> (Mexico).

Cooling system capacity (with reservoir)

: Refer to <u>MA-18, "FOR</u> <u>USA AND CANADA : Fluids and Lubricants"</u> (United States and Canada), <u>MA-20, "FOR MEXICO :</u> <u>Fluids and Lubricants"</u> (Mexico).

6. Install an air hose to the venturi assembly, the air pressure must be within specification.

Compressed air	: 549 - 824 kPa (5.6 - 8.4 kg/cm ² ,
supply pressure	80 - 119 psi)

CAUTION:

The compressed air supply must be equipped with an air dryer.

- 7. The vacuum gauge will begin to rise and there will be an audible hissing noise. During this process open the ball valve on the refill hose slightly. Rising coolant will be visible in the refill hose. After the refill hose is full of coolant, close the ball valve. This will purge air trapped in the refill hose.
- Continue to draw the vacuum until the gauge reaches 28 inches of vacuum. The gauge may not reach 28 inches in high altitude locations. Refer to the following table for expected vacuum readings.

Altitude above sea level 0 - 100 m (328 ft) 300 m (984 ft) 500 m (1,641 ft) 1,000 m (3,281 ft)

- Vacuum gauge reading : 28 inches of vacuum : 27 inches of vacuum : 26 inches of vacuum
- : 24 25 inches of vacuum
- LIA0057E
- 9. When the vacuum gauge has reached the specified amount, disconnect the air hose and wait 20 seconds to see if the system loses vacuum. If the vacuum level drops, perform necessary repairs to the system and repeat steps 6 8 to bring the vacuum to the specified amount. Recheck for leaks.

< PERIODIC MAINTENANCE >

10. Place the coolant container (with the refill hose inserted) at the same level as the top of the radiator. Then open the ball valve on the refill hose so the coolant will be drawn up to fill the cooling system. The cooling system is full when the vacuum gauge reads zero.
CAUTION:

Do not allow the coolant container to get too low when filling, to avoid air from being drawn into the cooling system.

- 11. Remove the Tool from the radiator neck opening and install the radiator cap.
- 12. Remove the non-vented reservoir cap.
- 13. Fill the cooling system reservoir tank to the specified level. Run the engine to warm up the cooling system and top up the system as necessary before installing the vented reservoir cap.

FLUSHING COOLING SYSTEM

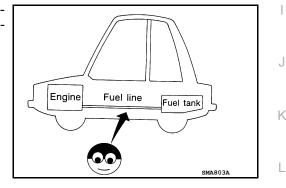

- 1. Drain the water from the engine cooling system. Refer to <u>MA-24, "ENGINE COOLANT : Changing Engine</u> <u>Coolant"</u>.
- 2. Fill the radiator and the reservoir tank (to the "MAX" line), with water. Reinstall the radiator cap and leave the vented reservoir cap off. □
- 3. Run the engine until it reaches normal operating temperature.
- 4. Press the engine accelerator two or three times under no-load.
- 5. Stop the engine and wait until it cools down.
- Drain the water from the engine cooling system. Refer to <u>MA-24, "ENGINE COOLANT : Changing Engine</u> <u>Coolant"</u>.
- 7. Repeat steps 2 through 6 until clear water begins to drain from the radiator.

FUEL LINES

FUEL LINES : Checking Fuel Line

Inspect fuel lines, fuel filler cap and fuel tank for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration.

If necessary, repair or replace damaged parts.

FUEL FILTER

FUEL FILTER : Changing Fuel Filter

INFOID:000000007347360

INFOID:000000007347359

The fuel filter is part of the fuel level sensor unit, fuel filter and fuel pump assembly. Refer to <u>FL-11, "Removal</u> and <u>Installation"</u>.

WARNING:

Before replacing the fuel filter, release the fuel pressure from the fuel system. Refer to <u>EC-487, "Fuel</u> <u>Pressure Check"</u>. AIR CLEANER FILTER

AIR CLEANER FILTER : Removal and Installation

REMOVAL

4

- 1. Disconnect air duct and resonator from the air cleaner case (upper).
- 2. Disconnect MAF/IAT sensor.
- 3. Unhook clips, and lift air cleaner case (upper).
- 4. Remove air cleaner filter.

INSTALLATION

Installation is in the reverse order of removal. **ENGINE OIL**

ENGINE OIL : Inspection

OIL LEVEL

- Before starting the engine make sure the vehicle is parked on a flat and level surface, then check the oil level. If the engine is already running, turn it off and allow 10 minutes before checking.
- · Pull out oil level gauge and wipe clean.
- Insert oil level gauge.
- · Check that the oil level is within the low (L) and high (H) range as indicated on the dipstick.
- If the engine oil level is out of range, add oil as necessary. Refer to MA-18, "FOR USA AND CANADA : Fluids and Lubricants" (United States and Canada), MA-20, "FOR MEXICO : Fluids and Lubricants" (Mexico).

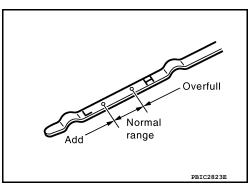

CAUTION:

Do not overfill the engine with oil.

ENGINE OIL : Changing Engine Oil

WARNING:

· Be careful not to burn yourself, as the engine and engine oil may be hot.

CHASSIS AND BODY MAINTENANCE IN-CABIN MICROFILTER

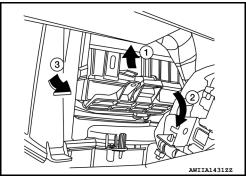

IN-CABIN MICROFILTER : Removal and Installation

INFOID:000000007347383

REPLACEMENT PROCEDURE

1. Open the lower glove box and press in on the sides so that it will open completely allowing it to hang by the cord.

down (2) to remove the cover (3). CAUTION: Use care when lifting up on the tab to avoid damaging it.

Gently lift up on the tab (1) then pull the in-cabin microfilter cover

- 3. Remove the in-cabin microfilters from the heater and cooling unit housing.
- 4. Insert the first new in-cabin microfilter into the heater and cooling unit housing and slide it over to the right. Insert the second new in-cabin microfilter into the heater and cooling unit housing as shown.

NOTE:

2.

The in-cabin microfilters are marked with air flow arrows. The end of the microfilter with the arrow should face the rear of the vehicle. The arrows should point downward.

- ALITAD360ZE
- ALITAO3592E
- 5. Install the in-cabin microfilter cover, make sure the tab is locked in place as shown.

6. Close the lower glove box completely. EXHAUST SYSTEM

< PERIODIC MAINTENANCE >

EXHAUST SYSTEM : Checking the Exhaust System

Check exhaust pipes, muffler and mounting for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration.

A/T FLUID

A/T FLUID : Checking the A/T Fluid (ATF)

CAUTION:

If using the vehicle for towing, the A/T fluid must be replaced as specified. Refer to MA-11, "FOR USA AND CANADA : Introduction to Periodic Maintenance" (United States and Canada) or MA-15, "FOR MEXICO : Periodic Maintenance Schedule" (Mexico)

- Before driving, the A/T fluid level can be checked at A/T fluid 1 temperatures of 30° to 50° C (86° to 122° F) using the "COLD" range on the A/T fluid level gauge as follows:
- Park the vehicle on a level surface and set the parking brake. а.
- Start the engine and move the selector lever through each gear b position. Shift the selector lever into the "P" position.
- Check the A/T fluid level with the engine idling. C.
- Remove the A/T fluid level gauge and wipe it clean with a lintfree paper.

CAUTION:

When wiping the A/T fluid from the A/T fluid level gauge, always use a lint-free paper, not a cloth.

e. Re-insert the A/T fluid level gauge into the A/T fluid charging pipe until the cap contacts the top of the A/T fluid charging pipe as shown.

CAUTION:

To check A/T fluid level, insert the A/T fluid level gauge until the cap contacts the top of the A/T fluid charging pipe, with the gauge reversed from the normal inserted position.

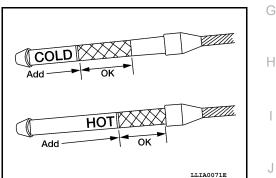

Remove the A/T fluid level gauge and note the A/T fluid level. If f. the A/T fluid level is at low side of range, add A/T fluid to the transmission through the A/T fluid charging pipe. CAUTION:

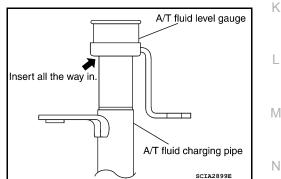

Do not overfill the transmission with A/T fluid.

Install the A/T fluid level gauge and the A/T fluid level gauge bolt. g.

> A/T fluid level gauge bolt : Refer to TM-195, "2WD : Exploded View" (2WD) or TM-198, "4WD : Exploded View" (4WD).

- 2. Warm up the engine and transmission.
- Check for any A/T fluid leaks. 3.
- Drive the vehicle to increase the A/T fluid temperature to 80° C (176° F). 4.

D

Ε

< PERIODIC MAINTENANCE >

 Allow the A/T fluid temperature to fall to approximately 65°C (149°F). Use the CONSULT to monitor the A/ T fluid temperature as follows:

NOTE:

The A/T fluid level will be significantly affected by the A/T fluid temperature as shown. Therefore monitor the A/T fluid temperature data using the CONSULT.

- a. Connect CONSULT to data link connector.
- b. Select "MAIN SIGNALS" in "DATA MONITOR" mode for "A/T" with CONSULT.
- c. Read out the value of "ATF TEMP 1".
- Re-check the A/T fluid level at A/T fluid temperatures of approximately 65°C (149°F) using the "HOT" range on the A/T fluid level gauge as shown. The HOT range is between 50° 80° C (122° 176° F).
 CAUTION:
 - When wiping the A/T fluid from the A/T fluid level gauge, always use lint-free paper, not a cloth.

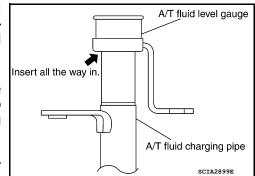

- To check the A/T fluid level, insert the A/T fluid level gauge until the cap contacts the top of the A/T fluid charging pipe, with the gauge reversed from the normal inserted position as shown.
- 7. Check the A/T fluid condition.
 - If the A/T fluid is very dark or has some burned smell, there may be an internal problem with the transmission. Refer to <u>TM-116</u>. Flush the transmission cooling system after repairing the transmission.
 - If the A/T fluid contains frictional material (clutches, bands, etc.), replace the radiator and flush the transmission cooler lines using cleaning solvent and compressed air after repairing the transmission.

(4WD).

- 8. Install the A/T fluid level gauge in the A/T fluid charging pipe.
- 9. Tighten the A/T fluid level gauge bolt to specification.

A/T fluid level gauge bolt

: Refer to <u>TM-195, "2WD : Exploded View"</u> (2WD) or TM-198, "4WD : Exploded View"

< PERIODIC MAINTENANCE >

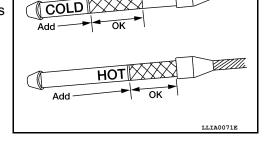

A/T FLUID : Changing the A/T Fluid (ATF)

CAUTION:

If using the vehicle for towing, the A/T fluid must be replaced as specified. Refer to <u>MA-11, "FOR USA</u> <u>AND CANADA : Introduction to Periodic Maintenance"</u> (United States and Canada) or <u>MA-15, "FOR</u> <u>MEXICO : Periodic Maintenance Schedule"</u> (Mexico).

- 1. Drive the vehicle to warm up the A/T fluid to approximately 80° C (176° F).
- 2. Stop the engine.
- 3. Remove the A/T fluid level gauge.
- 4. Drain the A/T fluid from the drain plug hole, then install the drain plug with a new gasket. Refill the transmission with new A/T fluid. Always refill with the same volume as the drained A/T fluid. Use the A/T fluid level gauge to check the A/T fluid level as shown. Add A/T fluid as necessary.

Drain plug : Refer to <u>TM-174, "Removal and</u> <u>Installation"</u>.

- To flush out the old A/T fluid from the transmission oil coolers, pour new A/T fluid into the A/T fluid charging pipe with the engine idling and at the same time drain the old A/T fluid from the auxiliary transmission oil cooler hose return line.
- When the color of the A/T fluid coming out of the auxiliary transmission oil cooler hose return line is about the same as the color of the new A/T fluid, flushing out the old A/T fluid is complete. The amount of new A/T fluid used for flushing should be 30% to 50% increase of the specified capacity.

A/T fluid grade and capacity : Re

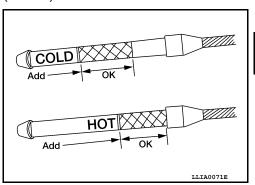

: Refer to MA-18, "FOR USA AND CANADA : Fluids and Lubricants" (United States and Canada or MA-15, "FOR MEXICO : Periodic Maintenance Schedule" (Mexico).

CAUTION:

- If Genuine NISSAN Matic S ATF is not available, Genuine NISSAN Matic J ATF may also be used. K Using automatic transmission fluid other than Genuine NISSAN Matic S or Matic J will cause deterioration in driveability. and may damage automatic transmission, which is not covered by the NISSAN new vehicle limited warranty.
- When filling the transmission with A/T fluid, do not spill the A/T fluid on any heat generating parts such as the exhaust manifold.
- Do not reuse the drain plug gasket.
- 5. Install the A/T fluid level gauge and tighten the A/T fluid level gauge bolt to specification.

A/T fluid level gauge bolt : Refer to <u>TM-195, "2WD : Exploded View"</u> (2WD) or <u>TM-198, "4WD : Exploded View"</u> (4WD).

- 6. Drive the vehicle to warm up the A/T fluid to approximately 80° C (176° F).
- 7. Check the fluid level and condition. If the A/T fluid is still dirty, repeat steps 2 through 6.

WHEELS

3.

WHEELS : Adjustment

INFOID:000000007347406

LLIA0068E

Fill to this level.

Drain plug

BALANCING WHEELS (ADHESIVE WEIGHT TYPE)

Preparation Before Adjustment

Remove inner and outer balance weights from the road wheel using releasing agent, remove double-faced adhesive tape from the road wheel.

CAUTION:

- Be careful not to scratch the road wheel during removal.
- After removing double-faced adhesive tape, wipe clean all traces of releasing agent from the road wheel.

Wheel Balance Adjustment

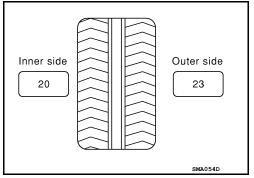

- If a balancer machine has an adhesive weight mode setting, select the adhesive weight mode setting and skip Step 2. below. If a balancer machine only has the clip-on (rim flange) weight mode setting, follow Step 2. to calculate the correct size adhesive weight.
- 1. Set road wheel on balancer machine using the center hole as a guide. Start the balancer machine.
- 2. For balancer machines that only have a clip-on (rim flange) weight mode setting, follow this step to calculate the correct size adhesive weight to use. When inner and outer imbalance values are shown on the balancer machine indicator, multiply outer imbalance value by 5/3 (1.67) to determine balance weight that should be used. Select the outer balance weight with a value closest to the calculated value above and install in to the designated outer position of, or at the designated angle in relation to the road wheel.
- a. Indicated imbalance value \times 5/3 = balance weight to be installed **Calculation example:**

23 g (0.81 oz) \times 5/3 (1.67) = 38.33 g (1.35 oz) \Rightarrow 40 g (1.41 oz) balance weight (closer to calculated balance weight value) **NOTE:**

Note that balance weight value must be closer to the calculated balance weight value.

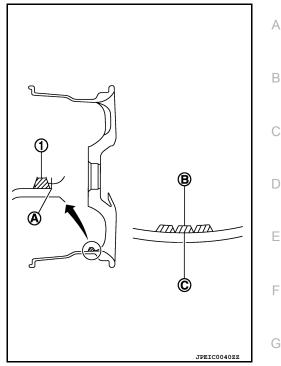

Example:

 $\begin{array}{l} 37.4 \Rightarrow 35 \text{ g} (1.23 \text{ oz}) \\ 37.5 \Rightarrow 40 \text{ g} (1.41 \text{ oz}) \end{array}$

< PERIODIC MAINTENANCE >

- 3. Install balance weight in the position shown. CAUTION:
 - Do not install the inner balance weight before installing the outer balance weight.
 - Before installing the balance weight, be sure to clean the mating surface of the road wheel.
 - When installing balance weight (1) to road wheel, set it into the grooved area (A) on the inner wall of the road wheel as shown so that the balance weight center (B) is aligned with the balancer machine indication position (angle) (C).
 CAUTION:
 - Always use genuine NISSAN adhesive balance weights.
 - Balance weights are non-reusable; always replace with new ones.
 - Do not install more than three sheets of balance weight.

Н

Κ

M

 If calculated balance weight value exceeds 50 g (1.76 oz), install two balance weight sheets in line with each other as shown.
 CAUTION:

Do not install one balance weight sheet on top another.

- 5. Start balancer machine again.
- Install balance weight on inner side of road wheel in the balancer machine indication position (angle).
 CAUTION:

Do not install more than two balance weights.

- 7. Start balancer machine. Make sure that inner and outer residual imbalance values are 5 g (0.17 oz) each or below.
- 8. If either residual imbalance value exceeds 5 g (0.17 oz), repeat installation procedures.

Wheel balance	Dynamic (At flange)	Static (At flange)
Maximum allowable im- balance	Refer to WT-55, "Road Wheel".	

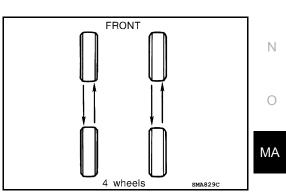

TIRE ROTATION

- Follow the maintenance schedule for tire rotation service intervals. Refer to <u>MA-11</u>, "FOR USA AND CANADA : Introduction to Periodic Maintenance" (United States and Canada), or <u>MA-15</u>, "FOR MEXICO : Periodic Maintenance Schedule" (Mexico).
- When installing the wheel, tighten wheel nuts to the specified torque.

CAUTION:

- Do not include the spare tire when rotating the tires.
- When installing wheels, tighten them diagonally by dividing the work two to three times in order to prevent the wheels from developing any distortion.
- Be careful not to tighten wheel nut at torque exceeding the criteria for preventing strain of disc rotor.
- Use NISSAN genuine wheel nuts for aluminum wheels.

Wheel nut tightening : 133 N·m (14 kg-m, 98 ft-lb) torque

< PERIODIC MAINTENANCE >

· Perform the ID registration, after tire rotation. Refer to WT-6. "ID Registration Procedure".

BRAKE FLUID LEVEL AND LEAKS

BRAKE FLUID LEVEL AND LEAKS : Checking Brake Fluid Level and Leaks

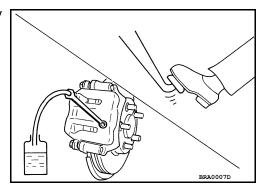

- Check the brake fluid level in the reservoir tank. It should be between the "MAX" and "MIN" lines on the reservoir tank.
- · Visually check around reservoir tank for fluid leaks.
- If the fluid level is extremely low, check the brake system.
- If the brake warning lamp comes on when the fluid is at the correct level, check the brake fluid level switch and the parking brake switch.

BRAKE FLUID LEVEL AND LEAKS : Drain and Refill

CAUTION:

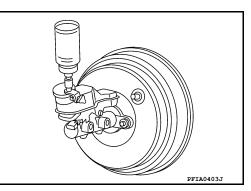

- Refill with new brake fluid. Refer to <u>MA-18, "FOR USA AND CANADA : Fluids and Lubricants"</u> (United States and Canada) or <u>MA-20, "FOR MEXICO : Fluids and Lubricants"</u> (Mexico).
- Do not reuse drained brake fluid.
- Do not let brake fluid splash on the painted surfaces of the body. This might damage the paint, so when splashing it, immediately wipe off the area and wash away with water.
- Before servicing, disconnect ABS actuator and electric unit (control unit) connector or battery negative terminal.
- 1. Turn ignition switch OFF and disconnect ABS actuator and electric unit (control unit) connector or battery negative terminal.
- 2. Connect a vinyl tube to each bleed valve.
- 3. Depress brake pedal, loosen each bleed valve, and gradually remove brake fluid.

- 4. Make sure there is no foreign material in reservoir tank, and refill with new brake fluid.
- 5. Rest foot on brake pedal. Loosen bleed valve. Slowly depress brake pedal until it stops. Tighten bleed valve. Release brake pedal. Repeat the process a few times, then pause to add new brake fluid to master cylinder. Continue until the new brake fluid flows out of the bleed valve.

Bleed the air out of the brake hydraulic system. Refer to <u>BR-20</u>, <u>"Bleeding Brake System"</u>.

BRAKE LINES AND CABLES

STEERING GEAR AND LINKAGE

STEERING GEAR AND LINKAGE : Checking Steering Gear and Linkage INFOID:00000007347411

STEERING GEAR

- · Check the steering gear housing for looseness, damage and oil leakage as shown.
- Check the steering column connections for looseness.

Н

Κ

Ν

August 2012

2012 Pathfinder

< PERIODIC MAINTENANCE >

STEERING LINKAGE

• Check the ball joint, dust cover and other component parts for looseness, wear, damage and grease leakage.

POWER STEERING FLUID AND LINES

POWER STEERING FLUID AND LINES : Checking Fluid Level

Check fluid level, referring to the scale on the reservoir tank. Use HOT range for fluid temperatures of 50° – 80° C (122° – 176° F). Use COLD range for fluid temperatures of 0° – 30° C (32° – 86° F). CAUTION:

• Do not overfill.

- Do not reuse any power steering fluid.
- Recommended fluid is Genuine NISSAN PSF or equivalent. Refer to MA-18, "FOR USA AND CANADA : Fluids and Lubricants" (United States and Canada) or MA-20, "FOR MEXICO : Fluids and Lubricants" (Mexico).

POWER STEERING FLUID AND LINES : Checking Fluid Leakage

Check the hydraulic piping lines for improper attachment, leaks, cracks, damage, loose connections, chafing and deterioration.

 Run the engine until the fluid temperature reaches 50° – 80°C (122° – 176°F) in the reservoir tank. Keep engine speed idle. CAUTION:

Do not allow steering fluid reservoir tank to go below the MIN level line. Check tank frequently and add fluid as needed.

- 2. Turn the steering wheel to the right and left several times.
- Hold the steering wheel at each "locked" position for five seconds to check for fluid leakage.
 CAUTION:

Do not hold steering wheel in the locked position for more than 10 seconds. (There is the possibility that the oil pump may be damaged.)

- 4. If fluid leakage at a connection is noticed, loosen the connection and then retighten. Do not over-tighten connector as this can damage O-ring, washer and connector. Refer to <u>ST-16</u> and <u>ST-25</u>.
- 5. If fluid leakage from the oil pump is noticed, check the oil pump. Refer to <u>ST-16</u>.
- 6. Check steering gear boots for accumulation of fluid, indicating a leak from the steering gear.

CAUTION:

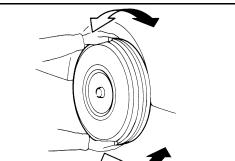

Do not reuse copper washers. AXLE AND SUSPENSION PARTS

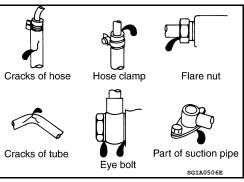

AXLE AND SUSPENSION PARTS : Checking Axle and Suspension Parts INFOLD:00000007347414

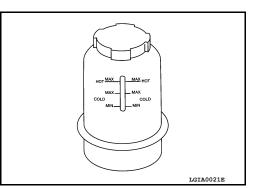

FRONT AND REAR AXLE AND SUSPENSION PARTS

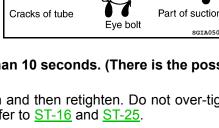

Check front and rear axle and suspension parts for excessive play, cracks, wear or other damage.

- Shake each wheel to check for excessive play.
- Rotate each wheel to check for abnormal noise.
- Check axle and suspension nuts and bolts for looseness.

INFOID:000000007347412

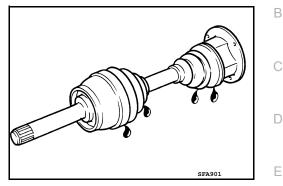

< PERIODIC MAINTENANCE >

• Check the strut and shock absorber for oil leakage or other damage.

• Check suspension ball joints for grease leakage and ball joint dust cover for cracks or other damage.

FRONT AND REAR DRIVE SHAFT

Check the boots and drive shaft for cracks, wear, damage, and grease leakage.

LOCKS, HINGES AND HOOD LATCH : Lubricating Locks, Hinges and Hood Latches

• Lubricate the locations shown. SEAT BELT, BUCKLES, RETRACTORS, ANCHORS AND ADJUSTERS

SEAT BELT, BUCKLES, RETRACTORS, ANCHORS AND ADJUSTERS : Checking Seat Belts, Buckles, Retractors, Anchors and Adjusters

Check the seat belt buckles, webbing, retractors, anchors and adjusters. Replace any seat belt assembly as necessary. Refer to <u>SB-9</u>, "Seat Belt Inspection".

- Check the seat belt anchors for loose mounting bolts, damage, or excessive wear.
- Check the seat belt webbing for any damage, cuts, fraying, or excessive wear.
- Check the retractor for smooth operation.

MA-58

< PERIODIC MAINTENANCE >

 Check the function of the buckles by inserting the seat belt tongue and checking for proper engagement of the buckle and press the button on the buckle to check for proper release of the seat belt tongue.

CAUTION:

After any collision, inspect all seat belt assemblies, including retractors and other attached components, such as the guide rail set. NISSAN recommends replacing all seat belt assemblies in use during a collision, unless they are not damaged and are inspected to confirm they are operating properly after a minor collision.
 Also inspect all seat belt assemblies that are not in use during a collision, and replace any components if demonstration are properly after a minor collision.

nents if damaged or not operating properly. The seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal collision where the driver and passenger air bags have been deployed.

- If any component of the seat belt assembly is suspected of being damaged or not operating properly, do not repair the component. Replace the components as an assembly.
- If the seat belt webbing is cut, frayed, or damaged then replace the seat belt assembly.
- Never lubricate the seat belt buckle or tongue.
- When replacing any seat belt assembly always use a Genuine NISSAN seat belt assembly.
