# PRECAUTION PRECAUTIONS

### Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SR and SB section of this Service Manual.

### WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SR section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

### PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

### WARNING:

- When working near the Airbag Diagnosis Sensor Unit or other Airbag System sensors with the Ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the Ignition OFF, disconnect the battery and wait at least three minutes before performing any service.

Precaution for SRS "AIR BAG" and "SEAT BELT PRE-TENSIONER" Service

INFOID:0000000011152639

- Do not use electrical test equipment to check SRS circuits unless instructed to in this Service Manual.
- Before servicing the SRS, turn ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.

For approximately 3 minutes after the cables are removed, it is still possible for the air bag and seat belt pretensioner to deploy. Therefore, do not work on any SRS connectors or wires until at least 3 minutes have passed.

- The air bag diagnosis sensor unit must always be installed with the arrow mark "
   —" pointing toward the front
   of the vehicle for proper operation. Also check air bag diagnosis sensor unit for cracks, deformities or rust
   before installation and replace as required.
- The spiral cable must be aligned with the neutral position since its rotations are limited. Do not attempt to turn steering wheel or column after removal of steering gear.
- Handle air bag module carefully. Always place driver and front passenger air bag modules with the pad side facing upward and seat mounted front side air bag module standing with the stud bolt side facing down.
- · Conduct self-diagnosis to check entire SRS for proper function after replacing any components.
- After air bag inflates, the front instrument panel assembly should be replaced if damaged.

- LH side curtain air bag module (view with headliner removed) (RH similar)
  - Crash zone sensor (view with air intake removed)
- Rear side air bag satellite sensor LH (view with luggage side lower finisher LH removed) (RH similar)
- Air bag diagnosis sensor unit (view with center console assembly removed)

- 3. Front passenger air bag module
- Front RH seatbelt pre-tensioner and lap pre-tensioner RH (view with lower center pillar cover removed) (LH similar)
- Front door satellite sensor LH (if equipped) (view with front door finisher LH removed) (RH similar)
- Seat belt buckle switch (driver seat) (passenger seat similar, except Mexico)

INFOID:000000011152641

Component	Function			
Air bag diagnosis sensor unit	Refer to SRC-8, "Air Bag Diagnosis Sensor Unit".			
Driver air bag module	Refer to SRC-6, "Driver Air Bag Module".			
Front passenger air bag module	Refer to SRC-7, "Front Passenger Air Bag Module".			
Front side air bag module	Refer to SRC-7, "Front Side Air Bag Module".			
Side curtain air bag module	Refer to SRC-7, "Side Curtain Air Bag Module".			
Front seat belt pre-tensioner	Refer to SRC-7, "Front Seat Belt Pre-tensioner".			
Occupant classification system (if equipped)	Refer to SRC-11. "OCCUPANT CLASSIFICATION SYSTEM : System Description".			
Lap pre-tensioner	Refer to SRC-7, "Front Seat Belt Pre-tensioner".			
Crash zone sensor	Refer to SRC-8, "Crash Zone Sensor".			
Front side air bag (satellite) sensor	Refer to SRC-8, "Front Side Air Bag Satellite Sensor".			
Rear side air bag (satellite) sensor	Refer to SRC-8, "Rear Side Air Bag Satellite Sensor".			
Front door (satellite) sensor (if equipped)	Refer to SRC-9, "Front Door Satellite Sensor".			
Seat belt buckle switch	The seat belt buckle switches (driver seat/passenger seat) provide the seat belt buckle signals to the air bag diagnosis sensor unit and the combination meter.			
Spiral cable	The spiral cable provides a rotating physical connection to the driver air bag module.			
Combination meter	The combination meter displays the air bag warning lamp and the seat belt warning lamp. The air bag warning lamp is used for diagnosis in User Mode and may be used to display diagnostic trouble codes without the use of the CONSULT.			

## Driver Air Bag Module

The driver air bag module is dual stage and located in the steering wheel assembly. It operates with the SRS system in a frontal collision exceeding a specified level.

INFOID:000000011152642

## **COMPONENT PARTS**

### < SYSTEM DESCRIPTION >

### Front Passenger Air Bag Module

The front passenger air bag module is located behind the instrument panel assembly. It operates with the SRS system in a frontal collision exceeding a specified level. Refer to <u>SRC-10, "SRS AIR BAG SYS-TEM : System Description"</u> for more information.

Front side air bag modules are built into the front seatback assemblies. Vehicles with side air bags are equipped with labels as shown.

### Side Curtain Air Bag Module

Side curtain air bag modules are located above the vehicle headlining. Vehicles with side curtain air bags are equipped with labels on the pillar upper finishers.

### Front Seat Belt Pre-tensioner

The seat belt pre-tensioner system with load limiter is installed for both the driver's seat and the front passenger's seat. It operates simultaneously with the SRS air bag system in the event of a frontal collision with an impact exceeding a specified level.

When the frontal collision with an impact exceeding a specified level occurs, seat belt slack resulting from clothing or other factors is immediately taken up by the pre-tensioner (1) as well as the lap pre-tensioner (2). Vehicle passengers are securely restrained.

When passengers in a vehicle are thrown forward in a collision and the restraining force of the seat belt exceeds a specified level, the load limiter permits the specified extension of the seat belt by the twisting of the ELR shaft, and a relaxation of the chest-area seat belt web tension while maintaining force.

### < SYSTEM DESCRIPTION > Air Bag Diagnosis Sensor Unit

The air bag diagnosis sensor unit is located under the center console assembly. The air bag diagnosis sensor unit receives signals from multiple SRS sensors and controls the deployment of the air bags. The deployment of the air bags depends on the type and severity of the collision. The air bag diagnosis sensor unit has selfdiagnosis capability through the use of the CONSULT as well as flash codes displayed by the air bag warning lamp.

# Crash Zone Sensor

The crash zone sensor is located behind the radiator and underneath the front air duct. The crash zone sensor sends signals to the air bag diagnosis sensor unit during a frontal collision. This sensor may be identified by a yellow connector.

# Front Side Air Bag Satellite Sensor

The front side air bag satellite sensors are located on the front center pillar LH and RH next to the seat belt pre-tensioners. The front side air bag satellite sensors send signals to the air bag diagnosis sensor unit during a side collision. These sensors may be identified by yellow connectors.

# Rear Side Air Bag Satellite Sensor

The rear side air bag satellite sensors are located behind the luggage side lower finisher LH and RH. The rear side air bag satellite sensors send signals to the air bag diagnosis sensor unit during a side collision. These sensors may be identified by yellow connectors.

INFOID:0000000011152650

2015 Pathfinder

INFOID:0000000011152649

### < SYSTEM DESCRIPTION >

### Front Door Satellite Sensor

The front door satellite sensors are located in the driver and passenger doors. The front door satellite sensors send signals to the air bag diagnosis sensor unit during a side collision. These sensors may be identified by yellow connectors.

# SRS Component Connectors

### DIRECT CONNECT

The following SRS components use direct-connect style harness connectors.

- · Driver front air bag module
- · Passenger front air bag module
- LH side curtain air bag module
- RH side curtain air bag module
- Front LH seat belt pre-tensioner
- Front RH seat belt pre-tensioner

Always pull up to release locking tab prior to removing connector from SRS component.

Always push down to lock locking tab after installing connector to SRS component. When locked, the locking tab is level with the connector housing.

### SLIDE DOUBLE LOCKING

- A new style slide double locking type connector is used on certain systems and components, especially those related to air bag control systems.
- The slide double locking type connectors help prevent incomplete locking and accidental looseness or disconnection.
- The slide double locking type connectors are disconnected by pushing or pulling the slider. Refer to the figure below.

### CAUTION:

Do not pull the harness or wires when disconnecting the connector.

## SYSTEM SRS AIR BAG SYSTEM

# SRS AIR BAG SYSTEM : System Description

INFOID:000000011152654

- The air bag deploys if the air bag diagnosis sensor unit is activated while the ignition switch is in the ON or START position.
- The collision modes for which supplemental restraint systems are activated are different among the SRS systems. For example, the driver air bag module, front passenger air bag module and front seat belt pre-tensioners are activated in a frontal collision but not in a side collision.

SRS configuration	Frontal collision	Left side collision	Right side collision	Rollover
Drivers air bag module	x	_	—	_
Front passenger air bag module	x	_	—	_
Front LH seat belt pre-tensioner	X	_	—	х
Front RH seat belt pre-tensioner	X	—	—	х
Front LH side air bag module	_	х	—	
Front RH side air bag module	_	_	x	
LH side curtain air bag module	—	х	—	х
RH side curtain air bag module	_	_	х	х

### SRS Collision Modes

# OCCUPANT CLASSIFICATION SYSTEM

### SYSTEM

### < SYSTEM DESCRIPTION >

# OCCUPANT CLASSIFICATION SYSTEM : System Description

The occupant classification system (OCS) identifies different size occupants, out of position occupants, and detects if a child seat is present in the front passenger seat. The OCS control unit (2) receives inputs from the occupant classification sensors (1) (located on the passenger seat track rail). Depending on classification of SRC the passenger, the OCS sends a signal to the air bag diagnosis sensor unit. The air bag diagnosis sensor unit uses this signal and the seat belt buckle switch (passenger seat) signal to determine deployment or non deployment of the passenger front air bag in the event of a collision. Depending on the signals received, the air bag diagnosis sensor unit can disable the passenger front air bag completely. The OCS (weight sensors) must be set to zero point using CONSULT after servicing the OCS system. NOTE:

- CONSULT can be used to confirm when "zero point reset" for OCS is complete.
- Always perform zero point reset after the removal and installation of the seat or when disconnecting the OCS control unit harness connector even if zero point reset has been completed in the past.
- If zero point reset is incomplete, the passenger air bag will be disabled and the passenger air bag off indicator will be ON.
- In case of customer concern, CONSULT can be used to confirm the passenger air bag status (readiness).

Passenger Air Bag Status Conditions

Front Passenger Seat (Condition)	PASS AIR BAG OFF Indicator (Status)	Passenger Air Bag Status (Readiness)	CONSULT Display	
Seat occupied	OFF	Active (enabled)	ON	,
Seat occupied NOTE	ON	Deactivated (disabled)	OFF	
Seat empty	OFF	Deactivated (disabled)	OFF	
OTE:		1		ſ

### NOTE:

Passenger does not meet Occupant Classification System specifications for passenger air bag activation.

### Active Vent Function

When air bag diagnosis sensor unit has identified that the front passenger is not sitting in a suitable position. the vent on the front passenger air bag module is opened. The pressure will be vented/released for the passengers safety.

### < SYSTEM DESCRIPTION >

# DIAGNOSIS SYSTEM (AIR BAG)

### Diagnosis Description

INFOID:000000011152659

### CAUTION:

- Do not use electrical test equipment on any circuit related to the SRS unless instructed to do so in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harness connectors.
- Do not attempt to repair, splice or modify SRS wiring harnesses. If a harness is damaged, replace it with a new one.
- Keep ground connections clean.

### HOW TO PERFORM TROUBLE DIAGNOSES FOR QUICK AND ACCURATE REPAIR

- 1. Obtain information about the symptom.
- WHAT vehicle model
- WHEN date, frequencies
- WHERE road conditions
- HOW operating conditions, symptoms, passengers
- 2. Perform Preliminary Check.
- Battery
- Fuses
- Harness connections

### DIAGNOSIS METHODS

SRS self-diagnosis results can be read by using the AIR BAG warning lamp or CONSULT.

The User Mode is for the customer (driver). This mode warns the driver of a system malfunction through the AIR BAG warning lamp.

The Diagnosis Mode is for the technician. This mode helps the technician locate the malfunctioning circuit or part.

	User Mode	Diagnosis Mode	Display type
AIR BAG warning lamp	Х	Х	ON/OFF
CONSULT	_	Х	Monitoring

### SRS Operation Check

INFOID:000000011152660

### USER MODE

- 1. Turn the ignition switch from OFF to ON and check that the air bag warning lamp blinks.
- 2. Compare the blinking pattern with the examples in the table.

# **DIAGNOSIS SYSTEM (AIR BAG)**

### < SYSTEM DESCRIPTION >

### Trouble Diagnosis with CONSULT

INFOID:0000000011152661

Ρ

1. Connect CONSULT.

2. DTC is displayed on SELF-DIAG RESULTS.

### NOTE:

If a malfunction is not detected on SELF-DIAG RESULTS [CURRENT], but a malfunction is detected during SRS Operation Check, the following cases may exist:

- SELF-DIAG [PAST] memory might not be erased. Refer to <u>SRC-16, "SRS Final Check"</u>.
- SRS system malfunctions intermittently. Refer to <u>SRC-42, "Inspection Procedure"</u>.

## **DIAGNOSIS SYSTEM (AIR BAG)**

### < SYSTEM DESCRIPTION >

### Trouble Diagnosis without CONSULT

INFOID:000000011152662

### **DIAGNOSIS MODE**

### NOTE:

Diagnosis Mode can not be entered if a malfunction is not detected in User Mode.

- 1. Turn ignition switch ON.
- 2. After AIR BAG warning lamp lights for 7 seconds, turn ignition switch OFF within 1 second.
- 3. Wait more than 3 seconds.
- 4. Repeat steps 1 to 3 two more times (3 times total).
- 5. Turn ignition switch ON.

SRS is now in Diagnosis Mode. Refer to SRC-22, "Flash Code Index".

### SRS History Check

INFOID:0000000011152663

### SRS HISTORY CHECK

- Check repair history of the SRS. If no repairs have been made, perform <u>SRC-14</u>, "<u>SRS Operation Check</u>". If repairs have been made, GO TO step 2.
- 2. Erase "SELF-DIAG [PAST]" after repair. Refer to SRC-16, "SRS Final Check".

### SRS Final Check

INFOID:000000011152664

INFOID:000000011152665

### DIAGNOSIS MODE

- 1. Connect CONSULT.
- 2. Confirm that zero point reset of OCS is complete.
- 3. If no DTCs are detected on "SELF-DIAG RESULTS [CURRENT]", repair of SRS is completed. Go to step 4.

If any DTCs are detected on "SELF-DIAG RESULTS [CURRENT]", the malfunction has not been repaired completely or another malfunction is being detected. Perform SRS Operation Check again. Refer to <u>SRC-14</u>, "<u>SRS Operation Check</u>".

### 4. Touch "ERASE".

NOTE: Touching "ERASE" will clear the SRS memory of the malfunction ("SELF-DIAG [PAST]"). If "SELF-DIAG [PAST]" is not erased, User Mode may show the previous system malfunction even if the malfunction has been repaired completely.

- 5. Check that no malfunction is detected in "SELF-DIAG [PAST]".
- 6. Exit Diagnosis Mode and disconnect the CONSULT.
- 7. Perform SRS Operation Check. Refer to <u>SRC-14, "SRS Operation Check"</u>.

### CONSULT Function (AIR BAG)

### **CAUTION:**

After disconnecting the CONSULT vehicle interface (VI) from the data link connector, the ignition must be cycled OFF  $\rightarrow$  ON (for at least 5 seconds)  $\rightarrow$  OFF. If this step is not performed, the BCM may not go to "sleep mode", potentially causing a discharged battery and a no-start condition.

CONSULT can display each diagnostic item using the diagnostic test modes shown following.

Diagnostic Test Mode	Diagnostic Item	Description
Self Diagnostic Result	SELF-DIAG RESULT [CURRENT]	A current Self-diagnosis result (also indicated by the number of warning lamp flashes in the Diagnosis mode) is displayed on the CONSULT screen in real time. This refers to a malfunctioning part requiring repairs.
Data Monitor	DATA MONITOR	Displays air bag diagnosis sensor unit input/output data in real time.

# **DIAGNOSIS SYSTEM (AIR BAG)**

### < SYSTEM DESCRIPTION >

Diagnostic Test Mode	Diagnostic Item	Description	٥

ACTIVE VENT CIRCUIT [SHORT]		Active vent circuits are shorted to each other.	*
IGN VOLTAGE [LOW]	<b>D142A</b>	Ignition voltage to the air bag diagnosis sen- sor unit is low.	Refer to <u>SRC-99, "Diag-nosis Procedure"</u> .
IGN VOLTAGE [HIGH]	– B142A	Ignition voltage to the air bag diagnosis sen- sor unit is high.	
FRONTAL COLLISION DETECTION	B1421	Frontal collision detected. Driver and/or front passenger air bag modules are deployed.	Refer to <u>SR-5, "For</u> Frontal Collision".
SIDE COLLISION DETECTION	B1422	Side collision detected. Curtain air bag mod- ule and seat belt pre-tensioner are deployed.	Refer to <u>SR-7, "For Side</u> and Rollover Collision".
CONTROL UNIT [UNIT FAIL]	B14XX	Air bag diagnosis sensor unit is malfunction- ing.	Refer to <u>SRC-102, "Di-</u> agnosis Procedure".

### Flash Code Index

INFOID:0000000011152668

### WARNING LAMP FLASH CODE CHART

How to read flash codes

- 1. Put the vehicle in Diagnosis Mode. Refer to <u>SRC-16, "Trouble Diagnosis without CONSULT"</u>.
- 2. All codes are proceded by a seven second "holding" flash.
- 3. Identify how many primary flashes are displayed as well as the length of each primary flash.
- 4. Refer to the tables and examples below to determine which SRS subsystem the code belongs to.

### SRC-22

### < ECU DIAGNOSIS INFORMATION >

- 5. Count the short secondary flashes that follow the primary flashes.
- 6. Match the correct flashing pattern to the malfunctioning component and perform the Diagnosis Procedure.

Refer to the illustrations below for an example of each flashing pattern.

### Front subsystem

(Primary)	(seconds)	(Secondary)	Malfunctioning Component or Circuit	Reference
		1	Driver air bag module	<u>SRC-46. "Diagnosis Proce-</u> <u>dure"</u>

## BASIC INSPECTION DIAGNOSIS AND REPAIR WORK FLOW

### Work Flow

INFOID:000000011152670 B

А

**OVERALL SEQUENCE** 

Get detailed information from the customer about the symptom.

### >> GO TO 2

2. PRELIMINARY CHECK

Perform preliminary check. Refer to SRC-14, "Diagnosis Description".

### **DIAGNOSIS AND REPAIR WORK FLOW**

< BASIC INSPECTION >

>> GO TO 3

**3.**SRS OPERATION CHECK (USER MODE)

Perform SRS operation check in User Mode. Refer to SRC-14, "SRS Operation Check".

>> GO TO 4

**4**.SELF-DIAGNOSIS (DIAGNOSIS MODE)

Perform SELF-DIAGNOSIS. Refer to <u>SRC-15</u>, "Trouble Diagnosis with CONSULT" or <u>SRC-16</u>, "Trouble Diagnosis without CONSULT".

>> GO TO 5

5. TECHNICAL SERVICE BULLETINS

Check for technical service bulletins.

>> GO TO 6

**6.**REPLACE PART

Replace the malfunctioning part.

>> GO TO 7

## 7.FINAL CHECK

Check SRS using Diagnosis Mode and User Mode. Does Diagnosis Mode and User Mode indicate SRS normal?

YES >> Inspection End.

NO >> GO TO 4

< BASIC INSPECTION >
INSPECTION AND ADJUSTMENT ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT
ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description
WARNING: Always perform zero point reset using CONSULT when removing and installing the front passenger seat or servicing the occupant classification system. If zero point reset is not performed, the OCS may not operate normally, which may increase the risk of serious injury in a collision.
ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Re- quirement
WORK PROCEDURE WHEN REPLACING OCS CONTROL UNIT $1.$ PERFORM ZERO POINT RESET
Perform zero point reset. Refer to SRC-41, "ZERO POINT RESET : Special Repair Requirement".
>> Inspection End. ZERO POINT RESET
ZERO POINT RESET : Description
<ul> <li>SULT when removing and installing passenger seat or servicing the OCS system. If zero point reset is not performed, the initialization is incomplete and OCS may not operate normally.</li> <li>NOTE:</li> <li>When reinstalling the passenger seat, the initial value for the OCS sensors may change, and the OCS may not operate normally.</li> <li>When zero point reset is performed after removal and installation of passenger seat, CONSULT displays "complete".</li> </ul>
ZERO POINT RESET : Special Repair Requirement
1.PERFORM ZERO POINT RESET
<ol> <li>Perform preliminary checks: NOTE:         <ul> <li>Level the vehicle</li> <li>Minimize vibrations near the vehicle</li> <li>Remove any objects on passenger seat</li> <li>Do not touch the vehicle during zero point reset</li> </ul> </li> </ol>
<ol> <li>Select START on ZERO POINT RESET from, WORK SUPPORT of "OCCUPANT DETECTION".</li> <li>"Zero point reset" starts.</li> </ol>
>> GO TO 2.
2.CONFIRM RESET
<ol> <li>Check that "Complete" is displayed on "Zero point reset status".</li> <li>CAUTION:</li> <li>"Complete" may be displayed if the seat has been reinstalled, or "zero point reset" has already been performed.</li> <li>"Incomplete" may be displayed if a new seat is installed.</li> <li>Air bag warning lamp blinks in user mode if zero point reset is "incomplete".</li> </ol>
Is zero point reset status "complete"?
YES >> Print out "ZERO POINT RESET CURRENT STATUS" screen Inspection end

YES >> Print out "ZERO POINT RESET CURRENT STATUS" screen. Inspection end.

NO >> Recheck the preliminary check items and perform zero point reset again.

< BASIC INSPECTION >

## INTERMITTENT INCIDENT

Inspection Procedure

INFOID:000000011152675

INTERMITTENT TROUBLE

An intermittent incident may have occurred in the past but is not being detected currently. This DTC will not be detected on SELF-DIAG [CURRENT], but may be viewed on SELF-DIAG [PAST] if the DTC has not been erased.

Trouble Diagnosis with CONSULT

INFOID:000000011152676

CHECK SRS REPAIR HISTORY Refer to <u>SRC-16, "SRS History Check"</u>.

## DTC/CIRCUIT DIAGNOSIS U1000 CAN COMM CIRCUIT

### Description

INFOID:000000011152677 B

А

Ε

CAN (Controller Area Network) is a serial communication system for real time application. It is an on-vehicle multiplex communication system with high data communication speed and excellent error detection ability. Many electronic control units are equipped into vehicles, and each control unit shares information and links with other control units during operation. With CAN communication, control units are connected with two communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits and receives data but selectively reads required data only. Refer to LAN-38, "CAN COMMUNICATION SYSTEM : CAN Communication Signal Chart".

## DTC Logic

INFOID:0000000011152678

### DTC DETECTION LOGIC

CONSULT name	DTC	DTC detecting condition	Repair order
CAN COMMUNICATION FAILURE	U1000	When air bag diagnosis sensor unit is not transmitting or receiving CAN communication signals for 2 or more seconds.	Refer to <u>SRC-43, "Diagnosis</u> <u>Procedure"</u> .
DTC CONFIRMATION PROCE	DURE		
1.PERFORM SELF-DIAGNOSIS			
<ol> <li>Turn ignition switch ON and w</li> <li>Using CONSULT, perform SE</li> <li>Check if any DTC is displayed</li> </ol>	LF-DIAGNO	SIS RESULTS of AIR BAG.	
Is DTC detected? YES >> Refer to <u>SRC-43, "Dia</u> NO >> Refer to <u>GI-47, "Interr</u>			
Diagnosis Procedure			INFOID:000000011152679
1. CHECK CAN COMMUNICATIO	ON SYSTEM	1	
Check CAN communication system	m. Refer to <u>I</u>	AN-21, "Trouble Diagnosis Flow C	hart".
>> Inspection End.			

## U1010 CONTROL UNIT (CAN)

### Description

Air bag diagnosis sensor performs self-tests on key ON. If CAN communication failure within control unit is detected, DTC is set.

### DTC Logic

INFOID:0000000011152681

INFOID:0000000011152682

INFOID:000000011152680

### DTC DETECTION LOGIC

CONSULT name	DTC	DTC detecting condition	Repair order
CAN CONTROL UNIT FAILURE	U1010	CAN communication error is detected in control unit.	Refer to <u>SRC-44, "Diagnosis</u> Procedure".

### DTC CONFIRMATION PROCEDURE

**1.**PERFORM SELF-DIAGNOSIS

1. Turn ignition switch ON.

2. Using CONSULT, perform SELF DIAGNOSIS RESULTS of AIR BAG.

3. Check if DTC is displayed in the self-diagnosis results.

#### Is DTC detected?

YES >> Refer to <u>SRC-44, "Diagnosis Procedure"</u>.

NO >> Inspection End.

### Diagnosis Procedure

**1.**REPLACE AIR BAG DIAGNOSIS SENSOR UNIT

Replace air bag diagnosis sensor unit. Refer to <u>SR-27, "Removal and Installation"</u>.

>> Inspection End.

## B0001, B0002 DRIVER AIRBAG MODULE

### Description

### DTC B0001, B0002 DRIVER AIRBAG MODULE

The driver air bag module is dual stage (US/CAN models) and single stage (MEX models) and wired to the air bag diagnosis sensor unit through the spiral cable. The air bag diagnosis sensor unit will monitor for opens and shorts in detected lines to the driver air bag module including the spiral cable.

### PART LOCATION

Refer to SRC-5, "Component Parts Location".

Is the DTC detected? YES (Current DTC)>>Refer to <u>SRC-4</u> YES (Past DTC)>>GO TO 2. NO >> Inspection End.	<u>16, "Diac</u>	nosis Procedure".	
2. ERASE SELF-DIAG RESULT			
Erase the DTC using CONSULT			

#### Erase the DTC using CONSULT.

Can the DTC be erased?

YES >> Inspection End.

### B0001, B0002 DRIVER AIRBAG MODULE

< DTC/CIRCUIT DIAGNOSIS >

NO >> Refer to <u>SRC-46, "Diagnosis Procedure"</u>.

### DTC CONFIRMATION PROCEDURE (Without CONSULT)

**1.**CHECK SELF-DIAG RESULT

1. Turn ignition switch ON.

2. Check the air bag warning lamp status. Refer to <u>SRC-16, "Trouble Diagnosis without CONSULT"</u>.

#### NOTE:

SRS will not enter diagnosis mode if no malfunction is detected in user mode.

Is the DTC detected?

- YES >> Refer to <u>SRC-46, "Diagnosis Procedure"</u>.
- NO >> Inspection End.

### **Diagnosis** Procedure

### **1.**HARNESS CONNECTOR

Visually inspect all applicable harness connectors for the following:

- Visible damage to connector or terminal
- Loose terminal
- Poor connection

#### NOTE:

NO

All harness connectors should be inspected from the air bag diagnosis sensor unit to the end component (including any in-line connectors).

Is the inspection result normal?

- YES >> GO TO 2.
  - >> Perform one of the following repairs:
    - Visible damage: Replace the harness.
    - Loose terminal: Secure the terminal.
    - Poor connection: Secure the connection.

### 2.CONFIRM DTC

- 1. Reconnect all harness connectors.
- 2. Turn ignition switch ON.
- 3. Check for DTC using CONSULT.

#### Is DTC still current?

YES >> GO TO 3.

NO >> Refer to <u>GI-47, "Intermittent Incident"</u>.

3.WIRING HARNESS

Check the wiring harness for visible damage.

### NOTE:

The entire wiring harness should be inspected from the air bag diagnosis sensor unit to the end component (including any in-line connectors).

Is the inspection result normal?

- YES >> GO TO 4.
- NO >> Replace the harness.

**4.**CHECK SPIRAL CABLE CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect driver air bag module harness connectors and spiral cable harness connector.
- 3. Check continuity between driver air bag module harness connector and spiral cable connector.

### **B0010, B0011 PASSENGER AIRBAG MODULE**

#### < DTC/CIRCUIT DIAGNOSIS >

### B0010, B0011 PASSENGER AIRBAG MODULE

### Description

INFOID:000000011152686

### DTC B0010, B0011 PASSENGER AIR BAG MODULE

The passenger air bag module is dual stage (US/CAN models) and single stage (MEX models) and is wired to the air bag diagnosis sensor unit. The air bag diagnosis sensor unit will monitor for opens and shorts in detected lines to the passenger air bag module.

#### PART LOCATION

Refer to SRC-5, "Component Parts Location".

### DTC Logic

INFOID:000000011152687

#### With CONSULT

CONSULT name	DTC	DTC detecting condition	Repair order
ASSIST AIRBAG MODULE CIRCUIT [OPEN]		Front passenger air bag module circuit (AS1) is open.	Refer to <u>SRC-49</u> , "Diagnosis Proce- dure".
ASSIST AIRBAG MODULE CIRCUIT [VB-SHORT]	B0010	Front passenger air bag module circuit (AS1) is shorted to a power supply circuit.	-
ASSIST AIRBAG MODULE CIRCUIT [GND-SHORT]		Front passenger air bag module circuit (AS1) is shorted to ground.	-
ASSIST AIRBAG MODULE CIRCUIT [SHORT]		Front passenger air bag module cir- cuits (AS1) are shorted to each other.	
ASSIST AIRBAG MODULE 2ND CIRCUIT [OPEN]		Front passenger air bag module circuit (AS2) is open.	
ASSIST AIRBAG MODULE 2ND CIRCUIT [VB-SHORT]	B0011	Front passenger air bag module circuit (AS2) is shorted to a power supply circuit.	
ASSIST AIRBAG MODULE 2ND CIRCUIT [GND-SHORT]		Front passenger air bag module circuit (AS2) is shorted to ground.	
ASSIST AIRBAG MODULE 2ND CIRCUIT [SHORT]		Front passenger air bag module cir- cuits (AS2) are shorted to each other.	

### DTC CONFIRMATION PROCEDURE (With CONSULT)

**1.**CHECK SELF-DIAG RESULT

- 1. Turn ignition switch ON.
- 2. Check for DTC using CONSULT.

#### Is the DTC detected?

YES (Current DTC)>>Refer to <u>SRC-49. "Diagnosis Procedure"</u>. YES (Past DTC)>>GO TO 2. NO >> Inspection End.

## 2. ERASE SELF-DIAG RESULT

#### Erase the DTC using CONSULT.

Can the DTC be erased?

- YES >> Inspection End.
- NO >> Refer to <u>SRC-49</u>, "Diagnosis Procedure".

### DTC CONFIRMATION PROCEDURE (Without CONSULT)

1.CHECK SELF-DIAG RESULT

1. Turn ignition switch ON.

2. Check the air bag warning lamp status. Refer to SRC-16, "Trouble Diagnosis without CONSULT".

INFOID:0000000011152703

### **1**.HARNESS CONNECTOR

Visually inspect all applicable harness connectors for the following:

- Visible damage to connector or terminal
- Loose terminal
- Poor connection

#### NOTE:

All harness connectors should be inspected from the air bag diagnosis sensor unit to the end component (including any in-line connectors).

#### Is the inspection result normal?

YES >> GO TO 2. NO >> Perform

- >> Perform one of the following repairs:
  - Visible damage: Replace the harness.
  - · Loose terminal: Secure the terminal.
  - Poor connection: Secure the connection.

## 2.CONFIRM DTC

- 1. Reconnect all harness connectors.
- 2. Turn ignition switch ON.
- 3. Check for DTC using CONSULT.

#### Is DTC still current?

YES >> GO TO 3.

NO >> Refer to GI-47, "Intermittent Incident".

### **3.**WIRING HARNESS

### Check the wiring harness for visible damage.

#### NOTE:

The entire wiring harness should be inspected from the air bag diagnosis sensor unit to the end component (including any in-line connectors).

Is the inspection result normal?

YES >> GO TO 4.

NO >> Replace the harness.

**4.**CONFIRM DTC

- 1. Reconnect all harness connectors.
- 2. Turn ignition switch ON.
- 3. Check for DTC using CONSULT.

### Is DTC still current?

- YES >> GO TO 5.
- NO >> Refer to <u>GI-47, "Intermittent Incident"</u>.

### **5.**CRASH ZONE SENSOR

- 1. Replace the crash zone sensor. Refer to <u>SR-23, "Removal and Installation"</u>.
- 2. Turn ignition switch ON.
- 3. Check for DTC using CONSULT.

### Is DTC still current?

YES >> GO TO 6.

NO >> Clear DTC. Inspection End.

### 6.AIR BAG DIAGNOSIS SENSOR UNIT

1. Replace the air bag diagnosis sensor unit. Refer to SR-27, "Removal and Installation".

- 2. Turn ignition switch ON.
- 3. Check for DTC using CONSULT.

B-PILLAR SATELLITE SENSOR LH [SENSOR FAIL]	B0091	Front side air bag satellite sensor LH has malfunctioned.	Refer to <u>SRC-63, "Diagnosis Procedure"</u> .
B-PILLAR SATELLITE SENSOR LH [COMM FAIL]		Front side air bag satellite sensor LH communication error.	
B-PILLAR SATELLITE SENSOR LH [DISCONNECT]		Front side air bag satellite sensor LH is disconnected.	
B-PILLAR SATELLITE SENSOR LH [UNMATCH]		Front side air bag satellite sensor LH is out of specification.	
B-PILLAR SATELLITE SENSOR LH [GND-SHORT]		Front side air bag satellite sensor LH cir- cuit is shorted to ground.	

### DTC CONFIRMATION PROCEDURE (With CONSULT)

1. CHECK SELF-DIAG RESULT

1. Turn ignition switch ON.

2. Check for DTC using CONSULT.

#### Is the DTC detected?

YES (Current DTC)>>Refer to SRC-63, "Diagnosis Procedure".

YES (Past DTC)>>GO TO 2.

NO >> Inspection End.

### 2.ERASE SELF-DIAG RESULT

#### Erase the DTC using CONSULT.

### Can the DTC be erased?

YES >> Inspection End.

NO >> Refer to <u>SRC-63</u>, "Diagnosis Procedure".

### DTC CONFIRMATION PROCEDURE (Without CONSULT)

## 1.CHECK SELF-DIAG RESULT

1. Turn ignition switch ON.

2. Check the air bag warning lamp status. Refer to <u>SRC-16, "Trouble Diagnosis without CONSULT"</u>. **NOTE:** 

SRS will not enter diagnosis mode if no malfunction is detected in user mode.

#### Is the DTC detected?

- YES >> Refer to <u>SRC-63</u>, "Diagnosis Procedure".
- NO >> Inspection End.

## DTC B00A0 OCCUPANT CLASSIFICATION SYSTEM (OCS)

The OCS control unit is wired to the air bag diagnosis sensor unit. The air bag diagnosis sensor unit will monitor the OCS for failures and interruptions in communication between the OCS control unit and the air bag diagnosis sensor unit.

## PART LOCATION

Refer to SRC-5, "Component Parts Location".

# DTC Logic

INFOID:0000000011152723

## With CONSULT

CONSULT name	DTC	DTC detecting condition	Repair order
OCCUPANT DETECTION SENSOR UNIT [UNIT FAIL]		The OCS control unit is malfunction- ing.	Refer to <u>SRC-81, "Diagnosis Proce-</u> dure".
OCCUPANT DETECTION SENSOR UNIT [NO DATA]			
OCCUPANT DETECTION SENSOR UNIT [UNDEFINED]			
OCCUPANT DETECTION SENSOR UNIT [RESET FAIL]	B00A0		
OCCUPANT DETECTION SENSOR [UNIT FAIL]		The OCS sensor is malfunctioning.	
OCCUPANT DETECTION SENSOR [POWER FAIL]		The OCS sensor circuit is malfunc- tioning.	
OCCUPANT DETECTION SENSOR UNIT [COMM FAIL]		Communication between the OCS control unit and the air bag diagnosis sensor unit is interrupted.	

## DTC CONFIRMATION PROCEDURE (With CONSULT)

1.CHECK SELF-DIAG RESULT

1. Turn ignition switch ON.

2. Check for DTC using CONSULT.

## Is the DTC detected?

YES (Current DTC)>>Refer to SRC-81, "Diagnosis Procedure".

- YES (Past DTC)>>GO TO 2.
- NO >> Inspection End.
- **2.**ERASE SELF-DIAG RESULT

Erase the DTC using CONSULT.

#### Can the DTC be erased?

YES >> Inspection End.

NO >> Refer to <u>SRC-81, "Diagnosis Procedure"</u>.

## DTC CONFIRMATION PROCEDURE (Without CONSULT)

1.CHECK SELF-DIAG RESULT

1. Turn ignition switch ON.

2. Check the air bag warning lamp status. Refer to SRC-16, "Trouble Diagnosis without CONSULT".

NOTE:

SRS will not enter diagnosis mode if no malfunction is detected in user mode.

# **B142X COLLISION DETECTION**

# Description

DTC B142X COLLISION DETECTION

The air bag diagnosis sensor unit will set this DTC if it has detected a collision which has resulted in a deployment of one or more air bags or pre-tensioners. If this DTC is detected after a SRS repair, the air bag diagnosis sensor unit has not yet been replaced. This DTC can not be erased.

# **B14XX AIR BAG DIAGNOSIS SENSOR UNIT**

< DTC/CIRCUIT DIAGNOSIS >

# B14XX AIR BAG DIAGNOSIS SENSOR UNIT

## Description

INFOID:000000011152752

## DTC B14XX AIR BAG DIAGNOSIS SENSOR UNIT

The air bag diagnosis sensor unit will run self diagnostics when the ignition switch is turned ON. It has the potential to set many diagnostic trouble codes which will conform to the B14XX format, but will not match any other SRS diagnostic trouble codes. Refer to <u>SRC-16</u>, "CONSULT Function (AIR BAG)".

## PART LOCATION

Refer to SRC-5, "Component Parts Location".

DTC Logic

INFOID:0000000011152753

#### With CONSULT

CONSULT name	DTC	DTC detecting condition	Repair order
