PRECAUTIONS

PRECAUTIONS

WARNING:

А Precautions for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT **BELT PRE-TENSIONER**" EIS00074 The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along В with a front seat belt. helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual. To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be per-D formed by an authorized NISSAN/INFINITI dealer. Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air F Bag Module, see the SRS section. Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors. F Handling for Adhesive and Primer. FISODOIZ Do not use an adhesive which is past its usable term. Shelf life of this product is limited to six months after the date of manufacture.Carefully adhere to the expiration or manufacture date printed on the box. Keep primers and adhesive in a cool, dry place. Ideally, then should be stored in a refrigerator. Open the seal of the primer and adhesive just before application. Do not use the remainder. Н Before application, be sure to shake the primer container to stir the content. If any floating materials are found, do not use it. If any primer or adhesive contacts the skin, wipe it off with white gasoline or equivalent and wash the skin GW with soap. When using primer and adhesive, always observe the precautions in the instruction manual. Trouble diagnosis precaution EI\$000.10 If each local control unit (LCU) connector is left disconnected for at least 1 minute, the BCM stores a communication inactive. After reconnecting the connector, any of the following steps shall be done. "Discon-K nect the BCM battery power supply", Execute Erase memory with CONSULT-II. When you read wiring diagrams, refer to the followings:

- "HOW TO READ WIRING DIAGRAMS" in GI section
- PG-2. "POWER SUPPLY ROUTING" in PG section

When you perform trouble diagnosis, refer to the followings:

- "HOW TO FOLLOW TEST GROUP IN TROUBLE DIAGNOSIS" in GI section
- "HOW TO PERFORM EFFICIENT DIAGNOSIS FOR AN ELECTRICAL INCIDENT" in GI section

Check for any service bulletins before servicing the vehicle.

Special Service Tools

EIS000Z5

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name		Description
(J-39570) Chassis ear	Silao993E	Location the noise
(J-43980) NISSAN Squeak and Rattle Kit	SIIA0994E	Repairing the cause of noise
mmercial Service Te	ools	El
Tool name		Description

Tool name		Description
Engine ear	SIIA0995E	Location the noise

SQUEAK AND RATTLE TROUBLE DIAGNOSES PFP:00000 A **Work Flow** EI\$00077 Customer Interview Duplicate the Noise and Test Drive. Check Related Service Bulletins. Locate the Noise and Identify the Root Cause. Repair the Cause. NG Confirm Repair. E OK Inspection End SBT842

CUSTOMER INTERVIEW

Interview the customer if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any customer's comments; refer to $\underline{GW-9}$, "Diagnostic Worksheet". This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by test driving the vehicle with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak —(Like tennis shoes on a clean floor)
 Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces=higher pitch noise/softer surfaces=lower pitch noises/edge to surface=chirping
- Creak—(Like walking on an old wooden floor) Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle—(Like shaking a baby rattle) Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock —(Like a knock on a door) Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick—(Like a clock second hand)
 Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump—(Heavy, muffled knock noise) Thump characteristics include softer knock/dead sound often drought on by activity.
- Buzz—(Like a bumble bee) Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

GW

Κ

Μ

DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.

If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

- 1) Close a door.
- 2) Tap or push/pull around the area where the noise appears to be coming from.
- 3) Rev the engine.
- 4) Use a floor jack to recreate vehicle "twist".
- 5) At idle, apply engine load (electrical load, half-clutch on M/T model, drive position on A/T model).
- 6) Raise the vehicle on a hoist and hit a tire with a rubber hammer.
- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
- If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSBs) related to that concern or symptom.

If a TSB relates to the symptom, follow the procedure to repair the noise.

LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

- 1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Chassis Ear: J-39570, Engine Ear: J-39565 and mechanics stethoscope).
- 2. Narrow down the noise to a more specific area and identify the cause of the noise by:
- removing the components in the area that you suspect the noise is coming from.
 Do not use too much force when removing clips and fasteners, otherwise clips and fastener can be broken or lost during the repair, resulting in the creation of new noise.
- tapping or pushing/pulling the component that you suspect is causing the noise.
 Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.
- feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
- placing a piece of paper between components that you suspect are causing the noise.
- looking for loose components and contact marks.
 Refer to <u>GW-7, "Generic Squeak and Rattle Troubleshooting"</u>.

REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:
- separate components by repositioning or loosening and retightening the component, if possible.
- insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape. A Nissan Squeak and Rattle Kit (J-43980)is available through your authorized Nissan Parts Department.

CAUTION:

Do not use excessive force as many components are constructed of plastic and may be damaged. Always check with the Parts Department for the latest parts information.

The following materials are contained in the Nissan Squeak and Rattle Kit (J-43980). Each item can be ordered separately as needed.

URETHANE PADS [1.5mm(0.059 in) thick]

Insulates connectors, harness, etc.

76268-9E005: 100×135mm(3.94×5.31 in)/76884-71L01: 60×85mm(2.36×3.35 in)/76884-71L02: 15×25mm(0.59×0.98 in)

INSULATOR (Foam blocks)

Insulates components from contact.Can be used to fill space behind a panel.

73982-9E000: 45mm(1.77 in) thick, 50×50mm(1.97×1.97 in)/73982-50Y00: 10mm(0.39 in) think, 50×50mm(1.97×1.97 in)

INSULATOR (Light foam block) 80845-71L00: 30mm(1.18 in) thick, 30×50mm(1.18×1.97 in)	А
FELT CLOTHTAPE Used to insulate where movement does not occur.Ideal for instrument panel applications. 68370-4B000: 15×25mm(0.59×0.98 in) pad/68239-13E00: 5mm(0.20 in) wide tape roll The following materials, not found in the kit, can also be used to repair squeaks and rattles. UHMW(TEFLON) TAPE	В
Insulates where slight movement is present. Ideal for instrument panel applications. SILICONE GREASE Used in of UHMW tape that will be visible or not fit. Note: Will only last a few months.	С
SILICONE SPRAY Use when grease cannot be applied. DUCT TAPE Use to eliminate movement.	D
CONFIRM THE REPAIR	E
Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.	F
Generic Squeak and Rattle Troubleshooting	
Refer to Table of Contents for specific component removal and installation information.	
INSTRUMENT PANEL	G
Most incidents are caused by contact and movement between:	
1. The cluster lid A and instrument panel	Н
2. Acrylic lens and combination meter housing	
3. Instrument panel to front pillar garnish	GW
 Instrument panel to windshield Instrument panel mounting pins 	0
 6. Wiring harnesses behind the combination meter 	
7. A/C defroster duct and duct joint	J
These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicon spray (in hard to reach areas).Urethane pads can be used to insulate wiring harness.	K

CAUTION:

L Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.

CENTER CONSOLE

Components to pay attention to include:

- 1. Shifter assembly cover to finisher
- 2. A/C control unit and cluster lid C
- 3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

DOORS

Pay attention to the:

- 1. Finisher and inner panel making a slapping noise
- 2. Inside handle escutcheon to door finisher
- 3. Wiring harnesses tapping
- 4. Door striker out of alignment causing a popping noise on starts and stops

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks from the Nissan Squeak and Rattle Kit (J-43980) to repair the noise.

Μ

TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner. In addition look for:

- 1. Trunk lid dumpers out of adjustment
- 2. Trunk lid striker out of adjustment
- 3. The trunk lid torsion bars knocking together
- 4. A loose license plate or bracket

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

SUNROOF/HEADLINER

Noises in the sunroof/headliner area can often be traced to one of the following:

- 1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
- 2. Sunvisor shaft shaking in the holder
- 3. Front or rear windshield touching headliner and squeaking

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

SEATS

When isolating seat noise it's important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.

Cause of seat noise include:

- 1. Headrest rods and holder
- 2. A squeak between the seat pad cushion and frame
- 3. The rear seat back lock and bracket

These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

UNDERHOOD

Some interior noise may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.

Causes of transmitted underhood noise include:

- 1. Any component mounted to the engine wall
- 2. Components that pass through the engine wall
- 3. Engine wall mounts and connectors
- 4. Loose radiator mounting pins
- 5. Hood bumpers out of adjustment
- 6. Hood striker out of adjustment

These noise can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting securing, or insulating the component causing the noise.

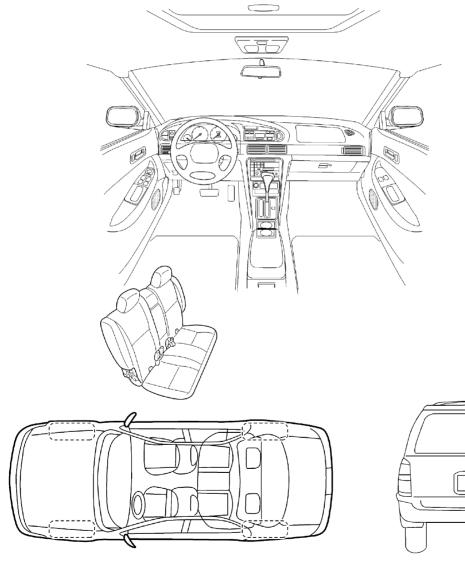

Diagnostic Worksheet

SQUEAK & RATTLE DIAGNOSTIC WORKSHEET

Dear Infiniti Customer:

We are concerned about your satisfaction with your Infiniti vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Infiniti right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle) The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.

Continue to the back of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

SQUEAK & RATTLE DIAGNOSTIC WORKSHEET- page 2

Briefly describe the location where the noise occurs:					
II. WHEN DOES IT OCCUR? (chec	ck the boxes that apply)				
 anytime 1st time in the morning only when it is cold outside only when it is hot outside 	 after sitting out in the sun when it is raining or wet dry or dusty conditions other:				
III. WHEN DRIVING:	IV. WHAT TYPE OF NOISE?				
 through driveways over rough roads over speed bumps only at about mph on acceleration coming to a stop on turns : left, right or either (circle) with passengers or cargo other: after driving miles or minute 	 squeak (like tennis shoes on a clean floor) creak (like walking on an old wooden floor) rattle (like shaking a baby rattle) knock (like a knock on a door) tick (like a clock second hand) thump (heavy, muffled knock noise) buzz (like a bumble bee) 				

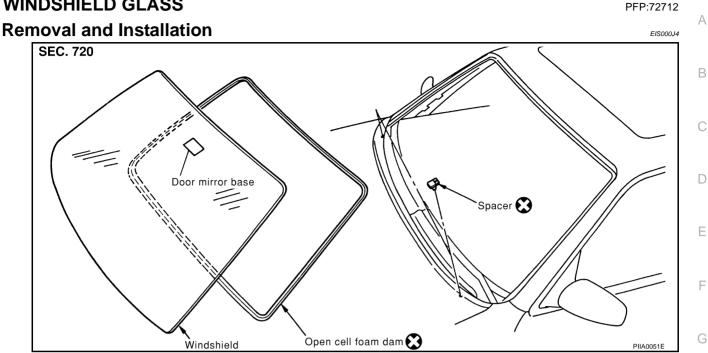

TO BE COMPLETED BY DEALERSHIP PERSONNEL Test Drive Notes:

		<u>YES</u>	<u>NO</u>	Initials of person performing	
Vehicle test driven with customer - Noise verified on test drive - Noise source located and repaired - Follow up test drive performed to confirm repair					
VIN:	Customer Name: _				
W.O. #:	Date:	_			SBT844

This form must be attached to Work Order

WINDSHIELD GLASS

WINDSHIELD GLASS

REMOVAL

- 1. Remove the front pillar garnish. Refer to EI-38, "BODY SIDE TRIM".
- 2. Remove the headlining. Refer to EI-48, "HEADLINING" .
- 3 Remove the weather-strip on the front pillar.
- 4. Remove the windshield molding. Refer to EI-24, "WINDSHIELD MOLDING" .
- 5. Remove the cowl top cover. Refer to EI-21, "COWL TOP" .
- 6. Apply a protective tape around the windshield glass to protect the painted surface from damage.

After removing moldings, remove glass using piano wire or power cutting tool and an inflatable pump bag.

If a windshield glass is reversed, mark the body and the glass with mating marks.

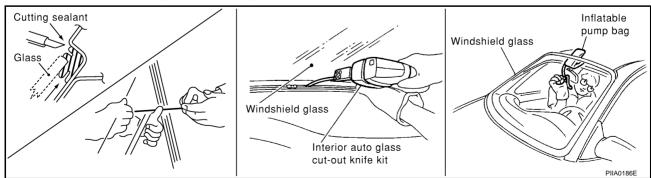

WARNING:

When cutting the glass from the vehicle, always wear safety glasses and heavy gloves to help prevent glass splinters from entering your eyes or cutting your hands.

CAUTION:

When a windshield glass is reused, do not use a cutting knife or power cutting tool. NOTE:

- Be careful not to scratch the glass when removing.
- Do not set or stand the glass on its edge. Small chips may develop into cracks.

INSTALLATION

- Use a genuine Nissan Urethane Adhesive Kit or equivalent and follow the instructions furnished with it.
- While the urethane adhesive is curing, open a door window. This will prevent the glass from being forced out by passenger compartment air pressure when a door is closed.

GW-11

Н

GW

Κ

L

М

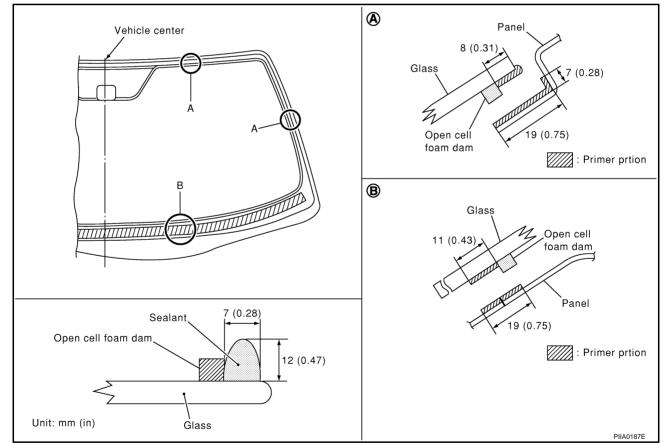

- The molding must be installed securely so that it is in position and leaves no gap.
- Inform the customer that the vehicle should remain stationary until the urethane adhesive has completely cured (preferably 24 hours). Curing time varies with temperature and humidity.

WARNING:

- Keep heat and open flames away as primers and adhesive are flammable.
- The materials contained in the kit are harmful if swallowed, and may irritate skin and eyes. Avoid contact with the skin and eyes.
- Use in an open, well ventilated location. Avoid breathing the vapors. They can be harmful if inhaled. If affected by vapor inhalation, immediately move to an area with fresh air.
- Driving the vehicle before the urethane adhesive has completely cured may affect the performance of the windshield in case of an accident.

CAUTION:

- Do not use an adhesive which is past its usable term. Shelf life of this product is limited to six months after the date of manufacture. Carefully adhere to the expiration or manufacture date printed on the box.
- Keep primers and adhesive in a cool, dry place. Ideally, they should be stored in a refrigerator.
- Do not leave primers or adhesive cartridge unattended with their caps open or off.
- The vehicle should not be driven for at least 24 hours or until the urethane adhesive has completely cured. Curing time varies depending on temperature and humidities. The curing time will increase under higher temperatures and lower humidities.

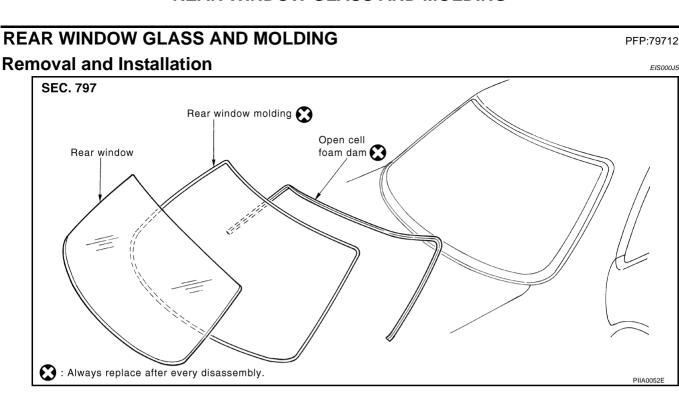

Repairing Water Leaks for Windshield

Leaks can be repaired without removing and reinstalling glass.

If water is leaking between the urethane adhesive material and body or glass, determine the extent of leakage. This can be done by applying water to the windshield area while pushing glass outward.

To stop the leak, apply primer (if necessary) and then urethane adhesive to the leak point.

REAR WINDOW GLASS AND MOLDING

REMOVAL

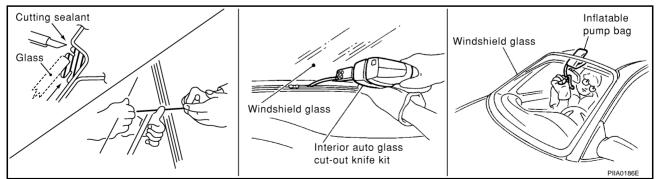

- Remove the rear of the headliner. Refer to EI-48, "Removal and Installation" in "Exterior/Interior (EI)" sec-1. Н tion.
- 2. Remove the rear pillar garnish. Refer to EI-38, "Removal and Installation" in "Exterior/Interior (EI)" section.
- Remove the rear parcel shelf finisher. Refer to EI-40, "Removal and Installation" in "Exterior/Interior (EI)" 3. section.
- Remove the connectors and grounds for the rear defogger and printed antenna. 4.
- After removing moldings, remove glass using piano wire or power cutting tool and an inflatable pump bag.
- If a windshield glass is revised, mark the body and the glass with mating marks.

WARNING:

When cutting the glass from the vehicle, always wear safety glasses and heavy gloves to help prevent glass splinters from entering your eyes or cutting your hands.

CAUTION:

- When a windshield glass is reused, do not use a cutting knife or power cutting tool.
- Be careful not to scratch the glass when removing.
- Do not set or stand the glass on its edge. Small chips may develop into cracks.

INSTALLATION

- Use a genuine Nissan Urethane Adhesive Kit or equivalent and follow the instructions furnished with it.
- While the urethane adhesive is curing, open a door window. This will prevent the glass from being forced out by passenger compartment air pressure when a door is closed.
- The molding must be installed securely so that it is in position and leaves no gap.

- The vehicle should not be driven for at least 24 hours or until the urethane adhesive has completely cured. Curing time varies depending on temperature and humidities. The curing time will increase under higher temperatures and lower humidities.

System Description OUTLINE

Power window system consists of

- BCM (Body Control Module)
- driver's door LCU (Local Control Module)
- passenger, rear LH, RH door control units
- four power window regulators

BCM is connected to driver's door LCU via DATA LINE A–3 and LCU supply power and ground to each power window regulator.

When ignition switch is in the "ON" position, power window will be operated depending on power window sub/ main switch (which is combined with each LCU) condition.

EIS000J6

OPERATIVE CONDITION

- Power windows can be raised or lowered with each sub-switch or the power window main switch located on the driver's door trim when ignition key is in the "ON" position and power window lock switch on the driver door trim is unlocked.
- When power window lock switch is locked, no windows can be raised or lowered except for driver side window.
- When ignition key is in the "ON" position, to fully open/close the front windows, press down/pull completely on the automatic switch and release it; it needs not be held. The window will automatically open/ close all the way. To stop the window, pull up/press down then release the switch.

DELAYED POWER OPERATION

When the ignition switch is turned to the "OFF" position, the power window will still operate for up to approximately 45 seconds unless the driver side door is opened. (Power window timer)

INTERRUPTION DETECTION FUNCTION

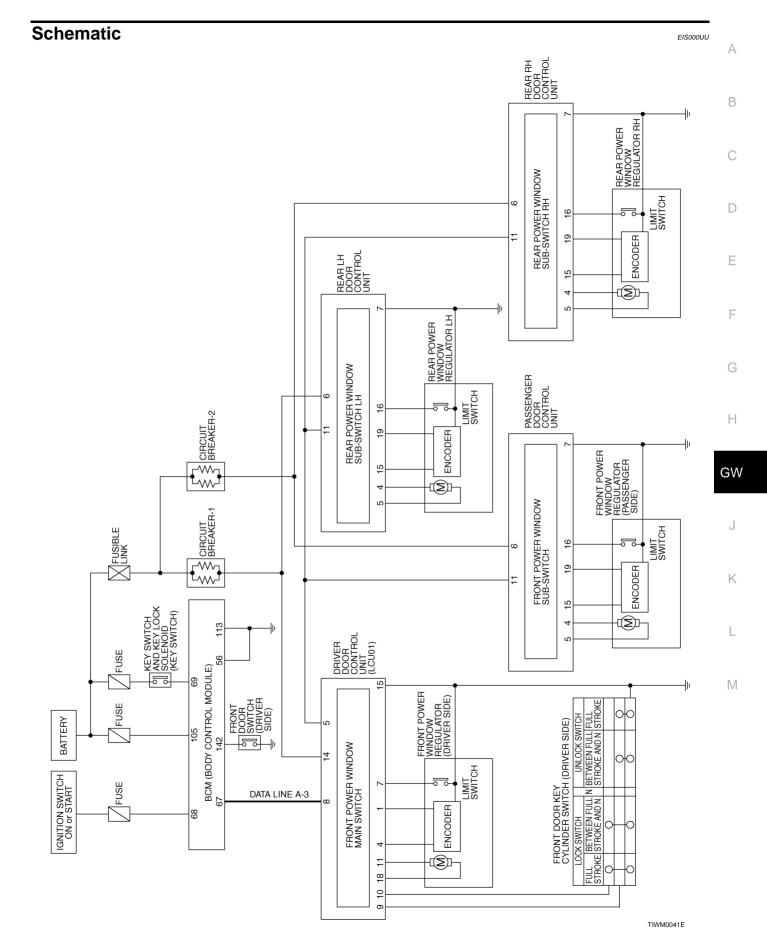

Driver's door control unit (LCU01) /passenger, rear LH, RH door control unit monitor the power window regulator motor operation and the power window position (full closed or other) by the signals

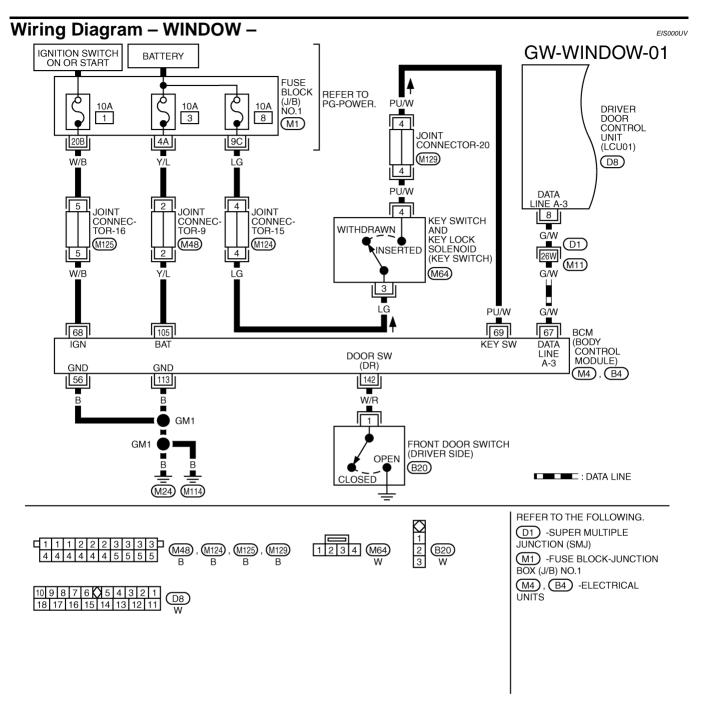

from encoder and limit switch in power window regulator motor.

When driver's door control unit (LCU01) /passenger, rear LH RH door control unit detect interruption during the following close operation in the each door,

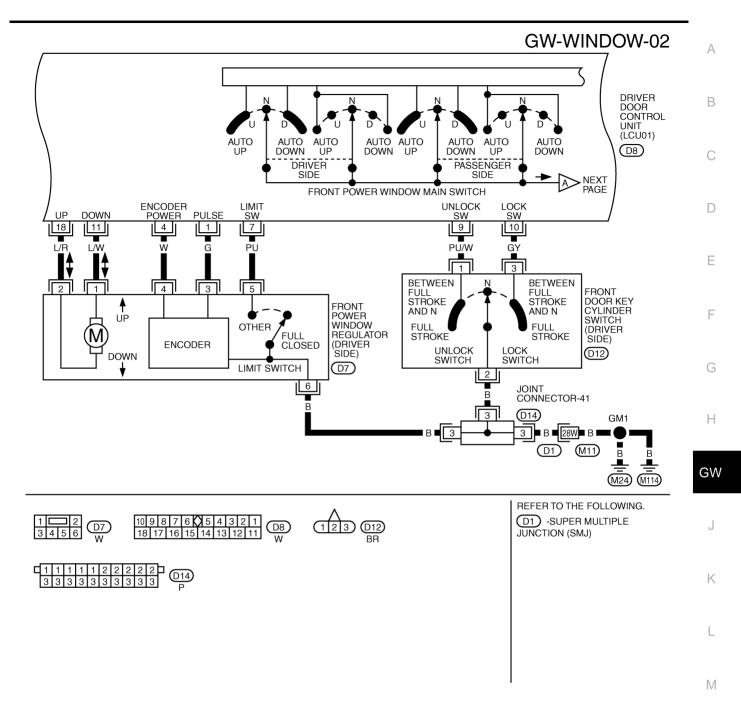

driver's door control unit (LCU01) / passenger, rear LH,RH door control unit control each power window regulator motor for open and the power window will be lowered about 150 mm (5.91 in).

- automatic close operation when ignition switch is in the "ON" position
- automatic close operation during power window timer operation

(): Passenger door control unit

Check that other systems using the signal of the follo	wing systems operate normally
Symptom	Diagnostic procedure.
None of the power windows can be operated using any switch.	Check the following.harness for open and short between BCM and driver LCU.BCM
Driver side power window cannot be operated but other windows	Diagnostic procedure 1 <u>GW-26, "Diagnostic Procedure 1"</u> (Driver power window motor circuit check)
can be operated.	If the above system is "OK", replace the driver door control unit (LCU01).
	Diagnostic procedure 2 <u>GW-27, "Diagnostic Procedure 2"</u> (Communication signal check)
One or more power windows except driver 's side window cannot	Diagnostic procedure 3 <u>GW-28</u> , " <u>Diagnostic Procedure 3</u> " (Passenger power window motor check)
be operated.	Diagnostic procedure 4 <u>GW-29, "Diagnostic Procedure 4"</u> (Rear LH or RH power window motor check)
	If the above system is "OK", replace the door control unit of the faulty door window.
Power windows except driver's side window cannot be operated using power window main switch but can be operated by power window sub-switches.	Check power window switch (door control unit).
	Diagnostic procedure 5 <u>GW-30, "Diagnostic Procedure 5"</u> (Limit switch check)
Power window automatic operation does not function properly.	Diagnostic procedure 6 <u>GW-33</u> , "Diagnostic Inspection 6" (Encoder system check)
	If the above system is "OK", replace the door control unit of the malfunctioning door window.
	Within 45 seconds after ignition switch turned OFF.
	When front door driver side closed.
Power window timer function does not operate properly.	Diagnostic procedure 7 <u>GW-34, "Diagnostic Inspection 7"</u> (Driver side door switch check)
	If the above system is "OK", replace the BCM.
	Door window sliding part malfunction.
During door window automatic raising operation, it is lowered at any position other than above.	 A foreign material adheres to window glass or glass run rubber.
	- Glass run rubber wear or deformation.
	 Sash is tilted too much, or not enough.

Diagnostic Procedure 1

DRIVER POWER WINDOW REGULATOR CIRCUIT CHECK

- 1. CHECK DRIVER POWER WINDOW MOTOR CIRCUIT
- 1. Turn ignition switch OFF.
- 2. Disconnect front power window regulator (driver side) connector and driver door control unit (LCU01) connector.
- Check continuity between front power window regulator (driver side) harness connector D7 terminals 1(L/W), 2(L/R) and driver door control unit (LCU01) harness connector D8 terminals 11(L/W), 18(L/R).
 - 1 18 : Continuity should exist.
 - 2 11 : Continuity should exist.
- Check continuity between front power window regulator (driver side) harness connector D7 terminals 1(L/W), 2(L/R) and body ground.
 - 1 ground : Continuity should not exist.

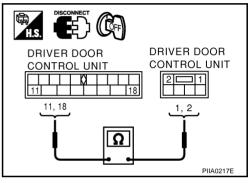

: Continuity should not exist.

OK or NG?

OK >> GO TO 2

2 – ground

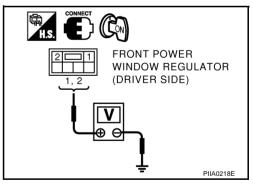

NG >> Repair or replace harness.

2. CHECK DRIVER DOOR CONTROL UNIT (LCU01) OUTPUT SIGNAL

- 1. Connect driver door control unit (LCU01) connector.
- 2. Turn ignition switch ON.
- Check voltage between front power window regulator (driver side) harness connector D7 terminals 1(L/ W), 2(L/R) and body ground.

	Terminals				
(-	(+) (-)		Condition	Voltage	
Connector	Terminal				
D7	4 (1.000)		Window is closing	0V	
DI	1 (L/W)	Ground	V	Window is opening	Battery voltage should exist.
D7	2 (L/R)		Window is closing	0V	
107	2 (UR)		Window is opening	Battery voltage should exist	

OK or NG?

- OK >> Replace front power window regulator (driver side).
- NG >> Replace driver door control unit (LCU01).

EIS000JB

Diagnostic Procedure 2

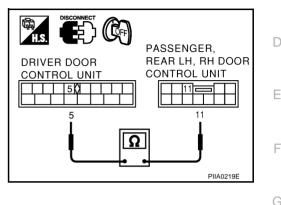

COMMUNICATION SIGNAL CIRCUIT CHECK

1. CHECK COMMUNICATION CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect connectors for driver door control unit (LCU01) and malfunctioning door control unit.
- Check continuity between driver door control unit (LCU01) harness connector terminal 5 and malfunction-3. ing door control unit harness connector terminal 11.

NG >> Repair or replace harness unit.

2. CHECK COMMUNICATION SIGNAL

- Connect driver door control unit (LCU01) and malfunctioning door control unit connector.
- Check voltage between malfunctioning door control unit harness connector terminal 11 and body ground.

OK or NG?

NG

- OK >> Communication signal is OK.
 - >> All door control unit (passenger, rear LH or RH) connected are NG → Replace driver door control unit (LCU01).
 - Any of door control unit (passenger, rear LH or RH) connected are NG.→ Replace malfunctioning door control unit.

Diagnostic Procedure 3 FRONT POWER WINDOW REGULATOR CHECK (PASSENGER SIDE)

EIS000JD

1. CHECK FRONT POWER WINDOW REGULATOR (PASSENGER SIDE) CIRCUIT

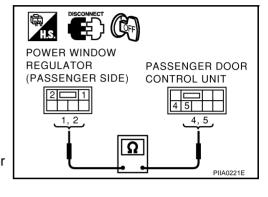

- 1. Turn ignition switch OFF.
- 2. Disconnect power window motor and door control unit connector.
- 3. Check continuity between door control unit harness connector D37 terminals 1(L/W), 2 (L/R) and power window regulator (passenger side) harness connector D39 terminals 4(L/W), 5(L/R).

	Terminals			
(+)		(-)		Continuity
Connector	Terminal	Connector	Terminal	
D39	4 (L/W)	D37	1 (L/W)	Yes
D39	5 (L/R)	D37	2 (L/R)	Yes

OK or NG?

OK >> GO TO 2

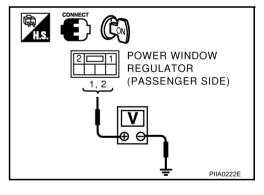

NG >> Repair or replace harness between passenger power window motor and passenger door control unit.

2. CHECK PASSENGER DOOR CONTROL UNIT OUTPUT SIGNAL

- 1. Connect passenger door control unit connector.
- 2. Turn ignition switch ON.
- Check voltage between front power window regulator (passenger side) harness connector D37 terminals 1(L/W), 2(L/R) and body ground.

	Terminals			
(-	(+)		(–) Condition	
Connector	Terminal			
D37	1 (L/W)		Window is closing	0V
037		Ground	Window is opening	Battery voltage should exist.
D37	2 (I /P)		Window is closing	0V
037	2 (L/R)		Window is opening	Battery voltage should exist

OK or NG?

OK >> Replace power window motor.

NG >> Replace door control unit.

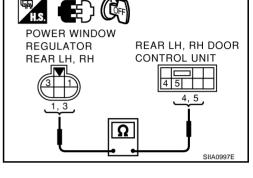

Diagnostic Procedure 4

REAR POWER WINDOW REGULATOR LH OR RH CIRCUIT CHECK

1. CHECK REAR POWER WINDOW REGULATOR LH OR RH CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect rear power window regulator and rear door control LH or RH unit connector.
- Check continuity between rear door control unit LH or RH harness connector D59(LH) or D79(RH) terminals 4(L/W), 5 (L/R) and rear power window regulator LH or RH harness connector D5(LH) or D77(RH) terminals 1(L/W), 3(L/R).

FRONT DOOR GLASS AND REGULATOR

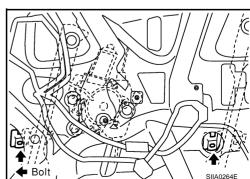

REMOVAL

- 1. Remove the front door finisher. Refer to EI-31, "Removal and Installation" .
- 2. Remove the door speaker. Refer to AV-28, "Removal and Installation of Door Speaker" .
- 3. Pull the inside seal out of the inner panel.

- 4. Operate the power window main switch to raise/lower the door window until the glass mounting bolts can be seen.
- 5. Remove the glass mounting bolts.

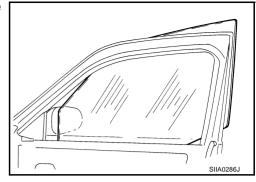

J

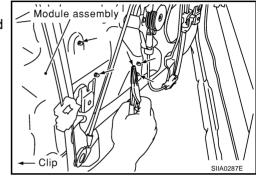

FRONT DOOR GLASS AND REGULATOR

6. While holding the door window, raise it at the rear end to pull the glass out of the sash toward the outside of the door.

- 7. Remove the mounting bolts, and remove the module assembly.
- 8. Disconnect the harness connector for the module assembly, and clip the harness from the back.

Install in the reverse order of removal.

INSPECTION AFTER REMOVAL

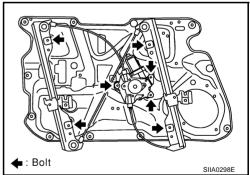

Check the regulator assembly for the following items. If a malfunction is detected, replace or body grease it.

- Wire wear
- **Regulator deformation**
- Grease condition for each sliding part

The arrows in the figure show the application points of the body grease.

DISASSEMBLY AND ASSEMBLY

Remove the regulator motor and guide rail from the module assembly.

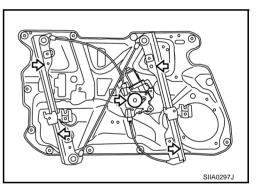

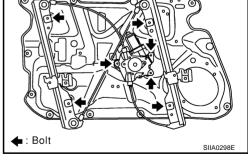

SETTING AFTER INSTALLATION

Setting of limit switch.

If any of the following work has been done, set the limit switch (integrated in the motor).

- Removal and installation of the regulator.
- Removal and installation of the motor from the regulator.
- Operate the regulators as a unit.
- Removal and installation of the glass.
- Removal and installation of the glass run.

Resetting

After installing each component to the vehicle, follow the steps below.

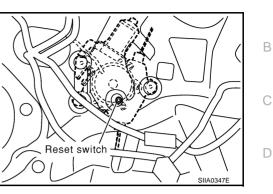

- 1. Raise the glass to the top dead center.
- 2. While pressing and holding the reset switch, lower the glass to the bottom dead center.
- 3. Release the reset switch, and check that the reset switch returns to the original position, and then raise the glass to the top dead center.

CAUTION:

Do not operate the glass automatically to raise the glass to the top dead center.

FITTING INSPECTION

- Check that the glass is securely fit into the glass run groove.
- Lower the glass slightly [approx. 10 to 20 mm (0.39 to 0.79 in)] and check that the clearance to the sash is
 parallel. If the clearance between the glass and sash is not parallel, loosen the regulator mounting bolts,
 guide rail mounting bolts, and glass & guide rail mounting bolts to correct the glass position.

Removal and Installation

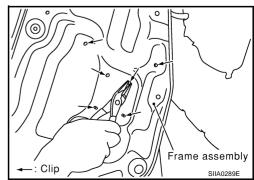

REMOVAL

- 1. Remove the rear door outside molding. Refer to EI-28, "Removal and Installation" .
- 2. Remove the rear door finisher. Refer to EI-31, "Removal and Installation" .
- 3. Pull the inside seal out of the inner panel.

- 4. Remove the mounting bolts, and remove the frame assembly.
- 5. Remove the harness connector routed on the frame assembly, then remove the harness clip from the back.

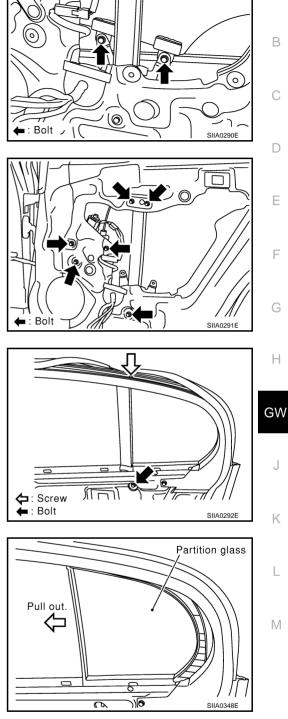

REAR DOOR GLASS AND REGULATOR

- 6. Operate the power window switch to raise/lower the door window until the glass mounting bolts can be seen.
- 7. Remove the glass mounting bolts, and place the glass on the inner bottom of the panel.

- 8. Remove the mounting bolts, and remove the regulator and guide channel from the panel.
- 9. Disconnect the connector for the regulator assembly.

- 10. Remove the partition sash from the glass run.
- 11. Remove the partition sash mounting bolt (lower) and screw (upper) to remove the sash.
- 12. Remove the glass from the inside of the panel.

13. Remove the partition glass from the panel. Install in the reverse order of removal.

Н

А

REAR DOOR GLASS AND REGULATOR

INSPECTION AFTER REMOVAL

Check the regulator assembly for the following items. If a malfunction is detected, replace or grease it.

- Gear wear
- Regulator deformation
- Spring damage
- Grease condition for each sliding part

The arrows in the figure show the application points of the grease "Dow Corning Moly Coat SK 623".

SETTING AFTER INSTALLATION

If any of the following work has been done, set the limit switch (integrated in the motor).

- Removal and installation of the regulator.
- Removal and installation of the motor from the regulator.
- Operate the regulators a unit.
- Removal and installation of the glass.
- Removal and installation of the glass run.

Setting Of Limit Switch

After installing each component to the vehicle, follow the steps below.

CAUTION:

Do not assembly the frame assembly.

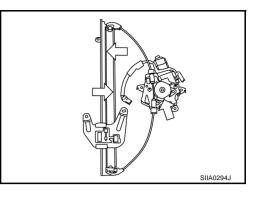

- 1. Raise the glass to the top dead center.
- 2. While pressing and holding the reset switch, lower the glass to the bottom dead center.
- 3. Release the reset switch, and check that the reset switch returns to the original position, and then raise the glass to the top dead center.

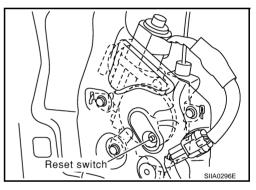

CAUTION:

Do not operate the glass automatically to raise the glass to the top dead center.

FITTING INSPECTION

- Check that the glass is securely fit into the glass run groove.
- Lower the glass slightly [approx. 10 to 20 mm (0.39 to 0.79 in)], and check that the clearance to the sash is parallel. If the clearance between the glass and sash is not parallel, loosen the regulator mounting bolts, guide rail mounting bolts, and glass & carrier plate mounting bolts to correct the glass position.

REAR WINDOW DEFOGGER

REAR WINDOW DEFOGGER PFP:2538	
System Description	A UP
The rear window defogger system is controlled by the BCM. Power is supplied at all times	В
 through 20A fuse[NO.10, located in the fuse block (J/B)] 	
 to the rear window defogger and door mirror defogger relay terminal NO.6,and through 20A fuse[NO.11, located in the fuse block (J/B)] 	С
 to the rear window defogger and door mirror defogger relay terminal NO.3. 	
With the ignition switch in the ON or START position, power is supplied	D
 through 10A fuse[NO.1, located in the fuse block (J/B)] 	
to BCM terminal NO.68	
 to the rear window defogger and door mirror defogger relay terminal NO.1, and 	E
When the rear defogger switch in the multifunction switch is ON, ground is supplied	
 through terminal NO.5 of the multifunction switch 	_
• to BCM terminal NO.10.	F
Terminal NO.144 of the BCM then supplies ground to the rear window defogger and door mirror defogger relaterminal NO.2.	
With power and ground supplied, the rear window defogger and door mirror defogger relay is energized t operate rear window defogger for about 15 minutes.	o G
When the system is activated, the rear window defogger indicator in the rear defogger switch illuminates. Power is supplied	Н

- from rear window defogger and door mirror defogger relay terminal NO.5 and NO.7
- to multifunction switch terminal NO.6.

OK or NG?

OK >> System is OK.

NG >> Repair or replace harness.

CONSULT-II Function

EIS0014N

F

F

G

GW

Μ

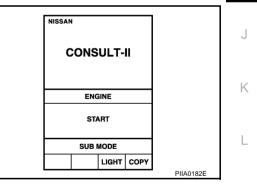

А

 The following functions are executed by combining data received and command transmitted via the communication line from the BCM.

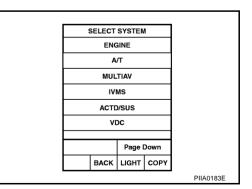

Self-diagnosis mode	Content	0
Data monitor	Displays the input data to BCM on real-time basis.	
Active test	Gives a drive signal to a load to check the operation.	Н

CONSULT-II BASIC OPERATION

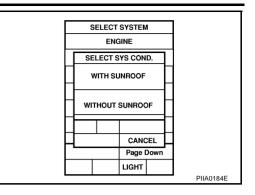

- 1. With the ignition switch OFF, connect CONSULT–II to the data link connector, and turn the ignition switch ON.
- 2. Touch "START".

3. Touch "IVMS" on the "SELECT SYSTEM" screen.

- 4. Check the model specification, and touch either "WITH SUN-ROOF" or "WITHOUT SUNROOF" on the "SELECT SYS COND" screen.
- 5. Touch "OK". If the selection is wrong, touch "CANCEL".
- Select the desired part to be diagnosed on the "SELECT TEST ITEM" screen.

DATA MONITOR

Operation Procedure

- 1. Touch "REAR DEFOGGER" on the "SELECT TEST ITEM" screen.
- 2. Touch "DATA MONITOR" on the "SELECT DIAG MODE" screen.
- 3. Touch either "ALL SIGNALS" or "SELECTION FROM MENU" on the "DATA MONITOR" screen.

ALL SIGNALS	Monitor all items.
SELECTION FROM MENU	Select and monitor the item.

- 4. Touch "START".
- 5. If "SELECTION FROM MENU" is selected, touch the desired monitor item. If "ALL SIGNALS" is selected, all the items are monitored.
- 6. During monitoring, touching "COPY" can start recording the monitor item status.

Display Item List

Monitor item "OPERATION"		Content
DEFOGGER SW	"ON/OFF"	Displays "Press (ON)/others (OFF)" status determined with the defogger switch.
IGN ON SW	"ON/OFF"	Displays "IGN (ON)/OFF, ACC (OFF)" status determined with the ignition switch signal.

ACTIVE TEST

Operation Procedure

- 1. Touch "REAR DEFOGGER" on the "SELECT TEST ITEM" screen.
- 2. Touch "ACTIVE TEST" on the "SELECT DIAG MODE" screen.
- 3. Touch the item to be tested, and check the operation.
- 4. During the operation check, touching "OFF" deactivates the operation.

Display Item List

Test item	Content
Rear defogger relay	Gives a drive signal to the rear window defogger and door mirror defogger relay to activate it.

Symptom Chart

Symptom	Malfunctioning system and reference
Rear window defogger does not activate.	Rear window defogger control system, refer to <u>GW-61, "Rear</u> <u>Window Defogger Control System Inspection."</u> .

EIS000U8

Filament Repair REPAIR EQUIPMENT

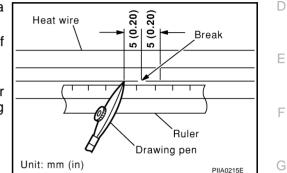

- Conductive silver composition (Dupont NO.4817 or equivalent)
- Ruler 30 cm(11.8in) long
- Drawing pen
- Heat gun
- Alcohol
- Cloth

REPAIRING PROCEDURE

- 1. Wipe broken heat wire and its surrounding area clean with a cloth dampened alcohol.
- 2. Apply a small amount of conductive silver composition to tip of drawing pen.

Shake silver composition container before use.

3. Place ruler on glass along broken line. Deposit conductive silver composition on break with drawing pen. Slightly overlap existing heat wire on both sides [preferably 5 mm(0.20in)] of the break.

EIS000U9

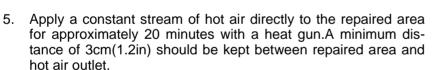

А

В

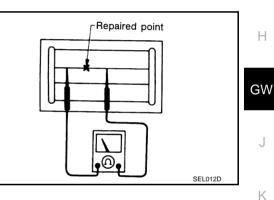

С

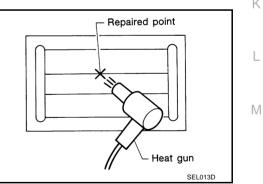

4. After repair has been completed, check repaired wire for continuity.This check should be conducted 10 minutes after silver composition is deposited.

Do not touch repaired area while test is being conducted.

If a heat gun is not available, let the repaired area dry for 24 hours.

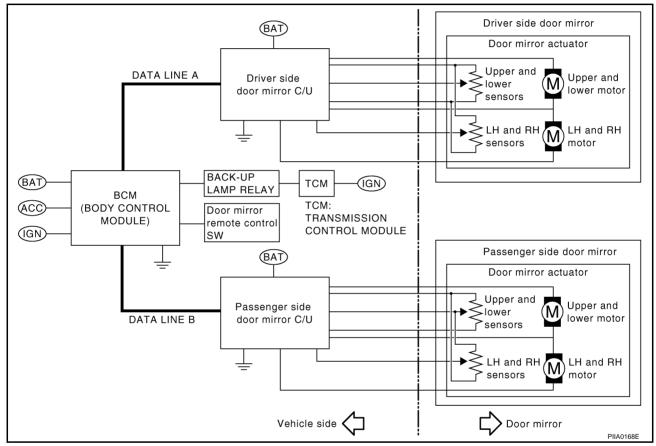

System Description

PFP:28548

- When switching the door mirror remote control switch position (LH/RH), the system moves driver or passenger door mirror face downward, in relation to the A/T selector lever being shifted to Reverse Position.
- The mirror position with the reverse gear engaged can be adjusted and the adjusted mirror position can be stored in memory (2 positions).
- With reverse gear-linked operation signal, the door mirror control unit–LH/RH (LCU) installed on the door panel drives and controls the motors (UP/DOWN, LH/RH).
- Using the self-diagnostic function and CONSULT-II, system diagnosis can be performed.

OUTLINE OF OPERATION Operation Conditions

If the following conditions are satisfied, starts operating after approximately 0.5 seconds.

- Ignition switch is in ON position.
- Set the door mirror remote control switch to the neutral position \rightarrow right position, or left position.
- A/T selector lever is in R position.

NOTE:

• If the conditions for reverse gear-linked operation are satisfied during manual operation, the manual operation is interrupted and switched to the reverse gear-linked operation.

Operation Angle

Fixed operation angle

	Facing downward	Facing innerward
Driver-side	7 °	1°
Passenger-side	7 °	1°

End of Operation

If the following conditions are satisfied, the reverse gear-linked operation is stopped.

- When the set angle is reached.
- When no operation signal or no operation end signal can be received for approximately 2 seconds or more after BCM actually outputs the reverse gear-linked operation signal.
- After receiving the operation signal from the door mirror control unit, when BCM has stayed in the status for 60 seconds.

Return Operation

If one of the following conditions is satisfied, the mirror face returns upward.

- When the ignition switch is turned OFF.
- When the A/T selector lever is shifted to any position except R position.
- When the door mirror remote control switch is in the neutral position.

NOTE:

• After the above operation, if no operation conditions previously mentioned are satisfied, shifting the A/T selector lever to R position will not move the mirror face downward.

End of Return Operation

- Mirror face returns to the original position.
- When no operation signal or no operation end signal can be received for approximately 2 seconds or more after BCM actually outputs the reverse gear-linked operation signal.
- After receiving the operation signal from the door mirror control unit, when BCM has stayed in the status for 60 seconds.

MIRROR POSITION MEMORY FUNCTIONS

Equipped with a function which allows memorizing the desired mirror face positions (2 positions each for LH/ RH door mirror).

Memory Operation Conditions

The seat and steering wheel positions are in accordance with memory 1 or memory 2 in the automatic drive position control. Refer to <u>SE-12, "AUTOMATIC DRIVE POSITIONER"</u>.

Memory Operation Procedure

- 1. Turn ignition switch ON.
- 2. Shift the A/T selector lever to R position.
- 3. Switch the door mirror remote control switch to right or left, and set the mirror face to the desired angle.
- 4. Press the setting button, and within 5 seconds, press the memory switch which stores the current seat and steering wheel positions for 0.5 seconds or more.
- 5. If the memory switch with certain positions stored is used, it turns off for 0.5 seconds after the operation, and after that it illuminates continuously (for approx. 5 seconds).
- 6. If a memory switch with no positions stored is used, it illuminates (for approx. 5 seconds) after the memory switch operation.

POWER SUPPLY AND GROUND

Power is supplied at all times

- through 10A fuse[No.8,located in the fuse block (J/B)]
- to driver side door mirror control unit terminal No.8 and passenger side door mirror remote control unit terminal No.8.
- through 10A fuse[No.3,located in the fuse block (J/B)]
- to BCM terminal No.105.

Power is supplied

- through 10A fuse[No.9,located in the fuse block (J/B)]
- to TCM terminal No.41.

BCM is connected to LCU03 and LCU04 as DATA LINE A–2 and DATA LINE A–3. When door mirror remote control switch is turned left or right, ground is supplied

- to BCM terminal No.24 or No.21
- through door mirror remote control switch terminal No.6 or No.5.

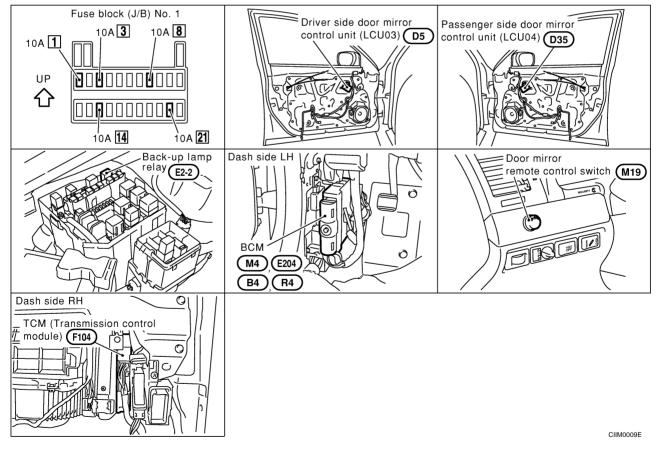

When selector lever is R position, ground is supplied

- to TCM terminal No.41.
- from back-up lamp relay terminal No.1.
- to BCM terminal No.141.
- through back-up lamp relay terminal No.3.

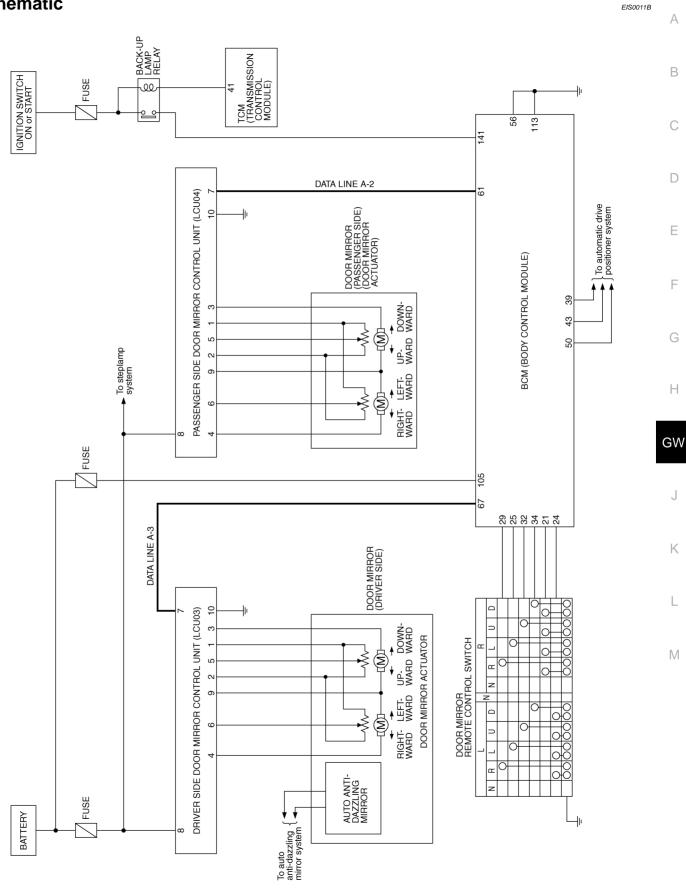

Then signal input to driver side door mirror control unit and passenger side door mirror control unit terminal No.7 from BCM terminal No.61 and No.67 by DATA LINE A–2 and DATA LINE A–3.

M4	113(B)	Ground	lgnition switch OFF	Should exist	

OK or NG?

OK >> Check the door mirror control unit. GO TO 4

NG >> Repair or replace harness.

4. POWER SUPPLY CIRCUIT INSPECTION (DOOR MIRROR CONTROL UNIT)

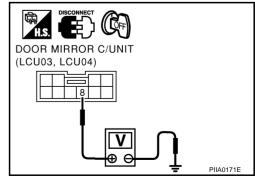

Disconnect harness connectors of the door mirror control unit on the driver-side and passenger-side, measure the voltage between connecting the terminal (refer to the "Chart" below) of the harness connector D5,D35and body ground.

	Terminals				Voltage (V)	
(+)		()	Power source	Condition		
Connector	Terminal	(-)				
D5,D35	8(L)	Ground	BAT power supply	Ignition switch OFF	Battery voltage	

OK or NG?

OK >> GO TO 5

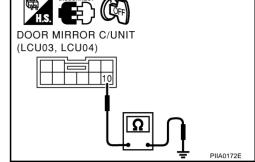

NG >> Repair or replace harness.

5. GROUND CIRCUIT INSPECTION (DOOR MIRROR CONTROL UNIT)

Check continuity between the following terminal of the harness connectors D5,D35 for door mirror control unit on the driver-side and passenger-side and body ground.

	Terminals			
(+)		()	Condition	Continuity
Connector	Terminal	(-)		
D5,D35	10(B)	Ground	Ignition switch OFF	Should exist

OK or NG?

OK >> Normal

NG >> Repair or replace harness.

CONSULT-II Function

 CONSULT–II executes the following functions by combining data receved and command transmitted via the communication line from BCM. IVMS communication inspection, work support (only function setting of seats and steering wheel), self-diagnosis, data monitor, and active test display.

IVMS diagnosis position	Inspection item and diagnosis mode	Description
IVMS- COMM CHECK	IVMS- COMM DIAGNOSIS	Diagnose a communication malfunction, inactive communication, and sleep malfunction in the communication line between BCM and each LCU.
	WAKE-UP DIAGNOSIS	Diagnose the wake-up signals output from each LCU.
	WORK SUPPORT*	Changes the setting for each function. Refer to <u>SE-31, "SETTING CHANGE</u> <u>FUNCTION"</u> .
AUTO DRIVE	SELF-DIAG RESULTS	Carries out the self-diagnosis.
POSITIONER	DATA MONITOR	Displays the input data of BCM and each LCU on real-time basis.
	ACTIVE TEST	Sends a drive signal to a load to check the operation.
BCM PART NUMBER		Displays BCM part No.

*: Only for function setting of seat and steering wheel

CONSULT-II BASIC OPERATION PROCEDURE

- 1. With the ignition switch OFF, connect CONSULT–II to the data link connector and turn the ignition switch ON.
- 2. Touch "START".

IVMS COMMUNICATION INSPECTION

IVMS contains the IVMS communication diagnosis and wake-up diagnosis.

IVMS Communication Diagnosis

 The IVMS communication diagnosis consists of the communication diagnosis, sleep diagnosis, and inactive communication diagnosis between BCM and each local unit (LCU), and display the results on the CONSULT–II screen.

NOTE:

screen.

5.

Sleep is a power saving function when a vehicle is stationary (all BCM related electrical equipment: OFF, and the timer: OFF).

 The function also stores the communication malfunction records and inactive communication records, and displays the data on the CONSULT–II screen (Error record diagnosis)

Malfunction description	CONSULT–II dis- play item	Description
Communication error	COMM DATA	• Communicating with each LCU is judged sound when the communication is nor- mally completed and the transmitted data and received data are identically the same. In other cases, it is judged malfunctioning. If the communication is inactive, no diagnosis result is displayed.
Inactive communi- cation	NO RESPONSE	• Communicating with each LCU is judged sound when at least one time communi- cation is normally completed within three trials. In other cases, it is judged mal- functioning.
Sleep malfunction	SLEEP	Check that each LCU enters sleep mode.
Communication error *	PAST COMM DATA	• The records when communication signal malfunctions were continuously detected while the communication was normal are displayed. Or the records when a malfunction is detected during the past sleep mode are displayed.
Inactive communi- cation*	PAST NO RESPONSE	• The records when inactive communications were continuously detected while the communication was normal are displayed.

*: malfunctioning item record

Operation Procedure

MIR CHNG SW-R	"ON/OFF"	Operation (ON)/open (OFF) status judged from the door mirror remote control switch(switching to RIGHT) signal is displayed.	
MIR CHNG SW-L	"ON/OFF"	Operation (ON)/open (OFF) status judged from the door mirror remote control switch(switching to LEFT) signal is displayed.	

Monitor item [OPERAT	ON or UNIT]	Contents
SET SW	"ON/OFF"	Operation (ON)/open (OFF) status judged from the setting switch signal is displayed.
TELESCO SW-FR	"ON/OFF"	Operation (ON)/open (OFF) status judged from the telescoping switch (FR) signal is displayed.
TELESCO SW-RR	"ON/OFF"	Operation (ON)/open (OFF) status judged from the telescoping switch (RR) signal is displayed.
TILT SW-UP	"ON/OFF"	Operation (ON)/open (OFF) status judged from the tilt switch (UP) signal is displayed.
TILT SW-DOWN	"ON/OFF"	Operation (ON)/open (OFF) status judged from the tilt switch (DOWN) signal is displayed.
MEMORY SW1	"ON/OFF"	Operation (ON)/open (OFF) status judged from the seat memory switch 1 signal is displayed.
MEMORY SW2	"ON/OFF"	Operation (ON)/open (OFF) status judged from the seat memory switch 2 signal is displayed.
CANCEL SW	"ON/OFF"	Setting status is displayed with the display unit: "Active (ON)/inactive (OFF)"
DOOR SW DR	"ON/OFF"	Door open (ON)/door closed (OFF) status judged from the driver door switch is displayed.
VHCL SPEED SE	"<7km/ >7km"	The present vehicle speed (less than 7 km/h(4 MPH), or 7 km/h(4MPH) or higher) is displayed.
DETENT SW	"ON/OFF"	The selector lever position "P position (ON)/other than P position (OFF)" judged from the detent switch signal is displayed.
IGN ON SW	"ON/OFF"	Ignition key switch ON/ignition switch START, ACC, or OFF status judged from the ignition switch signal is displayed.
IGN ACC SW	"ON/OFF"	Ignition key switch ACC or ON/ignition switch START, or OFF status judged from the ignition switch signal is displayed.
IGN START SW	"ON/OFF"	Ignition key switch START, ON/ignition switch ACC, or OFF status judged from the ignition switch signal is displayed.
IGN KEY SW	"ON/OFF"	Key inserted (ON)/key removed (OFF) status judged from the key detection switch is displayed.
R POSITION SW	"ON/OFF"	R position (ON)/Other than R position OFF of shift position signal from back- up lamp relay is displayed.
TILT SEN	"V"	The tilt position (voltage) judged from the tilt sensor signal is displayed.
TELESCO SEN	"V"	The telescoping position (voltage) judged from the telescoping sensor signal is displayed.
MIR/SE RH R-L	"ON/OFF"	ON (normal value)/OFF (abnormal value) *of voltage value judged from RH door mirror sensor output voltage (LH/RH) is displayed.
MIR/SE RH U-D	"ON/OFF"	ON (normal value)/OFF (abnormal value) *of voltage value judged from RH door mirror sensor output voltage (UP/DOWN) is displayed.
MIR/SE LH R-L	"ON/OFF"	ON (normal value)/OFF (abnormal value) *of voltage value judged from LH door mirror sensor output voltage (LH/RH) is displayed.
MIR/SE LH U-D	"ON/OFF"	ON (normal value)/OFF (abnormal value) *of voltage value judged from LH door mirror sensor output voltage (UP/DOWN) is displayed.
Voltage	"V"	Displays measured values by voltage probe.
Frequency	"ms,Hz,%"	Displays value measured with pulse probe.

*: Abnormal value indicates that the sensor output voltage is 0.2V or lower, or 4.5V or higher.

ACTIVE TEST

Operation Procedure

- 1. Touch "AUTO DRIVE POSITIONER" on "SELECT TEST ITEM" screen.
- 2. Touch "ACTIVE TEST" on "SELECT DIAG MODE" screen.
- 3. Touch the item to be tested, and check the operation.
- 4. During the operation check, touching "OFF" deactivates the operation.

Display Item List

Test item	Description	
TILT MOTOR	The tilt motor is activated by receiving the drive signal.	
TELESCO MOTOR	The telescoping motor is activated by receiving the drive signal.	
SEAT SLIDE	The sliding motor is activated by receiving the drive signal.	
SEAT RECLINING	The reclining motor is activated by receiving the drive signal.	
SEAT LIFTER FR	The front end lifter motor is activated by receiving the drive signal.	
SEAT LIFTER RR	The rear end lifter motor is activated by receiving the drive signal.	
MEMORY SW INDCTR	The memory switch indicator is lit by receiving the drive signal.	
MIRROR MOTOR RH	The RH door mirror motor moves the mirror UP/DOWN and LEFT/RIGHT by receiving the drive signal.	
MIRROR MOTOR LH	The LH door mirror motor moves the mirror UP/DOWN and LEFT/RIGHT by receiving the drive signal.	

On Board Diagnosis

EIS0011G

 BCM can check each local unit (LCU), switches, loads, and malfunctions in communication with the selfdiagnosis.

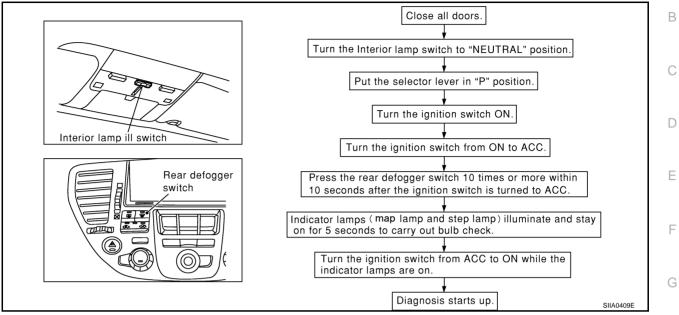

DIAGNOSIS ITEM

Diagnosis item	Description	
Communication diagnosis	• It can check the communication line between BCM and each LCU, and also each LCU, for a communication error and malfunction.	
Switch monitor	• It can check the switch systems which send data to BCM and each LCU for a malfunction.	
Self-diagnosis for auto drive posi- tioner	• Diagnoses malfunctions in each motor and sensor in the electrical load parts of the driver power seat system (sliding, reclining, and lifter [front/rear]), of the steering wheel system (tilt, telescoping), and of door mirror.	

COMMUNICATION DIAGNOSIS

• Check the communication between BCM and each local control unit(LCU).

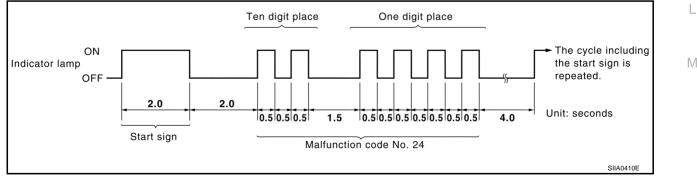

Operation Procedure

Diagnosis Result Display

- The indicator lamps (the map lamp and step lamp) turn ON (illuminate) for 2 seconds and OFF (go off) for 2 seconds to indicate that the diagnosis has started, then indicate the diagnosis trouble code.
- To indicate the self-diagnosis trouble code, the indicator lamps illuminate or flash.
- At first, the lamps indicate the second place by ON/OFF with 0.5 second-interval, then OFF for 1.5 seconds. Next, they indicate the first place by ON/OFF with 0.5 second interval.
- If there are multiple malfunctioning parts, the lamps indicate them in sequence from the smallest diagnosis trouble code.
- The diagnosis results repeat until the diagnosis is cancelled.
- If a malfunction is indicated, carry out the communication diagnosis again to check that the same diagnosis trouble code is indicated.

Diagnosis Trouble Code Indication Example

SLEEP malfunc- tion	One LCU is dis- played.	POWER WINDOW C/U-DR "SLEEP"		Poplace the displayed
		DOOR MIRROR C/U-RH "SLEEP"		
		DOOR MIRROR C/U-LH "SLEEP"		Replace the displayed LCU.
		POWER SEAT C/U–DR "SLEEP"		
	Multiple LCUs are displayed	All the above control units are displayed.	No self-diagno- sis function	Communication system / Refer to <u>GW-89, "COM-</u> <u>MUNICATION SYSTEM</u>

NOTE:

 For a specific local control unit(LCU), either "PAST COMM DATA" or "PAST NO RESPONSE" may be displayed instead of the above results. This is caused by the data record, so erase the records. (The display only shows the incident records, they are not malfunctions caused during the diagnosis. One possible cause is that an

(The display only shows the incident records, they are not malfunctions caused during the diagnosis. One possible cause is that an irreproducible incident occurred.)

- Follow the steps below to erase the memory. Carry out either disconnect BCM battery power supply or erase memory with CONSULT-II.
- With the battery connected, if the local control unit(LCU) connector is disconnected and left for approximately 1 minute, the BCM stores "NO RESPONSE" record.

Cancel of Communication Diagnosis

If the following conditions are satisfied, the communication diagnosis is cancelled.

- When the ignition switch is turned OFF.
- The vehicle speed becomes 7 km/h (4 MPH) or higher.
- Ten minutes have passed since the diagnosis result indication start without no diagnosis cancel operation.

COMMUNICATION SYSTEM A	
1. BCM INSPECTION	A
Replace the BCM with a known-good one, and carry out the communication diagnosis. Refer to "COMMUNICATION DIAGNOSIS".	<u>GW-87,</u> B

Replace the malfunctioning BCM with a known-good one, and carry out the communication diagnosis. Refer to <u>GW-87, "COMMUNICATION DIAGNOSIS"</u>.

OK or NG?

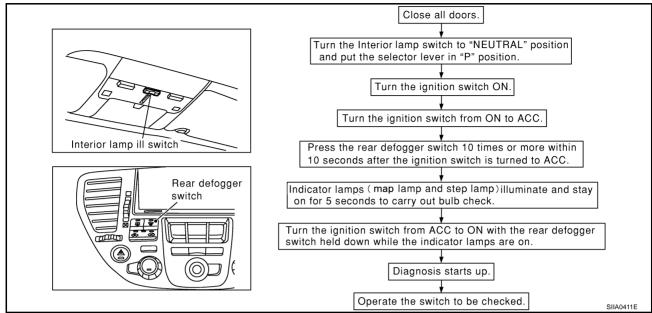

OK >> Replace the BCM

NG >> Repair the communication harness between the LCU and BCM control.

SWITCH MONITOR

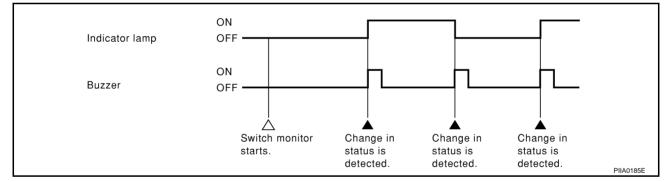

• Carry out the diagnosis for the switch system input to each control unit.

Operation Procedure

Diagnosis Result Display

- Detects the status change (switch ON/OFF operation) of the switch to be checked, and turns on/off the indicator lamps (the map lamp and step lamp). Also sounds the buzzer (the key remainder and light remainder) for 0.5 seconds.
- If a malfunction is detected, no indicator lamp and buzzer react.

Diagnosis Item

 The status of the switch (except the ignition switch, interior lamp switch, and map lamp switch) input to each control unit can be monitored.

Control unit	Item
	Detent switch
	Steering wheel position switch (telescoping switch and tilt switch)
BCM	Seat memory switch (memory switch 1, memory switch 2, and setting switch).
	Driver door switch
	Door mirror remote control switch

Cancel of Switch Monitor

If the following conditions are satisfied, the switch monitor is cancelled.

- When the ignition switch is turned OFF.
- The vehicle speed becomes 7 km/h (4 MPH) or higher.

ON BOARD DIAGNOSIS FOR AUTOMATIC DRIVE POSITIONER

• Check the operations of the auto drive positioner system.

	В
Condition • Ignition switch: OFF • Selector lever: "P" range	С
Turn ignition switch "ON".	D
Within 5 seconds	
Push memory set switch and two memory switches at the same time for more than 2 seconds.	E
Self-diagnosis should be performed. - Two indicator lamps should go on. (At the same time, driver's seat move automatically.)	F
	G
As soon as the indicator lamps go on and off by turns, start engine.	
Within 15 seconds	Н
Drive the vehicle more than 7 km/h (4 MPH) and stop. Do not stop engine.	
	GW
If a circuit malfunctions, a malfunction code should be indicated.*1	
	J
Turn ignition switch "OFF".	
or Touch front driver's side power seat switch.	K
DIAGNOSIS END*2	L

SEL596W

А

*1:If no malfunction is indicated,On board Diagnosis will end after the vehicle speed sensor diagnosis is performed.

*2:Diagnosis ends after self-diagnostic results have indicated for 10 minutes if left unattended.

Diagnosis Result Display

• The malfunctioning items are indicated by how many times LEDs on the seat memory switches 1 and 2 flash simultaneously.

Code No.	Detected items	Indication of seat memory switches 1 and 2	Explanation
1	Seat sliding	IND1, IND2 -	
2	Seat reclining		While the seat motors are moving for 2.5 seconds, if the number of seat sliding/reclining/lifting
3	Seat lifting front		sensor pulses changes 2 times or less, the seat device is determined
4	Seat lifting rear		to be malfunctioning.
5	Steering telescopic		While the steering motors are moving, if the steering sensor output changes
6	Steering tilt		0.2 volts or less, the steering device is determined to be malfunctioning.
7	Door mirrors (upper and lower)		When output voltage of either LH or RH door mirror sensor continues at less than 0.2V or more than 4.5V for 0.5 seconds or more, the door mirror is determined to be malfunctioning.
8	Door mirrors (LH and RH)		When output voltage of either LH or RH door mirror sensor continues at less than 0.2V or more than 4.5V for 0.5 seconds or more, the door mirror is determined to be malfunctioning.
9	Vehicle speed sensor circuit	IND1, IND2	If the vehicle speed sensor output of less than 7 km/h (4 MPH) is detected, the vehicle speed sensor is determined to be malfunctioning.
_	No malfunction in the above items	SW1 IND - CONTRACT SW1 IND - CONTRACT SW2 IND - CON	

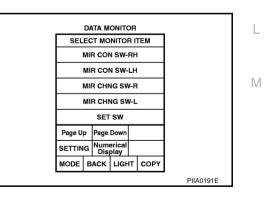

- If the vehicle speed is less than 7 km/h (4 MPH) for 15 seconds after the diagnosis for the seat and steering wheel systems were completed, the vehicle speed signal is judged malfunctioning.
- If LH door mirror is malfunctioning, only indicator lamp on the memory switch 1 flashes, and if RH door mirror is malfunctioning, only indicator lamp on the memory switch 2 flashes.
- When all the diagnosis are finished normally, the indicator lamps on the memory switches 1 and 2 go off after the vehicle speed signal diagnosis.
- If there are multiple malfunctioning parts, the lamps indicate them in sequence from the smallest diagnosis trouble code.
- The diagnosis results repeat until the diagnosis mode is cancelled.

Symptom	Malfunctioning system and reference
	Refer to <u>GW-93, "Door Mirror Remote Control Switch</u> (<u>Changeover switch</u>) <u>Circuit Inspection</u> " in "Door mirror LH/RH switching signal" section.
Reverse interlock door mirror system does not operate at all.	Refer to <u>GW-95. "Back-up Input Signal Circuit Inspection In R</u> <u>Position"</u> in "R position signal" section.
	If all the above systems are normal, replace BCM.
• During the reverse interlock door mirror system operation, either LH or RH door mirror face does not reproduce the stored angle.	Refer to <u>GW-96, "Mirror Sensors Circuit Inspection 1"</u> in "Mir- ror sensor signal" section.
 After the reverse interlock door mirror system operation, the door mirror face returns to wrong position (not to the original position). 	If the above system is normal, carry out the communication inspection again.
	Refer to <u>SE-74, "Seat Memory Switch Circuit Inspection"</u> in "Seat memory switch signal" section.
	Refer to <u>GW-93, "Door Mirror Remote Control Switch</u> (<u>Changeover switch</u>) <u>Circuit Inspection</u> " in "Door mirror LH/RH switching signal" section.
The mirror face position with the reverse gear engaged cannot	Refer to <u>GW-98, "Door Mirror Remote Control Switch (Mirror</u> <u>Switch) System Inspection"</u> in "Door mirror up/down and left/ light adjustment signal"section.
be memorized.	Refer to <u>GW-95. "Back–up Input Signal Circuit Inspection In R</u> <u>Position"</u> in "R position signal" section.
	Refer to <u>GW-99, "Mirror Motors Circuit Inspection"</u> in "Mirror motor signal" section.
	Refer to <u>GW-101, "Mirror Sensors Circuit Inspection 2"</u> in "Mirror sensor signal" section.
	If all the above systems are normal, replace BCM.

Door Mirror Remote Control Switch (Changeover switch) Circuit Inspection 1. FUNCTION INSPECTION

() With CONSULT-II

 Check the operation on " MIR CHNG SW–R " or "MIR CHNG SW–L" in the DATA MONITOR. Refer to <u>GW-84, "DATA MONI-TOR"</u>.

Without CONSULT-II

DOOR MIRROR

Disassembly and Assembly EIS0000F SEC. 963 Housing Housing Side turn signal lamp Bracket Power unit Door mirror sensor Base Side turn signal lamp Mirror Connector Packing R'im Bracket and power unit removal Remove door and installation mirror base Remove door Screw (Bracket) mirror rim Screw Screw Screw Screw (Power unit) PIIA0047E

DISASSEMBLY

- 1. Place the mirror body with the mirror glass facing upward.
- 2. Put a strip of protective tape on the mirror body.
- 3. As shown in the figure, insert a small slotted screwdriver into the recess between the mirror face (mirror holder) and mirror holder bracket, and push up the pawls (2) to remove the mirror holder lower half.

NOTE:

When pushing up the pawls, do not attempt to use 1 recess only, be sure to push up with both recesses.

ASSEMBLY

- 1. Place the mirror holder bracket and mirror body assembly (actuator) in a horizontal position.
- 2. Fit the upper tab on the mirror face onto the mirror holder bracket first, then press the lower side of the mirror face until a click sound is heard to engage the lower pawls.

NOTE:

After installation, visually check that the lower pawls (2) are securely engaged from the bottom of the mirror face.
