PRECAUTIONS PFP:00001

# Precautions for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

EHS000M7

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

## **Precaution for Seat Belt Service**

FHS001NP

#### **CAUTION:**

- Before removing the front seat belt pre-tensioner assembly, turn the ignition switch off, disconnect the both battery cables and wait at least 3 minutes.
- Do not use electrical test equipment for front seat belt pre-tensioner connector.
- After replacing or reinstalling front seat belt pre-tensioner assembly, or reconnecting front seat belt pre-tensioner connector, check the system function. Refer to <u>SRS-20, "SRS Operation Check"</u>
- Deploy front seat belt pre-tensioner assembly before disposing. Refer to <u>SRS-52</u>, "<u>DISPOSAL OF</u>
   AIR BAG MODULE AND SEAT BELT PRE-TENSIONER".
- Do not use disassemble buckle or seat belt assembly.
- Replace anchor bolts if they are deformed or worn out.
- Never oil tongue and buckle.
- If any component of seat belt assembly is questionable, do not repair. Replace the whole seat belt assembly.
- If webbing is cut, frayed, or damaged, replace seat belt assembly.
- When replacing seat belt assembly, use a genuine NISSAN seat belt assembly.

## **AFTER A COLLISION**

#### **WARNING:**

Inspect all seat belt assemblies including retractors and attaching hardware after any collision.

NISSAN recommends that all seat belt assemblies in use during a collision be replaced unless the col-

lision was minor and the belts show no damage and continue to operate properly. Failure to do so could result in serious personal injury in an accident. Seat belt assemblies not in use during a collision should also be replaced if either damage or improper operation is noted. Seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal collision in which the air bags are deployed.

Replace any seat belt assembly (including anchor bolts) if:

- The seat belt was in use at the time of a collision (except for minor collisions and the belts, retractors and buckles show no damage and continue to operate properly).
- The seat belt was damaged in an accident. (i.e. torn webbing, bent retractor or guide).
- The seat belt attaching point was damaged in an accident. Inspect the seat belt attaching area for damage
  or distortion and repair as necessary before installing a new seat belt assembly.
- Anchor bolts are deformed or worn out.

## **PRECAUTIONS**

The front seat belt pre-tensioner should be replaced even if the seat belts are not in use during the collision in which the air bags are deployed.

SEAT BELTS PFP:86884

# System Description SEAT BELT WARNING CHIME

FHS001NQ

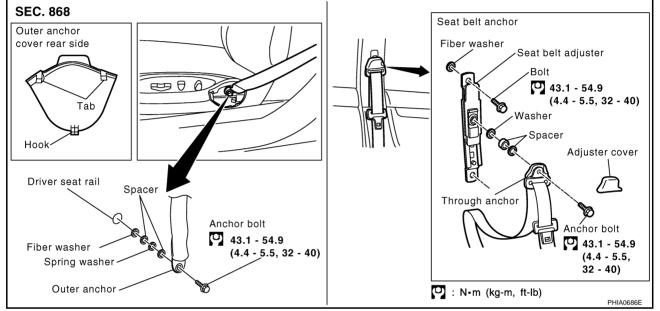

- With ignition switch turned ON and seat belt unfastened (seat belt switch ON), warning chime will sound for approximately 6 seconds.
- If warning chime does not sound, refer to DI-71, "Seat Belt Buckle Switch Input Signal Inspection".

#### **SEAT BELT WARNING LAMP**

- Fasten driver's seat belt.
- The seat belt warning lamp should go out.
- If the seat belt warning lamp does not go out, refer to DI-35, "Wiring Diagram WARN —".

## Removal and Installation of Front Seat Belt

EHS00085

#### CAUTION

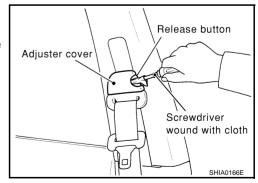

Before servicing SRS, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.

## REMOVAL OF SEAT BELT RETRACTOR

Remove the adjuster cover on the seat belt anchor.

#### NOTE:

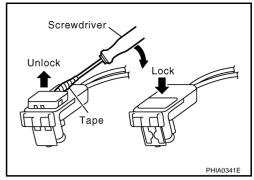

Insert a screwdriver wound with cloth into the slot of the release button to disengage the tab and remove the release button.

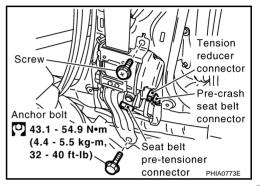

- 2. Remove the anchor bolts.
- 3. Remove the outer anchor cover, and remove the anchor bolts.
- 4. Remove the center pillar upper and lower garnish. Refer to El-42, "Removal and Installation".

#### **CAUTION:**

- For installing/removing seat belt pre-tensioner connector, insert thin screwdriver wrapped in tape into notch, lift lock and remove connector.
- Install connector with lock raised, and push lock into connector.

- Disconnect the tension reducer connector and the pre-crush seat belt connector.
- 7. Remove the seat belt pre-tensioner retractor fixing screw and anchor bolt, and then remove the seat belt retractor.

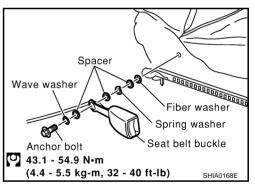

#### INSTALLATION OF SEAT BELT RETRACTOR

Install in the reverse order of removal.

#### REMOVAL OF SEAT BELT BUCKLE

- 1. Remove the front seat. Refer to SE-186, "Removal and Installation".
- 2. Remove the anchor bolt, and remove the buckle.

## **INSTALLATION OF SEAT BELT BUCKLE**

Install in the reverse order of removal.

# Seat Belt Inspection AFTER A COLLISION

EHS00087

Α

D

F

#### **WARNING:**

Inspect all seat belt assemblies including retractors and attaching hardware after any collision.

NISSAN recommends that all seat belt assemblies in use during a collision be replaced unless the collision was minor and the belts show no damage and continue to operate properly. Failure to do so could result in serious personal injury in an accident. Seat belt assemblies not in use during a collision should also be replaced if either damage or improper operation is noted. Seat belt pre-tensioned should be replaced even if the seat belts are not in use during a frontal collision in which the air bags are deployed.

Replace any seat belt assembly (including anchor bolts) if:

- The seat belt was in use at the time of a collision (except for minor collisions and the belts, retractors and buckles show no damage and continue to operate properly).
- The seat belt was damaged in an accident. (i.e. torn webbing, bent retractor or guide, etc.)
- The seat belt attaching point was damaged in an accident. Inspect the seat belt attaching area for damage
  or distortion and repair as necessary before installing a new seat belt assembly.
- Anchor bolts are deformed or worn out.
- The seat belt pre-tensioner should be replaced even if the seat belts are not in use during the collision in which the air bags are deployed.

#### PRELIMINARY CHECKS

- 1. Check the seat belt warning lamp/chime for proper operation as follows:
- a. Switch ignition ON. The seat belt warning lamp should illuminate. Also, the seat belt warning chime should sound for about seven seconds.
- b. Fasten driver's seat belt. The seat belt warning lamp should go out and the chime (if sounding) should stop.
- 2. If the air bag warning lamp is blinking, conduct self-diagnosis using CONSULT-II, and air bag warning lamp. Refer to <a href="SRS-20">SRS-20</a>, "SRS Operation Check"</a>.
- 3. Check that the seat belt retractor, seat belt anchor and buckle bolts are securely attached.
- 4. Check the shoulder seat belt guide and shoulder belt height adjuster for front seats. Ensure guide swivels freely and that webbing lays flat and does not bind in guide. Ensure height adjuster operates properly and holds securely.
- Check retractor operation:
- a. Fully extend the seat belt webbing and check for twists, tears or other damage.
- b. Allow the seat belt to retract. Ensure that webbing returns smoothly and completely into the retractor. If the seat belt does not return smoothly, wipe the inside of the loops with a clean paper cloth. Because dirt built up in the loops of the upper anchors can cause the seat belts to retract slowly.
- c. Fasten the seat belt. Check the seat belt returns smoothly and completely to the retractor. If the webbing does not return smoothly, the cause may be an accumulation of dust or dirt. Use the "SEAT BELT TAPE SET" and perform the following steps.

Inspect the front seat belt though-anchor

- 1. Pull the seat belt out to a length of 500 mm (19.69 in) or more.
- 2. Use a clip or other device to the fix the seat belt at the center pillar webbing oping.
- 3. Pass a thin wire though the though-anchor webbing opening. Hold both ends of the wire and pull taut while moving it up and down several times along the webbing opening surface to move matter stuck there.
- 4. Any dirt that can not be removed with the wire can be removed by cleaning the opening with a clean cloth.
- 5. Apply tape at the point where the webbing contacts the though-anchor webbing opening.

#### NOTE:

Apply the tape so that there is no looseness or wrinkling.

- 6. Remove the clip fixing the seat belt and check that the webbing returns smoothly.
- 6. Repeat steps above as necessary to check the other seat belts.

#### SEAT BELT RETRACTOR ON-VEHICLE CHECK

## **Emergency Locking Retractors (ELR) and Automatic Locking Retractors (ALR)**

#### NOTE:

All seat belt retractors are of the Emergency Locking Retractors (ELR) type. In an emergency (sudden stop) the retractor will lock and prevent the webbing from extending any further. All 3-point type seat belt retractors except the driver's seat belt also have an Automatic Locking Retractors (ALR) mode. The ALR mode (also called child restraint mode) is used when installing child seats. The ALR mode is activated when the seat belt is fully extended. When the webbing is then retracted partially, the ALR mode automatically locks the seat belt in a specific position so the webbing cannot be extended any further. To cancel the ALR mode, allow the seat belt to fully wind back into the retractor.

Check the seat belt retractors using the following test(s) to determine if a retractor assembly is operating properly.

## **ELR Function Stationary Check**

Grasp the shoulder webbing and pull forward quickly. The retractor should lock and prevent the belt from extending further.

## **ALR Function Stationary Check**

- 1. Pull out entire length of seat belt from retractor until a click is heard.
- 2. Retract the webbing partially. A clicking noise should be heard as the webbing retracts indicating that the retractor is in the Automatic Locking Retractors (ALR) mode.
- Grasp the seat belt and try to pull out the retractor. The webbing must lock and not extend any further. If NG, replace the retractor assembly.
- 4. Allow the entire length of the webbing to retract to cancel the automatic locking mode.

## **ELR Function Moving Check**

#### **WARNING:**

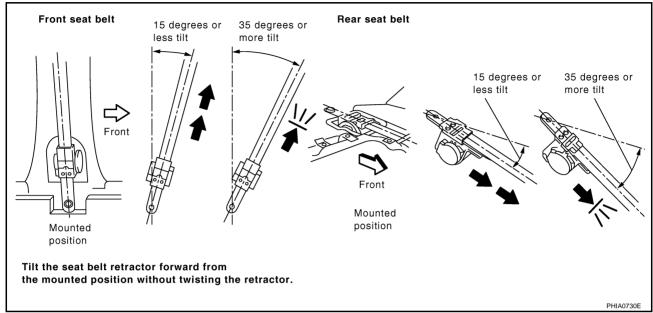

Perform the following test in a safe, open area clear of other vehicles and obstructions (for example, a large, empty parking lot). Road surface must be paved and dry. DO NOT perform the following test on wet or gravel roads or on public streets and highways. This could result in an accident and serious personal injury. The driver and passenger must be prepared to brace themselves in the event the retractor does not lock.

- 1. Fasten driver's seat belt. Buckle a passenger into the seat for the belt that is to be tested.
- 2. Proceed to the designated safe area.
- 3. Drive the vehicle at approximately 16 km/h (10 MPH). Notify any passengers of a pending sudden stop and the driver and passenger must be prepared to brace themselves in the event the retractor does not lock, apply brakes firmly and make a very hard stop.

During stop, seat belts should lock and not be extended. If the seat belt retractor assembly does not lock, perform the retractor off-vehicle check.

## SEAT BELT RETRACTOR OFF-VEHICLE CHECK

- 1. Remove the seat belt retractor assembly.
- 2. Slowly pull out webbing while tilting the retractor assembly forward from the mounted position without twisting the retractor assembly as shown in the illustration.

15 degrees or less tilt : Webbing can be pulled out.

35 degrees or more tilt : Webbing locks and cannot be pulled out.

If NG, replace the retractor assembly.

## **PRE-CRASH SEAT BELT**

PFP:98845

## **Component Parts and Harness Connector Location**

EHS001PT

## **System Description**

EHS001PU

- Pre-crash seat belt system is adapted to front seat belts RH/LH.
- When the pre-crash seat belt control unit judges the emergency braking operation, it gives the sense of security by the motor built into the pre-crash seat belt retracting the shoulder belt and suppressing the crew's posture change. Also, it eases the damage of the collision.

#### **FUNCTION DESCRIPTION**

## **Operation condition**

Pre-crash seat belt operates under the following conditions.

Conditio	r

- When the brake pedal is depressed more than a certain extent
- When operation prohibition condition is not satisfied

## Operation prohibition condition

If operation condition is satisfied, pre-crash seat belt does not operate under the following conditions.

## Condition

- When seat belt is not fastened (Only the seat belt that is not fastened does not operate.)
- When vehicle is moving backwards
- When the vehicle speed is 15 km/h (9 MPH) or less
- When pre-crash seat belt continuously operates 3 times or more \*1
- At fail-safe condition \*2

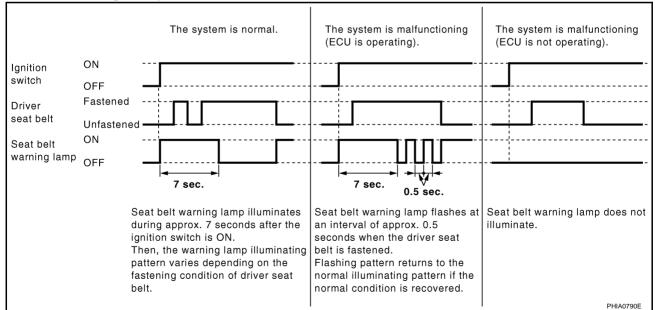

#### **FAIL-SAFE MODE**

When a malfunction occurs in the following system, the pre-crash seat belt function is controlled according to the malfunctioning parts.

Also, seat belt warning lamp blinks with fastening driver seat belt when the following malfunction occurs.

Malfunctioning parts	Control contents
Brake pedal stroke sensor system malfunction	Pre-crash seat belt RH/LH do not activate when emergency brake operates.
Seat belt motor RH malfunction	Pre-crash seat belt RH does not activate.
Seat belt motor LH malfunction	Pre-crash seat belt LH does not activate.
Motor power supply circuit malfunction	Pre-crash seat belt RH/LH do not activate.

L

<sup>\*1 :</sup>When pre-crash seat belt doesn't operate after it continuously operates 3 times or more, operation can be performed again by stopping operation for approximately 7 minutes.

<sup>\*2 :</sup> Refer to SB-13, "FAIL-SAFE MODE" for details of fail-safe mode.

## **CAN Communication System Description**

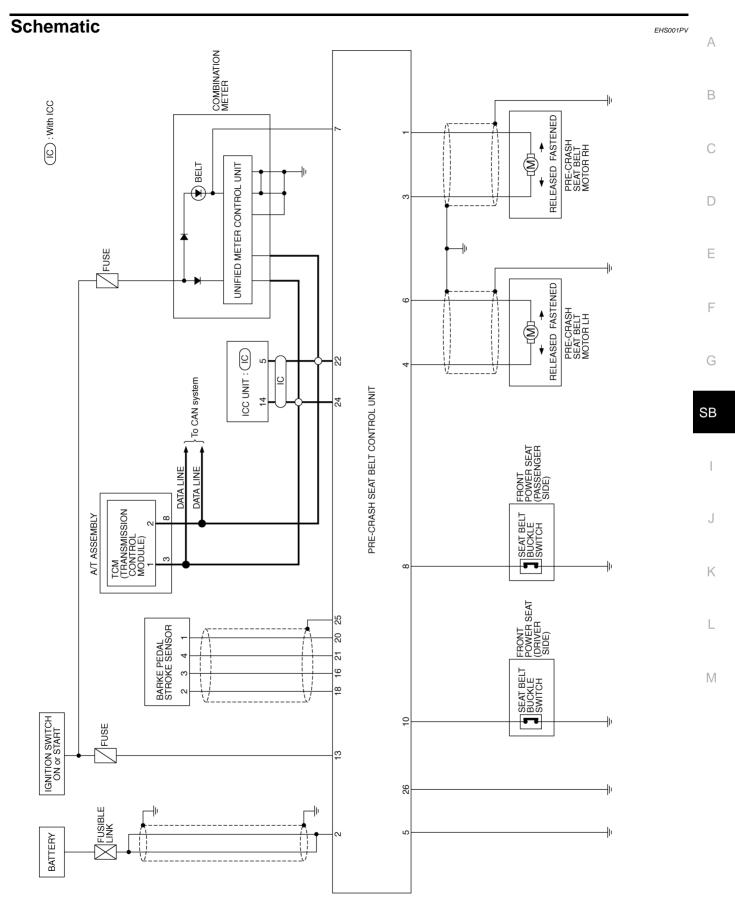

FHS001R

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

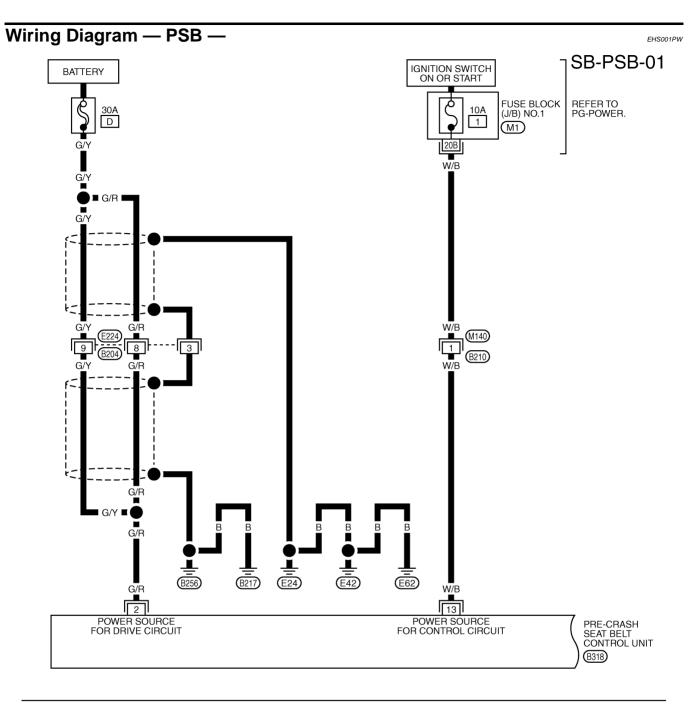

## **CAN Communication Unit**

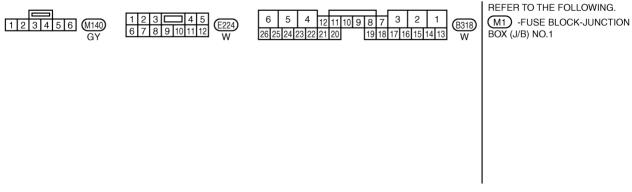

EHS001R7

Refer to LAN-36, "CAN Communication Unit".

Work Flow

- 1. Check the symptom and customer's requests.
- 2. Understand the system description. Refer to SB-12, "System Description".
- 3. Perform the preliminary check. Refer to SB-24, "Preliminary Check".
- 4. Check the self-diagnosis, results using CONSULT-II. Refer to SB-23, "CONSULT-II Function".
- 5. Based on the trouble diagnosis chart, repair or replace the cause of the malfunction. Refer to <u>SB-25</u>, "<u>Diagnoses Symptom Chart"</u>.
- Does pre-crash seat belt system operate normally? OK: GO TO 7.

NG: GO TO 4.

7. INSPECTION END

## **CONSULT-II Function**

=HS001R8

The following functions are executed by combining data received and command transmitted via the communication line from the pre-crash seat belt control unit.

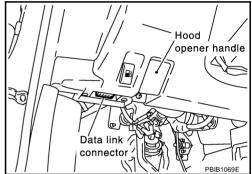

CONSULT-II diagnosis items	Inspection item self-diagnosis mode	Content	Reference page
	SELF-DIG RESULTS	Carries out the self-diagnosis.	<u>SB-24</u>
PRECRASH	DATA MONITOR	Displays pre-crash seat belt control unit input data in real time.	<u>SB-24</u>
SEATBELT	CAN DIAGNOSTIC SUPPORT MONITOR	The results of transmit / receive diagnosis of CAN communication can be read.	LAN-32
	ECU NUMBER	Displays pre-crash seat belt control unit part No.	_

#### **CONSULT-II INSPECTION PROCEDURE**

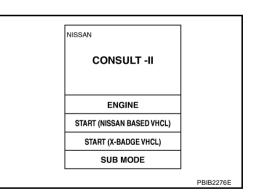

#### CAUTION

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

- Turn ignition switch "OFF".
- 2. Connect "CONSULT-II" and "CONSULT-II CONVERTER" to the data link connector.

- Turn ignition switch "ON".
- 4. Touch "START (NISSAN BASED VHCL)".

Touch "PRECRASH SEATBELT".
 If "PRECRASH SEATBELT" is not indicated, refer to GI-38,
 "CONSULT-II Data Link Connector (DLC) Circuit".

EHS001PZ

#### **WARNING:**

- The following tests should be performed in a safe, open place that is free of traffic and obstacles.
- The tests should be performed on a dry, paved road. Do not attempt the tests on wet or unpaved road, open road, or highway. (This may cause an accident or personal injury.)
- Driver and passenger assume it will not operate and prepare themselves accordingly.
- 1. Tighten driver and passenger seat belts.
- 2. Drive at approximately 25 km/h (16 MPH).
- 3. Notify passenger of a sudden stop. Driver and passenger prepare themselves for the possibility of system not operating. Then, driver fully depresses the brake pedal to stop suddenly.
- 4. Make sure that the shoulder of the seat belt is pulled while braking.

F

**SB-25** Edition; 2004 May 2005 Q45

# $\frac{1}{2}$ . Check ignition power supply circuit

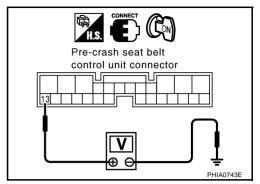

- 1. Turn ignition switch ON.
- 2. Check voltage between pre-crash seat belt control unit harness connector B318 terminal 13(W/B) and ground.

13 (W/B) – Ground : Battery voltage

#### OK or NG

OK >> Ignition power supply circuit is OK.

NG >> Check pre-crash seat belt control unit ignition power supply circuit harness.

## Motor Power Supply and Ground Circuit Check [B2454]

EHS001RB

## 1. CHECK FUSE

Check 30A fusible link (letter **D**, located in the fuse and fusible link box).

#### NOTE

Refer to SB-12, "Component Parts and Harness Connector Location".

#### OK or NG

OK >> GO TO 2.

NG >> If fuse is blown out, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-2, "POWER SUPPLY ROUTING".

## 2. CHECK MOTOR POWER SUPPLY CIRCUIT 1

## (II) With CONSULT-II

Select "SELF-DIAG RESULTS" and then make sure the "MOTOR PWR SUP CIRC" is displayed.

CONSULT-II display	CONSULT-II display code
NO DTC	_
MOTOR PWR SUP CIRC	B2454

SE	LF-DIAG	RESUL	TS	
DTC RESULTS			TIME	
MOTOR PWR SUP CIRC [B2454]			CRNT	
ERA	SE	PR	INT	
MOOE	BACK	LIGHT	СОРУ	PHIA0770E

#### Without CONSULT-II

When CONSULT-II is not used, omit this inspection, and then GO TO 3.

## Displayed B2454?

Yes >> GO TO 3.

No >> Motor power supply system is normal.

## 3. CHECK MOTOR POWER SUPPLY CIRCUIT 2

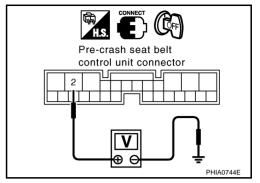

Check voltage between pre-crash seat belt control unit harness connector B318 terminal 2(G/R) and ground.

2 (G/R) – Ground : Battery voltage

## OK or NG

OK >> GO TO 4.

NG >> Repair or replace harness.

## 4. CHECK PRE-CRASH SEAT BELT CONTROL UNIT GROUND CIRCUIT

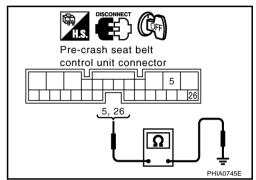

- 1. Turn ignition switch OFF.
- 2. Disconnect pre-crash seat belt control unit connector.
- 3. Check continuity between pre-crash seat belt control unit harness connector B318 terminals 5 (B), 26 (B) and ground.

5 (B) – Ground : Continuity should exist. 26 (B) – Ground : Continuity should exist.

## OK or NG

OK >> Motor power supply and ground circuit is OK.

NG >> Repair or replace harness.

## Seat Belt Buckle Switch (Driver Side) Circuit Check

## 1. CHECK PRE-CRASH SEAT BELT CONTROL UNIT INPUT SIGNAL

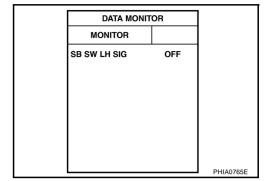

EHS001RE

## (II) With CONSULT-II

Select "SB SW LH SIG" on DATA MONITOR screen, and then make sure that ON/OFF display changes synchronized with the insertion operation to the seat belt buckle.

#### **SB SW LH SIG**

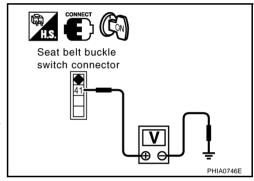

When passenger seat belt is not fastened : OFF
When passenger seat belt is fastened : ON

#### **Without CONSULT-II**

- 1. Turn the ignition switch ON.
- 2. Check voltage between seat belt buckle switch (driver side) harness connector and ground.

Connector Terminal		ninal	Condition	Voltage [V]	
Connector	(+)	(-)	Condition	(Approx.)	
B150 41 (L/B)		Ground	When seat belt is not fastened	0	
		Ciodila	When seat belt is fastened	5	

#### OK or NG

OK >> Seat belt buckle switch (driver side) circuit is OK.

NG >> GO TO 2.

## 2. CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE) HARNESS

- 1. Turn the ignition switch OFF.
- 2. Disconnect pre-crash seat belt control unit connector.
- Check continuity between pre-crash seat belt control unit harness connector B318 terminal 10(G/W) and seat belt buckle switch (driver side) harness connector B150 terminal 41(L/B).

10 (G/W) - 41 (L/B) : Continuity should exist.

 Check continuity between pre-crash seat belt control unit harness connector B318 terminal 10 (L/B) and ground.

10 (G/W) - Ground : Continuity should not exist.

# PHIA0747E

## OK or NG

OK >> GO TO 3.

NG >> Repair or replace harness.

## $\overline{3}$ . CHECK LH SEAT BELT SWITCH

Check continuity between seat belt buckle switch (driver side) B150 terminals 41 and 15A while performing the insertion operation to the seat belt buckle.

Connector	Terr	minal	Condition	Continuity
B150	11	15A	When seat belt is not fastened	Yes
D130	71	13/1	When seat belt is fastened	No

# Seat belt buckle switch

## OK or NG

OK >> GO TO 4.

NG >> Replace seat belt buckle switch (driver side).

## 4. CHECK LH SEAT BELT SWITCH GROUND CIRCUIT HARNNES

Check continuity between seat belt buckle switch (driver side) harness connector B150 terminal 15A (B) and ground.

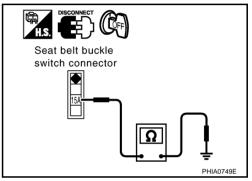

15A (B) - Ground : Continuity should not exist.

## OK or NG

OK >> Check harness connection.

- If it is OK, replace pre-crash seat belt control unit.
- If it is NG, repair or replace malfunction part.

NG >> Repair or replace harness.

## Seat Belt Buckle Switch (Passenger Side) Circuit Check

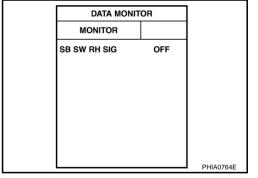

## 1. CHECK PRE-CRASH SEAT BELT CONTROL UNIT INPUT SIGNAL

## (II) With CONSULT-II

Select "SB SW RH SIG" on DATA MONITOR screen, and then make sure that ON/OFF display changes synchronized with the insertion operation to the seat belt buckle.

#### **SB SW RH SIG**

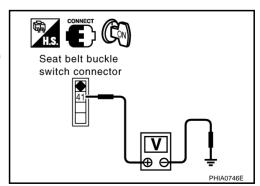

When RH seat belt is not fastened :OFF
When RH seat belt is fastened :ON

## Without CONSULT-II

- 1. Turn the ignition switch ON.
- 2. Check voltage between seat belt buckle switch (passenger side) harness connector and ground.

Connector		ninal color)	Condition	Voltage [V] (Approx.)	
	(+)	(-)		(Арргох.)	
B350	B350 41 (SB) Ground		When seat belt is not fastened	0	
			When seat belt is fastened	5	

#### OK or NG

OK >> Seat belt buckle switch (passenger side) circuit is OK.

NG >> GO TO 2.

# 3. CHECK BRAKE PEDAL STROKE SENSOR HARNESS

- 1. Turn the ignition switch OFF.
- 2. Disconnect pre-crash seat belt control unit connector and brake pedal stroke sensor connector.
- Check continuity between pre-crash seat belt control unit harness connector B318 terminals 16(W), 18(R), 20(G), and 21(B) and brake pedal stroke sensor harness connector M405 terminals 1(G), 2(R), 3(W), and 4(B).

16 (W) - 3(W) : Continuity should exist. 18 (R) - 2(R) : Continuity should exist. 20 (G) - 1(G) : Continuity should exist. 21 (B) - 4(B) : Continuity should exist.

 Check continuity between pre-crash seat belt control unit harness connector B318 terminals 16(W), 18(R), 20(G), and 21(B) and ground.

16 (W) - Ground : Continuity should not exist.
18 (R) - Ground : Continuity should not exist.
20 (G) - Ground : Continuity should not exist.
21 (B) - Ground : Continuity should not exist.

## OK or NG

OK >> GO TO 4.

NG >> Repair or replace harness between pre-crash seat belt control unit and brake pedal stroke sensor.

## 4. CHECK BRAKE PEDAL STROKE SENSOR POWER SUPPLY

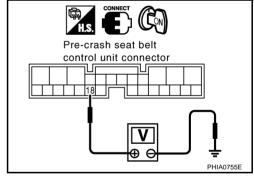

- 1. Connect pre-crash seat belt control unit connector.
- 2. Turn the ignition switch ON.
- 3. Check voltage between pre-crash seat belt control unit harness connector B318 terminal 18(R) and ground.

18 (R) - Ground : Approx. 5V

## OK or NG

OK >> GO TO 5.

NG >> Replace pre-crash seat belt control unit.

## 5. CHECK BRAKE PEDAL STROKE SENSOR

Check continuity between brake pedal stroke sensor terminal 2 and terminals 1, 3 while performing brake operation.

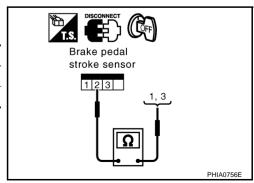

Terr	minal	Condition	Resistance [k $\Omega$ ]
2	1	Brake released $\rightarrow$ depressed	1.0 → 0.2
2	3	Brake released → depressed	0.2 → 1.0

## OK or NG

OK >> Check harness connection.

- If it is OK, replace pre-crash seat belt control unit.
- If it is NG, repair or replace malfunction part.

NG >> Replace brake pedal stroke sensor.

## Pre-crash Seat Belt Motor LH Circuit Check [B2452]

## 1. CHECK LH SEAT BELT MOTOR CIRCUIT

## (II) With CONSULT-II

Select "SELF-DIAG RESULTS" of CONSULT-II, and then make sure that "SB MOTOR LH CIRC" is displayed.
