Special Service Tool

INFOID:000000010101915

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name		Description
KV10115801 (J-38956) Oil filter wrench	s-NT375	Removing and installing oil filter a: 64.3 mm (2.531 in)

Commercial Service Tool

Tool name		Description
Power tool		Loosening nuts and bolts
	PBIC0190E	
Spark plug wrench		Removing and installing spark plug a : 14 mm (0.55 in)
	JPBIA0399ZZ	

General maintenance includes those items which should be checked during the normal day-to-day operation

of the vehicle. They are essential if the vehicle is to continue operating properly. The owners can perform

checks and inspections themselves or have their **INFINITI** retailers do them. OUTSIDE THE VEHICLE

< PERIODIC MAINTENANCE >

FOR NORTH AMERICA

GENERAL MAINTENANCE

PERIODIC MAINTENANCE

The maintenance items listed here should be performed from time to time, unless otherwise specified.

FOR NORTH AMERICA : Explanation of General Maintenance

Item		Reference page	
Tires	Check the pressure with a gauge often and always prior to long distance trips. Adjust the pressure in all tires, including the spare, to the pressure specified. Check carefully for damage, cuts or excessive wear.	<u>WT-71</u>	E
Wheel nuts	When checking the tires, make sure no nuts are missing, and check for any loose nuts. Tighten if necessary.	_	F
Tire rotation	Tires should be rotated every 5,000 miles (8,000 km). If the vehicle is equipped with different sized tires in the front and rear, tires cannot be rotated.	<u>MA-47</u>	(.
Tire Pressure Moni- toring System (TPMS) transmitter compo- nents	Replace the TPMS transmitter grommet seal, valve core and cap when the tires are replaced due to wear or age.	<u>WT-68</u>	ŀ
Wheel alignment and balance	If the vehicle should pull to either side while driving on a straight and level road, or if you detect uneven or abnormal tire wear, there may be a need for wheel alignment. If the steering wheel or seat vibrates at normal highway speeds, wheel balancing may be needed. For additional information regarding tires, refer to "Important Tire Safety Information" (US) or "Tire Safety Information" (Canada) in the INFINITI Warranty Information Booklet.	<u>FSU-8</u> (2WD) <u>FSU-28</u> (AWD) <u>RSU-6</u> <u>MA-47</u>	I
Windshield	Clean the windshield on a regular basis. Check the windshield at least every six months for cracks or other damage. Repair as necessary.	_	
Windshield wiper blades	Check for cracks or wear if they do not wipe properly.	_	k
Doors and engine hood	Check that all doors and the engine hood operate properly. Also make sure that all latches lock securely. Lubricate if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released. When driving in areas using road salt or other corrosive materials, check lubrication frequently.	<u>MA-53</u>	L
Lamps	Make sure that the headlamps, stop lamps, tail lamps, turn signal lamps, and other lamps are all operating properly and installed securely. Also check headlamp aim. Clean the headlamps on a regular basis.		N

INSIDE THE VEHICLE

The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, cleaning the vehicle, etc.

Item		Reference page	-
Warning lamps and chimes	Make sure that all warning lamps and chimes are operating properly.	_	0
Windshield wiper and washer	Check that the wipers and washer operate properly and that the wipers do not streak.	_	MA
Windshield defroster	Check that the air comes out of the defroster outlets properly and in sufficient quantity when operating the heater or air conditioner.	_	-
Steering wheel	Check that it has the specified play. Check for changes in the steering condition, such as excessive play, hard steering or strange noises. Free play: Less than 35 mm (1.38 in)		-

С

D

GENERAL MAINTENANCE

< PERIODIC MAINTENANCE >

Item		Reference page
Seats	Check seat position controls such as seat adjusters, seatback recliner, etc. to make sure they operate smoothly and that all latches lock securely in every position. Check that the head restrains move up and down smoothly and that the locks (if equipped) hold securely in all latched positions. Check that the latches lock securely for folding-down rear seatbacks.	_
Seat belts	Check that all parts of the seat belt system (e.g. buckles, anchors, adjusters and retrac- tors) operate properly and smoothly, and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.	<u>MA-53</u>
Accelerator pedal	Check the pedal for smooth operation and make sure the pedal does not catch or re- quire uneven effort. Keep the floor mats away from the pedal.	_
Brakes	Check that the brake does not pull the vehicle to one side when applied.	—
Brake pedal and booster	Check the pedal for smooth operation and make sure it has the proper distance under it when depressed fully. Check the brake booster function. Be sure to keep the floor mats away from the pedal.	<u>BR-7</u> BR-13
Parking brake	Check that the lever or pedal has the proper travel and make sure that the vehicle is held securely on a fairly steep hill when only the parking brake is applied.	<u>PB-3</u>
Automatic transmis- sion "Park" mecha- nism	Check that the lock release button on the selector lever operates properly and smoothly. On a fairly steep hill check that the vehicle is held securely with the selector lever in the P (Park) position without applying any brakes.	_

UNDER THE HOOD AND VEHICLE

The maintenance items listed here should be checked periodically (e.g. each time you check the engine oil or refuel).

Item		Reference page
Windshield washer fluid	Check that there is adequate fluid in the tank.	_
Engine coolant level	Check the coolant level when the engine is cold.	<u>CO-9</u> (VQ37) <u>CO-37</u> (VK56)
Radiator and hoses	Check the front of the radiator and clean off any dirt, insects, leaves, etc., that may have accumulated. Make sure the hoses have no cracks, deformation, deterioration or loose connections.	<u>MA-25</u> (VQ37) <u>MA-36</u> (VK56)
Brake fluid level	Make sure that the brake fluid level is between the "MAX" and "MIN" lines on the reservoir.	<u>MA-49</u>
Battery	Check the fluid level in each cell. It should be between the "MAX" and "MIN" lines. Vehicles operated in high temperatures or under severe conditions require frequent checks of the battery fluid level.	<u>PG-120</u>
Engine drive belts	Make sure that no belt is frayed, worn, cracked or oily.	<u>MA-20</u> (VQ37) <u>MA-31</u> (VK56)
Engine oil level	Check the level on the oil level gauge after parking the vehicle on a level spot and turn- ing off the engine.	<u>LU-9</u> (VQ37) <u>LU-33</u> (VK56)
Power steering fluid level and lines	Check the level when the fluid is cold, with the engine off. Check the lines for proper attachment, leaks, cracks, etc.	<u>MA-51</u>
Exhaust system	Make sure there are no loose supports, cracks or holes. If the sound of the exhaust seems unusual or there is a smell of exhaust fumes, immediately locate the trouble and correct it.	<u>MA-41</u>
Underbody	The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these substances, otherwise rust will form on the floor pan, frame, fuel lines and around the exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, being careful to clean those areas where mud and dirt can easily accumulate.	_
Fluid leaks	Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks or gasoline fumes are evident, check for the cause and correct it immediately.	_

FOR MEXICO

GENERAL MAINTENANCE

< PERIODIC MAINTENANCE >

FOR MEXICO : General Maintenance

General maintenance includes those items which should be checked during the normal day-to-day operation of the vehicle. They are essential if the vehicle is to continue operating properly. The owners can perform the checks and inspections themselves or they can have their **INFINITI** dealers do them.

OUTSIDE THE VEHICLE

The maintenance items listed here should be performed from time to time, unless otherwise specified.

	Item	Reference page
Doors and hood	Check that all doors and the hood operate smoothly as well as the back door, trunk lid and hatch. Also make sure that all latches lock securely. Lubricate if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released. When driving in areas using road salt or other corrosive materials, check lu- brication frequently.	<u>MA-53</u>
Lamps	Clean the headlamps on a regular basis. Make sure that the headlamps, stop lamps, tail lamps, turn signal lamps, and other lamps are all operating properly and installed securely. Also check the aim of the headlamps.	_
Tires	Check the pressure with a gauge often and always prior to long distance trips. Adjust the pressure in all tires, including the spare, to the pressure specified. Check carefully for damage, cuts or excessive wear.	<u>WT-71</u>
Tire rotation	In the case that Two-Wheel Drive (2WD) and front & rear tires are same size; Tires should be rotated every 10,000 km (6,000 miles). Tires marked with directional indicators can only be rotated between front and rear. Make sure that the directional indicators point in the direction of wheel rotation after the tire rotation is completed. In the case that Four-Wheel Drive (4WD) and front & rear tires are same size; Tires	
	should be rotated every 5,000 km (3,000 miles). Tires marked with directional indica- tors can only be rotated between front and rear. Make sure that the directional indica- tors point in the direction of wheel rotation after the tire rotation is completed. In the case that front tires are different size from rear tires; Tires cannot be rotated. However, the timing for tire rotation may vary according to your driving habits and the road surface conditions.	<u>MA-47</u>
Tire Pressure Monitor- ing System (TPMS) transmitter components (if equipped)	Replace the TPMS transmitter grommet seal, valve core and cap when the tires are replaced due to wear or age.	<u>WT-68</u>
Wheel alignment and balance	If the vehicle should pull to either side while driving on a straight and level road, or if you detect uneven or abnormal tire wear, there may be a need for wheel alignment. If the steering wheel or seat vibrates at normal highway speeds, wheel balancing may be needed.	<u>FSU-8</u> <u>RSU-6</u> <u>MA-47</u>
Windshield	Clean the windshield on a regular basis. Check the windshield at least every six months for cracks or other damage. Repair as necessary.	_
Wiper blades	Check for cracks or wear if not functioning correctly.	_

INSIDE THE VEHICLE

The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, cleaning the vehicle, etc.

	Item	Reference page	N
Accelerator pedal	Check the pedal for smooth operation and make sure that the pedal does not catch or require uneven effort. Keep the floor mats away from the pedal.	_	-
Brake pedal	Check the pedal for smooth operation and make sure that it is the proper distance from the floor mat when depressed fully. Check the brake booster function. Be sure to keep the floor mats away from the pedal.	<u>BR-7</u>	0
Parking brake	Check the parking brake operation regularly. Check that the lever (if equipped) or the pedal (if equipped) has the proper travel. Also make sure that the vehicle is held securely on a fairly steep hill when only the parking brake is applied.	<u>PB-3</u>	MA
Seat belts	Check that all parts of the seat belt system (for example, buckles, anchors, adjusters and retractors) operate properly and smoothly, and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.	<u>MA-53</u>	-

GENERAL MAINTENANCE

< PERIODIC MAINTENANCE >

	Item	Reference page
Steering wheel	Check for changes in the steering condition, such as excessive play, hard steering or strange noises. Check that it has the specified play. Free play: Less than 35 mm (1.38 in)	_
Warning lamps and chimes	Make sure that all warning lamps and chimes are operating properly.	
Windshield defogger	Check that the air comes out of the defogger outlets properly and in good quantity when operating the heater or air conditioner.	_
Windshield wiper and washer	Check that the wipers and washer operate properly and that the wipers do not streak.	_

UNDER THE HOOD AND VEHICLE

The maintenance items listed here should be checked periodically (for example, each time you check the engine oil or refuel.)

	Item	Reference page
Battery	Except for maintenance free battery; Check the fluid level in each cell. It should be be- tween the "UPPER" and "LOWER" lines. Vehicles operated in high temperatures or un- der severe conditions require frequent checks of the battery fluid level.	<u>PG-120</u>
Brake (and clutch) fluid level(s)	For Manual Transmission (MT) model; Make sure that the brake and clutch fluid levels are between the "MAX" and "MIN" lines on the reservoirs. Except for Manual Transmission (MT) model; Make sure that the brake fluid level is between the "MAX" and "MIN" lines on the reservoir.	<u>MA-49</u>
Coolant level	Check the coolant level when the coolant is cold. Make sure that the coolant level is between the "MAX" and "MIN" lines on the reservoir.	<u>CO-9</u> (VQ37) <u>CO-37</u> (VK56)
Engine drive belt(s)	Make sure that drive belt(s) is/are not frayed, worn, cracked or oily.	<u>MA-20</u> (VQ37) <u>MA-31</u> (VK56)
Engine oil level	Check the level after parking the vehicle (on a level ground) and turning off the engine.	<u>LU-9</u> (VQ37) <u>LU-33</u> (VK56)
Fluid leaks	Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks or if fuel fumes are evident, check for cause and have it corrected immediately.	_
Power steering fluid level and lines	Check the level when the fluid is cold with the engine off. Check the lines for proper attachment, leaks, cracks, etc.	<u>MA-51</u>
Windshield washer fluid	Check that there is adequate fluid in the reservoir.	_

PERIODIC MAINTENANCE FOR NORTH AMERICA

FOR NORTH AMERICA : Introduction of Periodic Maintenance

INFOID:000000010249406

А

В

С

The following tables show the normal maintenance schedule. Depending upon weather and atmospheric conditions, varying road surfaces, individual driving habits and vehicle usage, additional or more frequent maintenance may be required.

Periodic maintenance beyond the last period shown on the tables requires similar maintenance.

Emission Control System Maintenance

Abbreviations: R = Replace. I = Inspect. Correct or replace if necessary.

MAINTENANCE OPERATION	MAINTENANCE INTERVAL										
Perform at number of miles, kilometers or months, whichever comes first.	Miles x 1,000 (km x 1,000) Months	5 (8) 6	10 (16) 12	15 (24) 18	20 (32) 24	25 (40) 30	30 (48) 36	35 (56) 42	40 (64) 48	45 (72) 54

Intake and exhaust valve clearance*	NOTE (6)							<u>EM-13</u> (VQ37) <u>EM-175</u> (VK56)

NOTE:

• (1) After 40,000 miles (64,000 km) or 48 months, inspect every 10,000 miles (16,000 km) or 12 months. Replace the drive belts if found damaged.

- (2) If operating mainly in dusty conditions, more frequent maintenance may be required.
- (3) Maintenance-free item. For service procedures, refer to the FL section.
- (4) First replacement interval is 105,000 miles (168,000 km) or 84 months. After first replacement, replace every 75,000 miles (120,000 km) or 60 months.
- (5) Use only Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent with proper mixture ratio of 50% anti-freeze and 50% demineralized or distilled water. Mixing any other type of coolant or the use of non-distilled water will reduce the life expectancy of the factory fill coolant.
- (6) Periodic maintenance is not required. However, if valve noise increases, inspect valve clearance.

* Maintenance items and intervals with "*" are recommended by INFINITI for reliable vehicle operation. The owner need not perform such maintenance in order to maintain the emission warranty or manufacturer recall liability. Other maintenance items and intervals are required.

Chassis and Body Maintenance

NOTE:

• Maintenance items with "★" should be performed more frequently according to "Maintenance Under Severe Driving Conditions".

- (1) Automatic transmission fluid maintenance-free.
- (2) If towing a trailer, using a camper or car-top carrier, or driving on rough or muddy roads, change (not just inspect) oil at every 20,000 miles (32,000 km) or 24 months.
- (3) Refer to "Tire rotation" under the "GENERAL MAINTENANCE" heading earlier in this section.

MAINTENANCE UNDER SEVERE DRIVING CONDITIONS

MA

< PERIODIC MAINTENANCE >

The maintenance intervals shown on the preceding pages are for normal operating conditions. If the vehicle is mainly operated under severe driving conditions as shown below, more frequent maintenance must be performed on the following items as shown in the table.

Severe driving conditions

- Repeated short trips of less than 5 miles (8 km).
- Repeated short trips of less than 10 miles (16 km) with outside temperatures remaining below freezing.
- Operating in hot weather in stop-and-go "rush hour" traffic.
- Extensive idling and/or low speed driving for long distances, such as police, taxi or door-to-door delivery use.
- Driving in dusty conditions.
- Driving on rough, muddy, or salt spread roads.
- Towing a trailer, using a camper or a car-top carrier.

	Maintenance operation: Inspect = Inspect and correct or replace as necessary

FOR MEXICO

FOR MEXICO : Periodic Maintenance

INFOID:000000010101922

The following tables show the normal maintenance schedule. Depending upon weather and atmospheric conditions, varying road surfaces, individual driving habits and vehicle usage, additional or more frequent maintenance may be required.

Periodic maintenance beyond the last period shown on the tables requires similar maintenance.

ENGINE AND EMISSION CONTROL MAINTENANCE

Abbreviations: I = Inspect and correct or replace as necessary, R = Replace, E = Check and correct the engine coolant mixture ratio.

NOTE:

- Maintenance items with "*" should be performed more frequently according to "Maintenance Under Severe Driving Conditions".
- (1) Periodic maintenance is not required. However, if valve noise increases, check valve clearance.
- (2) Replace the drive belts if found damaged or if the auto belt tensioner reading reaches the maximum limit.
- (3) Use Genuine NISSAN Engine Coolant (blue) or equivalent in its quality, in order to avoid possible aluminium corrosion within the engine cooling system caused by the use of non-genuine engine coolant. Check and correct the engine coolant mixture ratio every 48,000 km (30,000 miles) or 24 months. First replacement interval is 168,000 km (105,000 miles) or 96 months. After first replacement, replace every 84,000 km (52,500 miles) or 48 months.

• (4) Maintenance-free item.

• (5) Replace spark plug when the spark plug gap exceeds 1.4 mm (0.055 in) even if within specified periodic replacement mileage.

MAINTENANCE UNDER SEVERE DRIVING CONDITIONS

The maintenance intervals shown on the preceding pages are for normal operating conditions. If the vehicle is mainly operated under severe driving conditions as shown below, more frequent maintenance must be performed on the following items as shown in the table.

Severe driving conditions

- A Driving under dusty conditions
- B Driving repeatedly short distances
- C Towing a trailer or caravan
- D Extensive idling

E —Driving in extremely adverse weather conditions or in areas where ambient temperatures are either extremely low or extremely high

- F Driving in high humidity or mountainous areas
- G Driving in areas using salt or other corrosive areas
- H Driving on rough and/or muddy roads or in the desert
- I Driving with frequent use of braking or in mountainous areas
- J Frequent driving in water

Maintenance operation: Inspect = Check and correct or replace as necessary

*1: INFINITI recommends Genuine NISSAN Ester Engine Oil available at an INFINITI retailer.

*2: For additional information, see "Engine Oil Recommendation".

*3: Using automatic transmission fluid other than Genuine NISSAN Matic S ATF will cause deterioration in driveability and automatic transmission durability, and may damage the automatic transmission, which is not covered by the INFINITI new vehicle limited warranty. *4: For hot climates, Viscosity SAE 90 is suitable for ambient temperatures above 32°F (0°C).

< PERIODIC MAINTENANCE >

*5: See an INFINITI retailer for service for synthetic oil.

*6: Using transfer fluid other than Genuine NISSAN Matic J ATF will cause deterioration in driveability and transfer durability, and may A damage the transfer, which is not covered by the INFINITI new vehicle limited warranty.

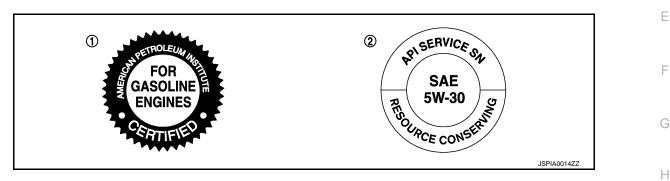

*7: DEXRON™ VI type ATF may also be used.

*8: Available in mainland U.S.A. through an INFINITI retailer.

*9: The fluid capacity is the reference value.

FOR NORTH AMERICA : Engine Oil Recommendation

NISSAN recommends the use of an energy conserving oil in order to improve fuel economy. Select only engine oils that meet the American Petroleum Institute (API) certification and International Lubricant Standardization and Approval Committee (ILSAC) certification and SAE viscosity standard. These oils have the API certification mark on the front of the container. Oils which do not have the specified quality label should not be used as they could cause engine damage.

1. API certification mark

2. API service symbol

FOR NORTH AMERICA : Anti-Freeze Coolant Mixture Ratio

The engine cooling system is filled at the factory with a pre-diluted mixture of 50% Genuine NISSAN Long Life Antifreeze/Coolant (blue) and 50% water to provide year-round anti-freeze and coolant protection. The anti-freeze solution contains rust and corrosion inhibitors. Additional engine cooling system additives are not necessary.

WARNING:

- Never remove the radiator or coolant reservoir cap when the engine is hot. Wait until the engine and radiator cool down. Serious burns could be caused by high pressure fluid escaping from the radiator.
- The radiator is equipped with a pressure type radiator cap. To prevent engine damage, use only a genuine NISSAN radiator cap.

CAUTION:

- When adding or replacing coolant, be sure to use only Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent. Genuine NISSAN Long Life Antifreeze/Coolant (blue) is pre-diluted to provide antifreeze protection to -34°F (-37°C). If additional freeze protection is needed due to weather where you operate your vehicle, add Genuine NISSAN Long Life Antifreeze/Coolant (blue) concentrate following the directions on the container. If an equivalent coolant other than Genuine NISSAN Long Life Antifreeze/Coolant (blue) is used, follow the coolant manufactur's instructions to maintain minimum antifreeze protection to -34°F (-37°C). The use of other types of coolant solutions other than Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent may damage the engine cooling system.
- Mixing any other type of coolant other than Genuine NISSAN Long Life Antifreeze/Coolant (blue), including Genuine NISSAN Long Life Antifreeze/Coolant (green), or the use of non-distilled water will reduce the life expectancy of the factory-fill coolant.

INFOID:000000010101927

DIFFERENTIAL GEAR OIL

< PERIODIC MAINTENANCE >

• 75W-90 for the differential gear is preferable.

IPPIA0001GB

FOR MEXICO : Engine Coolant Mixture Ratio

The engine cooling system is filled at the factory with a high-quality, year-round and extended life engine coolant. The high quality engine coolant contains the specific solutions effective for the anti-corrosion and the anti-freeze function. Therefore, additional cooling system additives are not necessary.

CAUTION:

 When adding or replacing coolant, be sure to use only Genuine NISSAN Engine Coolant or equivalent in its quality with the proper mixture ratio. See the examples shown right.

The use of other types of engine coolant may damage the engine cooling system.

When checking the engine coolant mixture ratio by the coolant

hydrometer, use the chart below to correct your hydrometer reading (specific gravity) according to coolant temperature.

				Unit: specific gravity	
Engine coolant mixture		Coolant temp	erature °C (°F)		M
ratio	15 (59)	25 (77)	35 (95)	45 (113)	
30%	1.046 - 1.050	1.042 - 1.046	1.038 - 1.042	1.033 - 1.038	Ν
50%	1.076 - 1.080	1.070 - 1.076	1.065 - 1.071	1.059 - 1.065	

WARNING:

Mixed coolant specific gravity

Never remove the radiator cap when the engine is hot. Serious burns could be caused by high pressure fluid escaping from the radiator. Wait until the engine and radiator cool down.

Drive belt

- When new drive belt is installed, the indicator (notch on fixed side) should be within the range (B) in the figure.
- Visually check the entire drive belt for wear, damage or crack.
- If the indicator (notch on fixed side) is out of the possible use range or belt is damaged, replace drive belt.

DRIVE BELT : Tension Adjustment

Refer to <u>EM-155, "Drive Belt"</u>. ENGINE COOLANT

ENGINE COOLANT : Draining

INFOID:000000010274358

INFOID:000000010274353

INFOID:0000000010274352

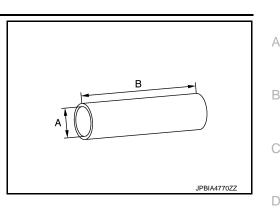

WARNING:

- To avoid being scalded, never change engine coolant when the engine is hot.
- Wrap a thick cloth around radiator cap and carefully remove radiator cap. First, turn radiator cap a quarter of a turn to release built-up pressure. Then turn radiator cap all the way.
 Never spill engine coolant on drive belt
- Never spill engine coolant on drive belt.
- Connect drain hose. NOTE:

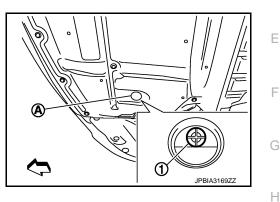

< PERIODIC MAINTENANCE >

Use a general-purpose hose with the dimmensions shown in the figure.

- А : \$ 15 - 16 mm (0.59 - 0.63 in)
- В : 145 mm (5.17 in)

- Open radiator drain plug (1) at the bottom of radiator, and then 2. remove radiator cap.
 - : Radiator drain plug hole А
 - \triangleleft : Vehicle front

Е

F

Κ

Μ

Ν

MA

When draining all of engine coolant in the system, open water drain plugs on cylinder block. Refer to EM-86, "Setting".

- Remove reservoir tank if necessary, and drain engine coolant and clean reservoir tank before installing.
- 4. Check drained engine coolant for contaminants such as rust, corrosion or discoloration. If contaminated, flush the engine cooling system. Refer to CO-12, "Flushing".
- 5. Disconnect drain hose.

ENGINE COOLANT : Refilling

CAUTION:

- Do not reuse O-rings.
- Do not put additive such as waterleak preventive, since it may cause cooling waterway clogging.
- · When refilling use Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent in its quality L mixed with water (distilled or demineralized). Refer to MA-16, "FOR NORTH AMERICA : Fluids and Lubricants" (FOR NORTH AMERICA), MA-18, "FOR MEXICO : Fluids and Lubricants" (FOR MEXICO).
- Remove air cleaner case (LH) and air duct (inlet). Refer to EM-29, "Exploded View". 1.
- 2. Install reservoir tank if removed, and radiator drain plug. **CAUTION:**

Be sure to clean drain plug and install with new O-ring.

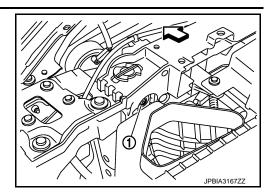

: Refer to CO-15, "Exploded View". **Tightening torque**

If water drain plugs on cylinder block are removed, close and tighten them. Refer to EM-86, "Set- \cap ting".

3. Check that each hose clamp has been firmly tightened.

< PERIODIC MAINTENANCE >

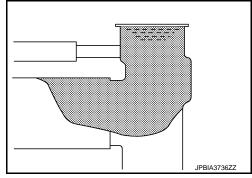

4. Remove air relief plug (1) on radiator left side.

5. Fill up the radiator with cooling water. Pour engine coolant through engine coolant filler neck slowly of less than 2ℓ (2-1/8 US qt, 1-3/4 Imp qt) a minute to allow air in system to escape.

> Engine coolant capacity (With reservoir tank at "MAX" level)

: Refer to <u>CO-30,</u> <u>"Periodical Maintenanc</u> <u>e Specification"</u>.

Reservoir tank engine coolant capacity
(At "MAX" level):Refer to CO-30,
"Periodical Maintenance Specification"

- A : MAX
- B : MIN
- When engine coolant overflows air relief hole on radiator, install air relief plug with new O-ring.
 CAUTION:

Do not reuse O-rings.

Tightening torque : Refer to <u>CO-15, "Exploded View"</u>.

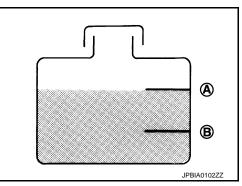

- 7. Refill reservoir tank to "MAX" level line with engine coolant.
- 8. Install air cleaner case (LH) and air duct (inlet). Refer to EM-29, "Exploded View".
- 9. Install radiator cap and reservoir tank cap.
- 10. Warm up engine until opening thermostat. Standard for warming-up time is approximately 10 minutes at 3,000 rpm.

• Check thermostat opening condition by touching radiator hose (lower) to see a flow of warm water. CAUTION:

Watch water temperature gauge so as not to overheat engine.

- 11. Stop the engine and cool down to less than approximately 50°C (122°F).
 - Cool down using fan to reduce the time.
 - If necessary, refill radiator up to filler neck with engine coolant.
 - Remove the radiator cap to check the fluid level. If the fluid level is low, refill with cooling water and repeat the steps from Step 7.
- 12. Refill reservoir tank to "MAX" level line with engine coolant.
- 13. Check cooling system for leakage with engine running.
- 14. Check flow noise, according to the following steps.

To check flow noise, turn OFF the radio and close the windows, doors, and the hood.

MA-22

< PERIODIC MAINTENANCE >

- a. Allow the engine to become cold [approximately 50°C (122°F) or less].
- b. Start the engine, maintain 1000 rpm for approximately 30 seconds, and increase the engine speed from A 1000 to 3000 rpm. Repeat this cycle three times.
- c. Check that flow noise can be heard from the heater core during the Step b operation.
- d. If flow noise can be heard, repeat from Step 12 of Refilling to Step c of Flow Noise Verification Method.
- e. Check that the reservoir tank cap is tightened.

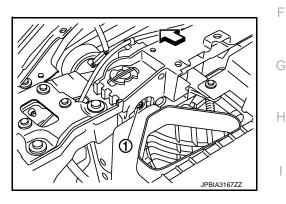

ENGINE COOLANT : Flushing

 Install reservoir tank if removed, and radiator drain plug. CAUTION: Be sure to clean drain plug and install with new O-ring.

Tightening torque : Refer to CO-15, "Exploded View".

If water drain plugs on cylinder block are removed, close and tighten them. Refer to <u>EM-86, "Set-ting"</u>.

- 2. Remove air relief plug (1) on radiator.

INFOID:000000010274360

C

D

Е

Κ

M

Ν

3. Fill radiator with water until water spills from the air relief holes, then close air relief plugs. Fill radiator and reservoir tank with water and reinstall radiator cap.

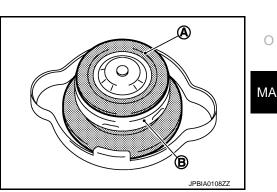

Tightening torque : Refer to CO-15, "Exploded View".

- 4. Run the engine and warm it up to normal operating temperature.
- 5. Rev the engine two or three times under no-load.
- 6. Stop the engine and wait until it cools down.
- 7. Drain water from the system. Refer to CO-10, "Draining".
- 8. Repeat steps 1 through 7 until clear water begins to drain from radiator.
- 9. Check that the reservoir tank cap is tightened.

RADIATOR CAP

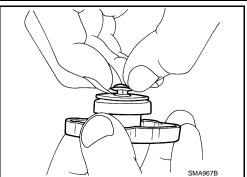

RADIATOR CAP : Inspection

- Check valve seat (A) of radiator cap.
 - B : Metal plunger
- Check if valve seat is swollen to the extent that the edge of the plunger (B) cannot be seen when watching it vertically from the top.
- Check if valve seat has no soil and damage.

< PERIODIC MAINTENANCE >

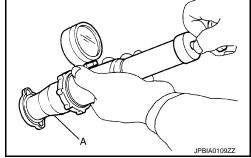

- Pull negative-pressure valve to open it, and check that it close completely when released.
- Check that there is no dirt or damage on the valve seat of radiator cap negative-pressure valve.
- Check that there are no unusualness in the opening and closing conditions of negative-pressure valve.

• Check radiator cap relief pressure.

Standard and limit : Refer to CO-30, "Radiator".

- When connecting radiator cap to the radiator cap tester and the radiator cap tester adapter (commercial service tool) (A), apply engine coolant to the cap seal surface.

• Replace radiator cap if there is an unusualness related to the above three. CAUTION:

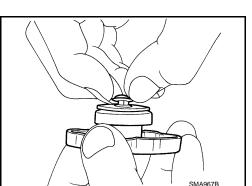

When installing radiator cap, thoroughly wipe out the water outlet (front) filler neck to remove any waxy residue or foreign material.

RESERVOIR TANK CAP

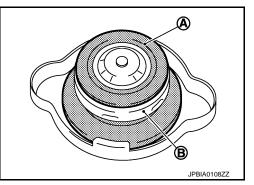

RESERVOIR TANK CAP : Inspection

- Check valve seat of reservoir tank cap.
- Check if valve seat (A) is swollen to the extent that the edge of the metal plunger (B) cannot be seen when watching it vertically from the top.
- Check if valve seat has no soil and damage.

- Pull negative-pressure valve to open it, and check that it close completely when released.
- Check that there is no dirt or damage on the valve seat of reservoir tank cap negative-pressure valve.
- Check that there are no unusualness in the opening and closing conditions of negative-pressure valve.

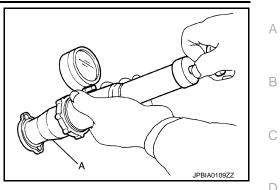

• Check reservoir tank cap relief pressure.

< PERIODIC MAINTENANCE >

- When connecting reservoir tank cap to the radiator cap tester (commercial service tool) and the radiator cap tester adapter (commercial service tool) (A), apply engine coolant to the cap seal surface.

Standard and limit : Refer to CO-30, "Radiator".

Replace reservoir tank cap if there is an unusualness related to the above three.
 CAUTION:

When installing reservoir tank cap, thoroughly wipe out the reservoir tank filler neck to remove any waxy residue or foreign material. RADIATOR

RADIATOR : Inspection

Check radiator for mud or clogging. If necessary, clean radiator as follows:

- Be careful not to bend or damage radiator fins.
- When radiator is cleaned without removal, remove all surrounding parts such as radiator cooling fan assembly and horns. Then tape harness and connectors to prevent water from entering.
- 1. Apply water by hose to the back side of the radiator core vertically downward.
- 2. Apply water again to all radiator core surfaces once per minute.
- 3. Stop washing if any stains no longer flow out from radiator.
- 4. Blow air into the back side of radiator core vertically downward.
 - Use compressed air lower than 490 kPa (5 kg/cm², 71 psi) and keep distance more than 30 cm (11.8 in).
- 5. Blow air again into all the radiator core surfaces once per minute until no water sprays out.

FUEL LINES

FUEL LINES : Inspection

Inspect fuel lines, fuel filler cap and fuel tank for improper attachment, leakage, cracks, damage, loose connections, chafing or deterioration.

- A : Engine
- B : Fuel line
- C : Fuel tank

If necessary, repair or replace damaged parts.

DRIVE BELT : Checking

WARNING:

Be sure to perform the these steps when engine is stopped.

- Remove air duct (inlet) when inspecting alternator, water pump and A/C compressor belt.
- Remove engine undercover with power tool when inspecting power steering oil pump belt.
- Check that the indicator (A) (notch on fixed side) of each auto-tensioner is within the possible use range (B).
 NOTE:
 - Check the each auto-tensioners indication when the engine is cold.
 - When new drive belts is installed, the indicator (notch on fixed side) should be within the range (C) in the figure.
- Visually check all drive belts for wear, damage or cracks.
- If the indicator (notch on fixed side) is out of the possible use range or drive belts are damaged, replace drive belts.

DRIVE BELT : Tension Adjustment

INFOID:000000010274372

Refer to <u>EM-308, "Drive Belts"</u>. ENGINE COOLANT

ENGINE COOLANT : Draining

INFOID:000000010274377

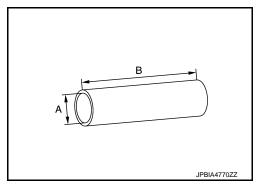

WARNING:

- Never change engine coolant when the engine is hot to avoid being scalded.
- Wrap a thick cloth around radiator cap and carefully remove radiator cap. First, turn radiator cap a quarter of a turn to release built-up pressure. Then turn radiator cap all the way.
- Never spill engine coolant on drive belt.
- 1. Connect drain hose.

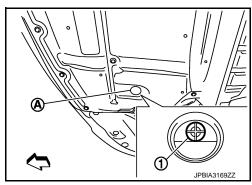

NOTE:

Use a general-purpose hose with the dimmensions shown in the figure.

- A : φ 15 16 mm (0.59 0.63 in)
- B : 145 mm (5.17 in)

- 2. Open radiator drain plug (1) at the bottom of radiator, and then remove radiator cap.
 - A : Radiator drain plug hole

When draining all of engine coolant in the system, open water drain plug on cylinder block. Refer to <u>EM-282, "Disassembly and Assembly"</u>.

- 3. Remove reservoir tank if necessary, and drain engine coolant and clean reservoir tank before installing.
- 4. Check drained engine coolant for contaminants such as rust, corrosion or discoloration. If contaminated, flush the engine cooling system. Refer to <u>CO-40, "Flushing"</u>.
- 5. Disconnect drain hose.

ENGINE COOLANT : Refilling

CAUTION:

- Do not put additive such as waterleak preventive, since it may cause cooling waterway clogging.
- When refilling use Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent in its quality mixed with water (distilled or demineralized). Refer to <u>MA-16, "FOR NORTH AMERICA : Fluids and</u>
- Lubricants" (FOR NORTH AMERICA), MA-18, "FOR MEXICO : Fluids and Lubricants" (FOR MEXICO).
- Remove air cleaner case (LH) and air duct (inlet). Refer to <u>EM-191, "Exploded View"</u>.
- Install reservoir tank if removed, and radiator drain plug.
 CAUTION: Be sure to clean drain plug and install with new O-ring.

Revision: 2013 November

MA-32

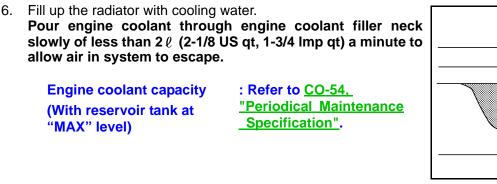

● : 1.2 N·m (0.12 kg-m, 11 in-lb)

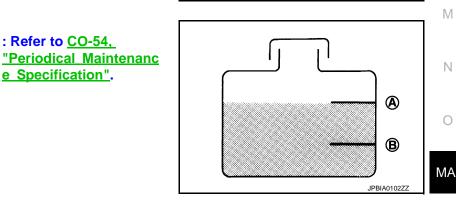

If water drain plug on cylinder block is removed, close and tighten it. Refer to <u>EM-282, "Disassem-bly and Assembly"</u>.

ENGINE MAINTENANCE (VK56VD)

< PERIODIC MAINTENANCE >

 When engine coolant overflows air relief hole on heater hose, install air relief plug with new O-ring. Then refill radiator with engine coolant.
 CAUTION:

Do not reuse O-rings.

● : 1.2 N·m (0.12 kg-m, 11 in-lb)

- 10. Install air cleaner case (LH) and air duct (inlet).
- 11. Install radiator cap.
- 12. Warm up engine until opening thermostat. Standard for warming-up time is approximately 10 minutes at 3,000 rpm.

• Check thermostat opening condition by touching radiator hose (lower) to see a flow of warm water. CAUTION:

Watch water temperature gauge so as not to overheat engine.

- 13. Stop the engine and cool down to less than approximately 50°C (122°F).
 - Cool down using fan to reduce the time.
 - If necessary, refill radiator up to filler neck with engine coolant.
 - Remove the radiator cap to check the fluid level. If the fluid level is low, refill with cooling water and repeat the steps from Step 8.
- 14. Refill reservoir tank to "MAX" level line with engine coolant.
- 15. Check cooling system for leakage with engine running.
- Check flow noise, according to the following steps.
 CAUTION:

To check flow noise, turn OFF the radio and close the windows, doors, and the hood.

- a. Allow the engine to become cold (approximately 50°C or less).
- b. Start the engine, maintain 1000 rpm for approximately 30 seconds, and increase the engine speed from 1000 to 3000 rpm. Repeat this cycle three times.
- c. Check that flow noise can be heard from the heater core during the Step b operation.
- d. If flow noise can be heard, repeat from Step 12 of Refilling to Step c of Flow Noise Verification Method.
- e. Check that the reservoir tank cap is tightened.

ENGINE COOLANT : Flushing

INFOID:000000010274379

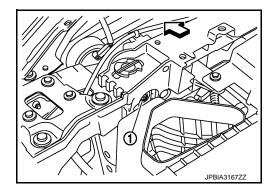

1. Install reservoir tank if removed, and radiator drain plug. CAUTION:

Be sure to clean drain plug and install with new O-ring.

: 1.2 N·m (0.12 kg-m, 11 in-lb)

If water drain plug on cylinder block is removed, close and tighten it. Refer to <u>EM-282, "Disassem-bly and Assembly"</u>.

2. Remove air relief plug (1) on radiator.

3. Fill water inlet with water until water spills from the air relief holes, then close air relief plugs. Fill water inlet and reservoir tank with water and reinstall radiator cap.

ENGINE MAINTENANCE (VK56VD)

< PERIODIC MAINTENANCE >

: 1.2 N·m (0.12 kg-m, 11 in-lb)

- 4. Run the engine and warm it up to normal operating temperature.
- 5. Rev the engine two or three times under no-load.
- 6. Stop the engine and wait until it cools down.
- Drain water from the system. Refer to <u>CO-37, "Draining"</u>.
- 8. Repeat steps 1 through 7 until clear water begins to drain from radiator.
- 9. Check that the reservoir tank cap is tightened.

RADIATOR CAP

RADIATOR CAP : Inspection

• Check valve seat of radiator cap.

Check radiator cap relief pressure.

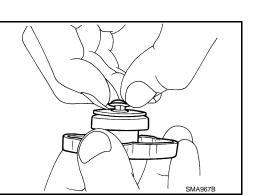

Standard and limit

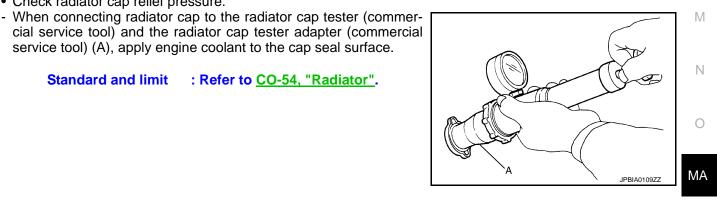

- Check if valve seat (A) is swollen to the extent that the edge of the metal plunger (B) cannot be seen when watching it vertically from the top.
- Check if valve seat has no soil and damage.

- Check that there is no dirt or damage on the valve seat of radiator cap negative-pressure valve.
- Check that there are no unusualness in the opening and closing conditions of negative-pressure valve.

service tool) (A), apply engine coolant to the cap seal surface.

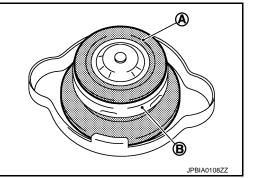

Replace radiator cap if there is an unusualness related to the above three.

: Refer to CO-54, "Radiator".

CAUTION:

When installing radiator cap, thoroughly wipe out the water inlet filler neck to remove any waxy residue or foreign material.

FRONT DIFFERENTIAL GEAR OIL: F160A : Refilling

1. Remove filler plug (1). Fill with new gear oil until oil level reaches the specified level near filler plug mounting hole.

Oil grade and Viscosity

: Refer to <u>MA-16, "FOR</u> <u>NORTH AMERICA : Fluids</u> <u>and Lubricants"</u>. : Refer to <u>DLN-163, "Gen</u>eral Specifications".

Oil capacity

 After refilling oil, check oil level. Set a gasket to filler plug, then install it to final drive assembly. Refer to <u>DLN-138</u>. "Exploded <u>View"</u>.

CAUTION:

Never reuse gasket.

REAR DIFFERENTIAL GEAR OIL: R200

REAR DIFFERENTIAL GEAR OIL: R200 : Inspection

OIL LEAKAGE

• Make sure that oil is not leaking from final drive assembly or around it.

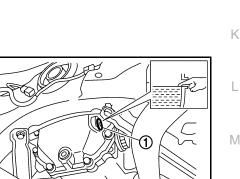

OIL LEVEL

• Remove filler plug (1) and check oil level from filler plug mounting hole as shown in the figure.

CAUTION:

Never start engine while checking oil level.

 Set a gasket on filler plug and install it on final drive assembly. Refer to <u>DLN-180, "Exploded View"</u>. CAUTION: Never reuse gasket.

Ν

REAR DIFFERENTIAL GEAR OIL: R200 : Draining

: Refer to <u>MA-16, "FOR</u> <u>NORTH AMERICA : Fluids</u> <u>and Lubricants" (For North</u> <u>America), <u>MA-18, "FOR</u> <u>MEXICO : Fluids and Lubri-</u> <u>cants" (For Mexico).</u> : Refer to <u>DLN-236, "Gen-</u> <u>eral Specifications"</u>.</u>

Oil capacity

 After refilling oil, check oil level. Set a gasket to filler plug, then install it to final drive assembly. Refer to <u>DLN-218, "Exploded View"</u>. CAUTION:

Never reuse gasket.

WHEELS (BONDING WEIGHT TYPE)

WHEELS (BONDING WEIGHT TYPE) : Adjustment

BALANCING WHEELS (BONDING WEIGHT TYPE)

Preparation Before Adjustment

Using releasing agent, remove double-faced adhesive tape from the road wheel.

- CAUTION:
- Be careful not to scratch the road wheel during removal.
- After removing double-faced adhesive tape, wipe clean traces of releasing agent from the road wheel.

Wheel Balance Adjustment

- The details of the adjustment procedure are different for each model of wheel balancer. Therefore, refer to each instruction manual.
- If a tire balance machine has adhesion balance weight mode settings and drive-in weight mode setting, select and adjust a drive-in weight mode suitable for road wheels.
- 1. Set road wheel on tire balance machine using the center hole as a guide. Start the tire balance machine.
- 2. When inner and outer unbalance values are shown on the tire balance machine indicator, multiply outer unbalance value by 5/3 to determine balance weight that should be used. Select the outer balance weight with a value closest to the calculated value above and install to the designated outer position of, or at the designated angle in relation to the road wheel. CAUTION:
 - Never install the inner balance weight before installing the outer balance weight.
 - Before installing the balance weight, always to clean the mating surface of the road wheel.

< PERIODIC MAINTENANCE >

a. Indicated unbalance value $\times 5/3$ = balance weight to be installed **Calculation example:** 23 g (0.81 oz) $\times 5/3$ = 38.33 g (1.35 oz) \Rightarrow 37.5 g (1.32 oz) bal-

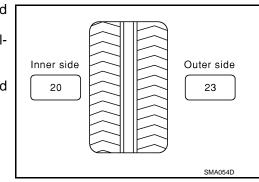

ance weight (closer to calculated balance weight value) **NOTE:**

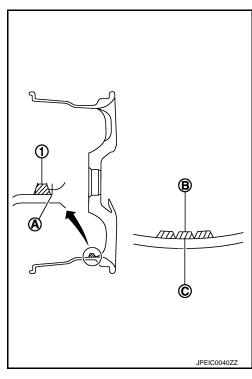

Note that balance weight value must be closer to the calculated balance weight value.

Example:

 $36.2 \Rightarrow 35 \text{ g} (1.23 \text{ oz})$ $36.3 \Rightarrow 37.5 \text{ g} (1.32 \text{ oz})$

- b. Installed balance weight in the position.
 - When installing balance weight (1) to road wheels, set it into the grooved area (A) on the inner wall of the road wheel as shown in the figure so that the balance weight center (B) is aligned with the tire balance machine indication position (angle) (C).
 - CAUTION:
 - Always use genuine NISSAN adhesion balance weights.
 - Balance weights are non-reusable; always replace with new ones.
 - · Never install three or more sheets of balance weight.

 c. If calculated balance weight value exceeds 50 g (1.76 oz), install two balance weight sheets in line with each other as shown in the figure.
 CAUTION:

Never install one balance weight sheet on top of another.

- 3. Start the tire balance machine again.
- Install drive-in balance weight on inner side of road wheel in the tire balance machine indication position (angle).
 CAUTION:

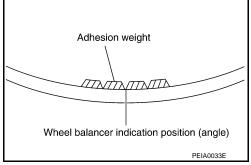

Never install three or more balance weight.

 Start the tire balance machine. Check that the inner and outer residual unbalance value is within the allowable unbalance value.
 CAUTION:

If either residual unbalance value exceeds limit, repeat installation procedures.

Allowable unbalance valueDynamic (At flange): Refer to WT-71, "Road Wheel".Static (At flange): Refer to WT-71, "Road Wheel".

TIRE ROTATION

< PERIODIC MAINTENANCE >

- Follow the maintenance schedule for tire rotation service intervals. Refer to MA-5, "FOR NORTH AMERICA : Explanation of General Maintenance".
- When installing the wheel, tighten wheel nuts to the specified torque. Refer to WT-65, "Exploded View". **CAUTION:**
 - Do not include the T-type spare tire when rotating the tires.
 - When installing wheels, tighten them diagonally by dividing the work two to three times in order to prevent the wheels from developing any distortion.
 - · Be careful not to tighten wheel nut at torque exceeding the criteria.
- Use NISSAN genuine wheel nuts for aluminum wheels.
- Perform the ID registration, after tire rotation. Refer to <u>WT-31, "Work Procedure"</u>.

BRAKE FLUID LEVEL AND LEAKS

BRAKE FLUID LEVEL AND LEAKS : Inspection

If fluid level is extremely low, check brake system for leaks.

BRAKE LINES AND CABLES : Inspection

 Check brake fluid lines and parking brake cables for improper attachment, leaks, chafing, abrasions, deterioration, etc.

BRAKE FLUID

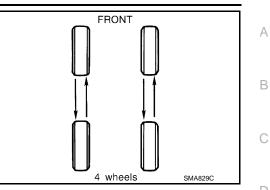

BRAKE FLUID : Changing

- 1 Drain brake fluid from each bleed valve.
- 2. Refill until new brake fluid comes out from each bleed valve. Use same procedure as in bleeding hydraulic system to refill brake fluid.

Refer to BR-11, "Bleeding Brake System".

- Refill with recommended Genuine NISSAN Super Heavy Duty Brake Fluid or equivalent DOT 3 (US FMVSS No. 116). Refer to MA-16, "FOR NORTH AMERICA : Fluids and Lubricants" (For North America), MA-18, "FOR MEXICO : Fluids and Lubricants" (For Mexico).
- Never reuse drained brake fluid.

< PERIODIC MAINTENANCE >

• Be careful not to splash brake fluid on painted areas. DISC BRAKE

DISC BRAKE : Inspection

DISC ROTOR

Check condition, wear, and damage.

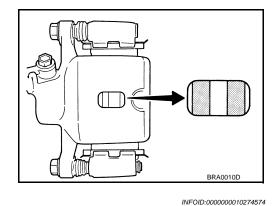

CALIPER

• Check for leakage.

SMA922A

• Check for wear or damage.

STEERING LINKAGE

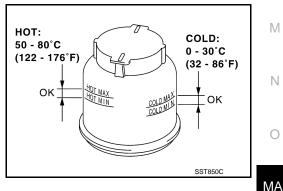

Check ball joint, dust cover and other component parts for looseness, wear, damage and grease leakage. POWER STEERING FLUID AND LINES

POWER STEERING FLUID AND LINES : Inspection

Check fluid level in reservoir tank with engine off.

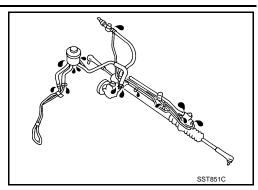

Use "HOT" range at fluid temperatures of 50 to 80°C (122 to 176°F) or "COLD" range at fluid temperatures of 0 to 30°C (32 to 86°F).

- Do not overfill.
- Recommended fluid is Genuine NISSAN PSF or equivalent. Refer to <u>MA-16</u>, "FOR NORTH AMERICA : Fluids and Lubricants" (For North America), <u>MA-18</u>, "FOR MEXICO : Fluids and Lubricants" (For Mexico).

< PERIODIC MAINTENANCE >

- Check lines for improper attachment, leaks, cracks, damage, loose connections, chafing and deterioration.
- Check rack boots for accumulation of power steering fluid.

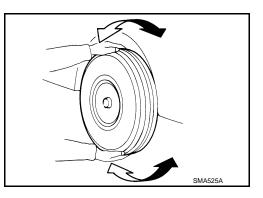

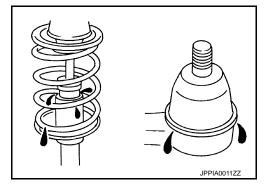

AXLE AND SUSPENSION PARTS

AXLE AND SUSPENSION PARTS : Inspection

Check front and rear axle and suspension parts for excessive play, cracks, wear or other damage.

- Shake each wheel to check for excessive play.
- Check wheel bearings for smooth operation.
- Check axle and suspension nuts and bolts for looseness.
- Check strut (shock absorber) for oil leakage or other damage.
- Check suspension ball joint for grease leakage and ball joint dust cover for cracks or other damage.

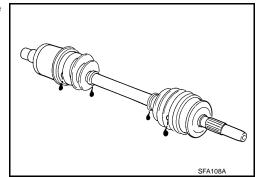

DRIVE SHAFT

DRIVE SHAFT : Inspection

Check boot and drive shaft for cracks, wear, damage and grease leakage.
