# Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER" used along with a seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. The SRS system composition which is available to INFINITI QX4 is as follows:

- For a frontal collision
  - The Supplemental Restraint System consists of driver air bag module (located in the center of the steering wheel), front passenger air bag module (located on the instrument panel on passenger side), seat belt pre-tensioners, a diagnosis sensor unit, warning lamp, wiring harness and spiral cable.
- For a side collision
  - The Supplemental Restraint System consists of side air bag module (located in the outer side of front seat), satellite sensor, diagnosis sensor unit (one of components of air bags for a frontal collision), wiring harness, warning lamp (one of components of air bags for a frontal collision).

Information necessary to service the system safely is included in the RS section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized (NFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the RS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. Spiral cable and wiring harnesses (except "SEAT BELT PRE-TENSIONER") covered with yellow insulation either just before the harness connectors or for the complete harness are related to the SRS.

## **GENERAL MAINTENANCE**

General maintenance includes those items which should be checked during the normal day-to-day operation of the vehicle. They are essential if the vehicle is to continue operating properly. The owners can perform checks and inspections themselves or they can have their INFINITI dealers do them.

#### **OUTSIDE THE VEHICLE**

The maintenance items listed here should be performed from time to time, unless otherwise specified.

ltem		Reference page
Tires	Tires  Check the pressure with a gauge periodically when at a service station, including the spare, and adjust to the specified pressure if necessary. Check carefully for damage, cuts or excessive wear.	
Wheel nuts	When checking the tires, make sure no nuts are missing, and check for any loose nuts. Tighten if necessary.	
Tire rotation	Tires should be rotated every 6,000 km (3,750 miles).	MA-24
Wheel alignment and balance		
Windshield wiper blades	Check for cracks or wear if they do not wipe properly.	
Check that all doors and the engine hood operate smoothly as well as the trunk lid and back hatch. Also make sure that all latches lock securely. Lubricate if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released.  When driving in areas using road salt or other corrosive materials, check lubrication frequently.		MA-27

#### **INSIDE THE VEHICLE**

The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, cleaning the vehicle, etc.

Item		Reference page	
Lamps	Make sure that the headlamps, stop lamps, tail lamps, turn signal lamps, and other lamps are all operating properly and installed securely. Also check headlamp aim.		
Warning lamps and buzzers/chimes	Make sure that all warning lamps and buzzers/chimes are operating properly.		
Windshield wiper and washer	Check that the wipers and washer operate properly and that the wipers do not streak.	_	
Windshield defroster	Check that the air comes out of the defroster outlets properly and in sufficient quantity when operating the heater or air conditioning.		
Steering wheel	Check that it has the specified play. Be sure to check for changes in the steering condition, such as excessive play, hard steering or strange noises.  Free play: Less than 35 mm (1.38 in)		
Check seat position controls such as seat adjusters, seatback recliner, etc. to make sure they operate smoothly and that all latches lock securely in every position. Check that the head restrains move up and down smoothly and that the locks (if equipped) hold securely in all latched positions. Check that the latches lock securely for folding-down rear seatbacks.		_	
Seat belts	Check that all parts of the seat belt system (e.g. buckles, anchors, adjusters and retractors) operate properly and smoothly and are installed securely.  Check the belt webbing for cuts, fraying, wear or damage.  MA "Seat Belt In PRS so		
Brakes	Check that the brake does not pull the vehicle to one side when applied.		

# **GENERAL MAINTENANCE**

ltem		Reference page	
Brake pedal and booster	Check the pedal for smooth operation and make sure it has the proper distance under it when depressed fully. Check the brake booster function. Be sure to keep floor mats away from the pedal.	"Brake Pedal and Bracket" and "Brake Booster" in BR section	G
Parking brake	Check that the lever has the proper travel and make sure that the vehicle is held securely on a fairly steep hill when only the parking brake is applied.	"Parking Brake Control" in BR section	IVI
Automatic transmis- sion "Park" mecha- nism	Check that the lock release button on the selector lever operates properly and smoothly. On a fairly steep hill check that the vehicle is held securely with the selector lever in the "P" position without applying any brakes.	_

# EM

# LC

EC

# **UNDER THE HOOD AND VEHICLE**

The maintenance items listed here should be checked periodically (e.g. each time you check the engine oil or refuel).	The maintenance items listed	here should be checked	l periodically (e.g. ea	ich time you check the	engine oil or refuel).
---	------------------------------	------------------------	-------------------------	------------------------	------------------------

Item		Reference page	
Windshield washer fluid Check that there is adequate fluid in the tank.			
Engine coolant level	Check the coolant level when the engine is cold.	MA-15	
Radiator and hoses	Check the front of the radiator and clean off any dirt, insects, leaves, etc., that may have accumulated. Make sure the hoses have no cracks, deformation, deterioration or loose connections.		
Brake fluid levels	Make sure that the brake fluid levels are between the "MAX" and "MIN" lines on the reservoir.  MA-25		
Battery	Check the fluid level in each cell. It should be between the "MAX" and "MIN" lines.		
Engine drive belts	Make sure that no belt is frayed, worn, cracked or oily.	MA-13	
Engine oil level	Check the level on the dipstick after parking the vehicle on a level spot and turning off the engine.	MA-17	_
Power steering fluid level and lines	Check the level on the dipstick with the engine off. Check the lines for improper attachment, leaks, cracks, etc.	MA-27	_
Automatic transmis- sion fluid level	Check the level on the dipstick after putting the selector lever in "P" with the engine idling.	MA-21	
Exhaust system	exhaust seems unusual or there is a smell of exhaust fumes, immediately locate the trouble and correct it.		_
Underbody  The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these substances, otherwise rust will form on the floor pan, frame, fuel lines and around the exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, being careful to clean those areas where mud and dirt can easily accumulate.		_	_
Fluid leaks	Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks or gasoline fumes are evident, check for the cause and correct it immediately.	_	_

## PERIODIC MAINTENANCE

Two different maintenance schedules are provided, and should be used, depending upon the conditions in which the vehicle is mainly operated. After 60,000 miles (96,000 km) or 48 months, continue the periodic maintenance at the same mileage/time intervals.

Schodulo 1	Follow Periodic Maintenance Schedule 1 if your driving habits frequently includes one or more of the following driving conditions:  Repeated short trips of less than 5 miles (8 km).  Repeated short trips of less than 10 miles (16 km) with outside temperatures remaining below freezing.	Emission Control System Maintenance	MA-7
<ul> <li>Operating in hot weather in stop-and-go "rush hour" to Extensive idling and/or low speed driving for long dist taxi or door-to-door delivery use.</li> <li>Driving in dusty conditions.</li> <li>Driving on rough, muddy, or salt spread roads.</li> <li>Towing a trailer, using a camper or a car-top carrier.</li> </ul>	<ul> <li>Extensive idling and/or low speed driving for long distances, such as police, taxi or door-to-door delivery use.</li> <li>Driving in dusty conditions.</li> <li>Driving on rough, muddy, or salt spread roads.</li> </ul>	Chassis and Body Maintenance	MA-8
Sahadula 2	Follow Periodic Maintenance Schedule 2 if none of the driving conditions shown in Schedule 1 apply to your driving habits.	Emission Control System Maintenance	MA-9
Schedule 2		Chassis and Body Maintenance	MA-10

#### Maintenance for off-road driving

Whenever you drive off-road through sand, mud or water, more frequent maintenance may be required of the following items:

- ▲ Brake pads and rotors
- ▲ Brake lining and drums
- ▲ Brake lines and hoses
- ▲ Wheel bearing grease
- ▲ Differential, transmission and transfer oil
- ▲ Steering linkage
- ▲ Propeller shaft and drive shafts
- ▲ Air cleaner filter

## Anti-freeze Coolant Mixture Ratio

The engine cooling system is filled at the factory with a high-quality, year-round, anti-freeze coolant solution. The anti-freeze solution contains rust and corrosion inhibitors. Therefore, additional cooling system additives are not necessary.

#### **CAUTION:**

SMA947CA

When adding or replacing coolant, be sure to use only a Genuine Nissan anti-freeze coolant or equivalent with the proper mixture ratio of 50% anti-freeze and 50% demineralized water/ distilled water. Other types of coolant solutions may damage your cooling system.

- Inspect belt for cracks, fraying, wear and oil. If necessary, replace.
- 2. Inspect drive belt deflection or tension at a point on the belt midway between pulleys.
- 3. Check belt tension using belt tension gauge (BT3373-F or equivalent).

Inspect drive belt deflection or tension when engine is cold. Adjust if belt deflections exceed the limit or if belt tension is not within specifications.

Drive belt tension can be checked at other points on the belt.

# **Changing Engine Coolant**

**WARNING:** 

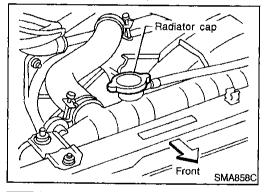

To avoid the danger of being scalded, never change the coolant when the engine is hot.

#### -DRAINING ENGINE COOLANT-

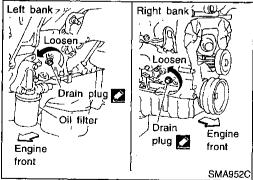

BMA0011S0

NRMAGGII

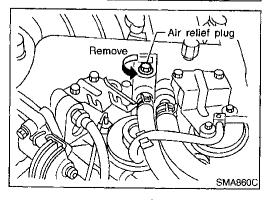

- 1. Set air conditioning system as follows to prevent coolant from remaining in the system.
- a. Turn ignition switch "ON" and set temperature controller to maximum hot position.
- b. Wait 10 seconds before turning ignition switch "OFF".
- 2. Open radiator drain plug at the bottom of radiator.

- Remove radiator filler cap.
   Remove reservoir tank, drain coolant, then clean reservoir tank.
   Install it temporarily.
- Be careful not to allow coolant to contact drive belts.

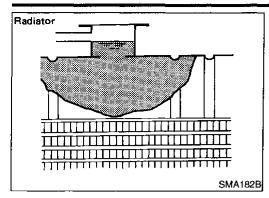

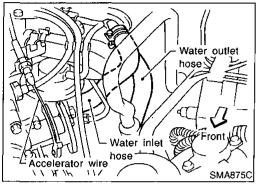

- Open drain plugs on both sides of cylinder block and water pump side, then open air relief plug to drain coolant.
- 5. Check drained coolant for contaminants such as rust, coorrosion or discoloration. If contaminated flush engine cooling system, "Refer to FLUSHING COOLING SYSTEM", MA-16.

#### **ENGINE MAINTENANCE**

Changing Engine Coolant (Cont'd)

#### -REFILLING ENGINE COOLANT—

Install reservoir tank, radiator drain plug, and cylinder block drain plugs.

Apply sealant to the thread of cylinder block drain plug.

(C): 34.3 - 44.1 N·m (3.5 - 4.5 kg-m, 25 - 33 ft-lb)

EM

LC

(GII

Fill radiator slowly with coolant until coolant spills from the air relief plug, then close air relief plug.

Fill radiator and reservoir tank with coolant up to the MAX level and install radiator cap.

FE

#### Air relief plug:

Use Geniune Nissan antifreeze coolant or equivalent mixed with demineralized water/distilled water.

For coolant mixture ratio, refer to "RECOMMENDED FLUIDS AND LUBRICANTS", MA-11.

TF

Coolant capacity (Without reservoir tank):

9.4 \( (10 US qt, 8-1/4 Imp qt)

PD

SU

 $\mathbb{A}\mathbb{X}$ 

BR

ST

Reservoir tank capacity (for MAX level): 1.2 ℓ (1-1/4 US qt, 1-1/8 Imp qt)

Pour coolant through coolant filler neck slowly to allow air in system to escape.

Warm up engine to normal operating temperature.

Run engine at 3,000 rpm for 10 seconds and return to idle 6. speed.

BT

Repeat 2 or 3 times.

Watch coolant temperature gauge so as not to overheat the engine.

MA

7. Stop engine and cool it down.

SC

Cool down using a fan to reduce the time.

8. Remove the radiator filler cap and check coolant level.

If necessary, refill radiator up to filler neck with coolant.

EL

Refill reservoir tank to Max line with coolant.

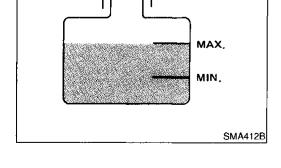

10. Repeat step 10 through step 14 two or more times.

IDX

11. Warm up engine, and check for sound of coolant flow while running engine from idle up to 3,000 rpm with heater temperature control set at several positions between COOL and HOT.

Sound may be noticeable at heater water cock.

12. If sound is heard, bleed air from cooling system by repeating

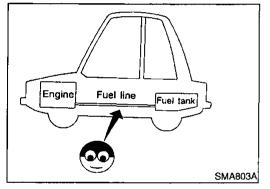

steps 10 through 14 until coolant level no longer drops.

• Clean excess coolant from engine.

#### —FLUSHING COOLING SYSTEM—

1. Open air relief plug.

- 2. Fill radiator with water until water spills from the air relief hole, then close air relief plug. Fill radiator and reservoir tank with water and reinstall radiator cap.
- 3. Run engine and warm it up to normal operating temperature.
- 4. Rev engine two or three times under no-load.
- 5. Stop engine and wait until it cools down.
- 6. Drain water.
- 7. Repeat steps 1 through 6 until clear water begins to drain from radiator.

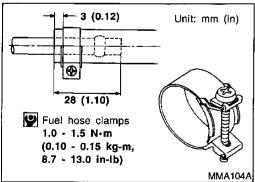

**Checking Fuel Lines** 

NBMA0012

NBMA0011S03

Inspect fuel lines and tank for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration.

If necessary, repair or replace faulty parts.

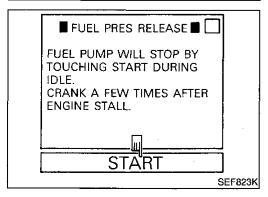

#### **CAUTION:**

Tighten high-pressure rubber hose clamp so that clamp end is 3 mm (0.12 in) from hose end.

Tightening torque specifications are the same for all rubber hose clamps.

Ensure that screw does not contact adjacent parts.

# **Changing Fuel Filter**

**WARNING:** 

NBMA0013

NBMA0013S01

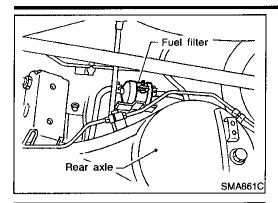

Before removing fuel filter, release fuel pressure from fuel line.

#### (f) WITH CONSULT

1. Start engine.

2. Perform "FUEL PRESSURE RELEASE" in "WORK SUP-PORT" mode to release fuel pressure to zero.

- 3. After engine stalls, crank engine two or three times to make sure that fuel pressure is released.
- 4. Turn ignition switch "OFF".

Fuel pump fuse

Fuel filter

- Loosen fuel hose clamps.
- Replace fuel filter. 6.
- Be careful not to spill fuel over engine compartment. Place a shop towel to absorb fuel.
- Use a high-pressure type fuel filter. Do not use a synthetic resinous fuel filter.
- When tightening fuel hose clamps, refer to "Checking Fuel

LC

EC

NBMA0013S02

- Remove fuel pump fuse.

# Changing Engine Oil WARNING:

Be careful not to burn yourself, as the engine oil is hot.

Prolonged and repeated contact with used engine oil may cause skin cancer: try to avoid direct skin contact with used oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.

Warm up engine, and check for oil leakage from engine components.

- Stop engine and wait for more than 10 minutes.
- Remove drain plug and oil filler cap.

**MA-17** 

4. Drain oil and refill with new engine oil.

#### Oil specification and viscosity

- API SG or SH and Energy Conserving II
- API Certification Mark
- See "RECOMMENDED FLUIDS AND LUBRICANTS", MA-11.

#### Oil capacity (Approximately):

Unit: ℓ (US qt, Imp qt)

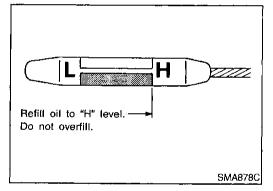

Drain and refill	With oil filter change	3.7 (3-7/8, 3-1/4)
	Without oil filter change	3.4 (3-5/8, 3)
Dry engine (engine	overhaul)	4.2 (4-1/2, 3-3/4)

#### CAUTION:

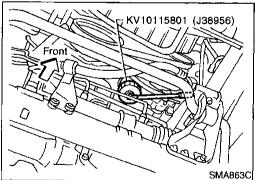

Be sure to clean drain plug and install with new washer.
 Oil pan drain plug:

(3.0 - 4.0 kg-m, 22 - 29 ft-lb)

The refill capacity depends on the oil temperature and drain time. Use these specifications for reference only. Always use the dipstick to determine when the proper amount of oil is in the engine.

- 5. Warm up engine and check area around drain plug and oil filter for oil leakage.
- 6. Stop engine and wait for more than 10 minutes.
- Check oil level.

# **Changing Oil Filter**

NBMA0016

1. Remove oil filter with Tool.

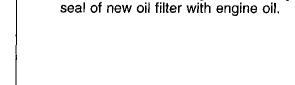

#### **WARNING:**

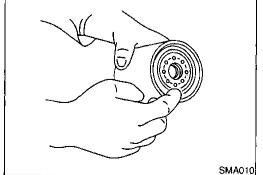

Be careful not to burn yourself, as the engine and engine oil are hot.

The filter is a full-flow cartridge type and is provided with a relief valve.

Refer to LC section ("Oil Filter", "ENGINE LUBRICATION SYSTEM").

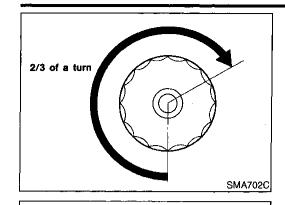

Clean oil filter mounting surface on cylinder block. Coat rubber

#### **ENGINE MAINTENANCE**

Changing Oil Filter (Cont'd)

4. Add engine oil.

#### Refer to Changing Engine Oil.

• Clean excess oil from engine.

GI

**Changing Spark Plugs** 

1. Disconnect ignition wires from spark plugs at boot. Do not pull on the wire.

EG

FE

AT

TF

PD)

LC

2. Remove spark plugs with 16 mm (0.63 in) spark plug wrench.

 Spark plug wrench set is available in tool kit provided on vehicle.

A type is for spark plugs except for No. 6 cylinder. B type is for No. 6 cylinder. Refer to section 995 of PARTS CATALOG for tool kit.

AX

toor kit.

SU

88

ST

RS

87

HA

SC

3. Check type and gap of new spark plug.

Spark plug type:

	Symbol	Make			
Standard type	FR5AP-10	NGK			
Cold type	FR6AP-10	NGK			
Hot type	FR4AP-10	NGK			

Use standard type spark plug for normal condition.

The hot type spark plug is suitable when fouling may occur with the standard type spark plug such as:

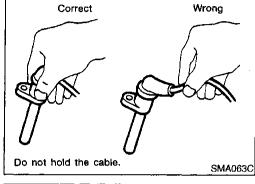

frequent engine starts

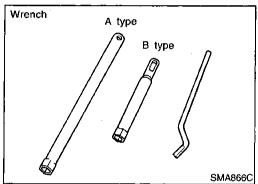

low ambient temperatures

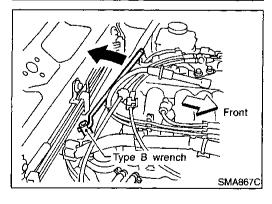

The cold type spark plug is suitable when spark knock may occur with the standard type spark plug such as:

extended highway driving

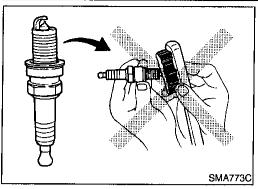

frequent high engine revolution

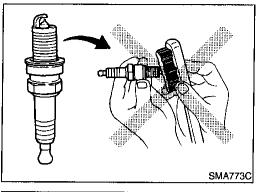

## Changing Spark Plugs (Cont'd)

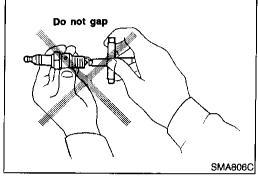

If plug tip is covered with carbon, spark plug cleaner may be used.

Cleaner air pressure:

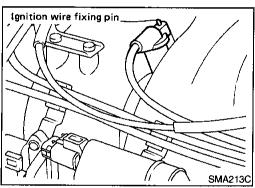

Less than 588 kPa (6 kg/cm<sup>2</sup>, 85 psi)

Cleaning time:

Less than 20 seconds

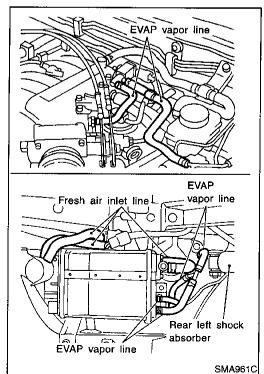

Checking and adjusting plug gap is not required between change intervals.

When installing spark plugs to No. 2 and 4 cylinders, securely fit each ignition wire mounting hole onto the ignition wire fixing pin.

Spark plug:

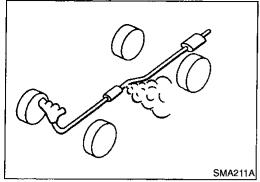

[O]: 20 - 29 N·m (2.0 - 3.0 kg-m, 14 - 22 ft-lb)

# **Checking EVAP Vapor Lines**

- Visually inspect EVAP vapor lines for improper attachment, cracks, damage, loose connections, chafing or deterioration.
- Inspect vacuum relief valve of fuel tank filler cap for clogging, sticking, etc.

Refer to EC section ("EVAPORATIVE EMISSION SYSTEM").

# Front side Hot: 50 - 80°C (122 - 176°F) ₩COLD Reverse side Cold: 30 - 50°C (86 - 122°F) SMA514CA

# Checking Exhaust System

Check exhaust pipes, muffler and mounting for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration.

EC

Æ

AT

LC

NBMA0020

# Checking A/T Fluid

Warm up engine.

2. Check for fluid leakage.

- Before driving, fluid level can be checked at fluid temperatures of 30 to 50°C (86 to 122°F) using "COLD" range on dipstick.
- Park vehicle on level surface and set parking brake.
- Start engine and move selector lever through each gear position. Leave selector lever in "P" position.
- Check fluid level with engine idling.
- Remove dipstick and note reading. If level is at low side of either range, and fluid to the charging pipe.
- Re-insert dipstick into charging pipe as far as it will go.
- Remove dipstick and note reading. If reading is at low side of range, add fluid to the charging pipe.

#### Do not overfill.

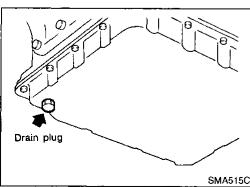

- Drive vehicle for approximately 5 minutes in urban areas.
- Re-check fluid level at fluid temperatures of 50 to 80°C (122 to 176°F) using "HOT" range on dipstick.

 $\mathbb{A}\mathbb{X}$ 

SU

- Check fluid condition.
- If fluid is very dark or smells burned, refer to AT section for checking operation of A/T. Flush cooling system after repair of
- If A/T fluid contains frictional material (clutches, bands, etc.), replace radiator and flush cooler line using cleaning solvent and compressed air after repair of A/T. Refer to LC section ("Radiator", "ENGINE COOLING SYSTEM").

# Changing A/T Fluid

Warm up A/T fluid.

2. Stop engine.

Drain A/T fluid from drain plug and refill with new A/T fluid. Always refill same volume with drained fluid.

#### Fluid grade:

Nissan Matic "D" (Continental U.S. and Alaska) or Genuine Nissan Automatic Transmission Fluid (Canada). Refer to "RECOMMENDED FLUIDS AND **LUBRICANTS", MA-11.** 

Fluid capacity (With torque converter):

# Checking Seat Belts, Buckles, Retractors, Anchors and Adjusters

CAUTION:

 After any collision, inspect all seat belt assemblies, including retractors and other attached hardwares (i.e. guide rail set). Nissan recommends to replace all seat belt assemblies in use during a collision, unless not damaged and properly operating after minor collision.

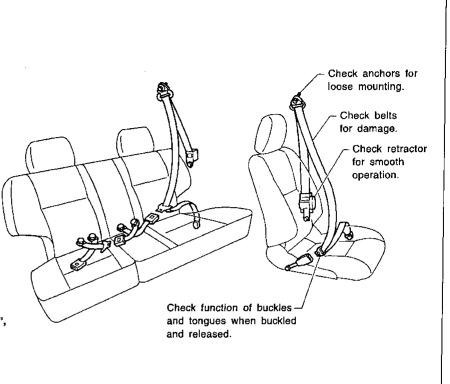

Also inspect seat belt assemblies not in use during a collision, and replace if damaged or improperly operating. Seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal collision where the driver and passenger air bags are deployed.

- If any component of seat belt assembly is questionable, do not repair.
   Replace as seat belt assembly.
- If webbing is cut, frayed, or damaged, replace belt assembly.
- Never oil tongue and buckle.
- Use a genuine seat belt assembly.

For details, refer to "Seat Belt Inspection", "SEAT BELTS" in RS section.
