### PRECAUTIONS

Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

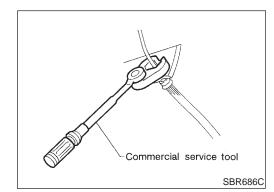

# Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER" used along with a seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. The SRS system composition which is available to INFINITI QX4 is as follows: MA For a frontal collision The Supplemental Restraint System consists of driver air bag module (located in the center of the steering wheel), front passenger air bag module (located on the instrument panel on passenger side), seat belt pre-tensioners, a diagnosis sensor unit, warning lamp, wiring harness and spiral cable. For a side collision LC The Supplemental Restraint System consists of side air bag module (located in the outer side of front seat), satellite sensor, diagnosis sensor unit (one of components of air bags for a frontal collision), wiring harness, warning lamp (one of components of air bags for a frontal collision). EC Information necessary to service the system safely is included in the **RS section** of this Service Manual. WARNING: To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized INFINITI dealer. Improper maintenance, including incorrect removal and installation of the SRS, can lead to per-AT sonal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the RS section. TF Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. Spiral cable and wiring harnesses covered with yellow insulation tape either just before the harness connectors or for the complete harness are related to the SRS. AX

NBBR0002

### **Precautions for Brake System**

- Use brake fluid "DOT 3".
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.
- To clean master cylinder parts, disc brake caliper parts or wheel cylinder parts, use clean brake fluid.
- Never use mineral oils such as gasoline or kerosene. They will ruin rubber parts of hydraulic system.
- Use flare nut wrench when removing and installing brake tubes.
- Always torque brake lines when installing.

### WARNING:

 Clean brakes with a vacuum dust collector to minimize risk of health hazard from powder caused by friction.

IDX

### Wiring Diagrams and Trouble Diagnoses

NBBR0003

When you read wiring diagrams, refer to the following:

- GI-11, "HOW TO READ WIRING DIAGRAMS"
- EL-9, "POWER SUPPLY ROUTING" for power distribution circuit
- When you perform trouble diagnoses, refer to the following:
- GI-35, "HOW TO FOLLOW TEST GROUP IN TROUBLE DIAGNOSES"
- GI-24, "HOW TO PERFORM EFFICIENT DIAGNOSIS FOR AN ELECTRICAL INCIDENT"

### **ON-VEHICLE SERVICE**

IDX

### ON-VEHICLE SERVICE

### Bleeding Brake System

### Bleeding Brake System

### CAUTION:

 Carefully monitor brake fluid level at master cylinder during bleeding operation.

=NBBR0009

- If master cylinder is suspected to have air inside, bleed air from master cylinder first. Refer to "Installation", "MAS-TER CYLINDER", BR-18.
- Fill reservoir with new brake fluid "DOT 3". Make sure it is full at all times while bleeding air out of system.
- Place a container under master cylinder to avoid spillage of brake fluid.
- Turn ignition switch OFF and disconnect ABS actuator and electric unit connectors or battery ground cable.
- Bleed air in the following order.
- 1. LSV air bleeder (4WD)
- 2. Left rear brake
- 3. Right rear brake
- 4. Left front brake
- 5. Right front brake

- 2. Fully depress brake pedal several times.
- 3. With brake pedal depressed, open air bleeder valve to release air.
- 4. Close air bleeder valve.
- 5. Release brake pedal slowly.
- 6. Repeat steps 2. through 5. until clear brake fluid comes out of air bleeder valve.
- 7. Tighten air bleeder valve.

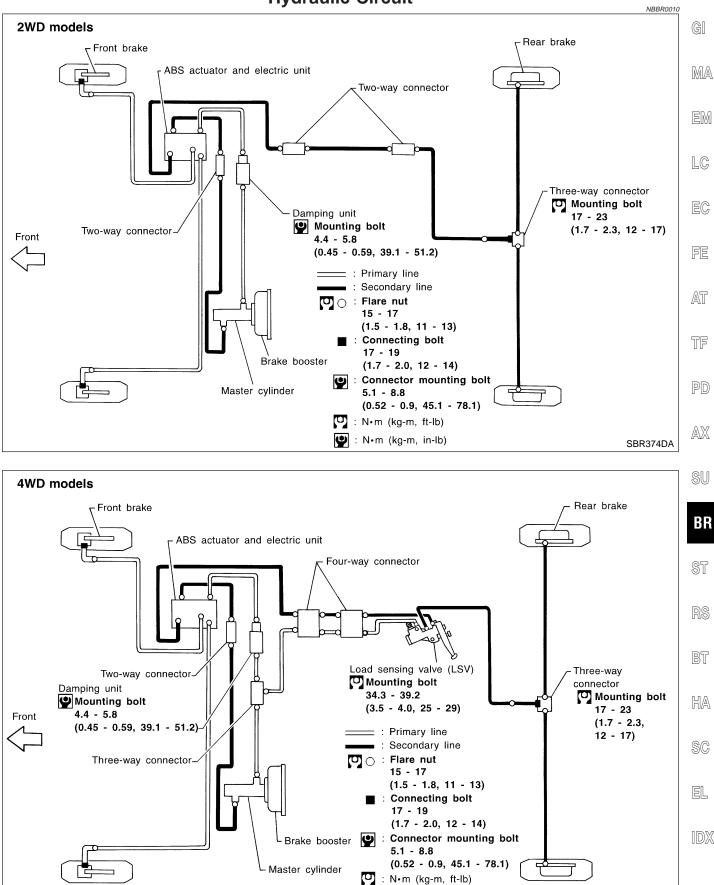

### **BRAKE HYDRAULIC LINE**

Hydraulic Circuit

SBR375DE

### **Hydraulic Circuit**

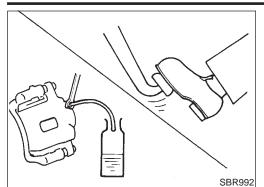

**BR-9** 

Q

: N•m (kg-m, in-lb)

### **BRAKE HYDRAULIC LINE**

### Removal

**CAUTION:** 

• Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.

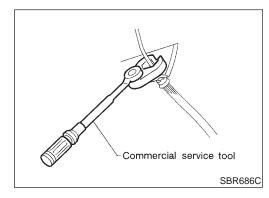

NBBR0011

NBBR0013

- All hoses must be free from excessive bending, twisting and pulling.
- 1. Connect vinyl tube to air bleeder valve.
- 2. Drain brake fluid from each air bleeder valve by depressing brake pedal.
- 3. Remove flare nut connecting brake tube and hose, then withdraw lock spring.
- 4. Cover openings to prevent entrance of dirt whenever disconnecting brake line.

### Inspection

Check brake lines (tubes and hoses) for cracks, deterioration or other damage. Replace any damaged parts.

### Installation

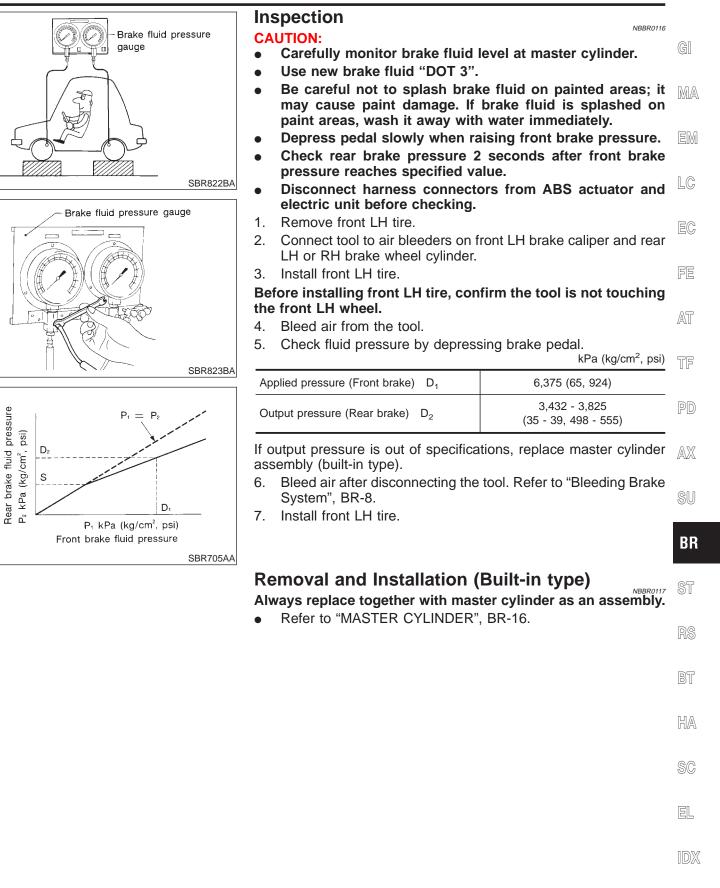

### **CAUTION:**

- Refill with new brake fluid "DOT 3".
- Never reuse drained brake fluid.
- Tighten all flare nuts and connecting bolts.
   Flare nut:

   15 17 N·m (1.5 1.8 kg-m, 11 13 ft-lb)
   Connecting bolt:
  - 🖸 : 17 19 N·m (1.7 2.0 kg-m, 12 14 ft-lb)
- 2. Refill until new brake fluid comes out of each air bleeder valve.
- 3. Bleed air. Refer to "Bleeding Brake System", BR-8.

### **PROPORTIONING VALVE (2WD)**

Inspection

### Inspection

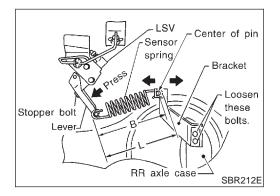

### CAUTION:

- Carefully monitor brake fluid level at master cylinder.
- Use new brake fluid "DOT 3".
- Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on paint areas, wash it away with water immediately.

NBBR0014

NBBR0015

- Depress pedal slowly when raising front brake pressure.
- Check rear brake pressure 2 seconds after front brake pressure reaches specified value.
- Disconnect harness connectors from ABS actuator and electric unit before checking.

- Park vehicle on a level surface with vehicle unloaded\*.
   \* Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.
- Press a lever to the stopper bolt, then check length "B" as follows:

Length "B"	Reference (Length "L")
207.7 mm (8.18 in)	217.3 mm (8.56 in)

3. If length "B" is not within specification, adjust sensor spring length.

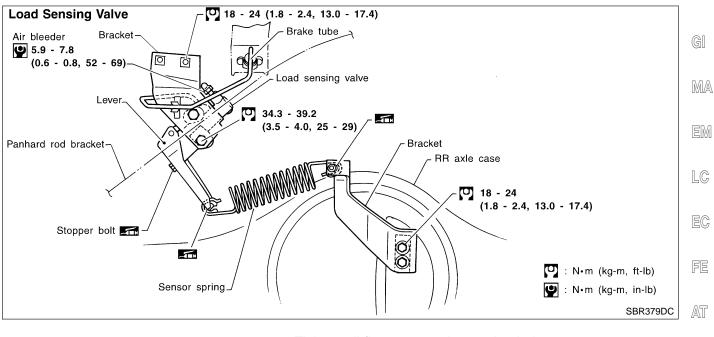

### **Removal and Installation**

### CAUTION:

- Refill with new brake fluid "DOT 3".
- Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.
- Do not reuse Load Sensing Valve once it is disassembled.
- Replace damaged Load Sensing Valve as an assembly.
- When disassembling, apply multi-purpose grease to all rubbing areas.

### LOAD SENSING VALVE (4WD)

Removal and Installation (Cont'd)

- Tighten all flare nuts and mounting bolts.
   Flare nut:
   : 15 17 N·m (1.5 1.8 kg-m, 11 13 ft-lb)
- 2. Refill until new brake fluid comes out of each air bleeder valve. PD
- 3. Bleed air. Refer to "Bleeding Brake System", BR-8.

**BR-13** 

### BRAKE PEDAL AND BRACKET

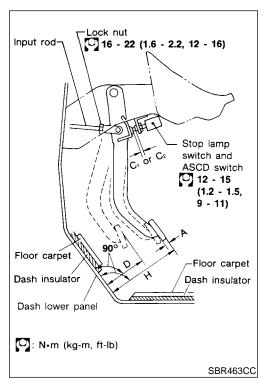

### **Removal and Installation**

### Inspection

Check brake pedal for following items.

- Brake pedal bend
- Clevis pin deformation
- Crack of any welded portion
- Crack or deformation of clevis pin stopper

### Adjustment

Check brake pedal free height from metal panel.

H: Free height

Refer to SDS (BR-83).

D: Depressed height

Refer to SDS (BR-83).

Under force of 490 N (50 kg, 110 lb) with engine running

NBBR0017

NBBR0018

 $C_1$ ,  $C_2$ : Clearance between pedal stopper and threaded end of stop lamp switch and ASCD switch

0.3 - 1.0 mm (0.012 - 0.039 in)

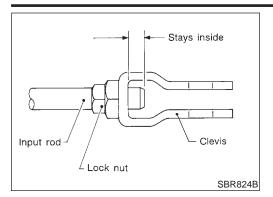

A: Pedal free play

1 - 3 mm (0.04 - 0.12 in)

If necessary, adjust brake pedal free height.

**BR-14** 

### **BRAKE PEDAL AND BRACKET**

1. Loosen lock nut and adjust pedal free height by turning brake booster input rod. Then tighten lock nut.

### Make sure that tip of input rod stays inside.

- Adjust clearance "C<sub>1</sub>" and "C<sub>2</sub>" with stop lamp switch and ASCD switch respectively. Then tighten lock nuts.
- 3. Check pedal free play.

### Make sure that stop lamp is off when pedal is released.

4. Check brake pedal's depressed height while engine is running. EM If depressed height is below specified value, check brake system for leaks, accumulation of air or any damage to components (master cylinder, wheel cylinder, etc.). Then make necessary repairs.

Adjustment (Cont'd)

### **MASTER CYLINDER**

### Removal

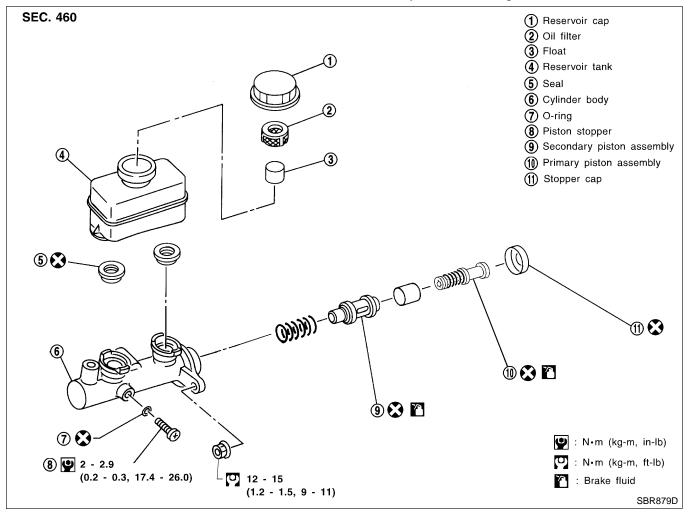

### **CAUTION:**

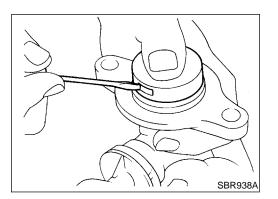

• Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.

NBBR0019

NBBR0020

- In the case of brake fluid leakage from the master cylinder, disassemble the cylinder. Then check piston cups for deformation or scratches and replace necessary parts.
- 1. Connect a vinyl tube to air bleeder valve.
- 2. Drain brake fluid from each air bleeder valve, depressing brake pedal to empty fluid from master cylinder.
- 3. Remove brake pipe flare nuts.
- 4. Remove master cylinder mounting nuts.

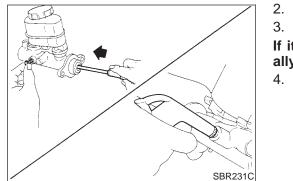

### Disassembly

1. Bend claws of stopper cap outward.

### **MASTER CYLINDER**

Remove piston stopper while piston is pushed into cylinder.
 Remove piston assemblies.
 If it is difficult to remove secondary piston assembly, gradually apply compressed air through fluid outlet.

# Draw out reservoir tank.

EM

MA

LC

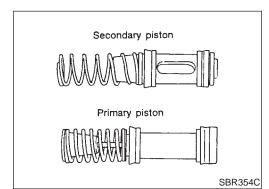

### LG

**Inspection** Check master cylinder inner wall for pin holes or scratches.

FE

AT

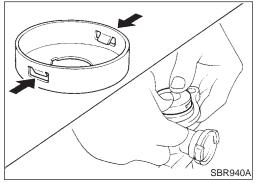

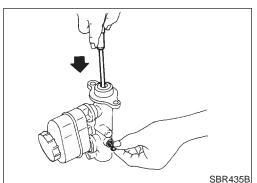

### Assembly

- 1. Insert secondary piston assembly. Then insert primary piston PD assembly.
- Pay attention to direction of piston cups in figure at left. Also, insert pistons squarely to avoid scratches on cylinder bore.
- Pay attention to alignment of secondary piston slit with suvely valve stopper mounting hole of cylinder body.

BR

2.	Install stopper cap.	ST
	fore installing stopper cap, ensure that claws are bent ward.	91
3.	Push reservoir tank seals into cylinder body.	RS

4. Push reservoir tank into cylinder body.

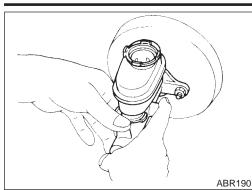

- BT
- HA
- 5. Install valve stopper while piston is pushed into cylinder.

EL

SC

IDX

### **MASTER CYLINDER**

### Installation

### **CAUTION:**

- Refill with new brake fluid "DOT 3".
- Never reuse drained brake fluid.
- 1. Place master cylinder onto brake booster and secure mounting nuts lightly.

NBBR0023

2. Torque mounting nuts.

### 🖸 : 12 - 15 N·m (1.2 - 1.5 kg-m, 9 - 11 ft-lb)

- 3. Fill up reservoir tank with new brake fluid.
- 4. Plug all ports on master cylinder with fingers to prevent air suction while releasing brake pedal.
- 5. Have driver depress brake pedal slowly several times until no air comes out of master cylinder.
- 6. Fit brake lines to master cylinder.
- 7. Tighten flare nuts.

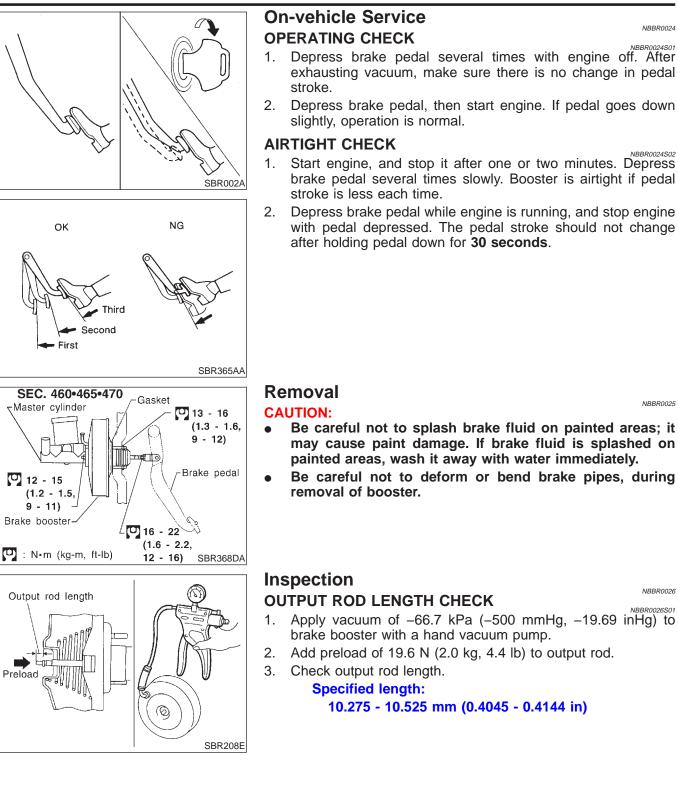

### 🖸 : 15 - 17 N·m (1.5 - 1.8 kg-m, 11 - 13 ft-lb)

8. Bleed air. Refer to "Bleeding Brake System", BR-8.

### **BRAKE BOOSTER**

### Installation

### CAUTION:

• Be careful not to deform or bend brake pipes during installation of booster.

=NBBR0027

- Replace clevis pin if damaged.
- Refill with new brake fluid "DOT 3".
- Never reuse drained brake fluid.
- Take care not to damage brake booster mounting bolt thread when installing. Due to the narrow angle of installation, the threads can be damaged by the dash panel.
- 1. Before fitting booster, temporarily adjust clevis to dimension shown.
- 2. Fit booster, then secure mounting nuts (brake pedal bracket to brake booster) lightly.
- 3. Connect brake pedal and booster input rod with clevis pin.
- 4. Secure mounting nuts.

### Specification: 13 - 16 N·m (1.3 - 1.6 kg-m, 9 - 12 ft-lb)

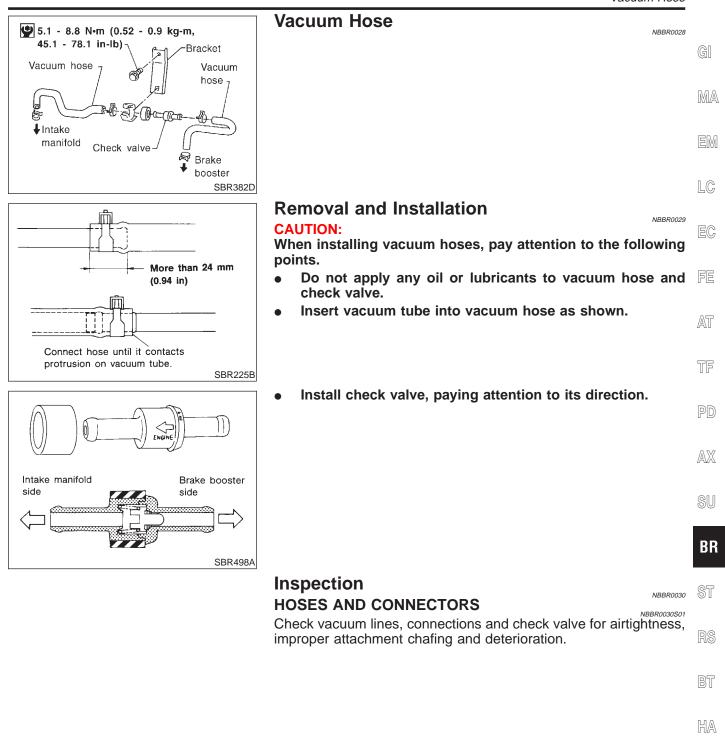

- 5. Install master cylinder. Refer to "Installation" in "MASTER CYLINDER", BR-18.
- 6. Adjust brake pedal height and free play. Refer to "Adjustment" in "BRAKE PEDAL AND BRACKET", BR-14.
- 7. Secure lock nut for clevis.

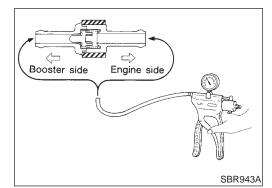

### 🖸 : 16 - 22 N·m (1.6 - 2.2 kg-m, 12 - 16 ft-lb)

8. Bleed air. Refer to "Bleeding Brake System", BR-8.

### **VACUUM PIPING**

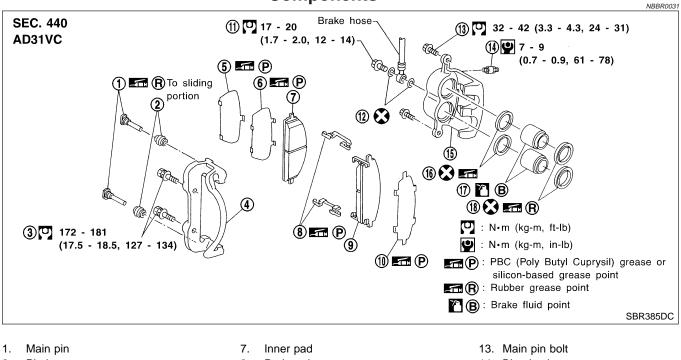

CHECK VALVE Check vacuum with a vacu	uum pump.	NBBR0030S02	SC
Connect to booster side	Vacuum should exist.		EL
Connect to engine side	Vacuum should not exist.		
			IDX

**BR-21** 

### Components

- 2. Pin boot
- 3. Torque member fixing bolt
- 4. Torque member
- 5. Shim cover
- 6. Inner shim

- 8. Pad retainer
- 9. Outer pad
- 10. Outer shim
- 11. Connecting bolt
- 12. Copper washer

- 14. Bleed valve
- 15. Cylinder body
- 16. Piston seal
- 17. Piston
- 18. Piston boot

NBBR0032

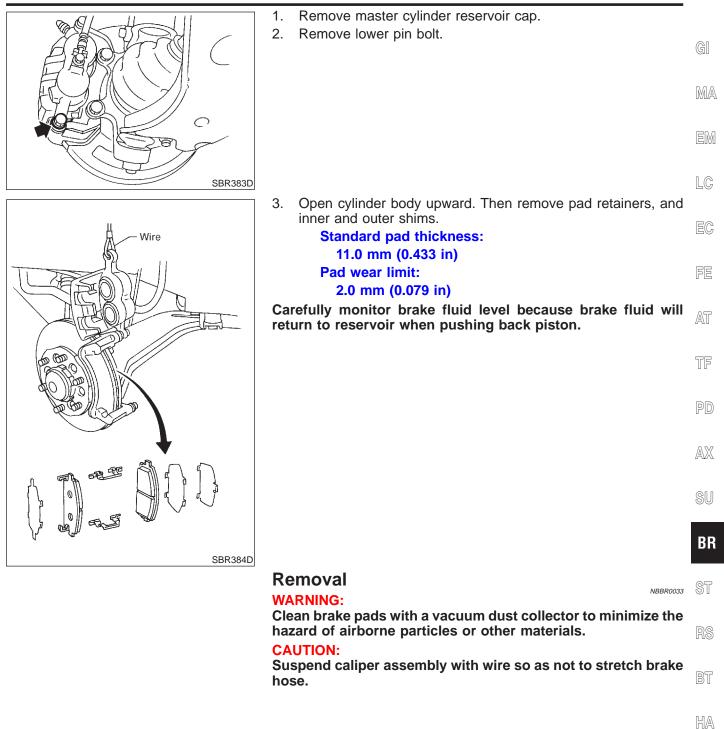

### Pad Replacement

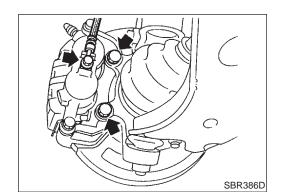

### WARNING:

Clean brakes with a vacuum dust collector to minimize the hazard of airborne particles or other materials.

### **CAUTION:**

- When cylinder body is open, do not depress brake pedal, or piston will pop out.
- Be careful not to damage piston boot or get oil on rotor. Always replace shims when replacing pads.
- If shims are rusted or show peeling of the rubber coat, replace them with new shims.
- It is not necessary to remove connecting bolt except for disassembly or replacement of caliper assembly. In this case, suspend cylinder body with wire so as not to stretch brake hose.
- Carefully monitor brake fluid level because brake fluid will return to reservoir when pushing back piston.

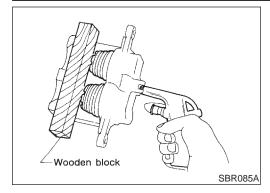

Remove torque member fixing bolts and connecting bolt. SC It is not necessary to remove connecting bolt except for disassembly or replacement of caliper assembly. In this case, suspend caliper assembly with wire so as not to stretch brake hose.

IDX

### Disassembly

### Disassembly

### WARNING:

### Do not place your fingers in front of piston.

### CAUTION:

### Do not scratch or score cylinder wall.

- 1. Push out piston with dust seal with compressed air.
- 2. Remove piston seal with a suitable tool.

### Inspection CALIPER Cylinder Body

NBBR0035

NBBR0034

NBBR0035S01

- Check inside surface of cylinder for score, rust, wear, damage or presence of foreign objects. If any of the above conditions are observed, replace cylinder body.
- Minor damage from rust or foreign objects may be eliminated by polishing surface with a fine emery paper. Replace cylinder body if necessary.

### **CAUTION:**

### Use brake fluid to clean. Never use mineral oil.

### Piston

Check piston for score, rust, wear, damage or presence of foreign objects. Replace if any of the above conditions are observed.

### **CAUTION:**

Piston sliding surface is plated. Do not polish with emery paper even if rust or foreign objects are stuck to sliding surface.

### Slide Pin, Pin Bolt and Pin Boot

Check for wear, cracks, rust or other damage. Replace if any of the above conditions are observed.

### ROTOR

### Runout

NBBR0035S02

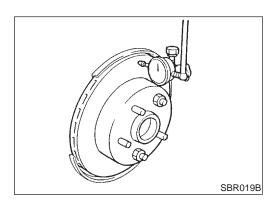

- 1. Secure rotor to wheel hub with at least two nuts (M12  $\times$  1.25).
- 2. Check runout using a dial indicator.

Make sure that wheel bearing axial end play is within the specifications before measuring. Refer to AX-4, "Front Wheel Bearing".

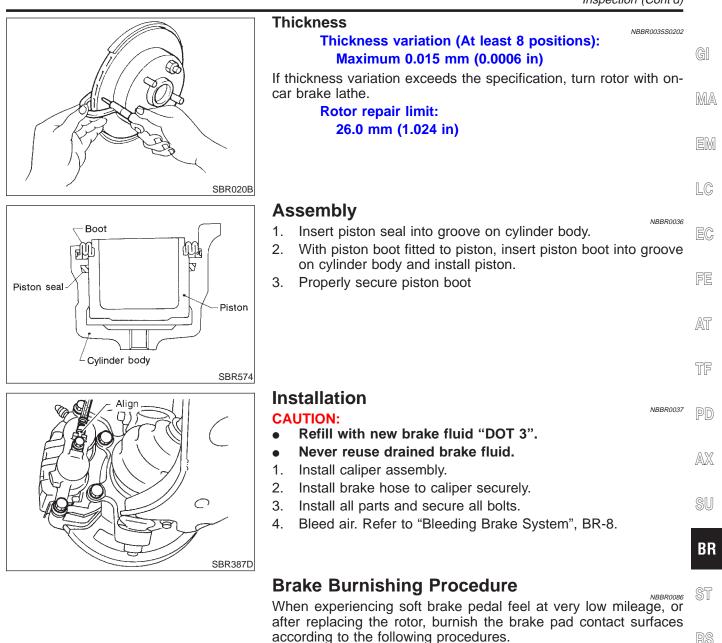

### Maximum runout:

### 0.1 mm (0.004 in)

- 3. If the runout is out of specification, find minimum runout position as follows:
  - a. Remove nuts and rotor from wheel hub.
  - b. Shift the rotor one hole and secure rotor to wheel hub with nuts.
  - c. Measure runout.
  - d. Repeat steps a. to c. so that minimum runout position can be found.
  - 4. If the runout is still out of specification, turn rotor with on-car brake lathe ("MAD, DL-8700", "AMMCO 700 and 705" or equivalent).

**BR-24** 

### **CAUTION:**

Only perform this procedure under safe road and traffic conditions. Use extreme caution.

- 1. Drive the vehicle on a straight smooth road at 50 km/h (31 MPH).
- Use medium brake pedal/foot effort to bring the vehicle to a complete stop from 50 km/h (31 MPH). Adjust brake pedal/foot pressure such that vehicle stopping time equals 3 to 5 seconds.
- 3. To cool the brake system, drive the vehicle at 50 km/h (31 MPH) for 1 minute without stopping.
- 4. Repeat steps 1 to 3 10 times or more to complete the burnishing procedure.

NBBR0039

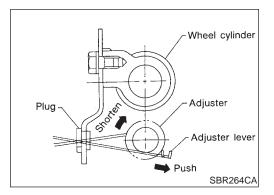

### Removal

### WARNING:

Clean brake lining with a vacuum dust collector to minimize the hazard of airborne asbestos or other materials.

### **CAUTION:**

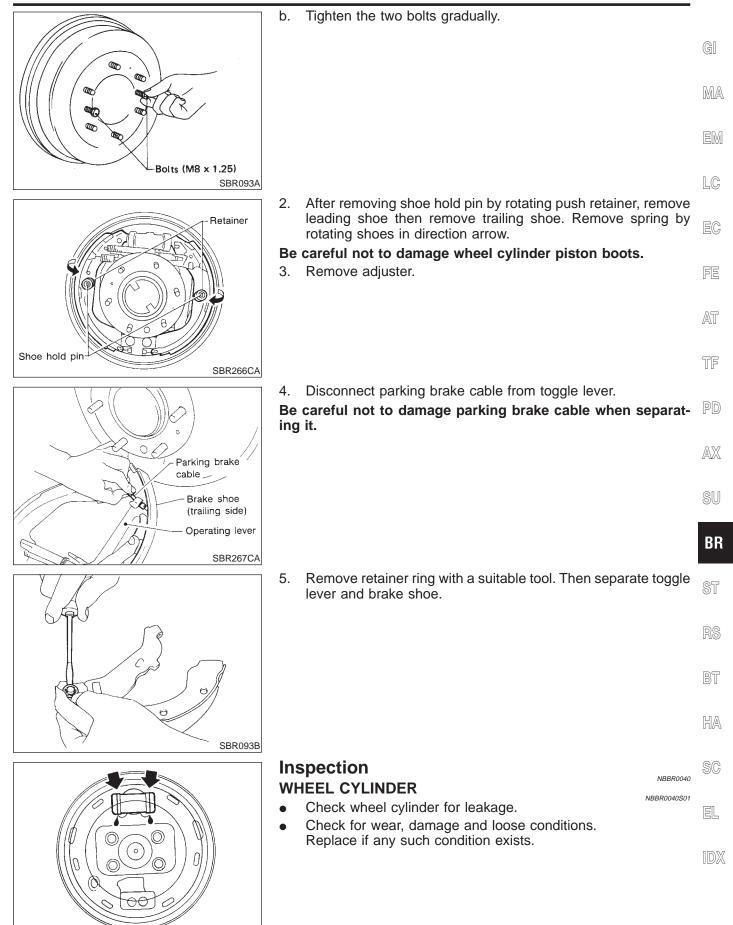

Make sure parking brake lever is released completely.

- 1. Release parking brake lever fully, then remove drum. If drum is hard to remove, the following procedures should be carried out.
- a. Remove plug. Then shorten adjuster to make clearance between brake shoe and drum as shown.

### **REAR DRUM BRAKE**

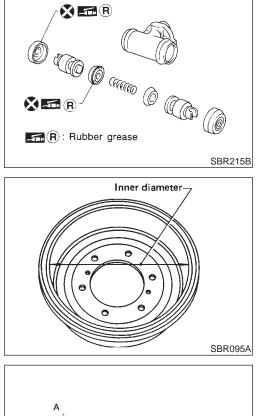

Removal (Cont'd)

SBR816B

### Wheel Cylinder Overhaul

### REAR DRUM BRAKE

### Wheel Cylinder Overhaul

- Check all internal parts for wear, rust and damage. Replace if necessary.
- Pay attention so as not to scratch cylinder when installing pistons.

### Inspection

### DRUM

### NBBR0042 NBBR0042S01

Maximum inner diameter: 296.5 mm (11.67 in) Out-of-roundness: 0.03 mm (0.0012 in) or less

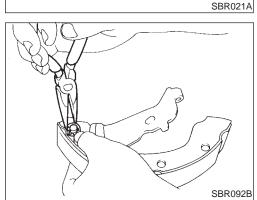

- Contact surface should be fine finished with No. 120 to 150 emery paper.
- Using a drum lathe, lathe brake drum if it shows scoring, partial wear or stepped wear.
- After brake drum has been completely reconditioned or replaced, check drum and shoes for proper contact pattern.

### LINING

Check lining thickness.

Standard lining thickness: 6.1 mm (0.240 in) Lining wear limit (A): 1.5 mm (0.059 in)

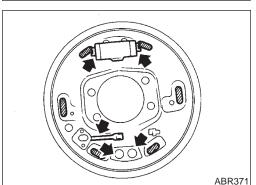

### Installation

Always perform shoe clearance adjustment. Refer to BR-31.

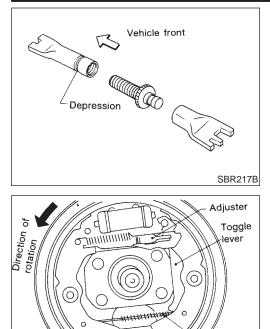

1. Fit toggle lever to brake shoe (trailing side) with retainer ring.

2. Apply brake grease to the contact areas (indicated by arrows and hatching) shown at left.

### DESCRIPTION

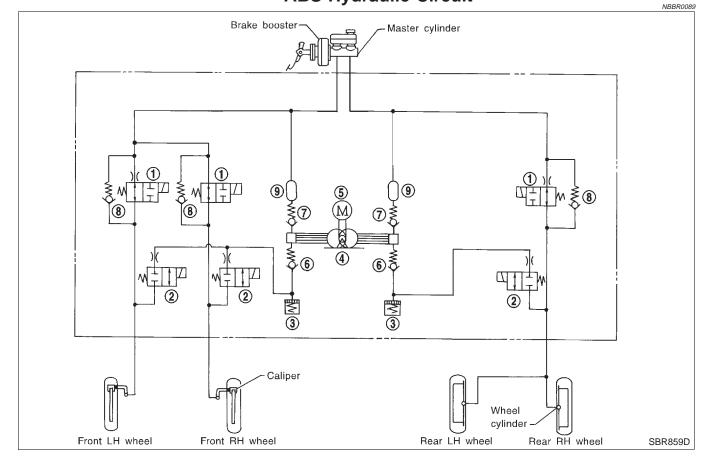

### Purpose

The Anti-Lock Brake System (ABS) consists of electronic and hydraulic components. It allows for control of braking force so locking of the wheels can be avoided.

- 1) Improves proper tracking performance through steering wheel operation.
- 2) Eases obstacle avoidance through steering wheel operation.
- 3) Improves vehicle stability.

### Operation

- When the vehicle speed is less than 10 km/h (6 MPH) this system does not work.
- The Anti-Lock Brake System (ABS) has a self-test function. The system turns on the ABS warning lamp for 1 second each time the ignition switch is turned "ON". After the engine is started, the ABS warning lamp turns off. The system performs a test the first time the vehicle reaches 6 km/h (4 MPH). A mechanical noise may be heard as the ABS performs this self-test. This is a normal part of the self-test feature. If a malfunction is found during this check, the ABS warning lamp will stay on.
- While driving, a mechanical noise may be heard during ABS operation. This is a normal condition.

### **ABS Hydraulic Circuit**

- 1. Inlet solenoid valve
- 2. Outlet solenoid valve
- 3. Reservoir

- 4. Pump
- 5. Motor
- 6. Inlet valve

- 7. Outlet valve
- 8. Bypass check valve
- 9. Damper

### System Description SENSOR

The sensor unit consists of a gear-shaped sensor rotor and a sensor element. The element contains a bar magnet around which a AX coil is wound. The front sensors are installed on the front spindles and the rear sensors are installed on the rear spindles. As the wheel rotates, the sensor generates a sine-wave pattern. The fre-SU quency and voltage increase(s) as the rotating speed increases.

### CONTROL UNIT (BUILT-IN ABS ACTUATOR AND ELECTRIC UNIT)

The control unit computes the wheel rotating speed by the signal current sent from the sensor. Then it supplies a DC current to the actuator solenoid valve. It also controls ON-OFF operation of the valve relay and motor relay. If any electrical malfunction should be detected in the system, the control unit causes the warning lamp to light up. In this condition, the ABS will be deactivated by the control unit, and the vehicle's brake system reverts to normal operation. (For control unit layout, refer to ABS ACTUATOR AND HA ELECTRIC UNIT, BR-33.)

### ABS ACTUATOR AND ELECTRIC UNIT The ABS actuator and electric unit contains: An electric motor and pump Two relays

- Six solenoid valves, each inlet and outlet for - LH front
  - RH front
  - Rear
- ABS control unit

### BR

ST

BT

SC

EL

IDX

NBBR0091S03

### DESCRIPTION

This component controls the hydraulic circuit and increases, holds or decreases hydraulic pressure to all or individual wheels. The ABS actuator and electric unit is serviced as an assembly.

**ABS Actuator Operation** 

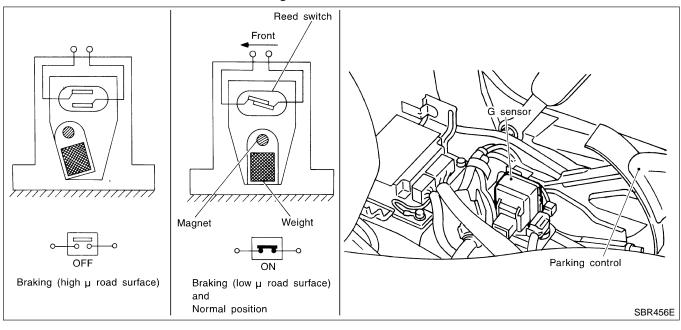

NBBR0091S0301

ABS

		Inlet solenoid valve	Outlet solenoid valve	
Normal brake operation		OFF (Open)	OFF (Closed)	Master cylinder brake fluid pressure is directly transmitted to caliper via the inlet solenoid valve.
ABS operation	Pressure hold	ON (Closed)	OFF (Closed)	Hydraulic circuit is shut off to hold the caliper brake fluid pressure.
	Pressure decrease	ON (Closed)	ON (Open)	Caliper brake fluid is sent to reservoir via the out- let solenoid valve. Then it is pushed up to the master cylinder by pump.
	Pressure increase	OFF (Open)	OFF (Closed)	Master cylinder brake fluid pressure is transmitted to caliper.

### G SENSOR (4WD MODELS ONLY)

The G sensor senses deceleration during braking to determine whether the vehicle is being driven on a high  $\mu$  road (asphalt road, etc.) or a low  $\mu$  road (snow-covered road, etc.). It then sends a signal to the ABS control unit.

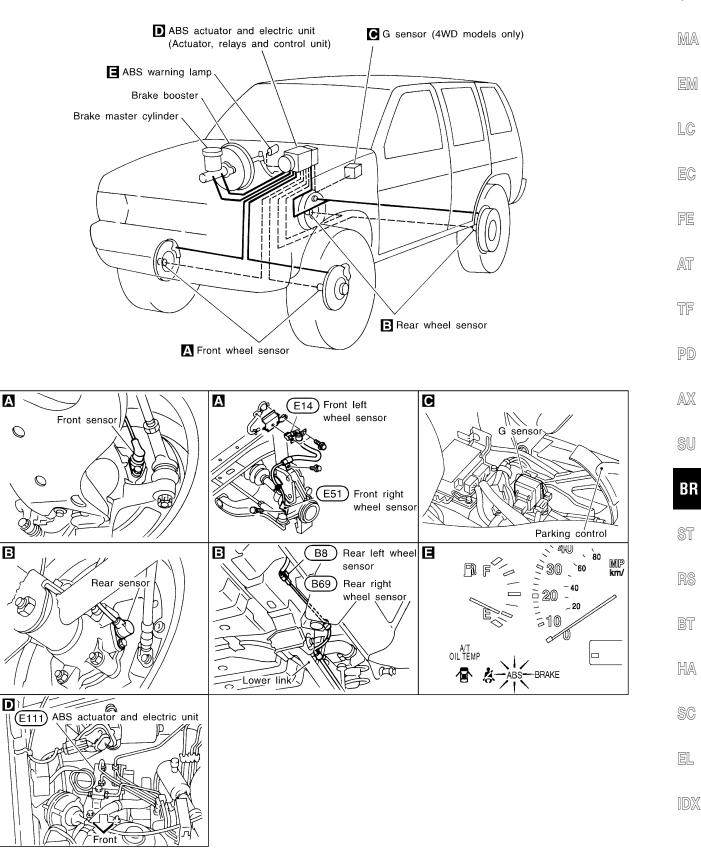

The reed switch turns on when it is affected by a magnetic field. During sudden deceleration (braking on a high  $\mu$  road), the weight moves and the magnet in the weight moves away from the reed switch. The magnetic field then diminishes and the reed switch turns off.

Self-diagnosis (Cont'd)

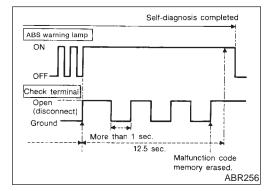

## HOW TO READ SELF-DIAGNOSTIC RESULTS (MALFUNCTION CODES)

Determine the code No. by counting the number of times the warning lamp flashes on and off.

ABS

- 2. When several malfunctions occur at one time, up to three code numbers can be stored; the latest malfunction will be indicated first.
- 3. The indication begins with the start code 12. After that a maximum of three code numbers appear in the order of the latest one first. The indication then returns to the start code 12 to repeat (the indication will stay on for five minutes at the most).
- 4. The malfunction code chart is given on page BR-54.

## HOW TO ERASE SELF-DIAGNOSTIC RESULTS (MALFUNCTION CODES)

- 1. Disconnect the check terminal from ground (ABS warning lamp will stay lit).
- 2. Within 12.5 seconds, ground the check terminal three times. Each terminal ground must last more than 1 second. The ABS warning lamp goes out after the erase operation has been completed.
- 3. Perform self-diagnosis again. Refer to BR-41. Only the startcode should appear, no malfunction codes.

#### **CAUTION:**

Be careful not to damage sensor edge and sensor rotor teeth. When removing the front or rear wheel hub assembly, disconnect the ABS wheel sensor from the assembly and move it away.

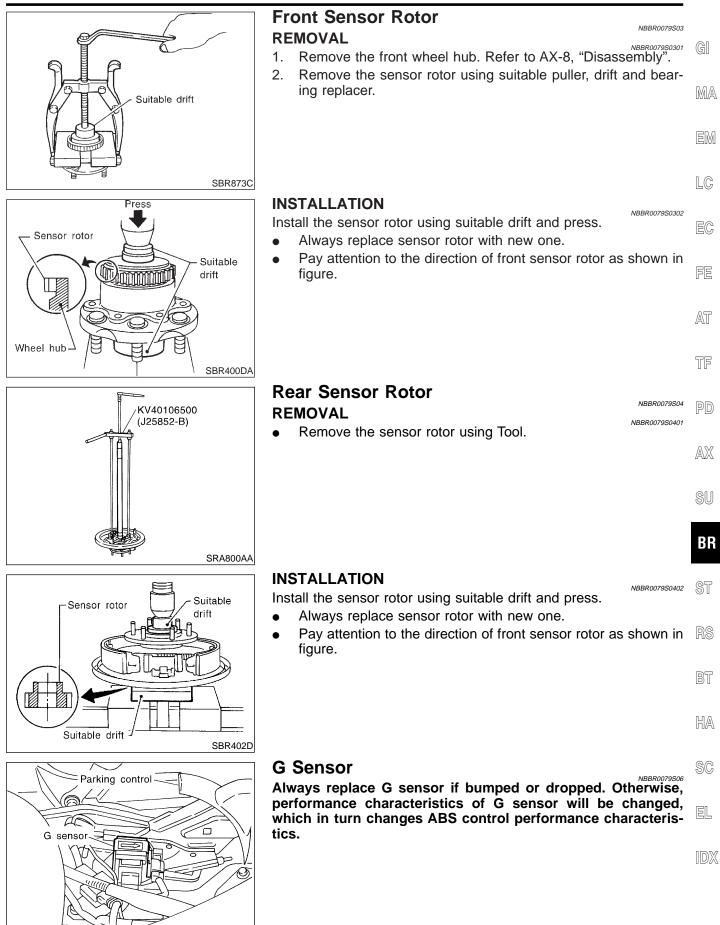

#### **BR-80**

## **REMOVAL AND INSTALLATION**

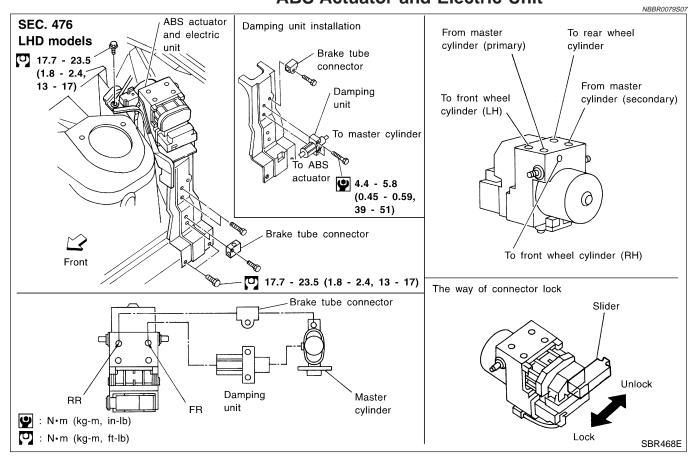

SBR503E

#### **REMOVAL AND INSTALLATION**

#### REMOVAL

NBBR0079S0701

NBBR0079S0702

- Disconnect battery cable.
   Drain brake fluid. Refer to "Changing Brake Fluid", BR-7.
- Remove mounting bracket fixing bolts and nuts.
- 4. Disconnect connector, brake pipes and remove fixing nuts and actuator ground cable.

#### INSTALLATION

#### CAUTION:

After installation, refill brake fluid. Then bleed air. Refer to "Bleeding Brake System", BR-8.

1. Tighten actuator ground cable.

#### Place ground cable at a notch of mounting bracket.

- 2. Connect brake pipes temporarily.
- 3. Tighten fixing bolts and nuts.
- 4. Tighten brake pipes.
- 5. Connect connector and battery cable.
