#### **PRECAUTIONS**

Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

#### Supplemental Restraint System (SRS) "AIR **BAG" and "SEAT BELT PRE-TENSIONER"**

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER" used along with a seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. The SRS system composition which is available to INFINITI QX4 is as follows:

- For a frontal collision
  - The Supplemental Restraint System consists of driver air bag module (located in the center of the steering wheel), front passenger air bag module (located on the instrument panel on passenger side), seat belt pre-tensioners, a diagnosis sensor unit, warning lamp, wiring harness and spiral cable.

MA

- For a side collision
  - The Supplemental Restraint System consists of side air bag module (located in the outer side of front seat), satellite sensor, diagnosis sensor unit (one of components of air bags for a frontal collision), wiring harness, warning lamp (one of components of air bags for a frontal collision).

LC

Information necessary to service the system safely is included in the **RS section** of this Service Manual.

EC

#### **WARNING:**

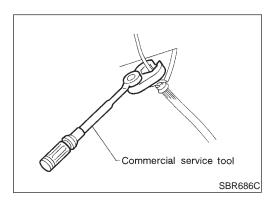

To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized INFINITI dealer.

Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the RS section.

Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow harness connector (and by yellow harness protector or yellow insulation tape before the harness connectors).

AX

#### BR

#### **Precautions for Brake System**

- Use brake fluid "DOT 3".
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.

To clean master cylinder parts, disc brake caliper parts or wheel cylinder parts, use clean brake fluid.

Never use mineral oils such as gasoline or kerosene. They will ruin rubber parts of hydraulic system.

Use flare nut wrench when removing and installing brake tubes.

SC

Always torque brake lines when installing.

Clean brakes with a vacuum dust collector to minimize risk of health hazard from powder caused by friction.

#### **PRECAUTIONS**

Wiring Diagrams and Trouble Diagnoses

#### Wiring Diagrams and Trouble Diagnoses

When you read wiring diagrams, refer to the following:

- GI-11, "HOW TO READ WIRING DIAGRAMS"
- EL-10, "POWER SUPPLY ROUTING" for power distribution circuit

When you perform trouble diagnoses, refer to the following:

- GI-35, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"
- GI-24, "HOW TO PERFORM EFFICIENT DIAGNOSIS FOR AN ELECTRICAL INCIDENT"

#### Checking Brake Fluid Level

Check fluid level in reservoir tank. It should be between Max and Min lines on reservoir tank.

If fluid level is extremely low, check brake system.

If the brake warning lamp comes on, check brake fluid level switch and parking brake switch.

MA

LC

#### **Checking Brake Line**

#### **CAUTION:**

If leakage occurs around joints, retighten or, if necessary, replace damaged parts.

Check brake lines (tubes and hoses) for cracks, deterioration or other damage. Replace any damaged parts.

Check for oil leakage by fully depressing brake pedal while engine is running.

AT

#### **Changing Brake Fluid**

SBR389C

Refill with new brake fluid "DOT 3".

Always keep fluid level higher than minimum line on reservoir tank.

NBBR0008

Never reuse drained brake fluid.

Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.

SU

BR

Clean inside of reservoir tank, and refill with new brake fluid.

Connect a vinyl tube to each air bleeder valve.

Drain brake fluid from each air bleeder valve by depressing brake pedal.

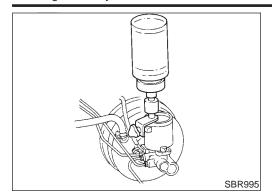

Refill until brake fluid comes out of each air bleeder valve. Use same procedure as in bleeding hydraulic system to refill brake fluid.

Refer to "Bleeding Brake System", BR-8.

HA

SC

EL

#### **Bleeding Brake System**

#### **CAUTION:**

Carefully monitor brake fluid level at master cylinder during bleeding operation.

=NBBR0009

 If master cylinder is suspected to have air inside, bleed air from master cylinder first. Refer to "Installation", "MAS-TER CYLINDER", BR-16.

• Fill reservoir with new brake fluid "DOT 3". Make sure it is full at all times while bleeding air out of system.

 Place a container under master cylinder to avoid spillage of brake fluid.

• Turn ignition switch OFF and disconnect ABS actuator and electric unit connectors or battery ground cable.

• Bleed air in the following order.

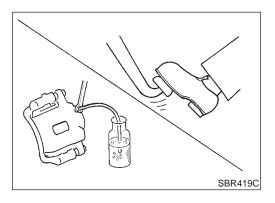

1. LSV air bleeder (4WD)

2. Left rear brake

3. Right rear brake

4. Left front brake

5. Right front brake

1. Connect a transparent vinyl tube to air bleeder valve.

2. Fully depress brake pedal several times.

3. With brake pedal depressed, open air bleeder valve to release air

4. Close air bleeder valve.

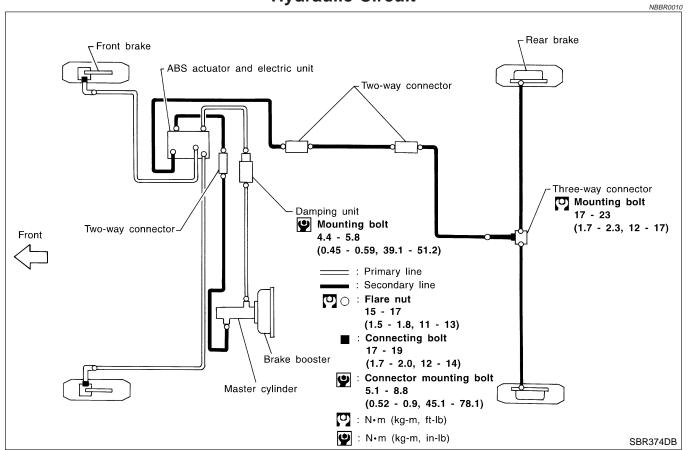

5. Release brake pedal slowly.

6. Repeat steps 2. through 5. until clear brake fluid comes out of air bleeder valve.

7. Tighten air bleeder valve.

(0.7 - 0.9 kg-m, 61 - 78 in-lb)

TF

#### Removal

#### **CAUTION:**

 Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.

NBBR0011

- All hoses must be free from excessive bending, twisting and pulling.
- 1. Connect vinyl tube to air bleeder valve.
- Drain brake fluid from each air bleeder valve by depressing brake pedal.
- Remove flare nut connecting brake tube and hose, then withdraw lock spring.
- Cover openings to prevent entrance of dirt whenever disconnecting brake line.

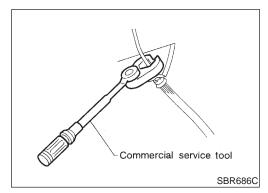

SC

HA

#### Inspection

VIRREDO01

Check brake lines (tubes and hoses) for cracks, deterioration or other damage. Replace any damaged parts.

#### Installation

NBBR0013

#### **CAUTION:**

- Refill with new brake fluid "DOT 3".
- Never reuse drained brake fluid.
- 1. Tighten all flare nuts and connecting bolts.

Flare nut:

◯ : 15 - 17 N·m (1.5 - 1.8 kg-m, 11 - 13 ft-lb)

**Connecting bolt:** 

: 17 - 19 N·m (1.7 - 2.0 kg-m, 12 - 14 ft-lb)

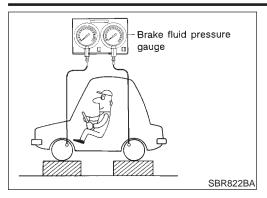

- 2. Refill until new brake fluid comes out of each air bleeder valve.
- 3. Bleed air. Refer to "Bleeding Brake System", BR-8.

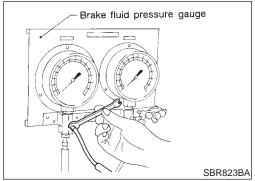

NBBR0116

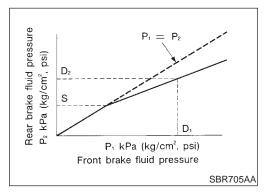

EM

EC

AT

#### Inspection

#### **CAUTION:**

Carefully monitor brake fluid level at master cylinder.

Use new brake fluid "DOT 3".

 Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on paint areas, wash it away with water immediately.

Depress pedal slowly when raising front brake pressure.

• Check rear brake pressure 2 seconds after front brake pressure reaches specified value.

 Disconnect harness connectors from ABS actuator and electric unit before checking.

Remove front LH tire.

2. Connect tool to air bleeders on front LH brake caliper and rear LH or RH brake wheel cylinder.

Install front LH tire.

## Before installing front LH tire, confirm the tool is not touching the front LH wheel.

4. Bleed air from the tool.

5. Check fluid pressure by depressing brake pedal.

kPa (kg/cm², psi)

Applied pressure (Front brake) D <sub>1</sub>	6,375 (65, 924)	
Output pressure (Rear brake) D <sub>2</sub>	3,432 - 3,825 (35 - 39, 498 - 555)	P

If output pressure is out of specifications, replace master cylinder assembly (built-in type).

Bleed air after disconnecting the tool. Refer to "Bleeding Brake System", BR-8.

7. Install front LH tire.

#### Removal and Installation (Built-in type)

Always replace together with master cylinder as an assembly.

• Refer to "MASTER CYLINDER", BR-14, BR-17.

SU

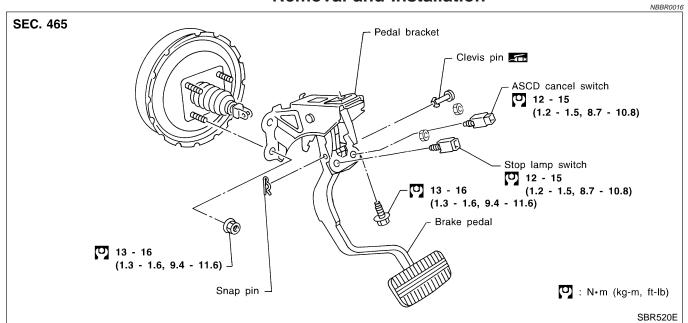

#### **Removal and Installation**

#### Inspection

Check brake pedal for following items.

- Brake pedal bend
- Clevis pin deformation
- Crack of any welded portion
- Crack or deformation of clevis pin stopper

#### Lock nut Input rod-O 16 - 22 (1.6 - 2.2, 12 - 16) Stop lamp switch and ASCD switch 12 - 15 (1.2 - 1.5,9 - 11) Floor carpet Floor carpet Dash insulator Dash insulator Dash lower panel : N•m (kg-m, ft-lb) SBR463CC

#### **Adjustment**

Check brake pedal free height from metal panel.

H: Free height

Refer to SDS (BR-85).

D: Depressed height

Refer to SDS (BR-85).

Under force of 490 N (50 kg, 110 lb) with engine running

 $C_1$ ,  $C_2$ : Clearance between pedal stopper and threaded end of stop lamp switch and ASCD switch

0.3 - 1.0 mm (0.012 - 0.039 in)

A: Pedal free play

1 - 3 mm (0.04 - 0.12 in)

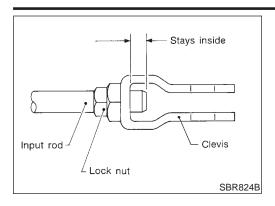

If necessary, adjust brake pedal free height.

NBBR0017

NBBR0018

#### BRAKE PEDAL AND BRACKET

Adjustment (Cont'd)

 Loosen lock nut and adjust pedal free height by turning brake booster input rod. Then tighten lock nut.

#### Make sure that tip of input rod stays inside.

- 2. Adjust clearance " $C_1$ " and " $C_2$ " with stop lamp switch and ASCD switch respectively. Then tighten lock nuts.
- Check pedal free play.

#### Make sure that stop lamp is off when pedal is released.

4. Check brake pedal's depressed height while engine is running. If depressed height is below specified value, check brake system for leaks, accumulation of air or any damage to components (master cylinder, wheel cylinder, etc.). Then make necessary repairs.

# On-vehicle Service OPERATING CHECK

NBBR0024

- 1. Depress brake pedal several times with engine off. After exhausting vacuum, make sure there is no change in pedal stroke.
- 2. Depress brake pedal, then start engine. If pedal goes down slightly, operation is normal.

#### AIRTIGHT CHECK

NBBR0024

- Start engine, and stop it after one or two minutes. Depress brake pedal several times slowly. Booster is airtight if pedal stroke is less each time.
- 2. Depress brake pedal while engine is running, and stop engine with pedal depressed. The pedal stroke should not change after holding pedal down for **30 seconds**.

#### Removal

NRRR0025

#### CAUTION:

- Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.
- Be careful not to deform or bend brake pipes, during removal of booster.

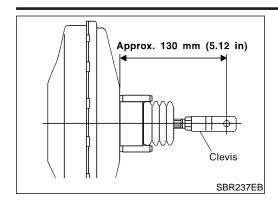

# Inspection OUTPUT ROD LENGTH CHECK

NBBR0026

- 1. Apply vacuum of -66.7 kPa (-500 mmHg, -19.69 inHg) to brake booster with a hand vacuum pump.
- 2. Add preload of 19.6 N (2.0 kg, 4.4 lb) to output rod.
- Check output rod length.

#### **Specified length:**

10.275 - 10.525 mm (0.4045 - 0.4144 in)

#### Installation

#### **CAUTION:**

=NBBR0027

ng instal-

- Replace clevis pin if damaged.
- Refill with new brake fluid "DOT 3".
- Never reuse drained brake fluid.

EM

MA

 Take care not to damage brake booster mounting bolt thread when installing. Due to the narrow angle of installation, the threads can be damaged by the dash panel.

\_\_\_\_

 Before fitting booster, temporarily adjust clevis to dimension shown. LC

2. Fit booster, then secure mounting nuts (brake pedal bracket to brake booster) lightly.

EG

3. Connect brake pedal and booster input rod with clevis pin.

FE

4. Secure mounting nuts.

Specification: 13 - 16 N·m (1.3 - 1.6 kg-m, 9 - 12 ft-lb)

, AT

5. Install master cylinder. Refer to "Installation" in "MASTER CYLINDER", BR-16.

7F

6. Adjust brake pedal height and free play. Refer to "Adjustment" in "BRAKE PEDAL AND BRACKET", BR-12.

TF

7. Secure lock nut for clevis.

(1.6 - 2.2 kg-m, 12 - 16 ft-lb)

8. Bleed air. Refer to "Bleeding Brake System", BR-8.

#### **Pad Replacement**

#### **WARNING:**

Clean brakes with a vacuum dust collector to minimize the hazard of airborne particles or other materials.

#### **CAUTION:**

- When cylinder body is open, do not depress brake pedal, or piston will pop out.
- Be careful not to damage piston boot or get oil on rotor.
   Always replace shims when replacing pads.
- If shims are rusted or show peeling of the rubber coat, replace them with new shims.
- It is not necessary to remove connecting bolt except for disassembly or replacement of caliper assembly. In this case, suspend cylinder body with wire so as not to stretch brake hose.
- Carefully monitor brake fluid level because brake fluid will return to reservoir when pushing back piston.

NBBR0032

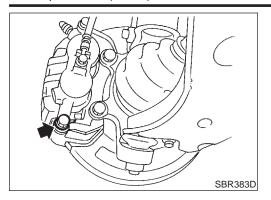

HA

HA

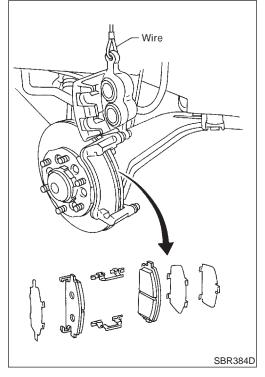

SC

SG

EL

- Remove master cylinder reservoir cap.
- 2. Remove lower pin bolt.

3. Open cylinder body upward. Then remove pad retainers, and inner and outer shims.

**Standard pad thickness:** 

11.0 mm (0.433 in)

Pad wear limit:

2.0 mm (0.079 in)

Carefully monitor brake fluid level because brake fluid will return to reservoir when pushing back piston.

#### Removal

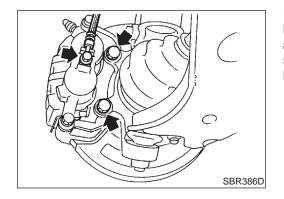

#### **WARNING:**

Clean brake pads with a vacuum dust collector to minimize the hazard of airborne particles or other materials.

NBBR0033

#### **CAUTION:**

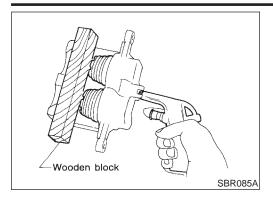

Suspend caliper assembly with wire so as not to stretch brake hose.

Remove torque member fixing bolts and connecting bolt.

It is not necessary to remove connecting bolt except for disassembly or replacement of caliper assembly. In this case, suspend caliper assembly with wire so as not to stretch brake hose.

NBBR0034

#### Disassembly

#### WARNING:

Do not place your fingers in front of piston.

Do not scratch or score cylinder wall.

- Push out piston with dust seal with compressed air.
- Remove piston seal with a suitable tool.

### Inspection

**CALIPER** 

NBBR0035

NBBR0035S01

Cylinder Body

Check inside surface of cylinder for score, rust, wear, damage or presence of foreign objects. If any of the above conditions are observed, replace cylinder body.

Minor damage from rust or foreign objects may be eliminated by polishing surface with a fine emery paper. Replace cylinder body if necessary.

#### CAUTION:

**Piston** 

Use brake fluid to clean. Never use mineral oil.

NRRR0035S0102

Check piston for score, rust, wear, damage or presence of foreign objects. Replace if any of the above conditions are observed.

#### **CAUTION:**

Piston sliding surface is plated. Do not polish with emery paper even if rust or foreign objects are stuck to sliding surface.

BR

AX

TF

#### Slide Pin, Pin Bolt and Pin Boot

Check for wear, cracks, rust or other damage. Replace if any of the above conditions are observed.

#### **ROTOR**

#### Runout

Check runout using a dial indicator.

Make sure that wheel bearing axial end play is within the specifications before measuring. Refer to AX-4, "Front Wheel Bearing".

#### **Maximum runout:**

#### 0.1 mm (0.004 in)

HA

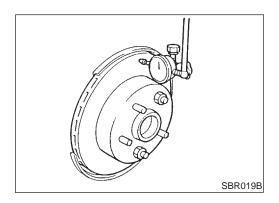

SC

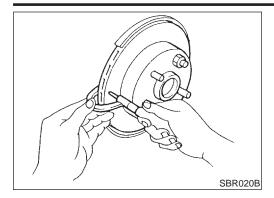

- If the runout is out of specification, find minimum runout position as follows:
- Remove nuts and rotor from wheel hub. a.

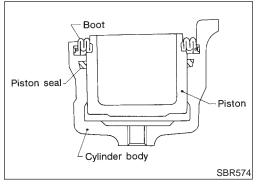

- Shift the rotor one hole and secure rotor to wheel hub with nuts.
- EL

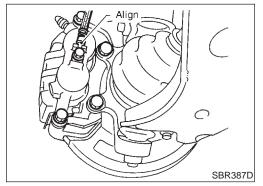

- Measure runout.
- Repeat steps a. to c. so that minimum runout position can be

If the runout is still out of specification, turn rotor with on-car brake lathe ("MAD, DL-8700", "AMMCO 700 and 705" or equivalent).

#### **Thickness**

NBBR0035S0202

Thickness variation (At least 8 positions):
Maximum 0.015 mm (0.0006 in)

If thickness variation exceeds the specification, turn rotor with oncar brake lathe.

Rotor repair limit: 26.0 mm (1.024 in)

#### **Assembly**

NBBR0036

- 1. Insert piston seal into groove on cylinder body.
- 2. With piston boot fitted to piston, insert piston boot into groove on cylinder body and install piston.
- 3. Properly secure piston boot

#### Installation

NBBR0037

#### CAUTION

- Refill with new brake fluid "DOT 3".
- Never reuse drained brake fluid.
- Install caliper assembly.
- 2. Install brake hose to caliper securely.
- Install all parts and secure all bolts.
- 4. Bleed air. Refer to "Bleeding Brake System", BR-8.

#### **Brake Burnishing Procedure**

NBBR008

When experiencing soft brake pedal feel at very low mileage, or after replacing the rotor, burnish the brake pad contact surfaces according to the following procedures.

#### **CAUTION:**

Only perform this procedure under safe road and traffic conditions. Use extreme caution.

- Drive the vehicle on a straight smooth road at 50 km/h (31 MPH).
- Use medium brake pedal/foot effort to bring the vehicle to a complete stop from 50 km/h (31 MPH). Adjust brake pedal/foot pressure such that vehicle stopping time equals 3 to 5 seconds.
- 3. To cool the brake system, drive the vehicle at 50 km/h (31 MPH) for 1 minute without stopping.
- 4. Repeat steps 1 to 3 10 times or more to complete the burnishing procedure.

#### Removal

#### **WARNING:**

Clean brake lining with a vacuum dust collector to minimize the hazard of airborne asbestos or other materials.

#### **CAUTION:**

Make sure parking brake lever is released completely.

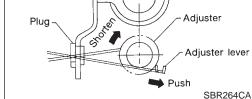

Release parking brake lever fully, then remove drum. If drum is hard to remove, the following procedures

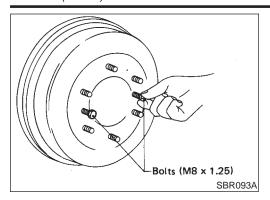

should be carried out. Remove plug. Then shorten adjuster to make clearance

HA SC

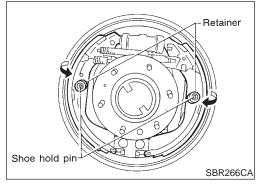

Wheel cylinder

between brake shoe and drum as shown.

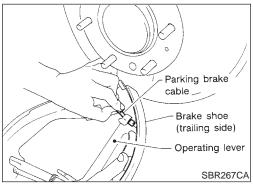

b. Tighten the two bolts gradually.

 After removing shoe hold pin by rotating push retainer, remove leading shoe then remove trailing shoe. Remove spring by rotating shoes in direction arrow.

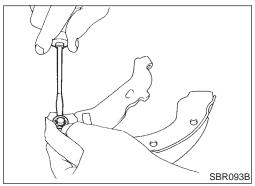

Be careful not to damage wheel cylinder piston boots.

Remove adjuster.

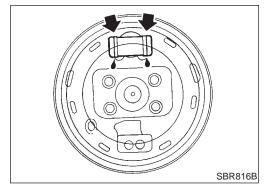

4. Disconnect parking brake cable from toggle lever.

Be careful not to damage parking brake cable when separating it.

5. Remove retainer ring with a suitable tool. Then separate toggle lever and brake shoe.

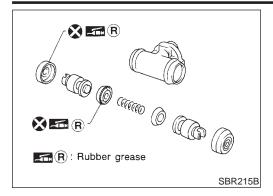

# **Inspection**WHEEL CYLINDER

NBBR0040

NBBR0040S01

Check wheel cylinder for leakage.

Check for wear, damage and loose conditions.
 Replace if any such condition exists.

#### Wheel Cylinder Overhaul

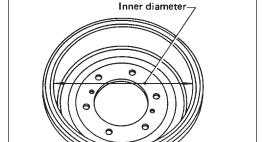

Check all internal parts for wear, rust and damage. Replace if necessary.

Pay attention so as not to scratch cylinder when installing pistons.

SC

#### **Adjustment**

NBBR0047

- . Adjust clearance between shoe and drum as follows:
- a. Release parking brake lever and loosen adjusting nut.
- b. Depress brake pedal fully at least 10 times with engine running.
- 2. Pull control lever 4 5 notches. Then adjust control lever by turning adjusting nut.
- 3. Pull control lever with specified amount of force. Check lever stroke and ensure smooth operation.

Number of notches: 6 - 8

- 4. Bend warning lamp switchplate to ensure:
- Warning lamp comes on when lever is lifted "A" notches.
- Warning lamp goes out when lever is fully released.

Number of "A" notches: 1 or less

#### **DESCRIPTION**

#### **Purpose**

The Anti-Lock Brake System (ABS) consists of electronic and hydraulic components. It allows for control of braking force so locking of the wheels can be avoided.

- 1) Improves proper tracking performance through steering wheel operation.
- 2) Eases obstacle avoidance through steering wheel operation.
- Improves vehicle stability.

#### Operation

NBBR0088

MA

EC

FE

AT

TF

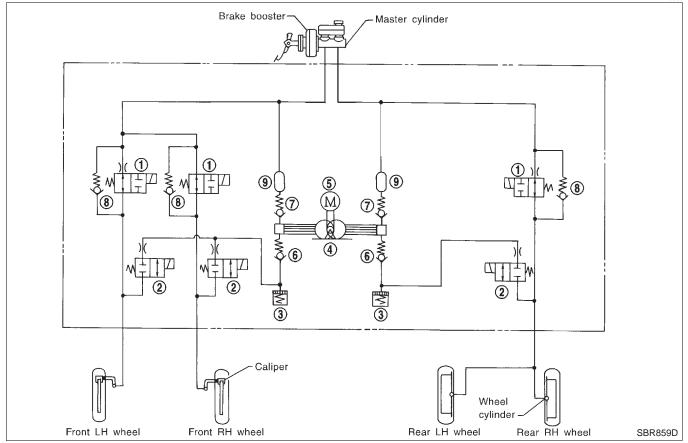

AX

BR

- When the vehicle speed is less than 10 km/h (6 MPH) this system does not work.
- The Anti-Lock Brake System (ABS) has a self-test function. The system turns on the ABS warning lamp for 1 second each time the ignition switch is turned "ON". After the engine is started, the ABS warning lamp turns off. The system performs a test the first time the vehicle reaches 6 km/h (4 MPH). A mechanical noise may be heard as the ABS performs this self-test. This is a normal part of the self-test feature. If a malfunction is found during this check, the ABS warning lamp will stay on.
- While driving, a mechanical noise may be heard during ABS operation. This is a normal condition.

#### **System Components**

# System Description SENSOR

The sensor unit consists of a gear-shaped sensor rotor and a sensor element. The element contains a bar magnet around which a coil is wound. The front sensors are installed on the front spindles and the rear sensors are installed on the rear spindles. As the wheel rotates, the sensor generates a sine-wave pattern. The frequency and voltage increase(s) as the rotating speed increases.

# CONTROL UNIT (BUILT-IN ABS ACTUATOR AND ELECTRIC UNIT)

The control unit computes the wheel rotating speed by the signal current sent from the sensor. Then it supplies a DC current to the actuator solenoid valve. It also controls ON-OFF operation of the valve relay and motor relay. If any electrical malfunction should be detected in the system, the control unit causes the warning lamp to light up. In this condition, the ABS will be deactivated by the control unit, and the vehicle's brake system reverts to normal operation. (For control unit layout, refer to ABS ACTUATOR AND ELECTRIC UNIT, BR-34.)

#### ABS ACTUATOR AND ELECTRIC UNIT

The ABS actuator and electric unit contains:

NBBR0091S03

NRRR0091

- An electric motor and pump
- Two relays
- Six solenoid valves, each inlet and outlet for
  - LH front
  - RH front
  - Rear
- ABS control unit

System Description (Cont'd)

This component controls the hydraulic circuit and increases, holds or decreases hydraulic pressure to all or individual wheels. The ABS actuator and electric unit is serviced as an assembly.

#### **ABS Actuator Operation**

		Inlet solenoid valve	Outlet solenoid valve	
Normal brake oper	ation	OFF (Open)	OFF (Closed)	Master cylinder brake fluid pressure is directly transmitted to caliper via the inlet solenoid valve.
ABS operation	Pressure hold	ON (Closed)	OFF (Closed)	Hydraulic circuit is shut off to hold the caliper brake fluid pressure.
	Pressure decrease	ON (Closed)	ON (Open)	Caliper brake fluid is sent to reservoir via the outlet solenoid valve. Then it is pushed up to the master cylinder by pump.
	Pressure increase	OFF (Open)	OFF (Closed)	Master cylinder brake fluid pressure is transmitted to caliper.

#### G SENSOR (4WD MODELS ONLY)

The G sensor senses deceleration during braking to determine whether the vehicle is being driven on a high  $\mu$  road (asphalt road, etc.) or a low  $\mu$  road (snow-covered road, etc.). It then sends a signal to the ABS control unit.

TF

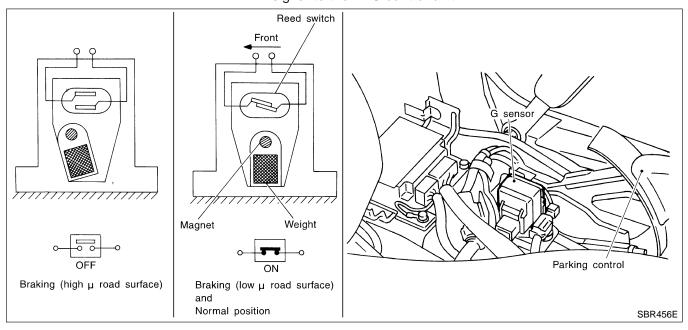

PD

AX

SU

BR

ST

The reed switch turns on when it is affected by a magnetic field. During sudden deceleration (braking on a high µ road), the weight moves and the magnet in the weight moves away from the reed switch. The magnetic field then diminishes and the reed switch

# Self-diagnosis FUNCTION

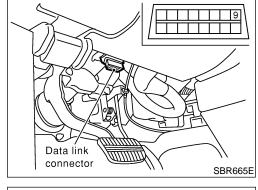

NBBR0095

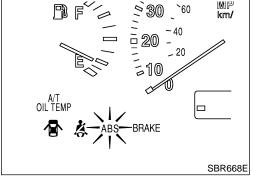

When a problem occurs in the ABS, the warning lamp on the instrument panel comes on. To start the self-diagnostic results mode, ground the self-diagnostic (check) terminal located on data link connector. The location of the malfunction is indicated by the warning lamp flashing.

#### **SELF-DIAGNOSIS PROCEDURE**

BBR0095S02

- 1. Drive vehicle over 30 km/h (19 MPH) for at least one minute.
- Turn ignition switch OFF.
- Ground terminal 9 of data link connector with a suitable harness.
- 4. Turn ignition switch ON while grounding terminal 9. **Do not depress brake pedal.**

- 5. After 3.0 seconds, the warning lamp starts flashing to indicate the malfunction code No. (See NOTE.)
- 6. Verify the location of the malfunction with the malfunction code chart. Refer to BR-56. Then make the necessary repairs following the diagnostic procedures.
- After the malfunctions are repaired, erase the malfunction codes stored in the control unit. Refer to BR-43.
- Rerun the self-diagnostic results mode to verify that the malfunction codes have been erased.
- 9. Disconnect the check terminal from the ground. The self-diagnostic results mode is now complete.
- 10. Check warning lamp for deactivation after driving vehicle over 30 km/h (19 MPH) for at least one minute.
- 11. After making certain that warning lamp does not come on, test the ABS in a safe area to verify that it functions properly.

#### NOTE:

The indication terminates after 5 minutes.

However, when the ignition switch is turned from OFF to ON, the indication starts flashing again.

Self-diagnosis (Cont'd)

#### HOW TO READ SELF-DIAGNOSTIC RESULTS (MALFUNCTION CODES)

Determine the code No. by counting the number of times the warning lamp flashes on and off.

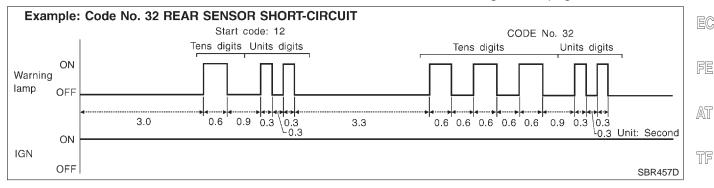

When several malfunctions occur at one time, up to three code numbers can be stored; the latest malfunction will be indicated first.

MA

3. The indication begins with the start code 12. After that a maximum of three code numbers appear in the order of the latest one first. The indication then returns to the start code 12 to repeat (the indication will stay on for five minutes at the most).

The malfunction code chart is given on page BR-56.

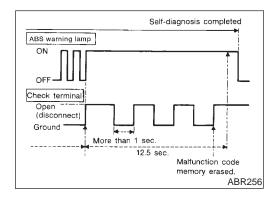

TF

AX

## BR

#### **HOW TO ERASE SELF-DIAGNOSTIC RESULTS** (MALFUNCTION CODES)

Disconnect the check terminal from ground (ABS warning lamp will stay lit).

Within 12.5 seconds, ground the check terminal three times. Each terminal ground must last more than 1 second. The ABS warning lamp goes out after the erase operation has been completed.

Perform self-diagnosis again. Refer to BR-42. Only the startcode should appear, no malfunction codes.

#### TROUBLE DIAGNOSIS — INTRODUCTION

**ABS** 

How to Perform Trouble Diagnoses for Quick and Accurate Repair

#### How to Perform Trouble Diagnoses for Quick and Accurate Repair INTRODUCTION

The ABS system has an electronic control unit to control major functions. The control unit accepts input signals from sensors and instantly drives the actuators. It is essential that both kinds of signals are proper and stable. It is also important to check for conventional problems: such as air leaks in booster lines, lack of brake

It is much more difficult to diagnose a problem that occurs intermittently rather than continuously. Most intermittent problems are caused by poor electric connections or faulty wiring. In this case, careful checking of suspicious circuits may help prevent the

fluid, or other problems with the brake system.

replacement of good parts. A visual check only may not find the cause of the problems, so a

road test should be performed.

Before undertaking actual checks, take a few minutes to talk with a customer who approaches with an ABS complaint. The customer is a very good source of information on such problems; especially intermittent ones. By talking to the customer, find out what symptoms are present and under what conditions they occur. Start your diagnosis by looking for "conventional" problems first. This is one of the best ways to troubleshoot brake problems on an ABS controlled vehicle.

Also check related Service bulletins for information.

5	CHECK TIRE		
Check	Check for inflation pressure, wear and size of each tire. (See NOTE.)		
	Are tire pressure and size correct and is tire wear within specifications?		
Yes	<b>•</b>	GO TO 6.	
No	<b>•</b>	Adjust tire pressure or replace tire(s). (See NOTE.)	

6	CHECK WHEEL BEARING		
Check	Check wheel bearing axial end play. (See NOTE.)		
	Is wheel bearing axial end play within specifications?		
Yes	<b>&gt;</b>	GO TO 7.	
No	<b>&gt;</b>	Check wheel bearing. Refer to AX-17, AX-4, "Front wheel bearing" and "Rear wheel bearing".	

7	CHECK SENSOR ROTO	DR .	
Check	Check sensor rotor for teeth damage. (See NOTE.)		
	Is sensor rotor free from damage?		
Yes	<b>&gt;</b>	Check ABS actuator and electric unit pin terminals for damage or the connection of ABS actuator and electric unit harness connector. Reconnect ABS actuator and electric unit harness connector. Then retest.	
No	<b>&gt;</b>	Replace sensor rotor. (See NOTE.)

## 1. ABS Works Frequently

	NBBN 136			
1	CHECK BRAKE FLUID	PRESSURE		
	Check brake fluid pressure distribution. Refer to BR-11, "Inspection", "PROPORTIONING VALVE (2WD)".			
		Is brake fluid pressure distribution normal?		
Yes	<b>•</b>	GO TO 2.		
No	<b>&gt;</b>	Repair. Then perform Preliminary Check. Refer to BR-52.		

2	CHECK WHEEL SENSO	DR .	
2. Per	<ol> <li>Check wheel sensor connector for terminal damage or loose connections.</li> <li>Perform wheel sensor mechanical check.         Refer to "7. CHECK SENSOR ROTOR" in "DIAGNOSTIC PROCEDURE", "Wheel Sensor or Rotor", BR-58.     </li> </ol>		
		Is wheel sensor mechanism OK?	
Yes	<b>&gt;</b>	GO TO 3.	
No	<b>•</b>	Repair.	

3	CHECK FRONT AXLE			
Check	Check front axles for excessive looseness. Refer to AX-4, "Front Wheel Bearing".			
	Is front axle installed properly?			
Yes	-	Go to "3. CHECK WARNING LAMP INDICATION" in "2. Unexpected Pedal Action", BR-70.		
No	<b>&gt;</b>	Repair.		

#### 2. Unexpected Pedal Action

1 CHECK BRAKE PEDAL STROKE

Check brake pedal stroke.

SBR540A

Is brake pedal stroke excessively large?

Yes Perform Preliminary Check. Refer to BR-52.

No GO TO 2.

No		Carry out self-diagnosis. Refer to BR-42, BR-45.		

4	CHECK WHEEL SENSO	DR .		
<ol> <li>Check wheel sensor connector for terminal damage or loose connection.</li> <li>Perform wheel sensor mechanical check. Refer to "7. CHECK SENSOR ROTOR" in "DIAGNOSTIC PROCEDURE", "Wheel Sensor or Rotor", BR-58.</li> </ol>				
	Is wheel sensor mechanism OK?			
Yes	Yes  Check ABS actuator and electric unit pin terminals for damage or the connection of AB actuator and electric unit harness connector.  Reconnect ABS actuator and electric unit harness connector.  Then retest.			
No	<b>&gt;</b>	Repair.		

IDX

## 3. Long Stopping Distance

	=NBBR0140				
1	CHECK MECHANICAL BRAKE SYSTEM PERFORMANCE				
Disco	Disconnect ABS actuator and electric unit connector and check whether stopping distance is still long.				
	Does brake system function properly when brake pedal is depressed?				
Yes Perform Preliminary Check and air bleeding (if necessary).		Perform Preliminary Check and air bleeding (if necessary).			
No	<b>&gt;</b>	Go to "3. CHECK WARNING LAMP INDICATION" in "2. Unexpected Pedal Action", BR-70.			

#### NOTE:

Stopping distance may be longer for vehicles without ABS when road condition is slippery.

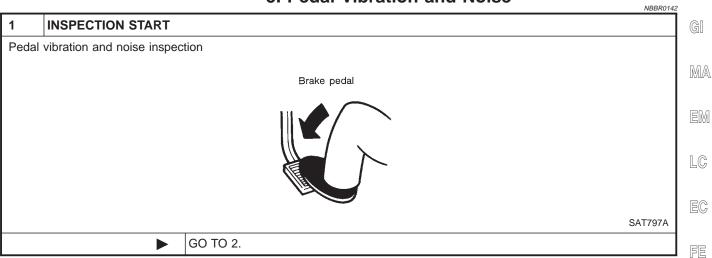

#### 4. ABS Does Not Work

		NBBR0141		
1	CHECK WARNING LAN	IP INDICATION		
Does	Does the ABS warning lamp activate?			
		Yes or No		
Yes	<b>•</b>	Carry out self-diagnosis. Refer to BR-42, BR-45.		
No	No Go to "3. CHECK WARNING LAMP INDICATION" in "2. Unexpected Pedal Action", BR-70.			

#### NOTE:

ABS does not work when vehicle speed is under 10 km/h (6 MPH).

### 5. Pedal Vibration and Noise

2 CHECK	SYMPTOM
1. Apply brake.	
2. Start engine	
	Does the symptom appear only when engine is started?
Yes	Carry out self-diagnosis. Refer to BR-42, BR-45.
No	Go to "3. CHECK WARNING LAMP INDICATION" in "2. Unexpected Pedal Action", BR-70.

#### NOTE:

ABS may operate and cause vibration under any of the following conditions.

- Applying brake gradually when shifting or operating clutch.
- Low friction (slippery) road.
- High speed cornering.
- Driving over bumps and pot holes.
- Engine speed is over 5,000 rpm with vehicle stopped.

and cause vibration under any of the following

#### CHECK ABS WARNING LAMP CONTROL CIRCUIT FOR OPEN

- 1. Disconnect combination meter connector M24.
- 2. Check continuity between combination meter connector M24 (body side) terminal 10 and ABS actuator and electric unit connector E111 (body side) terminal 2.

#### NOTE:

Connect positive lead of multimeter to1combination meter connector M24 (body side) terminal 10 and negative lead to ABS actuator and electric unit connector E111 (body side) terminal 2.

Continuity should exist.

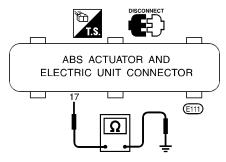

## Does continuity exist?

	Yes	Check combination meter. Refer to EL-146, "WARNING LAMPS".
ı	No	Repair harness or connectors.

8	REPLACE FUSE	
Replac	ce fuse.	
	Do	es the fuse blow out when ignition switch is turned ON?
Yes	<b>&gt;</b>	GO TO 9.
No	<b>•</b>	INSPECTION END

#### 9 CHECK ABS ACTUATOR AND ELECTRIC UNIT POWER SUPPLY CIRCUIT FOR SHORT

- 1. Disconnect battery cable and ABS actuator and electric unit connector.
- 2. Check continuity between ABS actuator and electric unit connector E111 (body side) terminal 17 and ground.

#### Continuity should not exist.

#### Does continuity exist?

	Check the following.  If NG, repair harness or connector.  • Harness connector E111  • Harness for open or short between ABS actuator and electric unit and fuse
No •	Replace ABS actuator and electric unit.

**ABS** 

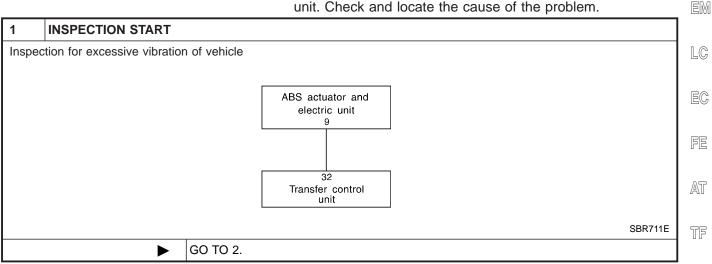

8. Vehicle Vibrates Excessively When ABS Is Operating

## 8. Vehicle Vibrates Excessively When ABS Is **Operating**

While ABS is operating, brake pedal vibrates slightly. This is not a problem.

MA

If vehicle vibration is greater in the AUTO mode than in the 2WD mode, there is the possibility of failure in the communication line between the ABS control unit and transfer control unit. Check and locate the cause of the problem.

2	CARRY OUT SELF-DIA	GNOSIS	
Perfor	rm self-diagnosis for the AB	S actuator and electric unit and transfer control unit.	1

8. Vehicle Vibrates Excessively When ABS Is Operating (Cont'd)

#### **CHECK ABS OPERATING SIGNAL**

- 1. Connect CONSULT-II to Data Link Connector.
- 2. Turn ignition switch "ON". Set CONSULT-II in the active test mode to output an ABS operating signal. (Refer to "ACTIVE TEST PROCEDURE", "CONSULT-II Inspection Procedure", BR-49.)
- 3. An ABS operating signal lasts for 10 seconds. During the time the signal is being output, check resistance between transfer control unit connector terminal 32 and ground.

Resistance:  $0.5\Omega$ , max.

ACTIVE TE	ST
ABS OPER SIG	OFF
MONITOI	₹
ABS OPER SIG	OFF

SBR680E

Is resistance within specifications?

Yes CHECK transfer control unit. Refer to TF-85, "ABS OPERATION SIGNAL". No Replace ABS actuator and electric unit.

SU

BR

ST

BT

HA

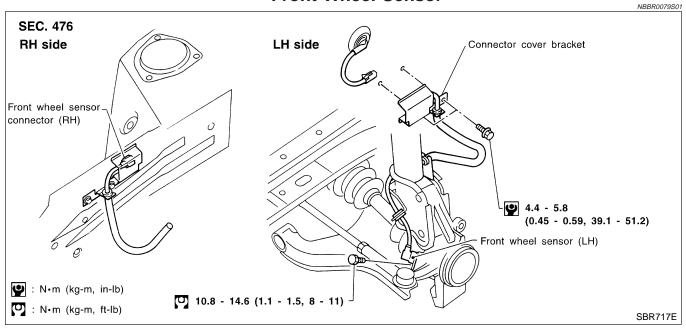

SC

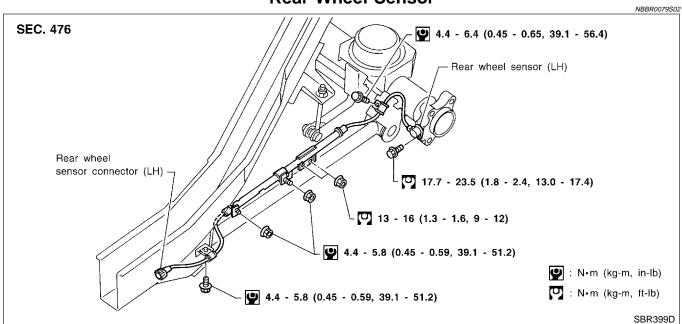

#### **CAUTION:**

Be careful not to damage sensor edge and sensor rotor teeth. When removing the front or rear wheel hub assembly, disconnect the ABS wheel sensor from the assembly and move it away.

#### **Front Wheel Sensor**

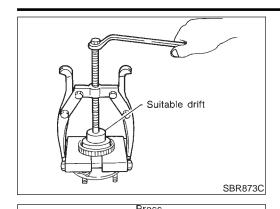

#### **Rear Wheel Sensor**

#### REMOVAL AND INSTALLATION

Front Sensor Rotor

### **Front Sensor Rotor REMOVAL**

NBBR0079S03

Remove the front wheel hub. Refer to AX-8, "Disassembly".

Remove the sensor rotor using suitable puller, drift and bearing replacer.

MA

EM

LC

#### **INSTALLATION**

NBBR0079S0302

Install the sensor rotor using suitable drift and press.

EC

Always replace sensor rotor with new one.

FE

Pay attention to the direction of front sensor rotor as shown in figure.

AT

TF

NBBR0079S04 NBBR0079S0401

PD

Remove the sensor rotor using Tool.

AX

SU

BR

#### **INSTALLATION**

SRA800AA

Install the sensor rotor using suitable drift and press.

Always replace sensor rotor with new one.

Pay attention to the direction of front sensor rotor as shown in

figure.

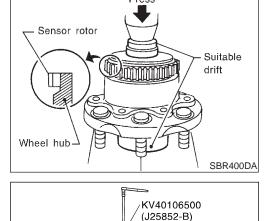

BT

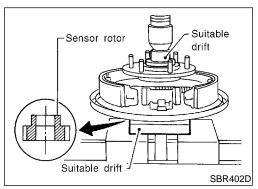

HA

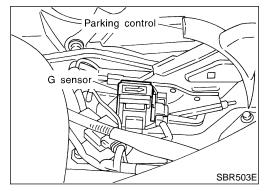

SC

**G** Sensor

Always replace G sensor if bumped or dropped. Otherwise, performance characteristics of G sensor will be changed, which in turn changes ABS control performance characteristics.

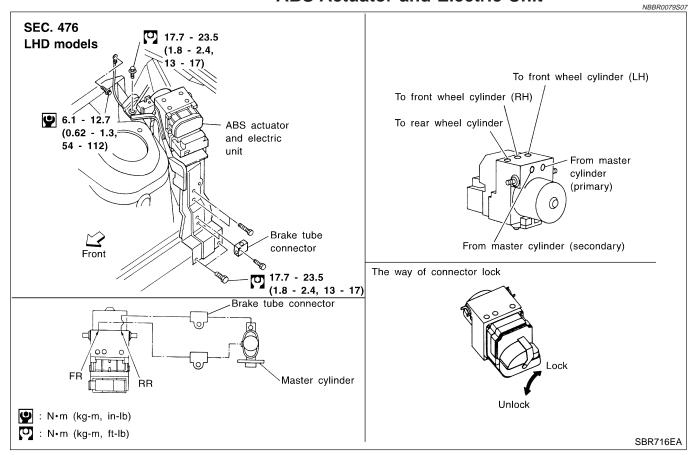

#### **ABS Actuator and Electric Unit**

#### **REMOVAL**

NBBR0079S0701

- 1. Disconnect battery cable.
- 2. Drain brake fluid. Refer to "Changing Brake Fluid", BR-7.
- 3. Remove mounting bracket fixing bolts and nuts.
- 4. Disconnect connector, brake pipes and remove fixing nuts and actuator ground cable.

#### **INSTALLATION**

#### **CAUTION:**

NBBR0079S0702

After installation, refill brake fluid. Then bleed air. Refer to "Bleeding Brake System", BR-8.

1. Tighten actuator ground cable.

Place ground cable at a notch of mounting bracket.

- 2. Connect brake pipes temporarily.
- 3. Tighten fixing bolts and nuts.
- 4. Tighten brake pipes.
- 5. Connect connector and battery cable.
