PRECAUTIONS

PRECAUTIONS PFP:00001

Precautions for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Man-

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

GENERAL MAINTENANCE

GENERAL MAINTENANCE

PFP:00000

General Maintenance

ELS000ZZ

General maintenance includes those items which should be checked during the normal day-to-day operation of the vehicle. They are essential if the vehicle is to continue operating properly. The owner can perform these checks and inspections or have their NISSAN dealers perform them.

OUTSIDE THE VEHICLE

The maintenance items listed here should be performed from time to time, unless otherwise specified.

Item		Reference page
Tires	Check the pressure with a gauge at least once a month and always prior to a long distance trip. Adjust to the specified pressure if necessary. Check carefully for damage, cuts or excessive wear.	_
Wheel lug nuts	When checking the tires, make sure no nuts are missing, and check for any loose nuts. Tighten if necessary.	WT-6, "Rotation"
Windshield	Clean the windshield on a regular basis. Check the windshield at least every six months for cracks or other damage. Repair as necessary.	
Tire rotation	Tires should be rotated every 12,000 km (7,500 miles).	WT-6, "Rotation"
Wheel alignment and balance	If the vehicle pulls to either side while driving on a straight and level road, or if you detect uneven or abnormal tire wear, there may be a need for wheel alignment. If the steering wheel or seat vibrates at normal highway speeds, wheel balancing may be needed.	WT-5, "Balancing Wheels", FSU-6, "Front Wheel Alignment"
Windshield wiper blades	Check for cracks or wear if they do not wipe properly.	_
Doors and engine hood	Check that all doors and the engine hood operate smoothly as well as the back hatch. Also make sure that all latches lock securely. Lubricate if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released. When driving in areas using road salt or other corrosive materials, check lubrication frequently.	MA-30, "Lubricating Locks, Hinges and Hood Latches"
Lamps	Make sure that the head lamps, stop lamps, tail lamps, turn signal lamps, and other lamps are all operating properly and installed securely. Also check head lamp aim. Clean the head lamps on a regular basis.	LT-31, "Aiming Adjust- ment" for US, LT-46, "Aiming Adjustment" for Canada

INSIDE THE VEHICLE

The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, cleaning the vehicle, etc.

Item		Reference page
Warning lamps and buzzers/chimes	Make sure that all warning lamps and buzzers/chimes are operating properly.	DI-25, "Electrical Components Inspection"
Windshield wiper and washer	Check that the wipers and washer operate properly and that the wipers do not streak.	_
Windshield defroster	Check that the air comes out of the defroster outlets properly and in sufficient quantity when operating the heater or air conditioner.	_
Steering wheel	Check that it has the specified play. Be sure to check for changes in the steering condition, such as excessive play, hard steering or strange noises.	PS-7, "CHECKING STEERING WHEEL PLAY"
Seats	Check seat position controls such as seat adjusters, seat back recliner, etc. to make sure they operate smoothly and that all latches lock securely in every position. Check that the head restraints move up and down smoothly and that the locks (if equipped) hold securely in all latched positions. Check that the latches lock securely for folding-down rear seat backs.	_
Seat belts	Check that all parts of the seat belt system (e.g. buckles, anchors, adjusters and retractors) operate properly and smoothly and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.	SB-10, "Seat Belt Inspection", MA-31, "Checking Seat Belts, Buckles, Retractors, Anchors and Adjusters"
Accelerator pedal	Check the pedal for smooth operation. Keep the floor mats away from the pedal.	_

GENERAL MAINTENANCE

Item		Reference page				
Brakes	Check that the brake does not pull the vehicle to one side when applied.					
Brake pedal and booster	Check the pedal for smooth operation and make sure it has the proper distance under it when depressed fully. Check the brake booster function. Keep the floor mats away from the pedal.	BR-6, "Inspection and Adjustment", BR-17, "On-Vehicle Service"				
Parking brake	Check that the parking brake control has the proper travel and make sure that the vehicle is held securely on a fairly steep hill when only the parking brake is applied.					
Automatic transmis- sion "Park" mecha- nism	On a fairly steep hill check that the vehicle is held securely with the selector lever in the P position without applying the brakes.	_				
INDER THE HOOD						
ne maintenance items ii Item	sted here should be checked periodically (e.g. each time you check the engine oil c	Reference page				
Windshield washer fluid	Check that there is adequate fluid in the tank.	—				
Engine coolant level	Check the coolant level when the engine is cold.	<u>MA-12</u>				
Radiator and hoses	· · · · · · · · · · · · · · · · · · ·					
Brake fluid level	Make sure that the brake fluid level is between the "MAX" and "MIN" lines on the reservoirs	<u>MA-27</u>				
Battery	Check the fluid level in each cell. It should be between the "MAX" and "MIN" lines. Vehicles operated in high temperatures or under severe conditions require frequent checks of the battery fluid level.	_				
Engine drive belt	Make sure that no belt is frayed, worn, cracked or oily.	MA-12				
Engine oil level	Check the level on the dipstick after parking the vehicle on a level spot and turning off the engine.	<u>MA-16</u>				
Power steering fluid level and lines	Check the level on the reservoir with the engine off. Check the lines for improper attachment, leaks, cracks, etc.	<u>MA-29</u>				
Automatic transmis- sion fluid level	Check the level on the dipstick after putting the selector lever in "P" with the engine idling.	MA-21				
Exhaust system	Make sure there are no loose supports, cracks or holes. If the sound of the exhaust seems unusual or there is a smell of exhaust fumes, immediately locate the trouble and correct it.	MA-21				
Underbody	The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these substances, otherwise rust will form on the floor pan, frame, fuel lines and around the exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, being careful to clean those areas where mud and dirt can easily accumulate.	_				
Eluid looks						

Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks or gasoline fumes are evident, check for

the cause and correct it immediately.

Fluid leaks

PERIODIC MAINTENANCE

PFP:00026

Introduction of Periodic Maintenance

FI S00100

Two different maintenance schedules are provided, and should be used, depending upon the conditions in which the vehicle is mainly operated. After 60,000 miles (96,000 km) or 48 months, continue the periodic maintenance at the same mileage or time intervals, whichever comes first.

	Follow Periodic Maintenance Schedule 1 if your driving habits frequently includes one or more of the following driving conditions:	Emission Control System Maintenance	<u>MA-6</u>
	Repeated short trips of less than 5 miles (8 km).		
	Repeated short trips of less than 10 miles (16 km) with outside temperatures remaining below freezing.		
Schedule 1	Operating in hot weather in stop-and-go "rush hour" traffic.		
	Extensive idling and/or low speed driving for long distances, such as police, taxi or door-to-door delivery use.	Chassis and Body Maintenance	<u>MA-6</u>
	Driving in dusty conditions.		
	Driving on rough, muddy, or salt spread roads.		
	Towing a trailer or using a car-top carrier.		
Schedule 2	Follow Periodic Maintenance Schedule 2 if none of the driving conditions shown in Schedule 1 apply to the driving habits.	Emission Control System Maintenance	<u>MA-8</u>
Scriedule 2		Chassis and Body Maintenance	<u>MA-8</u>

Maintenance For Off-road Driving (4WD only)

ELS0012F

After driving the vehicle off-road through sand, mud, or water; more frequent maintenance may be required for the following items:

- ▲ Brake pads and rotors
- ▲ Brake lines and hoses
- ▲ Rear final drive oil, transmission fluid, and transfer fluid
- ▲ Steering linkage
- ▲ Drive shafts
- ▲ Engine air cleaner filter
- ▲ In-cabin microfilters

RECOMMENDED FLUIDS AND LUBRICANTS

RECOMMENDED FLUIDS AND LUBRICANTS

PFP:00000

Fluids and Lubricants

ELS00103

Description		Capacity (Approximate)			Recommended Fluids/Lubricants	
		Metric	US measure	Imp measure	Necommended Fidids/Edimicants	
		105.8 ℓ	28 gal	23 1/4 gal	Unleaded gasoline with octane rating of at least 91 AKI (RON 96) *8	
Engine oil Drain and refill	With oil filter change	6.2 ℓ	6 1/2 qt	5 1/2 qt	 API Certification Mark *1 API grade SL, Energy Conserving *1 ILSAC grade GF-III *1 	
	Without oil filter change	5.9 ℓ	6 1/4 qt	5 1/4 qt		
Dry engine (engine overhaul)		7.6 ℓ	8 qt	6 3/4 qt	-	
Cooling system	With reservoir at MAX level	14.4 ℓ	3 3/4 gal	3 1/8 gal	Genuine NISSAN Long Life Anti-freeze coolant or equivalent	
Automatic transm	ission fluid (ATF)	10.6 ℓ	11 1/4 qt	9 3/8 qt	Genuine NISSAN Matic J ATF *2	
Rear final drive oil		1.75 ℓ	3 3/4 pt	3 1/8 pt	API GL-5 Viscosity SAE 80W-90 *6	
Transfer fluid		3.0 ℓ	3 1/8 qt	2 5/8 qt	Genuine NISSAN Matic D ATF (Continental U.S and Alaska) or Canada NISSAN Automatic Transmission Fluid *7	
Front final drive oil		1.6 ℓ	3 3/8 pt	2 7/8 pt	API GL-5 Viscosity SAE 80W-90 *6	
Power steering fluid (PSF)		1.0 ℓ	1 1/8 qt	7/8 qt	Genuine NISSAN PSF or equivalent *3	
Brake fluid		_	_	_	Genuine NISSAN Super Heavy Duty Brake Fluid or equivalent, DOT 3 (US FMVSS No. 116) *4	
Brake grease		_	_	_	PBC (poly butyl cuprysil) grease or equivalent	
Multi-purpose grease		_	_	_	NLGI No. 2 (lithium soap base)	
Windshield washer fluid		4.5 ℓ	1 1/4 gal	1 gal	Genuine NISSAN Windshield Washer Concentrate Cleaner & Anti-freeze or equivalent	
Air conditioning system refrigerant		1.08 ± 0.05 kg	2.38 ± 0.11 lb	2.38 ± 0.11 lb	HFC-134a (R-134a) *5	
Air conditioning system lubricants		290 m ℓ	9.8 fl oz	10.2 fl oz	NISSAN A/C System Lubricant Type S (DH-PS) or equivalent *5	

^{*1:} For further details, MA-11, "SAE Viscosity Number" .

^{*2:} Using automatic transmission fluid other than Genuine NISSAN Matic J ATF will cause deterioration in driveability and automatic transmission durability, and may damage the automatic transmission, which is not covered by the NISSAN new vehicle limited warranty.

^{*3:} For Canada, NISSAN Automatic Transmission Fluid (ATF), DEXRONTM III or MERCONTM or equivalent ATF may also be used.

^{*4:} Available in mainland U.S.A. through your NISSAN dealer.

^{*5:} For further details, see "Air conditioner specification label".

^{*6:} For hot climates, viscosity SAE 90 is suitable for ambient temperatures above 0° C (32° F).

^{*7:} DEXRONTM III, MERCONTM or equivalent may also be used. Outside the continental United States and Alaska contact a NISSAN dealership for more information regarding suitable fluids, including recommended brand(s) of DEXRONTM III or MERCONTM Automatic Transmission Fluid.

^{*8:} For further details, refer to GI-5, "Precautions for Fuel (Unleaded Premium Gasoline Required)".

RECOMMENDED FLUIDS AND LUBRICANTS

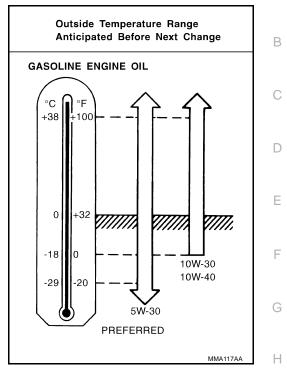

SAE Viscosity Number GASOLINE ENGINE OIL

ELS00104

Α

 SAE 5W-30 viscosity oil is preferred for all temperatures. SAE 10W-30 and 10W-40 viscosity oil may be used if the ambient temperature is above -18°C (0°F).

Use of 5W-30 viscosity oil will increase fuel economy.

ANTI-FREEZE COOLANT MIXTURE RATIO

The engine cooling system is filled at the factory with a high-quality, long life, year-round, anti-freeze coolant solution. The anti-freeze solution contains rust and corrosion inhibitors. Therefore, additional cooling system additives are not necessary.

For outside temperatures down to:		Anti-freeze coolant mixture ratio		
– 35° C	−30° F	Genuine NISSAN Long Life Antifreeze coolant	Demineralized water or dis- tilled water	
		50 %	50 %	

CAUTION:

- When adding or replacing coolant, be sure to use only Genuine NISSAN Long Life Anti-freeze coolant or equivalent with the proper mixture ratio of 50% anti-freeze and 50% demineralized water or distilled water.
- Other types of coolant solutions may damage your cooling system.

ENGINE MAINTENANCE

PFP:00000

Checking Drive Belts

ELS00105

- 1. Drive Belt
- 4. Crankshaft Pulley
- 7. Cooling Fan Pulley
- 2. Power Steering Pump Pulley
- A/C Compressor
- 8. Water Pump Pulley
- 3. Generator pulley
- 6. Idler Pulley
- 9. Drive Belt Tensioner

WARNING:

Be sure to perform when the engine is stopped.

- 1. Remove air duct and resonator assembly (inlet) when inspecting drive belt.
- 2. Make sure that indicator (single line notch) of each auto tensioner is within the allowable working range "A" (between three line notches) as shown.

NOTE:

- Check the auto tensioner indication when the engine is cold.
- When the new drive belt is installed, the range should be as shown.
- The indicator notch is located on the moving side of the auto tensioner.
- 3. Visually check entire belt for wear, damage or cracks.
- 4. If the indicator is out of allowable working range or belt is damaged, replace the belt. Refer to <u>EM-12</u>, "DRIVE BELTS" .

DRIVE BELT TENSION

There is no manual drive belt tension adjustment. The drive belt tension is automatically adjusted by the auto tensioner.

Changing Engine Coolant

ELS00106

WARNING:

- To avoid being scalded, never change the coolant when the engine is hot.
- Wrap a thick cloth around the cap to carefully remove the cap. First, turn the cap a quarter of a turn to release any built-up pressure, then push down and turn the cap all the way to remove it.

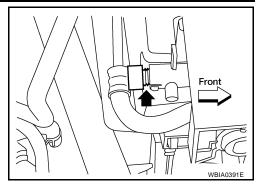

DRAINING ENGINE COOLANT

- 1. Turn ignition switch ON and set temperature control lever all the way to HOT position or the highest temperature position. Wait 10 seconds and turn ignition switch OFF.
- Remove the engine front undercover.

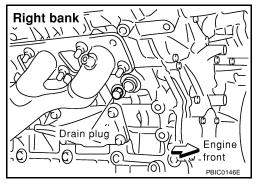

3. Open the radiator drain plug at the bottom of the radiator, and remove the radiator filler cap. This is the only step required when partially draining the cooling system (radiator only).

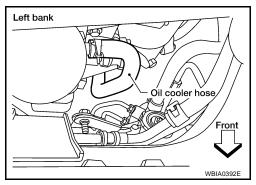

CAUTION:

Do not to allow the coolant to contact the drive belts.

4. When draining all of the coolant in the system for engine removal or repair, it is necessary to drain the cylinder block. Remove the RH cylinder block drain plug to drain the right bank and the oil cooler hose to drain the left bank as shown.

- 5. Remove the reservoir tank to drain the engine coolant, then clean the reservoir tank before installing it.
- Check the drained coolant for contaminants such as rust, corrosion or discoloration.
 If the coolant is contaminated, flush the engine cooling system. Refer to MA-14, "FLUSHING COOLING SYSTEM".

REFILLING ENGINE COOLANT

- 1. Close the radiator drain plug. Install the reservoir tank, cylinder block drain plug, and the oil cooler hose, if removed for a total system drain or for engine removal or repair.
 - The radiator must be completely empty of coolant and water.
 - Apply sealant to the threads of the cylinder block drain plug. Use Genuine High Performance Thread Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS".

Radiator drain plug : Refer to <u>CO-10, "RADIATOR"</u>.

RH cylinder block drain plug : Refer to EM-73, "CYLINDER BLOCK" .

- 2. Set the vehicle heater controls to the full HOT and heater ON position. Turn the vehicle ignition ON with the engine OFF as necessary to activate the heater mode.
- Remove the vented reservoir cap and replace it with a non-vented reservoir cap before filling the cooling system.

K

Α

Е

Н

Revision: August 2007 MA-13 2004 QX56

 Install the Tool by installing the radiator cap adapter onto the radiator neck opening. Then attach the gauge body assembly with the refill tube and the venturi assembly to the radiator cap adapter.

Tool number : KV991J0070 (J-45695)

- Insert the refill hose into the coolant mixture container that is placed at floor level. Make sure the ball valve is in the closed position.
 - Use Genuine NISSAN Long Life Anti-freeze coolant or equivalent, mixed 50/50 with distilled water or demineralized water.
 Refer to MA-11, "ANTI-FREEZE COOLANT MIXTURE RATIO".

Cooling system capacity : Refer to MA-10, "Fluids (with reservoir tank) and Lubricants".

6. Install an air hose to the venturi assembly, the air pressure must be within specification.

Compressed air : 5.7 - 8.5 kPa (5.6 - 8.4 kg/cm² supply pressure , 80 - 120 psi)

CAUTION:

The compressed air supply must be equipped with an air dryer.

8. Continue to draw the vacuum until the gauge reaches 28 inches of vacuum. The gauge may not reach 28 inches in high altitude locations, refer to the vacuum specifications based on the altitude above sea level.

Altitude above sea level

0 - 100 m (328 ft)

300 m (984 ft)

500 m (1,641 ft)

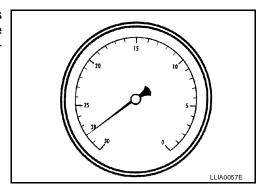

1,000 m (3,281 ft)

Vacuum gauge reading

: 28 inches of vacuum

: 26 inches of vacuum

: 24 - 25 inches of vacuum

- 9. When the vacuum gauge has reached the specified amount, disconnect the air hose and wait 20 seconds to see if the system loses any vacuum. If the vacuum level drops, perform any necessary repairs to the system and repeat steps 6 8 to bring the vacuum to the specified amount. Recheck for any leaks.
- 10. Place the coolant container (with the refill hose inserted) at the same level as the top of the radiator. Then open the ball valve on the refill hose so the coolant will be drawn up to fill the cooling system. The cooling system is full when the vacuum gauge reads zero.

CAUTION:

Do not allow the coolant container to get too low when filling, to avoid air from being drawn into the cooling system.

- 11. Remove the Tool from the radiator neck opening and install the radiator cap.
- 12. Remove the non-vented reservoir cap.
- 13. Fill the cooling system reservoir tank to the specified level. Run the engine to warm up the cooling system and top up the system as necessary before installing the vented reservoir cap.

FLUSHING COOLING SYSTEM

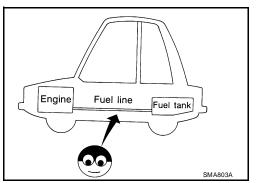

- 1. Drain the water from the engine cooling system. Refer to MA-12, "DRAINING ENGINE COOLANT".
- 2. Fill the radiator and the reservoir tank (to the "MAX" line), with water. Reinstall the radiator cap and leave the vented reservoir cap off.

- Run the engine until it reaches normal operating temperature.
- 4. Press the engine accelerator two or three times under no-load.
- Stop the engine and wait until it cools down.
- 6. Drain the water from the engine cooling system. Refer to MA-12, "DRAINING ENGINE COOLANT".
- 7. Repeat steps 2 through 6 until clear water begins to drain from the radiator.

Checking Fuel Lines

Inspect the fuel lines and fuel tank for improper mounting, leaks, cracks, damage, loose connections, chafing, or deterioration.

As necessary, repair or replace any faulty parts.

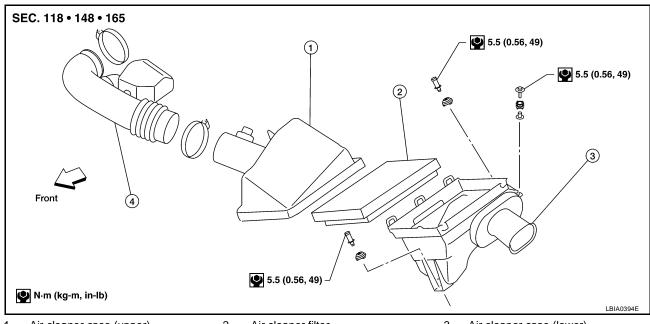

Changing Fuel Filter

The fuel filter is part of the fuel level sensor unit, fuel filter and fuel pump assembly. Refer to FL-5, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY".

Before replacing the fuel filter, release the fuel pressure from the fuel system. Refer to EC-46, "FUEL PRESSURE RELEASE".

Changing Engine Air Cleaner Filter VISCOUS PAPER TYPE

FLS00109

- Air cleaner case (upper)
- 2. Air cleaner filter

3. Air cleaner case (lower)

4. Air duct and resonator assembly

NOTE:

- The viscous paper type filter does not need cleaning between replacement intervals.
- Replace the air filter as necessary for required maintenance.
- Remove the air duct and resonator assembly (inlet). 1.
- Remove the air cleaner case (upper). 2.
- 3. Remove the air cleaner filter from the air cleaner case (lower).
- Install the new air cleaner filter in the air cleaner case (lower).

MA-15 2004 QX56 Revision: August 2007

ELS00107

Α

Е

MΑ

K

- 5. Install the air cleaner case (upper).
- 6. Install the air duct and resonator assembly (inlet).

Changing Engine Oil

ELS0010A

WARNING:

- Be careful not to burn yourself, as the engine oil is hot.
- Prolonged and repeated contact with used engine oil may cause skin cancer; try to avoid direct skin contact with used oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.
- 1. Warm up the engine, and check for any oil leaks.
- 2. Stop the engine and wait for at least 10 minutes.
- 3. Remove the oil drain plug and oil filler cap to drain the old oil.
- 4. Install a new washer on the oil drain plug, then install the oil drain plug in the oil pan.

Oil pan drain plug : Refer to EM-22, "OIL PAN AND OIL STRAINER" .

CAUTION:

Clean the drain plug and install with a new washer.

Refill the engine with the specified oil.

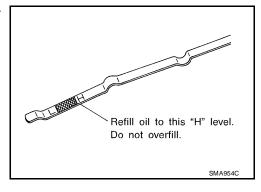

Oil capacity and grade : Refer to MA-10, "RECOMMENDED FLUIDS AND LUBRI-CANTS" .

CAUTION:

- Clean the drain plug and install with a new washer.
- The refill capacity depends on the oil temperature and drain time. Use the oil capacity value as a reference and check the oil level using the dipstick when filling the oil.
- 6. Warm up the engine and check the area around the drain plug and oil filter for any oil leaks.
- 7. Stop the engine and wait for more than 10 minutes.
- 8. Check the oil level using the dipstick as shown. Add oil as necessary and install the oil filler cap.

CAUTION:

Do not overfill the engine with oil.

Changing Oil Filter

ELS0010B

Remove the oil filter using Tool.

Tool number : KV10115801 (J-38956)

WARNING:

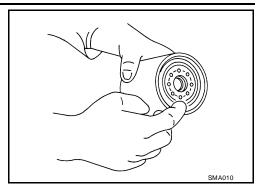

Be careful not to burn yourself, as the engine and engine oil are hot.

NOTE

The filter is a full-flow cartridge type and is provided with a relief valve.

Revision: August 2007 MA-16 2004 QX56

Clean the oil filter mounting surface on the cylinder block. Coat the oil filter rubber seal with engine oil as shown.

В

D

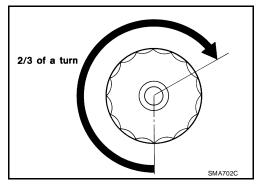

Е

Н

MA

M

- Screw on the oil filter until a slight resistance is felt, then tighten the oil filter an additional 2/3 turn as shown.
- 4. Add new engine oil. Refer to MA-16, "Changing Engine Oil" .
 - Clean any oil spills off the engine.

Changing Spark Plugs

ELS0010C SEC. 111•220 9.0 (0.92, 80) : N•m (kg-m, in-lb) 24.5 (2.5, 18) : N•m (kg-m, ft-lb)

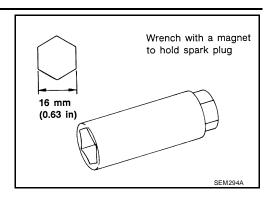

1. Ignition coil

Spark plug

REMOVAL

- 1. Disconnect harness connector from ignition coil.
- Remove ignition coil. Refer to <a>EM-26, "REMOVAL".

3. Using a suitable tool remove spark plug with.

INSPECTION AFTER REMOVAL

Use standard type spark plug for normal condition.

The hot type spark plug is suitable when fouling occurs with the standard type spark plug under conditions such as:

- Frequent engine starts
- Low ambient temperatures

The cold type spark plug is suitable when spark knock occurs with the standard type spark plug under conditions such as:

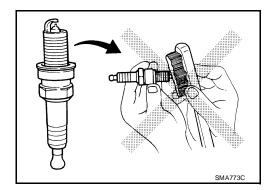

- Extended highway driving
- Frequent high engine revolution

Make	NGK
Standard type	PLFR5A-11
Hot type	PLFR4A-11
Cold type	PLFR6A-11

Gap (nominal) : 1.1 mm (0.043 in)

CAUTION:

- Do not drop or shock spark plug.
- Do not use a wire brush for cleaning.

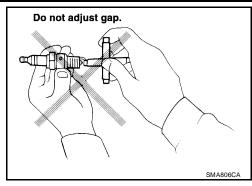

• If plug tip is covered with carbon, spark plug cleaner may be used.

Cleaner air pressure : Less than 588 kPa (5.9 bar, 6 kg/cm² , 85 psi)

Cleaning time : Less than 20 seconds

 Checking and adjusting plug gap is not required between change intervals.

INSTALLATION

Installation is in the reverse order of removal.

Checking EVAP Vapor Lines

LS0010D

- 1. Visually inspect EVAP vapor lines for improper attachment, cracks, damage, loose connections, chafing or deterioration.
- 2. Inspect vacuum relief valve of fuel tank filler cap for clogging and sticking. Refer to EC-637, "How to <a href="Detect Fuel Vapor Leakage".

CHASSIS AND BODY MAINTENANCE

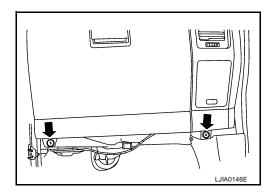

PFP:00100

Changing In-cabin Microfilter

1. Remove the instrument lower cover RH.

- Remove the glove box assembly.
- a. Remove the two lower glove box screws.

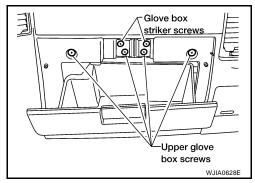

b. Open the glove box, then remove the four upper glove box screws.

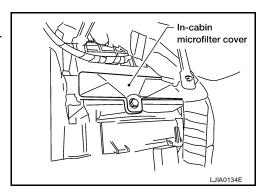

NOTE:

It is not necessary to remove the two glove box striker screws.

c. Remove the glove box assembly from the instrument panel to access the in-cabin microfilter cover.

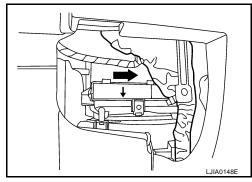

- 3. Remove the screw and remove the in-cabin microfilter cover.
- 4. Remove the in-cabin microfilters from the front heater and cooling unit assembly housing.

 Insert the first new in-cabin microfilter into the front heater and cooling unit assembly housing and slide it over to the right. Insert the second new in-cabin microfilter into the front heater and cooling unit assembly housing.

NOTE:

The in-cabin microfilters are marked with air flow arrows. The end of the microfilter with the arrow should face the rear of the vehicle. The arrows should point downward.

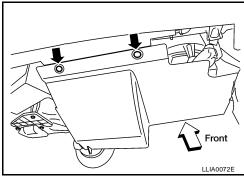

6. Install the in-cabin microfilter cover.

7. Install the glove box assembly in reverse order of removal.

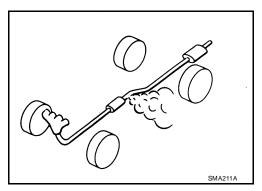

Upper glove box screws : 3.5 N·m (0.36 kg-m, 31 in-lb)
Lower glove box screws : 3.5 N·m (0.36 kg-m, 31 in-lb)

Install the instrument lower cover RH.

Checking Exhaust System

Check exhaust pipes, muffler and mounting for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration.

Checking A/T Fluid

1. Warm up the engine.

- 2. Check for any fluid leakage.
- 3. Remove the tightening bolt for the ATF level gauge.

60072E ELS0010F MA

M

D

Е

Н

ELS001JM

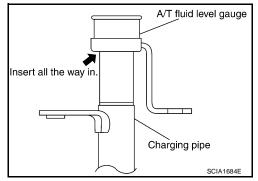

- 4. Before driving, fluid level can be checked at fluid temperatures of 30° to 50°C (86° to 122°F) using "COLD" range on ATF level gauge as follows.
- a. Park vehicle on level surface and set parking brake.
- b. Start engine and move selector lever through each gear position. Leave selector lever in "P" position.
- c. Check fluid level with engine idling.
- d. Remove ATF level gauge and wipe clean with lint-free paper.

CAUTION

When wiping away the fluid level gauge, always use lint-free paper, not a cloth one.

e. Re-insert ATF level gauge into charging pipe as far as it will go.

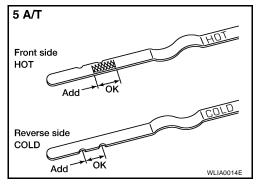

To check fluid level, insert the ATF level gauge until the cap contacts the end of the charging pipe, with the gauge reversed from the normal attachment conditions.

f. Remove ATF level gauge and note reading. If reading is at low side of range, add fluid to the charging pipe.

CAUTION:

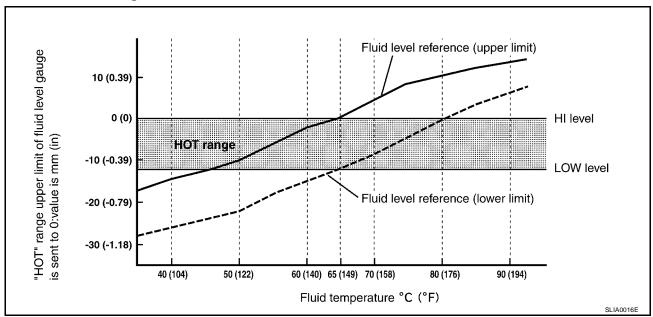

Do not overfill.

- 5. Increase ATF temperature by 80°C (176°F) once.
- 6. Make the fluid temperature approximately 65°C (149°F).

NOTE:

Fluid level will be greatly affected by temperature as shown. Therefore, be certain to perform operation while checking data with CONSULT-II.

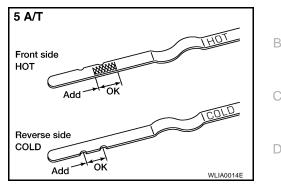

a. Connect CONSULT-II to data link connector.

- Select "MAIN SIGNALS" in "DATA MONITOR" mode for "A/T" with CONSULT-II.
- Read out the value of "ATF TEMP 1". C.
- 7. Re-check fluid level at fluid temperatures of approximately 65°C (149°F) using "HOT" range on A/T fluid level gauge.

CAUTION:

 When wiping away the fluid level gauge, always use lintfree paper, not a cloth one.

Insert all the way in

- To check fluid level, insert the ATF level gauge until the cap contacts the end of the charging pipe, with the gauge reversed from the normal attachment conditions as shown.
- 8. Check fluid condition.
 - If fluid is very dark or smells burned, refer to check operation of A/T. Flush cooling system after repair of A/T.
 - If ATF contains frictional material (clutches, bands, etc.), replace radiator and flush cooler line using cleaning solvent and compressed air after repair of A/T. Refer to CO-10, "RADIATOR" and AT-15, "A/T Fluid Cooler Cleaning".
- 9. Install the removed ATF level gauge into the fluid charging pipe.

: Refer to AT-13, "A/T FLUID" . Level gauge bolt

Changing A/T Fluid

ELS001JN

SCIA1684

A/T fluid level gauge

Charging pipe

- 1. Increase ATF temperature by 80°C (176°F) once.
- 2. Stop the engine.
- 3. Remove the tightening bolt for the ATF level gauge.
- Drain ATF from drain plug and refill with new ATF. Always refill same volume with drained fluid.
 - To replace the ATF, pour in new fluid at the charging pipe with the engine idling and at the same time drain the old fluid from the radiator cooler hose return side.
 - When the color of the fluid coming out is about the same as the color of the new fluid, the replacement is complete. The amount of new transmission fluid to use should be 30 to 50% increase of the stipulated amount.

ATF fluid capacity and specification : Refer to MA-10, "Fluids and Lubricants".

CAUTION:

- Use only specified ATF fluid. Do not mix with other fluid.
- Using ATF other than the specified ATF fluid will cause deterioration in driveability and automatic transmission durability, and may damage the automatic transmission, which is not covered by the warranty.
- When filling ATF, take care not to splash any heat generating parts such as the exhaust.

: Refer to AT-13, "A/T FLUID" . **Drain plug**

- 5. Increase ATF temperature by 80°C (176°F) once.
- 6. Check fluid level and condition. Refer to MA-21, "Checking A/T Fluid" . If fluid is still dirty, repeat step 2. through 5.
- 7. Install the removed ATF level gauge in the fluid charging pipe.

Level gauge bolt : Refer to AT-13, "A/T FLUID" .

Checking Transfer Fluid FLUID LEAKAGE AND FLUID LEVEL

ELS00101

- 1. Make sure that fluid is not leaking from the transfer assembly or around it.
- 2. Check fluid level from the filler plug hole as shown.

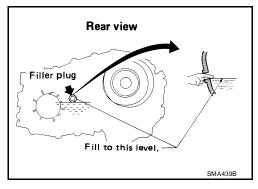

CAUTION:

Do not start engine while checking fluid level.

3. Install the filler plug with a new gasket to the transfer. Tighten to the specified torque. Refer to TF-110, "OVERHAUL".

CAUTION:

Do not reuse gasket.

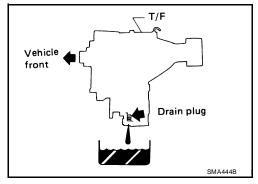

ELS0010J

Changing Transfer Fluid DRAINING

- 1. Stop engine.
- Remove the drain plug and gasket and drain the fluid.
- Install the drain plug with a new gasket to the transfer. Tighten to the specified torque. Refer to <u>TF-110</u>, "OVERHAUL"

CAUTION:

Do not reuse gasket.

Rear view

Fill to this level.

Filler plug

FILLING

- Remove the filler plug and gasket.
- 2. Fill the transfer with new fluid until the fluid level reaches the specified limit near the filler plug hole.

Fluid grade:

Refer to MA-10, "Fluids and Lubricants" .

Fluid capacity:

Refer to MA-10, "Fluids and Lubricants" .

CAUTION:

Carefully fill fluid. Fill up for approximately 3 minutes.

- 3. Leave the vehicle for 3 minutes, and check fluid level again.
- 4. Install the filler plug with a new gasket to the transfer. Tighten to the specified torque. Refer to TF-110, "OVERHAUL".

CAUTION:

Do not reuse gasket.

Checking Propeller Shaft

ELS0010L

WDIA0211E

Check the front and rear propeller shafts for damage, dents, and cracks. Check the joints for looseness and any damage. Repair or replace as necessary.

Checking Final Drive Oil

ELS0010M

CAUTION:

If using the vehicle for towing, the rear final drive oil must be replaced as specified. Refer to MA-6. "Schedule 1" .

NOTE:

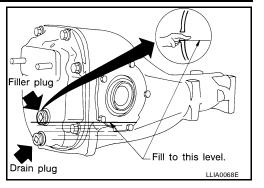

Rear final drive shown, front final drive similar.

- Remove the filler plug.
- Check for oil leaks and oil level. Add the specified oil as necessary.

Oil capacity and grade : Refer to RFD-11, "Components".

Install the filler plug and tighten to specification.

: Refer to FFD-14, "COMPONENTS" Filler plug (FFD), RFD-11, "Components" (RFD).

ELS0010N

Α

F

Н

Changing Final Drive Oil

CAUTION:

If using the vehicle for towing, the rear final drive oil must be replaced as specified. Refer to MA-6. "Schedule 1" .

NOTE:

Rear final drive shown, front final drive similar.

- Remove the filler plug.
- 2. Remove the drain plug and drain the final drive oil.
- 3. Apply sealant to the drain plug threads.
 - Use High Performance Thread Sealant or equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants".
- Install the drain plug and tighten to specification.

: Refer to FFD-14, "COMPONENTS" Drain plug (FFD), RFD-11, "Components" (RFD).

Refill the final drive with new specified oil.

Oil capacity and grade : Refer to MA-10, "Fluids and Lubricants" .

- Check the oil level.
- 7. Install the filler plug and tighten to specification.

: Refer to FFD-14, "COMPONENTS" Filler plug (FFD), RFD-11, "Components" (RFD).

Balancing Wheels REMOVAL

Using a releasing agent, remove the double-faced adhesive taped wheel weight(s) from the wheel.

CAUTION:

- Be careful not to scratch the wheel during removal.
- After removing double-faced adhesive taped wheel weights, wipe clean any traces of the releasing agent from the wheel.

WHEEL BALANCE ADJUSTMENT

If a tire balance machine has adhesion balance weight mode settings and drive-in weight mode setting, select and adjust a drive-in weight mode suitable for wheels.

- 1. Set the wheel on wheel balancer using the center hole as a guide. Start the tire balance machine.
- 2. When the inner and outer imbalance values are shown on the wheel balancer indicator, multiply the outer imbalance value by 1.6 to determine balance weight that should be used. Select the outer balance weight with a value closest to the calculated value and install it to the designated outer position of, or at the designated angle in relation to the road wheel.

Revision: August 2007

- Do not install the inner balance weight before installing the outer balance weight.
- Before installing the balance weight, be sure to clean the mating surface of the wheel.

Fill to this level. Drain plug

MA

MA-25 2004 QX56

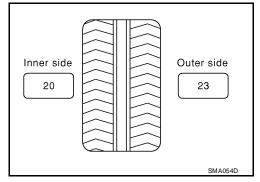

Indicated imbalance value \times 5/3 = balance weight to be installed Calculation example:

23 g $(0.81 \text{ oz}) \times 5/3 = 38.33 \text{ g} (1.35 \text{ oz}) = 40 \text{ g} (1.41 \text{ oz})$ balance weight (closer to calculated balance weight value)

Note that balance weight value must be closer to the calculated balance weight value.

Example:

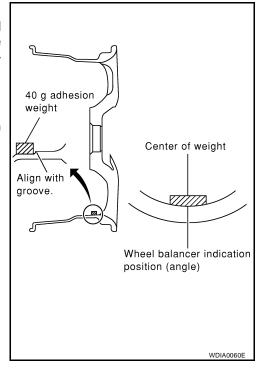

37.4 g = 35 g (1.23 oz)37.5 g = 40 g (1.41 oz)

- a. Install balance weight in the position shown.
- b. When installing balance weight to wheels, set it into the grooved area on the inner wall of the wheel as shown so that the balance weight center is aligned with the wheel balancer indication position (angle).

CAUTION:

- Always use Genuine NISSAN adhesion balance weights.
- Balance weights are not reusable; always replace with new ones.
- Do not install more than three sheets of balance weights.

 If calculated balance weight value exceeds 50 g (1.76 oz), install two balance weight sheets in line with each other as shown.

CAUTION:

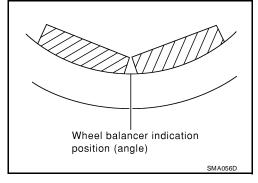

Do not install one balance weight sheet on top of another.

- Start wheel balancer again.
- 4. Install drive-in balance weight on inner side of road wheel in the wheel balancer indication position (angle).

CAUTION:

Do not install more than two balance weights.

- 5. Start wheel balancer. Make sure that inner and outer residual imbalance values are 5 g (0.18 oz) each or below.
 - If either residual imbalance value exceeds 5 g (0.18 oz), repeat installation procedures.

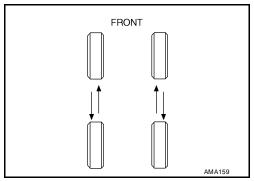

Wheel Balance						
Wheel type		Aluminum	Steel			
		Aluminum	Inside	Outside		
Maximum radial runout limit	Lateral mm (in)	0.3 (0.012) or less	1.0 (0.039) or less	0.9 (0.035) or less		
	Radial mm (in)	0.3 (0.012) or less	0.8 (0.031) or less	0.4 (0.016) or less		
Maximum residual imbalance	Dynamic (at rim flange)	Less than 5 g (0.18 oz) (per side)				
	Static (at rim flange)	Less than 10 g (0.35 oz)				

Tire Rotation ELS0010F

- 1. Rotate the tires on each side from front to back as shown.
 - Do not include the same spare tire when rotating the tires.

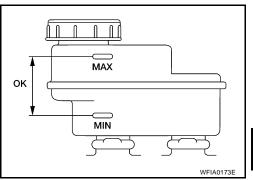

Wheel nuts : Refer to WT-6, "Rotation" .

- 2. Adjust the tire pressure to specification. Refer to WT-33, "Tire".
- 3. After the tire rotation, retighten the wheel nuts after the vehicle has been driven for 1,000 km (600 miles), and also after a wheel and tire have been installed such as after repairing a flat tire.

Checking Brake Fluid Level and Leaks

- Check the brake fluid level in the reservoir tank. It should be between the "MAX" and "MIN" lines on the reservoir tank.
- If the fluid level is extremely low, check the brake system.
- If the brake warning lamp comes on when the fluid is at the correct level, check the brake fluid level switch and the parking brake switch.

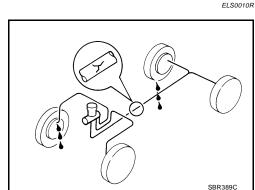

Checking Brake Lines and Cables

1. Check the brake lines and hoses for cracks, deterioration, and other damage. Replace any damaged parts.

If brake fluid leaks are visible around the brake line joints, retighten the joint, or replace damaged parts as necessary.

2. Check for brake fluid leaks by fully depressing brake pedal while engine is running.

ELS0010T

Checking Steering Gear and Linkage STEERING GEAR

- Check the steering gear housing for looseness, damage and oil leakage as shown.
- Check the steering column connections for looseness.

STEERING LINKAGE

 Check the ball joint, dust cover and other component parts for looseness, wear, damage and grease leakage.

Checking Power Steering Fluid and Lines CHECKING FLUID LEVEL

- Check the power steering fluid level with the engine off.
- Check fluid level on reservoir. Use "HOT" range at fluid temperatures of 50° to 80°C (122° to 176°F). Use "COLD" range at fluid temperatures of 0° to 30°C (32° to 86°F).

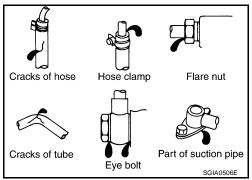

CAUTION:

- Do not overfill.
- Refer to MA-10, "Fluids and Lubricants".

CHECKING LINES

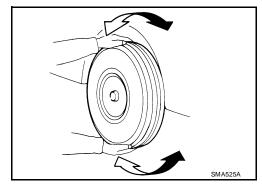

Check lines for improper attachment, leaks, cracks, damage, loose connections, chafing and deterioration.

Checking Axle and Suspension Parts FRONT AND REAR AXLE AND SUSPENSION PARTS

Check front and rear axle and suspension parts for excessive play, cracks, wear or other damage.

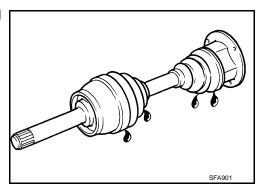

- Shake each wheel to check for excessive play.
- Rotate each wheel to check for abnormal noise.
- Check axle and suspension nuts and bolts for looseness.

- Check the strut and shock absorber for oil leakage or other damage.
- Check suspension ball joints for grease leakage and ball joint dust cover for cracks or other damage.

DRIVE SHAFT

Check the boots and drive shaft for cracks, wear, damage, and grease leakage.

Lubricating Locks, Hinges and Hood Latches

ELS0010W

WLIA0024E

Lubricate the locks, hinges, and latches at the locations as shown. Refer to MA-10, "Fluids and Lubricants" .

Checking Seat Belts, Buckles, Retractors, Anchors and Adjusters

ELS0010

Α

D

Check the seat belt buckles, webbing, retractors, anchors and adjusters. Replace any seat belt assembly as necessary. Refer to <u>SB-10</u>, "Seat Belt Inspection" .

- Check the seat belt anchors for loose mounting bolts, damage, or excessive wear.
- Check the seat belt webbing for any damage, cuts, fraying, or excessive wear.
- Check the retractor for smooth operation.
- Check the function of the buckles by inserting the seat belt tongue and checking for proper engagement of the buckle and press the button on the buckle to check for proper release of the seat belt tongue.

CAUTION:

- After any collision, inspect all seat belt assemblies, including retractors and other attached components, such as the guide rail set. NISSAN recommends replacing all seat belt assemblies in use during a collision, unless they are not damaged and are inspected to confirm they are operating properly after a minor collision.
 - Also inspect all seat belt assemblies that are not in use during a collision, and replace any components if damaged or not operating properly. The seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal collision where the driver and passenger air bags have been deployed.
- If any component of the seat belt assembly is suspected of being damaged or not operating properly, do not repair the component. Replace the components as an assembly.
- If the seat belt webbing is cut, frayed, or damaged then replace the seat belt assembly.
- Never lubricate the seat belt buckle or tongue.
- When replacing any seat belt assembly always use a Genuine NISSAN seat belt assembly.
