## PRECAUTION

#### **PRECAUTIONS**

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes dual stage front air bag modules. The SRS system may only deploy one front air bag, depending on the severity of a collision and whether the front passenger seat is occupied. Information necessary to service the system safely is included in the SR and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SR section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

#### WARNING:

- When working near the Airbag Diagnosis Sensor Unit or other Airbag System sensors with the Ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the Ignition OFF, disconnect the battery and wait at least three minutes before performing any service.

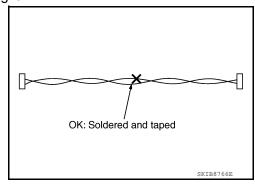

## Precautions For Harness Repair

INFOID:0000000011132035

ITS communication uses a twisted pair line. Be careful when repairing it.

Solder the repaired area and wrap tape around the soldered area.
 NOTE:

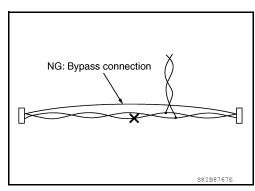

A fray of twisted lines must be within 110 mm (4.33 in).

Bypass connection is never allowed at the repaired area.

NOTE:

Bypass connection may cause ITS communication error. The spliced wire becomes separated and the characteristics of twisted line are lost.

#### **PRECAUTIONS**

< PRECAUTION > [ICC]

**ICC System Service** 

#### INFOID:0000000011132036

#### **CAUTION:**

- Turn the MAIN switch OFF in conditions similar to driving, such as free rollers or a chassis dynamometer.
- Never use the ICC sensor removed from vehicle. Never disassemble or remodel.
- Erase DTC when replacing parts of ICC system, then check the operation of ICC system after adjusting radar alignment if necessary.

**ICC Sensor** 

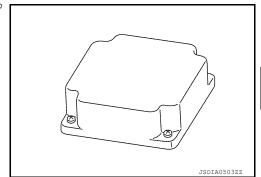

INFOID:0000000011132039

- ICC sensor is installed on the back of the front bumper and detects a vehicle ahead by using millimeter waves.
- ICC sensor detects radar reflected from a vehicle ahead by irradiating radar forward and calculates a distance from the vehicle ahead and relative speed, based on the detected signal.
- ICC sensor transmits the presence/absence of vehicle ahead and the distance from the vehicle to ADAS
  control unit via ITS communication.

**ADAS Control Unit** 

INFOID:0000000011132040

- ADAS control unit calculates a target distance between vehicles and a target speed, based on signals
  received from each sensor and switch to transmit an engine torque command value to ECM and a brake
  fluid pressure control signal to ABS actuator and electric unit (control unit) via CAN communication.
- ADAS control unit transmits buzzer output signal and meter display signal to combination meter via CAN communication.

### Brake Pedal Position Switch/Stop Lamp Switch

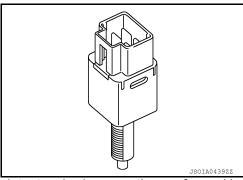

INFOID:0000000011132041

#### BRAKE PEDAL POSITION SWITCH

- Brake pedal position switch is installed at the upper part of the brake pedal and detects a brake operation performed by the driver.
- Brake pedal position switch is turned OFF when depressing the brake pedal.
- Brake pedal position switch signal is input to ECM. Brake pedal position switch signal is transmitted from ECM to ADAS control unit via CAN communication.

#### STOP LAMP SWITCH

- Stop lamp switch is installed at the upper part of the brake pedal and detects a brake operation performed by the driver.
- Stop lamp switch is turned ON, when depressing the brake pedal.
- Stop lamp switch signal is input to ECM and ABS actuator and electric unit (control unit). Stop lamp switch signals are transmitted from ECM and ABS actuator and electric unit (control unit) to ADAS control unit via CAN communication.

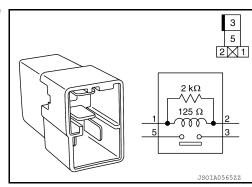

#### **ICC Steering Switch**

INFOID:0000000011132042

- ICC steering switch is installed to the steering wheel and allows the driver to operate the ICC system by using this switch.
- ICC steering switch allows the ON/OFF of the Intelligent Cruise Control and the settings of a vehicle speed and distance between vehicles.
- ICC steering switch signal is transmitted to ECM. ECM transmits the signal to the ADAS control unit via CAN
  communication.

## ICC Brake Hold Relay

INFOID:0000000011132043

• ICC brake hold relay is installed in the engine room (right side).

#### **COMPONENT PARTS**

#### < SYSTEM DESCRIPTION >

[ICC]

• When the brake is activated by the ICC system, the ICC brake hold relay turns ON the stop lamp by bypassing the circuit of the stop lamp, according to a signal transmitted from the ADAS control unit.

Combination Meter

INFOID:0000000011132044

- Performs the following operations using the signals received from the ADAS control unit via the CAN communication.
- Displays the ICC system operation status using the meter display signal.
- Illuminates the ICC system warning lamp using the ICC warning lamp signal.
- Illuminates the IBA OFF indicator lamp using the IBA OFF indicator lamp signal.
- Operates the buzzer (ICC warning chime) using the buzzer output signal.
- Combination meter turns ON/OFF the IBA system and transmits a system selection signal to the ADAS control unit.

#### **DESCRIPTION**

Intelligent Cruise Control

The Intelligent Cruise Control (ICC) system maintains a selected distance from the vehicle in front of own vehicle within the speed range of 0 to 144 km/h (0 to 90 MPH) up to the set speed.

The set speed can be selected by the driver between 32 to 144 km/h (20 to 90 MPH).

The vehicle travels at a set speed when the road ahead is clear.

The ICC system can be set to one of two cruise control modes:

#### **CAUTION:**

#### Never set the cruise speed exceeding the posted speed limit.

Vehicle-to-vehicle Distance Control Mode

For maintaining a selected distance between own vehicle and the vehicle in front of own vehicle up to the preset speed. Refer to <a href="CCS-20">CCS-20</a>. "VEHICLE-TO-VEHICLE DISTANCE CONTROL MODE FUNCTION: System <a href="Description">Description</a>".

Conventional (Fixed Speed) Cruise Control Mode

For cruising at a preset speed. Refer to <u>CCS-23</u>, <u>"CONVENTIONAL (FIXED SPEED) CRUISE CONTROL MODE FUNCTION: System Description"</u>.

#### NOTE:

In the Conventional (Fixed Speed) Cruise Control Mode, a warning chime will not sound to warn driver if own vehicle are too close to the vehicle ahead.

#### **WARNING:**

#### SYSTEM

#### < SYSTEM DESCRIPTION >

[ICC]

Always drive carefully and attentively when using either cruise control mode. To avoid serious injury or death, do not rely on the system to prevent accidents or to control the vehicle's speed in emergency situations. Do not use cruise control except in appropriate rode and traffic conditions.

Distance Control Assist (DCA) System

DCA share the systems and components with ICC system. Refer to <a href="DAS-89">DAS-89</a>, "Component Description".

Forward Collision Warning (FCW) System

FCW share the systems and components with ICC system. Refer to <a href="DAS-259">DAS-259</a>, "Component Description".

Intelligent Brake Assist (IBA) System

IBA system share the systems and components with ICC system. Refer to <a href="BRC-145">BRC-145</a>, "INTELLIGENT BRAKE ASSIST: System Description".

Brake Assist (with preview function)

Brake Assist (with preview function) share the systems and components with ICC system. Refer to <u>BRC-138</u>, <u>"BRAKE ASSIST (WITH PREVIEW FUNCTION)</u>: System Description".

## Fail-safe (ICC Sensor)

INFOID:0000000011132048

If a malfunction occurs in the ICC sensor, ADAS control unit cancels control, sounds a beep, and turns ON the ICC system warning lamp in the combination meter.

VEHICLE-TO-VEHICLE DISTANCE CONTROL MODE FUNCTION

VEHICLE-TO-VEHICLE DISTANCE CONTROL MODE FUNCTION: System Descrip-

#### **FUNCTION DESCRIPTION**

In the vehicle-to-vehicle distance control mode, the Intelligent Cruise Control (ICC) system automatically maintains a selected distance from the vehicle traveling in front of own vehicle according to that vehicle's speed (up to the set speed), or at the set speed when the road ahead is clear.

With ICC system, the driver can maintain the same speed as other vehicles without the constant need to adjust the set speed as driver would with a normal cruise control system.

The following items are controlled in the vehicle-to-vehicle distance control mode

- When there are no vehicles traveling ahead, the vehicle-to-vehicle distance control mode maintains the speed set by the driver. The set speed range is between approximately 32 and 144 km/h (20 and 90 MPH).
- When there is a vehicle traveling ahead, the vehicle-to-vehicle distance control mode adjusts the speed to maintain the distance, selected by driver, from a vehicle ahead. The adjusting speed range is up to the set speed.
- When the vehicle traveling ahead has moved out from its lane of travel, the vehicle-to-vehicle distance control mode accelerates and maintains vehicle speed up to the set speed.

#### **CAUTION:**

If the vehicle ahead comes to stop, the vehicle decelerates to a standstill within the limitations of the system. The system will cancel once it judges that the vehicle has come to a standstill and sound a warning chime.

To prevent the vehicle from moving, the driver must depress the brake pedal.

When the accelerator pedal is depressed, the brake operation and the warning are not performed by the ICC system.

#### OPERATION DESCRIPTION

Quickly push (less than 1.5 seconds) and release the MAIN switch ON.

The MAIN switch indicator, set distance indicator, own vehicle indicator, and set vehicle speed indicator come on and ICC system is set to a standby state.

ADAS control unit performs the control as per the following:

| Constant speed    | Comparing the set vehicle speed with the current vehicle speed, transmit the command to ECM via CAN communication to reach the set vehicle speed, and controls the electric throttle control actuator   |
|-------------------|---|
| Decelera-<br>tion | When a vehicle ahead (slower than driver set vehicle speed) appears or when a vehicle ahead slows down, the system controls the electric throttle control actuator into the close direction and decelerates the vehicle. If greater deceleration is necessary, the system transmits the brake fluid pressure control signal to the ABS actuator and electric unit (control unit) via CAN communication and operates the brake |
| Following         | The system controls the electric throttle control actuator and the brake fluid pressure to keep the proper distance between the vehicles according to the vehicle speed change of the vehicle ahead   |
| Accelera-<br>tion | When a vehicle ahead is not detected because of it changes lanes or own vehicle changes lanes during the following driving, the system controls the electric throttle control actuator in the open direction and accelerates the vehicle to the set vehicle speed slowly  |

#### Set Condition

Under a standby state, pushing down the SET/COAST switch will start system control.

- When vehicle speed is between approximately 32 km/h and 144 km/h (20 MPH and 90 MPH).
- When vehicle speed is below approximately 32 km/h (20 MPH) if the vehicle ahead is detected. The set vehicle speed becomes 32 km/h (20 MPH).

If the system is canceled by conditions 1-6 below, the system will resume control at the last set cruising speed by pushing up the RESUME/ACCELERATE switch.

#### NOTE:

- When the SET/COAST switch is pushed under the following conditions, the system cannot be set and the set vehicle speed indicator will blink for approximately 2 seconds.
- When traveling below 32 km/h (20 MPH) and the vehicle ahead is not detected.
- When the selector lever is not in the "D" position or manual mode.
- When the parking brakes are applied.
- When the brakes are operated by the driver.
- When the SET/COAST switch is pushed under the following conditions, the system cannot be set and a warning chime will sound and displays that causes in combination meter (information display).
- When the drive mode select switch is in SNOW position. (To use the ICC system, turn OFF the snow mode, push the ICC MAIN switch to turn OFF the ICC system and reset the ICC system by pushing the ICC MAIN switch again.)
- When the VDC is OFF. (To use the ICC system, turn ON the VDC system, push the MAIN switch to turn OFF the ICC system and reset the ICC system by pushing the MAIN switch again.)
- When ABS or VDC (including the TCS) operates.
- When the wheel is slipping. (To use the ICC system, make sure the wheels are no longer spinning, push the MAIN switch to turn OFF the ICC system and reset the ICC system by pushing the MAIN switch again.)

**SYSTEM** [ICC] < SYSTEM DESCRIPTION > **Cancel Conditions** 1. When CANCEL switch is pressed. Α 2. When brake pedal is depressed. 3. When the vehicle ahead is not detected below the speed of 24 km/h (15 MPH). 4. When the selector lever is not in the "D" position or manual mode. В 5. When the parking brakes are applied. 6. CONVENTIONAL (FIXED SPEED) CRUISE CONTROL MODE FUNCTION Е CONVENTIONAL (FIXED SPEED) CRUISE CONTROL MODE FUNCTION: System F Н L Ν

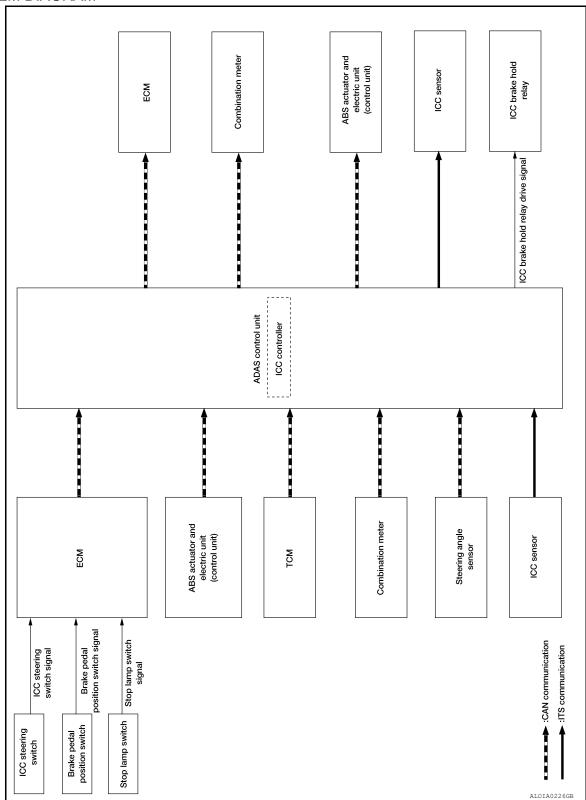

CCS

F

Revision: August 2014 CCS-23 2015 QX60 NAM

Description INFOID:0000000011132050

#### SYSTEM DIAGRAM

#### **FUNCTION DESCRIPTION**

This mode allows driving at a speed between 40 to 144 km/h (25 to 90 MPH) without keeping foot on the accelerator pedal.

NOTE:

#### **SYSTEM**

#### < SYSTEM DESCRIPTION >

[ICC]

In the conventional (fixed speed) cruise control mode, a warning chime does not sound to warn driver if own vehicle are too close to the vehicle ahead, as neither the presence of the vehicle ahead nor the vehicle-to-vehicle distance is detected.

В

D

Е

F

#### OPERATION DESCRIPTION

To turn ON the conventional (fixed speed) cruise control mode, push and hold the MAIN switch for longer than approximately 1.5 seconds when ICC system is OFF.

When pushing the MAIN switch ON, the ICC system display and the MAIN switch indicator are displayed on the information display.

After hold the MAIN switch ON for longer than approximately 1.5 seconds, the ICC system display goes out. The MAIN switch indicator stays lit and brings the system to standby state.

#### NOTE:

- To turn on the vehicle-to-vehicle distance control mode again, turn OFF the system and quickly push (less than 1.5 seconds) the MAIN switch.
- When the DCA system is ON, the conventional (fixed speed) cruise control mode cannot be turned on even though the MAIN switch is pushed and held.
- To turn ON the conventional (fixed speed) cruise control mode, turn OFF the DCA system. Refer to <u>DAS-89</u>.
   "Component Description".

ADAS control unit performs the control as per the following:

Constant speed

Comparing the set vehicle speed with the current vehicle speed, transmits the command to ECM via CAN communication to reach the set vehicle speed, and controls the electronic throttle control actuator.

#### Set Condition

When the system is under a standby state and the vehicle speed is between approximately 40 km/h (25 MPH) and 144 km/h (90 MPH), pushing the SET/COAST switch will start system control.

If the system is canceled by conditions 1-5 below, the system will resume control at the last set cruising speed by pushing the RESUME/ACCELERATE switch.

#### Cancel conditions

- 1. When CANCEL switch is pressed.
- 2. When brake pedal depressed.
- 3. When the vehicle slows down more than 13 km/h (8 MPH) below the set speed.
- 4. When the selector lever is not in the "D" position or manual mode.
- 5. When the parking brakes are applied.
- 6. When the MAIN switch is turned OFF.
- 7. When VDC (including the TCS) operates.
- 8. When a wheel slips.
- 9. When the system malfunction occurs.

|              |                | When the vehicle speed exceeds the set speed | ☐ >50 ← MPH<br>CRUISE         |

#### NOTE:

The display of the DCA system is given priority when the DCA system is ON in a standby mode. (The set vehicle speed indicator and set distance indicator are not displayed).

#### APPROACH WARNING DISPLAY

If own vehicle comes closer to a vehicle ahead due to rapid deceleration of that vehicle or if another vehicle cuts in, the system warns the driver with the chime and ICC system display. Decelerate by depressing the brake pedal to maintain a safe vehicle distance if:

- The chime sounds.
- The vehicle ahead detection indicator blinks in orange.

The warning chime may not sound in some cases when there is a short distance between vehicles. Some examples are:

- When the vehicles are traveling at the same speed and the distance between vehicles is not changing.
- When the vehicle ahead is traveling faster and the distance between vehicles is increasing.
- · When a vehicle cuts in at near own vehicle.

The warning chime will not sound when own vehicle approaches vehicles that are parked or moving slowly.

The warning chime will not sound when the accelerator pedal is depressed, overriding the system.

The approach warning chime may sound and the system display may blink when the ICC sensor detects some reflectors which are fitted on vehicles in other lanes or on the side of the road.

This may cause the ICC system to decelerate or accelerate the vehicle.

The ICC sensor may detect these objects when the vehicle is driven on winding roads, hilly roads or when entering or exiting a curve.

The ICC sensor may also detect reflectors on narrow roads or in road construction zones.

In these cases driver will have to manually control the proper distance ahead of own vehicle.

Also, the sensor sensitivity can be affected by vehicle operation (steering maneuver or driving position in the lane) or traffic or vehicle condition (for example, if a vehicle is being driven with some damage).

#### HANDLING PRECAUTION

#### Precautions for Vehicle-to-Vehicle Distance Control Mode

INFOID:0000000011132055

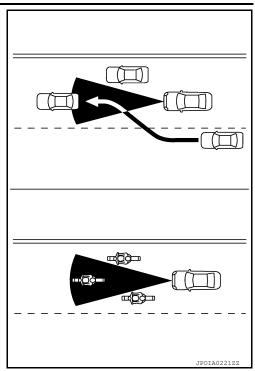

- ICC system is only an aid to assist the driver and is not a collision warning or avoidance system. It is the
  driver's responsibility to stay alert, drive safely and be in control of the vehicle at all times.
- The system is primarily intended for use on straight, dry, open roads with light traffic. It is not advisable to use the system in city traffic or congested areas.
- This system will not adapt automatically to road conditions. This system should be used in evenly flowing traffic. Never use the system on roads with sharp curves, or on icy roads, in heavy rain or in fog.
- The ICC sensor will not detect the following objects:
- Stationary and slow moving vehicles.
- Pedestrians or objects in the roadway.
- Oncoming vehicles in the some lane.
- Motorcycles traveling offset in the travel lane.
- As there is a performance limit to the distance control function, never rely solely on the ICC system. This
  system does not correct careless, inattentive or absent-minded driving, or overcome poor visibility in rain,
  fog, or other bad weather. Decelerate the vehicle speed by depressing the brake pedal, depending on the
  distance to the vehicle ahead and the surrounding circumstances in order to maintain a safe distance
  between vehicles.
- If the vehicle ahead comes to a stop, the vehicle decelerates to a standstill within the limitations of the system. The system will cancel once it judges that the vehicle has come to a standstill and sound a warning chime. To prevent the vehicle from moving, the driver must depress the brake pedal.
- The system may not detect the vehicle in front of the driver in certain road or weather conditions. To avoid accidents, never use the ICC system under the following conditions:
- On roads where the traffic is heavy or there are sharp curves.
- On slippery road surfaces such as on ice or snow, etc.
- During bad weather (rain, fog, snow, etc.)
- When rain, snow or dirt adhere to the ICC sensor.
- On steep downhill roads (the vehicle may go beyond the set vehicle speed and frequent braking may result in overheating the brakes).
- On repeated uphill and downhill roads.
- When traffic conditions make it difficult to keep a proper distance between vehicles because of frequent acceleration or deceleration.
- Never use the ICC system if own vehicle is towing a trailer. The system may not detect a vehicle ahead.
- In some road or traffic conditions, a vehicle or object can unexpectedly come into the sensor detection zone
  and cause automatic braking. The driver may need to control the distance from other vehicles using the
  accelerator pedal. Always stay alert and avoid using the ICC system when it is not recommended in this section.
- The vehicle-to-vehicle distance control mode uses a sensor located behind the front bumper of the vehicle to
  detect vehicles traveling ahead. The sensor generally detects the signals returned from the vehicle ahead.
  Therefore, if the sensor cannot detect the reflection from the vehicle ahead, the ICC system may not maintain the selected distance.
- The following are some conditions in which the sensor cannot detect the signals:
- When the snow or road spray from traveling vehicles reduces the sensor's visibility.
- When excessively heavy baggage is loaded in the rear seat or the luggage room of own vehicle.
- The ICC system is designed to automatically check the sensor's operation within the limitation of the system. When the front bumper area of the ICC sensor is covered with dirt or is obstructed, the system will automatically cancel. If the front bumper area of the ICC sensor is covered with ice, a transparent or translucent vinyl bag, etc., the ICC system may not detect them. In these instances, the vehicle-to-vehicle distance control mode may not cancel and may not be able to maintain the selected following distance from the vehicle ahead. Be sure to check and clean the front bumper area of the ICC sensor regularly.
- The ICC system does not control vehicle speed or warn the driver when own vehicle approaches stationary
  and slow moving vehicles. The driver must pay attention to vehicle operation to maintain proper distance
  from vehicles ahead when approaching toll gates or traffic congestion.

Α

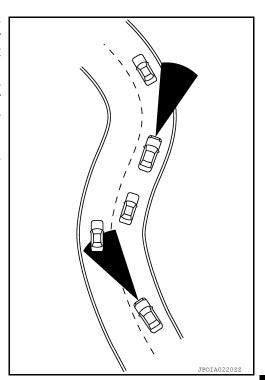

D

Е

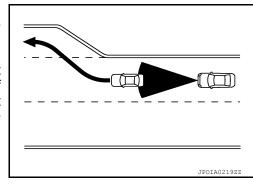

• The detection zone of the ICC sensor is limited. A vehicle ahead must be in the detection zone for the vehicle-to-vehicle distance detection mode to maintain the selected distance from the vehicle ahead. A vehicle ahead may move outside of the detection zone due to its position within the same lane of travel. Motorcycles may not be detected in the same lane ahead if they are traveling offset from the center line of the lane. A vehicle that is entering the lane ahead may not be detected until the vehicle has completely moved into the lane. If this occurs, the ICC system may warn the driver by blinking the system indicator and sounding the chime. The driver may have to manually control the proper distance away from vehicle traveling ahead.

• When driving on some roads, such as winding, hilly, curved, narrow roads, or roads which are under construction, the ICC sensor may detect vehicles in a different lane, or may temporarily not detect a vehicle traveling ahead. This may cause the ICC system to decelerate or accelerate the vehicle. The detection of vehicles may also be affected by vehicle operation (steering maneuver or traveling position in the lane, etc.) or vehicle condition. If this occurs, the ICC system may warn the driver by blinking the system indicator and sounding the chime unexpectedly. The driver will have to manually control the proper distance away from the vehicle traveling ahead.

• When driving on the freeway at a set speed and approaching a slower traveling vehicle ahead, the ICC will adjust the speed to maintain the distance, selected by the driver, from the vehicle ahead. If the vehicle ahead changes lanes or exits the freeway, the ICC system will accelerate and maintain the speed up to the set speed. Pay attention to the driving operation to maintain control of the vehicle as it accelerates to the set speed. The vehicle may not maintain the set speed on winding or hilly roads. If this occurs, the driver will have to manually control the vehicle speed.

Ν

M

CCS

Р

Revision: August 2014 CCS-33 2015 QX60 NAM

#### HANDLING PRECAUTION

< SYSTEM DESCRIPTION >

- Normally when controlling the distance to a vehicle ahead, this system automatically accelerates or decelerates own vehicle according to the speed of the vehicle ahead. Depress the accelerator to properly accelerate own vehicle when acceleration is required for a lane change. Depress the brake pedal when deceleration is required to maintain a safe distance to the vehicle ahead due to its sudden braking or if a vehicle cuts in. Always stay alert when using the ICC system.
- The sensor sensitivity can be affected by vehicle operation (steering maneuver or driving position in the lane) or traffic or vehicle condition (for example, if a vehicle is being driven with some damage).

### Precautions for Conventional (Fixed Speed) Cruise Control Mode

INFOID:0000000011132056

- In the conventional (fixed speed) cruise control mode, a warning chime does not sound to warn the driver if own vehicle is too close to the vehicle ahead, as neither the presence of the vehicle ahead nor the vehicleto-vehicle distance is detected.
- Pay special attention to the distance between own vehicle and the vehicle ahead or a collision could occur.
- Always confirm the setting in the ICC system display.
- Never use the conventional (fixed speed) cruise control mode when driving under the following conditions:
- When it is not possible to keep the vehicle at a set speed.
- In heavy traffic or in traffic that varies in speed.
- On winding or hilly roads.
- On slippery roads (rain, snow, ice, etc.).
- In very windy areas.
- Doing so could cause a loss of vehicle control and result in an accident.
- To avoid accidentally engaging cruise control, make sure to the MAIN switch OFF when not using ICC sys-

## **DIAGNOSIS SYSTEM (ADAS CONTROL UNIT)**

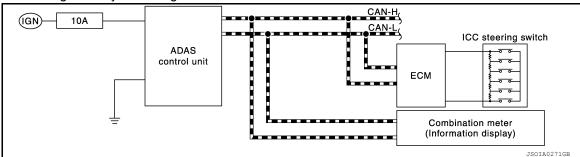

## On Board Diagnosis Function

INFOID:0000000011558201

#### **DESCRIPTION**

The DTC is displayed on the information display by operating the ICC steering switch.

On Board Self-diagnosis System Diagram

#### METHOD OF STARTING

#### **CAUTION:**

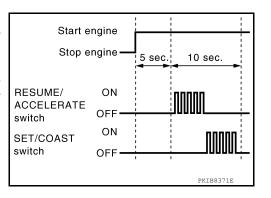

Start condition of on board self-diagnosis

- ICC system OFF
- DCA system OFF
- Vehicle speed 0 km/h (0 MPH)
- 1. Turn the ignition switch OFF.
- 2. Start the engine.
- Wait for 5 seconds after starting the engine. Push up the RESUME/ACCELERATE switch 5 times and push down the SET/COAST switch 5 times within 10 seconds.

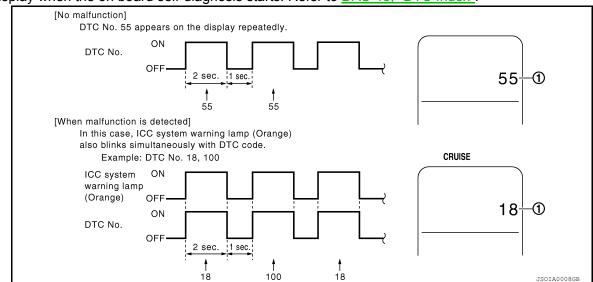

#### NOTE:

NOTE:

If the above operation cannot be performed within 10 seconds after waiting for 5 seconds after starting the engine, repeat the procedure from step 1.

 The DTC is displayed on the set vehicle speed indicator (1) on the ICC system display on the information display when the on board self-diagnosis starts. Refer to <u>DAS-48</u>, "<u>DTC Index</u>".

Revision: August 2014 CCS-35 2015 QX60 NAM

M

Ν

ccs

- It displays for up to 5 minutes and then stops.
- If multiple malfunctions exist, up to 6 DTCs can be stored in memory at the most, and the most recent one is displayed first.

#### WHEN THE ON BOARD SELF-DIAGNOSIS DOES NOT START

If the on board self-diagnosis does not start, check the following items.

| Assumed abnormal part         |                                  | Inspection item   |
|-------------------------------|----------------------------------|---|
| Information display           | Combination meter malfunction    | Check that the self-diagnosis function of the combination meter operates. Refer to MWI-15, "INFORMATION DISPLAY: System Description"  |
| ICC steering switch malf      | unction                          |   |
| Harness malfunction bet       | ween ICC steering switch and ECM | Perform the inspection for DTC"C1A06". Refer to <u>DAS-176</u> , " <u>Diagnosis Procedure</u> "   |
| ECM malfunction               |                                  |   |
| ADAS control unit malfunction |                                  | <ul> <li>Check power supply and ground circuit of ADAS control unit. Refer to <u>DAS-84</u>, "<u>Diagnosis Procedure</u>".</li> <li>Perform SELF-DIAGNOSIS for "ICC/ADAS" with CONSULT, and then check the malfunctioning parts. Refer to <u>DAS-48</u>, "<u>DTC Index</u>".</li> </ul> |

#### HOW TO ERASE ON BOARD SELF-DIAGNOSIS

- 1. Turn the ignition switch OFF.
- 2. Start the engine, and then start the on board self-diagnosis.
- Press the CANCEL switch 5 times, and then press the DIS-TANCE switch 5 times under the condition that the on board self-diagnosis starts.

#### NOTE:

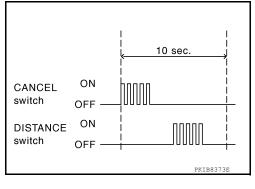

- Complete the operation within 10 seconds after pressing the CANCEL switch first.
- If the operation is not completed within 10 seconds, repeat the procedure from step 1.
- 4. DTC 55 is displayed after erasing.

#### NOTE:

DTCs for existing malfunction can not be erased.

5. Turn ignition switch OFF, and finish the diagnosis.

## CONSULT Function (ICC/ADAS)

INFOID:0000000011558202

#### **CAUTION:**

After disconnecting the CONSULT vehicle interface (VI) from the data link connector, the ignition must be cycled OFF  $\rightarrow$  ON (for at least 5 seconds)  $\rightarrow$  OFF. If this step is not performed, the BCM may not go to "sleep mode", potentially causing a discharged battery and a no-start condition.

#### APPLICATION ITEMS

CONSULT performs the following functions via CAN communication using ADAS control unit.

| Diagnosis mode         | Description   |  |
|------------------------|---|--|
| Self Diagnostic Result | Displays the name of a malfunctioning system stored in the ADAS control unit.                                   |  |
| Data Monitor           | Displays ADAS control unit input/output data in real time.  |  |
| Work support           | Displays causes of automatic system cancellation occurred during system control.                                |  |
| Active Test            | Enables an operational check of a load by transmitting a driving signal from the ADAS control unit to the load. |  |
| ECU identification     | Displays ADAS control unit part number.   |  |
| CAN Diag Support Mntr  | Displays a reception/transmission state of CAN communication and ITS communication.                             |  |

#### SELF DIAGNOSTIC RESULT

Refer to DAS-48, "DTC Index".

| Monitored item<br>[Unit]         | ALL SIG (ICC) | MAIN SIG (ICC) | MAIN SIG (LDW/LDP) | MAIN SIG (BSW/BSI) | BCI MAIN | Description  |
|----------------------------------|---------------|----------------|--------------------|--------------------|----------|--|
| MAIN SW<br>[On/Off]              | ×             | ×              | ×                  | ×                  |          | Indicates [On/Off] status as judged from ICC steering switch signal (ECM transmits ICC steering switch signal through CAN communication)   |
| SET/COAST SW<br>[On/Off]         | ×             | ×              |                    |                    |          | Indicates [On/Off] status as judged from ICC steering switch signal (ECM transmits ICC steering switch signal through CAN communication)   |
| CANCEL SW<br>[On/Off]            | ×             | ×              |                    |                    |          | Indicates [On/Off] status as judged from ICC steering switch signal (ECM transmits ICC steering switch signal through CAN communication)   |
| RESUME/ACC SW<br>[On/Off]        | ×             | ×              |                    |                    |          | Indicates [On/Off] status as judged from ICC steering switch signal (ECM transmits ICC steering switch signal through CAN communication)   |
| DISTANCE SW<br>[On/Off]          | ×             |                |                    |                    |          | Indicates [On/Off] status as judged from ICC steering switch signal (ECM transmits ICC steering switch signal through CAN communication)   |
| CRUISE OPE<br>[On/Off]           | ×             | ×              |                    |                    |          | Indicates whether controlling or not (ON means "controlling")  |
| BRAKE SW<br>[On/Off]             | ×             | ×              | ×                  | ×                  | ×        | Indicates [On/Off] status as judged from brake pedal position switch signal (ECM transmits brake pedal position switch signal through CAN communication)   |
| STOP LAMP SW<br>[On/Off]         | ×             | ×              | ×                  | ×                  | ×        | Indicates [On/Off] status as judged from stop lamp switch signal (ECM transmits stop lamp switch signal through CAN communication)   |
| IDLE SW<br>[On/Off]              | ×             |                |                    |                    | ×        | Indicates [On/Off] status of idle switch read from ADAS control unit through CAN communication (ECM transmits On/Off status through CAN communication)   |
| SET DISTANCE<br>[Short/Mid/Long] | ×             | ×              |                    |                    |          | Indicates set distance memorized in ADAS control unit  |
| CRUISE LAMP<br>[On/Off]          | ×             | ×              |                    |                    |          | Indicates [On/Off] status of MAIN switch indicator output  |
| OWN VHCL<br>[On/Off]             | ×             |                |                    |                    |          | Indicates [On/Off] status of own vehicle indicator output  |
| VHCL AHEAD<br>[On/Off]           | ×             |                |                    |                    |          | Indicates [On/Off] status of vehicle ahead detection indicator output  |
| ICC WARNING<br>[On/Off]          | ×             |                |                    |                    |          | Indicates [On/Off] status of ICC system warning lamp output  |
| VHCL SPEED SE<br>[km/h] or [mph] | ×             | ×              | ×                  | ×                  | ×        | Indicates vehicle speed calculated from ADAS control unit through CAN communication [ABS actuator and electric unit (control unit) transmits vehicle speed signal (wheel speed) through CAN communication] |
| SET VHCL SPD<br>[km/h] or [mph]  | ×             | ×              |                    |                    |          | Indicates set vehicle speed memorized in ADAS control unit   |
| BUZZER O/P<br>[On/Off]           | ×             |                |                    |                    | ×        | Indicates [On/Off] status of ICC warning chime output  |
| THRTL SENSOR<br>[deg]            | ×             | ×              |                    |                    |          | NOTE: The item is displayed, but it is not monitored   |
| ENGINE RPM<br>[rpm]              | ×             |                |                    |                    |          | Indicates engine speed read from ADAS control unit through CAN communication (ECM transmits engine speed signal through CAN communication)   |
| WIPER SW<br>[OFF/LOW/HIGH]       | ×             |                |                    |                    |          | Indicates wiper [OFF/LOW/HIGH] status (BCM transmits front wiper request signal through CAN communication)   |
| BA WARNING<br>[On/Off]           | ×             |                |                    |                    |          | Indicates [On/Off] status of IBA OFF indicator lamp output   |
| STP LMP DRIVE<br>[On/Off]        | ×             | ×              |                    |                    | ×        | Indicates [On/Off] status of ICC brake hold relay drive output   |

|---|---------------|----------------|--------------------|--------------------|----------|--|
| Monitored item<br>[Unit]                | ALL SIG (ICC) | MAIN SIG (ICC) | MAIN SIG (LDW/LDP) | MAIN SIG (BSW/BSI) | BCI MAIN | Description  |
| D RANGE SW<br>[On/Off]                  | ×             |                |                    |                    |          | Indicates [On/Off] status of "D" or "M" positions read from ADAS control unit through CAN communication; ON when position "D" or "M" (TCM transmits shift position signal through CAN communication).  |
| NP RANGE SW<br>[On/Off]                 | ×             |                |                    |                    |          | Indicates shift position signal read from ADAS control unit through CAN communication (TCM transmits shift position signal through CAN communication)  |
| PKB SW<br>[On/Off]                      | ×             |                |                    |                    |          | Parking brake switch status [On/Off] judged from the parking brake switch signal that ADAS control unit readout via CAN communication is displayed (Combination meter transmits the parking brake switch signal via CAN communication)                     |
| PWR SUP MONI<br>[V]                     | ×             | ×              |                    |                    |          | Indicates IGN voltage input by ADAS control unit   |
| VHCL SPD AT [km/h] or [mph]             | ×             |                |                    |                    |          | Indicates vehicle speed calculated from CVT vehicle speed sensor read from ADAS control unit through CAN communication (TCM transmits CVT vehicle speed sensor signal through CAN communication)   |
| THRTL OPENING [%]                       | ×             | ×              |                    |                    | ×        | Indicates throttle position read from ADAS control unit through CAN communication (ECM transmits accelerator pedal position signal through CAN communication).   |
| GEAR<br>[1, 2, 3, 4, 5, 6]              | ×             |                |                    |                    |          | Indicates CVT gear position read from ADAS control unit through CAN communication (TCM transmits current gear position signal through CAN communication)   |
| MODE SIG<br>[OFF, ICC, ASCD]            | ×             |                |                    |                    |          | Indicates the active mode from ICC or ASCD [conventional (fixed speed) cruise control mode]  |
| SET DISP IND<br>[On/Off]                | ×             |                |                    |                    |          | Indicates [On/Off] status of SET switch indicator output   |
| DISTANCE<br>[m]                         | ×             |                |                    |                    |          | Indicates the distance from the vehicle ahead  |
| RELATIVE SPD<br>[m/s]                   | ×             |                |                    |                    |          | Indicates the relative speed of the vehicle ahead  |
| Camera lost<br>[Detect/Deviate/Both]    |               |                | ×                  | ×                  |          | Indicates a lane marker detection state judged from a lane marker detection signal read by the ADAS control unit via ITS communication (Lane camera unit transmits a lane marker signal via ITS communication)   |
| Lane unclear<br>[On/Off]                |               |                | ×                  | ×                  |          | Indicates an ON/OFF state of the lane marker. The ON/OFF state is judged from a detected lane condition signal read by the ADAS control unit via ITS communication (The lane camera unit transmits a detected lane condition signal via ITS communication) |
| STATUS signal<br>[Stnby/Warn/Cancl/Off] |               |                | ×                  |                    |          | Indicates a control state of LDP system  |
| DYNA ASIST SW<br>[On/Off]               | ×             | ×              |                    | ×                  |          | Indicates [On/Off] status as judged from ICC steering switch signal (ECM transmits ICC steering switch signal through CAN communication)   |
| DCA ON IND<br>[On/Off]                  | ×             |                |                    |                    |          | The status [ON/OFF] of DCA system switch indicator output is displayed   |
| DCA VHL AHED<br>[On/Off]                | ×             |                |                    |                    |          | The status [ON/OFF] of vehicle ahead detection indicator output in DCA system is displayed   |
| IBA SW<br>[On/Off]                      | ×             | ×              |                    |                    |          | Indicates [On/Off] status of IBA OFF switch  |
| APA TEMP<br>[°C]                        | ×             |                |                    |                    | ×        | Accelerator pedal actuator integrated motor temperature that the ADAS control unit readout via ITS communication is displayed (Accelerator pedal actuator transmits the integrated motor temperature via ITS communication)                                |

< SYSTEM DESCRIPTION > [ICC]

| < SYSTEM DESCRIP                              | 110           | <b>N</b> /     |                    |                    |          | [160]  |
|---|---------------|----------------|--------------------|--------------------|----------|--|
| Monitored item<br>[Unit]                      | ALL SIG (ICC) | MAIN SIG (ICC) | MAIN SIG (LDW/LDP) | MAIN SIG (BSW/BSI) | BCI MAIN | Description  |
| APA PWR<br>[V]                                | ×             |                |                    |                    | ×        | Accelerator pedal actuator power supply voltage that the ADAS control unit read-<br>out via ITS communication is displayed (Accelerator pedal actuator transmits the<br>power supply voltage via ITS communication)  |
| FCW SYSTEM ON<br>[On/Off]                     | ×             | ×              |                    |                    |          | Indicates [On/Off] status of FCW system  |
| LDW SYSTEM ON<br>[On/Off]                     |               |                | ×                  |                    |          | Indicates [On/Off] status of LDW system  |
| LDW ON LAMP<br>[On/Off]                       |               |                | ×                  |                    |          | Indicates [On/Off] status of waning systems ON indicator output  |
| LDP ON IND<br>[On/Off]                        |               |                | ×                  |                    |          | Indicates [On/Off] status of LDP ON indicator lamp (Green) output  |
| LANE DPRT W/L<br>[On/Off]                     |               |                | ×                  |                    |          | Indicates [On/Off] status of lane departure warning lamp (Yellow) output   |
| LDW BUZER OUTPUT<br>[On/Off]                  |               |                | ×                  |                    |          | Indicates [On/Off] status of warning buzzer output   |
| LDP SYSTEM ON<br>[On/Off]                     |               |                | ×                  |                    |          | Indicates [On/Off] status of LDP system  |
| READY signal<br>[On/Off]                      |               |                | ×                  |                    |          | Indicates LDP system settings  |
| Shift position<br>[Off, P, R, N, D, M/T1 - 7] |               |                | ×                  | ×                  | ×        | Indicates shift position read from ADAS control unit through CAN communication (TCM transmits shift position signal through CAN communication)   |
| Turn signal<br>[OFF/LH/RH/LH&RH]              |               |                | ×                  | ×                  |          | Indicates turn signal operation status read from ADAS control unit through CAN communication (BCM transmits turn indicator signal through CAN communication)   |
| SIDE G<br>[G]                                 |               |                | ×                  | ×                  |          | Indicates lateral G acting on the vehicle. This lateral G is judged from a side G sensor signal read by ADAS control unit via CAN communication (The ABS actuator and electric unit (control unit) transmits a side G sensor signal via CAN communication) |
| FUNC ITEM(FCW)                                | ×             | ×              | ×                  | ×                  |          | Indicates systems which can be set to ON/OFF by selecting "Driver Assistance" ⇒ "Driving aids" of the navigation system FCW: Distance Control Assist (DCA), Lane Departure Prevention (LDP) and Blind Spot Intervention                                    |
| FUNC ITEM(LDW)                                | ×             | ×              | ×                  | ×                  |          | Indicates systems which can be set to ON/OFF by selecting "Driver Assistance" ⇒ "Driving aids" of the navigation system LDW: Distance Control Assist (DCA), Lane Departure Prevention (LDP) and Blind Spot Intervention                                    |
| FUNC ITEM(BSW)                                | ×             | ×              | ×                  | ×                  |          | Indicates systems which can be set to ON/OFF by selecting "Driver Assistance" ⇒ "Driving aids" of the navigation system BSW: Distance Control Assist (DCA), Lane Departure Prevention (LDP) and Blind Spot Intervention                                    |

## < SYSTEM DESCRIPTION >

#### **WORK SUPPORT**

| Work support items     | Description  |
|------------------------|--|
| CAUSE OF AUTO-CANCEL 1 | Displays causes of automatic system cancellation occurred during control of the following systems  • Vehicle-to-vehicle distance control mode  • Conventional (fixed speed) cruise control mode  • Distance Control Assist (DCA) |
| CAUSE OF AUTO-CANCEL 2 | Displays causes of automatic system cancellation occurred during control of the following systems  Lane Departure Prevention (LDP)  Blind Spot Intervention  |
| CAUSE OF AUTO-CANCEL 3 | Displays causes of automatic system cancellation occurred during control of the following system  • Backup Collision Intervention  |

#### NOTE:

- Causes of the maximum five cancellations (system cancel) are displayed.
- The displayed cancellation causes display the number of the ignition switch ON/OFF up to 254. It is fixed to 254 if it is over 254. It returns to 0 when the same cancellation cause is detected again.

Display Items for The Cause of Automatic Cancellation 1

| Cause of cancellation | Vehicle-to-vehicle distance control mode | Conventional (fixed speed) cruise control mode | Distance Control Assist | Description   |
|-----------------------|--|--|-------------------------|---|
| OPERATING ABS         | ×  |  | ×                       | ABS function was operated   |
| OPERATING TCS         | ×  | ×  | ×                       | TCS function was operated   |
| OPERATING VDC         | ×  | ×  | ×                       | VDC function was operated   |
| ECM CIRCUIT           | ×  | ×  |                         | ECM did not permit ICC operation  |
| OPE SW VOLT CIRC      | ×  | ×  | ×                       | The ICC steering switch input voltage is not within standard range  |
| LASER TEMP            | ×  |  | ×                       | Temperature around ICC sensor became low  |
| SNOW MODE SW          | ×  |  | ×                       | SNOW mode switch was pressed  |
| OP SW DOUBLE<br>TOUCH | ×  | ×  |                         | ICC steering switches were pressed at the same time   |
| VHCL SPD DOWN         | ×  | ×  | ×                       | Vehicle speed lower than the speed as follows  Vehicle-to-vehicle distance control mode is 24 km/h (15 MPH)  Conventional (fixed speed) cruise control mode is 22 km/h (14 MPH) |
| WHL SPD ELEC NOISE    | X  | ×  | ×                       | Wheel speed sensor signal caught electromagnetic noise  |
| VDC/TCS OFF SW        | ×  |  | ×                       | VDC OFF switch was pressed  |
| VHCL SPD UNMATCH      | ×  | ×  | ×                       | Wheel speed became different from CVT vehicle speed   |
| FR RADAR BLOCKED      | ×  |  | ×                       | The front bumper near the ICC sensor is blocked or dirty  |
| TIRE SLIP             | ×  | ×  |                         | Wheel slipped   |

#### < SYSTEM DESCRIPTION >

[ICC]

| IGN LOW VOLT               | × | × | × | Decrease in ADAS control unit IGN voltage   |
|----------------------------|---|---|---|---|
| PARKING BRAKE ON           | × | × |   | The parking brake is engaged  |
| WHEEL SPD UNMATCH          | × | × | × | The wheel speeds of 4 wheels are out of the specified values  |
| INCHING LOST               | × |   |   | A vehicle ahead is not detected during the following driving when the vehicle speed is approximately 24 km/h (15 MPH) or less |
| CAN COMM ERROR             | × | × | × | ADAS control unit received an abnormal signal with CAN communication  |
| ABS/TCS/VDC CIRC           | × | × | × | An abnormal condition occurs in VDC/TCS/ABS system  |
| ECD CIRCUIT                | × | × | × | An abnormal condition occurs in ECD system  |
| ASCD VHCL SPD DTAC         |   | × |   | Vehicle speed is detached from set vehicle speed  |
| ASCD DOUBLE COMD           |   | × |   | Cancel switch and operation switch are detected simultaneously  |
| APA HI TEMP                |   |   | × | The accelerator pedal actuator integrated motor temperature is high   |
| ICC SENSOR CAN<br>COMM ERR | × |   | × | Communication error between ADAS control unit and the ICC sensor  |
| ABS WARNING LAMP           | × |   | × | ABS warning lamp ON   |
| NO RECORD                  | × | × | × | _   |

Display Items for The Cause of Automatic Cancellation 2

| Cause of cancellation | Lane departure prevention | Blind spot intervention | Description  |
|-----------------------|---------------------------|-------------------------|--|
| OPE VDC/TCS/ABS 1     | ×                         |                         | The activation of VDC, TCS, or ABS during LDP system control                                 |
| Vehicle dynamics      | ×                         |                         | Vehicle behavior exceeds specified value   |
| Steering speed        | ×                         |                         | Steering speed was more than the specified value in evasive direction                        |
| End by yaw angle      | ×                         |                         | Yaw angle was the end of LDP control   |
| Departure yaw large   | ×                         |                         | Detected more than the specified value of yaw angle in departure direction                   |
| ICC WARNING           | ×                         |                         | Target approach warning of ICC system, IBA system, or FCW system was activated               |
| CURVATURE             | ×                         |                         | Road curve was more than the specified value   |
| Steering angle large  | ×                         |                         | Steering angle was more than the specified value   |
| Brake is operated     | ×                         |                         | Brake pedal was operated   |
| IGN LOW VOLT          | ×                         |                         | Decrease in ADAS control unit IGN voltage  |
| Lateral offset        | ×                         |                         | Distance of vehicle and lane was detached in lateral direction more than the specified value |
| Lane marker lost      | ×                         |                         | Lane camera unit lost the trace of lane marker   |
| Lane marker unclear   | ×                         |                         | Detected lane marker was unclear   |
| Yaw acceleration      | ×                         |                         | Detected yawing speed was more than the specified value                                      |
| Deceleration large    | ×                         |                         | Deceleration in a longitudinal direction was more than the specified value                   |
| Accel is operated     | ×                         |                         | Accelerator pedal was depressed  |
| Departure steering    | ×                         |                         | Steering wheel was steered more than the specified value in departure direction              |
| Evasive steering      | ×                         |                         | Steering wheel was steered more than the specified value in the evasive direction            |
| R range               | ×                         |                         | Selector lever was operated to R range   |
| Parking brake drift   | ×                         |                         | Rear wheels lock was detected  |

| BSI) Vehicle dynamics         |                           | ×                       | Vehicle behavior exceeds specified value   |
| BSI) Steering speed           |                           | ×                       | Steering speed was more than the specified value in evasive direction                        |
| BSI) End by yaw angle         |                           | ×                       | Yaw angle was the end of Blind Spot Intervention control                                     |
| BSI) Departure yaw large      |                           | ×                       | Detected more than the specified value of yaw angle in departure direction                   |
| BSI) ICC WARNING              |                           | ×                       | Target approach warning of ICC system, IBA system or FCW system was activate                 |
| BSI) CURVATURE                |                           | ×                       | Road curve was more than the specified value   |
| BSI) Steering angle large     |                           | ×                       | Steering angle was more than the specified value   |
| BSI) Brake is operated        |                           | ×                       | Brake pedal was operated   |
| BSI) IGN LOW VOLT             |                           | ×                       | Decrease in ADAS control unit IGN voltage  |
| BSI) Lateral offset           |                           | ×                       | Distance of vehicle and lane was detached in lateral direction more than the specifie        |
| BSI) Lane marker lost         |                           | ×                       | Lane camera unit lost the trace of lane marker   |
| BSI) Lane marker un-<br>clear |                           | ×                       | Detected lane marker was unclear   |
| BSI) Yaw acceleration         |                           | ×                       | Detected yawing speed was more than the specified value                                      |
| BSI) Deceleration large       |                           | ×                       | Deceleration in a longitudinal direction was more than the specified value                   |
| BSI) Accel is operated        |                           | ×                       | Accelerator pedal was depressed  |
| BSI) Departure steering       |                           | ×                       | Steering wheel was steered more than the specified value in departure direction              |
| BSI) Evasive steering         |                           | ×                       | Steering wheel was steered more than the specified value in the evasive direction            |
| BSI) R range                  |                           | ×                       | Selector lever was operated to R range   |
| BSI) Parking brake drift      |                           | ×                       | Rear wheels lock was detected  |
| BSI) SNOW MODE SW             |                           | ×                       | SNOW mode switch was pressed   |
| BSI) VDC OFF SW               |                           | ×                       | VDC OFF switch was pressed   |
| BSI) OPE VDC/ABS 2            |                           | ×                       | The activation of VDC or ABS during a standby time of Blind Spot Intervention system control |
| BSI) Not operating condition  |                           | ×                       | Did not meet the operating condition (vehicle speed, turn signal operation, etc.)            |
| Side Radar Lost               |                           | ×                       | Unrecognized side radar LH or RH by the ADAS control unit                                    |
| NO RECORD                     | ×                         | ×                       | _  |

Display Items for The Cause of Automatic Cancellation 3

Revision: August 2014 CCS-43 2015 QX60 NAM

| Cause of cancellation | Backup Collision Intervention | Description   |
|-----------------------|-------------------------------|---|
| OPERATING WIPER       | ×                             | The wiper operates at HI (it includes when the wiper is operated at HI with the wiper switch AUTO position) |
| OPERATING ABS         | ×                             | ABS function was operated   |
| OPERATING TCS         | ×                             | TCS function was operated   |
| OPERATING VDC         | ×                             | VDC function was operated   |
| ECM CIRCUIT           | ×                             | ECM did not permit ICC operation  |
| SNOW MODE SW          | ×                             | SNOW mode switch was pressed  |
| VDC/TCS OFF SW        | ×                             | VDC OFF switch was pressed  |
| VHCL SPD UNMATCH      | ×                             | Wheel speed became different from CVT vehicle speed   |
| TIRE SLIP             | ×                             | Wheel slipped   |
| IGN LOW VOLT          | ×                             | Decrease in ADAS control unit IGN voltage   |
| PARKING BRAKE ON      | ×                             | The parking brake is engaged  |
| WHEEL SPD UNMATCH     | ×                             | The wheel speeds of 4 wheels are out of the specified values  |
| CAN COMM ERROR        | ×                             | ADAS control unit received an abnormal signal with CAN communication  |
| ABS/TCS/VDC CIRC      | ×                             | An abnormal condition occurs in VDC/TCS/ABS system  |
| ECD CIRCUIT           | ×                             | An abnormal condition occurs in ECD system  |
| APA HI TEMP           |                               | The accelerator pedal actuator integrated motor temperature is high   |
| ABS WARNING LAMP      | ×                             | ABS warning lamp ON   |
| Brake is operated     | ×                             | Brake pedal was operated  |
| Accel is operated     | ×                             | Accelerator pedal was depressed   |
| SNOW MODE SW          | ×                             | DMS switch SNOW mode was selected   |
| VDC OFF SW            | ×                             | VDC OFF switch was pressed  |
| Side Radar Lost       | ×                             | Unrecognized side radar LH or RH by the ADAS control unit   |
| NO RECORD             | ×                             | _   |

#### **ACTIVE TEST**

#### **CAUTION:**

- Never perform "Active Test" while driving the vehicle.
- The "Active Test" cannot be performed when the following systems warning lamp is illuminated.
- ICC system warning lamp
- Lane departure warning lamp
- Blind Spot Warning/Blind Spot Intervention warning lamp
- IBA OFF indicator lamp (IBA system ON)
- Shift the selector lever to "P" position, and then perform the test.

| Test item      | Description  |
|----------------|--|
| BRAKE ACTUATOR | Activates the brake by an arbitrary operation  |
| ICC BUZZER     | Sounds a buzzer used for following systems by arbitrarily operating ON/OFF  Intelligent Cruise Control (ICC)  Distance Control Assist (DCA)  Forward Collision Warning (FCW)  Intelligent Brake Assist (IBA) |

< SYSTEM DESCRIPTION > [ICC]

| Test item            | Description  |
|----------------------|--|
| METER LAMP           | The ICC system warning lamp, MAIN switch indicator and IBA OFF indicator lamp can be illuminated by ON/OFF operations as necessary   |
| STOP LAMP            | The ICC brake hold relay can be operated by ON/OFF operations as necessary, and the stop lamp can be illuminated   |
| ACTIVE PEDAL         | The accelerator pedal actuator can be operated as necessary  |
| DCA INDICATOR        | The DCA system switch indicator can be illuminated by ON/OFF operations as necessary   |
| LDP BUZZER           | Sounds a buzzer used for following systems by arbitrarily operating ON/OFF  • Lane Departure Warning (LDW)  • Lane Departure Prevention (LDP)  • Blind Spot Warning (BSW)  • Blind Spot Intervention |
| WARNING SYSTEM IND   | Warning systems ON indicator (on warning systems switch) can be illuminated by ON/OFF operations as necessary  |
| LDP ON IND           | The LDP ON indicator lamp can be illuminated by ON/OFF operations as necessary   |
| LANE DEPARTURE W/L   | The Lane departure warning lamp can be illuminated by ON/OFF operations as necessary   |
| BSW/BSI WARNING LAMP | The Blind Spot Warning/Blind Spot Intervention warning lamp can be illuminated by ON/OFF operations as necessary   |
| BSI ON INDICATOR     | The Blind Spot Intervention ON indicator can be illuminated by ON/OFF operations as necessary  |
| LDW ON INDICATOR     | The LDW ON indicator lamp can be illuminated by ON/OFF operations as necessary   |
| BSW ON INDICATOR     | The BSW ON indicator lamp can be illuminated by ON/OFF operations as necessary   |

#### **BRAKE ACTUATOR**

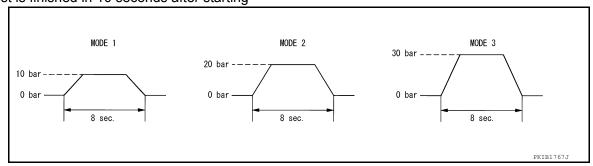

#### NOTE:

The test can be performed only when the engine is running.

| Test item      | Operation  | Description  | "PRESS SENS" value |
|----------------|------------|--|--------------------|
| BRAKE ACTUATOR | MODE1      | Transmits the brake fluid pressure control signal to the                         | 10 bar             |
|                | MODE2      | ABS actuator and electric unit (control unit) via CAN                            | 20 bar             |
|                | MODE3      | communication  | 30 bar             |
|                | Test start | Starts the tests of "MODE1", "MODE2" and "MODE3"                                 | _                  |
|                | Reset      | Stops transmitting the brake fluid pressure control signal below to end the test | _                  |
|                | End        | Returns to the "SELECT TEST ITEM" screen   | _                  |

#### NOTE:

The test is finished in 10 seconds after starting

[ICC]

| Test item  | Operation  | Description  | ICC warning chime operation sound |
|------------|------------|--|-----------------------------------|
|            | MODE1      | Transmits the buzzer output signals to the combination meter via CAN communication | Intermittent beep sound           |
| ICC BUZZER | Test start | Starts the tests of "MODE1"  | _                                 |
| ICC BUZZER | Reset      | Stops transmitting the buzzer output signal below to end the test                  | _                                 |
|            | End        | Returns to the "SELECT TEST ITEM" screen   | _                                 |

#### **METER LAMP**

#### NOTE:

The test can be performed only when the engine is running.

| Test item  | Oper-<br>ation | Description  | MAIN switch indicator     ICC system warning lamp     IBA OFF indicator lamp |
|------------|----------------|--|--|
| METER LAMP | Off            | Stops sending the following signals to exit from the test  Meter display signal  ICC warning lamp signal  IBA OFF indicator lamp signal                            | OFF  |
|            | On             | Transmits the following signals to the combination meter via CAN communication  • Meter display signal  • ICC warning lamp signal  • IBA OFF indicator lamp signal | ON   |

#### STOP LAMP

| Test item | Oper-<br>ation | Description  | Stop lamp |
|-----------|----------------|--|-----------|
| STOP LAMP | Off            | Stops transmitting the ICC brake hold relay drive signal below to end the test | OFF       |
|           | On             | Transmits the ICC brake hold relay drive signal                                | ON        |

#### ACTIVE PEDAL

#### **CAUTION:**

- Shift the selector lever to "P" position, and then perform the test.
  Never depress the accelerator pedal excessively. (The engine speed may rise unexpectedly when finishing the test.)

#### NOTE:

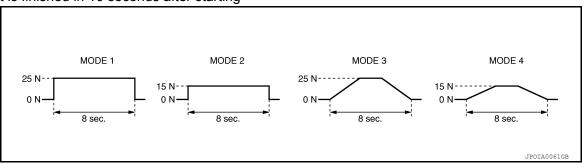

- Depress the accelerator pedal to check when performing the test.
- The test can be performed only when the engine is running.

| Test item    | Operation  | Description   | Accelerator pedal operation                 |
|--------------|------------|---|---|
| Active Pedal | MODE1      |   | Constant with a force of 25 N for 8 seconds |
|              | MODE2      | Transmit the accelerator pedal feedback force control signal to the accelerator pedal actuator via ITS communication. | Constant with a force of 15 N for 8 seconds |
|              | MODE3      |   | Change up to a force of 25 N for 8 seconds  |
|              | MODE4      |   | Change up to a force of 15 N for 8 seconds  |
|              | Test start | Starts the tests of "MODE1", "MODE2", "MODE3" and "MODE4"   | _   |
|              | Reset      | Stops transmitting the accelerator pedal feedback force control signal below to end the test.                         | _   |
|              | End        | Returns to the "SELECT TEST ITEM" screen  | _   |

NOTE:

The test is finished in 10 seconds after starting

#### DCA INDICATOR

NOTE:

The test can be performed only when the engine is running.

| Test item     | Opera-<br>tion | Description   | DCA system switch indicator |
|---------------|----------------|---|-----------------------------|
| DCA INDICATOR | Off            | Stops transmitting the DCA system switch indicator signal below to end the test                 | _                           |
|               | On             | Transmits the DCA system switch indicator signal to the combination meter via CAN communication | ON                          |

#### LDP BUZZER

| Test item  | Opera-<br>tion | Description  | Warning buzzer |
|------------|----------------|--|----------------|
| LDP BUZZER | Off            | Stops transmitting the warning buzzer signal below to end the test | _              |
|            | On             | Transmits the warning buzzer signal to the warning buzzer          | ON             |

#### WARNING SYSTEM IND

| Test item             | Oper-<br>ation | Description   | Warning systems ON indicator |
|-----------------------|----------------|---|------------------------------|
| WARNING SYSTEM<br>IND | Off            | Stops transmitting the warning systems ON indicator signal below to end the test      | _                            |
|                       | On             | Transmits the warning systems ON indicator signal to the warning systems ON indicator | ON                           |

#### LDP ON IND

| Test item  | Oper-<br>ation | Description   | LDP ON indicator lamp (Green) |
|------------|----------------|---|-------------------------------|
| LDP ON IND | Off            | Stops transmitting the LDP ON indicator lamp signal below to end the test                 | _                             |
|            | On             | Transmits the LDP ON indicator lamp signal to the combination meter via CAN communication | ON                            |

#### LANE DEPARTURE W/L

| Test item             | Oper-<br>ation | Description   | Lane departure warning lamp (Yellow) |
|-----------------------|----------------|---|--------------------------------------|
| LANE DEPARTURE<br>W/L | Off            | Stops transmitting the lane departure warning lamp signal below to end the test                 | _                                    |
|                       | On             | Transmits the lane departure warning lamp signal to the combination meter via CAN communication | ON                                   |

#### **BSW/BSI WARNING LAMP**

| Test item               | Oper-<br>ation | Description   | Blind Spot Warning/Blind Spot Intervention warning lamp (Yellow) |
|-------------------------|----------------|---|--|
| BSW/BSI WARNING<br>LAMP | Off            | Stops transmitting the Blind Spot Warning/Blind Spot Intervention warning lamp signal below to end the test                 | _  |
|                         | On             | Transmits the Blind Spot Warning/Blind Spot Intervention warning lamp signal to the combination meter via CAN communication | ON   |

#### **BSI ON INDICATOR**

| Test item        | Oper-<br>ation | Description  | Blind Spot Intervention ON indicator lamp (Green) |
|------------------|----------------|--|---|
| BSI ON INDICATOR | Off            | Stops transmitting the Blind Spot Intervention ON indicator signal below to end the test                 | _   |
|                  | On             | Transmits the Blind Spot Intervention ON indicator signal to the combination meter via CAN communication | ON  |

#### LDW ON INDICATOR

| Test item        | Oper-<br>ation | Description   | Lane Departure Warning ON indicator lamp (Yellow) |
|------------------|----------------|---|---|
| LDW ON INDICATOR | Off            | Stops transmitting the Lane Departure Warning ON indicator signal below to end the test                 | _   |
|                  | On             | Transmits the Lane Departure Warning ON indicator signal to the combination meter via CAN communication | ON  |

#### **BSW ON INDICATOR**

| Test item        | Oper-<br>ation | Description  | Blind Spot Warning ON indicator lamp (Yellow) |
|------------------|----------------|--|---|
| BSW ON INDICATOR | Off            | Stops transmitting the Blind Spot Warning ON indicator signal below to end the test  | _   |
|                  | On             | Transmits the Blind Spot Warning ON indicator signal to the warning lamp on the door | ON  |

#### **ECU IDENTIFICATION**

ADAS control unit part number is displayed.

## DIAGNOSIS SYSTEM (ICC SENSOR)

## CONSULT Function (LASER/RADAR)

#### INFOID:0000000011132059

#### **CAUTION:**

After disconnecting the CONSULT vehicle interface (VI) from the data link connector, the ignition must be cycled OFF  $\rightarrow$  ON (for at least 5 seconds)  $\rightarrow$  OFF. If this step is not performed, the BCM may not go to "sleep mode", potentially causing a discharged battery and a no-start condition.

#### APPLICATION ITEMS

CONSULT performs the following functions via CAN communication with ADAS control unit and the communication with ICC sensor.

| Diagnosis mode           | nosis mode Description   |  |
|--------------------------|--|--|
| Self Diagnostic Result   | Displays malfunctioning system memorized in ICC sensor   |  |
| Data Monitor             | Displays real-time input/output data of ICC sensor   |  |
| Work support             | It can monitor the adjustment direction indication in order to perform the radar adjustment operation smoothly |  |
| ECU identification       | Displays ICC sensor part number  |  |
| CAN Diag Support Monitor | The results of transmit/receive diagnosis of ITS communication can be read                                     |  |

#### SELF DIAGNOSTIC RESULT

Refer to CCS-66, "DTC Index".

#### **DATA MONITOR**

| Monitored item<br>[Unit]         | Description   |
|----------------------------------|---|
| VHCL SPEED SE<br>[km/h] or [mph] | Vehicle speed judged from a vehicle speed signal read by the ICC sensor via ITS communication is displayed [ADAS control unit receives a vehicle speed signal from ABS actuator and electric unit (control unit) via CAN communication and transmits the calculated vehicle speed to ICC sensor via ITS communication]  |
| YAW RATE<br>[deg/s]              | Indicates yaw rate read from ADAS control unit through ITS communication (ADAS control unit receives yaw rate signal from ABS actuator and electric unit (control unit) via CAN communication and transmits yaw rate calculated by the ADAS control unit)  Yaw rate judged from a yaw rate signal read by ICC sensor via ITS communication is displayed [ADAS control unit receives a yaw rate signal from ABS actuator and electric unit (control unit) via CAN communication and transmits the calculated yaw rate to ICC sensor via ITS communication] |
| PWR SUP MONI<br>[V]              | Indicates IGN voltage input by ICC sensor   |
| DISTANCE<br>[m]                  | Indicates the distance from the vehicle ahead   |
| RELATIVE SPD<br>[m/s]            | Indicates the relative speed of the vehicle ahead   |
| RADAR OFFSET<br>[m]              | NOTE: The item is indicated, but not used   |
| RADAR HEIGHT<br>[m]              | NOTE: The item is indicated, but not used   |
| STEERING ANGLE<br>[deg]          | The steering angle is displayed   |
| STRG ANGLE SPEED [deg/s]         | The steering angle speed is displayed   |
| L/R ADJUST<br>[deg]              | Indicates a horizontal correction value of the radar  |
| U/D ADJUST<br>[deg]              | Indicates a vertical correction value of the radar  |

Fail-safe

If a malfunction occurs in each system, ADAS control unit cancels each control, sounds a beep, and turns ON the warning lamp or indicator lamp.

| System   | Buzzer            | Warning lamp/Indicator lamp | Description |
|--|-------------------|-----------------------------|-------------|
| Vehicle-to-vehicle distance control mode       | High-pitched tone | ICC system warning lamp     | Cancel      |
| Conventional (fixed speed) cruise control mode | High-pitched tone | ICC system warning lamp     | Cancel      |
| Intelligent Brake Assist (IBA)                 | High-pitched tone | IBA OFF indicator lamp      | Cancel      |
| Forward Collision Warning (FCW)                | High-pitched tone | Warning message             | Cancel      |
| Distance Control Assist (DCA)                  | High-pitched tone | DCA system warning          | Cancel      |
| Lane Departure Warning (LDW)                   | _                 | Lane departure warning lamp | Cancel      |
| Lane Departure Prevention (LDP)                | Low-pitched tone  | Lane departure warning lamp | Cancel      |

#### NOTE:

- The details of time display are as per the following.
- CRNT: A malfunction is detected now
- PAST: A malfunction was detected in the past
- IGN counter is displayed on FFD (Freeze Frame Data).
- 0: The malfunctions that are detected now CAN communication system (U1000, U1010)
- 1 39: It increases like 0 → 1 → 2 ··· 38 → 39 after returning to the normal condition whenever the ignition switch OFF → ON. It returns to 0 when a malfunction is detected again in the process.
- If it is over 39, it is fixed to 39 until the self-diagnosis results are erased. Other than CAN communication system (Other than U1000, U1010)
- 1 49: It increases like 0 → 1 → 2 ··· 38 → 49 after returning to the normal condition whenever the ignition switch OFF → ON. It returns to 0 when a malfunction is detected again in the process.
- If it is over 49, it is fixed to 49 until the self-diagnosis results are erased.

#### Systems for fail-safe

- · A: Vehicle-to-vehicle distance control mode
- · B: Conventional (fixed speed) cruise control mode
- · C: Intelligent Brake Assist (IBA)
- · D: Forward Collision Warning (FCW)
- E: Distance Control Assist (DCA)
- F: Lane Departure Warning (LDW)/Lane Departure Prevention (LDP)
- · G: Blind Spot Warning (BSW)/Blind Spot Intervention
- · H: Backup Collision Intervention (BCI)

#### NOTE:

With the detection of "U1000" some systems do not perform the fail-safe operation.

A system controlling based on a signal received from the control unit performs fail-safe operation when the communication with the ADAS control unit becomes inoperable.

#### VALUES ON THE DIAGNOSIS TOOL

| Monitor item        |   | Condition  | Value/Status                                      |
|---------------------|---|--|---|
| VHCL SPEED SE       | While driving   |  | Value of vehicle<br>speed signal<br>(wheel speed) |
|                     |   | Vehicle stopped  | 0.0   |
| YAW RATE            | While driving   | Vehicle turning right                                      | Positive value                                    |
|                     |   | Vehicle turning left                                       | Negative value                                    |
| PWR SUP MONI        | Ignition switch ON  |  | Power supply voltage value of ICC sensor          |
| DISTANCE            | Drive the vehicle and activate the vehicle-to-vehicle distance control mode | When a vehicle ahead is detected                           | Displays the distance from the preceding vehicle  |
|                     |   | When a vehicle ahead is not detected                       | 0.0   |
| RELATIVE SPD        | Drive the vehicle and activate the vehicle-to-vehicle distance              | When a vehicle ahead is detected                           | Displays the rel-<br>ative speed                  |
|                     | control mode  | When a vehicle ahead is not detected                       | 0.0   |
| RADAR OFFSET        | NOTE:<br>The item is indicated, but not u                                   | sed  | _   |
| RADAR HEIGHT        | NOTE: The item is indicated, but not u                                      | sed  | _   |
|                     |   | When setting the steering wheel in straight-ahead position | 0.0   |
| STEERING ANGLE      | Ignition switch ON  | When turning the steering wheel 90° rightward              | +90   |
|                     |   | When turning the steering wheel 90° leftward               | -90   |
| STRG ANGLE<br>SPEED | Ignition switch ON  | At the time of turning the steering wheel                  | Steering wheel turning speed is displayed         |
| L/R ADJUST          | Ignition switch ON  | At the completion of radar alignment adjustment            | Horizontal cor-<br>rection value is<br>displayed  |
| U/D ADJUST          | Ignition switch ON  | At the completion of radar alignment adjustment            | Vertical correction value is displayed            |

Fail-safe

If a malfunction occurs in the ICC sensor, ADAS control unit cancels control, sounds a beep, and turns ON the ICC system warning lamp in the combination meter.

## **DTC Inspection Priority Chart**

INFOID:0000000011132066

If multiple DTCs are detected simultaneously, check them one by one depending on the following DTC inspection priority chart.

| Priority | Detected items (DTC)  |
|----------|---|
| 1        | U1000: CAN COMM CIRCUIT     U1010: CONTROL UNIT (CAN)   |
| 2        | C1A50: ADAS MALFUNCTION   |
| 3        | <ul> <li>C1A01: POWER SUPPLY CIR</li> <li>C1A02: POWER SUPPLY CIR 2</li> <li>C1A12: RADAR OFF-CENTER</li> <li>C1A16: RADAR BLOCKED</li> <li>C1A18: RADAR ALIGNMENT INCOMPLETE</li> <li>C1A21: UNIT HIGH TEMP</li> <li>C1A39: STRG SEN CIR</li> <li>C10B7: YAW RATE SENSOR</li> <li>U0104: ADAS CAN CIR1</li> <li>U0121: VDC CAN CIR2</li> <li>U0126: STRG SEN CAN CIR1</li> <li>U0405: ADAS CAN CIR2</li> <li>U0415: VDC CAN CIR2</li> <li>U0415: VDC CAN CIR1</li> <li>U0428: STRG SEN CAN CIR2</li> </ul> |
| 4        | C1A00: CONTROL UNIT   |

DTC Index

#### NOTE:

- The details of time display are as per the following.
- 0: The malfunctions that are detected now CAN communication system (U1000, U1010)
- 1 39: It increases like 0 → 1 → 2 ··· 38 → 39 after returning to the normal condition whenever the ignition switch OFF → ON. It returns to 0 when a malfunction is detected again in the process.
- If it is over 39, it is fixed to 39 until the self-diagnosis results are erased. Other than CAN communication system (Other than U1000, U1010)
- 1 49: It increases like 0 → 1 → 2 ··· 38 → 49 after returning to the normal condition whenever the ignition switch OFF → ON. It returns to 0 when a malfunction is detected again in the process.
- If it is over 49, it is fixed to 49 until the self-diagnosis results are erased.

## DIAGNOSIS AND REPAIR WORK FLOW

Work Flow INFOID:0000000011132069 В

Α

D

Ν

CCS

#### **OVERALL SEQUENCE**

#### **DETAILED FLOW**

# 1.INTERVIEW FOR MALFUNCTION

It is also important to clarify the customer concerns before starting the inspection. Interview the customer about the concerns carefully and understand the symptoms fully.

#### DIAGNOSIS AND REPAIR WORK FLOW

< BASIC INSPECTION > [ICC]

#### NOTE:

The customers are not professionals. Never assume that "maybe the customer means..." or "maybe the customer mentioned this symptom".

>> GO TO 2.

# 2.self-diagnosis with consult

- 1. Perform "All DTC Reading" with CONSULT.
- 2. Check if any DTC is detected in self-diagnosis results of "ICC/ADAS" and "LASER/RADAR".

#### Is any DTC detected?

YES >> GO TO 5.

NO >> GO TO 3.

## 3. ACTION TEST

Perform the ICC system action test to check the operation status. Refer to <a href="CCS-97">CCS-97</a>, "Description". Check if any other malfunctions occur.

>> GO TO 4.

# 4.SYMPTOM DIAGNOSIS

Perform the applicable diagnosis according to the diagnosis chart by symptom. Refer to <a href="CCS-179">CCS-179</a>, "Symptom <a href="Table"</a>.

>> GO TO 6.

## 5. TROUBLE DIAGNOSIS BY DTC

- 1. Check the DTC in the self-diagnosis results.
- Perform trouble diagnosis for the detected DTC. Refer to <u>CCS-60, "DTC Index"</u> (ICC/ADAS) or <u>CCS-66, "DTC Index"</u> (LASER/RADAR).

#### NOTE:

If "DTC: U1000" is detected, first diagnose the CAN communication system or ITS communication system.

>> GO TO 6.

## 6. MALFUNCTIONING PART REPAIR

Repair or replace the identified malfunctioning parts.

>> GO TO 7.

# 7.REPAIR CHECK (SELF-DIAGNOSIS WITH CONSULT)

- 1. Erases self-diagnosis results.
- 2. Perform "All DTC Reading" again after repairing or replacing the malfunctioning parts.
- 3. Check if any DTC is detected in self-diagnosis results of "ICC/ADAS" and "LASER/RADAR".

#### Is any DTC detected?

YES >> GO TO 5.

NO >> GO TO 8.

# 8. REPAIR CHECK (ACTION TEST)

Perform the ICC system action test. Check if the malfunction symptom is solved or no other symptoms occur. Is there any malfunction symptom?

YES >> GO TO 4.

NO >> INSPECTION END

#### ADDITIONAL SERVICE WHEN REPLACING ICC SENSOR

< BASIC INSPECTION > [ICC]

## ADDITIONAL SERVICE WHEN REPLACING ICC SENSOR

Description

NFOID:000000011132070

 Always perform the radar alignment aiming adjustment after removing and installing or replacing the ICC sensor.

#### **CAUTION:**

The system does not operate normally unless the ICC sensor is aligned properly.

Perform the ICC system action test to check that the ICC system operates normally.

Work Procedure

# 1. RADAR ALIGNMENT ADJUSTMENT

Adjust the radar alignment. Refer to CCS-89, "Description".

>> GO TO 2.

# 2.ICC SYSTEM ACTION TEST

- Perform the ICC system action test. Refer to <u>CCS-97, "Description"</u>.
- 2. Check that the ICC system operates normally.

>> Inspection End.

#### ICC SENSOR INITIAL VERTICAL ALIGNMENT

< BASIC INSPECTION > [ICC]

## ICC SENSOR INITIAL VERTICAL ALIGNMENT

Description INFOID:0000000011132072

#### **WARNING:**

Radio waves could adversely affect electric medical equipment. Those who use a pacemaker should contact the electric medical equipment manufacturer for the possible influences before use.

#### OUTLINE OF ICC SENSOR INITIAL ALIGNMENT PROCEDURE

 Always perform the ICC sensor initial vertical alignment after removing and installing or replacing the ICC sensor.

#### **CAUTION:**

The system does not operate normally unless the ICC sensor is aligned properly.

- Required tools, refer to <u>CCS-86, "Required Tools"</u>.
- 2. Preparation, refer to CCS-86, "Preparation".
- 3. ICC sensor initial vertical alignment, refer to CCS-87, "ICC Sensor Initial Vertical Alignment".

# CAUTIONARY POINT FOR ICC SENSOR ALIGNMENT PROCEDURE

#### **CAUTION:**

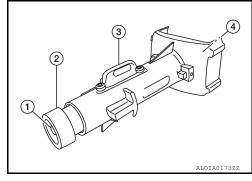

- For ICC sensor alignment procedure, choose a level location with a few feet of working space in front and surrounding the vehicle.
- Vehicle must be stationary and unoccupied during the whole alignment procedure.
- Never enter the vehicle during ICC sensor alignment.
- For proper system operation and adjustment, all vehicle wheels must be the original factory size.

The ICC sensor requires alignment whenever the ICC sensor is removed and reinstalled and whenever front end structural repairs are performed. ICC sensor alignment consists of performing the mechanical vertical alignment (ICC sensor initial vertical alignment) described in the following procedure, followed by the electronic horizontal alignment (ICC sensor alignment) that is performed using CONSULT and the appropriate special service tools.

Required Tools

The following ICC sensor cone alignment tool J-51093 is necessary to perform the ICC sensor initial vertical alignment:

- · ICC sensor cone alignment tool.
- 1. Center release button
- 2. Plunger
- 3. Level
- Suction cup

Preparation INFOID:0000000011132074

# 1. PREPARATION FOR ICC SENSOR INITIAL VERTICAL ALIGNMENT PROCEDURE

- 1. Verify correct vehicle suspension height. Refer to WT-61, "Road Wheel".
- 2. Repair or replace any damaged body components.
- 3. Verify proper tire inflation pressures. Refer to WT-61, "Tire Air Pressure".
- 4. Remove any accumulations of mud, snow or ice from the vehicle underbody.
- 5. Verify that there is no load in the vehicle (cargo or passenger).
- Place the vehicle on a known level horizontal surface such as a wheel or frame alignment rack to achieve satisfactory sensor vertical alignment results.
- Remove front fascia if required. Refer to EXT-17, "Removal and Installation".

>> Refer to CCS-87, "ICC Sensor Initial Vertical Alignment".

## ICC Sensor Initial Vertical Alignment

INFOID:0000000011132075

Α

В

D

Е

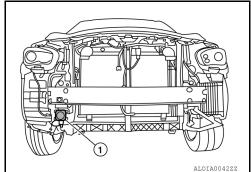

F

Н

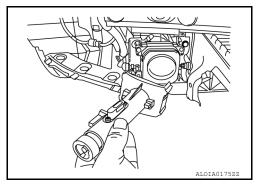

#### NOTE:

The ICC sensor initial vertical alignment procedure must be performed anytime the ICC sensor is removed and reinstalled or replaced.

- 1. The ICC sensor (1) is located near the right front bumper behind the front fascia.
- 2. Using standard glass cleaner and a clean soft towel, remove any dirt from the ICC sensor lens and from the suction cup of the vertical alignment tool.

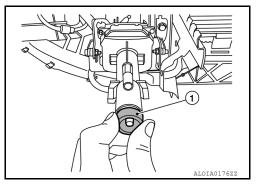

3. With the level indicator facing upward, carefully slide the vertical alignment tool over the sensor housing until the suction cup rests against the lens of the sensor.

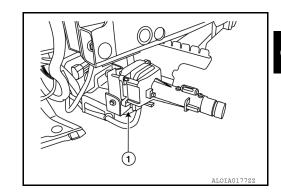

4. Depress the plunger of the vertical alignment tool (1) to engage the suction cup and attach the tool securely to the lens of the sensor.

#### NOTE:

It may take several attempts to get the suction cup of the tool to fasten securely to the sensor. If necessary, lightly wet the suction cup with clean water to help improve adhesion.

5. Turn the ICC sensor adjustment screw (1) to level the tool.

Р

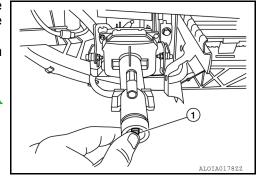

Revision: August 2014 CCS-87 2015 QX60 NAM

## ICC SENSOR INITIAL VERTICAL ALIGNMENT

< BASIC INSPECTION > [ICC]

Depress the center release button of the tool (1) to release the suction cup from the sensor lens and remove the tool from the sensor.

- 7. Insure the ICC sensor electrical connector located on the bottom of the sensor is connected.
- 8. Reinstall the front fascia.
- 9. Perform the ICC sensor alignment procedure. Refer to <u>CCS-89.</u> "<u>Description"</u>.

ICC SENSOR ALIGNMENT < BASIC INSPECTION > ICC SENSOR ALIGNMENT Α Description INFOID:0000000011132076 **WARNING:** Radio waves could adversely affect electric medical equipment. Those who use a pacemaker should contact the electric medical equipment manufacturer for the possible influences before use. OUTLINE OF ICC SENSOR ALIGNMENT PROCEDURE A 4-wheel vehicle alignment must be performed before proceeding with ICC sensor alignment procedure. Always perform the ICC sensor alignment after removing and installing or replacing the ICC sensor. If the ICC sensor was removed and installed or replaced, first perform ICC Sensor Initial Vertical Alignment, refer to CCS-86, "Description". **CAUTION:** Е The system does not operate normally unless the ICC sensor is aligned properly. 1. Required tools, refer to CCS-89, "Required Tools". Preparation, refer to <u>CCS-90, "Preparation"</u>. Vehicle set up, refer to <u>CCS-91, "Vehicle Set Up"</u>. 4. Setting the ICC target board, refer to <a href="CCS-93">CCS-93</a>, "Setting The ICC Target Board". ICC sensor adjustment, refer to <u>CCS-94, "ICC Sensor Adjustment"</u>. CAUTIONARY POINT FOR ICC SENSOR ALIGNMENT PROCEDURE **CAUTION:**  For ICC sensor alignment procedure, choose a level location with a few feet of working space in front and surrounding the vehicle. Vehicle must be stationary and unoccupied during the whole alignment procedure. Any slight vibration during the alignment procedure can cause the test to fail. If this happens, you will have to restart the alignment process. The ignition switch must be in the ON position. • The battery voltage must not fall below 12 volts during the whole alignment procedure. Failure to maintain adequate battery voltage will cause the test to fail. If this happens, you will have to restart the alignment process. The ICC target board must be set in front of the vehicle facing the sensor. Adjust the ICC sensor alignment with CONSULT. (The ICC sensor alignment procedure cannot be adjusted without CONSULT.) Never enter the vehicle during ICC sensor alignment. Never block the area between the ICC sensor and the ICC target board at any time during the alignment process. Never break the laser beam between the laser assembly and front ICC target board or rear reflector

- at any time during alignment.
- · Accurate steering wheel setting is crucial. Once set, do not disturb the steering wheel for the remainder of the alignment procedure.
- To avoid physical damage, the ICC sensor adjustment screw must not be forced to either clockwise or counter-clockwise limit. For proper adjustment procedure, follow the directions of the CONSULT exactly as instructed.
- For proper system operation and adjustment, all vehicle wheels must be of the same size.

Required Tools INFOID:0000000011132077

- ICC alignment kit 1-20-2721-1-IF in addition to one of the following:
  - a) Hunter self-centering wheel adapter (Hunter wheel alignment tool)
  - b) Special Service Tool kit 1-20-2722-1-IF (kit SCA W/Tire Clamp-ICC Aiming)

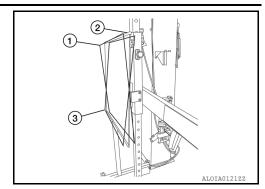

The following ICC alignment kit 1-20-2721-1-IF is necessary to perform the ICC sensor alignment:

**CCS-89** 2015 QX60 NAM Revision: August 2014

CCS

< BASIC INSPECTION >

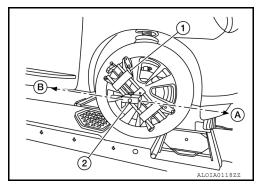

- · ICC target board.
- Position 1, with top tilted 2° toward vehicle (1).
- Position 2, vertical (2).
- Position 3, with top tilted 2° away from vehicle (3).

 Hunter self-centering wheel adapter (1) [shown with laser assembly (2) installed (Hunter alignment rack head may be substituted). NOTE:

Retailers that are not equipped with a Hunter self-centering wheel adapter will require the following kit:

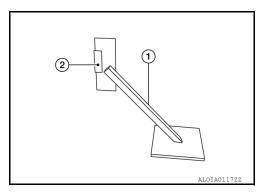

Part No. 1-20-2722-1-IF (kit SCA W/Tire Clamp-ICC Aiming)

- · Laser assembly (with bi-directional laser beam) as shown in the illustration.
- Tightening knob (1)
- Power ON/OFF button (2)
- Front laser beam opening (3)
- Rear laser beam opening (4)
- Attaching shaft (5)

- · Stationary target as shown in the illustration.
- Stationary target (1)
- Laser signal reception plate (2)

· Distance chain (not shown).

Preparation INFOID:0000000011132078

# 1. ADVANCE PREPARATION FOR ICC SENSOR ALIGNMENT PROCEDURE

- Adjust all tire pressure to the specified value.
- Empty the vehicle. (Remove any luggage from the passenger compartment, luggage room, etc.) 2.
- Shift the selector lever to "P" position, and release the parking brake. 3.
- 4. Fully fill the fuel tank, and then check that the coolant and oils are filled up to correct level.
- Clean off the right front side of the fascia in front of the ICC sensor.

#### **ICC SENSOR ALIGNMENT**

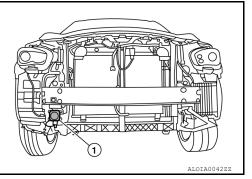

[ICC] < BASIC INSPECTION >

#### NOTE:

The ICC sensor is located behind the fascia and it is not exposed to the elements. Therefore it should not require any cleaning.

1 : ICC sensor

>> Refer to CCS-91, "Vehicle Set Up".

Vehicle Set Up

INFOID:0000000011132079

#### **DESCRIPTION**

Accurate adjustment of the ICC sensor alignment requires that the ICC target board, wheel adapter, laser assembly, and stationary target be properly positioned.

#### **CAUTION:**

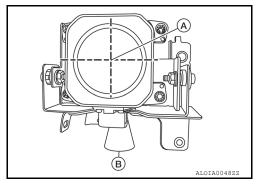

If the ICC sensor alignment is adjusted with the ICC target board, wheel adapter, laser assembly, or stationary target in the incorrect position, the ICC system will not function properly or the alignment procedure may not be completed successfully.

1.PREPOSITION TARGET BOARD

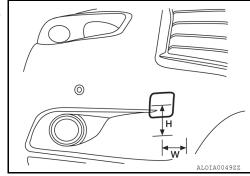

#### NOTE:

· The center of the sensor wave axis (A) is located at the center of the front lens.

B : Up-down direction adjusting screw

 To locate the ICC sensor, and to identify the sensor wave axis center (A) easily, measure 4.5 in (115 mm) (H) down from the center of the recovery hook cover, and 0.5 in (13 mm) (W) to the right when viewed from the front of the vehicle.

Initial ICC target board setting must be in the center position.

CCS

Α

Е

F

Н

M

Ν

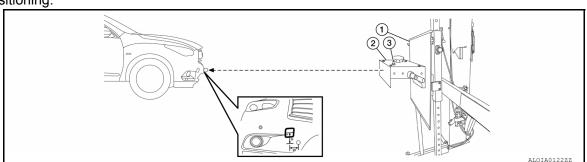

K

**CCS-91** Revision: August 2014 2015 QX60 NAM

(1)

- Position the ICC target board in front facing the right front side of the vehicle:
- Using the full length of the supplied chain for distance, place the marked center of the ICC target board (1) 1375 mm (54.1 in.)  $\pm$  625 mm(24.6 in) facing the ICC sensor.
- Adjust the height of the ICC target board using the adjustable nut (2) to achieve the proper height. The up/down tolerance is  $\pm$  80 mm (3.15 in).
- Adjust the ICC target board lateral position aligning the marked center of the board horizontally with the center of the ICC sensor front lens. The right/left tolerance is  $\pm$  80 mm (3.15 in).
- 2. Extend the machined arm of the ICC target board exposing the reflective surface (3) to the right front side of the vehicle.

- 4. Turn the laser assembly ON (3) allowing the laser beam to emit through the opening of the laser assembly toward the center of the ICC sensor.
- 5. Move the ICC target board (1) as necessary so that center of ICC target board aligns with center of ICC sensor.
- 6. Turn the laser assembly OFF when done.

#### Are you using Hunter alignment equipment?

YES >> Refer to Hunter's equipment instructions for complete vehicle set up and ICC target board setting. Then, refer to CCS-94, "ICC Sensor Adjustment".

NO >> GO TO 2.

< BASIC INSPECTION >

## 2.INSTALLING LASER ASSEMBLY

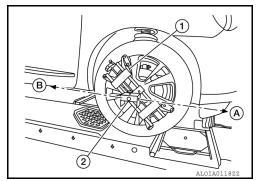

#### NOTE:

- · Insure the steering wheel is positioned in the center straight forward position.
- Insure all 4 vehicle wheels do not contain any physical damage.
- 1. Install the wheel adapter (1) on the right front wheel.
- 2. Mount the laser assembly (2) to the wheel adapter (1) as shown in the figure.

### NOTE:

When the power switch is turned ON, the front laser signal (A) will be emitted toward the front ICC target board, and the rear laser signal (B) will be emitted toward the rear of the vehicle.

>> GO TO 3.

# 3.SETTING UP STATIONARY TARGET

#### ICC SENSOR ALIGNMENT

## < BASIC INSPECTION > [ICC]

- 1. Place the stationary target next to the right rear tire as shown in the figure.
- 2. Turn the laser assembly ON allowing the laser beam to be emitted through the front and rear laser assembly openings.
- 3. Measure and record the distance (Dr) between the edge of the right rear wheel and the laser beam (1) on the stationary target (horizontal line).
- 4. Measure and record the height (Hr) between the laser beam (1) on the stationary target and ground level (vertical line).

6. Measure and record the height (H<sub>f</sub>) between the laser beam signal/opening (1) on the laser assembly and ground level (vertical line).

#### NOTE:

- Horizontal adjustment [front distance (Df) and rear distance (Dr)] is accomplished by slowly turning the steering wheel until the 2 distances are the same.
- Vertical adjustment [front height (H<sub>f</sub>) and rear height (H<sub>r</sub>)] is accomplished by rotating the laser assembly around its axis until the two heights are the same.
- Directional arrows (A) and (B) are shown to illustrate the direction of the laser assembly beams.
- Adjust laser beam as necessary until the two distances match and the two heights match. NOTE:

You will have to verify both horizontal and vertical adjustments anytime one adjustment is made.

>> Refer to CCS-93, "Setting The ICC Target Board".

# Setting The ICC Target Board

Accurate adjustment of the ICC sensor alignment requires that the ICC target board be accurately positioned. **CAUTION:** 

If the ICC sensor alignment is adjusted with the ICC target board in the incorrect position, the ICC system will not function properly or the alignment procedure may not be completed successfully.

## 1.ICC TARGET BOARD FINAL SETTING

 With the ICC target board arm extended, the laser beam (1) emitted by the laser assembly (A) will be reflected back (B) toward the laser assembly.

#### NOTE:

DESCRIPTION

When adjusted properly, reflected laser beam (B) must align with emitted laser beam (A) and the two laser beams will be seen as one.

- 2. Rotate the ICC target board to achieve the necessary horizontal adjustment.
- 3. Adjust the ICC target board leveling screws to achieve the necessary vertical adjustment.

Revision: August 2014 CCS-93 2015 QX60 NAM

 The figure shown illustrates the laser beam (A) emitted by the laser assembly (1) and its reflection (B) off of the ICC target board arm.

>> GO TO 2.

## 2.CHECK THE POSITION OF THE ICC TARGET BOARD

Do not place anything other than the ICC target board in the space shown in front of the vehicle (view from top).

- 1. ICC target board arm
- 4. Vehicle
- C. Height between front laser beam and ground (Hf)
- L. 750 2000 mm (29.5 78.7 in)
- 2. ICC target board
- A. Distance between front wheel and laser beam (Df)
- Height between rear laser beam and E. ground (Hr)
- 3. ICC sensor
- B. Distance between rear wheel and laser beam (Dr)
- E. ICC target board center position (Position 2)

>> Refer to CCS-94, "ICC Sensor Adjustment".

# ICC Sensor Adjustment

INFOID:0000000011132081

#### DESCRIPTION

- Adjust the ICC sensor alignment in a vertical direction with CONSULT as per the following.
- The ICC sensor alignment in the horizontal direction is performed automatically and cannot be adjusted manually.

#### **CAUTION:**

- Never look directly into or block the ICC sensor source (between the front fascia and ICC target board) during the ICC sensor alignment procedure.
- Perform all necessary work for ICC sensor alignment procedure until the adjustment completes as shown in the procedure. If the procedure is started but not completed, the ICC system is rendered inoperable.

# $1.\mathsf{set}$ consult to the ICC sensor alignment mode

- 1. Place ignition switch in the ON position.
- Connect CONSULT and select "LASER/RADAR", then "Work Support".
- Select "RADAR Alignment".
- Select "START" after the "RADAR Alignment" screen is displayed.
   NOTE:

# If the adjustment screen does not appear or an error appears within approximately 10 seconds after "RADAR Alignment" is selected, the following causes are possible.

#### ICC SENSOR ALIGNMENT

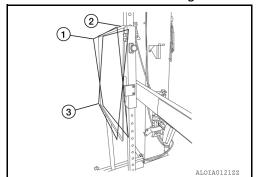

< BASIC INSPECTION > [ICC]

- The ICC target board is not installed in the correct position.
- Adequate space is not secured around the ICC target board.
- The ICC sensor alignment procedure exceeds its proper installation range.
- Deformation of vehicle body.
- Deformation of unit.
- Deformation of bracket.
- The area is not suitable for the adjustment work.
- Right front side of fascia (ICC sensor view) is not clean.
- · The ICC system warning lamp illuminates.
- Battery voltage is low.
- The extended arm and mirror are not stationary.

>> GO TO 2.

# 2.icc sensor alignment

- Once the ICC sensor alignment procedure is started, you will be prompted by the CONSULT for the next instruction.
- Follow all the instructions exactly as requested by the CONSULT which will include the following:
- Adjust ICC target board to position 1 (top tilted toward vehicle)
- Adjust ICC target board to position 2 (vertical position)
- Adjust ICC target board to position 3 (top tilted away from vehicle)

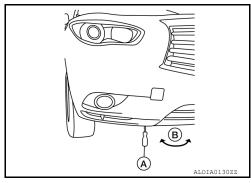

3. You will be prompted with specific instructions to perform physical adjustment to the sensor which may include turning the screw driver (A) by a certain number of turns (B) in increments of 0.25 in either direction.

#### NOTE:

The CONSULT is not live and will not automatically update while turning the tool.

#### **CAUTION:**

Be careful not to cover the right front side of the fascia (ICC sensor view) with a hand or any other body part during adjustment.

>> GO TO 3.

# 3.icc sensor alignment confirmation

- 1. When the "U/D CORRECT" value is executed and the "ADJ VALUE" has been performed, touch "END".
- When "COMPLETED THE VERTICAL AIMING OF LASER BEAM" display appears, touch "END". CAUTION:

Always check that the value of "U/D CORRECT" remains accurate (within specification) when the ICC sensor is left alone for at least 2 seconds.

- 3. Check that "ADJUSTING AUTOMATIC HORIZONTAL LASER BEAM AIMING" is displayed and wait for a short period of time. (The maximum: Approx. 10 seconds).
- Check that "Normally Completed" is displayed, and select "End" to end "RADAR Alignment".

Once "RADAR Alignment" is started with CONSULT, always continue the work until the ICC sensor alignment is completed successfully. If the job is stopped midway, the ICC sensor alignment is not completed and the ICC system is rendered inoperative.

< BASIC INSPECTION > [ICC]

### **ACTION TEST**

Description INFOID:0000000011132082

Always perform the ICC system action test to check that the ICC system operates normally after replacing the ICC sensor or repairing any ICC system malfunction.

**CAUTION:** 

- Always drive safely when performing the action test.
- Turn the DCA system to OFF when performing the action test.

Work Procedure (Vehicle-To-Vehicle Distance Control Mode)

INFOID:0000000011132083

Α

D

Е

F

#### NOTE:

- When there is no vehicle ahead, drive at the set speed steadily.
- When there is a vehicle ahead, control to maintain distance from the vehicle ahead, watching its speed.
- The running speed can be set between 32 km/h (20 MPH) and 144 km/h (90 MPH).

#### **CAUTION:**

Never set the cruise speed exceeding the posted speed limit.

## 1. CHECK FOR MAIN SWITCH

Start the engine.

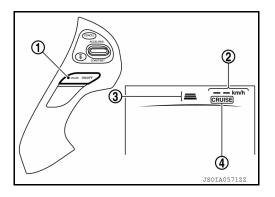

Press the MAIN switch (1) (less than 1.5 seconds).

Information display status

Set vehicle speed indicator (2) : "km/h" ("MPH")

Set distance indicator (3) : Long mode

MAIN switch indicator (4) : ON

- Check the ICC system display on the information display to check that the vehicle-to-vehicle distance control mode is ready for activation.
- 4. Press the MAIN switch, and check that the ICC system display on the information display turns OFF when the ICC system is deactivated.
- 5. Check that the ICC system display on the information display turns OFF after starting the engine again.

>> GO TO 2.

# 2.CHECK FOR DISTANCE SWITCH

- Start the engine.
- 2. Press the MAIN switch (less than 1.5 seconds).
- 3. Press the DISTANCE switch.

ccs

Ν

F

Revision: August 2014 CCS-97 2015 QX60 NAM

L

M

< BASIC INSPECTION > [ICC]

Check that the set distance indicator changes display in order of: (Long)→(Middle)→(Short).

| Distance | Display     | Approximate distance at 100 km/h (60 MPH) [m (ft)] |
|----------|-------------|--|
| Long     | 100 km/h    | 55 (180)   |
| Middle   | 100<br>km/h | 40 (130)   |
| Short    | 100<br>km/h | 25 (80)  |

NOTE:

When the MAIN switch is turned ON, initial setting set to (Long).

>> GO TO 3.

# 3.check for resume/accelerate, set/coast, and cancel switches

- Check that RESUME/ACCELERATE, SET/COAST, CANCEL switches are operated smoothly.
- 2. Check that switches come up as hand is released from the switches.

>> GO TO 4.

## 4.SET CHECKING (1)

- Start the engine.
- Press the MAIN switch (less than 1.5 seconds) and turn the vehicle-to-vehicle distance control mode ON.
- 3. Drive the vehicle at 32 km/h (20 MPH) or more.
- 4. Push down the SET/COAST switch.
- Check that the desired speed is set and vehicle-to-vehicle distance control mode control starts when releasing SET/COAST switch.

#### NOTE:

The set vehicle speed is indicated on the set vehicle speed indicator in the ICC system display on the information display.

>> GO TO 5.

# 5. CHECK FOR INCREASE OF CRUISING SPEED (1)

- Set the vehicle-to-vehicle distance control mode at desired speed.
- 2. Check that the set speed increases by 1 km/h (1 MPH) as RESUME/ACCELERATE switch is pushed up. **NOTE:**

The maximum set speed of the vehicle-to-vehicle distance control mode is 144 km/h (90 MPH).

#### **CAUTION:**

Never set the cruise speed exceeding the posted speed limit.

>> GO TO 6.

# 6. CHECK FOR DECREASE OF CRUISING SPEED (1)

- 1. Set the vehicle-to-vehicle distance control mode at desired speed.
- 2. Check that the set speed decreases by 1 km/h (1 MPH) as SET/COAST switch is pushed down.

## NOTE:

• The minimum set speed is approximately 32 km/h (20 MPH).

[ICC] < BASIC INSPECTION >

Cancel the control automatically when the vehicle speed is less than approximately 24 km/h (15 MPH) and when the system does not detect any vehicle ahead.

>> GO TO 7.

# 7.SET CHECKING (2)

- Stop the vehicle.
- 2. Drive the vehicle at less than approximately 32 km/h (20 MPH).
- 3. Push down the SET/COAST switch when the system detects a vehicle ahead.
- 4. Check that the vehicle-to-vehicle distance control mode is performed so that the vehicle maintains a proper distance according to the vehicle speed [maximum: approximately 32 km/h (20 MPH)] when releasing SET/COAST switch.

- The vehicle-to-vehicle distance control mode cannot be set when the vehicle speed is less than 32 km/h (20 MPH) and when a vehicle ahead is not detected.
- · Cancel the control automatically when the vehicle speed is 24 km/h (15 MPH) or less during the control and when the system does not detect any vehicle ahead.
- The set vehicle speed indicator in the ICC system display on the information display is set to 32 km/h (20 MPH).

>> GO TO 8.

>> GO TO 9.

# 8.CHECK FOR INCREASE OF CRUISING SPEED (2)

- Set the vehicle-to-vehicle distance control mode when the vehicle speed is less than approximately 32 km/h (20 MPH) and when a vehicle ahead is detected.
- 2. Check that the set speed increases by 1 km/h (1 MPH) as RESUME/ACCELERATE switch is pushed up.

NOTE:

The maximum set speed of the vehicle-to-vehicle distance control mode is 144 km/h (90 MPH).

CAUTION:

Never set the cruise speed exceeding the posted speed limit.

# 9.CHECK FOR DECREASE OF CRUISING SPEED INSPECTION (2)

- 1. Set the vehicle-to-vehicle distance control mode when the vehicle speed is less than approximately 32 km/h (20 MPH) and when a vehicle ahead is detected.
- Set the set vehicle speed to the desired vehicle speed according to "check for increase of cruising speed".
- 3. Check that the set speed decreases by 1 km/h (1 MPH) as SET/COAST switch is pushed down.

#### NOTE:

- The minimum the set speed is approximately 32 km/h (20 MPH).
- If the vehicle ahead comes to a stop, the vehicle decelerates to a standstill within the limitations of the system. The system will cancel once it judges a standstill with a warning chime.

**CAUTION:** 

The creep occurs because the stop status is not maintained.

>> GO TO 10.

# 10.CHECK FOR CANCELLATION OF VEHICLE-TO-VEHICLE DISTANCE CONTROL MODE

Check that the vehicle-to-vehicle distance control mode is canceled when performing the following operations.

- When the brake pedal is depressed after vehicle-to-vehicle distance control mode is set and the vehicle is driven.
- When the selector lever is in the "N" position after vehicle-to-vehicle distance control mode is set and the vehicle is driven.
- When the MAIN switch is turned OFF after vehicle-to-vehicle distance control mode is set and the vehicle is
- When the CANCEL switch is pressed after vehicle-to-vehicle distance control mode is set and the vehicle is driven.

>> GO TO 11.

< BASIC INSPECTION > [ICC]

# 11. CHECK FOR RESTORING SPEED THAT IS SET BY VEHICLE-TO-VEHICLE DISTANCE CONTROL MODE BEFORE CANCELLATION

Check that the vehicle restores the previous speed kept before the system deactivation when performing the following operations.

- Drive the vehicle when the vehicle-to-vehicle distance control mode is set and depress the brake pedal to
  cancel the control. Check that the vehicle restores the previous vehicle speed kept before the system deactivation when pushing up the RESUME/ACCELERATE switch.
- Drive the vehicle when the vehicle-to-vehicle distance control mode is set and shift the selector lever to the "N" position to cancel the control. Check that the vehicle restores the previous vehicle speed kept before the system deactivation when shifting the selector lever to the "D" position and pushing up the RESUME/ ACCELERATE switch.
- Drive the vehicle when the vehicle-to-vehicle distance control mode is set and press the CANCEL switch to cancel the control. Check that the vehicle restores the previous vehicle speed kept before the system deactivation when pushing up the RESUME/ACCELERATE switch.

#### >> INSPECTION END

## Work Procedure [Conventional (Fixed Speed) Cruise Control Mode]

INFOID:0000000011132084

#### NOTE

The running speed can be set between 40 km/h (25 MPH) and 144 km/h (90 MPH). **CAUTION:** 

Never set the cruise speed exceeding the posted speed limit.

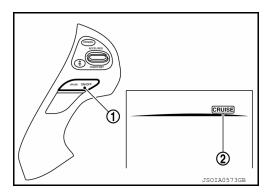

1. CHECK FOR MAIN SWITCH

- 1. Start the engine.
- 2. Press the MAIN switch (1) (1.5 seconds or more).

Information display status

MAIN switch indicator (2)

: ON

- Check that the ICC system display on the information display turns on and the display is ready for activation.
- 4. Press the MAIN switch, and check that the ICC system display on the information display turns OFF when the ICC system is deactivated.
- 5. Check that the ICC system display on the information display turns OFF after starting the engine again.

>> GO TO 2.

# 2.CHECK FOR RESUME/ACCELERATE, SET/COAST, AND CANCEL SWITCHES

- 1. Check that RESUME/ACCELERATE, SET/COAST, CANCEL switches are operated smoothly.
- 2. Check that switches come up as hand is released from the switches.

>> GO TO 3.

# 3.SET CHECKING

- Start the engine.
- Press the MAIN switch (1.5 seconds or more) and turn the conventional (fixed speed) cruise control mode to ON.
- 3. Drive the vehicle at 40 km/h (25 MPH) or more.
- 4. Push down the SET/COAST switch.

< BASIC INSPECTION > [ICC]

5. Check that the desired speed is set and conventional (fixed speed) cruise control mode control starts when releasing SET/COAST switch.

#### NOTE:

- The set vehicle speed is not displayed in the ICC system display on the information display.
- Display the set status in the ICC system display on the information display.

>> GO TO 4.

## 4. CHECK FOR INCREASE OF CRUISING SPEED

- 1. Set the vehicle speed to any desired speed, and drive the vehicle.
- 2. Check that the set speed increases by 1.6 km/h (1 MPH) as RESUME/ACCELERATE switch is pushed up.

#### NOTE:

- The maximum set speed is 144 km/h (90 MPH).
- The set vehicle speed increases while pushing up the RESUME/ACCELERATE switch.

#### **CAUTION:**

Never set the cruise speed exceeding the posted speed limit.

>> GO TO 5.

# 5. CHECK FOR DECREASE OF CRUISING SPEED

- 1. Set the vehicle speed to any desired speed, and drive the vehicle.
- 2. Check that the set speed decreases by 1.6 km/h (1 MPH) as SET/COAST switch is pushed down.

#### NOTE:

- The minimum set speed is 40 km/h (25 MPH).
- The set vehicle speed decreases while pressing down the SET/COAST switch.

>> GO TO 6.

# 6. CHECK FOR CANCELLATION OF CONVENTIONAL (FIXED SPEED) CRUISE CONTROL MODE

Check that the conventional (fixed speed) cruise control mode is canceled when performing the following operations.

- When the brake pedal is depressed after the conventional (fixed speed) cruise control mode is set and the vehicle is driven.
- When the selector lever is in the "N" position after the conventional (fixed speed) cruise control mode is set and the vehicle is driven.
- When the MAIN switch is turned OFF after the conventional (fixed speed) cruise control mode is set and the vehicle is driven.
- When the CANCEL switch is pressed after the conventional (fixed speed) cruise control mode is set and the vehicle is driven.

>> GO TO 7.

# 7.CHECK FOR RESTORING SPEED THAT IS SET BY CONVENTIONAL (FIXED SPEED) CRUISE CONTROL MODE BEFORE CANCELLATION

Check that the vehicle restores the previous speed kept before the system deactivation when performing the following operations.

- Drive the vehicle when the conventional (fixed speed) cruise control mode is set and depress the brake pedal to cancel the control. Check that the vehicle restores the previous vehicle speed kept before the system deactivation when pushing up the RESUME/ACCELERATE switch at the vehicle speed approximately 40 km/h (25 MPH) or more.
- Drive the vehicle when the conventional (fixed speed) cruise control mode is set and shift the selector lever is in the "N" position to cancel the control. Check that the vehicle restores the previous vehicle speed kept before the system deactivation when shifting the selector lever is in the "D" position and pushing up the RESUME/ACCELERATE switch at the vehicle speed of approximately 40 km/h (25 MPH) or more.
- Drive the vehicle when the conventional (fixed speed) cruise control mode is set and press the CANCEL switch to cancel the control. Check that the vehicle restores the previous vehicle speed kept before the system deactivation when pushing up the RESUME/ACCELERATE switch at the vehicle speed of approximately 40 km/h (25 MPH) or more.

| C1A05<br>(5)              | BRAKE SW/STOP L<br>SW  | A mismatch between a stop lamp switch signal and a brake pedal position switch signal received from ECM and a stop lamp signal received from the ABS actuator and electric unit (control unit) continues for 10 seconds or more with vehicle speeds at approximately 40 km/h or more | Stop lamp switch circuit Brake pedal position switch circuit Stop lamp switch Brake pedal position switch Incorrect stop lamp switch installation Incorrect brake pedal position switch installation ECM ABS actuator and electric unit (control unit) |

#### NOTE:

If DTC "C1A05" is detected along with DTC "U1000", first diagnose the DTC "U1000". Refer to CCS-165, "ADAS CONTROL UNIT: DTC Logic".

## Diagnosis Procedure

INFOID:0000000011132098

Regarding Wiring Diagram information, refer to <a href="CCS-68">CCS-68</a>, "Wiring Diagram".

# 1. CHECK SELF-DIAGNOSIS RESULTS

- 1. Perform "All DTC Reading" with CONSULT.
- Check if the "U1000" is detected other than "C1A05" in "Self Diagnostic Result" of "ICC/ADAS".

#### Is "U1000" detected?

YES >> Perform the CAN communication system inspection. Repair or replace the malfunctioning parts. Refer to CCS-165, "ADAS CONTROL UNIT: DTC Logic".

NO >> GO TO 2.

# 2.CHECK STOP LAMP SWITCH AND BRAKE PEDAL POSITION SWITCH

Check that "STOP LAMP SW" and "BRAKE SW" operate normally in "DATA MONITOR" of "ICC/ADAS".

#### Is the inspection result normal?

YES >> GO TO 3.

NO-1 >> When "BRAKE SW" operation is malfunctioning: GO TO 4.

NO-2 >> When "STOP LAMP SW" operation is malfunctioning: GO TO 9.

# 3.CHECK STOP LAMP SWITCH

Check that "STOP LAMP SW" operate normally in "DATA MONITOR" of "ABS".

#### Is the inspection result normal?

YES >> GO TO 14.

NO >> GO TO 9.

### 4. CHECK BRAKE PEDAL POSITION SWITCH INSTALLATION

- Turn ignition switch OFF.
- Check brake pedal position switch for correct installation. Refer to BR-7, "Inspection".

#### Is the inspection result normal?

YES >> GO TO 5.

NO >> Adjust brake pedal position switch installation. Refer to BR-15, "Adjustment".

# C1A05 BRAKE SW/STOP LAMP SW

< DTC/CIRCUIT DIAGNOSIS >

[ICC]

В

D

Е

# 5. BRAKE PEDAL POSITION SWITCH INSPECTION

Disconnect brake pedal position switch connector.

Check brake pedal position switch. Refer to CCS-113, "Component Inspection (Brake Pedal Position Switch)".

#### Is the inspection result normal?

YES >> GO TO 6.

NO >> Replace brake pedal position switch.

# $oldsymbol{6}$ .CHECK BRAKE PEDAL POSITION SWITCH POWER SUPPLY CIRCUIT

Turn the ignition switch ON.

Check voltage between brake pedal position switch harness connector and ground.

| (                  | +)              | (-)    | Voltage         |
|--------------------|-----------------|--------|-----------------|
| Brake pedal p      | oosition switch |        | (Approx.)       |
| Connector Terminal |                 | Ground |                 |
| E72                | 1               |        | Battery voltage |

#### Is the inspection result normal?

YES >> GO TO 7.

NO >> Repair the harnesses or connectors.

# 7.CHECK HARNESS BETWEEN BRAKE PEDAL POSITION SWITCH AND ECM

1. Turn ignition switch OFF

Disconnect ECM connector. 2.

Check for continuity between brake pedal position switch harness connector and ECM harness connector.

| Brake pedal position switch |          | ECM                     |          | Continuity |
|-----------------------------|----------|-------------------------|----------|------------|
| Connector                   | Terminal | Connector               | Terminal | Continuity |
| F72                         | 2        | E16 (for Mexico)        | 126      | Existed    |
| E12                         | 2        | E32 (except for Mexico) | 140      | Existed    |

Check for continuity between brake pedal position switch harness connector and ground.

| Brake pedal p      | position switch |        | Continuity  |
|--------------------|-----------------|--------|-------------|
| Connector Terminal |                 | Ground | Continuity  |
| E72                | 2               |        | Not existed |

#### Is the inspection result normal?

YES >> GO TO 8.

NO >> Repair the harnesses or connectors.

# 8.PERFORM SELF-DIAGNOSIS OF ECM

- Connect all connectors again if the connectors are disconnected.
- Turn ignition switch ON.
- 3. Perform "All DTC Reading".
- Check if any DTC is detected in "Self Diagnostic Result" of "ENGINE". Refer to EC-112, "DTC Index" (except for Mexico) or EC-636, "DTC Index" (for Mexico).

#### Is any DTC detected?

YFS >> Repair or replace the malfunctioning parts identified by the self-diagnosis result.

NO >> Replace the ADAS control unit. Refer to DAS-85, "Removal and Installation".

# 9.CHECK STOP LAMP SWITCH INSTALLATION

- Turn ignition switch OFF.
- Check stop lamp switch for correct installation. Refer to <u>BR-7</u>, "Inspection".

#### Is the inspection result normal?

**CCS-111** Revision: August 2014 2015 QX60 NAM CCS

# **C1A05 BRAKE SW/STOP LAMP SW**

#### < DTC/CIRCUIT DIAGNOSIS >

YES >> GO TO 10.

NO >> Adjust stop lamp switch installation. Refer to <u>BR-15</u>, "Adjustment".

# $10.\mathsf{stop}$ Lamp switch inspection

1. Disconnect stop lamp switch connector.

2. Check stop lamp switch. Refer to CCS-113, "Component Inspection (Stop Lamp Switch)".

#### Is the inspection result normal?

YES >> GO TO 11.

NO >> Replace stop lamp switch.

# 11. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

- 1. Turn the ignition switch ON.
- 2. Check voltage between stop lamp switch harness connector and ground.

| (         | +)        | (-)     | Voltage         |
|-----------|-----------|---------|-----------------|
| Stop lan  | np switch |         | (Approx.)       |
| Connector | Terminal  | Ground  |                 |
| E38       | 1 3       | Giodila | Battery voltage |

#### Is the inspection result normal?

YES >> GO TO 12.

NO >> Repair the harnesses or connectors.

# 12. CHECK HARNESS BETWEEN STOP LAMP SWITCH AND ECM

- 1. Turn ignition switch OFF
- 2. Disconnect ECM, rear combination lamp and high-mounted stop lamp connectors.
- Check for continuity between stop lamp switch harness connector and ECM harness connector.

| Stop lamp switch |          | ECM                     |          | Continuity |
|------------------|----------|-------------------------|----------|------------|
| Connector        | Terminal | Connector               | Terminal | Continuity |

### C1A06 OPERATION SW

DTC Logic

#### DTC DETECTION LOGIC

| DTC<br>(On board display) | Trouble diagnosis name | DTC detecting condition  | Possible causes   |
|---------------------------|------------------------|--|---|
| C1A06<br>(6)              | OPERATION SW<br>CIRC   | Any switch of the ICC steering switch is detected as "ON" continuously for 60 seconds     An ON/OFF state judgment of the ICC differs between ECM and ADAS control unit, and the state continues for 2 seconds or more | ICC steering switch circuit     ICC steering switch     ECM |

#### NOTE:

If DTC "C1A06" is detected along with DTC "U1000", first diagnose the DTC "U1000". Refer to CCS-165. "ADAS CONTROL UNIT: DTC Logic".

#### DTC CONFIRMATION PROCEDURE

# 1. PERFORM DTC CONFIRMATION PROCEDURE

- Start the engine.
- 2. Wait for approximately 5 minutes after turning the MAIN switch of ICC system ON.
- 3. Perform "All DTC Reading" with CONSULT.
- 4. Check if the "C1A06" is detected as the current malfunction in "Self Diagnostic Result" of "ICC/ADAS".

#### Is "C1A06" detected as the current malfunction?

YES >> Refer to CCS-114, "Diagnosis Procedure".

NO >> Refer to GI-50, "Intermittent Incident".

# Diagnosis Procedure

INFOID:0000000011132102

Regarding Wiring Diagram information, refer to <a href="CCS-68">CCS-68</a>, "Wiring Diagram".

# 1. CHECK SELF-DIAGNOSIS RESULTS

Check if "U1000" is detected other than "C1A06" in "Self Diagnostic Result" of "ICC/ADAS".

#### Is "U1000" detected?

YES >> Perform the CAN communication system inspection. Repair or replace the malfunctioning parts. Refer to <a href="https://ccs-165">CCS-165</a>, "ADAS CONTROL UNIT: DTC Logic".

NO >> GO TO 2.

# 2.check icc steering switch

- Turn the ignition switch OFF.
- 2. Disconnect the ICC steering switch connector.
- Check the ICC steering switch. Refer to <u>CCS-115, "Component Inspection".</u>

#### Is the inspection result normal?

YES >> GO TO 3.

NO >> Replace the ICC steering switch.

# 3.CHECK HARNESS BETWEEN SPIRAL CABLE AND ECM

- 1. Disconnect the ECM connector.
- Check for continuity between the spiral cable harness connector and ECM harness connector.

| Spiral cable |          | ECM       |          | Continuity |
|--------------|----------|-----------|----------|------------|
| Connector    | Terminal | Connector | Terminal | Continuity |

#### Is the inspection result normal?

YES >> GO TO 15.

NO >> Repair the harnesses or connectors.

# 15. CHECK ICC BRAKE HOLD RELAY

- 1. Remove ICC brake hold relay.
- 2. Check ICC brake hold relay. Refer to <a href="CCS-124">CCS-124</a>, "Component Inspection".

#### Is the inspection result normal?

YES >> GO TO 16.

### C1A13 STOP LAMP RELAY

< DTC/CIRCUIT DIAGNOSIS >

[ICC]

NO >> Replace ICC brake hold relay.

# 16. CHECK STOP LAMP SWITCH

Check that "STOP LAMP SW" operate normally in "DATA MONITOR" of "ABS".

#### Is the inspection result normal?

YES >> GO TO 21.

NO >> GO TO 17.

17. CHECK STOP LAMP SWITCH INSTALLATION

Α

В

- Turn ignition switch OFF.
- 2. Check stop lamp switch for correct installation. Refer to BR-7, "Inspection".

#### Is the inspection result normal?

YES >> GO TO 18.

NO >> Adjust stop lamp switch installation. Refer to <u>BR-15</u>, "Adjustment".

18. CHECK STOP LAMP SWITCH

Е

D

- Disconnect stop lamp switch connector.
- Check stop lamp switch. Refer to CCS-113, "Component Inspection (Stop Lamp Switch)".

### Is the inspection result normal?

YES >> GO TO 19.

NO >> Replace stop lamp switch.

Н

K

M

Ν

F

# 19. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

- Connect stop lamp switch connector.
- 2. Check the voltage between stop lamp switch harness connector and ground.

| (                | +)       | (-)    | Voltage         |
|------------------|----------|--------|-----------------|
| Stop lamp switch |          | (      | (Approx.)       |
| Connector        | Terminal | Ground |                 |
| E38              | 3        |        | Battery voltage |

#### Is the inspection result normal?

YES >> GO TO 20.

NO >> Repair or replace stop lamp switch power supply circuit.

# 20.check harness between stop lamp switch and abs actuator and electric unit (CONTROL UNIT)

- Turn the ignition switch OFF.
- 2. Disconnect stop lamp switch, ABS actuator and electric unit (control unit) connectors.
- Check for continuity between the stop lamp switch harness connector and the ABS actuator and electric unit (control unit) harness connector.

| Stop lamp switch |          | ABS actuator and electric unit (control unit) |          | Continuity |
|------------------|----------|---|----------|------------|
| Connector        | Terminal | Connector                                     | Terminal |            |
| E38              | 4        | E125  | 5        | Existed    |

Check for continuity between stop lamp switch harness connector and ground.

| Stop lamp switch |          |        | Continuity  |
|------------------|----------|--------|-------------|
| Connector        | Terminal | Ground | Continuity  |
| E38              | 4        |        | Not existed |

#### Is the inspection result normal?

YES >> GO TO 21.

**CCS-123** Revision: August 2014 2015 QX60 NAM CCS

### C1A13 STOP LAMP RELAY

#### < DTC/CIRCUIT DIAGNOSIS >

[ICC]

NO >> Repair the harnesses or connectors.

# 21. PERFORM SELF-DIAGNOSIS OF ECM

- 1. Connect all connectors again if the connectors are disconnected.
- 2. Turn ignition switch ON.
- 3. Perform "All DTC Reading".
- Check if any DTC is detected in "Self Diagnostic Result" of "ENGINE". Refer to <u>EC-112</u>, "<u>DTC Index</u>" (except for Mexico) or <u>EC-636</u>, "<u>DTC Index</u>" (for Mexico).

#### Is any DTC detected?

YES >> Repair or replace the malfunctioning parts identified by the self-diagnosis result.

NO >> GO TO 22.

# 22.PERFORM SELF-DIAGNOSIS OF ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

- 1. Connect all connectors again if the connectors are disconnected.
- 2. Turn ignition switch ON.
- 3. Perform "All DTC Reading".
- 4. Check if any DTC is detected in "Self Diagnostic Result" of "ABS". Refer to BRC-46, "DTC Index".

#### Is any DTC detected?

YES >> Repair or replace the malfunctioning parts identified by the self-diagnosis result.

NO >> Replace ADAS control unit. Refer to <a href="DAS-85">DAS-85</a>, "Removal and Installation".

## Component Inspection

INFOID:0000000011132110

# 1. CHECK ICC BRAKE HOLD RELAY

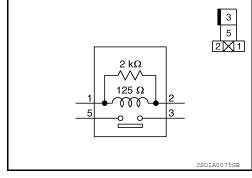

Apply battery voltage to ICC brake hold relay terminals 1 and 2, and then check for continuity under the following conditions.

| Terminal |   | Condition                               | Continuity       |
|----------|---|---|------------------|
|          |   | When the battery voltage is applied     | Existed          |
| 3        | 5 | When the battery voltage is not applied | Not exist-<br>ed |

### Is the inspection result normal?

YES >> INSPECTION END

NO >> Replace ICC brake hold relay.

### C1A15 GEAR POSITION

Description INFOID:0000000011132113

ADAS control unit judges the gear position based on the following signals.

- Current gear position signal transmitted from TCM via CAN communication.
- Value of gear ratio calculated from input speed signal transmitted from TCM via CAN communication.
- Value of gear ratio calculated from the vehicle speed signal transmitted from ABS actuator and electric unit (control unit) via CAN communication.

DTC Logic INFOID:0000000011132114

#### DTC DETECTION LOGIC

| DTC<br>(On board display) | Trouble diagnosis name | DTC detecting condition   | Possible causes   |
|---------------------------|------------------------|---|---|
| C1A15<br>(15)             | GEAR POSITION          | A mismatch between a current gear position signal transmitted from TCM via CAN communication and a gear position calculated by the ADAS control unit continues for approximately 11 minutes or more | Input speed sensor     Vehicle speed sensor CVT (output speed sensor)     TCM |

#### NOTE:

If DTC "C1A15" is detected along with DTC "U1000", "C1A03", or "C1A04", first diagnose the DTC "U1000", "C1A03", or "C1A04".

- Refer to CCS-165, "ADAS CONTROL UNIT: DTC Logic" for DTC "U1000".
- Refer to CCS-107, "DTC Logic" for DTC "C1A03".
- Refer to CCS-109, "DTC Logic" for DTC "C1A04".

#### DTC CONFIRMATION PROCEDURE

# 1.perform dtc confirmation procedure

- Start the engine.
- Turn the MAIN switch of ICC system ON.
- 3. Drive the vehicle at 10 km/h (6 MPH) or faster for approximately 15 minutes or more.

#### **CAUTION:**

#### Always drive safely.

- 4. Stop the vehicle.
- 5. Perform "All DTC Reading" with CONSULT.
- Check if "C1A15" is detected as the current malfunction in the "Self Diagnostic Result" of "ICC/ADAS".

#### Is "C1A15" detected as the current malfunction?

YES >> Refer to CCS-126, "Diagnosis Procedure".

NO >> Refer to GI-50, "Intermittent Incident".

# Diagnosis Procedure

INFOID:0000000011132115

# 1. CHECK SELF-DIAGNOSIS RESULTS

Check if "C1A03", "C1A04", or "U1000" is detected other than "C1A15" in "Self Diagnostic Result" of "ICC/ADAS".

#### Is any DTC detected?

YES >> Perform diagnosis on the detected DTC and repair or replace the malfunctioning parts. Refer to <a href="CCS-60">CCS-60</a>, "DTC Index".

NO >> GO TO 2.

# 2.CHECK VEHICLE SPEED SIGNAL

Check that "VHCL SPEED SE" operates normally in "DATA MONITOR" of "ICC/ADAS".

#### **CAUTION:**

#### Be careful of the vehicle speed.

### C1A16 RADAR STAIN

DTC Logic

#### DTC DETECTION LOGIC

| DTC   | Trouble diagnosis name | DTC detecting condition  | Possible causes   |
|-------|------------------------|--|---|
| C1A16 | RADAR STAIN            | Inclusion of dirt or stains on the ICC sensor area of the front bumper | Stain or foreign materials is deposited     Cracks or scratches exist |

#### NOTE:

DTC "C1A16" may be detected under the following conditions. (Explain to the customer about the difference between the contamination detection function and the indication when the malfunction is detected and tell them "This is not malfunction".)

- When contamination or foreign materials adhere to the ICC sensor area of the front bumper.
- · When driving while it is snowing or when frost forms on the ICC sensor area of the front bumper.
- When ICC sensor area of the front bumper is temporarily fogged.

## Diagnosis Procedure

INFOID:0000000011132117

#### NOTE:

After ICC sensor alignment is performed, the vehicle must be driven at a speed of 4.5 MPH (7.2 km/h) or higher for a minimum of 2 minutes before DTC C1A16 can be cleared.

### 1.VISUAL CHECK 1

Check the contamination and foreign matter on the ICC sensor area of the front bumper.

#### Does contamination or foreign matter adhere?

YES >> Wipe out the contamination and foreign matter on the ICC sensor area of the front bumper.

NO >> GO TO 2.

# 2. VISUAL CHECK 2

- Remove the front bumper. Refer to <u>EXT-17</u>, "Removal and Installation".
- 2. Check ICC sensor for contamination and foreign matter.

#### Does contamination or foreign matter adhere?

YES >> Wipe out the contamination and foreign matter from the ICC sensor.

NO >> GO TO 3.

# 3.VISUAL CHECK ${\mathfrak z}$

Check ICC sensor and ICC sensor bracket for damage or looseness.

#### Does damage or looseness exist?

YES >> 1. Repair or replace effected components. Refer to <a href="CCS-195">CCS-195</a>, "Removal and Installation".

- 2. Perform ICC sensor alignment. Refer to <a href="CCS-89">CCS-89</a>, "Description".
- 3. Perform action test. Refer to CCS-97, "Description".

NO >> GO TO 4.

# 4.INTERVIEW

- 1. Ask if there is any trace of contamination or foreign materials adhering to the ICC sensor area of the front bumper.
- 2. Ask if ICC sensor area of the front bumper was frosted during driving or if vehicle was driven in snow.
- 3. Ask if ICC sensor area of the front bumper was temporarily fogged. (Windshield glass may also tend to fog, etc.)

#### Is any of above conditions seen?

YES >> Explain to the customer about the difference between the contamination detection function and the indication when the malfunction is detected and tell them "This is not malfunction".

NO >> 1. Perform ICC sensor alignment. Refer to <a href="CCS-89">CCS-89</a>, "Description".

- 2. Perform action test. Refer to CCS-97, "Description".
- GO TO 5.

#### DTC CONFIRMATION PROCEDURE

NP RANGE

# 1. CHECK DTC REPRODUCE (1)

- Start the engine.
- 2. Turn the MAIN switch of ICC system ON.
- 3. Wait for approximately 5 minutes or more after shifting the selector lever to "P" position.
- 4. Perform "All DTC Reading" with CONSULT.
- 5. Check if the "C1A24" is detected as the current malfunction in "Self Diagnostic Result" of "ICC/ADAS".

#### Is "C1A24" detected as the current malfunction?

YES >> Refer to CCS-135, "Diagnosis Procedure".

NO >> GO TO 2.

# 2.CHECK DTC REPRODUCE (2)

- 1. Wait for approximately 5 minutes or more after shifting the selector lever to "N" position.
- 2. Perform "All DTC Reading".
- Check if the "C1A24" is detected as the current malfunction in "Self Diagnostic Result" of "ICC/ADAS".

#### Is "C1A24" detected as the current malfunction?

YES >> Refer to <a href="CCS-135">CCS-135</a>, "Diagnosis Procedure".

NO >> Refer to GI-50, "Intermittent Incident".

# Diagnosis Procedure

# 1. CHECK SELF-DIAGNOSIS RESULTS

Check if "U1000" is detected other than "C1A24" in "Self Diagnostic Result" of "ICC/ADAS".

#### Is "U1000" detected?

YES >> Perform the CAN communication system inspection. Repair or replace the malfunctioning parts. Refer to <a href="https://ccs-165.">CCS-165.</a>, "ADAS CONTROL UNIT: DTC Logic".

NO >> GO TO 2.

# 2. CHECK TCM DATA MONITOR

Check that "SLCT LVR POSI" operates normally in "DATA MONITOR" of "TRANSMISSION".

#### Is the inspection result normal?

YES >> Replace the ADAS control unit. Refer to <a href="DAS-85">DAS-85</a>, "Removal and Installation".

NO >> GO TO 3.

# 3.perform tcm self-diagnosis

- Perform "All DTC Reading".
- Check if any DTC is detected in "Self Diagnostic Result" of "TRANSMISSION".

#### Is any DTC detected?

## DTC CONFIRMATION PROCEDURE

# 1. PERFORM DTC CONFIRMATION PROCEDURE

- 1. Turn the ignition switch OFF.
- 2. Turn the ignition switch ON.
- 3. Slowly depress the accelerator pedal completely, and then release it.
- 4. Repeat step 3 several times.
- 5. Perform "All DTC Reading" with CONSULT.
- Check if the DTC "C1F01" is detected as the current malfunction on the self-diagnosis results of "ICC/ ADAS".

## Is "C1F01" detected as the current malfunction?

YES >> Refer to <a href="CCS-148">CCS-148</a>, "Diagnosis Procedure".

NO >> Refer to GI-50, "Intermittent Incident".

# Diagnosis Procedure

INFOID:0000000011132153

# 1. CHECK ADAS CONTROL UNIT SELF-DIAGNOSIS RESULTS

Check if "U1000" is detected other than "C1F01" in "Self Diagnostic Result" of "ICC/ADAS".

## Is "U1000" detected?

YES >> Perform the CAN communication system inspection. Repair or replace the malfunctioning parts. Refer to <a href="https://ccs-165.">CCS-165.</a> "ADAS CONTROL UNIT: DTC Logic".

NO >> GO TO 2.

# 2.CHECK ACCELERATOR PEDAL ACTUATOR SELF-DIAGNOSIS RESULTS

Check if "C1F01" is detected in "Self Diagnostic Result" of "ACCELE PEDAL ACT".

#### Is "C1F01" detected?

YES >> Refer to <u>DAS-48</u>, "<u>DTC Index</u>".

NO >> Replace the ADAS control unit. Refer to <a href="DAS-85">DAS-85</a>, "Removal and Installation".

#### DTC DETECTION LOGIC

| DTC<br>(On board display) | Trouble diagnosis name | DTC detecting condition  | Possible causes                               |
|---------------------------|------------------------|--|---|
| U0415<br>(126)            | VDC CAN CIR1           | If ADAS control unit detects an error signal that is received from ABS actuator and electric unit (control unit) via CAN communication | ABS actuator and electric unit (control unit) |

#### NOTE:

If DTC "U0415" is detected along with DTC "U1000", first diagnose the DTC "U1000". Refer to CCS-165, "ADAS CONTROL UNIT: DTC Logic".

#### DTC CONFIRMATION PROCEDURE

# 1. PERFORM DTC CONFIRMATION PROCEDURE

- Start the engine.
- Turn the MAIN switch of ICC system ON.
- 3. Perform "All DTC Reading" with CONSULT.
- 4. Check if the "U0415" is detected as the current malfunction in "Self Diagnostic Result" of "ICC/ADAS".

## Is "U0415" detected as the current malfunction?

YES >> Refer to CCS-161, "ADAS CONTROL UNIT : Diagnosis Procedure".

NO >> Refer to GI-50, "Intermittent Incident".

# ADAS CONTROL UNIT: Diagnosis Procedure

#### INFOID:0000000011132179

# 1. CHECK SELF-DIAGNOSIS RESULTS

Check if "U1000" is detected other than "U0415" in "Self Diagnostic Result" of "ICC/ADAS".

#### Is "U1000" detected?

YES >> Perform the CAN communication system inspection. Repair or replace the malfunctioning parts. Refer to CCS-165, "ADAS CONTROL UNIT: DTC Logic".

NO >> GO TO 2.

# 2.CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) SELF-DIAGNOSIS RESULTS

Check if any DTC is detected in "Self Diagnostic Result" of "ABS".

#### Is any DTC detected?

YES >> Perform diagnosis on the detected DTC and repair or replace the malfunctioning parts. Refer to BRC-46, "DTC Index".

NO >> Replace the ADAS control unit. Refer to DAS-85, "Removal and Installation".

# U1000 CAN COMM CIRCUIT ADAS CONTROL UNIT

ADAS CONTROL UNIT: Description

INFOID:0000000011132186

#### CAN COMMUNICATION

CAN (Controller Area Network) is a serial communication line for real time applications. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicle is equipped with many electronic control units, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H, CAN-L) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads the required data only.

CAN communication signal chart. Refer to <u>LAN-45</u>, "CAN COMMUNICATION SYSTEM: CAN Communication Signal Chart".

#### ITS COMMUNICATION

- ITS communication is a multiplex communication system. This enables the system to transmit and receive large quantities of data at high speed by connecting control units with 2 communication lines.
- ITS communication lines adopt twisted-pair line style (two lines twisted) for noise immunity.

# U1514 STRG SEN CAN 3

DTC Logic

#### DTC DETECTION LOGIC

| DTC<br>(On board display) | Trouble diagnosis name | DTC detecting condition   | Possible causes       |
|---------------------------|------------------------|---|-----------------------|
| U1514<br>(165)            | STRG SEN CAN CIRC 3    | ADAS control unit detects an error signal that is received from steering angle sensor via CAN communication | Steering angle sensor |

#### NOTE:

If DTC "U1514" is detected along with DTC "U1000", first diagnose the DTC "U1000". Refer to CCS-165. "ADAS CONTROL UNIT: DTC Logic".

## DTC CONFIRMATION PROCEDURE

# 1. PERFORM DTC CONFIRMATION PROCEDURE

- 1. Start the engine.
- Turn the MAIN switch of ICC system ON.
- 3. Perform "All DTC Reading" with CONSULT.
- 4. Check if the "U1514" is detected as the current malfunction in "Self Diagnostic Result" of "ICC/ADAS".

## Is "U1514" detected as the current malfunction?

YES >> Refer to CCS-174, "Diagnosis Procedure".

NO >> Refer to GI-50, "Intermittent Incident".

# Diagnosis Procedure

INFOID:0000000011132211

# 1. CHECK SELF-DIAGNOSIS RESULTS

Check if "U1000" is detected other than "U1514" in "Self Diagnostic Result" of "ICC/ADAS".

#### Is "U1000" detected?

YES >> Perform the CAN communication system inspection. Repair or replace the malfunctioning parts. Refer to CCS-165, "ADAS CONTROL UNIT: DTC Logic".

NO >> GO TO 2

# 2.CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) SELF-DIAGNOSIS RESULTS

Check if any DTC is detected in "Self Diagnostic Result" of "ABS".

## Is any DTC detected?

YES >> Perform diagnosis on the detected DTC and repair or replace the malfunctioning parts. Refer to BRC-46, "DTC Index".

NO >> Replace the ADAS control unit. Refer to DAS-85, "Removal and Installation".

# MAIN SWITCH DOES NOT TURN ON, MAIN SWITCH DOES NOT TURN OFF

< SYMPTOM DIAGNOSIS >

[ICC]

# MAIN SWITCH DOES NOT TURN ON, MAIN SWITCH DOES NOT TURN OFF

**Description** 

MAIN switch does not turn ON

ICC system display does not appear even when MAIN switch is pressed.

MAIN switch does not turn OFF

When ICC system display is ON, display does not turn OFF even if MAIN switch is pressed.

#### NOTE:

When ICC system warning lamp illuminates, perform the self-diagnosis of ICC system, and then repair or replace the malfunctioning parts.

# Diagnosis Procedure

INFOID:0000000011132220

# 1. MAIN SWITCH INSPECTION

- 1. Start the engine.
- Check that "MAIN SW" and "CRUISE LAMP" operate normally in "DATA MONITOR" of "ICC/ADAS" with CONSULT.

#### Is the inspection result normal?

YES >> GO TO 2.

NO >> GO TO 4.

# 2. CHECK COMBINATION METER

Check that "CRUISE IND" operates normally in "DATA MONITOR" of "METER/M&A".

#### Is the inspection result normal?

YES >> GO TO 3.

NO >> GO TO 4.

# 3.perform self-diagnosis of combination meter

- Perform "Self Diagnostic Result" of "METER/M&A".
- Check if DTC is detected. Refer to <u>MWI-26</u>, "<u>DTC Index</u>".

#### Is any DTC detected?

YES >> Repair or replace malfunctioning parts.

NO >> GO TO 4.

# 4.PERFORM SELF-DIAGNOSIS RESULTS OF ICC SYSTEM

- Perform "All DTC Reading".
- 2. Check if the "U1000" is detected in self-diagnosis results of "ICC/ADAS".

#### Is "U1000" detected?

YES >> GO TO 5.

NO >> GO TO 6.

# 5. CAN COMMUNICATIONS INSPECTION

Check the CAN communication and repair or replace malfunctioning parts. Refer to <u>CCS-165, "ADAS CONTROL UNIT : DTC Logic"</u>.

>> INSPECTION END

# 6. CHECK ICC STEERING SWITCH

Check the ICC steering switch. Refer to CCS-115, "Component Inspection".

>> INSPECTION END

## ICC SYSTEM CANNOT BE SET (MAIN SWITCH TURNS ON/OFF)

[ICC] < SYMPTOM DIAGNOSIS >

## ICC SYSTEM CANNOT BE SET (MAIN SWITCH TURNS ON/OFF)

The MAIN switch can be turned ON/OFF, but the ICC system cannot be set even if the SET/COAST switch is pressed.

#### NOTE:

Description

The system cannot be set in the following case.

- When the vehicle ahead is not detected below the speed of 32 km/h (20 MPH).
- When the selector lever is not in the "D" position or manual mode.
- When the brake pedal is depressed.
- · When the VDC is turned OFF.
- When ABS or VDC (including the TCS) operates.
- When a wheel slips.
- When the drive mode select switch is in SNOW position.
- When ABS warning lamp is ON.

### Diagnosis Procedure

## ${f 1}$ .CHECK CAUSE OF AUTOMATIC CANCELLATION

Check if there is the cancellation cause in the "CAUSE OF AUTO-CANCEL" on "WORK SUPPORT" of "ICC/ ADAS" with CONSULT.

#### Is it displayed?

Not displayed>>GO TO 2.

"OPE SW VOLT CIRC">>Refer to CCS-114, "DTC Logic".

"VHCL SPD UNMATCH">>Refer to CCS-107, "DTC Logic".

"IGN LOW VOLT">>Refer to CCS-105, "ADAS CONTROL UNIT: DTC Logic".

"ECM CIRCUIT">>Refer to CCS-125, "DTC Logic".

"CAN COMM ERROR">>Refer to CCS-165, "ADAS CONTROL UNIT: DTC Logic".

"ICC SENSOR CAN COMM ERR">>Refer to CCS-157, "DTC Logic".

"ABS/TCS/VDC CIRC">>Refer to CCS-109, "DTC Logic".

"ECD CIRCUIT">>Refer to CCS-137, "DTC Logic".

## 2.perform the self-diagnosis

- Perform "All DTC Reading".
- Check if any DTC is detected in "Self Diagnostic Result" of "ICC/ADAS"" of "LASER/RADAR". Refer to CCS-60, "DTC Index" (ICC/ADAS) or CCS-66, "DTC Index" (LASER/RADAR).

#### Is any DTC detected?

YES >> GO TO 3.

NO >> GO TO 4.

## 3 . REPAIR OR REPLACE MALFUNCTIONING PARTS

Repair or replace malfunctioning parts identified by the self-diagnosis result.

## f 4.CHECK EACH SWITCH AND VEHICLE SPEED SIGNAL

- Start the engine.
- Check that the following items operate normally in "DATA MONITOR" of "ICC/ADAS".
- "VHCL SPEED SE"

#### CHIME DOES NOT SOUND

< SYMPTOM DIAGNOSIS > [ICC]

#### CHIME DOES NOT SOUND

Description

Symptom check: In the following conditions, the warning chime may not sound even if the vehicle distance is short

- When the vehicles are traveling at the same speed and the distance between vehicles is not changing.
- When the vehicle ahead is traveling faster and the distance between vehicles is increasing.
- The warning chime will not sound when the accelerator pedal is depressed, overriding the system.
- The warning chime will not sound when own vehicle approaches vehicles that are parked or moving slowly.
- The warning chime does not sound when the system does not detect any vehicle ahead. (Diagnose the conditions under which the system is detecting the vehicle ahead and when the system is malfunctioning. If there is any malfunction in detecting the vehicle ahead, check the system following the <a href="CCS-188">CCS-188</a>, "Description".)

## Diagnosis Procedure

## 1. PERFORM ACTIVE TEST

Check if the warning chime sounds on the active test item "ICC BUZZER" of "ICC/ADAS" with CONSULT.

## Does the warning chime sound?

YES >> GO TO 2. NO >> GO TO 3.

## 2.CHECK THE MALFUNCTION SYMPTOM DURING WARNING CHIME OPERATION

Understand the vehicle ahead detecting condition when the malfunction occurred. If the warning chime should have sounded, replace the ADAS control unit. Refer to <u>DAS-85</u>, "Removal and Installation".

>> GO TO 8.

## 3.check icc warning chime circuit

Check the meter buzzer circuit. Refer to WCS-29, "Component Function Check".

#### Is the inspection result normal?

YES >> GO TO 4. NO >> GO TO 6.

## 4.PERFORM THE SELF-DIAGNOSIS

- 1. Perform "All DTC Reading" with CONSULT.
- Check if the "U1000" is detected in self-diagnosis results of "ICC/ADAS".

#### Is "U1000" detected?

YES >> GO TO 5.

NO >> GO TO 7.

## CAN COMMUNICATIONS SYSTEM INSPECTION

Check the CAN communication system and repair or replace malfunctioning parts. Refer to <u>CCS-165</u>, "ADAS <u>CONTROL UNIT : DTC Logic"</u>.

#### >> INSPECTION END

#### O. REPAIR OR REPLACE MALFUNCTIONING PARTS

Repair or replace malfunctioning parts.

### FREQUENTLY CANNOT DETECT THE VEHICLE AHEAD / DETECTION ZONE IS SHORT

< SYMPTOM DIAGNOSIS >

## FREQUENTLY CANNOT DETECT THE VEHICLE AHEAD / DETECTION ZONE IS SHORT

Description INFOID:000000001113223:

The detection function may become unstable in the following cases.

- When radar reflections from the vehicle ahead is interrupted.
- When driving a road with extremely sharp corners.
- When the sensor cannot detect a vehicle ahead while the vehicle ahead passes a hill or valley.

### Diagnosis Procedure

INFOID:0000000011132232

## 1. VISUAL CHECK (1)

Check the contamination and foreign matter on the ICC sensor area of the front bumper.

#### Do foreign matter adhere?

>> GO TO 3. YES

NO >> GO TO 2.

## 2.VISUAL CHECK (2)

- Remove the front bumper. Refer to EXT-17, "Removal and Installation".
- Check ICC sensor for contamination and foreign matter.

#### Do foreign matter adhere?

YES >> GO TO 3.

>> GO TO 4. NO

## 3. WIPE OUT DIRT AND FOREIGN MATERIALS

Wipe out the contamination and foreign matter in the area around the ICC sensor.

>> GO TO 8.

## 4. VISUAL CHECK (3)

Check ICC sensor for cracks and scratches.

#### Are there any cracks or scratches?

>> GO TO 6. YES

NO >> GO TO 5.

## ${f 5}.$ ADJUST RADAR ALIGNMENT

- Install the front bumper. Refer to EXT-17, "Removal and Installation".
- Adjust the radar alignment. Refer to CCS-89, "Description".
- Perform ICC system action test. Refer to CCS-97, "Description".
- Check that the vehicle ahead detection performance improves.

#### Does it improve?

>> INSPECTION END YES

NO >> GO TO 6.

## 6.REPLACE ICC SENSOR

- Replace the ICC sensor. Refer to CCS-195, "Removal and Installation".
- Install the front bumper. Refer to <u>EXT-17</u>, "<u>Removal and Installation</u>". Adjust the radar alignment. Refer to <u>CCS-89</u>, "<u>Description</u>".
- Perform ICC system action test. Refer to CCS-97, "Description".
- Check that the vehicle ahead detection performance improves.

#### Does it improve?

>> INSPECTION END YES

NO >> GO TO 7.

## 7.REPLACE ADAS CONTROL UNIT

Replace ADAS control unit. Refer to DAS-85, "Removal and Installation".

# FREQUENTLY CANNOT DETECT THE VEHICLE AHEAD / DETECTION ZONE IS SHORT

< SYMPTOM DIAGNOSIS > [ICC]

>> GO TO 8.

## 8. CHECK ICC SYSTEM

1. Erase the self-diagnosis results, and then perform "All DTC Reading" again after performing the action test. (Refer to CCS-97, "Description" for action test.)

2. Check that the ICC system is normal.

### THE SYSTEM DOES NOT DETECT THE VEHICLE AHEAD AT ALL

< SYMPTOM DIAGNOSIS >

[ICC]

## THE SYSTEM DOES NOT DETECT THE VEHICLE AHEAD AT ALL

Description INFOID:0000000011132233

When ICC system is active, the ICC system does not perform any control even through there is a vehicle ahead.

### Diagnosis Procedure

INFOID:0000000011132234

## 1. CHECK ICC SYSTEM DISPLAY ON INFORMATION DISPLAY

- 1. Start the self-diagnosis mode of combination meter. Refer to MWI-17, "Description".
- Check that the information display turns ON normally.

#### Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace the combination meter.

2.VISUAL CHECK (1)

Check the contamination and foreign matter on the ICC sensor area of the front bumper.

#### Do foreign matter adhere?

YES >> GO TO 4.

NO >> GO TO 3.

3.VISUAL CHECK (2)

- 1. Remove the front bumper. Refer to EXT-17, "Removal and Installation".
- 2. Check ICC sensor for contamination and foreign matter.

#### Do foreign matter adhere?

YES >> GO TO 4.

NO >> GO TO 5.

## 4. WIPE OUT DIRT AND FOREIGN MATTER

Wipe out the contamination and foreign matter in the area around the ICC sensor.

>> GO TO 9.

## 5. VISUAL CHECK (3)

Check ICC sensor for cracks and/or scratches.

#### Are there cracks?

YES >> GO TO 7.

NO >> GO TO 6.

#### 6.RADAR ALIGNMENT ADJUSTMENT

- 1. Install the front bumper. Refer to EXT-17, "Removal and Installation".
- Adjust the radar alignment. Refer to <u>CCS-89</u>, "<u>Description</u>".
- 3. Perform ICC system action test. Refer to CCS-97, "Description".
- 4. Check that the vehicle ahead detection performance improves.

#### Does it improve?

YES >> INSPECTION END

NO >> GO TO 8.

#### 7. REPLACE ICC SENSOR

- 1. Replace the ICC sensor. Refer to CCS-195, "Removal and Installation".
- 2. Install the front bumper. Refer to EXT-17, "Removal and Installation".
- 3. Adjust the radar alignment. Refer to CCS-89, "Description".
- 4. Perform ICC system action test. Refer to CCS-97, "Description".
- 5. Check that the vehicle ahead detection performance improves.

#### NORMAL OPERATING CONDITION

< SYMPTOM DIAGNOSIS > [ICC]

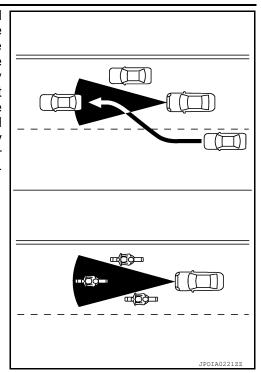

### NORMAL OPERATING CONDITION

Description INFOID:0000000011132235

#### PRECAUTIONS FOR VEHICLE-TO-VEHICLE DISTANCE CONTROL MODE

- ICC system is only an aid to assist the driver and is not a collision warning or avoidance system. It is the driver's responsibility to stay alert, drive safely and be in control of the vehicle at all times.
- The system is primarily intended for use on straight, dry, open roads with light traffic. It is not advisable to use the system in city traffic or congested areas.
- This system will not adapt automatically to road conditions. This system should be used in evenly flowing traffic. Never use the system on roads with sharp curves, or on icy roads, in heavy rain or in fog.
- The ICC sensor will not detect the following objects:
- Stationary and slow moving vehicles.
- Pedestrians or objects in the roadway.
- Oncoming vehicles in the some lane.
- Motorcycles traveling offset in the travel lane.
- As there is a performance limit to the distance control function, never rely solely on the ICC system. This
  system does not correct careless, inattentive or absent-minded driving, or overcome poor visibility in rain,
  fog, or other bad weather. Decelerate the vehicle speed by depressing the brake pedal, depending on the
  distance to the vehicle ahead and the surrounding circumstances in order to maintain a safe distance
  between vehicles.
- If the vehicle ahead comes to a stop, the vehicle decelerates to a standstill within the limitations of the system. The system will cancel once it judges that the vehicle has come to a standstill and sound a warning chime. To prevent the vehicle from moving, the driver must depress the brake pedal.
- The system may not detect the vehicle in front of the driver in certain road or weather conditions. To avoid accidents, never use the ICC system under the following conditions:
- On roads where the traffic is heavy or there are sharp curves.
- On slippery road surfaces such as on ice or snow, etc.
- During bad weather (rain, fog, snow, etc.)
- When rain, snow or dirt adhere to the ICC sensor.
- On steep downhill roads (the vehicle may go beyond the set vehicle speed and frequent braking may result in overheating the brakes).
- On repeated uphill and downhill roads.
- When traffic conditions make it difficult to keep a proper distance between vehicles because of frequent acceleration or deceleration.
- Never use the ICC system if own vehicle is towing a trailer. The system may not detect a vehicle ahead.
- In some road or traffic conditions, a vehicle or object can unexpectedly come into the sensor detection zone
  and cause automatic braking. The driver may need to control the distance from other vehicles using the
  accelerator pedal. Always stay alert and avoid using the ICC system when it is not recommended in this section.
- The vehicle-to-vehicle distance control mode uses a sensor located behind the front bumper of the vehicle to
  detect vehicles traveling ahead. The sensor generally detects the signals returned from the vehicle ahead.
  Therefore, if the sensor cannot detect the reflection from the vehicle ahead, the ICC system may not maintain the selected distance.
- The following are some conditions in which the sensor cannot detect the signals:
- When the snow or road spray from traveling vehicles reduces the sensor's visibility.
- When excessively heavy baggage is loaded in the rear seat or the luggage room of own vehicle.
- The ICC system is designed to automatically check the sensor's operation within the limitation of the system. When the front bumper area of the ICC sensor is covered with dirt or is obstructed, the system will automatically cancel. If the front bumper area of the ICC sensor is covered with ice, a transparent or translucent vinyl bag, etc., the ICC system may not detect them. In these instances, the vehicle-to-vehicle distance control mode may not cancel and may not be able to maintain the selected following distance from the vehicle ahead. Be sure to check and clean the front bumper area of the ICC sensor regularly.
- The ICC system does not control vehicle speed or warn the driver when own vehicle approaches stationary and slow moving vehicles. The driver must pay attention to vehicle operation to maintain proper distance from vehicles ahead when approaching toll gates or traffic congestion.

• The detection zone of the ICC sensor is limited. A vehicle ahead must be in the detection zone for the vehicle-to-vehicle distance detection mode to maintain the selected distance from the vehicle ahead. A vehicle ahead may move outside of the detection zone due to its position within the same lane of travel. Motorcycles may not be detected in the same lane ahead if they are traveling offset from the center line of the lane. A vehicle that is entering the lane ahead may not be detected until the vehicle has completely moved into the lane. If this occurs, the ICC system may warn the driver by blinking the system indicator and sounding the chime. The driver may have to manually control the proper distance away from vehicle traveling ahead.

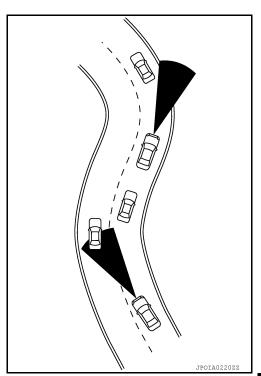

[ICC]

Α

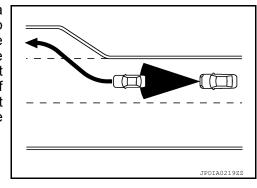

D

Е

• When driving on some roads, such as winding, hilly, curved, narrow roads, or roads which are under construction, the ICC sensor may detect vehicles in a different lane, or may temporarily not detect a vehicle traveling ahead. This may cause the ICC system to decelerate or accelerate the vehicle. The detection of vehicles may also be affected by vehicle operation (steering maneuver or traveling position in the lane, etc.) or vehicle condition. If this occurs, the ICC system may warn the driver by blinking the system indicator and sounding the chime unexpectedly. The driver will have to manually control the proper distance away from the vehicle traveling ahead.

• When driving on the freeway at a set speed and approaching a slower traveling vehicle ahead, the ICC will adjust the speed to maintain the distance, selected by the driver, from the vehicle ahead. If the vehicle ahead changes lanes or exits the freeway, the ICC system will accelerate and maintain the speed up to the set speed. Pay attention to the driving operation to maintain control of the vehicle as it accelerates to the set speed. The vehicle may not maintain the set speed on winding or hilly roads. If this occurs, the driver will have to manually control the vehicle speed.

Ν

M

CCS

Р

Revision: August 2014 CCS-193 2015 QX60 NAM

#### NORMAL OPERATING CONDITION

< SYMPTOM DIAGNOSIS >

- Normally when controlling the distance to a vehicle ahead, this system automatically accelerates or decelerates own vehicle according to the speed of the vehicle ahead. Depress the accelerator to properly accelerate own vehicle when acceleration is required for a lane change. Depress the brake pedal when deceleration is required to maintain a safe distance to the vehicle ahead due to its sudden braking or if a vehicle cuts in. Always stay alert when using the ICC system.
- The sensor sensitivity can be affected by vehicle operation (steering maneuver or driving position in the lane) or traffic or vehicle condition (for example, if a vehicle is being driven with some damage).

#### PRECAUTIONS FOR CONVENTIONAL (FIXED SPEED) CRUISE CONTROL MODE

- In the conventional (fixed speed) cruise control mode, a warning chime does not sound to warn the driver if own vehicle is too close to the vehicle ahead, as neither the presence of the vehicle ahead nor the vehicleto-vehicle distance is detected.
- Pay special attention to the distance between own vehicle and the vehicle ahead or a collision could occur.
- Always confirm the setting in the ICC system display.
- Never use the conventional (fixed speed) cruise control mode when driving under the following conditions:
- When it is not possible to keep the vehicle at a set speed.
- In heavy traffic or in traffic that varies in speed.
- On winding or hilly roads.
- On slippery roads (rain, snow, ice, etc.).
- In very windy areas.
- Doing so could cause a loss of vehicle control and result in an accident.
- To avoid accidentally engaging cruise control, make sure to the MAIN switch OFF when not using ICC sys-

#### **CAUTION:**

Always perform the ICC system action test to check that the ICC system operates normally after replacing the ICC sensor or repairing any ICC system malfunction. Refer to <a href="CCS-97">CCS-97</a>, "Work Procedure (Vehicle-To-Vehicle Distance Control Mode)".

#### **PRECAUTIONS**

< PRECAUTION > [ASCD]

## **PRECAUTION**

### **PRECAUTIONS**

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes dual stage front air bag modules. The SRS system may only deploy one front air bag, depending on the severity of a collision and whether the front passenger seat is occupied. Information necessary to service the system safely is included in the SR and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal
  injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag
  Module, see the SR section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

#### **WARNING:**

- When working near the Airbag Diagnosis Sensor Unit or other Airbag System sensors with the Ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the Ignition OFF, disconnect the battery and wait at least three minutes before performing any service.
