< PRECAUTION > PRECAUTION PRECAUTIONS

Precautions for Removing Battery Terminal

 When removing the 12V battery terminal, turn OFF the ignition switch and wait at least 30 seconds.
 NOTE:

ECU may be active for several tens of seconds after the ignition switch is turned OFF. If the battery terminal is removed before ECU stops, then a DTC detection error or ECU data corruption may occur.

• For vehicles with the 2-batteries, be sure to connect the main battery and the sub battery before turning ON the ignition switch. **NOTE:**

If the ignition switch is turned ON with any one of the terminals of main battery and sub battery disconnected, then DTC may be detected.

After installing the 12V battery, always check "Self Diagnosis Result" of all ECUs and erase DTC.
 NOTE:

The removal of 12V battery may cause a DTC detection error.

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.

Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

WARNING:

Always observe the following items for preventing accidental activation.

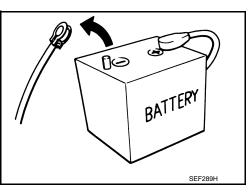

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see "SRS AIR BAG".
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

WARNING:

Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

PERIODIC MAINTENANCE ENGINE COOLANT

Inspection

LEVEL

- Check if the reservoir tank engine coolant level is within the "MIN" to "MAX" when the engine is cool.
 - A : MAX
 - B : MIN
- Adjust the engine coolant level if necessary.
 CAUTION:

Refill Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent in its quality mixed with water (distilled or demineralized). Refer to <u>MA-17, "FOR NORTH AMERICA : Fluids and Lubricants"</u>(For North America) or <u>MA-18, "FOR MEXICO :</u> <u>Fluids and Lubricants"</u>(For Mexixo).

LEAKAGE

• To check for leakage, apply pressure to the cooling system with the radiator cap tester and radiator cap tester adapter (commercial service tool) (A).

Testing pressure : Refer to CO-30, "Radiator".

WARNING:

Never remove radiator cap when engine is hot. Serious burns could occur from high-pressure engine coolant escaping from engine cooling system.

CAUTION:

Higher test pressure than specified may cause radiator damage.

NOTE:

In a case that engine coolant decreases, fill radiator with engine coolant.

· If anything is found, repair or replace damaged parts.

Draining

WARNING:

- Never change engine coolant when the engine is hot to avoid being scalded.
- Wrap a thick cloth around radiator cap and carefully remove radiator cap. First, turn radiator cap a quarter of a turn to release built-up pressure. Then turn radiator cap all the way.

CO-10

1. Connect drain hose.

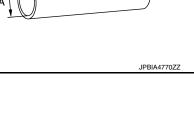

Revision: 2015 February

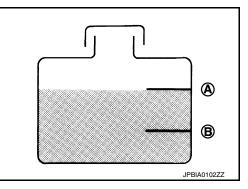

NOTE:

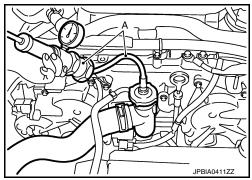

Use a general-purpose hose with the dimmensions shown in the figure.

A : φ 15 - 16 mm (0.59 - 0.63 in)

B : 145 mm (5.17 in)

INFOID:000000010582218

Κ

L

- 2. Open radiator drain plug (2) at the bottom of radiator, and then remove radiator cap.
 - 1 : Engine under cover
 - A : Radiator drain plug hole
 - : Vehicle front

When draining all of engine coolant in the system, open water drain plugs on cylinder block. Refer to EM-163, "NVH Troubleshooting - Engine Noise".

- 3. Remove reservoir tank if necessary, and drain engine coolant and clean reservoir tank before installing.
- 4. Check drained engine coolant for contaminants such as rust, corrosion or discoloration. If contaminated, flush the engine cooling system. Refer to <u>CO-13, "Flushing"</u>.
- 5. Disconnect drain hose.

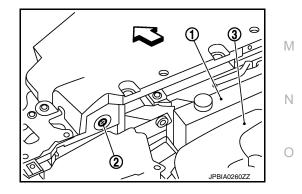

Refilling

CAUTION:

- Do not reuse O-rings.
- Do not put additive such as waterleak preventive, since it may cause cooling waterway clogging.
- When refilling use Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent in its quality mixed with water (distilled or demineralized). Refer to <u>MA-17</u>, <u>"FOR NORTH AMERICA : Fluids and Lubricants"</u>(For North America) or <u>MA-18</u>, <u>"FOR MEXICO : Fluids and Lubricants"</u>(For Mexico).
- 1. Remove engine cover. Refer to CO-16, "Exploded View"
- Install reservoir tank if removed, and radiator drain plug.
 CAUTION:
 Be sure to clean drain plug and install with new O-ring.
 - Tightening torque : Refer to CO-16, "Exploded View".

If water drain plugs on cylinder block are removed, close and tighten them. Refer to <u>EM-163</u>, <u>"NVH Troubleshooting - Engine Noise"</u>.

- 3. Check that each hose clamp has been firmly tightened.
- 4. Remove air relief plug (2) on radiator left side.
 - 1 : Reservoir tank
 - 3 : Engine cover

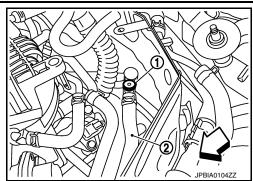

ENGINE COOLANT

< PERIODIC MAINTENANCE >

[VQ37VHR]

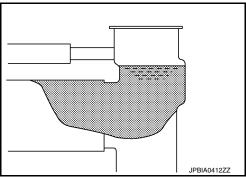

- 5. Remove air relief plug (1) on heater hose. (Models with air relief plug on heater hose)
 - 2 : Heater hose
 - \triangleleft : Vehicle front

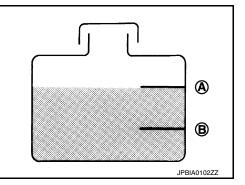

- 6. Fill radiator, and reservoir tank if removed, to specified level.
 - Pour engine coolant through engine coolant filler neck slowly of less than 2 ℓ (1-3/4 Imp qt) a minute to allow air in system to escape.

Engine coolant capacity (With reservoir tank at "MAX" level)

: Refer to <u>CO-30.</u> "Periodical Maintenance Spe <u>cification"</u>.

Reservoir tank engine coolant capacity (At "MAX" level) : Refer to <u>CO-30</u>, "Periodical Maintenance Spe <u>cification"</u>.

- A : MAX
- B : MIN
- When engine coolant overflows air relief hole on radiator, install air relief plug with new O-ring. CAUTION:

Do not reuse O-ring.

Tightening torque : Refer to <u>CO-16, "Exploded View"</u>.

- 8. Repeat step 6.
- 9. When engine coolant overflows air relief hole on heater hose, install air relief plug with new O-ring. Then refill radiator with engine coolant. (Models with air relief plug on heater hose) CAUTION:

Do not reuse O-ring.

● : 1.2 N·m (0.12 kg-m, 11 in-lb)

- 10. Install radiator cap.
- 11. Warm up engine until opening thermostat . Standard for warming-up time is approximately 10 minutes at 3,000 rpm.

• Check thermostat opening condition by touching radiator hose (lower) to see a flow of warm water. CAUTION:

Watch water temperature gauge so as not to overheat engine.

- 12. Stop the engine and cool down to less than approximately 50°C (122°F).
 - Cool down using fan to reduce the time.
 - If necessary, refill radiator up to filler neck with engine coolant.
- 13. Refill reservoir tank to "MAX" level line with engine coolant.

ENGINE COOLANT

< PERIODIC MAINTENANCE >

- 14. Repeat steps 10 through 13 two or more times with radiator cap installed until engine coolant level no longer drops.
- 15. Check cooling system for leakage with engine running.
- 16. Warm up the engine, and check for sound of engine coolant flow while running engine from idle up to 3,000 rpm with heater temperature controller set at several position between "COOL" and "WARM".
 Sound may be heard from the heater unit.
- 17. Repeat step 16 three times.
- 18. If sound is heard, bleed air from cooling system by repeating step 6, and steps from 10 to 17 until engine coolant level no longer drops.
- 19. Check that the reservoir tank cap is tightened.

Flushing

1. Install reservoir tank if removed, and radiator drain plug. CAUTION:

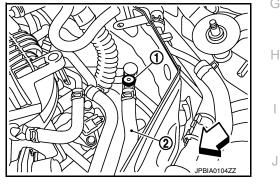

Be sure to clean drain plug and install with new O-ring.

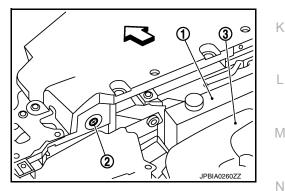

Tightening torque : Refer to CO-16, "Exploded View".

If water drain plugs on cylinder block are removed, close and tighten them. Refer to <u>EM-83, "Set-</u> ting".

- 2. Remove air relief plug (1) on heater hose. (Models with air relief plug on heater hose)
 - 2 : Heater hose

- 3. Remove air relief plug (2) on radiator.
 - 1 : Reservoir tank
 - 3 : Engine cover

4. Fill radiator until water spills from the air relief holes, then close air relief plugs. Fill radiator and reservoir tank with water and reinstall radiator cap.

Tightening torque : Refer to CO-16, "Exploded View".

- 5. Run the engine and warm it up to normal operating temperature.
- 6. Rev the engine two or three times under no-load.
- 7. Stop the engine and wait until it cools down.
- 8. Drain water from the system. Refer to CO-10, "Draining".
- 9. Repeat steps 1 through 8 until clear water begins to drain from radiator.
- 10. Check that the reservoir tank cap is tightened.

RADIATOR RADIATOR CAP

RADIATOR CAP : Inspection

- · Check valve seat of radiator cap.
- Check if valve seat (A) is swollen to the extent that the edge of the metal plunger (B) cannot be seen when watching it vertically from the top.
- Check if valve seat has no soil and damage.

- · Pull negative-pressure valve to open it, and check that it close Check that there is no dirt or damage on the valve seat of radiator - Check that there are no unusualness in the opening and closing
- · Check radiator cap relief pressure.

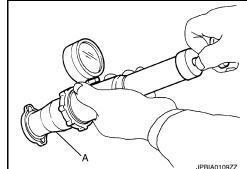

completely when released.

cap negative-pressure valve.

conditions of negative-pressure valve.

- When connecting radiator cap to the radiator cap tester (commercial service tool) and the radiator cap tester adapter (commercial service tool) (A), apply engine coolant to the cap seal surface.

> Standard and limit : Refer to CO-30, "Radiator".

· Replace radiator cap if there is an unusualness related to the above three. CAUTION:

When installing radiator cap, thoroughly wipe out the water outlet (front) filler neck to remove any waxy residue or foreign material. RADIATOR

RADIATOR : Inspection

Check radiator for mud or clogging. If necessary, clean radiator as follows:

- · Be careful not to bend or damage radiator fins.
- · When radiator is cleaned without removal, remove all surrounding parts such as radiator cooling fan assembly and horns. Then tape harness and connectors to prevent water from entering.
- 1. Apply water by hose to the back side of the radiator core vertically downward.
- 2. Apply water again to all radiator core surfaces once per minute.

< REMOVAL AND INSTALLATION > WATER PUMP

Exploded View

INFOID:000000010582230

[VQ37VHR]

A. Identify with yellow paint mark B. Apply engine coolant

Refer to <u>GI-4, "Components"</u> for symbols in the figure.

Removal and Installation

INFOID:000000010582231

CAUTION:

1.

4.

- When removing water pump assembly, be careful not to get engine coolant on drive belt.
- Water pump cannot be disassembled and should be replaced as a unit.
- After installing water pump, connect hose and clamp securely, then check for leakage using the radiator cap tester (commercial service tool) and the radiator cap tester adapter (commercial service tool).

REMOVAL

- 1. Remove engine cover. Refer to EM-27, "Exploded View".
- 2. Release the fuel pressure. Refer to FL-19, "VQ37VHR : Inspection".
- 3. Disconnect the battery cable from the negative terminal.
- 4. Remove air duct and air cleaner case assembly. Refer to EM-29, "Exploded View".
- 5. Separate engine harness, removing their brackets from front timing chain case.
- 6. Remove engine undercover with power tool.
- 7. Drain engine oil. Refer to <u>LU-10, "Draining"</u>. CAUTION:
 - Perform this step when the engine is cold.
 - Never spill engine oil on drive belt.
- 8. Drain engine coolant from radiator. Refer to <u>CO-10. "Draining"</u>. CAUTION:
 - Perform this step when the engine is cold.
 - Never spill engine coolant on drive belt.
- 9. Remove reservoir tank. Refer to CO-16, "Exploded View".
- 10. Remove cooling fan assembly. Refer to CO-20, "Exploded View".
- 11. Remove radiator hose (lower). Refer to CO-16, "Exploded View".
- 12. Remove front timing chain case.
- 13. Remove timing chain tensioner (primary) as follows:

Revision: 2015 February

WATER PUMP

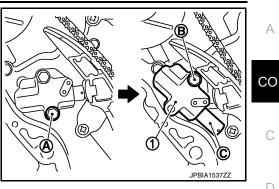

< REMOVAL AND INSTALLATION >

- Remove lower mounting bolt (A). a.
- b. Loosen upper mounting bolt (B) slowly, and then turn chain tensioner (primary) (1) on the upper mounting bolt so that plunger (C) is fully expanded.

NOTE:

Even if plunger is fully expanded, it is not dropped from the body of timing chain tensioner (primary).

c. Remove upper mounting bolt, and then remove timing chain tensioner (primary).

- 14. Remove water pump as follows:
- a. Remove three water pump mounting bolts. Secure a gap between water pump gear and timing chain, by turning crankshaft counterclockwise until timing chain looseness on water pump sprocket becomes maximum.
- b. Screw M8 bolts (A) [pitch: 1.25 mm (0.049 in) length: approximately 50 mm (1.97 in)] into water pumps upper and lower mounting bolt holes until they reach timing chain case. Then, alternately tighten each bolt for a half turn, and pull out water pump (1). CAUTION:
 - · Pull straight out while preventing vane from contacting socket in installation area.
 - · Remove water pump without causing sprocket to contact timing chain.
- Remove M8 bolts and O-rings from water pump. CAUTION:

Never disassemble water pump.

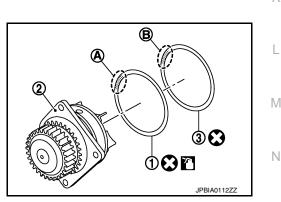

INSTALLATION CAUTION:

Do not reuse O-rings.

1. Install new O-rings to water pump. CAUTION:

Do not reuse O-rings.

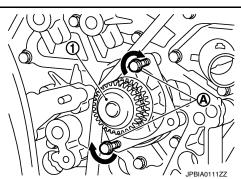

- Apply engine oil to O-ring (1) and engine coolant to O-ring (3) as shown in the figure.
 - 2 : Water pump
- Locate O-ring with yellow paint mark (A) to front side.
- Locate O-ring with light blue paint mark (B) to rear side.

2. Install water pump. CAUTION:

Never allow cylinder block to nip O-rings when installing water pump.

- Check timing chain and water pump sprocket are engaged.
- Insert water pump by tightening mounting bolts alternately and evenly.
- Install timing chain tensioner (primary) as follows:
- Turn crankshaft clockwise so that timing chain on the timing chain tensioner (primary) side is loose. a.

L

WATER PUMP

< REMOVAL AND INSTALLATION >

b. Pull plunger stopper tab (A) up (or turn lever downward) so as to remove plunger stopper tab from the ratchet of plunger (D).
 NOTE:

Plunger stopper tab and lever (C) are synchronized.

- c. Push plunger into the inside of tensioner body.
- d. Hold plunger in the fully compressed position by engaging plunger stopper tab with the tip of ratchet.
- e. To secure lever, insert stopper pin (E) through hole of lever into tensioner body hole (B).
 - The lever parts and the tab are synchronized. Therefore, the plunger will be secured under this condition.
 NOTE:

Figure shows the example of 1.2 mm (0.047 in) diameter thin screwdriver being used as the stopper pin.

- f. Install timing chain tensioner (primary).
 - Remove dust and foreign material completely from backside of timing chain tensioner (primary) and from installation area of rear timing chain case.
- g. Remove stopper pin.
- h. Check again that timing chain and water pump sprocket are engaged.
- 4. Install in the reverse order of removal for remaining parts.
 - After starting engine, let idle for three minutes, then rev engine up to 3,000 rpm under no load to purge air from the high-pressure chamber of chain tensioner. Engine may produce a rattling noise. This indicates that air still remains in the chamber and is not a matter of concern.

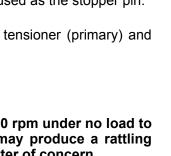

Inspection

INSPECTION AFTER REMOVAL

- Check for badly rusted or corroded water pump body assembly.
- · Check for rough operation due to excessive end play.
- If anything is found, replace water pump.

- Check that the reservoir tank cap is tightened.
- Check for leakage of engine coolant, using the radiator cap tester adapter (commercial service tool) and the radiator cap tester (commercial service tool). Refer to <u>CO-10, "Inspection"</u>.
- Start and warm up the engine. Visually check that there is no leakage of engine coolant.

 Refer to GI-4, "Components" for symbols in the figure.

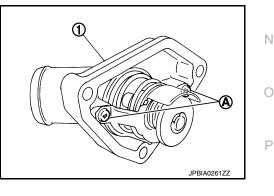

Removal and Installation

REMOVAL

- 1. Remove engine undercover with power tool.
- Drain engine coolant from radiator drain plug at the bottom of radiator. Refer to <u>CO-10, "Draining"</u>. CAUTION:
 - Perform this step when the engine is cold.
 - Never spill engine coolant on drive belt.
- 3. Remove engine cover. Refer to EM-27, "Exploded View".
- 4. Remove air duct and air cleaner case assembly (bank 2). Refer to EM-29, "Exploded View".
- 5. Remove reservoir tank. Refer to CO-16, "Exploded View".
- 6. Remove oil cooler water pipe mounting bolt, and move aside water pipe. Refer to <u>LU-15. "Exploded</u> <u>View"</u>.
- 7. Disconnect radiator hose (lower).
- 8. Disconnect intake valve timing control solenoid valve harness connector (bank 2), and remove intake valve timing control solenoid valve (bank 2).
- 9. Remove water inlet and thermostat assembly (1).
 - A : Do not loosen these screw.

CAUTION:

Never disassemble water inlet and thermostat assembly. Replace them as a unit, if necessary.

INSTALLATION

Note the following, and install in the reverse order of removal.

• Be careful not to spill engine coolant over engine room. Use rag to absorb engine coolant.

WATER INLET AND THERMOSTAT ASSEMBLY

< REMOVAL AND INSTALLATION >

Inspection

[VQ37VHR]

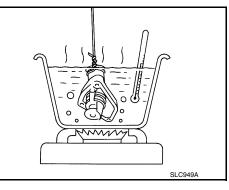

INFOID:000000010582235

INSPECTION AFTER REMOVAL

- 1. Check valve seating condition at ordinary room temperatures. It should seat tightly.
- 2. Check valve operation.

Thermostat (Standard) : Refer to CO-30, "Thermostat".

 If the malfunctioning condition, when valve seating at ordinary room temperature, or measured values are out of the standard, replace water inlet and thermostat assembly.

INSPECTION AFTER INSTALLATION

- · Check that the reservoir tank cap is tightened.
- Check for leakage of engine coolant, using the radiator cap tester adapter (commercial service tool) and the radiator cap tester (commercial service tool). Refer to <u>CO-10</u>, "Inspection".
- Start and warm up the engine. Visually check that there is no leakage of engine coolant.

< PRECAUTION > PRECAUTION

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT **PRF-TENSIONER**" INFOID:000000010582245

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

WARNING:

Always observe the following items for preventing accidental activation.

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see "SRS AIR BAG".
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

WARNING:

Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

Precautions for Removing Battery Terminal

• When removing the 12V battery terminal, turn OFF the ignition switch and wait at least 30 seconds. NOTE:

ECU may be active for several tens of seconds after the ignition switch is turned OFF. If the battery terminal is removed before ECU stops, then a DTC detection error or ECU data corruption may occur.

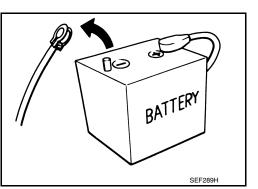

· For vehicles with the 2-batteries, be sure to connect the main battery and the sub battery before turning ON the ignition switch. NOTE:

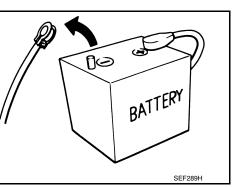

If the ignition switch is turned ON with any one of the terminals of main battery and sub battery disconnected, then DTC may be detected.

After installing the 12V battery, always check "Self Diagnosis Result" of all ECUs and erase DTC. NOTE:

The removal of 12V battery may cause a DTC detection error.

< PERIODIC MAINTENANCE >

PERIODIC MAINTENANCE ENGINE COOLANT

Inspection

LEVEL

- Check if the reservoir tank engine coolant level is within the "MIN" to "MAX" when the engine is cool.
 - A : MAX
 - B : MIN
- Adjust the engine coolant level if necessary.
 CAUTION:

Refill Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent in its quality mixed with water (distilled or demineralized). Refer to <u>MA-17</u>, <u>"FOR NORTH AMERICA : Fluids and Lubricants"</u>.

• Check that the reservoir tank cap is tightened.

LEAKAGE

• To check for leakage, apply pressure to the cooling system with the radiator cap tester and radiator cap tester adapter (commercial service tool) (A).

Testing pressure : Refer to CO-54, "Radiator".

WARNING:

Never remove radiator cap when engine is hot. Serious burns could occur from high-pressure engine coolant escaping from water inlet.

CAUTION:

Higher test pressure than specified may cause radiator damage.

NOTE:

In a case that engine coolant decreases, fill radiator with engine coolant.

• If anything is found, repair or replace damaged parts.

Draining

WARNING:

- · Never change engine coolant when the engine is hot to avoid being scalded.
- Wrap a thick cloth around radiator cap and carefully remove radiator cap. First, turn radiator cap a M quarter of a turn to release built-up pressure. Then turn radiator cap all the way.
- 1. Connect drain hose.

NOTE:

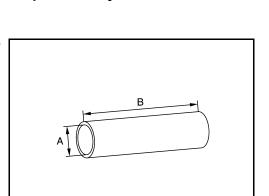

Use general-purpose hose with the dimmensions shown in the figure.

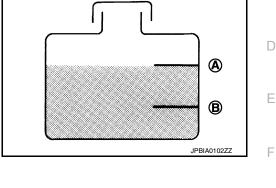

A : \$\operatorname{4} 15 - 16 mm (0.59 - 0.63 in)

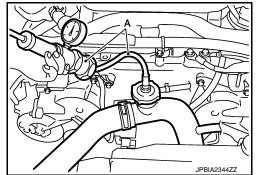

B : 145 mm (5.71 in)

- 2. Open radiator drain plug (2) at the bottom of radiator, and then remove radiator cap.
 - 1 : Engine under cover
 - A : Radiator drain plug hole

When draining all of engine coolant in the system, open water drain plug on cylinder block. Refer to <u>EM-213, "Setting"</u>.

- 3. Remove reservoir tank if necessary, and drain engine coolant and clean reservoir tank before installing.
- 4. Check drained engine coolant for contaminants such as rust, corrosion or discoloration. If contaminated, flush the engine cooling system. Refer to <u>CO-40</u>, "Flushing".
- 5. Disconnect drain hose.

Refilling

INFOID:000000010582249

CAUTION:

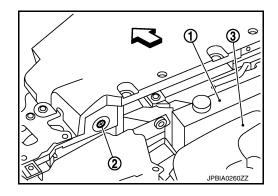

- Do not reuse O-rings.
- Do not put additive such as waterleak preventive, since it may cause cooling waterway clogging.
- Refill Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent in its quality mixed with water (distilled or demineralized). Refer to <u>MA-17</u>, "FOR NORTH AMERICA : Fluids and Lubricants".
- 1. Remove engine cover and engine room cover (LH). Refer to EM-184, "Exploded View".
- 2. Install reservoir tank if removed, and radiator drain plug. CAUTION:

Be sure to clean drain plug and install with new O-ring.

● : 1.2 N·m (0.12 kg-m, 11 in-lb)

If water drain plug on cylinder block is removed, close and tighten it. Refer to <u>EM-267, "Disassem-bly and Assembly"</u>.

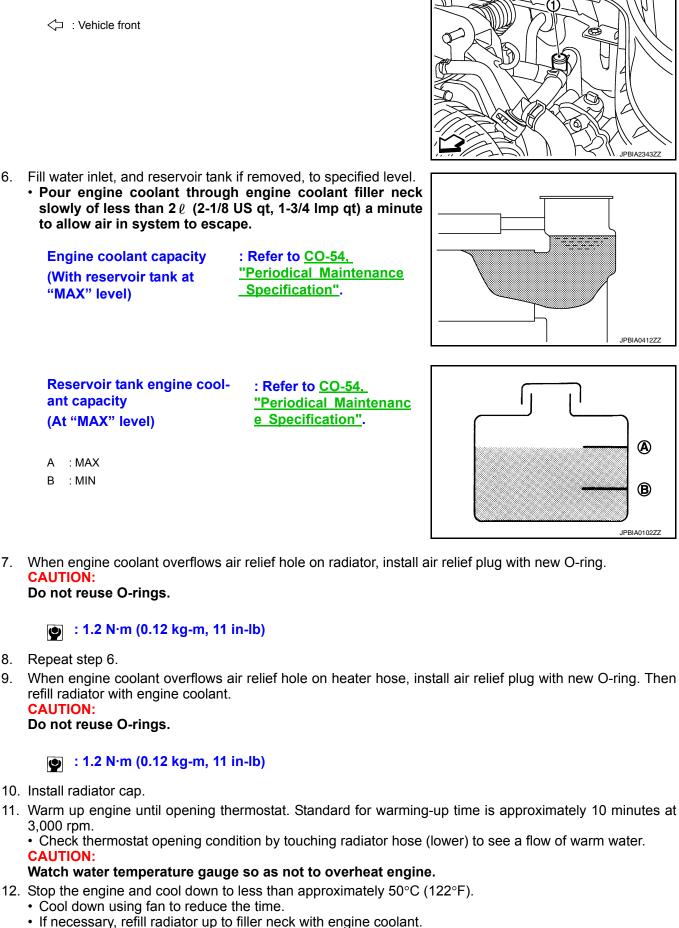

- 3. Check that each hose clamp is firmly tightened.
- 4. Remove air relief plug (2) on radiator left side.
 - 1 : Reservoir tank
 - 3 : Water inlet

ENGINE COOLANT

< PERIODIC MAINTENANCE >

- 14. Repeat steps 10 through 13 two or more times with radiator cap installed until engine coolant level no longer drops.
- 15. Check cooling system for leakage with engine running.
- 16. Warm up the engine, and check for sound of engine coolant flow while running engine from idle up to 3,000 rpm with heater temperature controller set at several position between "COOL" and "WARM".
 - Sound may be heard from the heater unit.
- 17. Repeat step 16 three times.
- 18. If sound is heard, bleed air from cooling system by repeating step 6, and steps from 10 to 17 until engine coolant level no longer drops.
- 19. Check that the reservoir tank cap is tightened.

Flushing

INFOID:000000010582250

 Install reservoir tank if removed, and radiator drain plug. CAUTION: Be sure to clean drain plug and install with new O-ring.

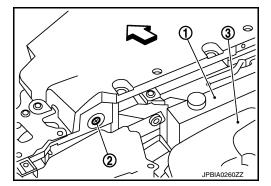

● : 1.2 N·m (0.12 kg-m, 11 in-lb)

If water drain plug on cylinder block is removed, close and tighten it. Refer to <u>EM-267, "Disassem-bly and Assembly"</u>.

- 2. Remove air relief plug (1) on heater hose.
 - <□ : Vehicle front

- 3. Remove air relief plug (2) on radiator.
 - 1 : Reservoir tank
 - 3 : Water inlet

4. Fill water inlet with water until water spills from the air relief holes, then close air relief plugs. Fill water inlet and reservoir tank with water and reinstall radiator cap.

● : 1.2 N·m (0.12 kg-m, 11 in-lb)

- 5. Run the engine and warm it up to normal operating temperature.
- 6. Rev the engine two or three times under no-load.
- 7. Stop the engine and wait until it cools down.
- 8. Drain water from the system. Refer to CO-37, "Draining".
- 9. Repeat steps 1 through 8 until clear water begins to drain from radiator.
- 10. Check that the reservoir tank cap is tightened.

Revision: 2015 February

< PERIODIC MAINTENANCE >

RADIATOR RADIATOR CAP

RADIATOR CAP : Inspection

- Check valve seat of radiator cap.
- Check if valve seat (A) is swollen to the extent that the edge of the metal plunger (B) cannot be seen when watching it vertically from the top.
- Check if valve seat has no soil and damage.

- Pull negative-pressure valve to open it, and check that it close completely when released.
- Check that there is no dirt or damage on the valve seat of radiator cap negative-pressure valve.
- Check that there are no unusualness in the opening and closing conditions of negative-pressure valve.

· Replace radiator cap if there is an unusualness related to the above three.

CAUTION:

When installing radiator cap, thoroughly wipe out the water inlet filler neck to remove any waxy residue or foreign material. RADIATOR

RADIATOR : Inspection

· Check radiator cap relief pressure.

Standard and limit

Check radiator for mud or clogging. If necessary, clean radiator as per the following:

- · Be careful not to bend or damage radiator fins.
- · When radiator is cleaned without removal, remove all surrounding parts such as radiator cooling fan assembly and horns. Then tape harness and connectors to prevent water from entering.
- 1. Apply water by hose to the back side of the radiator core vertically downward.
- Apply water again to all radiator core surfaces once per minute. 2.

< REMOVAL AND INSTALLATION >

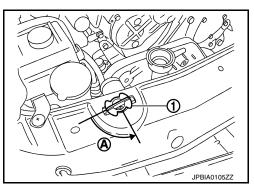

Never remove radiator cap when engine is hot. Serious burns could occur from high-pressure engine coolant escaping from water inlet. Wrap a thick cloth around the cap. Slowly turn it a quarter of a turn to release built-up pressure. Carefully remove radiator cap by turning it all the way. NOTE:

When removing components such as hoses, tubes/lines, etc., cap or plug openings to prevent fluid from spilling.

- 1. Remove the following parts:
 - Engine under cover, using a power tool.
 - Engine cover and engine room cover (RH and LH): Refer to EM-184, "Exploded View".
 - Air cleaner case: Refer to <u>EM-187, "Exploded View"</u>.
 - Air duct (inlet): Refer to <u>EM-187, "Exploded View"</u>.
 - Hood lock stay assembly and horn: Refer to <u>DLK-337, "Exploded View"</u> and <u>HRN-7, "Exploded View"</u>.
- 2. Remove condenser. Refer to HA-106, "Exploded View".
- 3. Drain engine coolant from radiator. Refer to <u>CO-37, "Draining"</u>. **CAUTION:**
 - Perform this step when the engine is cold.
 - Never spill engine coolant on drive belts.
- 4. Disconnect A/T fluid cooler hoses from radiator.Install blind plug to avoid leakage of A/T fluid.
- 5. Remove radiator hoses (upper and lower) and reservoir tank hose. CAUTION:
 - Be careful not to allow engine coolant to contact drive belts.
 - Never loosen radiator water inlet pipe mounting screw (A). If loosened, replace radiator (1).
 - 2 : Radiator water inlet pipe

- 6. Rotate two radiator upper mount brackets 90 degrees in direction as shown in the figure, and remove them.
 - 1 : Radiator upper mount bracket
 - A : Turn 90° counterclockwise

 Remove radiator as per the following: CAUTION: Be careful not to damage radiator core.

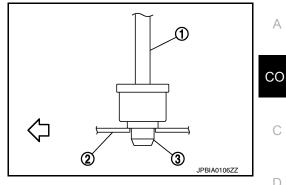

< REMOVAL AND INSTALLATION >

Lift up and pull the radiator (1) forward, and then remove the a. mounting rubber (lower) (3) from the radiator core support (2).

Remove radiator (1) from front of radiator core support (2).

INSTALLATION

 \triangleleft

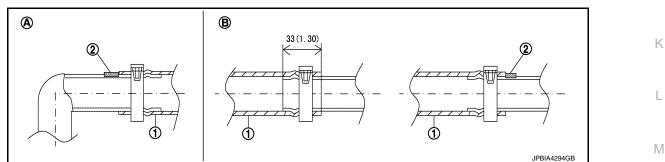

Note the following, and install in the reverse order of removal. CAUTION:

- Do not reuse O-rings.
- Use genuine mounting bolts for the cooling fan assembly and strictly observe the tightening torque. (Breakage prevention for radiator)

NOTE:

b.

Insert the radiator hose (1) all the way to the stopper (2) or by 33 mm (1.30 in) (hose without a stopper).

Unit mm (in)

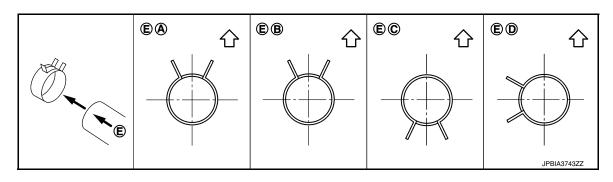

A. Radiator side

B. Engine side

For the orientation of the hose clamp pawl, refer to the figure.

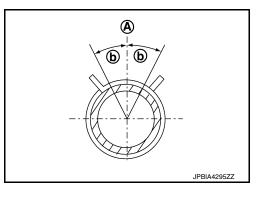

Radiator hose	Hose end	Paint mark	Position of hose clamp*	(
Radiator hose (upper)	Radiator side	Upper	А	_
	Engine side	Upper	В	F
Radiator hose (lower)	Radiator side	Lower	С	_
	Engine side	Front side	D	_

*Refer to the illustrations for the specific position each hose clamp tab.

√ Vehicle upper

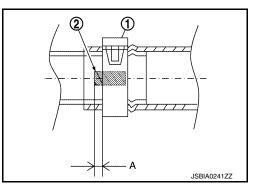

- The angle (b) created by the hose clamp pawl and the specified line (A) must be within $\pm 30^\circ$ as shown in the figure.

• To install hose clamps (1), check that the dimension (A) from the end of the paint mark (2) on the radiator hose to the hose clamp is within the reference value.

Dimension "A"

: (-1) - (+1) mm (-0.04) - (+0.04) in

Inspection

INFOID:000000010582255

INSPECTION AFTER INSTALLATION

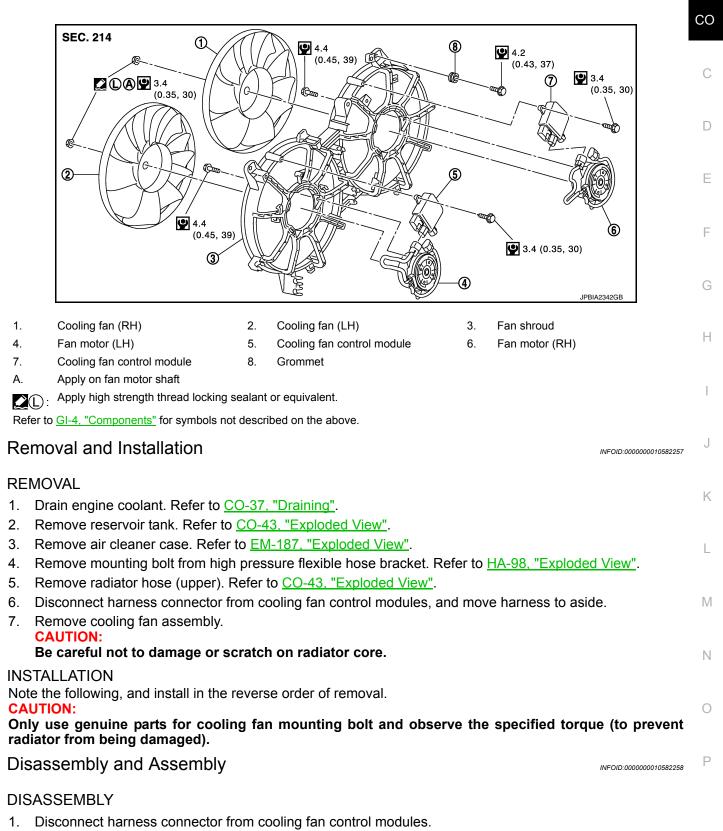

- Check for leakage of engine coolant using the radiator cap tester adapter (commercial service tool) and the radiator cap tester (commercial service tool). Refer to <u>CO-37. "Inspection"</u>.
- Start and warm up the engine. Visually check that there is no leakage of engine coolant and A/T fluid.

< REMOVAL AND INSTALLATION >

COOLING FAN

Exploded View

INFOID:000000010582256

 Remove cooling fan control modules from cooling fan assembly. CAUTION: Handle carefully to avoid dropping and impact. А

COOLING FAN

< REMOVAL AND INSTALLATION >

3. Remove cooling fan mounting nuts, and then remove the cooling fan (RH and LH).

4. Remove fan motors (RH and LH).

ASSEMBLY

Note the following, and assemble in the reverse order of disassembly. **CAUTION:**

RH and LH cooling fans are different. Be careful not to misassemble them.

• Install each fan in the following position.

Right side	: 9 blades
Left side	: 11 blades

• Secure the harness tightly to the fan shroud to prevent the fan rotation area from being slack.

Inspection

INFOID:000000010582259

INSPECTION AFTER REMOVAL

Check that fan motors operate normally.

NOTE:

Cooling fans are controlled by cooling fan control module. For details, refer to EC-1198, "System Description".

INSPECTION AFTER DISASSEMBLY

Cooling Fan

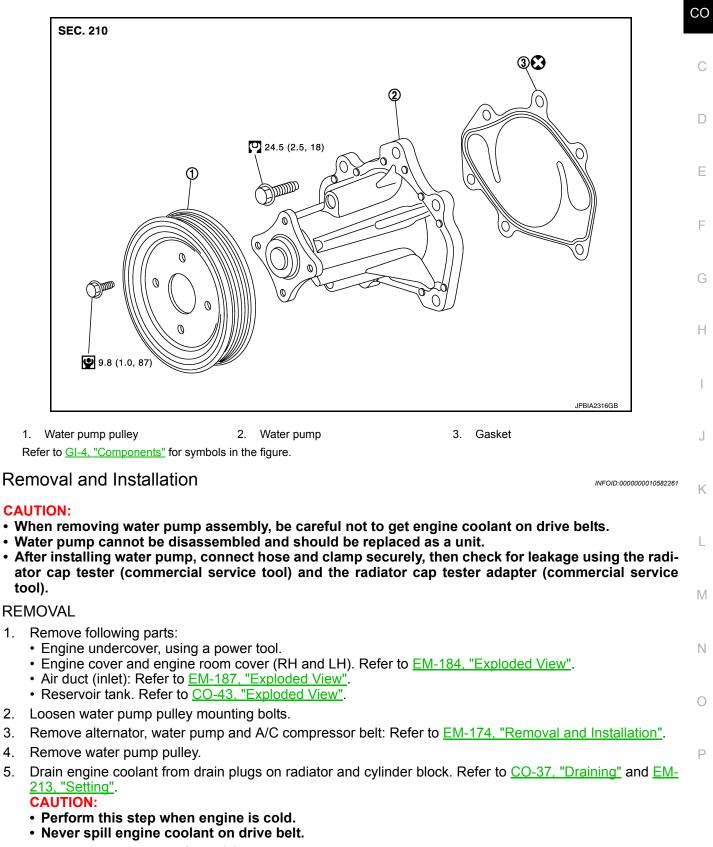

Inspect cooling fan for crack or unusual bend.

• If anything is found, replace cooling fan.

< REMOVAL AND INSTALLATION > WATER PUMP

Exploded View

INFOID:000000010582260

6. Remove water pump. Refer to <u>CO-49, "Exploded View"</u>.
• Engine coolant will leak from cylinder block, so have a receptacle ready under vehicle.

CO-49

А

WATER PUMP

< REMOVAL AND INSTALLATION >

CAUTION:

- Handle the water pump vane so that it does not contact any other parts.
- Never disassemble water pump.

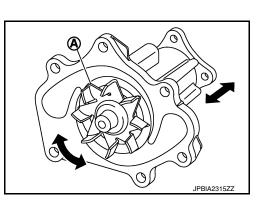

INSTALLATION

Install in the reverse order of removal.

Inspection

INSPECTION AFTER REMOVAL

- Visually check that there is no significant dirt or rusting on water pump body and vane (A).
- Check there is no slack in vane shaft, and that it turns smoothly when rotated by hand.
- If anything is found, replace water pump.

INSPECTION AFTER INSTALLATION

- · Check that the reservoir tank cap is tightened.
- Check for leakage of engine coolant using the radiator cap tester adapter (commercial service tool) and the radiator cap tester (commercial service tool). Refer to <u>CO-37. "Inspection"</u>.
- Start and warm up the engine. Visually check that there is no leakage of engine coolant.

< REMOVAL AND INSTALLATION >

- 2. Remove air duct (inlet). Refer to EM-187, "Exploded View".
- 3. Remove reservoir tank. Refer to <u>CO-43</u>, "Exploded View".
- 4. Remove engine undercover with a power tool.
- 5. Drain engine coolant from drain plugs on radiator and cylinder block. Refer to <u>CO-37, "Draining"</u> and <u>EM-213, "Setting"</u>.
 - CAUTION:
 - Perform this step when engine is cold.
 - Never spill engine coolant on drive belts.
- 6. Disconnect radiator hose (upper and lower). Refer to CO-43, "Exploded View".
- 7. Remove intake manifold. Refer to EM-189, "Exploded View".
- 8. Remove water suction pipe and water suction hose.
- 9. Remove water inlet and thermostat.
- 10. Remove water connector, heater pipes and heater hoses.
- 11. Remove thermostat housing.

INSTALLATION

Note the following, and install in the reverse order of removal.

CAUTION:

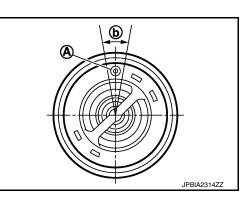

- Do not reuse O-rings.
- Be careful not to spill engine coolant over engine room. Use rag to absorb engine coolant.

(1)

Thermostat

• Install thermostat with the whole circumference of each flange part (A) fit securely inside rubber ring (1).

Water Connector and Heater Pipe

• First apply a neutral detergent to O-rings, then quickly insert the insertion parts of the water connector and heater pipe into the installation holes.

Inspection

INSPECTION AFTER REMOVAL

• Check that valve in thermostat is completely closing at normal temperature.

WATER INLET AND THERMOSTAT ASSEMBLY

< REMOVAL AND INSTALLATION >

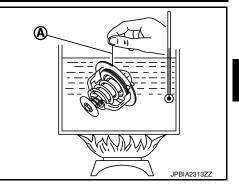

- Place a thread (A) so that it is caught in the valve of the thermostat. Immerse fully in a container filled with water. Heat while stirring.
- The valve opening temperature is the temperature at which the valve opens and falls from the thread.
- After checking the maximum valve lift, lower the water temperature and check the valve closing temperature.

Thermostat (Standard) : Refer to CO-54, "Thermostat".

• If the malfunctioning condition, when valve seating at ordinary room temperature, or measured values are out of the standard, replace thermostat.

INSPECTION AFTER INSTALLATION

- · Check that the reservoir tank cap is tightened.
- Check for leakage of engine coolant using the radiator cap tester adapter (commercial service tool) and the radiator cap tester (commercial service tool). Refer to <u>CO-37</u>, "Inspection".
- Start and warm up the engine. Visually check that there is no leakage of engine coolant.

SERVICE DATA AND SPECIFICATIONS (SDS)

Periodical Maintenance Specification

ENGINE COOLANT CAPACITY (APPROXIMATELY)

Unit: ℓ (US qt, Imp qt)

INFOID:000000010582266

Engine coolant capacity [With reservoir tank ("MAX" level)]	11 (11-5/8, 9-5/8)
Reservoir tank engine coolant capacity (At "MAX" level)	0.8 (7/8, 3/4)

Radiator

INFOID:000000010582267 Unit: kPa (kg/cm², psi)

Cap relief pressure	Standard	122.3 - 151.7 (1.2 - 1.5, 18 - 22)	
	Limit	107 (1.1, 16)	
Leakage testing pressure		157 (1.6, 23)	

Thermostat

INFOID:000000010582268

Thermostat	Standard	
Valve opening temperature	82°C (180°F)	
Maximum valve lift	10.0 mm/95°C (0.394 in/203°F)	
Valve closing temperature	77°C (171°F)
