# PRECAUTION PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

#### WARNING:

Always observe the following items for preventing accidental activation.

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see "SRS AIR BAG".
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

#### PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

#### WARNING:

Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing HAC serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

INFOID:000000009010057 Е

	Component	Description
Ambient sensor		Ambient sensor measures ambient air temperature. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.
AV control unit		AV control unit transmits front A/C control operation signal to A/C auto amp. via CAN communication line.
A/C auto amp.		A/C auto amp. controls front automatic air conditioning system by inputting and calculating signals from each sensor and each switch. A/C auto amp. has self-diagnosis function. Diagnosis of front automatic air conditioning system can be performed quickly.
BCM		BCM transmits key ID signal to A/C auto amp. via CAN communication line.
	Front blower motor	Refer to <u>HAC-13</u> .
Blower unit	Intake door motor	The LCU (Local Control Unit) is installed to intake door motor so as to per- form the multiplex communication control (LIN). Refer to <u>HAC-19, "FRONT AUTOMATIC AIR CONDITIONING SYSTEM :</u> <u>Door Control"</u> .
Combination met	ier	Combination meter transmits vehicle speed signal to A/C auto amp. via CAN communication line.
ECM		ECM controls compressor according to status of engine and refrigerant. ECM transmits engine coolant temperature signal to A/C auto amp. via CAN communication line.
Engine coolant te	emperature sensor	Engine coolant temperature sensor measures engine coolant temperature. The sensor uses a thermistor which is sensitive to the change in tempera- ture. The electrical resistance of the thermistor decreases as temperature increases.
Front display		Front display indicates operation status of front automatic air conditioning system.
Front in-vehicle s	sensor	Front in-vehicle sensor measures temperature of intake air that flows through aspirator to passenger room. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

## < SYSTEM DESCRIPTION >

## [AUTOMATIC AIR CONDITIONING]

(	Component	Description		
	Aspirator	Refer to <u>HAC-12</u> .		
	Front air mix door motor (Driver side)	The LCU (Local Control Unit) is installed to front air mix door motor (driver side) so as to perform the multiplex communication control (LIN). Refer to <u>HAC-19</u> , "FRONT AUTOMATIC AIR CONDITIONING SYSTEM : <u>Door Control"</u> .		
	Front air mix door motor (Pas- senger side)	The LCU (Local Control Unit) is installed to front air mix door motor (pas- senger side) so as to perform the multiplex communication control (LIN). Refer to <u>HAC-19</u> , "FRONT AUTOMATIC AIR CONDITIONING SYSTEM : <u>Door Control"</u> .		
Heater & cooling unit assembly	Front mode door motor	The LCU (Local Control Unit) is installed to front mode door motor so as to perform the multiplex communication control (LIN). Refer to <u>HAC-19</u> , "FRONT AUTOMATIC AIR CONDITIONING SYSTEM : <u>Door Control"</u> .		
	Intake sensor	Intake sensor measures temperature of front evaporator fin temperature. The sensor uses a thermistor which is sensitive to the change in tempera- ture. The electrical resistance of the thermistor decreases as temperature increases.		
	Upper ventilator door motor	The LCU (Local Control Unit) is installed to upper ventilator door motor so as to perform the multiplex communication control (LIN). Refer to <u>HAC-19</u> , "FRONT AUTOMATIC AIR CONDITIONING SYSTEM : <u>Door Control</u> ".		
IPDM E/R		A/C relay is integrated in IPDM E/R. IPDM E/R operates A/C relay when A/ C compressor request signal is received from ECM via CAN communica- tion line.		
Magnet clutch		The magnet clutch is the device that drives the compressor with the signal from IPDM E/R. Compressor is driven by the magnet clutch which is magnetized by electric power supply. IPDM controls magnet clutch by turning the built in A/C relay to ON $\Leftrightarrow$ OFF according to ECM request.		
Preset switch		Preset switch is integrated with front A/C control and AV operation switch. Front A/C control operation signal is transmitted from preset switch to AV control unit via communication line.		
Refrigerant pressure s	ensor	Refer to <u>HAC-13</u> .		
Sunload sensor		Sunload sensor measures sunload amount. This sensor is a dual system so that sunload for driver side and passenger side are measured separate- ly. This sensor converts sunload amount to voltage signal by photodiode and transmits to A/C auto amp.

INFOID:000000009010061

Component		Description
AV control unit		AV control unit transmits A/C switch operation signal to A/C auto amp. via CAN communication line.
A/C auto amp.		A/C auto amp. controls ACCS (advanced climate control system) by input- ting and calculating signals from each sensor and each switch. A/C auto amp. has self-diagnosis function. Diagnosis of ACCS (advanced climate control system) can be performed quickly.
BCM		BCM transmits key ID signal to A/C auto amp. via CAN communication line.
Blower unit	Intake door motor	The LCU (Local Control Unit) is installed to intake door motor so as to per- form the multiplex communication control (LIN). Refer to <u>HAC-19</u> , "FRONT AUTOMATIC AIR CONDITIONING SYSTEM : <u>Door Control</u> ".
Exhaust gas / outside o	dor detecting sensor	Exhaust gas / outside odor detecting sensor measures unpleasant odor out- side of passenger room. In addition to previous exhaust gas detection func- tion, unpleasant odor in ambient atmosphere is measured.
Front display		Front display indicates operation status of ACCS (advanced climate control system).
Heater & cooling unit as- sembly		lonizer generates an approximately equal proportional amount of positive and negative ions in the air.
Preset switch		Preset switch is integrated with front A/C control and AV operation switch. Front A/C control operation signal is transmitted from preset switch to AV control unit via communication line.

## Aspirator

INFOID:000000009010062

The aspirator generates the vacuum by the air blown from the heater & cooling unit and draws the air of the passenger room to the front in-vehicle sensor area via the aspirator duct.

## < SYSTEM DESCRIPTION >

## Front Blower Motor

The front blower motor utilizes a brush-less motor with a rotating magnet. Quietness is improved comparing to a conventional motor (brush motor) that rotates coil while brush functions as contact points.

## **Rear Blower Motor**

The rear blower motor utilizes a brush-less motor with a rotating magnet. Quietness is improved comparing to a conventional motor (brush motor) that rotates coil while brush functions as contact points.

**Refrigerant Pressure Sensor** 

Description

INFOID:000000009010065

А

INFOID:000000009010063

#### < SYSTEM DESCRIPTION >

#### [AUTOMATIC AIR CONDITIONING]

Refrigerant pressure sensor is installed to upper portion of liquid tank. The refrigerant pressure sensor converts high-pressure side refrigerant pressure into voltage and outputs it to ECM. ECM operates cooling system protection and idle speed control according to voltage value that is input.

#### Structure and operation

The refrigerant pressure sensor is a capacitance type sensor. It consists of a pressure detection area and a signal processing area. The pressure detection area, which is a variable capacity condenser, changes internal static capacitance according to pressure force. The signal processing area detects the static capacitance of the pressure detection area, converts the static capacitance into a voltage value, and transmits the voltage value to ECM.

 Front automatic air conditioning system is controlled by each function of A/C auto amp., ECM, IPDM E/R and BCM.

Control by A/C auto amp.

- HAC-16, "FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Air Flow Control"
- HAC-17, "FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Air Inlet Control"

#### < SYSTEM DESCRIPTION >

- HAC-18. "FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Air Outlet Control"
- HAC-18, "FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Compressor Control"
   HAC-19, "FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Door Control"
- HAC-19, FRONT AUTOMATIC AIR CONDITIONING SYSTEM: Door Control
   HAC-22, "FRONT AUTOMATIC AIR CONDITIONING SYSTEM: Temperature Control"
- HAC-22, "FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Intelligent Key Interlock Function"
- Correction for input value of each sensor

#### Ambient sensor (setting temperature correction)

 A/C auto amp. controls passenger room temperature so that the optimum level always matches the temperature level that passenger may feel. Correction is applied to the target temperature that is set using temperature control dial, according to ambient temperature detected by ambient sensor.

Front in-vehicle sensor [in-vehicle temperature (front side) correction]

• Passenger room temperature (front side) detected by front in-vehicle sensor is corrected for each front air conditioning control (driver side and passenger side)

Intake sensor (intake temperature correction)

 A/C auto amp. performs correction to change recognition intake temperature of A/C auto amp. quickly when difference is large between recognition intake temperature and intake temperature detected by intake temperature sensor. The correction is performed to change recognition intake temperature slowly when difference is small.

Sunload sensor (sunload amount correction)

- Sunload amount detected by sunload sensor is corrected for each air conditioning control (driver side and passenger side).
- A/C auto amp. performs correction to change recognition sunload amount of A/C auto amp. slowly when sunload amount changes quickly, for example when entering or exiting a tunnel.

Control by ECM

- Cooling fan control Refer to <u>EC-48, "COOLING FAN CONTROL : System Description"</u>.
   Air conditioning cut control.
- Refer to EC-55, "AIR CONDITIONING CUT CONTROL : System Description".

Control by IPDM E/R

- Relay control
- Refer to <u>PCS-5, "RELAY CONTROL SYSTEM : System Description"</u>.
- Cooling fan control Refer to <u>PCS-8, "POWER CONTROL SYSTEM : System Description"</u>.

Control by BCM

- Intelligent key interlock function

Refer to <u>DLK-18, "INTELLIGENT KEY SYSTEM : System Description"</u>.

• Front A/C control (preset switch) transmits the commands for front automatic air conditioning system operation to AV control unit via communication line, then AV control unit transmits the commands to A/C auto amp. via CAN communication. A/C auto amp. transmits each indication information to AV control unit via CAN communication. AV control unit displays each indication information that is received.

FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Air Flow Control

INFOID:000000009010068

#### DESCRIPTION

- A/C auto amp. changes duty ratio of blower motor drive signal and controls air flow continuously. When air flow is increased, duty ratio of front blower motor control signal gradually increases to prevent a sudden increase in air flow.
- In addition to manual control and automatic control, air flow control is consist of starting fan speed control, low coolant temperature starting control, high in-vehicle temperature starting control and fan speed control at door motor operation

#### AUTOMATIC AIR FLOW CONTROL

- A/C auto amp. decides target air flow depending on target front air mix door opening angle.
- A/C auto amp. changes duty ratio of front blower motor control signal and controls the air flow continuously so that air flow matches to target air flow.

## < SYSTEM DESCRIPTION >

When air outlet is VENT or B/L, the minimum air flow is changed depending on sunload.

## **[AUTOMATIC AIR CONDITIONING]**

#### STARTING AIR FLOW CONTROL

- When front blower motor is activated. A/C auto amp. gradually increases duty ratio of front blower motor control signal to prevent a sudden increase in discharge air flow.
- It takes approximately 8 seconds for air flow to reach HI from LOW.

## LOW COOLANT TEMPERATURE STARTING CONTROL

If the engine coolant temperature is 56°C (133°F) or less, to prevent a cold discharged air flow, A/C auto amp. suspends front blower motor activation for the maximum 150 seconds depending on target front air mix door opening angle. After this, front blower motor control signal is increased gradually, and front blower motor is activated.

#### HIGH IN-VEHICLE TEMPERATURE STARTING CONTROL

When front evaporator fin temperature is high [intake sensor value is 35°C (95°F) or more], to prevent a hot discharged air flow, A/C auto amp. suspends front blower motor activation for approximately 3 seconds so that front evaporator is cooled by refrigerant.

#### FAN SPEED CONTROL AT DOOR MOTOR OPERATION

When front mode door motor is activated while air flow is more than the specified value, A/C auto amp. reduces temporarily fan speed so that front mode door moves smoothly.

#### FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Air Inlet Control

The intake door is automatically controlled by the temperature setting, ambient temperature, in-vehicle temperature (front side), intake temperature, amount of sunload and ON/OFF operation of the compressor.

Intake door automatic control selects FRE, 20% FRE, or REC depending on a target front air mix door opening angle, based on invehicle temperature (front side), ambient temperature, and sunload.

Ν

Ρ

## < SYSTEM DESCRIPTION >

## [AUTOMATIC AIR CONDITIONING]

## FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Air Outlet Control

- While air outlet is in automatic control, A/C auto amp. selects the front mode door position depending on a target front air mix door angle and outlet air temperature calculated from sunload.
- If ambient temperature is excessively low, D/F is selected to prevent windshield fogging when air outlet is set to FOOT.

# FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Compressor Control

INFOID:000000009010071

## DESCRIPTION

- When the compressor activation condition is satisfied while blower motor is activated, A/C auto amp. transmits A/C ON signal and blower fan ON signal to ECM via CAN communication.
- ECM judges that the compressor can be activated depending on each sensors state (refrigerant pressure sensor signal, and others). And transmits A/C compressor request signal to IPDM E/R via CAN communication.
- IPDM E/R turns A/C relay ON and activates the compressor depending on request from ECM.

## COMPRESSOR PROTECTION CONTROL AT PRESSURE MALFUNCTION

When high-pressure side value that is detected by refrigerant pressure sensor is as per the following state, ECM requests IPDM E/R to turn A/C relay OFF and stops the compressor.

- 3.12 MPa (31.82 kg/cm<sup>2</sup>, 452.4 psi) or more (When the engine speed is less than 1,500 rpm)
- 2.74 MPa (27.95 kg/cm<sup>2</sup>, 397.3 psi) or more (When the engine speed is 1,500 rpm or more)
- 0.14 MPa (1.43 kg/cm<sup>2</sup>, 20.3 psi) or less

#### COMPRESSOR OIL CIRCULATION CONTROL

When the engine starts while the engine coolant temperature is 56°C (133°F) or less, ECM activates the compressor for approximately 6 seconds and circulates the compressor lubricant once.

#### LOW TEMPERATURE PROTECTION CONTROL

- When intake sensor detects that front evaporator fin temperature is 2.5°C (37°F) or less, A/C auto amp. requests ECM to turn compressor OFF, and stops the compressor.
- When the front evaporator fin temperature returns to 5.0°C (41°F) or more, the compressor is activated.

## OPERATING RATE CONTROL

When set temperature is other than fully cold or air outlet is "VENT", "B/L" or "FOOT" A/C auto amp. controls the compressor activation depending on ambient temperature.

#### AIR CONDITIONING CUT CONTROL

When set engine is running is excessively high load condition, ECM requests IPDM E/R to turn A/C relay OFF, and stops the compressor. Refer to <u>EC-55. "AIR CONDITIONING CUT CONTROL : System Description"</u> for details.

## < SYSTEM DESCRIPTION >

## [AUTOMATIC AIR CONDITIONING]

## FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Door Control

INFOID:000000009010072

А

## DOOR MOTOR CONTROL

- LCU (Local Control Unit) is built in to each door motor. And detects door position by PBR (Potentio Balance (Resistor).
- A/C auto amp. communicates with each LCU via communication line. And receives each door position feed back signal from each LCU.
- Each LČU controls each door to the appropriate position depending on the control signal from A/C auto amp. when the door movement is complete, transmits the signal of door movement completion to A/C auto amp.

#### SWITCHES AND THEIR CONTROL FUNCTION

## FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Temperature Control

INFOID:000000009010073

- When ignition switch is in the ON position, A/C auto amp. always automatically controls temperature regardless of front air conditioning operational state.
- A/C auto amp. calculates the target front air mix door opening angle depending on set temperature, in-vehicle temperature (front side), ambient temperature, and sunload.
- Front air mix door is controlled depending on the comparison of current front air mix door opening angle and target front air mix door opening angle.
- Regardless of in-vehicle temperature (front side), ambient temperature, and sunload, front air mix door is fixed at the fully cold position when set temperature is 18.0°C (60°F), and at the fully hot position when set temperature is 32.0°C (90°F).

## FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Intelligent Key Interlock Function

## DESCRIPTION

Revision: 2013 September

#### < SYSTEM DESCRIPTION >

 Setting value of front air conditioning system when ignition switch is previously OFF can be memorized for each Intelligent Key. Front air conditioning system is automatically operated by the setting value. NOTE:

[AUTOMATIC AIR CONDITIONING]

А

В

Н

Κ

L

INFOID:000000009827193

Setting value can be memorized for up to 3 Intelligent Keys.

Interlock items are as per the following table.

Operation	Conditions
	AUTO switch (ON/OFF)
	Setting temperature (Setting value)
	Air flow (Setting value)
Preset switch	Air inlet (FRE / REC)
Preset Switch	Air outlet (VENT / B/L / FOOT / D/F / DEF)
	A/C switch (ON/OFF)
	DUAL switch (ON/OFF)
	Upper ventilator switch (ON/OFF)

#### **Operation Description**

Memory

- 1. Unlock door using Intelligent Key or driver door request switch.
- 2. BCM transmits Key ID signal to A/C auto amp. via CAN communication line.
- 3. When ignition switch turns OFF, A/C auto amp. memorizes setting information (setting temperature, air inlet status, and others) of front air conditioning system to memory for each Key ID.

#### Readout

- 1. Unlock door using Intelligent Key or driver door request switch.
- BCM transmits Key ID signal to A/C auto amp. via CAN communication line. 2.
- HAC When ignition switch turns ON, A/C auto amp. operates automatically front air conditioning system 3. according to setting information of Key ID that is received. NOTE:

When Intelligent Key interlock function operates, "Connection with the key has been done." is displayed.

## FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Fail-safe

#### FAIL-SAFE FUNCTION

If a communication error exists between the A/C auto amp., and the AV control unit and preset switch for 30 seconds or longer, air conditioning is controlled under the following conditions:

When ambient temperature is less than 3°C (37°F) and engine coolant temperature is less than 56°C (133°F)

Compressor	: ON	
Air outlet	: DEF	M
Air inlet	: FRE (Fresh air intake)	
Blower fan speed	: AUTO	
Set temperature	: Setting before communication error occurs	Ν
When ambient temperature is 3°C (37°F) or more	e, or engine coolant temperature is 56°C (133°F) or more	
Compressor	: ON	0
Air outlet	: AUTO	
Air inlet	: 20% FRE (20% fresh air intake)	
Blower fan speed	: AUTO	Ρ
Set temperature	: Setting before communication error occurs	
REAR AUTOMATIC AIR CO	NDITIONING SYSTEM	

## < SYSTEM DESCRIPTION >

## [AUTOMATIC AIR CONDITIONING]

## REAR AUTOMATIC AIR CONDITIONING SYSTEM : System Description

• Rear automatic air conditioning system is controlled by each function of A/C auto amp. and BCM.

Control by A/C auto amp.

- HAC-25. "REAR AUTOMATIC AIR CONDITIONING SYSTEM : Air Flow Control"
- HAC-26, "REAR AUTOMATIC AIR CONDITIONING SYSTEM : Air Outlet Control"
- HAC-27, "REAR AUTOMATIC AIR CONDITIONING SYSTEM : Door Control"
- HAC-28, "REAR AUTOMATIC AIR CONDITIONING SYSTEM : Temperature Control"
- HAC-28, "REAR AUTOMATIC AIR CONDITIONING SYSTEM : Intelligent Key Interlock Function"
- Correction for input value of each sensor

## HAC-24

#### < SYSTEM DESCRIPTION >

## [AUTOMATIC AIR CONDITIONING]

#### Ambient sensor (setting temperature correction)

• A/C auto amp. controls passenger room temperature so that the optimum level always matches the temperature level that passenger may feel. Correction is applied to the target temperature that is set using temperature control dial, according to ambient temperature detected by ambient sensor.

#### Rear in-vehicle sensor [in-vehicle temperature (rear side) correction]

 Passenger room temperature (rear side) detected by rear in-vehicle sensor is corrected for each rear automatic air conditioning control.

#### Intake sensor (intake temperature correction)

 A/C auto amp. performs correction to change recognition intake temperature of A/C auto amp. quickly when difference is large between recognition intake temperature and intake temperature detected by intake temperature sensor. The correction is performed to change recognition intake temperature slowly when difference is small.

Sunload sensor (sunload amount correction)

- Sunload amount detected by sunload sensor is corrected for each rear automatic air conditioning control.
- A/C auto amp. performs correction to change recognition sunload amount of A/C auto amp. slowly when sunload amount changes quickly, for example when entering or exiting a tunnel.

#### Operation by front controller

 Front A/C control (preset switch) transmits the commands for rear automatic air conditioning system operation to AV control unit via communication line, then AV control unit transmits the commands to A/C auto amp.
 via CAN communication. A/C auto amp. transmits each indication information to AV control unit via CAN communication. AV control unit displays each indication information that is received.

#### Operation by rear controller

 Rear A/Ć control transmits the commands for rear automatic air conditioning system operation to A/C auto amp. via communication line.

Control by BCM

 Intelligent key interlock function Refer to <u>DLK-18, "INTELLIGENT KEY SYSTEM : System Description"</u>.

## REAR AUTOMATIC AIR CONDITIONING SYSTEM : Air Flow Control

#### DESCRIPTION

- A/C auto amp. changes duty ratio of rear blower motor drive signal and controls air flow continuously. When air flow is increased, duty ratio of rear blower motor control signal gradually increases to prevent a sudden increase in air flow.
- In addition to manual control and automatic control, air flow control is compose of starting fan speed control, low coolant temperature starting control, high in-vehicle temperature starting control and fan speed control at door motor operation

#### AUTOMATIC AIR FLOW CONTROL

- A/C auto amp. decides target air flow depending on target rear air mix door opening angle.
- A/C auto amp. changes duty ratio of rear blower motor control signal and controls the air flow continuously so that air flow matches to target air flow.
- When air outlet is VENT or B/L, the minimum air flow is changed depending on sunload.

В

D

Е

F

## < SYSTEM DESCRIPTION >

- When rear blower motor is activated, A/C auto amp. gradually increases duty ratio of rear blower motor control signal to prevent a sudden increase in discharge air flow.
- It takes approximately 8 seconds for air flow to reach HI from LOW.

#### [AUTOMATIC AIR CONDITIONING]

T: Rear blower motor regulatory time (T<approximately 150 seconds) JMIIA0740GE

Rear duty ra

## LOW COOLANT TEMPERATURE STARTING CONTROL

If the engine coolant temperature is 56°C (133°F) or less, to prevent a cold discharged air flow, A/C auto amp. suspends rear blower motor activation for the maximum 150 seconds depending on target rear air mix door opening angle. After this, rear blower motor control signal is increased gradually, and rear blower motor is activated.

## HIGH IN-VEHICLE TEMPERATURE STARTING CONTROL

When front evaporator fin temperature is high [intake sensor value is 35°C (95°F) or more], to prevent a hot discharged air flow, A/C auto amp. suspends rear blower motor activation for approximately 3 seconds so that rear evaporator is cooled by refrigerant.

## FAN SPEED CONTROL AT DOOR MOTOR OPERATION

When rear mode door motor is activated while air flow is more than the specified value, A/C auto amp. reduces temporarily fan speed so that rear mode door moves smoothly.

## REAR AUTOMATIC AIR CONDITIONING SYSTEM : Air Outlet Control

INFOID:0000000009010079

• While air outlet is in automatic control, A/C auto amp. selects the rear mode door position depending on a target rear air mix door angle and outlet air temperature calculated from sunload.

#### < SYSTEM DESCRIPTION >

## **REAR AUTOMATIC AIR CONDITIONING SYSTEM : Door Control**

INFOID:000000009010080

A/C auto amp. sends each indication information to AV control unit via CAN communication. AV control unit displays each indication information that is received.

ACCS (ADVANCED CLIMATE CONTROL SYSTEM) : Automatic Intake Control (Ex-

## HAC-29

## < SYSTEM DESCRIPTION >

#### haust Gas / Outside Odor Detecting Mechanism)

#### DESCRIPTION

In addition to air inlet automatic control of front automatic air conditioning system, A/C auto amp. controls automatically air inlet according to signal from exhaust gas / outside odor detecting sensor, so that unpleasant outside odor does not enter in passenger room.

#### **OPERATION DESCRIPTION**

- When pressing auto intake switch while front blower motor is operated and DEF switch is OFF, auto intake switch indicator lamp and intake switch indicator lamp turn ON. Air inlet is fixed to recirculation for approximately 5 minutes, and then is switched to automatic intake control (exhaust gas / outside odor detecting mechanism).
- Air inlet switches to recirculation when exhaust gas or outside odor is detected while automatic intake control (exhaust gas / outside odor detecting mechanism) is operated. After that, air inlet switches to fresh air intake when exhaust gas or outside odor becomes not detectable.

#### NOTE:

- Sensitivity of exhaust gas / outside odor detecting sensor can be changed by "GAS SENSOR ADJUST-MENT" in "WORK SUPPORT" mode of CONSULT. Refer to HAC-75, "ACCS (ADVANCED CLIMATE CON-TROL SYSTEM) : Exhaust Gas / Outside Odor Detecting Sensor Sensitivity Adjustment Function".
- Automatic intake control (exhaust gas / outside odor detecting mechanism) does not operate when ambient temperature is -2°C (28°F) or less. In this case, control is only for control of automatic air inlet of automatic air conditioning system.

## ACCS (ADVANCED CLIMATE CONTROL SYSTEM) : Plasmacluster Control

INFOID:000000009010086

## DESCRIPTION

Plasmacluster<sup>™</sup> control eliminates microbes and reduces odor on interior surface by including high density Plasmacluster<sup>™</sup> ion in air conditioning outlet air flow.

#### **OPERATION DESCRIPTION**

- Plasmacluster<sup>™</sup> control operates by interlocking to blower motor. Plasmacluster<sup>™</sup> control operates when blower motor operates.
- Control status is displayed on front air conditioning system display screen. Refer to <u>HAC-39</u>, "ACCS (ADVANCED CLIMATE CONTROL SYSTEM) : Switch Name and Function".

#### NOTE:

- Plasmacluster<sup>™</sup> ion technology developed by Sharp Corporation is installed in this item.
- Plasmacluster<sup>™</sup> is a trademark of Sharp Corporation.

# DIAGNOSIS SYSTEM (A/C AUTO AMP.)

#### < SYSTEM DESCRIPTION >

## DIAGNOSIS SYSTEM (A/C AUTO AMP.)

### Description

INFOID:000000009010091

Air conditioning system performs self-diagnosis, operation check, function diagnosis, and various settings  $_{\rm B}$  using diagnosis function of each control unit.

ECU		Diagnostic item (CONSULT)		
		Self Diagnostic Result		
		Data Monitor		
A/C auto amp.	HVAC	Active Test		
		Work support		
AV control unit	(E)MULTI AV	MULTI AV     Self Diagnostic Result		
	Multi AV system on board dia	Multi AV system on board diagnosis function		
ECM	@=	Self Diagnostic Result		
ECIM	ENGINE	Data Monitor		
		Self Diagnostic Result		
IPDM E/R	IPDM E/R	Data Monitor	(	
	Auto active test	,		

### CONSULT Function

CONSULT performs the following functions via CAN communication with A/C auto amp.

Diagnostic mode	Description	- HAC
Self diagnostic result	Displays the diagnosis results judged by A/C auto amp.	
Data monitor	Displays the input/output signal of A/C auto amp.	J
Active test	The signals used to activate each device are forcibly supplied from A/C auto amp.	
Work support	Changes the setting for each setting function.	
ECU identification	Displays the part number of A/C auto amp.	- K

#### NOTE:

Diagnosis should be performed with engine running. Door motor operation speeds become slower and NO results may be returned even for normal operation if battery voltage drops below 12 V during self-diagnosis.

#### SELF-DIAGNOSIS RESULTS

Refer to HAC-47, "DTC Index".

#### DATA MONITOR

#### NOTE:

The following table includes information (items) inapplicable to this vehicle. For information (items) applicable N to this vehicle, refer to CONSULT display items.

Display item list				
Monitor item [Unit]		Description		
AMB TEMP SEN	[°C (°F)]	Ambient sensor value converted from ambient sensor signal received from ambient sensor

### DIAGNOSIS SYSTEM (A/C AUTO AMP.)

### < SYSTEM DESCRIPTION >

[AUTOMÁTIC AIR CONDITIONING]

Monitor item [Unit]		Description
INT TEMP CAL	[°C (°F)]	Front evaporator fin temperature value calculated by A/C auto amp.
SUNL SEN CAL	[w/m <sup>2</sup> ]	Sunload value (driver side) calculated by A/C auto amp.
COMP REQ SIG	[On/Off]	Displays A/C switch ON/OFF status transmitted to other units via CAN communication
FAN REQ SIG	[On/Off]	Displays front blower motor ON/OFF status transmitted to other units via CAN commu- nication
FAN DUTY		Duty ratio of front blower motor judged by A/C auto amp.
XM		Target discharge front air temperature (driver side) judged by A/C auto amp. depending on the temperature setting and the value from each sensor
PASS SUNL CAL	[w/m <sup>2</sup> ]	Sunload value (passenger side) calculated by A/C auto amp.
PASS SUNLOAD SEN	[w/m <sup>2</sup> ]	Sunload sensor value converted from sunload sensor signal (passenger side) received from sunload sensor
PA TARGET A/TEMP		Target discharge front air temperature (passenger side) judged by A/C auto amp. de- pending on the temperature setting and the value from each sensor
RRIN TEMP SEN	[°C (°F)]	Rear in-vehicle sensor value converted from rear in-vehicle sensor signal received from rear in-vehicle sensor.
RRIN TEMP CAL	[°C (°F)]	In-vehicle temperature (rear side) value calculated by A/C auto amp.
RR INT TMP CL	[°C (°F)]	Rear evaporator fin temperature value calculated by A/C auto amp.
RRFAN REQ SIG	[On/Off]	Displays rear blower motor ON/OFF status transmitted to other units via CAN communi- cation
RR FAN DUTY		Duty ratio of rear blower motor judged by A/C auto amp.
RR XM		Target discharge rear air temperature judged by A/C auto amp. depending on the temperature setting and the value from each sensor
ENG COOL TEMP	[°C (°F)]	Engine coolant temperature signal value received from ECM via CAN communication
VEHICLE SPEED	[km/h (mph)]	Vehicle speed signal value received from combination meter via CAN communication

### ACTIVE TEST

Test item	Description		
HVAC TEST	The operation check of air conditioning system can be performed by selecting the mode. Refer to the following table for the conditions of each mode.		

#### Check each output device

	Test item						
	MODE 1	MODE 2	MODE 3	MODE 4	MODE 5	MODE 6	MODE 7
Front mode door motor posi- tion	VENT	VENT	B/L	B/L	FOOT	D/F	DEF

### [AUTOMATIC AIR CONDITIONING]

## BASIC INSPECTION DIAGNOSIS AND REPAIR WORK FLOW

Work Flow

INFOID:000000009010098

**OVERALL SEQUENCE** 

JMKIA8652GB

### DIAGNOSIS AND REPAIR WORK FLOW

#### < BASIC INSPECTION >

### [AUTOMATIC AIR CONDITIONING]

<b>1.</b> GET INFORMATION FOR SYMPTOM	А	
1. Get detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurs).	A	
2. Check operation condition of the function that is malfunctioning.	В	
>> GO TO 2.		
<b>2.</b> CHECK DTC	С	
1. Check DTC.	0	
<ol> <li>Perform the following procedure if DTC is detected.</li> <li>Record DTC and freeze frame data (Print them out using CONSULT.)</li> <li>Erase DTC.</li> </ol>	D	
<ul> <li>Study the relationship between the cause detected by DTC and the symptom described by the customer.</li> <li>Check related service bulletins for information.</li> </ul>	E	
Are any symptoms described and any DTC detected?		
Symptom is described, DTC is detected>>GO TO 3. Symptom is described, DTC is not detected>>GO TO 4. Symptom is not described, DTC is detected>>GO TO 5.	F	
3.CONFIRM THE SYMPTOM		
Try to confirm the symptom described by the customer. Also study the normal operation and fail-safe related to the symptom. Verify relation between the symptom and the condition when the symptom is detected.	G H	
>> GO TO 5.	Π	
4.CONFIRM THE SYMPTOM		
Try to confirm the symptom described by the customer. Verify relation between the symptom and the condition when the symptom is detected.	HAC	
>> GO TO 6.	J	
5. PERFORM DTC CONFIRMATION PROCEDURE		
Perform DTC CONFIRMATION PROCEDURE for the detected DTC, and then check that DTC is detected	K	
again. At this time, always connect CONSULT to the vehicle, and check self diagnostic results in real time. If two or more DTCs are detected, refer to DTC INSPECTION PRIORITY CHART, and determine trouble diag-		
nosis order.	L	
<ul> <li>NOTE:</li> <li>Freeze frame data is useful if the DTC is not detected.</li> </ul>		
<ul> <li>Perform Component Function Check if DTC CONFIRMATION PROCEDURE is not included on Service Manual. This simplified check procedure is an effective alternative though DTC cannot be detected during this check.</li> </ul>	Μ	
If the result of Component Function Check is NG, it is the same as the detection of DTC by DTC CONFIR- MATION PROCEDURE.	Ν	
Is DTC detected?		
YES >> GO TO 7. NO >> Check according to <u>GI-43, "Intermittent Incident"</u> .	0	
6.DETECT MALFUNCTIONING SYSTEM BY SYMPTOM DIAGNOSIS	0	
Detect malfunctioning system according to SYMPTOM DIAGNOSIS based on the confirmed symptom in step	-	
4, and determine the trouble diagnosis order based on possible causes and symptom.	Ρ	
Is the symptom described?		
YES >> GO TO 7. NO >> Monitor input data from related sensors or check voltage of related module terminals using CON- SULT.		

**1.**DETECT MALFUNCTIONING PART BY DIAGNOSIS PROCEDURE

### DIAGNOSIS AND REPAIR WORK FLOW

< BASIC INSPECTION >

Inspect according to Diagnosis Procedure of the system.

Is malfunctioning part detected?

YES >> GO TO 8.

NO >> Check according to <u>GI-43, "Intermittent Incident"</u>.

8. REPAIR OR REPLACE THE MALFUNCTIONING PART

- 1. Repair or replace the malfunctioning part.
- Reconnect parts or connectors disconnected during Diagnosis Procedure again after repair and replacement.
- 3. Check DTC. If DTC is detected, erase it.

>> GO TO 9.

### **9.**FINAL CHECK

When DTC is detected in step 2, perform DTC CONFIRMATION PROCEDURE again, and then check that the malfunction is repaired securely.

When symptom is described by the customer, refer to confirmed symptom in step 3 or 4, and check that the symptom is not detected.

Is DTC detected and does symptom remain?

- YES-1 >> DTC is detected: GO TO 7.
- YES-2 >> Symptom remains: GO TO 4.

NO >> Before returning the vehicle to the customer, always erase DTC.

<pre>OPERATION INSPECTION &lt; BASIC INSPECTION &gt; [AUTOMATIC AIR CONDITIONING]</pre>
OPERATION INSPECTION FRONT AUTOMATIC AIR CONDITIONING SYSTEM
FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Work Procedure
DESCRIPTION The purpose of the operational check is to check that the individual system operates normally.
Check condition : Engine running at normal operating temperature.
OPERATION INSPECTION
1.CHECK MEMORY FUNCTION
1. Set temperature control dial (driver side) to 32.0°C (90°F).       E         2. Press OFF switch.       3. Turn ignition switch OFF.         3. Turn ignition switch ON.       5. Press AUTO switch.         5. Press AUTO switch.       6. Check that set temperature is maintained.         Is the inspection result normal?       YES >> GO TO 2.         NO >> GO TO 13.       O
2.CHECK FRONT BLOWER MOTOR
<ol> <li>Start engine.</li> <li>Operate fan switch.</li> <li>Check that fan speed changes. Check operation for all fan speeds.</li> <li>Is the inspection result normal?</li> <li>YES &gt;&gt; GO TO 3.</li> <li>NO &gt;&gt; GO TO 13.</li> </ol>
<b>3.</b> CHECK DISCHARGE AIR (MODE SWITCH AND DEF SWITCH)
<ol> <li>Operate fan switch to set the fan speed to maximum speed.</li> <li>Operate MODE switch and DEF switch.</li> <li>Check that air outlets change according to each indicated air outlet by placing a hand in front of the outlets. Refer to VTL-6, "VENTILATION SYSTEM (FRONT AIR CONDITIONING) : System Description".</li> </ol>
Is the inspection result normal?
YES >> GO TO 4. NO >> GO TO 13.
4. CHECK DISCHARGE AIR (UPPER VENTILATOR SWITCH)
<ol> <li>Press MODE switch to set the air outlet to other than D/F or DEF.</li> <li>Press upper ventilator switch. The upper ventilator switch indicator is turns ON.</li> <li>Check that air flow blows from upper ventilator.</li> <li>Press upper ventilator switch again. The upper ventilator switch indicator is turns OFF.</li> <li>Check that air flow from upper ventilator stops.</li> </ol>
Is the inspection result normal?
YES-1 >> With ACCS (advanced climate control system): GO TO 5. YES-2 >> Without ACCS (advanced climate control system): GO TO 6. NO >> GO TO 13.
5. CHECK INTAKE AIR [WITH ACCS (ADVANCED CLIMATE CONTROL SYSTEM)]
<ol> <li>Press intake switch to set the air inlet to recirculation. The intake switch indicator turns ON.</li> <li>Listen to intake sound and confirm air inlets change.</li> <li>Press intake switch again to set the air inlet to fresh air intake. The intake switch indicator turns OFF.</li> <li>Listen to intake sound and confirm air inlets change.</li> </ol>

Is the inspection result normal?

< BASIC INSPECTION >

YES >> GO TO 7. NO >> GO TO 13.

 $\mathbf{6}$ . CHECK INTAKE AIR [WITHOUT ACCS (ADVANCED CLIMATE CONTROL SYSTEM)]

- 1. Press REC switch to set the air inlet to recirculation. The REC switch indicator turns ON.
- 2. Listen to intake sound and confirm air inlets change.
- 3. Press FRE switch to set the air inlet to fresh air intake. The REC switch indicator turns OFF and FRE switch indicator turns ON.
- 4. Listen to intake sound and confirm air inlets change.

Is the inspection result normal?

YES >> GO TO 7.

NO >> GO TO 13.

**1**.CHECK COMPRESSOR

- 1. Press A/C switch. The A/C switch indicator is turns ON.
- 2. Check visually and by sound that the compressor operates.
- 3. Press A/C switch again. The A/C switch indicator is turns OFF.
- 4. Check that compressor stops.

Is the inspection result normal?

YES >> GO TO 8.

NO >> GO TO 13.

**8.**CHECK DISCHARGE AIR TEMPERATURE (LH/RH INDEPENDENT TEMPERATURE ADJUSTMENT FUNCTION)

- 1. Operate temperature control dial (driver side).
- 2. Check that discharge air temperature (driver side) changes.
- 3. Operate temperature control dial (passenger side). The DUAL switch indicator is turns ON.
- 4. Check that the discharge air temperature (passenger side) changes.
- 5. Press DUAL switch. The DUAL switch indicator is turns OFF.
- 6. Check that air temperature setting (LH/RH) is unified to the driver side temperature setting.

Is the inspection result normal?

YES >> GO TO 9.

NO >> GO TO 13.

9.CHECK WITH TEMPERATURE SETTING LOWERED

- 1. Operate compressor.
- 2. Operate temperature control dial (driver side) and lower the set temperature to 18°C (60°F).
- 3. Check that cool air blows from the air outlets.

Is the inspection result normal?

YES >> GO TO 10.

NO >> GO TO 13.

**10.**CHECK TEMPERATURE INCREASE

1. Operate temperature control dial (driver side) and raise the set temperature to 32°C (90°F).

2. Check that warm air blows from the air outlets.

Is the inspection result normal?

YES >> GO TO 11.

NO >> GO TO 13.

**11.**CHECK AUTO MODE

- 1. Press AUTO switch to confirm that "AUTO" is indicated on the display.
- 2. Operate temperature control dial (driver side) to check that fan speed or air outlet changes (the air outlet or fan speed varies depending on the ambient temperature, in-vehicle temperature (front side), set temperature, and etc.).

Is the inspection result normal?

YES >> GO TO 12.

NO >> GO TO 13.

< BASIC INSPECTION >

#### 12. CHECK INTELLIGENT KEY INTERLOCK FUNCTION А 1. Operate temperature control dial (driver side) to 32.0°C (90°F). Operate fan switch. Set fan speed to 1st speed. 2. 3. Turn ignition switch OFF. В 4. Lock door using Intelligent Key or driver door request switch. Switch to another Intelligent Key and unlock door using Intelligent Key or driver door request switch. 5. Turn ignition switch ON. 6. Operate fan switch. Set fan speed to 7th speed. 7. Operate temperature control dial (driver side). Decrease setting temperature to 18.0°C (60°F). 9. Turn ignition switch OFF. 10. Lock door using Intelligent Key or driver door request switch. D 11. Switch to another Intelligent Key and unlock door using Intelligent Key or driver door request switch. 12. Turn ignition switch ON. 13. Check that "Connection with the key has been done." is indicated on display and that air conditioning sys-Е tem starts to operate automatically by setting temperature to 32.0°C (90°F) and fan speed to 1st. Is the inspection result normal? YES >> INSPECTION END NO >> GO TO 13. F 13. CHECK SELF-DIAGNOSIS WITH CONSULT 1 Perform self-diagnosis with CONSULT. Check that any DTC is detected. 2. Is any DTC detected? YES >> Refer to HAC-47, "DTC Index" and perform the appropriate diagnosis. Н >> GO TO 14. NO 14. CHECK FAIL-SAFE ACTIVATION HAC Check that symptom is applied to the fail-safe activation. Refer to HAC-47, "Fail-safe". >> Refer to HAC-138, "Diagnosis Chart By Symptom" and perform the appropriate diagnosis. REAR AUTOMATIC AIR CONDITIONING SYSTEM **REAR AUTOMATIC AIR CONDITIONING SYSTEM : Work Procedure** INFOID-000000009010100 Κ DESCRIPTION The purpose of the operational check is to check that the individual system operates normally. NOTE: L Check that front automatic air conditioning system operates normally. Refer to HAC-138, "Diagnosis Chart By Symptom". M : Engine running at normal operating temperature. **Check condition** : Front air conditioning system operate. Ν OPERATION INSPECTION Front A/C Control Operation 1. CHECK REAR CONTROL MODE FUNCTION 1. Press REAR switch. The REAR switch indicator turns ON. 2. Check that front display changes to state indication display (rear control mode) and that rear automatic air conditioning system starts. Ρ 3. Press REAR switch again. The REAR switch indicator turns OFF. 4. Check that rear control mode released. (rear automatic air conditioning system operates continuously) Is the inspection result normal? YES >> GO TO 2. NO >> GO TO 8.

2.CHECK REAR BLOWER MOTOR

< BASIC INSPECTION >

- Press REAR switch.
   Operate fan switch.
- 3. Check that fan speed changes. Check operation for all fan speeds.

Is the inspection result normal?

- YES >> GO TO 3.
- NO >> GO TO 8.

3. CHECK DISCHARGE AIR

- 1. Operate fan switch to set the fan speed to maximum speed.
- 2. Operate MODE switch.
- 3. Check that air outlets change according to each indicated air outlet by placing a hand in front of the outlets. Refer to <u>VTL-7</u>, "VENTILATION SYSTEM (REAR AIR CONDITIONING) : System Description".

Is the inspection result normal?

YES >> GO TO 4.

NO >> GO TO 8.

**4.**CHECK DISCHARGE AIR TEMPERATURE

1. Operate temperature control dial (driver side).

2. Check that discharge air temperature changes.

Is the inspection result normal?

YES >> GO TO 5.

NO >> GO TO 8.

**5.**CHECK WITH TEMPERATURE SETTING LOWERED

1. Operate temperature control dial (driver side) and lower the set temperature to 18°C (60°F).

2. Check that cool air blows from the air outlets.

Is the inspection result normal?

YES >> GO TO 6. NO >> GO TO 8.

 $\sim$  SO 10 8.

**O**.CHECK TEMPERATURE INCREASE

1. Operate temperature control dial (driver side) and raise the set temperature to 32°C (90°F).

2. Check that warm air blows from the air outlets.

Is the inspection result normal?

YES >> GO TO 7. NO >> GO TO 8.

7. CHECK AUTO MODE

1. Press AUTO switch.

2. Operate temperature control dial (driver side) to check that fan speed or air outlet changes (the air outlet or fan speed varies depending on the ambient temperature, in-vehicle temperature (rear side), set temperature, and etc.).

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 8.

**8.**CHECK SELF-DIAGNOSIS WITH CONSULT

- 1. Perform self-diagnosis with CONSULT.
- 2. Check that any DTC is detected.

Is any DTC detected?

YES >> Refer to <u>HAC-47</u>, "DTC Index" and perform the appropriate diagnosis.

NO >> Refer to <u>HAC-140</u>, "Diagnosis Chart By Symptom" and perform the appropriate diagnosis.

Rear A/C Control Operation

**1.**CHECK REAR BLOWER MOTOR

1. Press AUTO switch.

2. Operate fan switch.

< BASIC INSPECTION >	[AUTOMATIC AIR CONDITIONING]

### DESCRIPTION

The purpose of the operational check is to check that the individual system operates normally. NOTE:

### **HAC-71**

Check that front automatic air conditioning system operates normally. Refer to <u>HAC-67, "FRONT AUTOMATIC</u> <u>AIR CONDITIONING SYSTEM : Work Procedure"</u>.

### Check condition : Engine running

OPERATION INSPECTION

1.CHECK PLASMACLUSTER<sup>™</sup> CONTROL

Check the ionizer operation sound (whirring sound) in the duct by putting an ear to the center ventilator grille (driver side) outlet while pressing fan switch and OFF switch alternately.

Is the inspection result normal?

YES >> GO TO 2.

NO >> GO TO 4.

2.CHECK PLASMACLUSTER<sup>™</sup> CONTROL OPERATION STATUS

Operate fan switch. Visually check that status indicator in front display changes in accordance with the following table.

Fan speed	Front display (ion indicator)
2nd	CLEAN
5th	QUICK CLEAN

Is the inspection result normal?

YES >> GO TO 3.

NO >> GO TO 4.

3.CHECK AUTOMATIC INTAKE CONTROL (EXHAUST GAS / OUTSIDE ODOR DETECTING MECHANISM)

- 1. Operate fan switch to set the fan speed to maximum speed.
- 2. Press auto intake switch to set the air inlet to recirculation. The auto intake switch indicator and intake switch indicator turn ON.
- 3. Listen to intake sound and confirm air inlets change.
- 4. Wait approximately for 5 minutes until air inlet switches to fresh air intake.
- 5. Apply cigarette smoke or similar substance to exhaust gas / outside odor detecting sensor portion.
- 6. Listen to intake sound and confirm air inlets change to recirculation.

Is the inspection result normal?

YES >> INSPECTION END

NO >> GO TO 4.

**4.**CHECK SELF-DIAGNOSIS WITH CONSULT

- 1. Perform self-diagnosis with CONSULT.
- 2. Check that any DTC is detected.

Is any DTC detected?

- YES >> Refer to <u>HAC-47, "DTC Index"</u> and perform the appropriate diagnosis.
- NO >> Refer to <u>HAC-140, "Diagnosis Chart By Symptom"</u> and perform the appropriate diagnosis.

# SYSTEM SETTING FRONT AUTOMATIC AIR CONDITIONING SYSTEM

# FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Temperature Setting Trimmer (Front)

#### DESCRIPTION

If the temperature felt by the customer is different from the front air flow temperature controlled by the temperature setting, the A/C auto amp. control temperature can be adjusted to compensate for the temperature setting.

#### HOW TO SET

#### (P)With CONSULT

Perform "TEMP SET CORRECT" of HVAC work support item.

Work support items	Display (°C)	Display (°F)	
	3.0	6	
	2.5	5	
-	2.0	4	
	1.5	3	G
-	1.0	2	
-	0.5	1	
TEMP SET CORRECT	0 (initial status)	0 (initial status)	
-	-0.5	-1	
-	-1.0	-2	HAC
-	-1.5	-3	
-	-2.0	-4	
	-2.5	-5	J
	-3.0	-6	

#### NOTE:

- When −3.0°C (−6°F) is corrected on the temperature setting set as 25.0°C (77°F) the temperature controlled by A/C auto amp. is 25.0°C (77°F) −3.0°C (−6°F) = 22.0°C (72°F) and the temperature becomes lower than the temperature setting.
- When the battery cable is disconnected from the negative terminal or when the battery voltage becomes 10 V or less, the setting of the difference between the set temperature and control temperature may be cancelled.

FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Foot Position Setting Trimmer

#### DESCRIPTION

In FOOT mode, the air blowing to DEF can change ON/OFF.

#### HOW TO SET

#### (P)With CONSULT

Perform the "BLOW SET" of HVAC work support item.

Work support items	Display	Defroster door position	
work support items		Auto control	Manual control
	Mode1	OPEN	CLOSE
BLOW SET	Mode2 (initial status)	OPEN	OPEN
BLOW SET	Mode3	CLOSE	OPEN
	Mode4	CLOSE	CLOSE

#### < BASIC INSPECTION >

#### NOTE:

When the battery cable is disconnected from the negative terminal or when the battery voltage becomes 10 V or less, the setting of the discharge air mix ratio in FOOT mode may be cancelled.

#### FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Inlet Port Memory Function (FRE) INFOID-000000009010104

#### DESCRIPTION

- If the ignition switch is turned to the OFF position while the intake switch is set to OFF (fresh air intake), "Perform the memory" or "Do not perform the memory" of intake switch OFF (fresh air intake) condition can be selected.
- If "Perform the memory" was set, the intake switch will be OFF (fresh air intake) when turning the ignition switch to the ON position again.
- If "Do not perform the memory" was set, the air inlets will be controlled automatically when turning the ignition switch to the ON position again.

#### HOW TO SET

(P)With CONSULT

Perform the "FRE MEMORY SET" of HVAC work support item.

Work support items	Display	Setting
FRE MEMORY SET	WITHOUT	Perform the memory of manual FRE
	WITH (initial status)	Do not perform the memory of manual FRE (auto control)

#### NOTE:

When the battery cable is disconnected from the negative terminal or when the battery voltage becomes 10 V or less, the setting of the FRE memory function may be cancelled.

## FRONT AUTOMATIC AIR CONDITIONING SYSTEM : Inlet Port Memory Function (REC)

INFOID:000000009010105

#### DESCRIPTION

- If the ignition switch is turned to the OFF position while the intake switch is set to ON (recirculation), "Perform the memory" or "Do not perform the memory" of intake switch ON (recirculation) condition can be selected.
- If "Perform the memory" was set, the intake switch will be ON (recirculation) when turning the ignition switch to the ON position again.
- If "Do not perform the memory" was set, the air inlets will be controlled automatically when turning the ignition switch to the ON position again.

#### HOW TO SET

#### (P)With CONSULT

Perform the "REC MEMORY SET" of HVAC work support item.

Work support items	Display	Setting
REC MEMORY SET	WITHOUT (initial status)	Perform the memory of manual REC
REG MEMORT SET	WITH	Do not perform the memory of manual REC (auto control)

#### NOTE:

When the battery cable is disconnected from the negative terminal or when the battery voltage becomes 10 V or less, the setting of the REC memory function may be cancelled. REAR AUTOMATIC AIR CONDITIONING SYSTEM

#### REAR AUTOMATIC AIR CONDITIONING SYSTEM : Temperature Setting Trimmer (Rear) INFOID:000000009010106

DESCRIPTION

# SYSTEM SETTING

#### < BASIC INSPECTION >

If the temperature felt by the customer is different from the rear air flow temperature controlled by the temperature setting, the A/C auto amp. control temperature can be adjusted to compensate for the temperature setting.

# HOW TO SET

Perform "REAR TEMP SET CORRECT" of HVAC work support item.

Work support items	Display (°C)	Display (°F)	
	3.0	6	
	2.5	5	
	2.0	4	
	1.5	3	
	1.0	2	
	0.5	1	
REAR TEMP SET CORRECT	0 (initial status)	0 (initial status)	
	-0.5	-1	
	-1.0	-2	
	-1.5	-3	
	-2.0	-4	
	-2.5	-5	
	-3.0	6	

#### NOTE:

- When -3.0°C (-6°F) is corrected on the temperature setting set as 25.0°C (77°F) the temperature controlled by A/C auto amp. is 25.0°C (77°F) -3.0°C (-6°F) = 22.0°C (72°F) and the temperature becomes lower than the temperature setting.
- When the battery cable is disconnected from the negative terminal or when the battery voltage becomes 10 V or less, the setting of the difference between the set temperature and control temperature may be cancelled.

# ACCS (ADVANCED CLIMATE CONTROL SYSTEM)

ACCS (ADVANCED CLIMATE CONTROL SYSTEM) : Exhaust Gas / Outs	ide Odor
Detecting Sensor Sensitivity Adjustment Function	INFOID:0000000009010107

#### DESCRIPTION

According to customer's sense of smell, exhaust gas / outside odor detecting sensor sensitivity can be changed.

#### HOW TO SET

(P)With CONSULT

Perform the "GAS SENSOR ADJUSTMENT" of HVAC work support item.

Work support items	Display	Setting	
	2	More sensitive setting than display 1 (REC earlier than display 1.)	0
	1	More sensitive setting than normal setting (REC earlier than normal operation.)	
GAS SENSOR ADJUSTMENT	0 (initial status)	Normal	
	-1	Less sensitive setting than normal setting (REC later than normal operation.)	Ρ
	-2	Less sensitive setting than display –1 (REC later than display –1.)	

#### NOTE:

When the battery cable is disconnected from the negative terminal or when the battery voltage becomes 10 V or less, the setting of WORK SUPPORT may be cancelled.

ACCS (ADVANCED CLIMATE CONTROL SYSTEM) : Auto Intake Switch Interlocking

J

Κ

L

Μ

А

[AUTOMATIC AIR CONDITIONING]

Ν

# Movement Change Function

INFOID:000000009010108

#### DESCRIPTION

Condition for interlocking movement of auto intake switch and A/C switch can be changed. In addition operation of the auto intake switch, which activates the automatic intake control (exhaust gas / outside odor detecting mechanism), can be set to become available when the A/C switch is ON.

#### HOW TO SET

#### (D)With CONSULT

Perform the "CLEAN SW SET" of HVAC work support item.

Work support items	Display	Setting
CLEAN SW SET	Mode1	Initial setting
	Mode2	Setting 1
	Mode3	Setting 2
	Mode4	Setting 3

Initial setting When the auto intake switch is ON, the A/C switch is also turned ON in synchronization with th switch. Control of the auto intake switch is functional even when the A/C switch is turned OFF.	
Setting 1	When the auto intake switch is ON, the A/C switch is not turned ON in synchronization with the auto intake switch. Control of the auto intake switch is functional even when the A/C switch is turned OFF.
Setting 2	When the auto intake switch is ON, the A/C switch is also turned ON in synchronization with the auto intake switch. When the A/C switch is turned OFF, the auto intake switch is turned OFF in synchronization with the A/C switch.
Setting 3	Auto intake switch can be turned ON only when A/C switch is ON. When the A/C switch is turned OFF, the auto intake switch is turned OFF in synchronization with the A/C switch.

#### NOTE:

When the battery cable is disconnected from the negative terminal or when the battery voltage becomes 10 V or less, the setting of WORK SUPPORT may be cancelled.

Ν

Ρ

INFOID:000000009010111

CAN (Controller Area Network) is a serial communication system for real time application. It is an on-vehicle multiplex communication system with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto vehicles, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with two communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only. CAN Communication Signal Chart. Refer to LAN-32, "CAN COMMUNICATION SYSTEM : CAN Communication transmission".

#### **DTC** Logic

# DTC DETECTION LOGIC

DTC	Items (CONSULT screen terms)	DTC detection condition	Possible cause	
U1000	CAN COMM CIRCUIT	When A/C auto amp. is not transmitting or receiving CAN communication signal for 2 or more seconds.	CAN communication system	G

# 1. CHECK FRONT AIR MIX DOOR MOTOR (PASSENGER SIDE) COMMUNICATION SIGNAL

- 1. Turn ignition switch ON.
- 2. Check output waveform between front air mix door motor RH harness connector and ground with the oscilloscope.

	+ door motor RH Terminal		Output waveform
M255	3	Ground	(V) 15 10 5 0 

#### Is the inspection result normal?

YES >> GO TO 2.

# 2. CHECK INSTALLATION OF FRONT AIR MIX DOOR MOTOR (PASSENGER SIDE)

Check front air mix door motor (passenger side) is properly installed. Refer to <u>HAC-158</u>, "Exploded View". <u>Is the inspection result normal?</u>

YES >> Replace front air mix door motor (passenger side). Refer to <u>HAC-159</u>, "<u>AIR MIX DOOR MOTOR</u> : <u>Removal and Installation</u>".

# **HAC-96**

#### B2634, B2635 FRONT AIR MIX DOOR MOTOR (PASSENGER SIDE) [AUTOMATIC AIR CONDITIONING]

< DTC/CIRCUIT DIAGNOSIS >

NO >> Repair or replace malfunctioning part.

# 3. CHECK FRONT AIR MIX DOOR MOTOR (PASSENGER SIDE) COMMUNICATION SIGNAL CIRCUIT

- 1. Turn ignition switch OFF.
- Disconnect front air mix door motor RH and A/C auto amp. connector. 2.

В Check continuity between front air mix door motor RH harness connector and A/C auto amp. harness con-3. nector.

Front air mix	door motor RH	A/C auto amp.		Continuity	
Connector	Terminal	Connector	Terminal	Continuity	
M255	3	M50	16	Existed	

#### Is the inspection result normal?

YES >> Replace A/C auto amp. Refer to HAC-152, "Removal and Installation".

NO >> Repair harness or connector.

< DTC/CIRCUIT DIAGNOSIS >

## B27B0 A/C AUTO AMP.

### DTC Logic

### DTC DETECTION LOGIC

#### NOTE:

- If DTC is displayed along with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to <u>HAC-</u> <u>77. "DTC Logic"</u>.
- If DTC is displayed along with DTC U1010, first perform the trouble diagnosis for DTC U1010. <u>HAC-78,</u> <u>"DTC Logic"</u>.

DTC	Items (CONSULT screen terms)	DTC detection condition	Possible cause
B27B0	A/C AUTO AMP.	A/C auto amp. EEPROM system is mal- functioning.	A/C auto amp.

### DTC CONFIRMATION PROCEDURE

### **1.**PERFORM DTC CONFIRMATION PROCEDURE

#### With CONSULT

- Turn ignition switch ON.
- 2. Select "Self Diagnostic Result" mode of "HVAC" using CONSULT.
- 3. Check DTC.

#### Is DTC detected?

- YES >> Refer to HAC-114, "Diagnosis Procedure".
- NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000009010150

INFOID:000000009010149

### **1.**PERFORM SELF DIAGNOSTIC

#### With CONSULT

- 1. Turn ignition switch ON.
- 2. Select "Self Diagnostic Result" mode of "HVAC" using CONSULT.
- 3. Touch "ERASE".
- 4. Turn ignition switch OFF.
- 5. Turn ignition switch ON.
- 6. Perform "DTC CONFIRMATION PROCEDURE". Refer to HAC-114, "DTC Logic".

#### Is DTC detected again?

- YES >> Replace A/C auto amp. Refer to <u>HAC-152, "Removal and Installation"</u>.
- NO >> INSPECTION END

NO >> Repair harness or connector.

3. CHECK INSTALLATION OF REAR AIR MIX DOOR MOTOR

Check rear air mix door motor is properly installed. Refer to HAC-158, "Exploded View".

< DTC/CIRCUIT DIAGNOSIS >

#### Is the inspection result normal?

- YES >> Replace rear air mix door motor. Refer to <u>HAC-160</u>, "REAR AIR MIX DOOR MOTOR : Removal <u>and Installation"</u>.
- NO >> Repair or replace malfunctioning part.

#### **4.**CHECK REAR AIR MIX DOOR MOTOR POWER SUPPLY CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect rear air mix door motor connector and A/C auto amp. connector.
- 3. Check continuity between rear air mix door motor harness connector and A/C auto amp. harness connector.

Rear air mi	x door motor	A/C au	to amp.	Continuity
Connector	Terminal	Connector	Terminal	Continuity
B210	1	M50	17	Existed

Is the inspection result normal?

YES >> Replace A/C auto amp. Refer to <u>HAC-152, "Removal and Installation"</u>.

NO >> Repair harness or connector.

### REAR A/C CONTROL

### REAR A/C CONTROL : Diagnosis Procedure

### **1.**CHECK FUSE

Check 10A fuse [No. 4, located in the fuse block (J/B)]. **NOTE:** 

Refer to PG-96, "Fuse, Connector and Terminal Arrangement".

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace the blown fuse after repairing the affected circuit if a fuse is blown.

### 2.CHECK REAR A/C CONTROL POWER SUPPLY

1. Turn ignition switch OFF.

2. Disconnect rear A/C control connector.

3. Turn ignition switch ON.

4. Check voltage between rear A/C control harness connector and ground.

-	+		
Rear A/0	C control	_	Voltage
Connector	Terminal	*

# FRONT BLOWER MOTOR

### **Diagnosis** Procedure

1.CHECK FUSE

- 1. Turn ignition switch OFF.
- Check 15A fuse [No. 21 and 22, located in fuse block (J/B)]. NOTE:
   Befor to DC 06, "Fund Connector and Terminal Arrangement"

Refer to PG-96, "Fuse, Connector and Terminal Arrangement".

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace the blown fuse after repairing the affected circuit if a fuse is blown.

2. CHECK FRONT BLOWER MOTOR POWER SUPPLY

1. Disconnect front blower motor connector.

2. Turn ignition switch ON.

3. Check voltage between front blower motor harness connector and ground.

+			
Front blo	wer motor	_	Voltage
Connector	Terminal	*	
M272	1	Ground	Battery voltage
	1. 1.		

Is the inspection result normal?

YES >> GO TO 3.

NO >> GO TO 6.

 $\mathbf{3}$ . Check front blower motor ground circuit

1. Turn ignition switch OFF.

2. Check continuity between front blower motor harness connector and ground.

Front blo	wer motor		Continuity	
Connector	Terminal		Continuity	
M272	3	Ground	Existed	

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair harness or connector.

**4.**CHECK FRONT BLOWER MOTOR CONTROL SIGNAL CIRCUIT

1. Disconnect A/C auto amp. connector.

2. Check continuity between front blower motor harness connector and A/C auto amp. harness connector.

Front blower motor		A/C auto amp.		Continuity	
Connector	Terminal	Connector	Terminal	Continuity	
M272	2	M50	14	Existed	

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair the harness or connector.

5.CHECK FRONT BLOWER MOTOR CONTROL SIGNAL

1. Reconnect front blower motor connector and A/C auto amp. connector.

2. Turn ignition switch ON.

3. Operate MODE switch to set air outlet to VENT.

4. Change fan speed from Lo to Hi, and check duty ratios between front blower motor harness connector and ground by using an oscilloscope.

INFOID:000000009010162

### FRONT BLOWER MOTOR

#### < DTC/CIRCUIT DIAGNOSIS >

# [AUTOMATIC AIR CONDITIONING]

#### NOTE:

Calculate drive signal duty ratio as shown in the figure. T2 = Approx. 1.6 ms

Front blower motor		Condition	Duty ratio

#### Is the inspection result normal?

- YES >> Replace front blower motor. Refer to VTL-16, "FRONT A/C UNIT : Removal and Installation". NO
  - >> Replace A/C auto amp. Refer to HAC-152, "Removal and Installation".

#### **6.**CHECK BLOWER RELAY GROUND CIRCUIT

#### 1. Turn ignition switch OFF.

2. Check continuity between fuse block (J/B) harness connector and ground.

Fuse blo	ock (J/B)		Continuity	
Connector	Terminal	—	Continuity	
M3	7C	Ground	Existed	HAC
Is the inspection				
YES >> GO NO >> Rep	TO 7. Dair harness or co	onnector.		J
7.CHECK BLO	WER RELAY			
Check blower re	elay. Refer to <u>HA</u>	C-128, "Component Ins	spection (Blower Relay)".	K

Is the inspection result normal?

YES >> Repair harness or connector between front blower motor and fuse block (J/B).

NO >> Replace blower relay.

### Component Inspection (Front Blower Motor)

### 1.CHECK FRONT BLOWER MOTOR-I

1. Remove front blower motor.

2. Check that there is not any mixing foreign object in the front blower motor.

#### Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace front blower motor. Refer to VTL-16, "FRONT A/C UNIT : Removal and Installation".

2. CHECK FRONT BLOWER MOTOR-II

Check that there is not breakage or damage in the front blower motor.

Is the inspection result normal?

YES >> GO TO 3.

NO >> Replace front blower motor. Refer to VTL-16, "FRONT A/C UNIT : Removal and Installation".

3.CHECK FRONT BLOWER MOTOR-III

Check that front blower motor turns smoothly.

Is the inspection result normal?

#### < DTC/CIRCUIT DIAGNOSIS >

### YES >> INSPECTION END

NO >> Replace front blower motor. Refer to <u>VTL-16, "FRONT A/C UNIT : Removal and Installation"</u>.

### Component Inspection (Blower Relay)

1.CHECK BLOWER RELAY

- 1. Turn ignition switch OFF.
- 2. Remove blower relay.
- 3. Check continuity between blower relay terminal 3 and 5 when voltage is supplied between terminal 1 and 2.

Terr	ninal	Voltage	Continuity
3	5	ON	Existed
5	5	OFF	Not existed

Is the inspection result normal?

### **Diagnosis Procedure**

1.CHECK FUSE

- 1. Turn ignition switch OFF.
- Check 20A fuse [No. 16, located in fuse block (J/B)]. NOTE: Refer to PG-96, "Fuse, Connector and Terminal Arrangement".

Is the inspection result normal?

YES >> GO TO 2.

NO >> Replace the blown fuse after repairing the affected circuit if a fuse is blown.

2. CHECK REAR BLOWER MOTOR POWER SUPPLY

1. Turn ignition switch OFF.

- 2. Disconnect rear blower motor connector.
- 3. Turn ignition switch ON.

4. Check voltage between rear blower motor harness connector and ground.

+			
Rear blo	wer motor	_	Voltage
Connector	Terminal	*	
M302	1	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair harness or connector between rear blower motor and fuse block (J/B).

## ${\it 3.}$ check rear blower motor ground circuit

1. Turn ignition switch OFF.

2. Check continuity between rear blower motor harness connector and ground.

Rear blower motor			Continuity
Connector	Terminal		Continuity
M302	3	Ground	Existed

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair harness or connector.

#### **4.**CHECK REAR BLOWER MOTOR CONTROL SIGNAL CIRCUIT

1. Disconnect A/C auto amp. connector.

2. Check continuity between rear blower motor harness connector and A/C auto amp. harness connector.

Rear blower motor		A/C auto amp.		Continuity
Connector	Terminal	Connector Terminal		Continuity
M302	2	M50	34	Existed

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair harness or connector.

**5.**CHECK REAR BLOWER MOTOR CONTROL SIGNAL

1. Reconnect rear blower motor connector and A/C auto amp. connector.

2. Turn ignition switch ON.

3. Operate MODE switch to set air outlet to VENT.

REAR AIR CONDITIONER

#### < SYMPTOM DIAGNOSIS >

#### **REAR AIR CONDITIONER : Description**

[AUTOMATIC AIR CONDITIONING]

INFOID:000000009010183

#### Symptom

Insufficient heating

• No warm air comes out. (Air flow volume is normal.)

#### **REAR AIR CONDITIONER : Diagnosis Procedure**

INFOID:000000009010184

#### CAUTION:

Perform the self-diagnoses with on board diagnosis and CONSULT before performing symptom diagnosis. If any malfunction result or DTC is detected, perform the corresponding diagnosis.

#### **1.**CHECK COOLING SYSTEM

- 1. Check engine coolant level and check leakage. Refer to <u>CO-8, "Inspection"</u>.
- 2. Check reservoir tank cap. Refer to CO-12, "RESERVOIR TANK CAP : Inspection".
- 3. Check water flow sounds of the engine coolant. Refer to CO-9, "Refilling".

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Refill the engine coolant and repair or replace the parts depending on the inspection results.

#### 2. CHECK HEATER HOSE

Check installation of heater hose by visually or touching.

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair or replace parts depending on the inspection results.

#### 3.CHECK REAR HEATER CORE

- 1. Check temperature of inlet hose and outlet hose of rear heater core.
- 2. Check that the inlet side of rear heater core is hot and the outlet side is slightly lower than/almost equal to the inlet side.

#### CAUTION:

# Always perform the temperature inspection in a short period of time because the engine coolant temperature is very hot.

#### Is the inspection result normal?

YES >> GO TO 4.

NO >> Replace rear heater core. Refer to <u>HA-49</u>, "HEATER CORE : Removal and Installation".

#### **4.**CHECK AIR LEAKAGE FROM EACH DUCT

Check duct and nozzle, etc. of the rear air conditioning system for air leakage.

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair or replace parts depending on the inspection results.

**5.**CHECK SETTING OF TEMPERATURE SETTING TRIMMER (REAR)

- 1. Check setting value of temperature setting trimmer (rear). Refer to <u>HAC-74</u>, "<u>REAR AUTOMATIC AIR</u> <u>CONDITIONING SYSTEM : Temperature Setting Trimmer (Rear)</u>".
- Check that the temperature setting trimmer is set to "- direction". NOTE:

The control temperature can be set by the temperature setting trimmer (rear).

3. Set the difference between the set temperature (rear) and control temperature to "0".

Are the symptoms solved?

- YES >> INSPECTION END
- NO >> Replace A/C auto amp. Refer to <u>HAC-152</u>, "Removal and Installation".

#### < SYMPTOM DIAGNOSIS >

## COMPRESSOR DOSE DOT OPERATE

#### Description

Symptom: Compressor dose not operate.

#### Diagnosis Procedure

INFOID:000000009010188

INFOID:000000009010187

# NOTE: Perform self-diagnoses with CONSULT before performing symptom diagnosis. If DTC is detected, perform the corresponding diagnosis.

• Check that refrigerant is enclosed in cooler cycle normally. If refrigerant amount is shortage from proper amount, perform inspection of refrigerant leakage.

**1.**CHECK MAGNET CLUTCH OPERATION

Check magnet clutch. Refer to HAC-131, "Component Function Check".

Does it operate normally?

YES >> GO TO 2.

NO >> Repair or replace malfunctioning parts.

2.CHECK REFRIGERANT PRESSURE SENSOR

Check refrigerant pressure sensor. Refer to EC-565. "Component Function Check".

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair or replace malfunctioning parts.

 $\mathbf{3.}$ CHECK A/C AUTO AMP. OUTPUT SIGNAL

With CONSULT

Check "COMP REQ SIG" and "FAN REQ SIG" in "DATA MONITOR" mode of "HVAC" using CONSULT.

Monitor item	Condition		Status
COMP REQ SIG	A/C switch	ON	On
		OFF	Off
FAN REQ SIG	Front blower motor	ON	On
TANKEQ SIG		OFF	Off

Is the inspection result normal?

YES >> GO TO 4.

NO >> Replace A/C auto amp. Refer to <u>HAC-152</u>, "Removal and Installation".

**4.**CHECK ECM INPUT SIGNAL

#### With CONSULT

Check "AIR COND SIG" and "HEATER FAN SW" in "DATA MONITOR" mode of "ECM" using CONSULT.

Monitor item	Condition		Status
AIR COND SIG	A/C switch	ON	On
AIR COND SIG		OFF	Off
HEATER FAN SW Front blower motor	Front blower motor	ON	On
HEATEN TAN SW		OFF	Off

#### Is the inspection result normal?

YES >> GO TO 5.

NO >> Check CAN communication system. Refer to LAN-22, "Trouble Diagnosis Flow Chart".

**5.**CHECK IPDM E/R INPUT SIGNAL

(D) With CONSULT

1. Start engine.

[AUTOMATIC AIR CONDITIONING]

### COMPRESSOR DOSE DOT OPERATE

#### < SYMPTOM DIAGNOSIS >

#### [AUTOMATIC AIR CONDITIONING]

#### 2. Check "AC COMP REQ" in "DATA MONITOR" mode of "IPDM E/R" using CONSULT.

Monitor item	Condition		Status
AC COMP REQ	A/C switch	ON	On
		OFF	Off

Is the inspection result normal?

YES >> INSPECTION END

NO >> Check CAN communication system. Refer to LAN-22, "Trouble Diagnosis Flow Chart".

# REMOVAL AND INSTALLATION FRONT A/C CONTROL

Removal and Installation

#### REMOVAL

- 1. Remove cluster lid C. Refer to IP-14, "Removal and Installation".
- 2. Remove preset switch. Refer to AV-298. "Removal and Installation".
- 3. Disconnect harness connector from front A/C control.

#### INSTALLATION

Install in the reverse order of removal.

# REAR A/C CONTROL Removal and Installation INFOID:00000000010190 REMOVAL 1. Remove console rear finisher. Refer to IP-29, "Removal and Installation". 2. Remove fixing screws, and then remove rear A/C control. INSTALLATION Install in the reverse order of removal.

# A/C AUTO AMP.

#### Removal and Installation

INFOID:000000009010191

[AUTOMATIC AIR CONDITIONING]

#### REMOVAL

- 1. Remove cluster lid C lower. Refer to IP-14, "Removal and Installation".
- 2. Remove AV control unit. Refer to <u>AV-282, "Removal and Installation"</u>.
- 3. Disconnect harness connector from A/C auto amp..
- 4. Remove fixing screws, and then remove A/C auto amp..

#### INSTALLATION

Install in the reverse order of removal.

# AMBIENT SENSOR Removal and Installation INFOID:00000000010192 REMOVAL 1. Remove front grill. Refer to EXT-20. "Removal and Installation". 2. Disengage the pawl, and then remove ambient sensor from bracket. 3. Disconnect ambient sensor connector, and then remove the ambient sensor. INSTALLATION

Install in the reverse order of removal.

# IN-VEHICLE SENSOR

FRONT A/C UNIT ASSEMBLY

#### FRONT A/C UNIT ASSEMBLY : Removal and Installation

INFOID:000000009010193

#### REMOVAL

- 1. Remove instrument lower panel LH. Refer to <u>IP-14, "Removal and Installation"</u>.
- 2. Remove fixing screw, and then remove in-vehicle sensor.

#### INSTALLATION

Install in the reverse order of removal. REAR A/C UNIT ASSEMBLY

#### REAR A/C UNIT ASSEMBLY : Removal and Installation

INFOID:000000009010194

#### REMOVAL

- 1. Remove rear A/C unit assembly. Refer to <u>HA-48, "REAR A/C UNIT ASSEMBLY : Removal and Installa-</u> tion".
- 2. Remove the intake sensor from rear A/C unit assembly.

#### INSTALLATION

Note the following items, and install in the reverse order of removal.

**CAUTION:** 

- Replace O-rings with new ones. Then apply the compressor oil to them when installing.
- Mark the mounting position of intake sensor bracket prior to removal so that the reinstalled sensor can be located in the same position.
- Never rotate the bracket insertion part when removing and installing the intake sensor.
- Check for leakages when recharging refrigerant. Refer to <u>HA-18, "Leak Test"</u>.

#### < REMOVAL AND INSTALLATION > SUNLOAD SENSOR

Removal	and	Installation	
---------	-----	--------------	--

REMOVAL	
---------	--

RE	MOVAL	В
1.	Remove upper ventilator grill RH. Refer to <u>VTL-10, "UPPER VENTILATOR GRILLE : Removal and Instal-</u> lation".	
2.	Remove sunload sensor from front defroster grill RH.	С

3. Disconnect harness connector from sunload sensor.

#### **INSTALLATION**

Install in the reverse order of removal.

# INTAKE SENSOR

**Exploded View** 

Refer to HA-42, "Exploded View".

Removal and Installation

#### REMOVAL

- 1. Remove the front evaporator assembly. Refer to HA-44, "EVAPORATOR : Removal and Installation".
- 2. Remove the intake sensor from front evaporator.

#### INSTALLATION

Note the following items, and install in the reverse order of removal.

CAUTION:

- Replace O-rings with new ones. Then apply the compressor oil to them when installing.
- Mark the mounting position of intake sensor bracket prior to removal so that the reinstalled sensor can be located in the same position.
- Never rotate the bracket insertion part when removing and installing the intake sensor.
- Check for leakages when recharging refrigerant. Refer to <u>HA-18, "Leak Test"</u>.

- 1. Rear A/C unit assembly Rear mode door motor
- 2. Rear mode door lever 2 5. Rear air mix door motor
- 3. Rear mode door lever 1

# MODE DOOR MOTOR

#### MODE DOOR MOTOR : Removal and Installation

#### REMOVAL

4.

- Remove instrument lower panel RH. Refer to <u>IP-14, "Removal and Installation"</u>.
- 2. Remove power steering control unit bracket.
- 3. Remove fixing screws (A), and then remove mode door motor (1).
- 4. Disconnect mode door motor connector.

INSTALLATION Install in the reverse order of removal. AIR MIX DOOR MOTOR

#### AIR MIX DOOR MOTOR : Removal and Installation

#### REMOVAL

#### Driver side

- Remove automatic drive position control unit. Refer to <u>ADP-137, "Removal and Installation"</u>.
- 2. Remove fixing screws (A), and then remove air door motor LH (1).
- 3. Disconnect air mix door motor connector.

#### Passenger side

- Remove heater core. Refer to HA-45, "HEATER CORE : Removal and Installation". 1.
- Remove fixing screws, and then remove air mix door motor RH.

#### INSTALLATION

Install in the reverse order of removal. INTAKE DOOR MOTOR

#### INTAKE DOOR MOTOR : Removal and Installation

#### REMOVAL

- 1. Remove blower unit assembly. Refer to VTL-15, "Removal and Installation".
- 2. Remove fixing screws, and then remove intake door motor.
