## PRECAUTIONS

< PRECAUTION >

# PRECAUTION

## PRECAUTIONS

### Removal and Installation

INFOID:0000000011323533

#### CAUTION:

- Be sure to use genuine exhaust system parts or equivalents which are specially designed for heat resistance, corrosion resistance, and shape.
- Perform the operation with the exhaust system fully cooled down because the system will be hot just after engine stops.
- Be careful not to cut your hand on the heat insulator edge.

### Precautions for Removing Battery Terminal

INFOID:0000000011323534

- When removing the 12V battery terminal, turn OFF the ignition switch and wait at least 30 seconds.

#### NOTE:

ECU may be active for several tens of seconds after the ignition switch is turned OFF. If the battery terminal is removed before ECU stops, then a DTC detection error or ECU data corruption may occur.

- For vehicles with the 2-batteries, be sure to connect the main battery and the sub battery before turning ON the ignition switch.

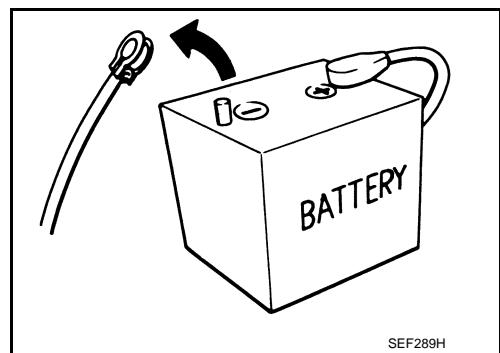

#### NOTE:

If the ignition switch is turned ON with any one of the terminals of main battery and sub battery disconnected, then DTC may be detected.

- After installing the 12V battery, always check "Self Diagnosis Result" of all ECUs and erase DTC.

#### NOTE:

The removal of 12V battery may cause a DTC detection error.

### PERIODIC MAINTENANCE EXHAUST SYSTEM

#### Inspection

INFOID:0000000011323536

Check exhaust pipes, muffler, and mounting for improper attachment, leakage, cracks, damage or deterioration.

- If anything is found, repair or replace damaged parts.

## < REMOVAL AND INSTALLATION >

### Removal and Installation

INFOID:000000011323538

#### REMOVAL

Disconnect each joint and mounting using power tool.

#### INSTALLATION

Note the following, and install in the reverse order of removal.

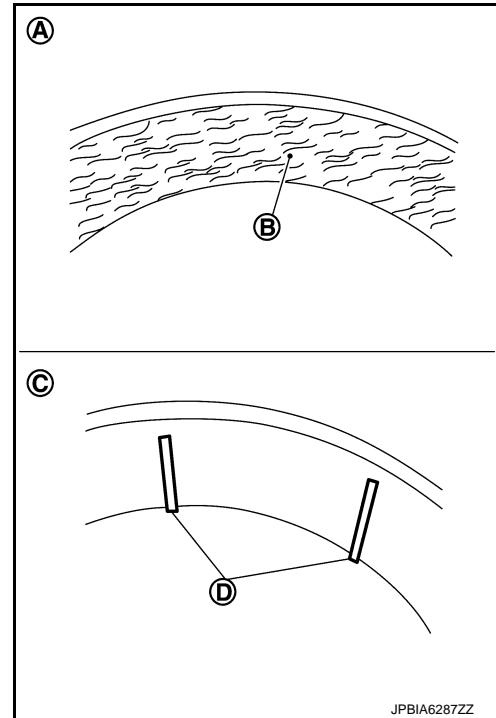

##### CAUTION:

- Always replace exhaust tube gaskets with new ones when reassembling.
- If heat insulator is badly deformed, repair or replace it. If deposits such as mud pile up on the heat insulator, remove them.
- When installing heat insulator avoid large gaps or interference between heat insulator and each exhaust pipe.
- Remove deposits from the sealing surface of each connection. Connect them securely to avoid gas leakage.
- Temporarily tighten mounting nuts and bolts. Check each part for unusual interference, and then tighten them to the specified torque.
- When installing each mounting rubber, avoid twisting or unusual extension in up/down and right/left directions.
- Install seal bearing according to the following instructions.

##### CAUTION:

The structure of seal bearing depends on the mounting portion. When installing seal bearings, be careful not to install wrong one.

- (A) : Exhaust manifold side
- (B) : Mesh
- (C) : Exhaust front tube side
- (D) : Pawl (projection)

JPBIA6287ZZ

#### Exhaust Front Tube to Center Muffler

1. Securely insert seal bearing (2) into exhaust front tube (1) side in the direction shown in the figure.

- 3 : Spring
- 4 : Bolt
- 5 : Center muffler

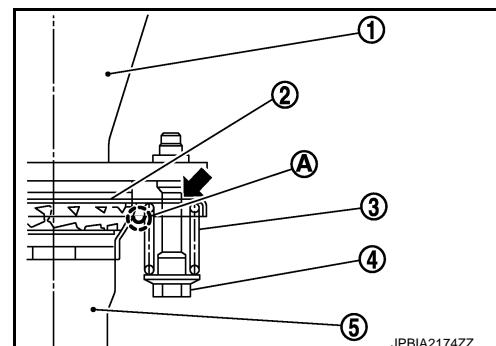

##### CAUTION:

Be careful not to damage seal bearing surface when installing.

2. With spring, tighten bolt.

##### CAUTION:

- Ensure springs are seated correctly on the flange and not sitting on (A).
- Be careful that bolt does not interfere with mounting hole of center muffler (←).

JPBIA2174ZZ

# EXHAUST SYSTEM

## < REMOVAL AND INSTALLATION >

- After installing, check that bolt does not interfere with mounting hole of center muffler.

## Inspection

INFOID:0000000011323539

### INSPECTION AFTER INSTALLATION

- Check clearance between tail tube and rear bumper is even at right and left.
- With engine running, check exhaust tube joints for gas leakage and unusual noises.
- Check to ensure that mounting brackets and mounting rubbers are installed properly and free from undue stress. Improper installation could result in excessive noise and vibration.
