## < PRECAUTION > PRECAUTION PRECAUTIONS

#### Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the "SRS AIR BAG" and "SEAT BELT" of this Service Manual.

#### WARNING:

Always observe the following items for preventing accidental activation.

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see "SRS AIR BAG".
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

#### PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

#### WARNING:

Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

#### Precaution for Procedure without Cowl Top Cover

INFOID:000000009651344

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc to prevent damage to windshield.

#### PRECAUTIONS

#### Precautions for Removing Battery Terminal

• When removing the 12V battery terminal, turn OFF the ignition switch and wait at least 30 seconds.

#### NOTE:

< PRECAUTION >

ECU may be active for several tens of seconds after the ignition switch is turned OFF. If the battery terminal is removed before ECU stops, then a DTC detection error or ECU data corruption may occur.

• For vehicles with the 2-batteries, be sure to connect the main battery and the sub battery before turning ON the ignition switch. **NOTE:** 

If the ignition switch is turned ON with any one of the terminals of main battery and sub battery disconnected, then DTC may be detected.

After installing the 12V battery, always check "Self Diagnosis Result" of all ECUs and erase DTC.
 NOTE:

The removal of 12V battery may cause a DTC detection error.

#### Precaution for Brake System

#### WARNING:

Since dust covering the front and rear brakes has an affect on human body, the dust must be removed <sup>G</sup> with a dust collector. Never splatter the dust with an air blow gun.

- Brake fluid use refer to <u>MA-10, "Fluids and Lubricants"</u>.
- Never reuse drained brake fluid.
- Never spill or splash brake fluid on painted surfaces. Brake fluid may seriously damage paint. Wipe it off immediately and wash with water if it gets on a painted surface.
- Always confirm the specified tightening torque when installing the brake pipes.
- After pressing the brake pedal more deeply or harder than normal driving, such as air bleeding, check each item of brake pedal. Adjust brake pedal if it is outside the standard value.
- Never use mineral oils such as gasoline or light oil to clean. They may damage rubber parts and cause improper operation.
- Always loosen the brake tube flare nut with a flare nut wrench.
- Tighten the brake tube flare nut to the specified torque with a crowfoot (A) and torque wrench (B).
- Turn the ignition switch OFF and disconnect the ABS actuator and electric unit (control unit) harness connector or the battery negative terminal before performing the work.
- Check that no brake fluid leakage is present after replacing the parts.

#### Precaution for Brake Control System

- Always perform a pre-driving check to drive the vehicle.
- Always check speed and safety while driving the vehicle.
- To operate CONSULT while driving, more than one person is required to be in the vehicle to avoid interference to driving and ensure safety.
- Slight vibrations are felt on the brake pedal and the operation noises occur, when VDC function, TCS function, ABS function EBD function or brake limited slip differential (BLSD) function operates. This is not a malfunction because it is caused by VDC function, TCS function, ABS function EBD function or brake limited slip differential (BLSD) function that is normally operated.
- When starting engine or when starting vehicle just after starting engine, brake pedal may vibrate or motor operating noise may be heard from engine compartment. This is normal condition.
- Brake stopping distance may become longer than models without ABS function depending on the road conditions, when ABS function is operated on slippery road like rough road, gravel road or snowy road.

Ρ

BRC

Н

INFOID:000000009972283

#### PRECAUTIONS

#### < PRECAUTION >

- When a malfunction is indicated, always collect information from the customer about conditions of occurrence, estimate cause and perform operation. Check brake booster operation, brake fluid level and brake fluid leakage, as well as electrical system.
- The optimum performance is achieved by control for VDC function, TCS function, ABS function EBD function and brake limited slip differential (BLSD) function when all of brakes, suspensions and tires installed on the vehicle are the specified size and parts. Brake performance and controllability may be negatively affected when other parts than the specified are installed.
- Brake stopping distance may become longer and steering stability may be negatively affected, when tires in different size and combination or other parts than the specified are used.
- When a radio (including wiring), antenna and antenna lead line are located near ABS actuator and electric unit (control unit), a malfunction or improper operation may occur for the control of VDC function, TCS function, ABS function EBD function and brake limited slip differential (BLSD) function.
- When the following items are replaced by other parts than genuine parts or modified, ABS warning lamp, brake warning lamp and VDC warning lamp may turn ON, and the control may not operate normally for VDC function, TCS function, ABS function EBD function and brake limited slip differential (BLSD) function.
- Suspension component parts (shock absorber, spring, bushing and others)
- Tire and wheel (other than the specified size)
- Brake component parts (brake pad, disc rotor, brake caliper and others)
- Engine component parts (ECM, muffler and others)
- Body reinforcement component parts (rollover bar, tower bar and others)
- When suspension, tire and brake component parts are excessively worn or deteriorated and the vehicle is driven, ABS warning lamp, brake warning lamp and VDC warning lamp may turn ON, and the control may not operate normally for VDC function, TCS function, ABS function EBD function and brake limited slip differential (BLSD) function.
- ABS warning lamp, brake warning lamp and VDC warning lamp may turn ON, when only front wheel or rear wheel is rotated using a free roller. This is not a malfunction, because it is caused by wheel speed difference between wheel that is rotated and wheel that is not rotated. In this case, perform self-diagnosis, check selfdiagnosis results, and erase memory.
- When power supply voltage is not normal, ABS warning lamp, brake warning lamp and VDC warning lamp turn ON. ABS actuator and electric unit (control unit) stops control for VDC function, TCS function, ABS function EBD function and brake limited slip differential (BLSD) function. Ordinary brake operates. After power supply returns to normal, ABS warning lamp, brake warning lamp and VDC warning lamp turn OFF. The control becomes operative for VDC function, TCS function, ABS function, ABS function (BLSD) function and brake limited slip differential (BLSD) function and brake limited slip differential (BLSD) function.
- Brake pedal vibrates and operation sound occurs during sudden acceleration and cornering, when VDC function, TCS function or brake limited slip differential (BLSD) function is operated. This is not a malfunction because it is caused by VDC function, TCS function or brake limited slip differential (BLSD) function that is operated normally.
- VDC warning lamp may turn ON and VDC function, TCS function and brake limited slip differential (BLSD) function may not normally operate, when driving on a special road the is extremely slanted (bank in a circuit course). This is not a malfunction if the status returns to normal for VDC function, TCS function and brake limited slip differential (BLSD) function after the engine is started again. In this case, perform self-diagnosis, check self-diagnosis results, and erase memory.
- A malfunction in yaw rate/side G sensor system may be detected when the vehicle sharply turns during a spin turn, acceleration turn or drift driving while VDC function, TCS function and brake limited slip differential (BLSD) function are OFF (VDC OFF switch is pressed and VDC OFF indicator lamp is in ON status). This is not a malfunction if the status returns to normal for VDC function, TCS function and brake limited slip differential (BLSD) function after the engine is started again. In this case, perform self-diagnosis, check self-diagnosis results, and erase memory.

#### PRECAUTIONS

#### < PRECAUTION >

#### Precaution for Harness Repair

• Solder the repair part, and wrap it with tape. [Twisted wire fray must be 110 mm (4.33 in) or less.]

[WITH VDC]

• Never bypass the repair point with wire. (If it is bypassed, the turnout point cannot be separated and the twisted wire characteristics are lost.)

#### ABS Actuator and Electric Unit (Control Unit)

INFOID:000000009651350

Electric unit (control unit) is integrated with actuator and comprehensively controls VDC function, TCS function, ABS function, EBD function and brake limited slip differential (BLSD) function.

#### ELECTRIC UNIT (CONTROL UNIT)

- Brake fluid pressure, engine and transaxle are controlled according to signals from each sensor.
- If malfunction is detected, the system enters fail-safe mode.

#### ACTUATOR

The following components are integrated with ABS actuator.

Pump

Feeds brake fluid by the motor.

Motor

Activates the pump according to signals from ABS actuator and electric unit (control unit).

Motor Relay

Operates the motor ON/OFF according to signals from ABS actuator and electric unit (control unit).

#### Actuator Relay (Main Relay)

Operates each valve ON/OFF according to signals from ABS actuator and electric unit (control unit).

ABS IN Valve

Switches the fluid pressure line to increase or hold according to signals from control unit.

NOTE:

Valve is a solenoid valve.

ABS OUT Valve

Switches the fluid pressure line to increase, hold or decrease according to signals from control unit. **NOTE:** 

Valve is a solenoid valve.

Cut Valve 1, Cut Valve2

Shuts off the ordinary brake line from master cylinder, when VDC function, TCS function and brake limited slip differential (BLSD) function are activated.

Suction Valve 1, Suction Valve 2

#### **BRC-10**

- Steering wheel rotation angular velocity
- Steering wheel rotation direction

#### Yaw Rate/Side G Sensor

Calculates the following information that affects the vehicle, and transmits a signal to ABS actuator and electric unit (control unit) via communication lines.

#### BRC-11

INFOID:000000009651354

Ρ

#### **COMPONENT PARTS**

#### < SYSTEM DESCRIPTION >

• Vehicle rotation angular velocity (yaw rate signal)

Vehicle lateral acceleration (side G signal)

#### Brake Fluid Level Switch

INFOID:000000009651355

[WITH VDC]

Detects the brake fluid level in reservoir tank and transmits converted electric signal from combination meter to ABS actuator and electric unit (control unit) via CAN communication, when brake fluid level is the specified level or less.

#### VDC OFF Switch

INFOID:000000009651356

- This is an integrated switch with switches for other functions.
- Non-operational status or standby status of the following functions can be selected using VDC OFF switch.
   VDC OFF indicator lamp indicates the operation status of function. (ON: Non-operational status, OFF: Standby status)
- VDC function
- TCS function

#### NOTE:

- ABS function, EBD function and Brake limited slip differential (BLSD) function control operates.
- VDC OFF indicator lamp turns OFF (standby status) when the engine is started again after it is stopped once while VDC OFF indicator lamp is ON (non-operational status).

#### < SYSTEM DESCRIPTION >

#### SYSTEM

#### System Description

- The system switches fluid pressure of each brake caliper to increase, to hold or to decrease according to signals from control unit in ABS actuator and electric unit (control unit). This control system is applied to VDC function, TCS function, ABS function, EBD function and brake limited slip differential (BLSD) function.
- Fail-safe function is available for each function and is activated by each function when system malfunction occurs.

#### SYSTEM DIAGRAM

VALVE OPERATION [VDC FUNCTION, TCS FUNCTION AND BRAKE LIMITED SLIP DIFFERENTIAL (BLSD) FUNCTION

#### < SYSTEM DESCRIPTION >

#### [WITH VDC]

The following descriptions explains the control of front brake right side, as an example.

#### When Pressure Increases

The control unit closes the cut valve 1 port and opens the suction valve 1 port by supplying current to the cut valve 1 and the suction valve 1. Fluid pressure generated in the master cylinder passes through the suction valve 1 and the fluid pressure is pressurized by the pump. Since power is not applied to the ABS IN valve and the ABS OUT valve, the port of ABS IN valve is open and that of the ABS out valve is closed. This enables the supply of intensified fluid pressure to the front RH caliper.

#### When Pressure Holds

The control unit closes the cut valve 1 port by supplying current to the cut valve 1. Since power is not applied to the suction valve 1, the suction valve 1 port closes. The ABS IN valve port opens and the ABS OUT valve port closes because power is not supplied to the ABS OUT valve. Since each port of the cut valve 1 and suc-

#### < SYSTEM DESCRIPTION >

tion valve 1 is closed, the paths to the master cylinder, front RH caliper, and pump and reservoir are cut to maintain fluid pressure of the front RH caliper.

#### When Pressure Decreases

Since power is not supplied to the cut valve 1, suction valve 1, ABS IN valve, and ABS OUT valve, each port of the suction valve 1 and the ABS OUT valve is closed and the ports of the cut valve 1 and the ABS IN valve are open. This allows front RH caliper fluid pressure to flow into the cylinder side.

#### Component Parts and Function

Component	Function
Pump	Feeds brake fluid by the motor.
Motor	Activates the pump according to signals from ABS actuator and electric unit (control unit).
ABS IN valve	Switches the fluid pressure line to increase or hold according to signals from control unit.
ABS OUT valve	Switches the fluid pressure line to increase, hold or decrease according to signals from control unit.
Cut valve 1 Cut valve 2	Shuts off the ordinary brake line from master cylinder, when VDC function, TCS function and brake limited slip differential (BLSD) function are activated.
Suction valve 1 Suction valve 2	Supplies the brake fluid from master cylinder to the pump, when VDC function, TCS function and brake limited slip differential (BLSD) function are activated.
Inlet valve	Brake fluid sucked from the reservoir by the pump does not backflow.
Outlet valve	Brake fluid discharged from the pump does not backflow.
Return check valve	Returns the brake fluid from brake caliper and wheel cylinder to master cylinder by bypassing orifice of each valve when brake is released.
Pressure sensor	Detects the brake fluid pressure and transmits signal to control unit.
Reservoir	Temporarily reserves the brake fluid drained from brake caliper, so that pressure efficiently decreases when decreasing pressure of brake caliper and wheel cylinder.
Damper	Reduces the vibrations travelling to the brake pedal during the operation of the VDC function, TCS function, ABS function, EBD function, or brake limited slip differential (BLSD) function.

VALVE OPERATION (ABS FUNCTION AND EBD FUNCTION)

#### < SYSTEM DESCRIPTION >

[WITH VDC]

The following descriptions explains the control of front brake right side, as an example.

#### Under Normal Brake Operation

Since power is not supplied to the ABS IN valve and the ABS OUT valve, the ABS IN valve port is open and the ABS OUT valve port is closed. This allows the master cylinder fluid pressure to be sent to the front RH caliper and blocks the brake fluid passage to the reservoir.

#### When Pressure Increases

The control unit pressurizes the inside of the brake caliper by opening the ABS IN valve port and closing the ABS OUT valve port. After breaking the circuit, the valves operate in the same way as described in "Under Normal Brake Operation." The fluid amount supplied from the master cylinder to the brake caliper is controlled, according to the power supply cut-off time (time to open the port) to the ABS IN valve.

When Pressure Holds

#### < SYSTEM DESCRIPTION >

The control unit passes an electric current to the ABS IN valve and closes the ABS IN valve port. Since power is not supplied to the ABS OUT valve, its port is closed. The paths to the brake caliper, master cylinder, and reservoir are cut off. This allows the front RH caliper fluid pressure to be maintained.

#### When Pressure Decreases

The control unit closes the ABS IN valve port and opens the ABS OUT valve port by supplying power to the ABS IN valve and the ABS OUT valve. The brake fluid of the front RH caliper passes through the ABS OUT valve to the reservoir and stays in the reservoir. After this the brake fluid is pumped up to return to the master cylinder.

#### When brake released

The fluid pressure returns from the front RH caliper to the master cylinder through the return check valve opened by the ABS IN valve port and fluid pressure.

#### Component Parts and Function

Component	Function
Pump	Feeds brake fluid by the motor.
Motor	Activates the pump according to signals from ABS actuator and electric unit (control unit).
ABS IN valve	Switches the fluid pressure line to increase or hold according to signals from control unit.
ABS OUT valve	Switches the fluid pressure line to increase, hold or decrease according to signals from control unit.
Cut valve 1 Cut valve 2	Shuts off the ordinary brake line from master cylinder, when VDC function, TCS function and brake limited slip differential (BLSD) function are activated.
Suction valve 1 Suction valve 2	Supplies the brake fluid from master cylinder to the pump, when VDC function, TCS function and brake limited slip differential (BLSD) function are activated.
Inlet valve	Brake fluid sucked from the reservoir by the pump does not backflow.
Outlet valve	Brake fluid discharged from the pump does not backflow.
Return check valve	Returns the brake fluid from brake caliper and wheel cylinder to master cylinder by bypassing orifice of each valve when brake is released.
Pressure sensor	Detects the brake fluid pressure and transmits signal to control unit.
Reservoir	Temporarily reserves the brake fluid drained from brake caliper, so that pressure efficiently decreases when decreasing pressure of brake caliper and wheel cylinder.
Damper	Reduces the vibrations travelling to the brake pedal during the operation of the VDC function, TCS function, ABS function, EBD function, or brake limited slip differential (BLSD) function.

#### CONDITION FOR TURN ON THE WARNING LAMP

Turns ON when ignition switch turns ON and turns OFF when the system is normal, for bulb check purposes.

Condition (status)	ABS warning lamp	Brake warning lamp	VDC warning lamp
Ignition switch OFF	OFF	OFF	OFF
For approx. 2 seconds after the ignition switch is turned ON	ON	ON	ON
Approx. 2 seconds after ignition switch is turned ON (when the system is in normal operation)	OFF	OFF	OFF
When parking brake operates (parking brake switch ON)	OFF	ON	OFF
When brake fluid is less than the specified level (brake fluid level switch ON)	OFF	ON	OFF
VDC function is malfunctioning	OFF	OFF	ON
TCS function is malfunctioning	OFF	OFF	ON
ABS function is malfunctioning	ON	OFF	ON
EBD function is malfunctioning	ON	ON	ON
Brake limited slip differential (BLSD) function is malfunctioning	OFF	OFF	ON
VDC function is operating	OFF	OFF	Blinking
TCS function is operating	OFF	OFF	Blinking

#### CONDITION FOR TURN ON THE INDICATOR LAMP

#### < SYSTEM DESCRIPTION >

#### [WITH VDC]

 Turns ON when VDC function and TCS function are switched to non-operational status (OFF) by VDC OFF switch.

• Turns ON when ignition switch turns ON and turns OFF when the system is normal, for bulb check purposes.

Condition (status)	VDC OFF indicator lamp	В
Ignition switch OFF	OFF	
For approx. 2 seconds after the ignition switch is turned ON	ON	
Approx. 2 seconds after ignition switch is turned ON (when the system is in normal operation)	OFF	С
When VDC OFF switch is ON (VDC function and TCS function are OFF)	ON	D

VDC FUNCTION, TCS FUNCTION AND BRAKE LIMITED SLIP DIFFERENTIAL (BLSD) FUNCTION VDC warning lamp in combination meter turn ON when a malfunction occurs in system [ABS actuator and electric unit (control unit)]. The control is suspended for VDC function, TCS function and brake limited slip dif-

#### < SYSTEM DESCRIPTION >

[WITH VDC]

ferential (BLSD) function. The vehicle status becomes the same as models without VDC function, TCS function and brake limited slip differential (BLSD) function. However, ABS function and EBD function are operated А normally.

#### **ABS FUNCTION**

В ABS warning lamp and VDC warning lamp in combination meter turn ON when a malfunction occurs in system [ABS actuator and electric unit (control unit)]. The control is suspended for VDC function, TCS function, ABS function and brake limited slip differential (BLSD) function. The vehicle status becomes the same as models without VDC function, TCS function, ABS function and brake limited slip differential (BLSD) function. However, EBD function is operated normally.

#### NOTE:

ABS self-diagnosis sound may be heard the same as in the normal condition, because self-diagnosis is performed when ignition switch turns ON and when vehicle initially starts.

#### EBD FUNCTION

ABS warning lamp, brake warning lamp and VDC warning lamp in combination meter turn ON when a malfunction occurs in system [ABS actuator and electric unit (control unit)]. The control is suspended for VDC function, TCS function, ABS function, EBD function and brake limited slip differential (BLSD) function. The vehicle status becomes the same as models without VDC function, TCS function, ABS function, EBD function BRC and brake limited slip differential (BLSD) function.

#### VDC FUNCTION

#### VDC FUNCTION : System Description

- Side slip or tail slip may occur while driving on a slippery road or intending an urgent evasive driving. VDC function detects side slip status using each sensor when side slip or tail slip is about to occur and improves vehicle stability by brake control and engine output control during driving.
- In addition to ABS function, EBD function and TCS function, target side slip amount is calculated according to steering operation amount from steering angle sensor. By comparing this information with vehicle side slip amount that is calculated from information from yaw rate/side G sensor and wheel sensor, vehicle driving conditions (conditions of understeer or oversteer) are judged and vehicle stability is improved by brake force control on all 4 wheels and engine output control.

- VDC function can be switched to non-operational status (OFF) by operating VDC OFF switch. In this case, VDC OFF indicator lamp turns ON.
- Control unit portion automatically improves driving stability by performing brake force control as well as engine output control, by transmitting drive signal to actuator portion according to difference between target side slip amount and vehicle side slip amount
- VDC warning lamp blinks while VDC function is in operation and indicates to the driver that the function is in operation.
- CONSULT can be used to diagnose the system diagnosis.
- Fail-safe function is adopted. When a malfunction occurs in VDC function, the control is suspended for VDC function, TCS function and brake limited slip differential (BLSD) function. The vehicle status becomes the same as models without VDC function, TCS function and brake limited slip differential (BLSD) function. However, ABS function and EBD function are operated normally. Refer to BRC-20, "Fail-safe". Ρ NOTE:

VDC has the characteristic as described here, This is not the device that helps reckless driving.

#### **OPERATION CHARACTERISTICS**

VDC Function That Prevents Oversteer Tendency

 During a cornering, brake force (brake fluid pressure) is applied on front wheel and rear wheel on the outer side of turn. Moment directing towards the outer side of turn is generated. Oversteer is prevented.

 Changing driving lane on a slippery road, when oversteer tendency is judged large, engine output is controlled as well as brake force (brake fluid pressure) of 4 wheels. Oversteer tendency decreases.

VDC Function That Prevents Understeer Tendency

 During a cornering, brake force (brake fluid pressure) is applied on front wheel and rear wheel on the inner side of turn. Moment directing towards the inner side of turn is generated. Understeer is prevented.

 Applying braking during a cornering on a slippery road, when understeer tendency is judged large, engine output is controlled as well as brake force (brake fluid pressure) of four wheels. Understeer tendency decreases.

#### TCS FUNCTION

Е

А

В

[WITH VDC]

M

Ν

P

< SYSTEM DESCRIPTION >

#### **TCS FUNCTION : System Description**

- Wheel spin status of drive wheel is detected by wheel sensor of 4 wheels. Engine output and transmission shift status is controlled so that slip rate of drive wheels is in appropriate level. When wheel spin occurs on drive wheel, ABS actuator and electric unit (control unit) perform brake force control of LH and RH drive wheels (apply brake force by increasing brake fluid pressure of drive wheel) and decrease engine torque by engine torque control. Wheel spin amount decreases. Engine torque is controlled to appropriate level.
- TCS function can be switched to non-operational status (OFF) by operating VDC OFF switch. In this case, VDC OFF indicator lamp turns ON.
- VDC warning lamp blinks while TCS function is in operation and indicates to the driver that the function is in operation.
- CONSULT can be used to diagnose the system diagnosis.
- Fail-safe function is adopted. When a malfunction occurs in TCS function, the control is suspended for VDC function, TCS function and brake limited slip differential (BLSD) function. The vehicle status becomes the same as models without VDC function, TCS function and brake limited slip differential (BLSD) function. However, ABS function and EBD function are operated normally. Refer to <u>BRC-20, "Fail-safe"</u>.

*: Communication line between	vaw rate/side G sensor and ABS actuator and electric unit (control unit)	

\*: Communication line between yaw rate/side G sensor and ABS actuator and electric unit (control unit) ABS FUNCTION

#### ABS FUNCTION : System Description

- By preventing wheel lock through brake force (brake fluid pressure) control that is electronically controlled by detecting wheel speed during braking, stability during emergency braking is improved so that obstacles can be easily bypassed by steering operation.
- During braking, control units calculates wheel speed and pseudo-vehicle speed, and transmits pressure increase, hold or decrease signals to actuator portion according to wheel slip status.

M

L

J

INFOID:000000009651362

Ν

0

Р

- The following effects are obtained by preventing wheel lock during braking.
- Vehicle tail slip is prevented during braking when driving straight.
- Understeer and oversteer tendencies are moderated during braking driving on a corner.
- Obstacles may be easily bypassed by steering operation during braking.
- CONSULT can be used to diagnose the system diagnosis.
- Fail-safe function is adopted. When a malfunction occurs in ABS function, the control is suspended for VDC function, TCS function, ABS function and brake limited slip differential (BLSD) function. The vehicle status becomes the same as models without VDC function, TCS function, ABS function and brake limited slip differential (BLSD) function. However, EBD function is operated normally. Refer to <u>BRC-20, "Fail-safe"</u>.

#### NOTE:

- ABS has the characteristic as described here, but it is not the device that helps reckless driving.
- To stop vehicle efficiently, ABS does not operate and ordinary brake operates at low speed [approx. 10 km/h (6.2 MPH) or less, but differs subject to road conditions).
- Self-diagnosis is performed immediately after when engine starts and when vehicle initially is driven [by vehicle speed approx. 15 km/h (9.3 MPH)]. Motor sounds are generated during self-diagno-

sis. In addition, brake pedal may be felt heavy when depressing brake pedal lightly. These symptoms are not malfunctions.

#### SYSTEM DIAGRAM

#### INPUT SIGNAL AND OUTPUT SIGNAL

Major signal transmission between each unit via communication lines is shown in the following table.

\*: Communication line between yaw rate/side G sensor and ABS actuator and electric unit (control unit) EBD FUNCTION

#### EBD FUNCTION : System Description

- BRC
- By preventing rear wheel slip increase through rear wheel brake force (brake fluid pressure) control that is electronically controlled when slight skip on front and rear wheels are detected during braking, stability during braking is improved.
- EBD function is expanded and developed from conventional ABS function and corrects rear wheel brake force to appropriate level by electronic control according to load weight (number of passengers).

- During braking, control unit portion compares slight slip on front and rear wheels by wheel speed sensor signal, transmits drive signal to actuator portion when rear wheel slip exceeds front wheel slip for the specified value or more, and controls rear wheel brake force (brake fluid pressure) so that increase of rear wheel slip is prevented and slips on front wheel and rear wheel are nearly equalized. ABS control is applied when slip on each wheel increases and wheel speed is the threshold value of ABS control or less.
- CONSULT can be used to diagnose the system diagnosis.
- Fail-safe function is adopted. When a malfunction occurs in EBD function, the control is suspended for VDC function, TCS function, ABS function, EBD function and brake limited slip differential (BLSD) function. The vehicle status becomes the same as models without VDC function, TCS function, ABS function, EBD function and brake limited slip differential (BLSD) function. Refer to BRC-20, "Fail-safe".

#### SYSTEM DIAGRAM

#### INPUT SIGNAL AND OUTPUT SIGNAL

Major signal transmission between each unit via communication lines is shown in the following table.

Component	Signal description	
Combination meter	<ul> <li>Mainly receives the following signals from ABS actuator and electric unit (control unit) via CAN communication.</li> <li>VDC warning lamp signal</li> <li>ABS warning lamp signal</li> <li>Brake warning lamp signal</li> </ul>	

#### BRAKE LIMITED SLIP DIFFERENTIAL (BLSD) FUNCTION

#### BRAKE LIMITED SLIP DIFFERENTIAL (BLSD) FUNCTION : System Description

INFOID:000000009651364

- LH and RH driving wheel spin is always monitored. If necessary, appropriate brake force is independently applied to LH or RH driving wheel so that one-sided wheel spin is avoided and traction is maintained. Mainly starting ability is improved.
- Brake limited slip differential (BLSD) function operates while VDC function is in non-operational status (OFF) by VDC OFF switch.
- VDC warning lamp blinking while brake limited slip differential (BLSD) function is in operation and indicates to the driver that the function is in operation.
- Slight vibrations are felt on the brake pedal and the operation noises occur, when brake limited slip differential (BLSD) function operates. This is not a malfunction because it is caused by brake limited slip differential (BLSD) function that is normally operated.
- CONSULT can be used to diagnose the system diagnosis.
- Fail-safe function is adopted. When a malfunction occurs in brake limited slip differential (BLSD) function, the control is suspended for VDC function, TCS function and brake limited slip differential (BLSD) function. The vehicle status becomes the same as models without VDC function, TCS function and brake limited slip differential (BLSD) function. However, ABS function and EBD function are operated normally. Refer to <u>BRC-20. "Fail-safe"</u>.

## DIAGNOSIS SYSTEM [ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)]

#### **CONSULT** Function

INFOID:000000009651365

#### APPLICATION ITEMS

CONSULT can display each diagnostic item using the diagnostic test modes as follows.

Mode	Function description
ECU identification	Parts number of ABS actuator and electric unit (control unit) can be read.
Self Diagnostic Result	Self-diagnostic results and freeze frame data can be read and erased quickly.*
DATA MONITOR	Input/Output data in the ABS actuator and electric unit (control unit) can be read.
ACTIVE TEST	Diagnostic Test Mode in which CONSULT drives some actuators apart from the ABS actuator and elec- tric unit (control unit) and also shifts some parameters in a specified range.
Function Test	Although "Function Test" is selectable, do not use its.
Work support	Components can be quickly and accurately adjusted.

\*: The following diagnosis information is erased by erasing.

- DTC
- Freeze frame data (FFD)

#### ECU IDENTIFICATION ABS actuator and electric unit (control unit) part number can be read.

#### SELF DIAGNOSTIC RESULT Refer to <u>BRC-38. "DTC Index"</u>.

When "CRNT" is displayed on self-diagnosis result • The system is presently malfunctioning.

When "PAST" is displayed on self-diagnosis result

• System malfunction in the past is detected, but the system is presently normal.

#### Freeze frame data (FFD)

When DTC is detected, a vehicle state shown below is recorded and displayed on CONSULT.

Item name	Display item
IGN counter (0 – 39)	<ul> <li>The number of times that ignition switch is turned ON after the DTC is detected is displayed.</li> <li>When "0" is displayed: It indicates that the system is presently malfunctioning.</li> <li>When except "0" is displayed: It indicates that system malfunction in the past is detected, but the system is presently normal.</li> <li>NOTE:</li> <li>Each time when ignition switch is turned OFF to ON, numerical number increases in 1 → 2 → 338 → 39. When the operation number of times exceeds 39, the number do not increase and "39" is displayed until self-diagnosis is erased.</li> </ul>

#### DATA MONITOR **NOTE**:

\*: Refer to <u>BRC-13</u>, "System Description" for ON/OFF conditions of each warning lamp and indicator lamp.

#### ACTIVE TEST

The active test is used to determine and identify details of a malfunction, based on self-diagnosis test result sand data obtained in the DATA MONITOR. In response to instructions from CONSULT, instead of those from ABS actuator and electric unit (control unit) on the vehicle, a drive signal is sent to the actuator to check its operation.

#### **CAUTION:**

- Never perform ACTIVE TEST while driving the vehicle.
- Always bleed air from brake system before ACTIVE TEST.
- Never perform ACTIVE TEST when system is malfunctioning.

#### NOTE:

- When active test is performed while depressing the pedal, the pedal depressing stroke may change. This is not a malfunction.
- "TEST IS STOPPED" is displayed approx. 10 seconds after operation start.
- When performing active test again after "TEST IS STOPPED" is displayed, select "BACK".
- ABS warning lamp and brake warning lamp may turn ON during active test. This is not a malfunction.

#### < ECU DIAGNOSIS INFORMATION >

Monitor item	Condition	Reference values in normal operation
	When ABS warning lamp is ON <sup>*3</sup>	On
ABS WARN LAMP	When ABS warning lamp is OFF <sup>*3</sup>	Off
	When VDC OFF indicator lamp is ON <sup>*3</sup>	On
OFF LAMP	When VDC OFF indicator lamp is OFF <sup>*3</sup>	Off
	VDC OFF switch ON	On
OFF SW	VDC OFF switch OFF	Off
	When VDC warning lamp is ON <sup>*3</sup>	On
SLIP/VDC LAMP	When VDC warning lamp is OFF <sup>*3</sup>	Off
BATTERY VOLT	Ignition switch ON	10 – 16 V
GEAR	Driving	1 – 6 Depending on shift status
SLCT LVR POSI	When ignition switch is ON	P, R, N, D
ENGINE SPEED	Engine stopped	0 rpm
	Engine running	Almost same reading as tachometer
	Vehicle stopped	Approx. 0 d/s
YAW RATE SEN	Turning right	Negative value
	Turning left	Positive value
P POSI SIC	When selector lever is in the R position	On
R FOSI SIG	When selector lever is in the other position than R	Off
	When selector lever is in the N position	On
N POSI SIG	When selector lever is in the other position than N	Off
P POSI SIC	When selector lever is in the P position	On
P POSI SIG	When selector lever is in the other position than P	Off
0\/4*2	Active	On
CV1 -	Not activated	Off
0.10*2	Active	On
CV2 -	Not activated	Off
≥\/4 <sup>*</sup> 2	Active	On
501-	Not activated	Off
	Active	On
5v2 -	Not activated	Off
ACCEL POS SIG	Never depress accelerator pedal (with ignition switch ON)	0%
	Depress accelerator pedal (with ignition switch ON)	0 – 100%
	Vehicle stopped	Approx. 0 m/s <sup>2</sup>
SIDE G-SENSOR	Turning right	Negative value
	Turning left	Positive value
	When driving straight	0±3.5°
STR ANGLE SIG	When steering wheel is steered to LH by $90^{\circ}$	Approx. –90°
	When steering wheel is steered to RH by $90^\circ$	Approx. +90°
	Brake pedal not depressed	Approx. 0 bar
PRESS SENSOR	Brake pedal depressed	(–40) – (+300 bar)
	EBD is activated	On
EBD SIGNAL	EBD is not activated	Off
## ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

[WITH VDC]

Monitor item	Condition	Reference values in normal operation	
	ABS is activated	On	A
ABS SIGNAL	ABS is not activated	Off	
	TCS is activated	On	В
ICS SIGNAL	TCS is not activated	Off	
	VDC is activated	On	
VDC SIGNAL	VDC is not activated	Off	С
	In EBD fail-safe	On	
EBD FAIL SIG	EBD is normal	Off	D
	In ABS fail-safe	On	
ABS FAIL SIG	ABS is normal	Off	
	In TCS fail-safe	On	E
TCS FAIL SIG	TCS is normal	Off	
	In VDC fail-safe	On	BR
VDC FAIL SIG	VDC is normal	Off	DIX
	At cranking	On	
CRAINING SIG	Other than at cranking	Off	G
FLUID LEV SW	When brake fluid level switch is ON (brake fluid level is less than the specified level)	On	
	When brake fluid level switch is OFF	Off	Н

\*1: Confirm tire pressure is standard value.

\*2: Refer to "valve operation" in <u>BRC-13, "System Description"</u> for valve operation of each valve.

\*3: Refer to <u>BRC-13</u>, "System Description" for ON/OFF conditions of each warning lamp and indicator lamp.

## Fail-safe

INFOID:000000009651367

# VDC FUNCTION, TCS FUNCTION AND BRAKE LIMITED SLIP DIFFERENTIAL (BLSD) FUNCTION VDC warning lamp in combination meter turn ON when a malfunction occurs in system [ABS actuator and electric unit (control unit)]. The control is suspended for VDC function, TCS function and brake limited slip differential (BLSD) function. The vehicle status becomes the same as models without VDC function, TCS function and brake limited slip differential (BLSD) function. However, ABS function and EBD function are operated normally.

#### **ABS FUNCTION**

ABS warning lamp and VDC warning lamp in combination meter turn ON when a malfunction occurs in system [ABS actuator and electric unit (control unit)]. The control is suspended for VDC function, TCS function, ABS function and brake limited slip differential (BLSD) function. The vehicle status becomes the same as models without VDC function, TCS function, ABS function and brake limited slip differential (BLSD) function and brake limited slip differential (BLSD) function. However, EBD function is operated normally.

#### NOTE:

ABS self-diagnosis sound may be heard the same as in the normal condition, because self-diagnosis is performed when ignition switch turns ON and when vehicle initially starts.

#### EBD FUNCTION

ABS warning lamp, brake warning lamp and VDC warning lamp in combination meter turn ON when a malfunction occurs in system [ABS actuator and electric unit (control unit)]. The control is suspended for VDC function, TCS function, ABS function, EBD function and brake limited slip differential (BLSD) function. The vehicle status becomes the same as models without VDC function, TCS function, ABS function, EBD function and brake limited slip differential (BLSD) function.

## DTC Inspection Priority Chart

When multiple DTCs are displayed simultaneously, check one by one depending on the following priority list.

Estimate error-detected system based on symptom diagnosis and perform inspection. Can the error-detected system be identified?

## BRC-45

## DIAGNOSIS AND REPAIR WORK FLOW

#### < BASIC INSPECTION >

[WITH VDC]

## YES >> GO TO 7.

NO >> Check harness and connectors based on the information obtained by interview. Refer to <u>GI-42</u>, <u>"Intermittent Incident"</u>.

## 7.FINAL CHECK

#### () With CONSULT

- 1. Check the reference value for "ABS".
- 2. Recheck the symptom and check that the symptom is not reproduced on the same conditions.

#### Is the symptom reproduced?

YES >> GO TO 3.

NO >> INSPECTION END

#### Diagnostic Work Sheet

INFOID:000000009651372

#### Description

- In general, customers have their own criteria for a problem. Therefore, it is important to understand the symptom and status well enough by asking the customer about his/her concerns carefully. To systemize all the information for the diagnosis, prepare the interview sheet referring to the interview points.
- In some cases, multiple conditions that appear simultaneously may cause a DTC to be detected.

#### INTERVIEW SHEET SAMPLE

## ADDITIONAL SERVICE WHEN REPLACING ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

< BASIC INSPECTION >

[WITH VDC]

# ADDITIONAL SERVICE WHEN REPLACING ABS ACTUATOR AND ELEC-TRIC UNIT (CONTROL UNIT)

## Description

INFOID:000000009651373

When replaced the ABS actuator and electric unit (control unit), Perform steering angle sensor neutral position. Refer to <u>BRC-49</u>, "Work Procedure".

## ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION < BASIC INSPECTION > [WITH VDC]

# ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

## Description

INFOID:000000009651374

А

# Always adjust the neutral position of steering angle sensor before driving when the following operation is performed. ${}^{\sf B}$

	×: Required —: Not required
Procedure	Adjust the neutral position of steering angle sensor
Removing/ installing ABS actuator and electric unit (control unit)	
Replacing ABS actuator and electric unit (control unit)	×
Removing/installing steering angle sensor	× D
Replacing steering angle sensor	X
Removing/installing steering components	×
Replacing steering components	×
Removing/installing suspension components	X
Replacing suspension components	×
Removing/installing tire	
Replacing tire	_
Tire rotation	G
Adjusting wheel alignment.	X
Work Procedure	HEAD AND AND AND AND AND AND AND AND AND A
1.CHECK THE VEHICLE STATUS         Stop vehicle with front wheels in the straight-ahead position?         Does the vehicle stay in the straight-ahead position?         YES       >> GO TO 2.         NO       >> Steer the steering wheel to the straight-ahead	tion. K ad position. Stop the vehicle.
2.ADJUST NEUTRAL POSITION OF STEERING ANG	LE SENSOR
<ul> <li>With CONSULT</li> <li>1. Turn the ignition switch ON.</li> <li>CAUTION:</li> <li>Never start engine.</li> <li>2. Select "ABS", "WORK SUPPORT" and "ST ANGLE</li> <li>3. Select "START".</li> </ul>	SENSOR ADJUSTMENT" in this order.
<ul> <li>CAUTION: Never touch steering wheel while adjusting stee</li> <li>4. After approx. 10 seconds, select "END".</li> <li>5. Turn ignition switch OFE and then turn it ON again</li> </ul>	ering angle sensor.
CAUTION: Be sure to perform the operation above.	P
J.CHECK DATA MONITOR	

#### With CONSULT

The vehicle is either pointing straight ahead, or the vehicle needs to be moved [30 – 50 km/h (19 – 31 MPH). Stop when it is pointing straight ahead.

## ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

< BASIC INSPECTION >

2. Select "ABS", "DATA MONITOR", "ECU INPUT SIGNALS" and "STR ANGLE SIG" in the order. Check that the signal is within the specified value.

#### STR ANGLE SIG $: 0\pm 3.5^{\circ}$

Is the inspection result normal?

YES >> GO TO 4. NO >> GO TO 1.

**4.**ERASE SELF-DIAGNOSIS MEMORY

With CONSULT
 Erase self-diagnosis result of "ABS".

Are the memories erased?

YES >> INSPECTION END

NO >> Check the items indicated by the self-diagnosis.

## DTC DETECTION LOGIC

DTC	Display Item	Malfunction detected condition	Possible causes
C1101	RR RH SENSOR-1	When an open circuit is detected in rear RH wheel sensor circuit.	
C1102	RR LH SENSOR-1	When an open circuit is detected in rear LH wheel sensor circuit.	<ul><li>Harness or connector</li><li>Wheel sensor</li></ul>
C1103	FR RH SENSOR-1	When an open circuit is detected in front RH wheel sensor circuit.	ABS actuator and electric unit (control unit)
C1104	FR LH SENSOR-1	When an open circuit is detected in front LH wheel sensor circuit.	

If "DTC CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

$2 \sim 10^{-2}$
With CONSULT
<ol> <li>Stat the engine.</li> <li>Drive the vehicle at approx 30 km/b (19 MPH) or more for approx 1 minute.</li> </ol>
3. Stop the vehicle.
4. Perform self-diagnosis for "ABS".
<u>Is DTC "C1101", "C1102", "C1103" or "C1104" detected?</u>
YES >> Proceed to <u>BRC-51, "Diagnosis Procedure"</u> . K NO >> INSPECTION END
Diagnosis Procedure
CAUTION:
Never check between wheel sensor harness connector terminals.
1.CHECK WHEEL SENSOR
1. Turn the ignition switch OFF.
2. Check wheel sensor for damage.
Is the inspection result normal?
YES >> GO TO 3.
2.REPLACE WHEEL SENSOR (1)
1. Replace wheel sensor.
<ul> <li>Front: Refer to <u>BRC-119</u>, "FRONT WHEEL SENSOR : Removal and Installation".</li> </ul>
<ul> <li>Rear: Refer to <u>BRC-120, "REAR WHEEL SENSOR : Removal and Installation"</u>.</li> <li>Error colf diagnosis result for "APS"</li> </ul>
<ol> <li>2. Erase self-diagnosis result for ADS.</li> <li>3. Turn the ignition switch OFF, and wait 10 seconds or more.</li> </ol>

- 4. Start the engine.
- 5. Drive the vehicle at approx. 30 km/h (19 MPH) or more for approx. 1 minute.
- 6. Stop the vehicle.

## BRC-51

## C1101, C1102, C1103, C1104 WHEEL SENSOR

< DTC/CIRCUIT DIAGNOSIS >

7. Perform self-diagnosis for "ABS".

Is DTC "C1101", "C1102", "C1103" or "C1104" detected?

YES >> GO TO 3.

NO >> INSPECTION END

## 3.CHECK CONNECTOR

- 1. Turn the ignition switch OFF.
- 2. Check ABS actuator and electric unit (control unit) harness connector for disconnection or looseness.
- 3. Check wheel sensor harness connector for disconnection or looseness.

Is the inspection result normal?

- YES >> GO TO 5.
- NO >> Repair or replace error-detected parts, securely lock the connector, and GO TO 4.

**4.**PERFORM SELF-DIAGNOSIS (1)

#### () With CONSULT

- 1. Erase self-diagnosis result for "ABS".
- 2. Turn the ignition switch OFF, and wait 10 seconds or more.
- 3. Start the engine.
- 4. Drive the vehicle at approx. 30 km/h (19 MPH) or more for approx. 1 minute.
- 5. Stop the vehicle.
- 6. Perform self-diagnosis for "ABS".

#### Is DTC "C1101", "C1102", "C1103" or "C1104" detected?

YES >> GO TO 5.

NO >> INSPECTION END

5.CHECK TERMINAL

- 1. Turn the ignition switch OFF.
- Disconnect ABS actuator and electric unit (control unit) harness connector and then check ABS actuator and electric unit (control unit) pin terminals for damage or loose connection with harness connector.
- 3. Disconnect wheel sensor harness connector and check each wheel sensor pin terminals for damage or loose connection with harness connector.

Is the inspection result normal?

- YES >> GO TO 7.
- NO >> Repair or replace error-detected parts and GO TO 6.

**6.** PERFORM SELF-DIAGNOSIS (2)

#### (D) With CONSULT

- T. Connect ABS actuator and electric unit (control unit) harness connector.
- 2. Connect wheel sensor harness connector.
- 3. Erase self-diagnosis result for "ABS".
- 4. Turn the ignition switch OFF, and wait 10 seconds or more.
- 5. Start the engine.
- 6. Drive the vehicle at approx. 30 km/h (19 MPH) or more for approx. 1 minute.
- 7. Stop the vehicle.
- 8. Perform self-diagnosis for "ABS".
- Is DTC "C1101", "C1102", "C1103" or "C1104" detected?

#### YES >> GO TO 7.

NO >> INSPECTION END

## 7.CHECK WHEEL SENSOR HARNESS

- 1. Turn the ignition switch OFF.
- 2. Disconnect ABS actuator and electric unit (control unit) harness connector.
- 3. Disconnect wheel sensor harness connector.
- 4. Check continuity between ABS actuator and electric unit (control unit) harness connector and wheel sensor harness connector. (Check continuity when steering wheel is steered to RH and LH, or center harness in wheel housing is moved.)

## DTC CONFIRMATION PROCEDURE

## 1.PRECONDITIONING

If "DTC CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

>> GO TO 2.

2. CHECK DTC DETECTION

### With CONSULT

- 1. Stat the engine.
- 2. Drive the vehicle at approx. 30 km/h (19 MPH) or more for approx. 1 minute.
- 3. Stop the vehicle.
- 4. Perform self-diagnosis for "ABS".

Is DTC "C1105", "C1106", "C1107" or "C1108" detected?

YES >> Proceed to <u>BRC-54</u>, "Diagnosis Procedure".

NO >> INSPECTION END

## Diagnosis Procedure

#### CAUTION:

#### Never check between wheel sensor harness connector terminals.

**1.**CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) POWER SUPPLY SYSTEM

Check ABS actuator and electric unit (control unit) power supply system. Refer to <u>BRC-101, "Diagnosis Proce-dure"</u>.

Is the inspection result normal?

YES >> GO TO 2.

INFOID:000000009651379

INFOID:000000009651378

< DTC/CIRCUIT DIAGNOSIS > [WITH V	/DC]
NO >> Repair or replace error-detected parts.	
2.CHECK TIRE	
<ol> <li>Turn the ignition switch OFF.</li> <li>Check tire air pressure, wear and size. Refer to <u>WT-51, "Tire Air Pressure"</u>.</li> </ol>	
Is the inspection result normal?	
YES >> GO TO 5. NO >> Adjust air pressure or replace tire and GO TO 3	
<b>3.</b> CHECK DATA MONITOR (1)	
<ul> <li>With CONSULT</li> <li>Erase self-diagnosis result for "ABS".</li> <li>Turn the ignition switch OFF, and wait 10 seconds or more.</li> <li>Start the engine.</li> </ul>	
<ol> <li>Select "ABS" and "DATA MONITOR", check "FR LH SENSOR", "FR RH SENSOR", "RR LH SENS and "RR RH SENSOR". NOTE:</li> </ol>	SOR"
Set the "DATA MONITOR" recording speed to "10 msec". 5. Read a value (wheel speed) of both normal wheel sensors and error-detecting wheel sensor.	atin a
wheel sensor and the maximum/minimum wheel speed detected by the normal wheel sensors, is the c ence within 5%, respectively?	<u>scung</u> <u>differ-</u>
YES >> GO TO 4. NO >> GO TO 5.	
4.PERFORM SELF-DIAGNOSIS (1)	
<ul> <li>With CONSULT</li> <li>Drive the vehicle at approx. 30 km/h (19 MPH) or more for approx. 1 minute.</li> <li>Stop the vehicle.</li> <li>Perform self-diagnosis for "ABS".</li> </ul>	
$\frac{18 \text{ DTC CHOS, CHOS, CHO7 or CHO8 detected?}}{\text{YES} \rightarrow \text{GOTO5}}$	
NO >> INSPECTION END	
5.CHECK WHEEL SENSOR	
<ol> <li>Turn the ignition switch OFF.</li> <li>Check wheel sensor for damage.</li> <li>Remove dust and foreign matter adhered to the sensor rotor with a vacuum dust collector through wheel sensor mounting hole.</li> <li>CAUTION:</li> </ol>	h the
Install wheel sensor with no backlash and float, and tighten the mounting bolt to the spectorque. • Front: Refer to BRC-119, "FRONT WHEEL SENSOR : Exploded View".	ified
Rear: Refer to <u>BRC-120, "REAR WHEEL SENSOR : Exploded View"</u> .	
Is the inspection result normal? YES >> GO TO 8.	
<b>6.</b> REPLACE WHEEL SENSOR (1)	
With CONSULT	
<ol> <li>Replace wheel sensor.</li> <li>Front: Refer to <u>BRC-119</u>, "FRONT WHEEL SENSOR : Removal and Installation".</li> <li>Rear: Refer to <u>BRC-120</u>, "REAR WHEEL SENSOR : Removal and Installation".</li> </ol>	
<ol> <li>Erase self-diagnosis result for "ABS".</li> <li>Turn the ignition switch OFF, and wait 10 seconds or more.</li> <li>Start the engine</li> </ol>	
5. Select "ABS" and "DATA MONITOR", check "FR LH SENSOR", "FR RH SENSOR", "RR LH SENS	SOR"

NOTE:

and "RR RH SENSOR".

< DTC/CIRCUIT DIAGNOSIS >

Set the "DATA MONITOR" recording speed to "10 msec".

6. Read a value (wheel speed) of both normal wheel sensors and error-detecting wheel sensor.

Regarding the deference at 30 km/h (19 MPH) between the wheel speed detected by the error detecting wheel sensor and the maximum/minimum wheel speed detected by the normal wheel sensors, is the difference within 5%, respectively?

YES >> GO TO 7.

NO >> GO TO 19.

**7.** PERFORM SELF-DIAGNOSIS (2)

#### With CONSULT

- 1. Drive the vehicle at approx. 30 km/h (19 MPH) or more for approx. 1 minute.
- 2. Stop the vehicle.
- 3. Perform self-diagnosis for "ABS".

Is DTC "C1105", "C1106", "C1107" or "C1108" detected?

- YES >> GO TO 19.
- NO >> INSPECTION END

#### 8. CHECK CONNECTOR

- 1. Turn the ignition switch OFF.
- 2. Check ABS actuator and electric unit (control unit) harness connector for disconnection or looseness.
- 3. Check wheel sensor harness connector for disconnection or looseness.

Is the inspection result normal?

YES >> GO TO 11.

NO >> Repair or replace error-detected parts, securely lock the connector, and GO TO 9.

**9.**CHECK DATA MONITOR (2)

#### With CONSULT

- 1. Erase self-diagnosis result for "ABS".
- 2. Turn the ignition switch OFF, and wait 10 seconds or more.
- 3. Start the engine.
- 4. Select "ABS" and "DATA MONITOR", check "FR LH SENSOR", "FR RH SENSOR", "RR LH SENSOR" and "RR RH SENSOR".

#### NOTE:

- Set the "DATA MONITOR" recording speed to "10 msec".
- 5. Read a value (wheel speed) of both normal wheel sensors and error-detecting wheel sensor.

Regarding the deference at 30 km/h (19 MPH) between the wheel speed detected by the error detecting wheel sensor and the maximum/minimum wheel speed detected by the normal wheel sensors, is the difference within 5%, respectively?

YES >> GO TO 10.

NO >> GO TO 11.

**10.** PERFORM SELF-DIAGNOSIS (3)

#### (I) With CONSULT

- 1. Drive the vehicle at approx. 30 km/h (19 MPH) or more for approx. 1 minute.
- 2. Stop the vehicle.
- 3. Perform self-diagnosis for "ABS".

Is DTC "C1105", "C1106", "C1107" or "C1108" detected?

- YES >> GO TO 11.
- NO >> INSPECTION END
- **11.**CHECK TERMINAL
- 1. Turn the ignition switch OFF.
- 2. Disconnect ABS actuator and electric unit (control unit) harness connector and then check ABS actuator and electric unit (control unit) pin terminals for damage or loose connection with harness connector.
- 3. Disconnect wheel sensor harness connector and check each wheel sensor pin terminals for damage or loose connection with harness connector.

Is the inspection result normal?

YES >> GO TO 14.

## C1115 WHEEL SENSOR

## < DTC/CIRCUIT DIAGNOSIS >

## C1115 WHEEL SENSOR

## DTC Logic

INFOID:000000009651386

[WITH VDC]

## DTC DETECTION LOGIC

DTC	Display Item	Malfunction detected condition	Possible causes
C1115	ABS SENSOR [ABNORMAL SIGNAL]	When difference in wheel speed between any wheel and others is detected the vehicle is driven, because of installation of other tires than specified.	<ul> <li>Harness or connector</li> <li>Wheel sensor</li> <li>Sensor rotor</li> <li>ABS actuator and electric unit (control unit)</li> <li>Tire</li> </ul>

#### DTC CONFIRMATION PROCEDURE

## 1.PRECONDITIONING

If "DTC CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

>> GO TO 2.

## 2. CHECK DTC DETECTION

#### With CONSULT

- 1. Stat the engine.
- 2. Drive the vehicle at approx. 30 km/h (19 MPH) or more for approx. 1 minute.
- 3. Stop the vehicle.
- 4. Perform self-diagnosis for "ABS".

## Is DTC "C1115" detected?

- YES >> Proceed to <u>BRC-64, "Diagnosis Procedure"</u>.
- NO >> INSPECTION END

## Diagnosis Procedure

#### **CAUTION:**

#### For wheel sensor, never check between terminals.

**1.**CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) POWER SUPPLY SYSTEM

Check ABS actuator and electric unit (control unit) power supply system. Refer to <u>BRC-101, "Diagnosis Proce-</u> dure".

Is the inspection result normal?

- YES >> GO TO 2.
- NO >> Repair or replace error-detected parts.

## 2.CHECK TIRE

- 1. Turn the ignition switch OFF.
- 2. Check tire air pressure, wear and size. Refer to <u>WT-51, "Tire Air Pressure"</u>.
- Is the inspection result normal?

YES >> GO TO 5.

NO >> Adjust air pressure or replace tire and GO TO 3.

## **3.**CHECK DATA MONITOR (1)

#### With CONSULT

- T. Erase self-diagnosis result for "ABS".
- 2. Turn the ignition switch OFF, and wait 10 seconds or more.
- 3. Start the engine.
- Select "ABS" and "DATA MONITOR", check "FR LH SENSOR", "FR RH SENSOR", "RR LH SENSOR" and "RR RH SENSOR".
   NOTE:

## BRC-64

INFOID:000000009651387

## **C1115 WHEEL SENSOR**

[WITH VDC]

Set the "DATA MONITOR" recording speed to "10 msec". 5. Read a value (wheel speed) of both normal wheel sensors and error-detecting wheel sensor.	А
Regarding the deference at 30 km/h (19 MPH) between the wheel speed detected by the error detecting	/ \
wheel sensor and the maximum/minimum wheel speed detected by the normal wheel sensors, is the differ- ence within 5%, respectively?	В
YES >> GO TO 4. NO >> GO TO 5.	
4.PERFORM SELF-DIAGNOSIS (1)	С
<ul> <li>With CONSULT</li> <li>Drive the vehicle at approx. 30 km/h (19 MPH) or more for approx. 1 minute.</li> <li>Stop the vehicle.</li> <li>Perform self-diagnosis for "ABS".</li> </ul>	D

YES >> GO TO 19. NO >> INSPECTION END	

< DTC/CIRCUIT DIAGNOSIS >

## < DTC/CIRCUIT DIAGNOSIS >

## 8. CHECK CONNECTOR

- 1. Turn the ignition switch OFF.
- 2. Check ABS actuator and electric unit (control unit) harness connector for disconnection or looseness.
- 3. Check wheel sensor harness connector for disconnection or looseness.

#### Is the inspection result normal?

YES >> GO TO 11.

NO >> Repair or replace error-detected parts, securely lock the connector, and GO TO 9.

## **9.**CHECK DATA MONITOR (2)

#### (B) With CONSULT

- 1. Erase self-diagnosis result for "ABS".
- 2. Turn the ignition switch OFF, and wait 10 seconds or more.
- 3. Start the engine.
- Select "ABS" and "DATA MONITOR", check "FR LH SENSOR", "FR RH SENSOR", "RR LH SENSOR" and "RR RH SENSOR".

NOTE:

Set the "DATA MONITOR" recording speed to "10 msec".

5. Read a value (wheel speed) of both normal wheel sensors and error-detecting wheel sensor.

Regarding the deference at 30 km/h (19 MPH) between the wheel speed detected by the error detecting wheel sensor and the maximum/minimum wheel speed detected by the normal wheel sensors, is the difference within 5%, respectively?

- YES >> GO TO 10.
- NO >> GO TO 11.

**10.**PERFORM SELF-DIAGNOSIS (3)

With CONSULT

- T. Drive the vehicle at approx. 30 km/h (19 MPH) or more for approx. 1 minute.
- 2. Stop the vehicle.
- 3. Perform self-diagnosis for "ABS".
- Is DTC "C1115" detected?
- YES >> GO TO 11.
- NO >> INSPECTION END
- **11.**CHECK TERMINAL
- 1. Turn the ignition switch OFF.
- 2. Disconnect ABS actuator and electric unit (control unit) harness connector and then check ABS actuator and electric unit (control unit) pin terminals for damage or loose connection with harness connector.
- 3. Disconnect wheel sensor harness connector and check each wheel sensor pin terminals for damage or loose connection with harness connector.

Is the inspection result normal?

YES >> GO TO 14.

NO >> Repair or replace error-detected parts and GO TO 12.

12. CHECK DATA MONITOR (3)

#### ()With CONSULT

- 1. Connect ABS actuator and electric unit (control unit) harness connector.
- 2. Connect wheel sensor harness connector.
- 3. Erase self-diagnosis result for "ABS".
- 4. Turn the ignition switch OFF, and wait 10 seconds or more.
- 5. Start the engine.
- Select "ABS" and "DATA MONITOR", check "FR LH SENSOR", "FR RH SENSOR", "RR LH SENSOR" and "RR RH SENSOR".
  - NOTE:

Set the "DATA MONITOR" recording speed to "10 msec".

7. Read a value (wheel speed) of both normal wheel sensors and error-detecting wheel sensor.

Regarding the deference at 30 km/h (19 MPH) between the wheel speed detected by the error detecting wheel sensor and the maximum/minimum wheel speed detected by the normal wheel sensors, is the difference within 5%, respectively?

#### Is the inspection result normal?

YES >> GO TO 15.

NO >> Repair or replace error-detected parts and GO TO 15.

15. CHECK DATA MONITOR (4)

- With CONSULT
  Connect ABS actuator and electric unit (control unit) harness connector.
- 2. Connect wheel sensor harness connector.
- Erase self-diagnosis result for "ABS". 3.
- Turn the ignition switch OFF, and wait 10 seconds or more. 4.
- Start the engine. 5.

## **BRC-67**

Ρ

## **C1115 WHEEL SENSOR**

< DTC/CIRCUIT DIAGNOSIS >

 Select "ABS" and "DATA MONITOR", check "FR LH SENSOR", "FR RH SENSOR", "RR LH SENSOR" and "RR RH SENSOR".
 NOTE:

Set the "DATA MONITOR" recording speed to "10 msec".

7. Read a value (wheel speed) of both normal wheel sensors and error-detecting wheel sensor.

Regarding the deference at 30 km/h (19 MPH) between the wheel speed detected by the error detecting wheel sensor and the maximum/minimum wheel speed detected by the normal wheel sensors, is the difference within 5%, respectively?

YES >> GO TO 16.

NO >> GO TO 17.

**16.**PERFORM SELF-DIAGNOSIS (5)

#### With CONSULT

- T. Drive the vehicle at approx. 30 km/h (19 MPH) or more for approx. 1 minute.
- 2. Stop the vehicle.
- 3. Perform self-diagnosis for "ABS".

Is DTC "C1115" detected?

YES >> GO TO 17.

NO >> INSPECTION END

17.REPLACE WHEEL SENSOR

#### With CONSULT

- 1. Replace wheel sensor.
- Front: Refer to BRC-119, "FRONT WHEEL SENSOR : Removal and Installation".
- Rear: Refer to BRC-120, "REAR WHEEL SENSOR : Removal and Installation".
- 2. Erase self-diagnosis result for "ABS".
- 3. Turn the ignition switch OFF, and wait 10 seconds or more.
- 4. Start the engine.
- Select "ABS" and "DATA MONITOR", check "FR LH SENSOR", "FR RH SENSOR", "RR LH SENSOR" and "RR RH SENSOR".

#### NOTE:

- Set the "DATA MONITOR" recording speed to "10 msec".
- 6. Read a value (wheel speed) of both normal wheel sensors and error-detecting wheel sensor.

Regarding the deference at 30 km/h (19 MPH) between the wheel speed detected by the error detecting wheel sensor and the maximum/minimum wheel speed detected by the normal wheel sensors, is the difference within 5%, respectively?

YES >> GO TO 18.

NO >> GO TO 19.

**18.**PERFORM SELF-DIAGNOSIS (6)

#### With CONSULT

- 1. Drive the vehicle at approx. 30 km/h (19 MPH) or more for approx. 1 minute.
- 2. Stop the vehicle.
- 3. Perform self-diagnosis for "ABS".
- Is DTC "C1115" detected?

#### YES >> GO TO 19.

NO >> INSPECTION END

## **19.**REPLACE SENSOR ROTOR

#### With CONSULT

- 1. Replace sensor rotor.
- Front: Refer to BRC-122, "FRONT SENSOR ROTOR : Removal and Installation".
- Rear: Refer to <u>BRC-122</u>, "REAR SENSOR ROTOR : Removal and Installation".
- 2. Erase self-diagnosis result for "ABS".
- 3. Turn the ignition switch OFF, and wait 10 seconds or more.
- 4. Start the engine.
- 5. Drive the vehicle at approx. 30 km/h (19 MPH) or more for approx. 1 minute.
- 6. Stop the vehicle.
- 7. Perform self-diagnosis for "ABS".

## **BRC-68**

# < DTC/CIRCUIT DIAGNOSIS >

## C1116 STOP LAMP SWITCH

## < DTC/CIRCUIT DIAGNOSIS >

## C1116 STOP LAMP SWITCH

## DTC Logic

INFOID:000000009651388

[WITH VDC]

## DTC DETECTION LOGIC

DTC	Display Item	Malfunction detected condition	Possible causes
C1116	STOP LAMP SW	When stop lamp switch signal is not input when brake pedal operates.	<ul> <li>Harness or connector</li> <li>Stop lamp switch</li> <li>Stop lamp relay</li> <li>ABS actuator and electric unit (control unit)</li> <li>Battery power supply system</li> </ul>

#### DTC CONFIRMATION PROCEDURE

## 1.PRECONDITIONING

If "DTC CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

>> GO TO 2.

2. CHECK DTC DETECTION

#### (D) With CONSULT

- 1. Turn the ignition switch OFF.
- 2. Perform self-diagnosis for "ABS".

#### Is DTC "C1116" detected?

- YES >> Proceed to <u>BRC-70, "Diagnosis Procedure"</u>.
- NO >> INSPECTION END

## Diagnosis Procedure

## **1.**CHECK CONNECTOR

#### With CONSULT

- 1. Turn the ignition switch OFF.
- 2. Disconnect ABS actuator and electric unit (control unit) harness connector.
- 3. Disconnect stop lamp switch harness connector.
- 4. Check terminal for deformation, disconnection, looseness, etc.
- 5. Reconnect ABS actuator and electric unit (control unit) and stop lamp switch connectors securely.
- 6. Start the engine.
- 7. Repeat pumping brake pedal carefully several times, and perform self-diagnosis for "ABS" with CON-SULT.

Is the inspection result normal?

YES >> GO TO2.

NO >> Poor connection of connector terminal. Replace or repair error-detected parts.

## **2.**CHECK STOP LAMP SWITCH CLEARANCE

- 1. Turn the ignition switch OFF.
- 2. Check stop lamp switch clearance. Refer to <u>BR-7, "Inspection and Adjustment"</u>.

Is the inspection result normal?

YES >> GO TO 3.

NO >> Adjust stop lamp switch clearance. Refer to BR-7, "Inspection and Adjustment".

3.CHECK STOP LAMP SWITCH

Check stop lamp switch. Refer to <u>BRC-71, "Component Inspection"</u>.

Is the inspection result normal?

YES >> GO TO 4.

INFOID:000000009651389

#### < DTC/CIRCUIT DIAGNOSIS >

Steering angle sensor			Continuity
Connector	Terminal		Continuity
M30	1	Ground	Existed

Is the inspection result normal?

YES >> GO TO 8.

NO >> Repair or replace error-detected parts.

8.CHECK TERMINAL

1. Check steering angle sensor pin terminals for damage or loose connection with harness connector.

2. Check fuse block (J/B) pin terminals for damage or loose connection with harness connector.

Is the inspection result normal?

YES >> GO TO 9.

NO >> Repair or replace error-detected parts.

**9.**CHECK CAN COMMUNICATION LINE

Check "STRG BRANCH LINE CIRCUIT". Refer to LAN-62, "Diagnosis Procedure".

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit). Refer to <u>BRC-123</u>, "<u>Removal and Installa-</u> <u>tion</u>".

NO >> Repair or replace error-detected parts. Refer to <u>BRC-7</u>, "Precaution for Harness Repair".

**Diagnosis** Procedure

### **1.**ADJUST THE NEUTRAL POSITION OF STEERING ANGLE SENSOR

Perform neutral position adjustment of steering angle sensor. Refer to BRC-49, "Work Procedure".

>> GO TO 2.

2. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

(P)With CONSULT Perform self-diagnosis for "ABS".

Is DTC "C1144" detected?

YES >> GO TO 3.

NO >> INSPECTION END

**3.**CHECK STEERING ANGLE SENSOR SYSTEM

Turn the ignition switch OFF. 1.

Check steering angle sensor system. Refer to BRC-82, "Diagnosis Procedure". 2.

Is the inspection result normal?

- >> Replace ABS actuator and electric unit (control unit). Refer to BRC-123, "Removal and Installa-YES Ρ tion".
- NO >> Repair or replace error-detected parts.

< DTC/CIRCUIT DIAGNOSIS >

# C1145, C1146 YAW RATE/SIDE G SENSOR

# **DTC Logic**

INFOID:000000009651405

[WITH VDC]

#### DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1145	YAW RATE SENSOR	<ul> <li>Yaw rate sensor is malfunctioning.</li> <li>Yaw rate/side G sensor signal line is open or shorted.</li> <li>When yaw rate/side G sensor power supply voltage is in following state.</li> <li>Yaw rate/side G sensor power supply voltage: 10 V ≥ Yaw rate/side G sensor.</li> <li>Yaw rate/side G sensor power supply voltage: 16 V ≤ Yaw rate/side G sensor power supply voltage.</li> </ul>	<ul> <li>Harness or connector</li> <li>Yaw rate/side G sensor</li> <li>ABS actuator and electric unit (control unit)</li> </ul>
C1146	SIDE G-SEN CIRCUIT	Side G sensor is malfunctioning.	Ť

#### DTC CONFIRMATION PROCEDURE

#### **1.**PRECONDITIONING

If "DTC CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

#### >> GO TO 2.

### 2. CHECK DTC DETECTION

#### ()With CONSULT

- 1. Turn the ignition switch OFF to ON.
- 2. Perform self-diagnosis for "ABS".

#### Is DTC "C1145" or "C1146" detected?

- YES >> Proceed to <u>BRC-86</u>, "Diagnosis Procedure".
- NO >> INSPECTION END

#### Diagnosis Procedure

INFOID:000000009651406

#### **CAUTION:**

- Sudden turns (such as spin turns, acceleration turns), drifting, etc. may cause yaw rate/side G sensor circuit indicate a malfunction. However this is not a malfunction if normal operation can be resumed after restarting engine.
- When on a turntable, such as at a parking structure entrance, or when on a moving object with engine running, the VDC warning lamp might turn on and self-diagnosis using the CONSULT yaw rate sensor system malfunction might be displayed, but in this case there is no malfunction with yaw rate/side G sensor circuit. As soon as the vehicle leaves the turntable or moving object, restart the engine to return the system to normal.

#### **1.**CHECK CONNECTOR

- 1. Turn ignition switch OFF.
- 2. Check ABS actuator and electric unit (control unit) harness connector for disconnection or looseness.
- 3. Check yaw rate/side G sensor harness connector for disconnection or looseness.

Is the inspection result normal?

NO >> Repair or replace error-detected parts, securely lock the connector, and GO TO 2.

2. PERFORM SELF-DIAGNOSIS

Perform self-diagnosis for "ABS" again.

Is DTC "C1145" or "C1146" detected?

- YES >> GO TO 3.
- NO >> INSPECTION END

# C1145, C1146 YAW RATE/SIDE G SENSOR

 $6. {\sf CHECK YAW RATE/SIDE G SENSOR SIGNAL CIRCUIT}$ 

# C1145, C1146 YAW RATE/SIDE G SENSOR

#### < DTC/CIRCUIT DIAGNOSIS >

Check continuity between yaw rate/side G sensor harness connector and ABS actuator and electric unit (control unit) harness connector.

Yaw rate/si	de G sensor	ABS actuator and electric unit (control unit)		Continuity	
Connector	Terminal	Connector	Terminal	Continuity	
M52	2	F36	25	Existed	
IVIJZ	3	230	19	LAISIEU	

Is the inspection result normal?

YES >> GO TO 7.

NO >> Repair or replace error-detected parts.

#### 7.CHECK TERMINAL

- 1. Disconnect ABS actuator and electric unit (control unit) harness connector and then check ABS actuator and electric unit (control unit) pin terminals for damage or loose connection with harness connector.
- 2. Disconnect yaw rate/side G sensor harness connector and check yaw rate/side G sensor pin terminals for damage or loose connection with harness connector.

Is the inspection result normal?

- YES >> GO TO 8.
- NO >> Repair or replace error-detected parts.

**8.**REPLACE YAW RATE/SIDE G SENSOR

#### With CONSULT

- 1. Connect ABS actuator and electric unit (control unit) harness connector
- 2. Replace yaw rate/side G sensor. Refer to <u>BRC-125, "Removal and Installation"</u>.
- 3. Erase self-diagnosis result for "ABS".
- 4. Turn the ignition switch OFF.
- 5. Turn the ignition switch ON.

#### CAUTION:

#### Never start engine.

6. Perform self-diagnosis for "ABS".

Is DTC "C1145" or "c1146" detected?

- YES >> Replace ABS actuator and electric unit (control unit). Refer to <u>BRC-123</u>, "<u>Removal and Installa-</u> tion".
- NO >> INSPECTION END

[WITH VDC]

# U1000 CAN COMM CIRCUIT

# Description

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

### DTC Logic

### ABS WARNING LAMP

### Component Function Check

**1.**CHECK ABS WARNING LAMP FUNCTION

Check that ABS warning lamp in combination meter turns ON for approx. 2 second after ignition switch is turned ON.

#### CAUTION:

#### Never start engine.

Is the inspection result normal?

- YES >> INSPECTION END
- NO >> Proceed to <u>BRC-108</u>, "Diagnosis Procedure".

### Diagnosis Procedure

INFOID:000000009651432

# 1 .check abs actuator and electric unit (control unit) power supply and ground circuit

Perform the trouble diagnosis for ABS actuator and electric unit (control unit) power supply and ground circuit. Refer to <u>BRC-101, "Diagnosis Procedure"</u>.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace error-detected parts.

2.PERFORM SELF-DIAGNOSIS

With CONSULT

Perform self-diagnosis for "ABS".

Is any DTC detected?

YES >> Check the DTC. Refer to <u>BRC-38, "DTC Index"</u>.

NO >> GO TO 3.

**3.**CHECK ABS WARNING LAMP SIGNAL

#### With CONSULT

- I. Select "ABS", "DATA MONITOR" and "ABS WARN LAMP" according to this order.
- 2. Turn the ignition switch OFF.
- 3. Check that data monitor displays "On" for approx. 1 second after ignition switch is turned ON and then changes to "Off".

# CAUTION:

#### Never start engine.

Is the inspection result normal?

- YES >> Check combination meter. Refer to <u>MWI-35, "CONSULT Function"</u>.
- NO >> Replace ABS actuator and electric unit (control unit). Refer to <u>BRC-123</u>, "<u>Removal and Installa-</u> tion".
# **BRAKE WARNING LAMP**

< DTC/CIRCUIT DIAGNOSIS > [WITH VDC]
BRAKE WARNING LAMP
Component Function Check
<b>1.</b> CHECK BRAKE WARNING LAMP FUNCTION (1)
Check that brake warning lamp in combination meter turns ON for approx. 2 second after ignition switch is turned ON. CAUTION: Never start engine
Is the inspection result normal?
YES >> GO TO 2. NO >> Proceed to <u>BRC-109, "Diagnosis Procedure"</u> .
2.CHECK BRAKE WARNING LAMP FUNCTION (2)
Check that brake warning lamp in combination meter turns ON/OFF when parking brake is operated. <b>NOTE:</b> Brake warning lamp turns ON when parking brake is operated (when parking brake switch is ON)
Is the inspection result normal? YES >> GO TO 3
NO >> Check parking brake switch system. Refer to <u>BRC-104, "Diagnosis Procedure"</u> . <b>3.</b> CHECK BRAKE WARNING LAMP FUNCTION (3)
Check that brake warning lamp in combination meter turns ON/OFF when brake fluid level switch is operated while brake fluid level in reservoir tank is with the specified level. <b>NOTE:</b>
Brake warning lamp turns ON when brake fluid is less than the specified level (when brake fluid level switch is ON).
Is the inspection result normal?         YES       >> INSPECTION END         NO       >> Check brake fluid level switch system. Refer to <u>BRC-89, "Diagnosis Procedure"</u> .
Diagnosis Procedure
1. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) POWER SUPPLY AND GROUND CIR-
Perform the trouble diagnosis for ABS actuator and electric unit (control unit) power supply and ground circuit. Refer to <u>BRC-101, "Diagnosis Procedure"</u> .
Is the inspection result normal?         YES       >> GO TO 2.         NO       >> Repair or replace error-detected parts.
2.PERFORM THE SELF-DIAGNOSIS
With CONSULT     Perform self-diagnosis for "ABS".
<u>Is any DTC detected?</u> YES >> Check the DTC. Refer to <u>BRC-38, "DTC Index"</u> .
<b>3.</b> CHECK COMBINATION METER
Check combination meter. Refer to MWI-35, "CONSULT Function".
<u>Is the inspection result normal?</u> YES >> Replace ABS actuator and electric unit (control unit). Refer to <u>BRC-123</u> , " <u>Removal and Installa-</u>
NO >> Repair or replace combination meter. Refer to <u>MWI-93, "Removal and Installation"</u> .

# VDC WARNING LAMP

# Component Function Check

**1.**CHECK VDC WARNING LAMP FUNCTION

Check that VDC warning lamp in combination meter turns ON for approx. 2 second after ignition switch is turned ON.

#### CAUTION:

#### Never start engine.

Is the inspection result normal?

#### YES >> INSPECTION END

NO >> Proceed to diagnosis procedure. Refer to <u>BRC-110, "Diagnosis Procedure"</u>.

## Diagnosis Procedure

INFOID:000000009651436

# 1. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) POWER SUPPLY AND GROUND CIRCUIT

Perform the trouble diagnosis for ABS actuator and electric unit (control unit) power supply and ground circuit. Refer to <u>BRC-101, "Diagnosis Procedure"</u>.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair or replace error-detected parts.

2. PERFORM THE SELF-DIAGNOSIS

#### () With CONSULT

Perform self-diagnosis for "ABS".

#### Is any DTC detected?

YES >> Check the DTC. Refer to <u>BRC-38, "DTC Index"</u>.

NO >> GO TO 3.

**3.**CHECK VDC WARNING LAMP SIGNAL

#### With CONSULT

- 1. Select "ABS", "DATA MONITOR" and "SLIP/VDC LAMP" according to this order.
- 2. Turn the ignition switch OFF.
- 3. Check that data monitor displays "On" for approx. 1 second after ignition switch is turned ON, and then changes to "Off".

# CAUTION:

#### Never start engine.

Is the inspection result normal?

- YES >> Check combination meter. Refer to <u>MWI-35, "CONSULT Function"</u>.
- NO >> Replace ABS actuator and electric unit (control unit). Refer to <u>BRC-123, "Removal and Installa-</u> tion".

# SYMPTOM DIAGNOSIS EXCESSIVE OPERATION FREQUENCY

## Description

VDC function, TCS function, ABS function, EBD function and brake limited slip differential (BLSD) function operates in excessive operation frequency.

#### Diagnosis Procedure

1. CHECK BRAKING FORCE

Check brake force using a brake tester.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Check brake system.

2.CHECK FRONT AND REAR AXLE

Check that there is no excessive looseness in front and rear axle.

Front axle: Refer to <u>FAX-7, "Inspection"</u>.

• Rear axle: Refer to RAX-4, "Inspection".

Is the inspection result normal?

YES >> GO TO 3.

NO >> Repair or replace error-detected parts.

 ${
m 3.check}$  wheel sensor

Check wheel sensor.

- Check installation and damage of wheel sensor.
- Check connection of wheel sensor harness connector.
- Check terminal of wheel sensor harness connector.

Is the inspection result normal?

YES >> GO TO 4.

NO

- >> Repair or replace wheel sensor.
  - Front wheel sensor: Refer to <u>BRC-119</u>, "FRONT WHEEL SENSOR : Removal and Installation".
    Rear wheel sensor: Refer to <u>BRC-120</u>, "REAR WHEEL SENSOR : Removal and Installation".

**4**.CHECK SENSOR ROTOR

Check that there is no looseness, damage or foreign material on sensor rotor.

Is the inspection result normal?

YES >> GO TO 5.

- NO >> Repair installation or replace sensor rotor.
  - Front sensor rotor: Refer to BRC-122, "FRONT SENSOR ROTOR : Removal and Installation".
  - Rear sensor rotor. Refer to BRC-122, "REAR SENSOR ROTOR : Removal and Installation".

5.CHECK WARNING LAMP TURNS OFF

Check that ABS warning lamp, brake warning lamp and VDC warning lamp turn OFF approx. 2 second after key switch is turned ON and stay in OFF status during driving. CAUTION:

- Brake warning lamp turns ON when parking brake is operated (parking brake switch is ON) or brake fluid is less than the specified level (brake fluid level switch is ON).
- VDC function and TCS function never operate when VDC OFF switch is operated (when VDC OFF indicator lamp turns ON).

Is the inspection result normal?

YES >> Normal

>> Perform self-diagnosis for "ABS" with CONSULT. NO

INFOID:000000009651440

INFOID:000000009651439

# UNEXPECTED BRAKE PEDAL REACTION

< SYMPTOM DIAGNOSIS > [WITH V	/DC]
UNEXPECTED BRAKE PEDAL REACTION	
Description	0009651441
A malfunction of brake pedal feel (height or others) is detected when brake pedal is depressed.	
Diagnosis Procedure	0009651442
1. CHECK FRONT AND REAR AXLE	
<ul> <li>Check that there is no excessive looseness in front and rear axle.</li> <li>Front axle: Refer to <u>FAX-7, "Inspection"</u>.</li> <li>Rear axle: Refer to <u>RAX-4, "Inspection"</u>.</li> </ul>	
Is the inspection result normal? YES >> GO TO 2. NO >> Repair or replace error-detected parts.	
	—
<ul> <li>Check disc rotor runout.</li> <li>Front: Refer to <u>BR-14, "DISC ROTOR : Inspection and Adjustment"</u>.</li> <li>Rear: Refer to <u>BR-16, "DISC ROTOR : Inspection and Adjustment"</u>.</li> </ul>	
<u>Is the inspection result normal?</u> YES >> GO TO 3. NO >> Refinish disc rotor. • Front: Refer to <u>BR-14</u> , " <u>DISC ROTOR : Inspection and Adjustment</u> ". • Rear: Refer to <u>BR-16</u> , " <u>DISC ROTOR : Inspection and Adjustment</u> ".	
<b>3.</b> CHECK BRAKE FLUID LEAKAGE	
Check fluid leakage.  • Front: Refer to <u>BR-22, "FRONT : Inspection"</u> .  • Rear: Refer to <u>BR-25, "REAR : Inspection"</u> .	
Is the inspection result normal? YES >> GO TO 4. NO >> Repair or replace error-detected parts. 4 CHECK BRAKE PEDAL	
Check each item of brake pedal. Refer to BR-7, "Inspection and Adjustment".	
Is the inspection result normal? YES >> GO TO 5. NO >> Adjust each item of brake pedal. Refer to BR-7, "Inspection and Adjustment".	
5. CHECK BRAKING FORCE	
Check brake force using a brake tester.	
<u>Is the inspection result normal?</u> YES >> GO TO 6. NO >> Check each components of brake system.	
6. CHECK BRAKE PERFORMANCE	
Disconnect ABS actuator and electric unit (control unit) connector so that ABS does not operate. Chec brake force is normal in this condition. Connect harness connectors after checking.	k that
Is the inspection result normal?	

NO >> Check each components of brake system.

< SYMPTOM DIAGNOSIS >

# THE BRAKING DISTANCE IS LONG

## Description

Brake stopping distance is long when ABS function is operated.

Diagnosis Procedure

#### CAUTION:

Brake stopping distance on slippery road like rough road, gravel road or snowy road may become longer when ABS is operated than when ABS is not operated.

**1.**CHECK BRAKING FORCE

Check brake force using a brake tester.

Is the inspection result normal?

YES >> GO TO 2.

NO >> Check each components of brake system.

2. CHECK BRAKE PERFORMANCE

Disconnect ABS actuator and electric unit (control unit) connector so that ABS does not operate. Check brake stopping distance in this condition. Connect harness connectors after checking.

Is the inspection result normal?

YES >> Normal

NO >> Check each components of brake system.

INFOID:000000009651444

# **DOES NOT OPERATE**

#### < SYMPTOM DIAGNOSIS >

# DOES NOT OPERATE

# Description

VDC function, TCS function, ABS function, EBD function and brake limited slip differential (BLSD) function  $_{\rm B}$  does not operate.

#### Diagnosis Procedure

#### **CAUTION:**

- VDC function, ABS function and EBD function never operate when the vehicle speed is 10 km/h (6.2 MPH) or less.
- VDC function and TCS function never operate when VDC OFF switch is operated (when VDC OFF indicator lamp turns ON).

**1.**CHECK WARNING LAMP

Check that ABS warning lamp, brake warning lamp and VDC warning lamp turn ON and turn OFF approx. 2 second after key switch is turned ON. Check that ABS warning lamp, brake warning lamp and VDC warning lamp and stay in OFF status during driving.

#### Brake warning lamp turns ON when parking brake is operated (parking brake switch is ON) or brake fluid is less than the specified level (brake fluid level switch is ON).

• VDC function and TCS function never operate when VDC OFF switch is operated (when VDC OFF G indicator lamp turns ON).

Is the inspection result normal?

YES >> Normal

NO >> Perform self-diagnosis for "ABS" with CONSULT.

# **BRAKE PEDAL VIBRATION OR OPERATION SOUND OCCURS**

#### < SYMPTOM DIAGNOSIS >

# BRAKE PEDAL VIBRATION OR OPERATION SOUND OCCURS

# Description

- Brake pedal vibrates and motor sound from ABS actuator and electric unit (control unit) occurs, when the engine starts.
- Brake pedal vibrates during braking.

#### CAUTION:

Vibration may be felt during brake pedal is lightly depressed (just placing a foot on it) in the following conditions. This is normal.

- · When shifting gears
- When driving on slippery road
- During cornering at high speed
- When passing over bumps or grooves [Approx. 50 mm (1.97 in) or more]
- When pulling away just after starting engine [at approx. 15 km/h (9.3 MPH) or higher]

# **Diagnosis Procedure**

INFOID:000000009651448

[WITH VDC]

INFOID:000000009651447

**1.**SYMPTOM CHECK 1

Check that there are pedal vibrations when the engine is started.

Do vibrations occur?

YES >> GO TO 2.

NO >> Check brake pedal. Refer to <u>BR-19</u>, "Inspection and Adjustment".

# 2.SYMPTOM CHECK 2

Check that motor noise from ABS actuator and electric unit (control unit) occurs when the engine starts. Does the operation sound occur?

YES >> GO TO 3.

NO >> Perform self-diagnosis for "ABS" with CONSULT.

**3.**SYMPTOM CHECK 3

Check symptoms when electrical component (headlamps, etc.) switches are operated.

Does the symptom occur?

- YES >> Check that radio (including wiring), antenna and antenna lead-in wires are not located near ABS actuator and electric unit (control unit). Move them if they are located near ABS actuator and electric unit (control unit).
- NO >> Normal

# **VEHICLE JERKS DURING**

< SYMPTOM DIAGNOSIS > [WITH VDC]
VEHICLE JERKS DURING
Description
The vehicle jerks when VDC function, TCS function, ABS function, EBD function or brake limited slip differen- tial (BLSD) function operates.
Diagnosis Procedure
1. СНЕСК ЗҮМРТОМ
Check that the vehicle jerks when VDC function, TCS function, ABS function, EBD function or brake limited slip differential (BLSD) function operates. Is the inspection result normal? YES >> Normal NO >> GO TO 2
2. PERFORM SELF-DIAGNOSIS
With CONSULT Perform self-diagnosis for "ABS". Is any DTC detected? YES >> Check the DTC. Refer to <u>BRC-38, "DTC Index"</u> .
NO >> GO TO 3. $3_{\text{CHECK CONNECTOR}}$
<ul> <li>With CONSULT</li> <li>1. Turn the ignition switch OFF.</li> <li>2. Disconnect ABS actuator and electric unit (control unit) harness connector.</li> <li>3. Check connector terminal for deformation, disconnection and looseness.</li> <li>4. Connect harness connector and perform self-diagnosis for "ABS" again.</li> <li>Is the inspection result normal?</li> </ul>
YES >> GO TO 4. NO >> Poor connection of connector terminal. Repair or replace connector terminal.
4. CHECK ECM AND TCM SELF-DIAGNOSIS RESULTS
With CONSULT     Perform self-diagnosis for "ENGINE" and "TRANSMISSION".
Is any DTC detected?         YES       >> Check the DTC.         NO       >> Replace ABS actuator and electric unit (control unit). Refer to <u>BRC-123, "Removal and Installa-tion"</u> .

#### < SYMPTOM DIAGNOSIS >

# NORMAL OPERATING CONDITION

# Description

INFOID:000000009651451

[WITH VDC]

Symptom	Result	
Brake pedal slightly vibrates and operation sound (motor sound and sound from suspen- sion) occurs when VDC function, TCS function, ABS function, EBD function or brake limited differential (BLSD) function operates.	This is not a malfunction, The symptom occurs VDC function, TCS function, ABS function, EBD function and brake limited differential (BLSD) function that are nor- mally operated.	
Brake stopping distance may become longer than models without ABS function depending on the road conditions, when ABS function is operated on slippery road like rough road, gravel road or snowy road.		
Brake pedal vibrates and operation sound occurs during sudden acceleration and corner- ing, when VDC function, TCS function or brake limited slip differential (BLSD) function is operated.		
Brake pedal vibrates and motor sound from the engine room occurs, when the engine starts or the vehicle starts just after starting the engine.	This is not a malfunction, because it is caused by operation check of ABS actuator and electric unit (control unit).	
Acceleration may be felt insufficient depending on the road conditions.	This is not a malfunction, because it is	
TCS function may operate momentarily, while driving on a road where friction coefficient varies, or when downshifting, or fully depressing accelerator pedal.	caused by TCS function that puts the highest priority to obtain the optimum traction (stability).	
VDC warning lamp may turn ON, when the vehicle is on a rotating turntable or is given a strong shaking or large vibrations on a ship while the engine is running.		
VDC warning lamp may turn ON and VDC function, TCS function and brake limited slip dif- ferential (BLSD) function may not normally operate, when driving on a special road the is extremely slanted (bank in a circuit course).	In this case, restart the engine on a nor- mal road. If the normal condition is re- stored, there is no malfunction. In that case, erase "ABS" self-diagnosis result memory with CONSULT.	
A malfunction in yaw rate/side G sensor system may be detected when the vehicle sharply turns during a spin turn, acceleration turn or drift driving while VDC function, TCS function and brake limited slip differential (BLSD) function are OFF (VDC OFF switch is pressed and VDC OFF indicator lamp is in ON status).		
The vehicle speed does not increase, when the accelerator pedal is depressed while the vehicle is on a 2-wheel chassis dynamometer for speedometer check.	This is not a malfunction. (When checking the vehicle on a chassis dynamometer, operate VDC OFF switch so that TCS function is OFF.)
