## < PRECAUTION >

# PRECAUTION PRECAUTIONS

#### Precautions for Suspension

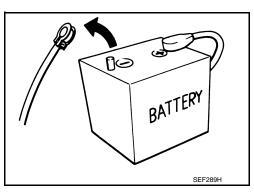

- When installing rubber bushings, the final tightening must be carried out under unladen conditions with tires on ground. Spilled oil might shorten the life of rubber bushings. Be sure to wipe off any spilled oil.
- Unladen conditions mean that fuel, engine coolant and lubricant are full. Spare tire, jack, hand tools and mats are in designated positions.
- After servicing suspension parts, be sure to check wheel alignment.
- Self-lock nuts are not reusable. Always use new ones when installing. Since new self-lock nuts are pre-oiled, tighten as they are.

## Precautions for Removing Battery Terminal

When disconnecting the battery terminal, pay attention to the following.

- Always use a 12V battery as power source.
- Never disconnect battery terminal while engine is running.
- When removing the 12V battery terminal, turn OFF the ignition switch and wait at least 30 seconds.
- For vehicles with the engine listed below, remove the battery terminal after a lapse of the specified time:

| D4D engine | : 20 minutes | YS23DDT  | : 4 minutes  |  |
|------------|--------------|----------|--------------|--|
| HRA2DDT    | : 12 minutes | YS23DDTT | : 4 minutes  |  |
| K9K engine | : 4 minutes  | ZD30DDTi | : 60 seconds |  |
| M9R engine | : 4 minutes  | ZD30DDTT | : 60 seconds |  |
| R9M engine | : 4 minutes  |          |              |  |
| V9X engine | : 4 minutes  |          |              |  |
| YD25DDTi   | : 2 minutes  |          |              |  |

#### NOTE:

ECU may be active for several tens of seconds after the ignition switch is turned OFF. If the battery terminal is removed before ECU stops, then a DTC detection error or ECU data corruption may occur.

• After high-load driving, if the vehicle is equipped with the V9X engine, turn the ignition switch OFF and wait for at least 15 minutes to remove the battery terminal.

#### NOTE:

- Turbocharger cooling pump may operate in a few minutes after the ignition switch is turned OFF.
- Example of high-load driving
- Driving for 30 minutes or more at 140 km/h (86 MPH) or more.
- Driving for 30 minutes or more on a steep slope.
- For vehicles with the 2-batteries, be sure to connect the main battery and the sub battery before turning ON the ignition switch.

#### NOTE:

If the ignition switch is turned ON with any one of the terminals of main battery and sub battery disconnected, then DTC may be detected.

• After installing the 12V battery, always check "Self Diagnosis Result" of all ECUs and erase DTC. **NOTE:** 

The removal of 12V battery may cause a DTC detection error.

#### < PERIODIC MAINTENANCE >

# PERIODIC MAINTENANCE REAR SUSPENSION ASSEMBLY

#### Inspection

#### COMPONENT PART

Check the mounting conditions (looseness, backlash) of each component and component conditions (wear, damage) are normal.

Ball Joint Axial End Play

- 1. Set front wheels in a straight-ahead position.
- 2. Move axle side of suspension arm in the axial direction by hand. Check there is no end play.

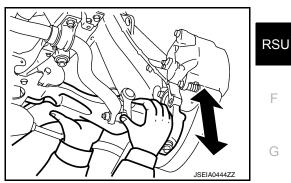

Axial end play : Refer to RSU-21, "Ball Joint".

#### CAUTION:

- Never depress brake pedal when measuring.
- Never perform with tires on level ground.
- Be careful not to damage ball joint boot. Never damage the installation position by applying excessive force.

#### SHOCK ABSORBER

Check for oil leakage and damage. Replace it if necessary.

## < PERIODIC MAINTENANCE >

## WHEEL ALIGNMENT

#### Inspection

DESCRIPTION

Measure wheel alignment under unladen conditions.

NOTE:

"Unladen conditions" means that fuel, engine coolant, and lubricant are full. Spare tire, jack, hand tools and mats are in designated positions.

#### PRELIMINARY CHECK

Check the following:

- Tires for improper air pressure and wear. Refer to WT-55, "Tire Air Pressure".
- Road wheels for runout.
- Wheel bearing axial end play. Refer to RAX-5, "Inspection".
- · Ball joint axial end play of suspension arm. Refer to RSU-5, "Inspection".
- Shock absorber operation.
- Each mounting point of axle and suspension for looseness and deformation.
- Each of front lower link, rear lower link, radius rod, rear suspension member, suspension arm, and shock absorber for cracks, deformation, and other damage.
- Vehicle height (posture).

#### GENERAL INFORMATION AND RECOMMENDATIONS

- A four-wheel thrust alignment should be performed.
- This type of alignment is recommended for any NISSAN/INFINITI vehicle.
- The four-wheel "thrust" process helps ensure that the vehicle is properly aligned and the steering wheel is centered.
- The alignment rack itself should be capable of accepting any NISSAN/INFINITI vehicle.
- The rack should be checked to ensure that it is level.
- · Make sure the machine is properly calibrated.
- Your alignment equipment should be regularly calibrated in order to give correct information.
- Check with the manufacturer of your specific equipment for their recommended Service/Calibration Schedule.

#### ALIGNMENT PROCESS

#### **IMPORTANT:**

Use only the alignment specifications listed in this Service Manual.

- When displaying the alignment settings, many alignment machines use "indicators": (Green/red, plus or minus, Go/No Go). Never use these indicators.
- The alignment specifications programmed into your machine that operate these indicators may not be correct.
- This may result in an ERROR.
- Most camera-type alignment machines are equipped with both "Rolling Compensation" method and optional "Jacking Compensation" method to "compensate" the alignment targets or head units. "Rolling Compensation" is the preferred method.
- If using the "Rolling Compensation" method, after installing the alignment targets or head units, push or pull on the rear wheel to move the vehicle. **Do not push or pull on the vehicle body.**
- If using the "Jacking Compensation" method, after installing the alignment targets or head units, raise the vehicle and rotate the wheels 1/2 turn both ways.

#### NOTE:

Do not use the "Rolling Compensation" method if you are using sensor-type alignment equipment.

- Follow all instructions for the alignment machine you're using for more information.

#### Adjustment

CAMBER

INFOID:000000012404821

## WHEEL ALIGNMENT

#### < PERIODIC MAINTENANCE >

• If camber is exceeds the standard value, adjust with adjusting bolt (1) in front lower link (2).

#### Camber: Refer to RSU-21, "Wheel Alignment".

#### **CAUTION:**

- When tightening the nut firmly and checking the torque, use a wrench to prevent the turning of the bolt.
- After adjusting camber, be sure to check toe-in.
  If camber is not still within the specification, inspect and replace
- any damaged or worn suspension parts.

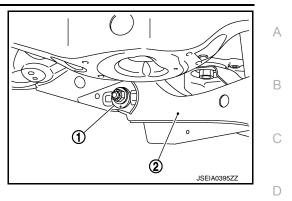

#### TOE-IN

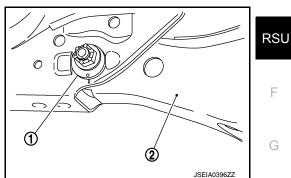

• If toe-in is exceeds the standard value, adjust with adjusting bolt (1) in rear lower link (2).

#### Toe-In: Refer to RSU-21, "Wheel Alignment".

#### **CAUTION:**

- Be sure to adjust equally on right and left side with adjusting bolt.
- When tightening the nut firmly and checking the torque, use a wrench to prevent the turning of the bolt.
- If toe-in is not still within the specification, inspect and replace any damaged or worn suspension parts.
- After toe-in adjustment, adjust neutral position of steering angle sensor. Refer to <u>BRC-50, "Work Procedure"</u> (with VDC).

# **REMOVAL AND INSTALLATION REAR LOWER LINK & COIL SPRING**

## Exploded View

INFOID:000000012404823

N·m (kg-m, ft-lb)

Always replace after every disassembly.

## Removal and Installation

#### REMOVAL

4

7

- Remove tires with power tool. Refer to WT-46, "Exploded View".
- 2. Set suitable jack under rear lower link. **CAUTION:** 
  - At this step, the jack must be set only for supporting the removal procedure. For details on jacking up the vehicle, refer to GI-29, "Garage Jack and Safety Stand and 2-Pole Lift".
  - Never damage the rear lower link with a jack.
  - Check the stable condition when using a jack.
- 3. Loosen rear lower link adjusting bolt and nut from rear suspension member, and then remove rear lower link mounting bolt and nut from axle housing with power tool.
- Slowly lower jack, then remove upper seat, coil spring, and rubber seat from rear lower link. 4. **CAUTION:**

#### Operate while checking that jack supporting status is stable.

- Remove rear lower link.
- 6. Perform inspection after removal. Refer to RSU-9, "Inspection".

#### INSTALLATION

Note the following, and install in the reverse order of removal.

• Install adjusting bolt so that the graduation marks on adjusting bolt are positioned downward.

## **REAR LOWER LINK & COIL SPRING**

#### < REMOVAL AND INSTALLATION >

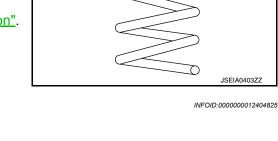

• When installing upper seat (1), align protrusion (B) on upper seat inside to tabs (A) of vehicle side bracket (2).

- - Fit the bottom end of coil spring to the step of rubber seat. **CAUTION:** Be careful with the vertical direction of the coil spring.

Fit rubber seat (1) to step (A) of rear lower link (2).

#### $\Diamond$ : Upper side

- Perform final tightening of fixing parts at the vehicle installation position (rubber bushing), under unladen conditions with tires on level ground.
- Perform inspection after installation. Refer to <u>RSU-9, "Inspection"</u>.

2

ി

2

**(A**)

JPEIB0266ZZ

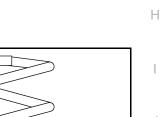

## Inspection

#### INSPECTION AFTER REMOVAL

Check rear lower link, rubber seat, upper seat, and coil spring for deformation, crack, and damage. Replace it if necessary.

#### **INSPECTION AFTER INSTALLATION**

- 1. Check wheel alignment. Refer to RSU-6, "Inspection".
- Adjust neutral position of steering angle sensor. Refer to <u>BRC-50</u>, "Work Procedure" (with VDC). 2.

## Removal and Installation

#### REMOVAL

- Remove tires with power tool. Refer to WT-46, "Exploded View". 1.
- 2. Set jack under axle housing. CAUTION:
  - At this step, the jack must be set only for supporting the removal procedure. For details on jacking up the vehicle, refer to GI-29, "Garage Jack and Safety Stand and 2-Pole Lift".
  - Never damage the axle housing with a jack.
  - · Check the stable condition when using a jack.
- 3. Separate shock absorber mounting bolt from front lower link.
- 4. Slowly lower jack, then remove shock absorber from front lower link. **CAUTION:**

#### Operate while checking that jack supporting status is stable.

5. Remove mounting bracket mounting nuts (+), and remove shock absorber assembly.

**INSTALLATION** 

Note the following, and install in the reverse order of removal.

**Revision: October 2015** 

## REAR SHOCK ABSORBER

#### < REMOVAL AND INSTALLATION >

- Perform final tightening of fixing parts at the vehicle installation position (rubber bushing), under unladen conditions with tires on level ground.
- Perform inspection after installation. Refer to <u>RSU-11, "Inspection"</u>.
- After replacing the shock absorber, always follow the disposal procedure to discard the shock absorber. Refer to <u>RSU-12, "Disposal"</u>.

#### Disassembly and Assembly

#### DISASSEMBLY

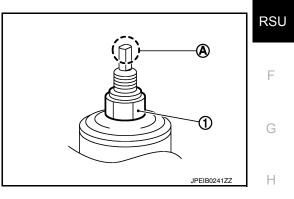

#### **CAUTION:**

#### Never damage shock absorber piston rod when removing components from shock absorber.

1. Wrap a shop cloth around lower side of shock absorber and fix it with a vise. CAUTION:

#### Never set the cylindrical part of shock absorber with a vise.

- 2. Secure the piston rod tip (A) so that piston rod does not turn, and remove piston rod lock nut (1).
- 3. Remove mounting bracket and bound bumper from shock absorber.
- Perform inspection after disassembly. Refer to <u>RSU-11, "Inspec-</u> tion".

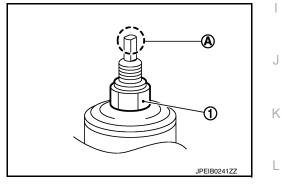

#### ASSEMBLY

Note the following, and install in the reverse order of removal.

• Secure the piston rod tip (A) so that piston rod does not turn, then tighten the piston rod lock nut (1) to the specified torque. CAUTION:

#### Never reuse piston rod lock nut.

- Never damage shock absorber piston rod when installing components from shock absorber.
- Perform inspection after assembly. Refer to <u>RSU-11, "Inspection"</u>.

#### Inspection

#### INSPECTION AFTER DISASSEMBLY

#### Mounting bracket Check for cracks and damage. Replace it if necessary.

Bound Bumper Check for cracks and damage. Replace it if necessary.

Shock Absorber

Check the following items, and replace the part if necessary.

- Shock absorber for deformation, cracks, and other damage.
- Piston rod for damage, uneven wear, and distortion.
- Oil leakage

#### INSPECTION AFTER ASSEMBLY

Make sure piston rod on shock absorber is not damaged when attaching components to shock absorber.

#### INSPECTION AFTER INSTALLATION

1. Check wheel alignment. Refer to RSU-6, "Inspection".

## **REAR SHOCK ABSORBER**

#### < REMOVAL AND INSTALLATION >

2. Adjust neutral position of steering angle sensor. Refer to BRC-50, "Work Procedure" (with VDC).

#### Disposal

INFOID:000000012404830

- 1. Set shock absorber horizontally to the ground with the piston rod fully extracted.
- Drill 2 3 mm (0.08 0.12 in) hole at the position (●) from top as shown in the figure to release gas gradually.
   CAUTION:
  - Wear eye protection (safety glasses).
  - Wear gloves.
  - Be careful with metal chips or oil blown out by the compressed gas.

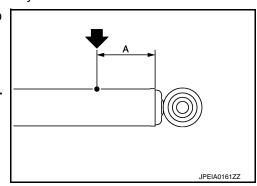

#### NOTE:

- Drill vertically in this direction show by arrow.
- Directly to the outer tube avoiding brackets.
- The gas is clear, colorless, odorless, and harmless.

#### A : 20 – 30 mm (0.79 – 1.18 in)

3. Position the drilled hole downward and drain oil by moving the piston rod several times. CAUTION:

Dispose of drained oil according to the law and local regulations.

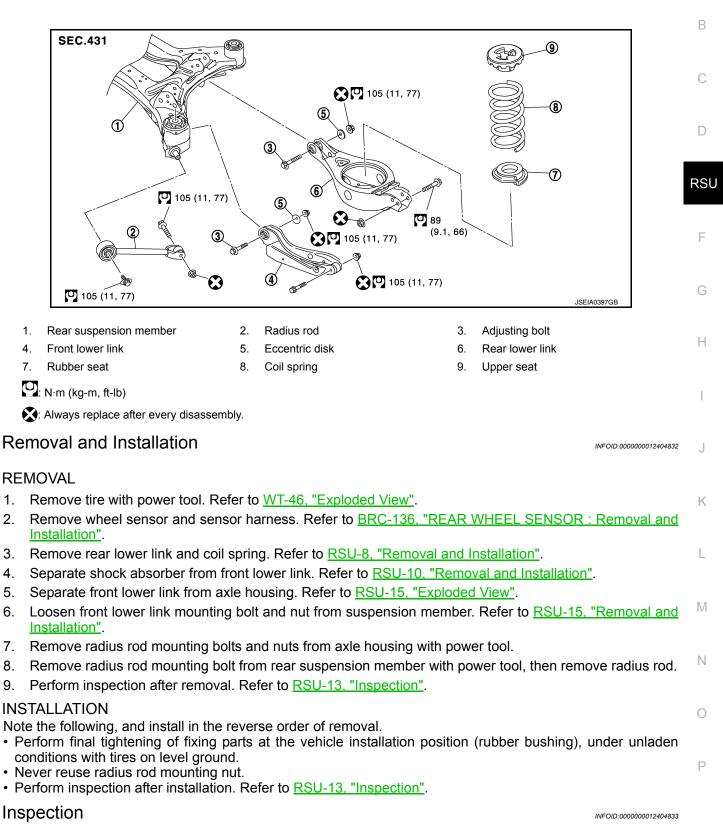

## RADIUS ROD

## Exploded View

INFOID:000000012404831

А

#### **INSPECTION AFTER REMOVAL**

Check radius rod and bushing for any deformation, cracks, or damage. Replace if necessary.

## **RSU-13**

#### INSPECTION AFTER INSTALLATION

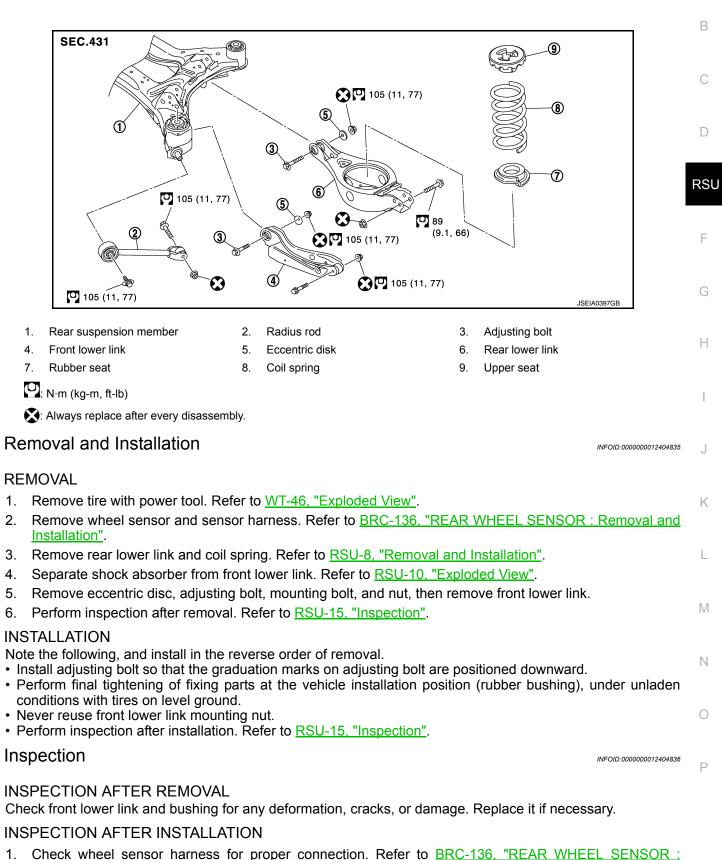

- 1. Check wheel sensor harness for proper connection. Refer to <u>BRC-136</u>, "REAR WHEEL SENSOR : <u>Exploded View"</u>.
- 2. Check wheel alignment. Refer to <u>RSU-6, "Inspection"</u>.
- 3. Adjust neutral position of steering angle sensor. Refer to <u>BRC-50, "Work Procedure"</u> (with VDC).

Exploded View".

## FRONT LOWER LINK

#### < REMOVAL AND INSTALLATION >

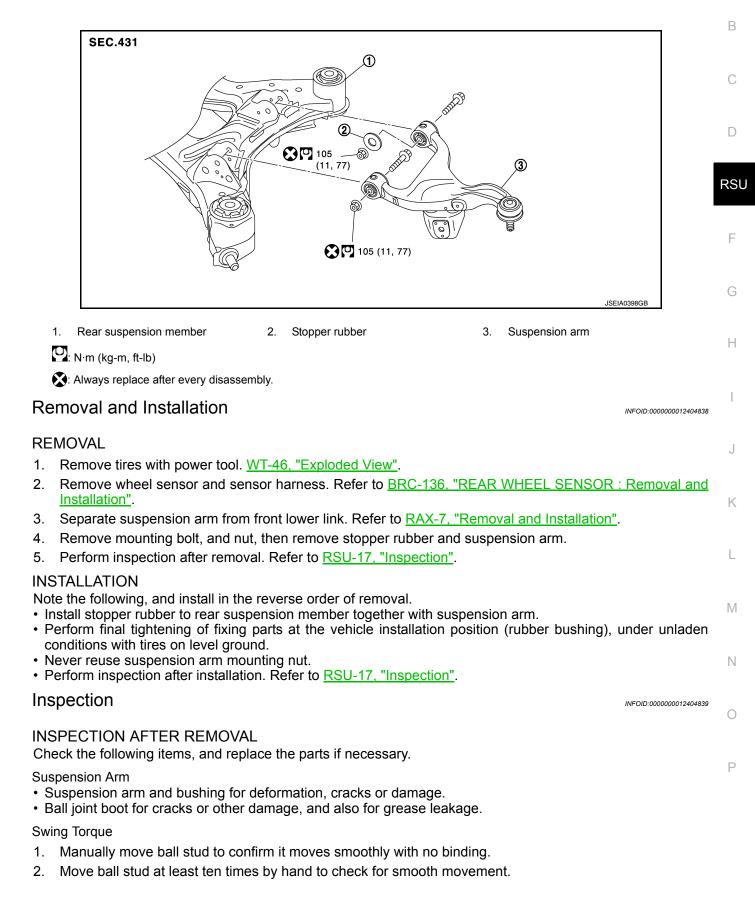

- 2. Check wheel alignment. Refer to <u>RSU-6, "Inspection"</u>.
- 3. Adjust neutral position of steering angle sensor. Refer to <u>BRC-50, "Work Procedure"</u> (with VDC).

## SUSPENSION ARM

## Exploded View

INFOID:000000012404837

А

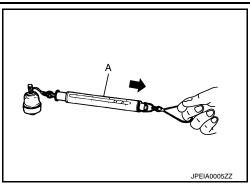

## SUSPENSION ARM

#### < REMOVAL AND INSTALLATION >

3. Hook spring balance (A) at cotter pin mounting hole. Confirm spring balance measurement value is within specifications when ball stud begins moving.

#### Swing torque : Refer to <u>RSU-21, "Ball Joint"</u>.

 If swing torque exceeds standard range, replace suspension arm assembly.

Axial End Play

- 1. Manually move ball stud to confirm it moves smoothly with no binding.
- 2. Move ball stud at least ten times by hand to check for smooth movement.
- 3. Move tip of ball stud in axial direction to check for looseness.

#### Axial end play : Refer to <u>RSU-21, "Ball Joint"</u>.

• If axial end play exceeds the standard value, replace suspension arm assembly.

#### **INSPECTION AFTER INSTALLATION**

- 1. Check wheel sensor harness for proper connection. Refer to <u>BRC-136</u>, "<u>REAR WHEEL SENSOR</u> : <u>Exploded View</u>".
- 2. Check wheel alignment. Refer to RSU-6, "Inspection".
- 3. Adjust neutral position of steering angle sensor. Refer to <u>BRC-50, "Work Procedure"</u> (with VDC).

INFOID:000000012404840

А

- Axle housing: Refer to RAX-7, "Removal and Installation".
- Suspension arm: Refer to RSU-17, "Removal and Installation".

#### **RSU-19**

## REAR SUSPENSION ASSEMBLY

#### < REMOVAL AND INSTALLATION >

- Radius rod: Refer to RSU-13, "Removal and Installation".
- Front lower link: Refer to <u>RSU-15, "Removal and Installation"</u>.
- 13. Perform inspection after removal. Refer to RSU-20, "Inspection".

#### INSTALLATION

Note the following, and install in the reverse order of the removal.

- Perform final tightening of fixing parts at the vehicle installation position (rubber bushing), under unladen conditions with tires on level ground.
- Perform inspection after installation. Refer to RSU-20, "Inspection".

#### Inspection

INFOID:000000012404842

#### INSPECTION AFTER REMOVAL

Check rear suspension member for deformation, cracks, or any other damage. Replace it if necessary.

#### INSPECTION AFTER INSTALLATION

- 1. Check wheel sensor harness for proper connection. Refer to <u>BRC-136</u>, "<u>REAR WHEEL SENSOR</u> : <u>Exploded View</u>".
- 2. Adjust parking brake operation (stroke). Refer to PB-4, "Inspection and Adjustment".
- 3. Check wheel alignment. Refer to RSU-6. "Inspection".
- 4. Adjust neutral position of steering angle sensor. Refer to <u>BRC-50, "Work Procedure"</u> (with VDC).
