# PRECAUTION PRECAUTIONS

#### Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SR and SB section of this Service Manual.

#### WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SR section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

#### PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

#### WARNING:

- When working near the Airbag Diagnosis Sensor Unit or other Airbag System sensors with the Ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the Ignition OFF, disconnect the battery and wait at least three minutes before performing any service.

#### PREPARATION

# < PREPARATION > PREPARATION

### PREPARATION

# Special Service Tool

INFOID:000000012429212

The actual shape of the tools may differ from those illustrated here.

Tool number (TechMate No.) Tool name		Description
KV991J0070 (J-45695-A) Coolant refill tool		Refilling engine cooling system
KV991J0010 (J-23688) Engine coolant refractometer	WEIA0539E	Checking concentration of ethylene glycol in engine coolant
ommercial Service Too		INFOID:000000012429213
Tool name		Description

#### < PERIODIC MAINTENANCE >

# PERIODIC MAINTENANCE ENGINE COOLANT

#### Inspection

#### LEVEL

- Check that the reservoir tank engine coolant level is within the "MIN" to "MAX" when the engine is cool.
  - (A) : MAX
  - (B) : MIN
- Adjust the engine coolant level if necessary.
   CAUTION:

Refill Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent in its quality mixed with water (distilled or demineralized). Refer to <u>MA-11, "Fluids and Lubricants"</u>.

#### CHECKING COOLING SYSTEM FOR LEAKS

 To check for leaks, apply pressure to the cooling system using suitable tools (A/B).

#### Testing pressure

: Refer to <u>CO-25, "Radiator"</u>.

#### WARNING:

Do not remove the radiator cap when the engine is hot. Serious burns could occur from high-pressure engine coolant escaping from the radiator. Wrap a thick cloth around the cap. Slowly push down and turn it a quarter turn to allow built-up pressure to escape. Carefully remove the cap by pushing it down and turning it all the way.

#### **CAUTION:**

- Perform this step when the engine is cold.
- Do not spill engine coolant on drivebelt.
- Higher test pressure than specified may cause radiator damage. NOTE:
- If engine coolant decreases, replenish radiator with engine coolant. Refer to <u>MA-11, "Fluids and Lubri-</u> <u>cants"</u>.
- · If anything is found, repair or replace damaged parts.

#### Draining

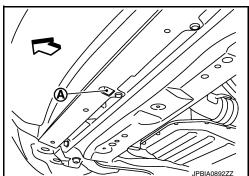

#### WARNING:

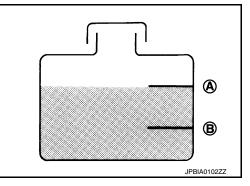

Do not remove radiator cap when engine is hot. Serious burns could occur from high pressure engine coolant escaping the radiator. Wrap a thick cloth around the cap. Slowly push down and turn it a quarter turn to allow built-up pressure to escape. Carefully remove the cap by pushing it down and turning it all the way.

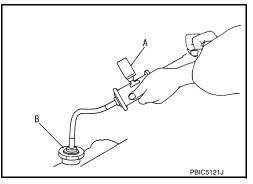

- 1. Open radiator drain plug at the bottom of radiator, and then remove radiator cap.
  - (A) : Radiator drain plug hole
  - $\triangleleft$  : Vehicle front

#### **CAUTION:**

- Do not allow engine coolant to contact the drive belt.
- Perform this step when the engine is cold.

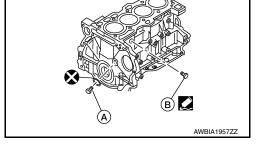

INFOID:000000012429218

#### **ENGINE COOLANT**

#### < PERIODIC MAINTENANCE >

- 2. Follow this step for heater core removal/replacement only. Disconnect the upper heater hose at the engine side and apply moderate air pressure [103.46 kPa (1.055 kg/cm<sup>2</sup>, 15 psi) maximum air pressure] into the hose for 30 seconds to blow the excess engine coolant out of the heater core.
- 3. When draining all of the engine coolant in the system, remove the reservoir tank and drain the engine coolant, then clean the reservoir tank before installation.
  CAUTION:
  - Do not allow the engine coolant to contact the drive belt.
  - Perform this step when engine is cold.
- 4. When draining all of the engine coolant in the system for engine removal or repair, remove the engine coolant drain plugs (A/B) from the cylinder block.

 Check the drained engine coolant for contaminants such as rust, corrosion or discoloration. If the engine coolant is contaminated, flush the engine cooling system. Refer to <u>CO-11, "Flushing"</u>.

Refilling

INFOID:000000012429219

#### **CAUTION:**

- Do not put additive such as waterleak preventive, since it may cause cooling waterway clogging.
- When refilling use Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent in its quality mixed with water (distilled or demineralized). Refer to <u>MA-11, "Fluids and Lubricants"</u>.
- 1. Install the radiator drain plug. Install the reservoir tank and cylinder block drain plug, if removed for a total system drain or for engine removal or repair.
  - The radiator must be completely empty of coolant and water.
  - Apply sealant to the threads of the cylinder block drain plug.
  - Use recommended coolant or equivalent. Refer to <u>MA-11, "Fluids and Lubricants"</u>.

Radiator drain plug	: Refer to <u>CO-13,</u>
Cylinder block drain plug (A)	: 53.9 N·m (5.5 kg
Cylinder block drain plug (B)	: 9.8 N·m (1.0 kg-

: Refer to <u>CO-13, "Exploded View"</u>. : 53.9 N·m (5.5 kg-m, 40 ft-lb) : 9.8 N·m (1.0 kg-m, 87 in-lb)

- 2. If disconnected, reattach the upper radiator hose at the engine side.
- Set the vehicle heater controls to the full HOT and heater ON position. Turn the vehicle ignition ON with the engine OFF as necessary to activate the heater mode.

Ρ

M

Ν

Ε

Н

А

#### **ENGINE COOLANT**

#### < PERIODIC MAINTENANCE >

4. Install the Tool by installing the radiator cap adapter onto the radiator neck opening. Then attach the gauge body assembly with the refill tube and the venturi assembly to the radiator cap adapter.

#### Tool number : KV991J0070 (J-45695-A)

- 5. Insert the refill hose into the coolant mixture container that is placed at floor level. Make sure the ball valve is in the closed position.
  - Use recommended coolant or equivalent. Refer to <u>MA-11</u>, "Fluids and Lubricants".

Engine coolant capacity<br/>(with reservoir tank): Refer to CO-25, "Periodical<br/>Maintenance Specification".

#### **CAUTION:**

Do not use any cooling system additives such as radiator sealer. Additives may clog the cooling system and cause damage to the engine, transmission and/or cooling system.

6. Install an air hose to the venturi assembly, the air pressure must be within specification.

 
 Compressed air supply pressure
 : 549 - 824 kPa (5.6 - 8.4 kg/cm<sup>2</sup>, 80 - 119 psi)

#### CAUTION:

#### The compressed air supply must be equipped with an air dryer.

- 7. The vacuum gauge will begin to rise and there will be an audible hissing noise. During this process open the ball valve on the refill hose slightly. Coolant will be visible rising in the refill hose. Once the refill hose is full of coolant, close the ball valve. This will purge any air trapped in the refill hose.
- 8. Continue to draw the vacuum until the gauge reaches 28 inches of vacuum. The gauge may not reach 28 inches in high altitude locations, use the vacuum specifications based on the altitude above sea level.

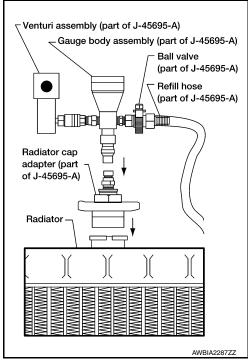

Vacuum gauge reading
: 28 inches of vacuum
: 27 inches of vacuum
: 26 inches of vacuum
: 24 - 25 inches of vacuum

- 9. When the vacuum gauge has reached the specified amount, disconnect the air hose and wait 20 seconds to see if the system loses any vacuum. If the vacuum level drops, perform any necessary repairs to the system and repeat steps 6 8 to bring the vacuum to the specified amount. Recheck for any leaks.
- 10. Place the coolant container (with the refill hose inserted) at the same level as the top of the radiator. Then open the ball valve on the refill hose so the coolant will be drawn up to fill the cooling system. The cooling system is full when the vacuum gauge reads zero.
  CAUTION:

# Do not allow the coolant container to get too low when filling, to avoid air from being drawn into the cooling system.

- 11. Remove the Tool from the radiator neck opening.
- 12. Fill the cooling system reservoir tank to the specified level and install the radiator cap. Run the engine to warm up the cooling system and top up the system as necessary.

#### **ENGINE COOLANT**

< F	PERIODIC MAINTENANCE >	
Flu	ushing	A
1.	Install reservoir tank, if removed, and radiator drain plug. CAUTION: • Be sure to clean drain plug. • Do not reuse O-ring.	CO
	<ul> <li>Radiator drain plug : Refer to <u>CO-13, "Exploded View"</u>.</li> <li>If water drain plugs on cylinder block are removed, close and tighten them. Refer to <u>EM-97, "Exploded</u></li> </ul>	С
2. 3.	<u>View"</u> . Refill engine coolant. Refer to <u>CO-9</u> , <u>"Refilling"</u> . Run the engine and warm it up to normal operating temperature.	D
4. 5. 6.	Rev the engine two or three times under no-load. Stop the engine and wait until it cools down. Drain water from the system. Refer to <u>CO-8</u> , " <u>Draining</u> ".	E

< PERIODIC MAINTENANCE >

#### RADIATOR RADIATOR CAP

**RADIATOR CAP** : Inspection

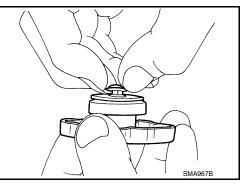

#### CHECKING RADIATOR CAP

- 1. Inspect the radiator cap.
  - Replace the cap if the metal plunger cannot be seen around the edge of the black rubber gasket.
  - Replace the cap if deposits of waxy residue or other foreign material are on the black rubber gasket or the metal retainer.

#### NOTE:

Thoroughly wipe out the radiator filler neck to remove any waxy residue or foreign material.

- 2. Pull the negative-pressure valve to open it and check that it closes completely when released.
  - Check that there is no dirt or damage on the valve seat of the radiator cap negative-pressure valve.
  - Check that there are no abnormalities in the opening and closing conditions of the negative-pressure valve.

3. Check radiator cap relief pressure using suitable tool (A/B).

#### Standard : Refer to <u>CO-25, "Radiator"</u>.

- Apply water or engine coolant to the cap seal surface before connecting the radiator cap to the tester.
- Replace the radiator cap if there is an abnormality in the negative-pressure valve, or if the open-valve pressure is outside of the standard values.

#### RADIATOR

#### **RADIATOR** : Inspection

Check radiator for mud or clogging. If necessary, clean radiator as follows. CAUTION:

- Be careful not to bend or damage radiator fins.
- When radiator is cleaned without removal, remove all surrounding parts such as radiator cooling fan assembly and horns. Then tape harness and harness connectors to prevent water from entering.
- 1. Spray water to the back side of the radiator core using a side to side motion from the top down.
- 2. Stop spraying when debris no longer flows from radiator core.
- 3. Blow air into the back side of radiator core using a side to side motion from the top down.
  - Use compressed air lower than 490 kPa (5 kg/cm<sup>2</sup>, 71 psi) and keep distance more than 30 cm (11.8 in).
- 4. Continue to blow air until no water sprays out.
- 5. Check for engine coolant leaks. Repair as necessary.

#### RADIATOR

#### < REMOVAL AND INSTALLATION >

When removing components such as hoses, tubes/lines, etc., cap or plug openings to prevent fluid from spilling.

1. Remove cooling fan assembly. Refer to <u>CO-17, "Removal and Installation"</u>. CAUTION:

#### Be careful not to damage the radiator.

- 2. Remove radiator hose (lower) from radiator.
- 3. Remove CVT oil warmer hoses from radiator.
- 4. Remove condenser. Refer to <u>HA-39</u>, "CONDENSER : Removal and Installation". CAUTION:

#### Be careful not to damage the condenser.

5. Remove radiator. CAUTION:

#### Be careful not to damage or scratch the radiator.

6. Remove clamps from radiator hose (upper/lower), (if necessary).

#### WARNING:

# Wear hand protection while applying heat to remove glue. NOTE:

Radiator hoses have glued on clamps.

- Apply heat gun at glued location, usually located on the underside of the radiator hose (upper/lower), a short distance from clamp.
- While applying heat, simultaneously wiggle or pressure the clamp tab gently until it can be removed from the hose without damaging it.

#### INSTALLATION

Installation is in the reverse order of removal.

- Reset electronic systems as necessary. Refer to PG-74, "ADDITIONAL SERVICE WHEN REMOVING BAT- TERY NEGATIVE TERMINAL : Special Repair Requirement"
  - **CAUTION:**
  - To prevent damage to the parts, connect the battery to the positive terminal first.
  - After connecting the positive and negative terminal to securely supply battery voltage, ensure that the positive and negative terminal are tightly clamped to battery and negative posts for good contact.
  - To securely supply battery voltage, check the positive and negative terminals for poor connection caused by corrosion.
- After installation, refill coolant and check for leaks. Refer to <u>CO-9, "Refilling"</u> and <u>CO-8, "Inspection"</u>.
   CAUTION:

#### Do not spill coolant in engine compartment. Use a shop cloth to absorb coolant.

CVT fluid cooler hose

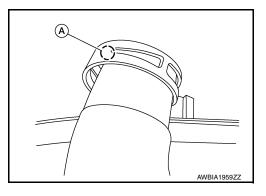

#### NOTE:

For orientation of the hose clamp for the CVT oil warmer hose. Refer to <u>TM-219</u>, "Removal and Installation"

Radiator hose

NOTE:

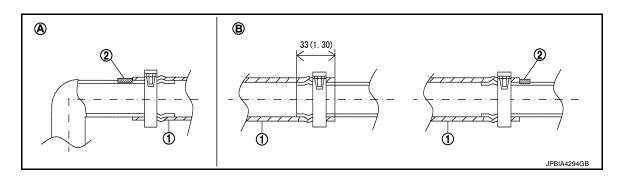

• Once hose clamp has been placed into position, place a small amount of glue between the hose and the clamp (A) (if necessary).

• Insert the radiator hose (1) all the way to the stopper (2) or by 33 mm (1.30 in) (hose without a stopper).

#### RADIATOR

Ο

#### COOLING FAN

#### < REMOVAL AND INSTALLATION >

- 5. Remove fender protector side cover. Refer to EXT-29, "FENDER PROTECTOR : Exploded View".
- 6. Remove air duct (inlet). Refer to EM-26, "Exploded View".
- 7. Remove radiator core support (upper). Refer to <u>DLK-248, "Removal and Installation"</u> (WITH INTELLI-GENT KEY SYSTEM), <u>DLK-367, "Removal and Installation"</u> (WITHOUT INTELLIGENT KEY SYSTEM).
- 8. Remove radiator hose (upper) from radiator. CAUTION:

#### Do not spill engine coolant on the drive belt.

- 9. Disconnect harness connector from cooling fan controller.
- 10. Remove harness retainers from fan shroud.
- 11. Remove CVT cooler hose retainers from fan shroud.
- 12. Remove reservoir tank hose from fan shroud. Refer to CO-13, "Exploded View".
- 13. Remove cooling fan assembly. Refer to <u>CO-17, "Exploded View"</u>. **CAUTION:**

#### Be careful not to damage the radiator.

#### INSTALLATION

Installation is in the reverse order of removal.

 Reset electronic systems as necessary. Refer to PG-74, "ADDITIONAL SERVICE WHEN REMOVING BAT-TERY NEGATIVE TERMINAL : Special Repair Requirement"

#### CAUTION:

- To prevent damage to the parts, connect the battery to the positive terminal first.
- After connecting the positive and negative terminal to securely supply battery voltage, ensure that the positive and negative terminal are tightly clamped to battery and negative posts for good contact.
- To securely supply battery voltage, check the positive and negative terminals for poor connection caused by corrosion.
- After installation, refill coolant and check for leaks. Refer to <u>CO-9, "Refilling"</u> and <u>CO-8, "Inspection"</u>. **CAUTION:**

# Do not spill coolant in engine compartment. Use a shop cloth to absorb coolant. NOTE:

Cooling fan is controlled by ECM. For details, refer to EC-66, "On Board Diagnosis Function".

#### Disassembly and Assembly

INFOID:000000012429228

#### DISASSEMBLY

- 1. Remove cooling fan nuts, and then remove the cooling fans (RH and LH).
- 2. Remove fan motor cover and fan motors (RH and LH).

#### ASSEMBLY

Assembly is in the reverse order of disassembly.

#### CAUTION:

#### Apply high thread locking sealant to cooling fan motor shaft.

Inspection

INFOID:000000012429229

#### INSPECTION AFTER DISASSEMBLY

#### Cooling Fan

Inspect cooling fan for cracks or unusual bends.

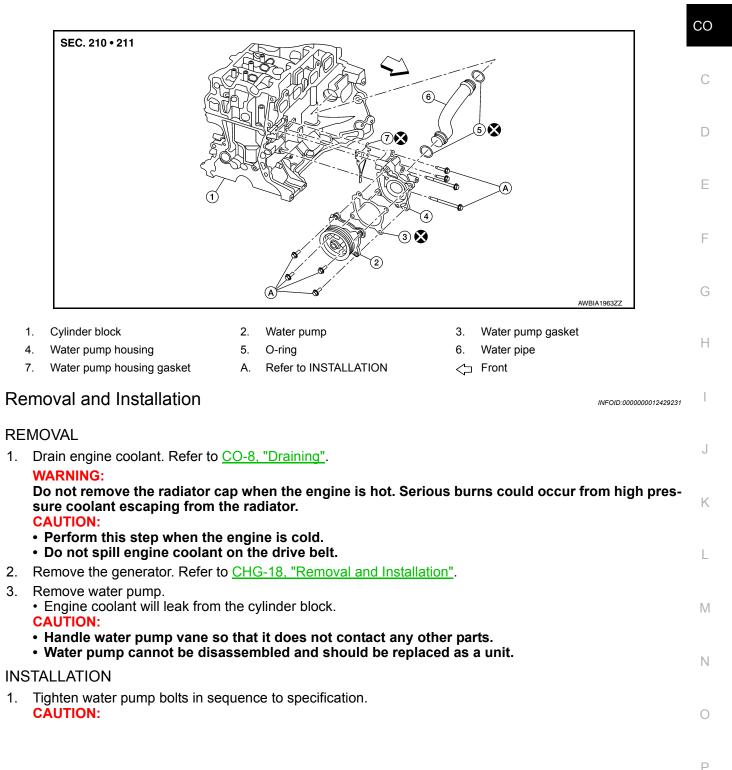

• If anything is found, replace cooling fan.

# < REMOVAL AND INSTALLATION > WATER PUMP

# Exploded View

INFOID:000000012429230

А

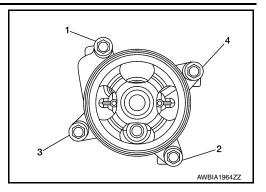

**Revision: September 2015** 

#### < REMOVAL AND INSTALLATION >

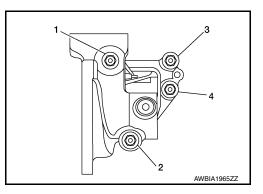

#### Do not reuse water pump gasket.

25 N·m (2.6 kg-m, 18 ft-lb)

Tighten water pump housing bolts in sequence to specification.
 CAUTION:
 Do not reuse water pump housing gasket.

22 N·m (2.2 kg-m, 16 ft-lb)

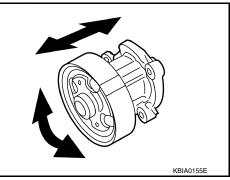

Installation of remaining components is in the reverse order of removal.

- After installation, refill coolant and check for leaks. Refer to <u>CO-9, "Refilling"</u> and <u>CO-8, "Inspection"</u>. **CAUTION:**
- Do not spill coolant in engine compartment. Use a shop cloth to absorb coolant.
- Do not reuse water pump gasket.
- Do not reuse water pump housing gasket.

#### Inspection

#### INSPECTION AFTER REMOVAL

- Check visually that there is no significant dirt or rusting on water pump body and vane.
- Check that there is no looseness in vane shaft, and that it turns smoothly when rotated by hand.
- Replace water pump, if necessary.

#### INSPECTION AFTER INSTALLATION

- Check for leakage of engine coolant using the radiator cap tester adapter (commercial service tool) and the radiator cap tester (commercial service tool). Refer to <u>CO-8</u>, "Inspection".
- Start and warm up engine. Check visually that there is no leakage of engine coolant.

#### THERMOSTAT AND WATER CONTROL VALVE

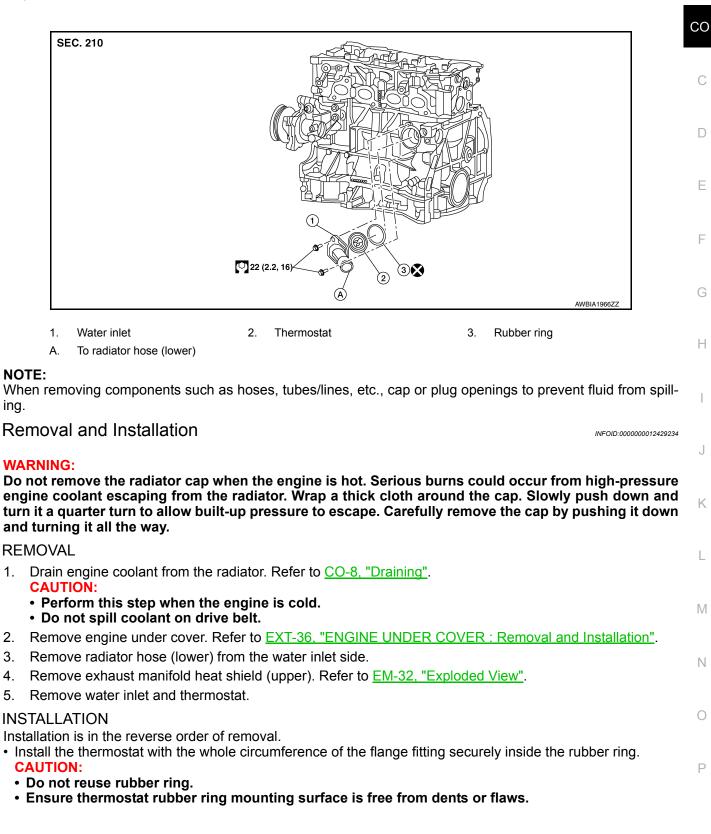

#### < REMOVAL AND INSTALLATION >

#### THERMOSTAT AND WATER CONTROL VALVE

#### Exploded View

INFOID:000000012429233

А

4.

5.

#### THERMOSTAT AND WATER CONTROL VALVE

#### < REMOVAL AND INSTALLATION >

- Install the thermostat with the jiggle valve facing upwards. The position deviation may be within the range of  $\pm 20^{\circ}$ .
- After installation, refill coolant and check for leaks. Refer to <u>CO-9</u>, <u>"Refilling"</u> and <u>CO-8</u>, <u>"Inspection"</u>.

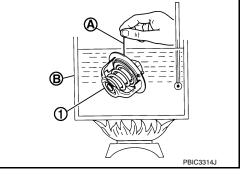

#### INSPECTION AFTER REMOVAL

- Place a thread (A) so that it is caught in the valves of thermostat (1) and water control valve. Immerse fully in a container (B) filled with water. Heat while stirring. (The example in the figure shows thermostat.)
- The valve opening temperature is the temperature at which the valve opens and falls from the thread.
- Continue heating. Check the maximum valve lift amount. **NOTE:**

The maximum valve lift amount standard temperature for water control valve is the reference value.

• After checking the maximum valve lift amount, lower the water temperature and check the valve closing temperature.

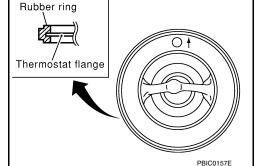

#### Standard

#### Thermostat : Refer to <u>CO-25, "Thermostat"</u>.

• If out of the standard, replace either or both thermostat and water control valve.

#### INSPECTION AFTER INSTALLATION

- Check for leakage of engine coolant using the radiator cap tester adapter (commercial service tool) and the radiator cap tester (commercial service tool). Refer to <u>CO-8</u>, "Inspection".
- Start and warm up engine. Check visually that there is no leakage of engine coolant.

#### WATER OUTLET AND WATER PIPING

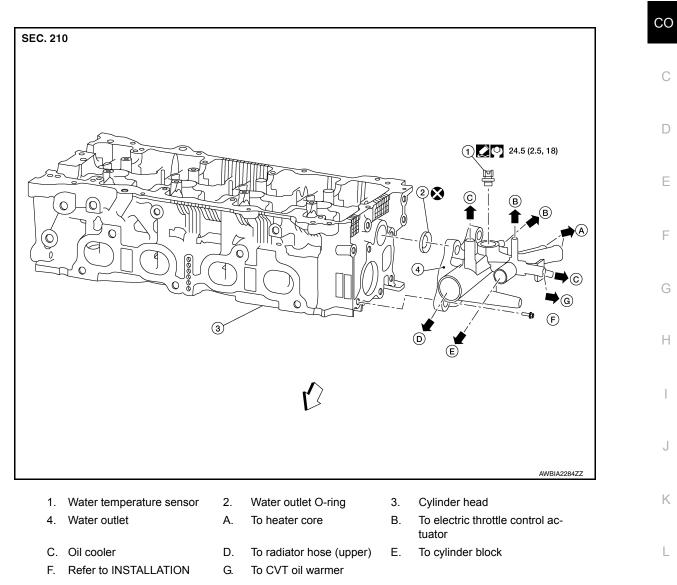

#### < REMOVAL AND INSTALLATION >

#### WATER OUTLET AND WATER PIPING

А

#### Removal and Installation

#### WARNING:

Do not remove the radiator cap when the engine is hot. Serious burns could occur from high-pressure engine coolant escaping from the radiator. Wrap a thick cloth around the cap. Slowly push down and turn it a quarter turn to allow built-up pressure to escape. Carefully remove the cap by pushing it down and turning it all the way.

#### NOTE:

When removing components such as hoses, tubes/lines, etc., cap or plug openings to prevent fluid from spilling.

#### CAUTION:

#### Perform when the engine cold.

#### REMOVAL

- 1. Drain engine coolant from the radiator. Refer to CO-8, "Draining".
- 2. Remove air duct assembly. Refer to EM-26, "Exploded View".
- 3. Remove battery tray. Refer to PG-81, "Removal and Installation (Battery Tray)".
- 4. Remove the upper radiator hose from water outlet.

INFOID:000000012429237

Μ

Ρ

#### WATER OUTLET AND WATER PIPING

#### < REMOVAL AND INSTALLATION >

- 5. Disconnect harness connector from water temperature sensor.
- 6. Remove water temperature sensor from water outlet, (if necessary).
- Remove heater hoses from water outlet.
   NOTE: Note location of heater hoses prior to removal to serve as an installation aid.
- 8. Remove CVT oil warmer hose from water outlet. **NOTE:**

Note location of CVT oil warmer hose prior to removal to serve as an installation aid.

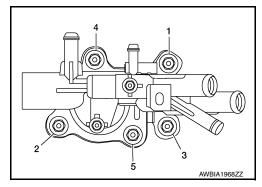

- 9. Remove water hoses from electric throttle control actuator.
- 10. Remove the water outlet.

#### INSTALLATION

Installation of remaining components is in the reverse order of removal.

1. Tighten water outlet bolts in sequence to specification.

#### 22 N·m (2.2 kg-m, 16 ft-lb)

#### CAUTION:

- Do not reuse heater pipe O-ring.
- Do not reuse water outlet O-ring.
- To install heater pipe, first apply a mild soap to the O-ring and quickly insert the heater pipe into the housing.
- Do not spill coolant in engine compartment. Use a shop cloth to absorb coolant.
- 2. After installation, refill coolant and check for leaks. Refer to <u>CO-9, "Refilling"</u> and <u>CO-8, "Inspection"</u>.
- 3. Perform the "Throttle Valve Closed Position Learning" when harness connector of electric throttle control actuator is disconnected. Refer to <u>EC-143</u>, "Work Procedure".
- 4. Perform the "Accelerator Pedal Released Position Learning" when harness connector of electric throttle control actuator is disconnected. Refer to <u>EC-142</u>, "Work Procedure".
