## PRECAUTIONS

< SERVICE INFORMATION >

# SERVICE INFORMATION

## PRECAUTIONS

### Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000005681318

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

### PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

#### **WARNING:**

- When working near the Airbag Diagnosis Sensor Unit or other Airbag System sensors with the Ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the Ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

### Precaution Necessary for Steering Wheel Rotation After Battery Disconnect

INFOID:0000000005283471

#### **NOTE:**

- This Procedure is applied only to models with Intelligent Key system and NATS (NISSAN ANTI-THEFT SYSTEM).
- Remove and install all control units after disconnecting both battery cables with the ignition knob in the "LOCK" position.
- Always use CONSULT-III to perform self-diagnosis as a part of each function inspection after finishing work. If DTC is detected, perform trouble diagnosis according to self-diagnostic results.

For models equipped with the Intelligent Key system and NATS, an electrically controlled steering lock mechanism is adopted on the key cylinder.

For this reason, if the battery is disconnected or if the battery is discharged, the steering wheel will lock and steering wheel rotation will become impossible.

If steering wheel rotation is required when battery power is interrupted, follow the procedure below before starting the repair operation.

### OPERATION PROCEDURE

1. Connect both battery cables.

#### **NOTE:**

Supply power using jumper cables if battery is discharged.

2. Use the Intelligent Key or mechanical key to turn the ignition switch to the "ACC" position. At this time, the steering lock will be released.
3. Disconnect both battery cables. The steering lock will remain released and the steering wheel can be rotated.
4. Perform the necessary repair operation.

## PRECAUTIONS

### < SERVICE INFORMATION >

5. When the repair work is completed, return the ignition switch to the "LOCK" position before connecting the battery cables. (At this time, the steering lock mechanism will engage.)
6. Perform a self-diagnosis check of all control units using CONSULT-III.

# BCM (BODY CONTROL MODULE)

< SERVICE INFORMATION >

## BCM (BODY CONTROL MODULE)

### System Description

INFOID:0000000005283472

BCM (body control module) controls the operation of various electrical units installed on the vehicle.

### BCM FUNCTION

BCM has a combination switch reading function for reading the operation of combination switches (light, wiper, washer, turn signal) in addition to the function for controlling the operation of various electrical components. Also, it functions as an interface that receives signals from the front air control, and sends signals to ECM using CAN communication.

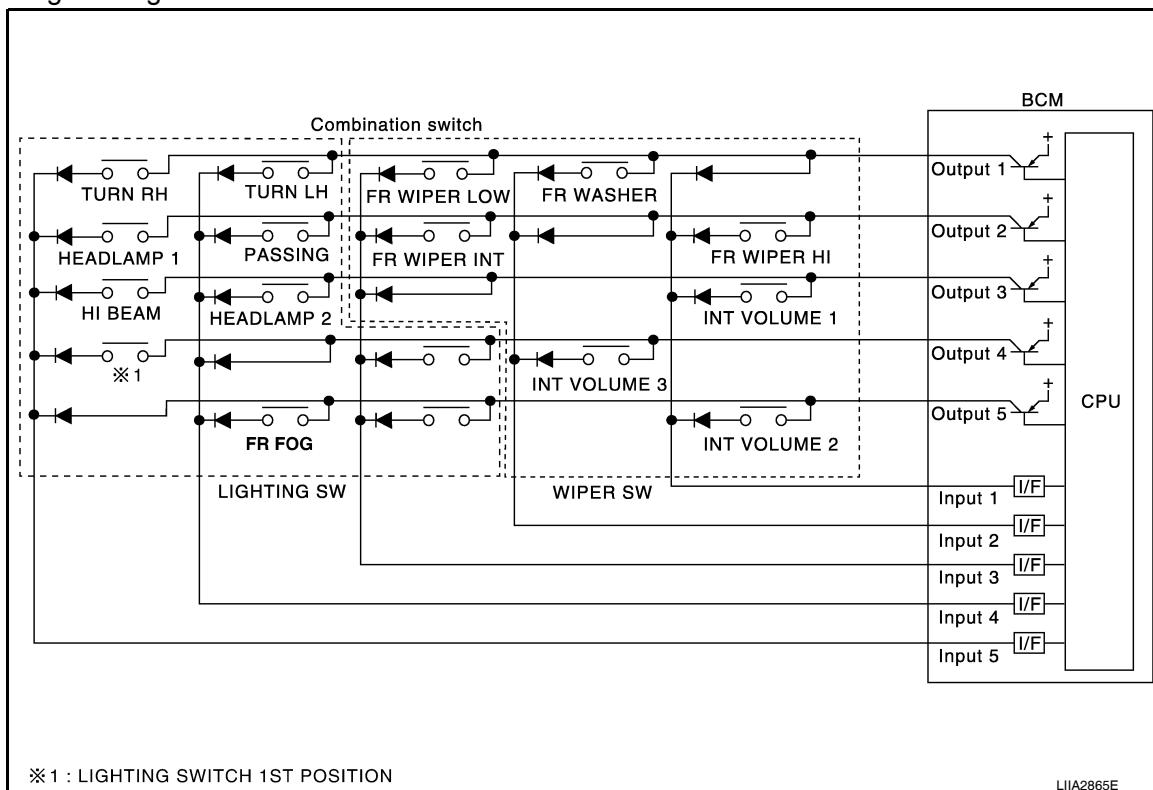

### COMBINATION SWITCH READING FUNCTION

#### 1. Description

- BCM reads combination switch (light, wiper) status, and controls various electrical components according to the results.
- BCM reads information of a maximum of 20 switches by combining five output terminals (OUTPUT 1-5) and five input terminals (INPUT 1-5).

#### 2. Operation description

- BCM activates transistors of output terminals (OUTPUT 1-5) periodically and allows current to flow in turn.
- If any (1 or more) of the switches are turned ON, circuit of output terminals (OUTPUT 1-5) and input terminals (INPUT 1-5) becomes active.
- At this time, transistors of output terminals (OUTPUT 1-5) are activated to allow current to flow. When voltage of input terminals (INPUT 1-5) corresponding to that switch changes, interface in BCM detects voltage change and BCM determines that switch is ON.

#### 3. BCM - Operation table of combination switch

- BCM reads operation status of combination switch by the combination shown in the following table.

# BCM (BODY CONTROL MODULE)

< SERVICE INFORMATION >

|                 | COMB SW OUTPUT 1 |                  | COMB SW OUTPUT 2 |                  | COMB SW OUTPUT 3 |                  | COMB SW OUTPUT 4     |                       | COMB SW OUTPUT 5 |                  |

LIA2866E

**NOTE:**

Headlamp has a dual system switch.

4. Example operation: (When lighting switch 1st position is turned ON)

- When lighting switch 1st position is turned ON, contact in combination switch turns ON. At this time if OUTPUT 4 transistor is activated, BCM detects that voltage changes in INPUT 5.
- When OUTPUT 4 transistor is ON, BCM detects that voltage changes in INPUT 5, and judges lighting switch 1st position is ON. Then BCM sends tail lamp ON signal to IPDM E/R using CAN communication.
- When OUTPUT 4 transistor is activated again, BCM detects that voltage changes in INPUT 5 and recognizes that lighting switch 1st position is continuously ON.

**NOTE:**

Each OUTPUT terminal transistor is activated at 10ms intervals. Therefore, after a switch is turned ON, electrical loads are activated with a time delay. But this time delay is so short that it cannot be noticed.

5. Operation mode

- Combination switch reading function has operation modes as follows:

# BCM (BODY CONTROL MODULE)

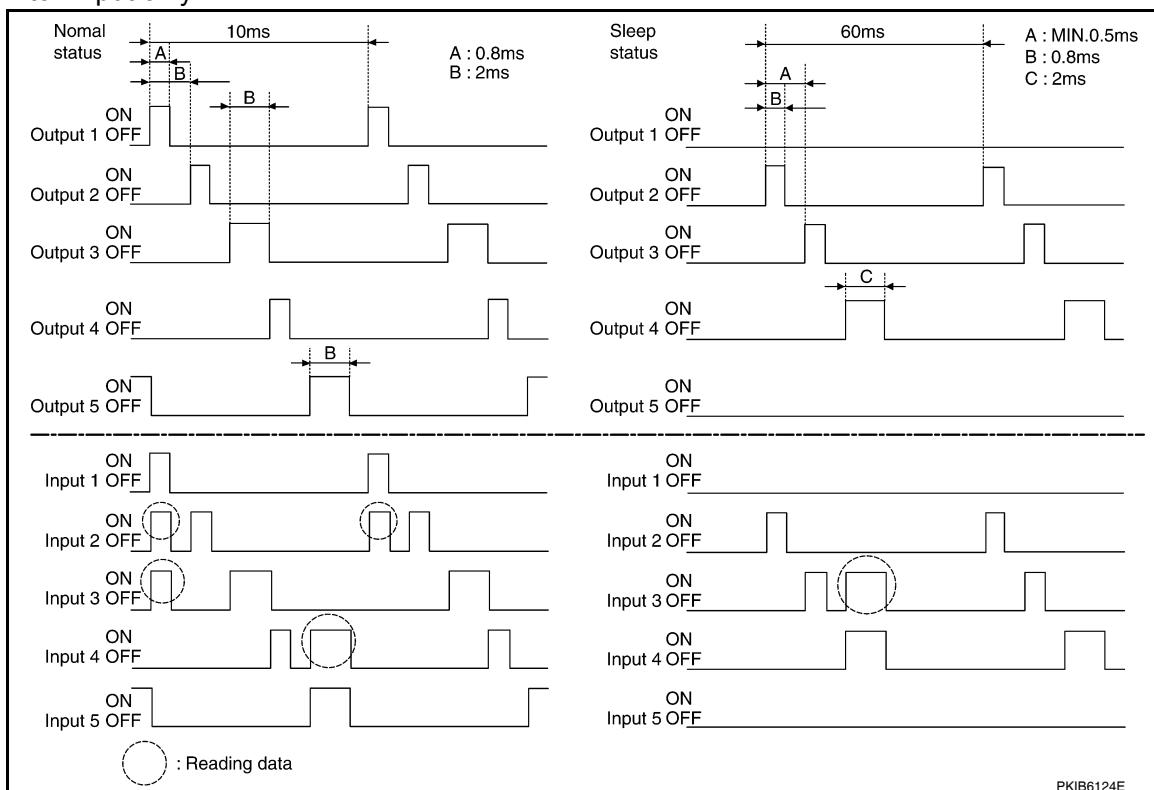

## < SERVICE INFORMATION >

### Normal status

- When BCM is not in sleep status, OUTPUT terminals (1-5) each turn ON-OFF every 10ms.

### Sleep status

- When BCM is in sleep mode, transistors of OUTPUT 1 and 5 stop the output, and BCM enters low-current-consumption mode. OUTPUTS (2, 3, and 4) turn ON-OFF at 60ms intervals, and receives lighting switch input only.

## CAN COMMUNICATION CONTROL

CAN communication allows a high rate of information through the two communication lines (CAN-L, CAN-H) connecting the various control units in the system. Each control unit transmits/receives data, but selectively reads required data only.

## BCM STATUS CONTROL

BCM changes its status depending on the operation status in order to save power consumption.

### 1. CAN communication status

- With ignition switch ON, CAN communicates with other control units normally.
- Control by BCM is being operated properly.
- When ignition switch is OFF, switching to sleep mode is possible.
- Even when ignition switch is OFF, if CAN communication with IPDM E/R and combination meter is active, CAN communication status is active.

### 2. Sleep transient status

- This status shuts down CAN communication when ignition switch is turned OFF.
- It transmits sleep request signal to IPDM E/R and combination meter.
- Two seconds after CAN communication of all control units stops, CAN communication switches to inactive status.

### 3. CAN communication inactive status

- With ignition switch OFF, CAN communication is not active.
- With ignition switch OFF, control performed only by BCM is active.
- Three seconds after CAN communication of all control units stops, CAN communication switches to inactive status.

### 4. Sleep status

- BCM is activated with low current consumption mode.
- CAN communication is not active.

# BCM (BODY CONTROL MODULE)

## < SERVICE INFORMATION >

- When CAN communication operation is detected, it switches to CAN communication status.
- When a state of the following switches changes, it switches to CAN communication state:
  - Ignition switch
  - Key switch (without Intelligent Key)
  - Key switch and ignition knob switch (with Intelligent Key)
  - Stop lamp switch
  - Hazard switch
  - Door lock/unlock switch
  - Front door switch (LH, RH)
  - Rear door switch (LH, RH)
  - Combination switch (passing, lighting switch 1st position, front fog lamp)
  - Keyfob (lock/unlock signal)
  - Front door key cylinder switch LH
- When control performed only by BCM is required by switch, it shifts to CAN communication inactive mode.
- Status of combination switch reading function is changed.

## SYSTEMS CONTROLLED BY BCM DIRECTLY

- Power door lock system. Refer to [BL-20](#).
- Remote keyless entry system. Refer to [BL-50](#).
- Power window system. Refer to [GW-15](#). NOTE
- Sunroof system. Refer to [RF-11](#). NOTE
- Room lamp timer. Refer to [LT-83](#).

### NOTE:

Power supply only. No system control.

## SYSTEMS CONTROLLED BY BCM AND IPDM E/R

- Panic system. Refer to [BL-50](#).
- Vehicle security (theft warning) system. Refer to [BL-153](#).
- NVIS(NATS) system. Refer to [BL-170](#).
- Headlamp, tail lamp and battery saver control systems. Refer to [LT-67](#), [LT-4](#) or [LT-25](#).
- Front fog lamp. Refer to [LT-36](#).
- Front wiper and washer system. Refer to [WW-5](#).
- Rear window defogger system. Refer to [GW-54](#).

## SYSTEMS CONTROLLED BY BCM AND COMBINATION METER

- Warning chime. Refer to [DI-53](#).
- Turn signal and hazard warning lamps. Refer to [LT-45](#).

## SYSTEMS CONTROLLED BY BCM AND INTELLIGENT KEY UNIT

- Intelligent Key system. Refer to [BL-71](#).

## MAJOR COMPONENTS AND CONTROL SYSTEM

## BCM Power Supply and Ground Circuit Inspection

INFOID:0000000005283477

### 1. CHECK FUSES AND FUSIBLE LINK

- Check 50A fusible link (letter j, located in the fuse and fusible link box).
- Check 10A fuses [No. 6, 12 and 21, located in the fuse block (J/B)].

OK or NG

OK >> GO TO 2.

NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse.

### 2. CHECK BCM POWER SUPPLY CIRCUIT

# BCM (BODY CONTROL MODULE)

## < SERVICE INFORMATION >

1. Turn ignition switch OFF.
2. Disconnect BCM.
3. Check voltage between BCM connectors and ground.

| Connector | Terminals |        | Power source          | Condition                   | Voltage (V) (Ap-prox.) |
|-----------|-----------|--------|-----------------------|-----------------------------|------------------------|
|           | (+)       | (-)    |                       |                             |                        |
| M18       | 11        | Ground | ACC power supply      | Ignition switch ACC or ON   | Battery voltage        |
|           | 38        | Ground | Ignition power supply | Ignition switch ON or START | Battery voltage        |
| M20       | 57        | Ground | Battery power supply  | Ignition switch OFF         | Battery voltage        |
|           | 70        | Ground | Battery power supply  | Ignition switch OFF         | Battery voltage        |

### OK or NG

OK >> GO TO 3.

NG >> Repair or replace the harness.

### 3.CHECK GROUND CIRCUIT

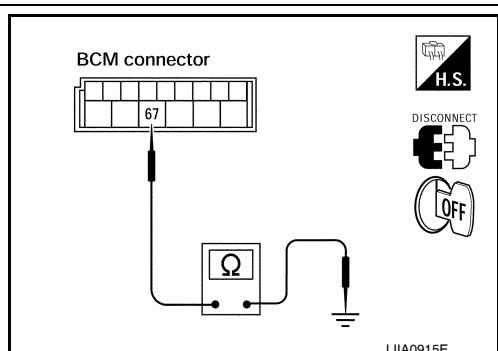

Check continuity between BCM connector M20 terminal 67 and ground.

**67 - Ground : Continuity should exist.**

### OK or NG

OK >> Power supply and ground circuit is OK.

NG >> Repair or replace harness.

### CONSULT-III Function (BCM)

INFOID:0000000005283478

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

| BCM diagnostic test item | Diagnostic mode       | Content  |
|--------------------------|-----------------------|--|
| Inspection by part       | WORK SUPPORT          | Supports inspections and adjustments. Commands are transmitted to the BCM for setting the status suitable for required operation, input/output signals are received from the BCM and received data is displayed. |
|                          | DATA MONITOR          | Displays BCM input/output data in real time.   |
|                          | ACTIVE TEST           | Operation of electrical loads can be checked by sending drive signal to them.  |
|                          | SELF-DIAG RESULTS     | Displays BCM self-diagnosis results.   |
|                          | CAN DIAG SUPPORT MNTR | The results of transmit/receive diagnosis of CAN communication can be read.  |
|                          | ECU PART NUMBER       | BCM part number can be read.   |
|                          | CONFIGURATION         | Performs BCM configuration read/write functions.   |

### ITEMS OF EACH PART

#### NOTE:

CONSULT-III will only display systems the vehicle possesses.

# BCM (BODY CONTROL MODULE)

## WORK SUPPORT

Display Item List

| Item                | Description   |
|---------------------|---|
| RESET SETTING VALUE | Return a value set with WORK SUPPORT of each system to a default value in factory shipment. |

## CAN Communication Inspection Using CONSULT-III (Self-Diagnosis)

INFOID:000000005283479

### 1. SELF-DIAGNOSTIC RESULT CHECK

1. Connect CONSULT-III and select "BCM" on "SELECT SYSTEM" screen.
2. Select "BCM" on "SELECT TEST ITEM" screen, and select "SELF-DIAG RESULTS".
3. Check display content in self-diagnostic results.

### Contents displayed

No malfunction>>Inspection End.

Malfunction in CAN communication system>>After printing the monitor items. Refer to [LAN-10, "Condition of Error Detection".](#)

## Configuration

INFOID:000000005283480

### DESCRIPTION

CONFIGURATION has three functions as follows:

- READ CONFIGURATION is the function to read (extract) vehicle configuration of current BCM.
- WRITE CONFIGURATION-Manual selection is the function to select and write vehicle configuration on BCM manually.
- WRITE CONFIGURATION-Config file is the function to write vehicle configuration with the data extracted from current BCM.
- For READ CONFIGURATION and WRITE CONFIGURATION-Config file, refer to CONSULT-III Operation Manual.
- For WRITE CONFIGURATION-Manual selection using the following flow chart, identify the correct model and configuration list. Confirm and/or change setting value for each item according to the configuration list. Depending on CONSULT-III software version being used, some or all of the write configuration items shown in the following configuration lists may be displayed. If an item does not appear on the CONSULT-III WRITE CONFIGURATION-Manual selection screen(s), then it is an auto setting item and it cannot be manually set or changed.

#### NOTE:

Confirm vehicle model on IDENTIFICATION PLATE. Refer to [GI-45, "Model Variation".](#)

| ITEM                       | SET VAL          |
|----------------------------|------------------|
| KEYLESS ENTRY              | WITH ⇔ WITHOUT   |
| I-KEY                      | WITH ⇔ WITHOUT   |
| DTRL                       | WITH ⇔ WITHOUT   |
| THEFT ALARM                | WITH ⇔ WITHOUT   |
| TIRE PRESSURE <sup>1</sup> | 230kPa or 240kPa |
| AUTO DOOR UNLOCK TIMING    | MODE             |

1: Refer to [WT-15, "CONSULT-III Function \(BCM\)".](#)

#### CAUTION:

- When replacing BCM, you must perform WRITE CONFIGURATION with CONSULT-III.
- Complete the procedure of WRITE CONFIGURATION in order.
- If you set incorrect WRITE CONFIGURATION, incidents will occur.
- Configuration is different for each vehicle model. Confirm configuration of each vehicle model.

## Removal and Installation of BCM

INFOID:000000005283481

### REMOVAL

#### CAUTION:

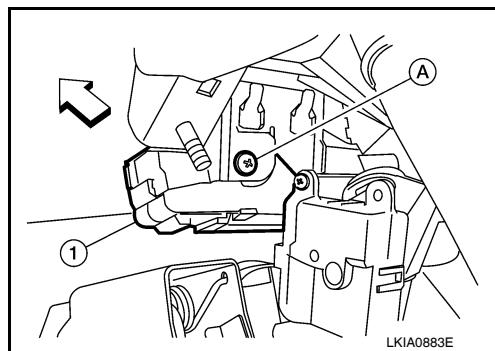

Before replacing BCM, perform "READ CONFIGURATION" to save or print current vehicle specifications. Refer to [BCS-18, "Configuration".](#)

1. Disconnect the battery negative terminal.
2. Remove the instrument lower finisher. Refer to [IP-11.](#)

## BCM (BODY CONTROL MODULE)

### < SERVICE INFORMATION >

3. Remove the front foot duct (LH). Refer to [MTC-77](#).
4. Remove the BCM screw (A), disconnect the connectors and remove the BCM (1).
  - ⇢ Front

### INSTALLATION

Installation is in the reverse order of removal.

#### CAUTION:

- When replacing BCM, perform "WRITE CONFIGURATION". Refer to [BCS-18, "Configuration"](#).
- When replacing BCM, perform initialization of NATS system and registration of all NATS ignition key IDs. Refer to [BL-107, "Key Switch \(Intelligent Key Unit Input\) Check"](#).
- When replacing BCM, if new BCM does not come with keyfobs attached, all existing keyfobs must be re-registered. Refer to CONSULT-III operation manual for the initialization procedure.
