< PRECAUTION > PRECAUTION PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SR and SB section of this Service Manual.

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SR section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

WARNING:

- When working near the Airbag Diagnosis Sensor Unit or other Airbag System sensors with the Ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the Ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

Precaution for Work

- When removing or disassembling each component, be careful not to damage or deform it. If a component may be subject to interference, be sure to protect it with a shop cloth.
- When removing (disengaging) components with a screwdriver or similar tool, be sure to wrap the component with a shop cloth or vinyl tape to protect it.
- Protect the removed parts with a shop cloth and prevent them from being dropped.
- Replace a deformed or damaged clip.
- If a part is specified as a non-reusable part, always replace it with new one.
- Be sure to tighten bolts and nuts securely to the specified torque.
- After installation is complete, be sure to check that each part works properly.
- Follow the steps below to clean components.
- Water soluble dirt: Dip a soft cloth into lukewarm water, and wring the water out of the cloth to wipe the dirty area.

Then rub with a soft and dry cloth.

Oily dirt: Dip a soft cloth into lukewarm water with mild detergent (concentration: within 2 to 3%), and wipe the dirty area.

Then dip a cloth into fresh water, and wring the water out of the cloth to wipe the detergent off. Then rub with a soft and dry cloth.

- Do not use organic solvent such as thinner, benzene, alcohol, or gasoline.
- For genuine leather seats, use a genuine leather seat cleaner.

Working with HFC-134a (R-134a)

WARNING:

• CFC-12 (R-12) refrigerant and HFC-134a (R-134a) refrigerant are not compatible. If the refrigerants are mixed compressor failure is likely to occur. Refer to <u>HA-5</u>, "<u>Precautions For Refrigerant System</u>

HAC-3

INFOID:000000007732972

PRECAUTIONS

< PRECAUTION >

<u>Service</u>". To determine the purity of HFC-134a (R-134a) in the vehicle and recovery tank, use Refrigerant Recovery/Recycling Recharging equipment and Refrigerant Identifier.

- Use only specified oil for the HFC-134a (R-134a) A/C system and HFC-134a (R-134a) components. If oil other than that specified is used, compressor failure is likely to occur.
- The specified HFC-134a (R-134a) oil rapidly absorbs moisture from the atmosphere. The following handling precautions must be observed:
- When removing refrigerant components from a vehicle, immediately cap (seal) the component to minimize the entry of moisture from the atmosphere.
- When installing refrigerant components to a vehicle, do not remove the caps (unseal) until just before connecting the components. Connect all refrigerant loop components as quickly as possible to minimize the entry of moisture into system.
- Only use the specified oil from a sealed container. Immediately reseal containers of oil. Without proper sealing, oil will become moisture saturated and should not be used.
- Avoid breathing A/C refrigerant and oil vapor or mist. Exposure may irritate eyes, nose and throat. Remove HFC-134a (R-134a) from the A/C system using certified service equipment meeting requirements of SAE J2210 [HFC-134a (R-134a) recycling equipment], or J2209 [HFC-134a (R-134a) recycling equipment]. If accidental system discharge occurs, ventilate work area before resuming service. Additional health and safety information may be obtained from refrigerant and oil manufacturers.
- Do not allow A/C oil to come in contact with styrofoam parts. Damage may result.

CONTAMINATED REFRIGERANT

If a refrigerant other than pure HFC-134a (R-134a) is identified in a vehicle, your options are:

- Explain to the customer that environmental regulations prohibit the release of contaminated refrigerant into the atmosphere.
- Explain that recovery of the contaminated refrigerant could damage your service equipment and refrigerant supply.
- Suggest the customer return the vehicle to the location of previous service where the contamination may have occurred.
- If you choose to perform the repair, recover the refrigerant using only **dedicated equipment and containers. Do not recover contaminated refrigerant into your existing service equipment.** If your facility does not have dedicated recovery equipment, you may contact a local refrigerant product retailer for available service. This refrigerant must be disposed of in accordance with all federal and local regulations. In addition, replacement of all refrigerant system components on the vehicle is recommended.
- If the vehicle is within the warranty period, the air conditioner warranty is void. Please contact NISSAN Customer Affairs for further assistance.

Service Equipment

INFOID:000000007732973

RECOVERY/RECYCLING EQUIPMENT

Follow the manufacturer's instructions for machine operation and machine maintenance. Never introduce any refrigerant other than that specified into the machine.

ELECTRONIC LEAK DETECTOR

Follow the manufacturer's instructions for tester operation and tester maintenance.

VACUUM PUMP

PRECAUTIONS

< PRECAUTION >

The oil contained inside the vacuum pump is not compatible with the specified oil for HFC-134a (R-134a) A/C systems. The vent side of the vacuum pump is exposed to atmospheric pressure so the vacuum pump oil may migrate out of the pump into the service hose. This is possible when the pump is switched off after evacuation (vacuuming) and hose is connected to it.

To prevent this migration, use a manual valve situated near the hose-to-pump connection, as follows.

- Usually vacuum pumps have a manual isolator valve as part of the pump. Close this valve to isolate the service hose from the pump.
- For pumps without an isolator, use a hose equipped with a manual shut-off valve near the pump end. Close the valve to isolate the hose from the pump.
- If the hose has an automatic shut off valve, disconnect the hose from the pump: as long as the hose is connected, the valve is open and lubricating oil may migrate.

Some one-way valves open when vacuum is applied and close under a no vacuum condition. Such valves may restrict the pump's ability to pull a deep vacuum and are not recommended.

MANIFOLD GAUGE SET

Be certain that the gauge face indicates R-134a or 134a. Make sure the gauge set has 1/2"-16 ACME threaded connections for service hoses. Confirm the set has been used only with refrigerant HFC-134a (R-134a) along with specified oil.

SERVICE HOSES

Be certain that the service hoses display the markings described (colored hose with black stripe). All hoses must include positive shutoff devices (either manual or automatic) near the end of the hoses opposite the manifold gauge.

ര

1/2"-16ACME

SERVICE COUPLERS

PRECAUTIONS

< PRECAUTION >

Never attempt to connect HFC-134a (R-134a) service couplers to a CFC-12 (R-12) A/C system. The HFC-134a (R-134a) couplers will not properly connect to the CFC-12 (R-12) system. However, if an improper connection is attempted, discharging and contamination may occur.

| Shut-off valve rotation | A/C service valve |
|-------------------------|-------------------|
| Clockwise | Open |
| Counterclockwise | Close |

[MANUAL AIR CONDITIONING]

WEIGHT SCALE

Verify that no refrigerant other than HFC-134a (R-134a) and specified oils have been used with the weight scale. If the weight scale controls refrigerant flow electronically, the hose fitting must be 1/2"-16 ACME.

CHARGING CYLINDER

Using a charging cylinder is not recommended. Refrigerant may be vented into air from cylinder's top valve when filling the cylinder with refrigerant. Also, the accuracy of the cylinder is generally less than that of an electronic scale or of quality recycle/recharge equipment.

Component Description

INFOID:000000007630818

А

[MANUAL AIR CONDITIONING]

| Component | Description | _ | | | |
|-----------------------------|--|---|--|--|--|
| A/C compressor | Vaporized refrigerant is drawn into the A/C compressor from the evaporator, where it is compressed to a high pressure, high temperature vapor. The hot, compressed vapor is then discharged to the condenser. | E | | | |
| BCM | The BCM receives the fan ON and A/C ON signals from the front air control and sends a compressor ON request to the ECM. | C | | | |
| ECM | The ECM sends a compressor ON request to the IPDM E/R based on the status of engine operation and load as well as refrigerant pressure information. If all the conditions are met for A/C operation, the ECM transmits the compressor ON request to the IPDM E/R. | C | | | |
| Fuse Block (J/B) | Located in the passenger compartment, behind the left lower IP, the Fuse Block (J/B) contains the front blower motor relay and several fuses required for the air conditioner control system. | F | | | |
| Front air control | The front air control controls the operation of the A/C and heating system. | | | | |
| Front blower motor | The front blower motor varies the speed at which the air flows through the ventilation system. | | | | |
| Front blower motor relay | The front blower motor relay controls the flow of current to fuse 20, 21 and 22 in the Fuse Block (J B). The relay is connected directly to ground, and is energized when the ignition switch is in the Ol or START position. | | | | |
| Front blower motor resistor | Ground for the blower is supplied through blower resistor and the blower speed switch. As the switch is moved from position 1 through 5, more current is allowed to flow through the motor, for a higher speed. This is because less resistors are in the path as the switch is moved to a higher position. When the switch is on the highest position, all resistors are bypassed. | G | | | |
| IPDM E/R | A/C relay is integrated in IPDM E/R. IPDM E/R operates A/C relay when receiving A/C compressor request signal from ECM via CAN communication line. | F | | | |
| Refrigerant pressure sensor | Refer to EC-26, "Refrigerant Pressure Sensor". | | | | |
| Thermo control amp. | Thermo control amp. is composed of thermistor and amplifier. When the A/C switch signal is received from the front air control, the thermo control amp. transmits the A/C ON signal to the BCM according to evaporator fin temperature. When the thermistor detecting temperature of the air that passes through evaporator is extremely low, the thermo control amp. sends the A/C OFF signal to BCM, and stops the compressor. | J | | | |

MANUAL AIR CONDITIONING SYSTEM

MANUAL AIR CONDITIONING SYSTEM : System Diagram

MANUAL AIR CONDITIONING SYSTEM : System Description

INFOID:000000007630811

- The manual air conditioning system is controlled by a sequence of functions from the front air control, BCM, ECM, and IPDM E/R.
- The fan speed of the front blower motor is changed by the combination of the fan control dial (fan switch) operation and blower resistor control.

| Module/Function | Door control | A/C request signal | Compressor control | Cooling fan control |
|-------------------|---------------|--------------------|--------------------|---------------------|
| Front air control | <u>HAC-11</u> | | <u>HAC-10</u> | |
| BCM | | BCS-6 | | |
| ECM | | | HAC-10 | <u>EC-37</u> |
| IPDM E/R | | | <u>HAC-10</u> | <u>EC-37</u> |

MANUAL AIR CONDITIONING SYSTEM : Compressor Control

INFOID:000000007207662

DESCRIPTION

- When A/C switch signal is received from front air control, the thermo control amp. transmits A/C ON signal to the BCM according to evaporator fin temperature.
- When the front blower motor is operated, the front air control transmits blower fan ON signal to the BCM.
- BCM transmits the A/C ON signal and blower fan ON signal to ECM via CAN communication line. Refer to EC-37. "CAN COMMUNICATION : System Description"
- ECM judges the conditions of each sensor (Refrigerant pressure sensor signal, accelerator position signal, etc.), and transmits the A/C compressor request signal to IPDM E/R via CAN communication line.
- By receiving the A/C compressor request signal from ECM, IPDM E/R turns the A/C relay to ON, and activates the compressor. Refer to <u>PCS-5</u>, "RELAY CONTROL SYSTEM : System Description"

CONTROL BY THERMO CONTROL AMP.

< SYSTEM DESCRIPTION >

[MANUAL AIR CONDITIONING]

Low Temperature Protection Control

 When thermo control amp. detects that evaporator fin temperature is 1.5°C (35°F) or less, thermo control amp. switches A/C ON signal to OFF and stops the compressor. When the evaporator fin temperature returns to 3°C (37°F) or more, the compressor is activated.

Е

Н

HAC

Κ

L

M

Ν

Ρ

INFOID:000000007207663

CONTROL BY ECM

Refrigerant Pressure Protection

The refrigerant system is protected against excessively high- or low-pressures by the refrigerant pressure sensor, located on the liquid tank on the condenser. The refrigerant pressure sensor detects the pressure inside the refrigerant line and sends a voltage signal to the ECM. If the system pressure rises above or falls below the following values, the ECM requests the IPDM E/R to de-energize the A/C relay and disengage the compressor.

- 3.12 MPa (31.82 kg/cm², 452.4 psi) or more (When the engine speed is less than 1,500 rpm)
- 2.74 MPa (27.95 kg/cm², 397.3 psi) or more (When the engine speed is 1,500 rpm or more)
- 0.14 MPa (1.43 kg/cm², 20.3 psi) or less

Compressor Oil Circulation Control

When the engine starts while the engine coolant temperature is 56°C (133°F) or less, ECM activates the compressor for approximately 6 seconds and circulates the compressor oil once.

Air Conditioning Cut Control

When the engine is under a high load condition, the ECM transmits an A/C relay OFF request to IPDM E/R, and stops the compressor. Refer to <u>EC-36</u>, "<u>AIR CONDITIONING CUT CONTROL</u>: <u>System Description</u>".

BASIC INSPECTION DIAGNOSIS AND REPAIR WORKFLOW

Workflow

INFOID:000000007630799

А

[MANUAL AIR CONDITIONING]

DETAILED FLOW **1**.INTERVIEW CUSTOMER

Interview the customer to obtain as much information as possible about the conditions and environment under which the malfunction occurred.

>> GO TO 2.

2.SYMPTOM CHECK

Verify symptoms.

>> GO TO 3.

3.CHECK FOR DTCS

()With CONSULT

- Turn ignition switch ON.
- 2. Select "Self Diagnostic Result" mode of "BCM" using CONSULT.
- 3. Check DTC.

Is any DTC detected?

YES >> GO TO 4.

NO >> GO TO 5.

4.PERFORM DTC DIAGNOSTIC PROCEDURE

Perform the diagnostic procedure for the detected DTC. Refer to BCS-35, "DTC Inspection Priority Chart".

>> GO TO 7.

5.OPERATION CHECK

Perform the operation check. Refer to HAC-27, "Work Procedure".

>> GO TO 6.

6.SYMPTOM DIAGNOSIS

Check the symptom diagnosis table. Refer to HAC-41, "Symptom Table".

>> GO TO 8.

7.VERIFY REPAIR.

With CONSULT

- Turn ignition switch ON.
- 2. Select "Self Diagnostic Result" mode of "BCM" using CONSULT.

3. Check DTC.

Is any DTC detected?

YES >> GO TO 4.

NO >> GO TO 8.

8. PERFORM FINAL OPERATION CHECK

Perform the operation check. Refer to HAC-27, "Work Procedure".

Does it operate normally?

YES >> Inspection End. NO >> GO TO 2.

OPERATION INSPECTION

| < BASIC INSPECTION > | [MANUAL AIR CONDITIONING] |
|---|---|
| OPERATION INSPECTION | Δ |
| Work Procedure | INFOID:00000007207674 |
| The purpose of the operation inspection is to check that the individual syst | em operates normally. |
| Check condition : Engine running at normal operating tempe | erature. |
| 1.CHECK FRONT BLOWER MOTOR | C |
| Operate fan control dial. Check that fan speed changes. Check operation for all fan speeds. Is the inspection result normal? YES >> GO TO 2 | D |
| NO >> GO TO 8. | E |
| | |
| Operate fan control dial to set the fan speed to maximum speed. Operate MODE dial to each position. Check that air outlets change according to each indicated air outlet is outlets. Refer to <u>VTL-4</u>, "VENTILATION SYSTEM (FRONT AIR CONE) | F by placing a hand in front of the air <u>DITIONING) : System Description"</u> . |
| Is the inspection result normal? | G |
| NO >> GO TO 8. | |
| 3.CHECK INTAKE AIR | Н |
| Operate intake lever to each position. Listen to intake sound and confirm air inlets change. | |
| Is the inspection result normal? YES >> GO TO 4. | HA |
| 4.CHECK COMPRESSOR | J |
| Turn fan control dial ON. Press A/C switch. The A/C switch indicator is turns ON. Check visually and by sound that the compressor operates. Press A/C switch again. The A/C switch indicator is turns OFF. Check that compressor stops. | K |
| Is the inspection result normal? | L |
| YES >> GO TO 5. NO >> GO TO 8. | |
| 5. CHECK DISCHARGE AIR TEMPERATURE | M |
| Operate temperature control dial. Check that discharge air temperature changes. Is the inspection result permet? | Ν |
| YES >> GO TO 6. | |
| NO >> GO TO 8. | C |
| U.CHECK IEMPERATURE DECREASE | |
| Operate compressor. Turn temperature control dial to full cold position. Check that cool air blows from the air outlets. Is the inspection result normal? | P |
| YES >> GO TO 7. NO >> GO TO 8. | |

7.CHECK TEMPERATURE INCREASE

- 1. Turn temperature control dial to full hot position.
- 2. Check that warm air blows from air outlets.

Is the inspection result normal?

YES >> INSPECTION END

8. Check self-diagnosis with consult

- 1. Perform self-diagnosis with CONSULT.
- 2. Check that any DTC is detected.

Is any DTC detected?

- YES >> Perform trouble diagnosis for the detected DTC.
- NO >> Refer to <u>HAC-41, "Symptom Table"</u> and perform the appropriate diagnosis.

YES >> Replace front air control. Refer to <u>HAC-45, "Removal and Installation"</u>.

NO >> Repair harness or connector between front air control and fuse.

< DTC/CIRCUIT DIAGNOSIS >

FRONT BLOWER MOTOR

Description

The front blower motor utilizes a brush-less motor with a rotating magnet. Quietness is improved over previous motors where the brush was the point of contact and the coil rotated.

< DTC/CIRCUIT DIAGNOSIS >

MAGNET CLUTCH

Description

SYSTEM DESCRIPTION

When the blower speed dial is in one of the fan speed positions, the front air control outputs a fan ON signal to the BCM. When the A/C switch is pressed, the A/C switch LED illuminates and the front air control outputs a compressor ON signal to the BCM. Any mode control button can be selected. As long as the BCM receives a compressor ON signal and a fan ON signal from the front air control, the conditions required for the BCM to transmit a compressor ON request to the ECM have been met.

The BCM sends a compressor ON signal to ECM, via CAN communication line.

The ECM judges whether the compressor can be turned ON, based on each sensor status (refrigerant pressure sensor signal, throttle angle sensor, etc.). If it judges the compressor can be turned ON, it sends a compressor ON signal to IPDM E/R, via CAN communication line.

Upon receipt of a compressor ON signal from ECM, IPDM E/R turns the A/C relay ON to operate the compressor.

Component Function Check INFOID:000000007207687 1. CHECK MAGNET CLUTCH OPERATION Perform auto active test of IPDM E/R. Refer to PCS-8, "CONSULT Function (IPDM E/R)". Is the inspection result normal? Н YES >> Inspection End. >> Refer to HAC-39, "Diagnosis Procedure". NO HAC Diagnosis Procedure INFOID:000000007207688 Regarding Wiring Diagram information, refer to HAC-18, "Wiring Diagram". 1.CHECK FUSE Κ Check 10A fuse (No. 42, located in IPDM E/R). NOTE: Refer to PG-60, "IPDM E/R Terminal Arrangement". Is the inspection result normal? YES >> GO TO 2. M NO >> Replace the blown fuse after repairing the affected circuit. 2.CHECK MAGNET CLUTCH

| 1. | Turn ignition switch OFF. | N |
|--------------|---|---|
| 2. | Disconnect compressor connector. | |
| 3. | Directly apply battery voltage to the magnet clutch. Check for operation visually and by sound. | |

INSUFFICIENT COOLING

Description

Symptom

- Insufficient cooling
- No cool air comes out. (Air flow volume is normal.)

Diagnosis Procedure

INFOID:000000007207696

INFOID:000000007207695

NOTE:

Perform self-diagnosis with CONSULT before performing symptom diagnosis. If any malfunction result or DTC is detected, perform the corresponding diagnosis.

1.CHECK MAGNET CLUTCH OPERATION

- 1. Turn ignition switch ON.
- 2. Turn fan control dial ON.
- 3. Press A/C switch.
- 4. Check that A/C indicator turns ON. Check visually and by sound that compressor operates.
- 5. Press A/C switch again.
- 6. Check that A/C indicator turns OFF. Check that compressor stops.
- Is the inspection result normal?

YES >> GO TO 2.

NO >> Check compressor operation. Refer to <u>HAC-44</u>, "Diagnosis Procedure".

2. CHECK DRIVE BELT

Check tension of drive belt. Refer to EM-17, "Inspection".

Is the inspection result normal?

YES >> GO TO 3.

NO >> Adjust or replace drive belt depending on the inspection results.

3.CHECK REFRIGERANT CYCLE PRESSURE

Connect the recovery/recycling recharging equipment to the vehicle and perform the pressure inspection using gauge. Refer to <u>HA-25, "Symptom Table"</u>.

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair or replace parts depending on the inspection results.

4.CHECK AIR LEAKAGE FROM EACH DUCT

Check duct and nozzle, etc. of the air conditioner system for leakage.

Is the inspection result normal?

- YES >> Check air mix door cable installation and air mix door operation.
- NO >> Repair or replace parts depending on the inspection results.

INSUFFICIENT HEATING

| < SYMPTOM DIAGNOSIS > | [MANUAL AIR CONDITIONING] |
|---|--|
| INSUFFICIENT HEATING | |
| Description | INFOID:000000007207697 |
| | |
| Symptom • Insufficient heating | |
| No warm air comes out. (Air flow volume is normal.) | |
| Diagnosis Procedure | INFOID:000000007207698 |
| NOTE: Perform self-diagnosis with CONSULT before performing symptom diag is detected, perform the corresponding diagnosis. | nosis. If any malfunction result or DTC |
| 1.CHECK COOLING SYSTEM | |
| Check engine coolant level and check for leakage. Refer to <u>CO-8</u>, " Check radiator cap. Refer to <u>CO-12</u>, "<u>RADIATOR CAP</u> : <u>Inspection</u>" Check water flow sounds of the engine coolant. Refer to <u>CO-9</u>, "<u>Reference</u> (CO-9, "Reference") | Inspection". filling Engine Coolant". |
| Is the inspection result normal? | |
| YES >> GO TO 2. NO >> Refill engine coolant and repair or replace the parts depend 2.CHECK HEATER HOSE | ing on the inspection results. |
| Check installation of heater hose by visually or touching. | |
| Is the inspection result normal? | |
| NO >> Repair or replace parts depending on the inspection results | |
| 3. CHECK HEATER CORE | |
| Check temperature of inlet hose and outlet hose of heater core. Check that inlet side of heater core is hot and the outlet side is sligh side. | tly lower than/almost equal to the inlet |
| Always perform the temperature inspection in a short period of temperature is very hot. | of time because the engine coolant |
| YES >> GO TO 4. | |
| NO >> Replace heater core. Refer to <u>HA-37. "HEATER CORE : Re</u> | emoval and Installation". |
| 4. CHECK AIR LEAKAGE FROM EACH DUCT | |
| Check duct and nozzle, etc. of air conditioning system for air leakage. | |
| YES >> Check air mix door cable installation and air mix door opera | tion. |
| NO >> Repair or replace parts depending on the inspection results | |
| | |
| | |

COMPRESSOR DOES NOT OPERATE

Description

SYMPTOM

Compressor does not operate.

Diagnosis Procedure

NOTE:

- Perform self-diagnosis with CONSULT before performing symptom diagnosis. If any malfunction result or DTC is detected, perform the corresponding diagnosis.
- Check that refrigerant system is fully charged. If the refrigerant charge is low, perform the inspection for refrigerant leakage
- **1.**CHECK MAGNET CLUTCH OPERATION

Check magnet clutch. Refer to HAC-39, "Component Function Check".

Does it operate normally?

YES >> GO TO 2.

NO >> Repair or replace malfunctioning parts.

2.CHECK REFRIGERANT PRESSURE SENSOR

Check refrigerant pressure sensor. Refer to EC-429, "Component Function Check".

Is the inspection result normal?

- YES >> GO TO 3.
- NO >> Repair or replace malfunctioning parts.

 $\mathbf{3}$.CHECK A/C ON SIGNAL

Check A/C ON signal. Refer to HAC-29, "Component Function Check".

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair or replace malfunctioning parts.

4.CHECK BLOWER FAN ON SIGNAL

Check blower fan ON signal. Refer to HAC-32, "Component Function Check".

Is the inspection result normal?

YES >> GO TO 5.

NO >> Repair or replace malfunctioning parts

5.CHECK BCM OUTPUT SIGNAL

()With CONSULT

T. Select "DATA MONITOR" mode of "ECM" using CONSULT.

2. Select "AIR COND SIG" and "HEATER FAN SW", and check status under the following conditions.

| Monitor item | Condition | | Status |
|---------------|--------------|--------------------------|--------|
| | A/C switch | OFF (A/C indicator: OFF) | Off |
| AIR COND SIG | | ON (A/C indicator: ON) | On |
| HEATER FAN SW | Blower motor | OFF | Off |
| | | ON | On |

Is the inspection result normal?

YES >> Replace IPDM E/R. Refer to <u>PCS-25, "Removal and Installation"</u>.

NO >> Replace BCM. Refer to <u>BCS-52. "Removal and Installation"</u>.

Refer to IP-15, "Removal and Installation".

- 2. Remove the air mix door cable from the A/C unit assembly. Refer to HAC-50, "AIR MIX DOOR CABLE : Ν Removal and Installation".
- 3. Remove the mode door cable from the A/C unit assembly. Refer to HAC-50, "MODE DOOR CABLE : Removal and Installation".
- 4. Remove the intake door cable from the A/C unit assembly. Refer to HAC-49, "INTAKE DOOR CABLE : Removal and Installation".

HAC-45

- 5. Remove the A/C control panel screws.
- 6. Remove the A/C control panel.

INSTALLATION

1.

4.

7.

C.

Installation is in the reverse order of removal.

< UNIT REMOVAL AND INSTALLATION >

THERMO CONTROL AMPLIFIER

Exploded View

Refer to HA-36, "Exploded View".

Removal and Installation

REMOVAL

- 1. Remove the evaporator. Refer to HA-37, "EVAPORATOR : Removal and Installation".
- 2. Remove the thermo control amplifier from the evaporator.

INSTALLATION

Installation is in the reverse order of removal.

- Replace O-ring with new one. Then apply compressor oil to them when installing.
- When installing the thermo control amplifier, set to the same position as before replacement.
- When removing the thermo control amplifier, do not turn the bracket which is on the top of the thermo control amp.
- Check for the leakages when recharging refrigerant. Refer to HA-16, "Leak Test".

REFRIGERANT PRESSURE SENSOR

< UNIT REMOVAL AND INSTALLATION >

REFRIGERANT PRESSURE SENSOR

Removal and Installation for Refrigerant Pressure Sensor

REMOVAL

CAUTION:

• Do not damage the condenser fins.

Installation is in the reverse order of removal.

- Perform lubricant return operation before each refrigeration system disassembly. However, if a large amount of refrigerant or lubricant is detected, never perform lubricant return operation. Refer to <u>HA-20</u>, <u>"Perform Oil Return Operation"</u>.
- 1. Move air guide aside.

INSTALLATION

CAUTION:

- 2. Disconnect the refrigerant pressure sensor connector.
- 3. Remove the refrigerant pressure sensor (1) from the liquid tank on the condenser.

Replace O-ring with new one. Then apply compressor oil to them when installing.
Check for leakages when recharging refrigerant. Refer to <u>HA-16</u>, "Leak Test"

2. Blower motor

INFOID:000000007207710

REMOVAL

- 1. Remove instrument panel assembly. Refer to IP-15, "Removal and Installation".
- 2. Disconnect blower fan resistor connector.
- 3. Remove screws, and then remove blower fan resistor.

INSTALLATION

Installation is in the reverse order of removal.

DOOR CABLE

Exploded View

INFOID:000000007207711

А

1. Remove front passenger air bag module or instrument finisher D. Refer to <u>IP-15, "Removal and Installa-</u> tion".

Revision: July 2011

< UNIT REMOVAL AND INSTALLATION >

- 2. Disconnect intake door cable (1) from clamp (A).
- 3. Set intake door lever to REC position.
- 4. Push intake door link (2) in the direction as shown, and then carefully pulling outer cable to A/C control side, and connect clamp.
 - JMIA0617Z
- Operate intake door lever to insure that inner cable moves smoothly.
 CAUTION:
 When clamping the outer cable, never move the inner cable.

MODE DOOR CABLE

MODE DOOR CABLE : Removal and Installation

REMOVAL

1. Remove A/C unit assembly. Refer to HA-36, "A/C UNIT ASSEMBLY : Removal and Installation".

DOOR CABLE

- 2. Disconnect mode door cable from A/C control.
- 3. Disconnect mode door cable from A/C unit assembly, and then remove mode door cable.

INSTALLATION

Installation is in the reverse order of removal.

MODE DOOR CABLE : Adjustment

- 1. Remove A/C unit assembly. Refer to HA-36, "A/C UNIT ASSEMBLY : Removal and Installation".
- 2. Disconnect mode door cable (1) from clamp (A).
- 3. Set mode dial to VENT position.
- 4. Push main link (2) in the direction as shown, and then carefully pulling outer cable to A/C control side, and connect clamp.

5. Operate mode dial to insure that inner cable moves smoothly. **CAUTION:**

When clamping the outer cable, never move the inner cable. AIR MIX DOOR CABLE

AIR MIX DOOR CABLE : Removal and Installation

REMOVAL

- 1. Remove foot duct LH. Refer to VTL-7, "FOOT DUCT : Removal and Installation".
- 2. Disconnect air mix door cable from A/C control.
- 3. Disconnect air mix door cable from A/C unit assembly, and then remove air mix door cable.

INSTALLATION

Installation is in the reverse order of removal.

[MANUAL AIR CONDITIONING]

INFOID:000000007207715

INFOID:000000007207714

3. Remove glove box. Refer to IP-22, "Removal and Installation".

< UNIT REMOVAL AND INSTALLATION > AIR MIX DOOR CABLE : Adjustment

- 4. Disconnect air mix door cable (1) from clamp (A).
- 5. Set temperature control dial to full cold position.
- 6. Push air mix door link (2) in the direction as shown, and then clamp.

1. Remove cluster lid "C". Refer to IP-21, "Removal and Installation".

7. Operate temperature control dial to insure that inner cable moves smoothly. **CAUTION:** When clamping the outer cable, never move the inner cable.

carefully pulling outer cable to A/C control side, and connect

2. Remove instrument panel finnisher "B". Refer to IP-20, "Removal and Installation".
