PRECAUTIONS

starting the repair operation.

OPERATION PROCEDURE

anism is adopted on the key cylinder.

steering wheel rotation will become impossible.

1. Connect both battery cables. NOTE: Supply power using jumper cables if bettery is discher

Supply power using jumper cables if battery is discharged.

- 2. Use the Intelligent Key or mechanical key to turn the ignition switch to the "ACC" position. At this time, the steering lock will be released.
- 3. Disconnect both battery cables. The steering lock will remain released and the steering wheel can be rotated.
- 4. Perform the necessary repair operation.

2012 Versa

<service information > SERVICE INFORMATION PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

WARNING:

NOTE:

TEM).

"LOCK" position.

- When working near the Airbag Diagnosis Sensor Unit or other Airbag System sensors with the Ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the Ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

This Procedure is applied only to models with Intelligent Key system and NATS (NISSAN ANTI-THEFT SYS-

• Remove and install all control units after disconnecting both battery cables with the ignition knob in the

GENERAL MAINTENANCE

Explanation of General Maintenance

General Maintenance

INFOID:000000007329126

INFOID:000000007329127

General maintenance includes those items which should be checked during the normal day-to-day operation of the vehicle. They are essential if the vehicle is to continue operating properly. The owners can perform checks and inspections themselves or have their NISSAN dealers do them.

OUTSIDE THE VEHICLE

The maintenance items listed here should be performed from time to time, unless otherwise specified.

Item		Reference page
Tires	Check the pressure with a gauge often and always prior to long distance trips. Adjust the pressure in all tires, including the spare, to the specified pressure. Check carefully for damage, cuts or excessive wear.	<u>WT-30</u>
Wheel nuts	When checking the tires, make sure no nuts are missing, and check for any loose nuts. Tighten if necessary.	<u>WT-7</u>
Tire rotation	Tires should be rotated every 7,500 miles (12,000 km).	<u>WT-7</u>
Tire Pressure Monitor System (TPMS) trans- mitter components	Replace the TPMS transmitter grommet seal, valve core and cap when the tires are replaced due to wear or age.	<u>WT-9</u>
Windshield	Clean the windshield on a regular basis. Check the windshield at least every six months for cracks or other damage. Repair as necessary.	<u>GW-12</u>
Windshield wiper blades	Check for cracks or wear if they do not wipe properly. Replace as necessary.	_
Doors and engine hood	Check that all doors and the engine hood operate smoothly as well as the back door. Also make sure that all latches lock securely. Lubricate if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released. When driving in areas using road salt or other corrosive materials, check lubrica- tion frequently.	<u>MA-36</u>
Lamps	Make sure that the headlamps, stop lamps, tail lamps, turn signal lamps, and other lamps are all operating properly and installed securely. Also check headlamp aim. Clean the headlamps on a regular basis.	<u>LT-23</u>

INSIDE THE VEHICLE

The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, cleaning the vehicle, etc.

Item		Reference page
Warning lamps and chimes	Make sure that all warning lamps and chimes are operating properly.	_
Windshield wiper and washer	Check that the wipers and washer operate properly and that the wipers do not streak.	_
Windshield defroster	Check that the air comes out of the defroster outlets properly and in sufficient quantity when operating the heater or air conditioning.	_
Steering wheel	Check that it has the specified play. Check for changes in the steering condition, such as excessive play, hard steering or strange noises. Free play: Less than 35 mm (1.38 in)	_
Seats	Check seat position controls such as seat adjusters, seat back recliner, etc. to make sure they operate smoothly and that all latches lock securely in every position. Check that the head restraints move up and down smoothly and that the locks (if equipped) hold securely in all latched positions. Check that the latches lock securely for folding-down rear seat backs.	_
Seat belts	Check that all parts of the seat belt system (e.g. buckles, anchors, adjusters and retractors) operate properly and smoothly and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.	<u>MA-36</u>
Accelerator pedal	Check the pedal for smooth operation and make sure the pedal does not catch or require uneven effort. Keep the floor mats away from the pedal.	_

GENERAL MAINTENANCE

< SERVICE INFORMATION >

Item		Reference page	
Brakes	Check that the brake does not pull the vehicle to one side when applied.	—	A
Brake pedal and booster	Check the pedal for smooth operation and make sure it has the proper distance under it when depressed fully. Check the brake booster function. Be sure to keep floor mats away from the pedal.	<u>BR-6</u> and <u>BR-20</u>	В
Clutch pedal	Make sure the pedal operates smoothly and check that it has the proper free play.	<u>CL-6</u>	-
Parking brake	Check that the lever has the proper travel and make sure that the vehicle is held securely on a fairly steep hill when only the parking brake is applied.	<u>PB-5</u>	С
Automatic transaxle "P" (Park) position mechanism	Check that the lock release button on the shift selector operates properly and smoothly. On a fairly steep hill check that the vehicle is held securely with the shift selector in the "P" (Park) position without applying any brakes.	_	D
CVT"P" (Park) posi- tion mechanism	On a fairly steep hill check that the vehicle is held securely with the shift selector in the "P" (Park) position without applying any brakes.	_	
			E

UNDER THE HOOD AND VEHICLE

The maintenance items listed here should be checked periodically (e.g. each time you check the engine oil or refuel).

Item		Reference page	
Windshield washer fluid	Check that there is adequate fluid in the tank.	_	F
Engine coolant level	Check the coolant level when the engine is cold.	<u>CO-11</u>	_
Radiator and hoses	Check the front of the radiator and clean off any dirt, insects, leaves, etc., that may have accumulated. Make sure the radiator hoses have no cracks, deformation, deterioration or loose connections.	_	G
Brake and clutch fluid levels	Make sure that the brake and clutch fluid level(s) is (are) between the "MAX" and "MIN" lines on the reservoir(s).	<u>BR-9</u>	Н
Battery	Check the fluid level in each cell. It should be between the "MAX" and "MIN" lines. Vehicles operated in high temperatures or under severe conditions require frequent checks of the battery fluid level.	_	
Engine drive belts	Make sure that no belt is frayed, worn, cracked or oily.	<u>EM-13</u>	-
Engine oil level	Check the level on the dipstick after parking the vehicle on a level spot and turning off the engine.	<u>MA-19</u>	J
Automatic transaxle fluid level	Check the level on the dipstick after putting the shift selector in "P" (Park) position with the engine idling.	<u>MA-30</u>	K
Exhaust system	Make sure there are no loose supports, cracks or holes. If the sound of the exhaust seems unusual or there is a smell of exhaust fumes, immediately locate the trouble and correct it.	<u>MA-25</u>	МА
Underbody	The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these substances, otherwise rust will form on the floor pan, frame, fuel lines and around the exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, being careful to clean those areas where mud and dirt can easily ac- cumulate.	_	M
Fluid leaks	Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is nor- mal. If you should notice any leaks or gasoline fumes are evident, check for the cause and correct it immediately.	_	N

< SERVICE INFORMATION >

PERIODIC MAINTENANCE

Introduction of Periodic Maintenance

INFOID:000000007329128

Two different maintenance schedules are provided, and should be used, depending upon the conditions in which the vehicle is mainly operated. After 60,000 miles (96,000 km) or 48 months, continue the periodic maintenance at the same mileage/time intervals.

	Follow Periodic Maintenance Schedule 1 if your driving habits frequently includes one or more of the following driving conditions:	Emission Control Sys- tem Maintenance	<u>MA-8</u>
Schedule 1	 Repeated short trips of less than 5 miles (8 km). Repeated short trips of less than 10 miles (16 km) with outside temperatures remaining below freezing. Operating in hot weather in stop-and-go "rush hour" traffic. Extensive idling and/or low speed driving for long distances, such as police, taxi or door-to-door delivery use. Driving in dusty conditions. Driving on rough, muddy, or salt spread roads. Towing a trailer, using a camper or a car-top carrier. 	Chassis and Body Maintenance	<u>MA-8</u>
Schedule 2	Follow Periodic Maintenance Schedule 2 if none of the driving conditions shown	Emission Control Sys- tem Maintenance	<u>MA-10</u>
	in Schedule 1 apply to your driving habits.	Chassis and Body Maintenance	<u>MA-10</u>

(1) After 60,000 miles (96,000 km) or 48 months, inspect every 15,000 miles (24,000 km) or 12 months. Replace the drive belts if found damaged.

(2) If operating mainly in dusty conditions, more frequent maintenance may be required.

(3) Maintenance-free item. For service procedures, refer to the FL section.

(4) First replacement interval is 105,000 miles (168,000 km) or 84 months. After first replacement, replace every 75,000 miles (120,000 km) or 60 months. Use only Pre-diluted Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent. Mixing any other type of coolant or water will reduce the life expectancy of the factory-filled coolant.

(5) Periodic maintenance is not required. However, if valve noise increases, inspect valve clearance.

* Maintenance items and intervals with "*" are recommended by NISSAN for reliable vehicle operation. The owner need not perform such maintenance in order to maintain the emission warranty or manufacturer recall liability. Other maintenance items and intervals are required.

(1) If towing a trailer, using a camper or car-top carrier, or driving on rough or muddy roads, change (not just inspect) oil/fluid at every 30,000 miles (48,000 km) or 24 months.

(2) If towing a trailer, using a camper or car-top carrier, or driving on rough or muddy roads, inspect CVT fluid deterioration with CON-SULT every 60,000 miles (96,000 km), then change CVT fluid NS-2 if necessary. (Refer to CVT section) If CONSULT is not available, change (not just inspect) CVT fluid NS-2 every 60,000 miles (96,000 km). Using transmission fluid other than Genuine NISSAN CVT Fluid NS-2 will damage the CVT, which is not covered by the NISSAN new vehicle limited warranty.

(3) Refer to "Tire rotation" under the "GENERAL MAINTENANCE" heading earlier in this section.

CVT fluid		RE0F08B	6.9 l	7 1/4 qt	6 1/8 qt	Genuine NISSAN CVT Fluid NS-2 *4
Brake and clutch fluid			_	_	_	Genuine NISSAN Super Heavy Duty Brake Fluid *5 or equivalent DOT 3 (US FMVSS No. 116)
Multi-purpose grease			_	—	-	NLGI No. 2 (Lithium soap base)
Windshield washer fluid		4.5 l	4 3/4 qt	4 qt	Genuine NISSAN Windshield Wash- er Concentrate Cleaner & Anti- Freeze or equivalent	
Air conditioning system refrigerant		$0.45\pm0.05~\text{kg}$	$0.99\pm0.11~\text{lb}$	$0.99\pm0.11~\text{lb}$	HFC-134a (R-134a) *6	
	vstem oil	MR18DE - Type 1	120 m ℓ	4.1 fl oz	4.2 fl oz	A/C System Oil Type R (DH-PR) *6
Air conditioning s	ysienn on	MR18DE - Type 2	100 m ℓ	3.4 fl oz	3.5 fl oz	A/C System Oil Type S (DH-PS) *6

*1: For additional information, see "Engine Oil Recommendation".

*2: If Genuine NISSAN gear oil is not available, API GL-4, Viscosity SAE 75W-80 may be used as a temporary replacement. However MA use Genuine NISSAN gear oil as soon as it is available.

*3: Using automatic transaxle fluid (ATF) other than Genuine NISSAN Matic D ATF will cause deterioration in driveability and automatic transaxle durability, and may damage the automatic transaxle, which is not covered by the NISSAN new vehicle limited warranty.

*4: Use only Genuine NISSAN CVT Fluid NS-2. Using transmission fluid other than Genuine NISSAN CVT Fluid NS-2 will damage the CVT, which is not covered by the NISSAN new vehicle limited warranty.

*5: Available in mainland U.S.A. through a NISSAN dealer.

*6: For further details, see "Air conditioner specification label".

SAE Viscosity Number

NISSAN recommends the use of an energy conserving oil in order to improve fuel economy. Select only engine oils that meet the American Petroleum Institute (API) certification and International Lubrication Standardization and Approval Committee (ILSAC) certification and SAE viscosity standard. These oils Ρ have the API certification mark on the front of the container. Oils which do not have the specified quality label should not be used as they could cause engine damage.

Anti-freeze Coolant Mixture Ratio

INFOID:000000007329133

The engine cooling system is filled at the factory with a pre-diluted high-quality, long life, year-round, antifreeze coolant solution. The anti-freeze solution contains rust and corrosion inhibitors. Therefore, additional cooling system additives are not necessary.

CAUTION:

• When adding or replacing coolant, be sure to use only Pre-diluted Genuine NISSAN Long Life Anti-Freeze/Coolant (blue) or equivalent. Pre-diluted Genuine NISSAN Long Life Antifreeze/Coolant (blue) is pre-diluted to provide antifreeze protection to 34° F (-37° C). If additional freeze protection is needed due to weather where you operate your vehicle, add Genuine NISSAN Long Life Antifreeze/Coolant (blue) concentrate following the directions on the container. if an equivalent coolant other than Pre-diluted Genuine NISSAN Long Life Anti-Freeze/Coolant (blue) is used, follow the coolant manufacturer's instructions to maintain minimum freeze protection to 34° F (-37° C). The use of other types of coolant solutions other than Pre-diluted Genuine NISSAN Long Life Anti-Freeze/Coolant (blue) or equivalent may damage the engine cooling system. < SERVICE INFORMATION >

ENGINE MAINTENANCE (MR18DE) DRIVE BELT

DRIVE BELT : Component

DRIVE BELT : Checking Drive Belts

WARNING:

Be sure to perform this step when the engine is stopped. NOTE:

- On vehicles not equipped with A/C, there is an idler pulley in the position for the drive belt routing. • Make sure that the indicator (notch on fixed side) of drive belt auto-tensioner is within the possible use
- Make sure that the indicator (notch on fixed side) of drive belt auto-tensioner is within the possible use range.

NOTE:

- · Check the drive belt auto-tensioner indication when the engine is cold.
- When new drive belt is installed, the indicator (notch on fixed side) should be within the range.
- Visually check entire drive belt for wear, damage or cracks.
- If the indicator (notch on fixed side) is out of the possible use range or belt is damaged, replace drive belt.

DRIVE BELT : Tension Adjustment

Belt tension is not necessary, as it is automatically adjusted by drive belt auto-tensioner. ENGINE COOLANT

ENGINE COOLANT : Inspection

LEVEL CHECK

 Check if the reservoir tank engine coolant level is within the "MIN" to "MAX" range when engine is cool.

• Adjust the engine coolant level as necessary.

ENGINE COOLANT : Changing Engine Coolant

WARNING:

< SERVICE INFORMATION >

- To avoid being scalded, do not change engine coolant when engine is hot.
- Wrap a thick cloth around radiator cap and carefully remove the cap. First, turn the cap a quarter of a turn to release built-up pressure. Then turn the cap all the way.
- CAUTION:

• Do not spill engine coolant on drive belt.

DRAINING ENGINE COOLANT

1. Open radiator drain plug (1) at the bottom of radiator, and then remove radiator cap.

• <> Front

When draining all of engine coolant in the system, open water drain plug on cylinder block. Refer to <u>EM-84</u>. CAUTION:

- Perform this step when engine is cold.
- Do not spill engine coolant on drive belt.

- 2. Remove reservoir tank as necessary, and drain engine coolant and clean reservoir tank before installing. Refer to <u>CO-15</u>, "Component".
- 3. Check drained engine coolant for contaminants such as rust, corrosion or discoloration. If contaminated, flush the engine cooling system.

REFILLING ENGINE COOLANT

- 1. Install the radiator drain plug. Install the reservoir tank and cylinder block drain plug, if removed for a total system drain or for engine removal or repair.
 - The radiator must be completely empty of coolant and water.
 - Apply sealant to the threads of the cylinder block drain plugs. Use Genuine High Performance Thread Sealant or equivalent. Refer to <u>GI-42</u>, "<u>Recommended Chemical Product and Sealant</u>".

 Radiator drain plug
 : Refer to CO-15, "Component".

Cylinder block drain plug : 9.8 N·m (1.0 kg-m, 87 in-lb)

- 2. If disconnected, reattach the upper radiator hose at the engine side.
- 3. Set the vehicle heater controls to the full HOT and heater ON position. Turn the vehicle ignition ON with the engine OFF as necessary to activate the heater mode.

< SERVICE INFORMATION >

Install the Tool by installing the radiator cap adapter onto the 4 radiator neck opening. Then attach the gauge body assembly with the refill tube and the venturi assembly to the radiator cap adapter.

Tool number : KV991J0070 (J-45695)

5. Insert the refill hose into the coolant mixture container that is placed at floor level. Make sure the ball valve is in the closed position.

 Use recommended coolant or equivalent. Refer to MA-14, "Anti-freeze Coolant Mixture Ratio".

Engine coolant capacity (with reservoir tank)

: Refer to MA-13, "Fluids and Lubricants".

Install an air hose to the venturi assembly, the air pressure must be within specification.

> Compressed air supply pressure

: 549 - 824 kPa (5.6 - 8.4 kg/cm², 80 - 119 psi)

CAUTION:

The compressed air supply must be equipped with an air dryer.

- The vacuum gauge will begin to rise and there will be an audible hissing noise. During this process open 7. the ball valve on the refill hose slightly. Coolant will be visible rising in the refill hose. Once the refill hose is full of coolant, close the ball valve. This will purge any air trapped in the refill hose.
- 8. Continue to draw the vacuum until the gauge reaches 28 inches of vacuum. The gauge may not reach 28 inches in high altitude locations, use the vacuum specifications based on the altitude above sea level.

Altitude above sea level	Vacuum gauge reading
0 - 100 m (328 ft)	: 28 inches of vacuum
300 m (984 ft)	: 27 inches of vacuum
500 m (1,641 ft)	: 26 inches of vacuum
1,000 m (3,281 ft)	: 24 - 25 inches of vacuum

Н

Κ

Ο

- When the vacuum gauge has reached the specified amount, disconnect the air hose and wait 20 seconds to see if the system loses any vacuum. If the vacuum level drops, perform any necessary repairs to the Μ system and repeat steps 6 - 8 to bring the vacuum to the specified amount. Recheck for any leaks.
- 10. Place the coolant container (with the refill hose inserted) at the same level as the top of the radiator. Then open the ball valve on the refill hose so the coolant will be drawn up to fill the cooling system. The cooling Ν system is full when the vacuum gauge reads zero. CAUTION:

Do not allow the coolant container to get too low when filling, to avoid air from being drawn into the cooling system.

- Remove the Tool from the radiator neck opening.
- 12. Fill the cooling system reservoir tank to the specified level and install the radiator cap. Run the engine to P warm up the cooling system and top up the system as necessary.

FLUSHING COOLING SYSTEM

- Install reservoir tank if removed. Refer to CO-15, "Component". 1.
- Install radiator drain plug. 2
 - If water drain plug on cylinder block is removed, close and tighten it. Refer to EM-84, "Disassemblv and Assembly". CAUTION:

< SERVICE INFORMATION >

Be sure to clean radiator drain plug and install with new O-ring. Refer to CO-15, "Component".

- 3. Fill radiator and reservoir tank with water and reinstall radiator cap.
- 4. Run engine and warm it up to normal operating temperature.
- 5. Rev engine two or three times under no-load.
- 6. Stop engine and wait until it cools down.
- 7. Drain water from the cooling system.
- 8. Repeat steps 1 through 7 until clear water begins to drain from radiator.

FUEL LINES

FUEL LINES : Checking Fuel Line

Inspect fuel lines, fuel filler cap and fuel tank for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration.

If necessary, repair or replace damaged parts.

AIR CLEANER FILTER AIR CLEANER FILTER : Component

ENGINE OIL : Changing Engine Oil

INFOID:000000007329156

WARNING:

- Be careful not to burn yourself, as engine oil may be hot.
- Prolonged and repeated contact with used engine oil may cause skin cancer. Try to avoid direct skin contact with used engine oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.
- 1. Warm up the engine, park vehicle on a level surface and check for engine oil leakage from engine components. Refer to <u>MA-19, "ENGINE OIL : Inspection"</u>.
- 2. Stop the engine and wait for 10 minutes.
- 3. Loosen oil filler cap (1) and then remove drain plug (2).
 - Oil filter (3)
 - Engine front
- 4. Drain engine oil.
- 5. Install drain plug (2) with new washer. Refer to <u>EM-25, "Compo-</u><u>nent"</u>.

CAUTION:

Be sure to clean drain plug (2) and install with new washer.

6. Refill with new engine oil. Refer to <u>MA-13</u>.

CAUTION:

- The refill capacity depends on the engine oil temperature and drain time. Use these specifications for reference only.
- Always use oil level gauge to determine the proper amount of engine oil in the engine.
- 7. Warm up engine and check area around drain plug (2) and oil filter (3) for engine oil leakage.
- 8. Stop engine and wait for 10 minutes.
- 9. Check the engine oil level. Refer to <u>MA-19, "ENGINE OIL :</u> <u>Inspection"</u>.

OIL FILTER

OIL FILTER : Removal and Installation

REMOVAL

- 1. Remove engine under cover. Refer to EI-15. "Removal and Installation".
- 2. Drain engine oil. Refer to MA-20, "ENGINE OIL : Changing Engine Oil".

< SERVICE INFORMATION >

- 3. Remove oil filter using Tool (A).
 - < : Front

Tool number : KV10115801 (J-38956)

WARNING:

- · Be careful not to get burned when engine and engine oil may be hot.
- CAUTION:
- Oil filter is provided with relief valve. Use Genuine NISSAN Oil Filter or equivalent.
- When removing, prepare a shop cloth to absorb any engine oil leakage or spillage.
- Do not spill engine oil on drive belt.
- Completely wipe off any engine oil that spills on engine and vehicle.

INSTALLATION

- 1. Remove foreign materials adhering to the oil filter installation surface.
- 2. Apply new engine oil to the oil seal contact surface of new oil filter.

D

Е

Κ

А

В

Screw oil filter manually until it touches the installation surface, 3. then tighten it by 2/3 turn. Or tighten to specification.

Oil filter:

: 17.7 N·m (1.8 kg-m, 13 ft-lb)

Refill engine with new engine oil. Refer to <u>MA-20, "ENGINE OIL : Changing Engine Oil"</u>. Μ 5. Install engine under cover. Refer to EI-15, "Removal and Installation". INSPECTION AFTER INSTALLATION Ν 1. Check the engine oil level. Refer to MA-19, "ENGINE OIL : Inspection". Start engine, and make sure there are no leaks of engine oil. 3. Stop engine and wait for 10 minutes. Ο Check the engine oil level and adjust as necessary. Refer to <u>MA-19, "ENGINE OIL : Inspection"</u>. SPARK PLUG Ρ

CHASSIS AND BODY MAINTENANCE **IN-CABIN MICROFILTER**

IN-CABIN MICROFILTER : Changing Air Conditioner Filter

FUNCTION

The fresh air (A) and the recirculated air (B) drawn inside the passenger compartment by the front blower motor (1) is kept clean (C) on either mode by the air conditioner filter (2), located before the evaporator (3), in the A/C unit assembly.

D B (C Ε WJIA22538

REPLACEMENT TIMING

Replace the air conditioner filter according to the maintenance schedules. Refer to MA-6, "General Maintenance".

NOTE:

The air conditioner filter caution label is located inside the glove box door.

REPLACEMENT PROCEDURES

- 1. Remove the glove box assembly. Refer to <u>IP-11, "Component Parts"</u>.
- 2. Compress the air conditioner filter (1) downward while sliding it to the RH side of the vehicle to release the upper pawl.
- Move the bottom of air conditioner filter (1) upward as shown to 3. release the bottom tab, then remove it.

Replace the air conditioner filter with new one and install the new filter in the A/C unit assembly. **CAUTION:**

Make sure that the air conditioner filter lower tab is fully seated, and that the air conditioner upper pawl is locked into place securing the new filter into the A/C unit assembly.

5. Install the glove box assembly. Refer to IP-11, "Component Parts".

EXHAUST SYSTEM

EXHAUST SYSTEM : Checking Exhaust System

Check exhaust pipes, muffler and mounting for improper attachment, leaks, cracks, damage or deterioration.

If necessary, repair or replace damaged parts.

CVT FLUID

CVT FLUID : Checking CVT Fluid

FLUID LEVEL CHECK

Fluid level should be checked with the fluid warmed up to 50° to 80°C (122° to 176°F).

- 1. Check for fluid leakage.
- 2. With the engine warmed up, drive the vehicle to warm up the CVT fluid. When ambient temperature is 20°C (68°F), it takes about 10 minutes for the CVT fluid to warm up to 50° to 80°C (122° to 176°F).
- 3. Park the vehicle on a level surface and set the parking brake.
- 4. With engine at idle, while depressing brake pedal, move the shift selector throughout the entire shift range and return it to the "P" position.
- 5. Press the tab on the CVT fluid level gauge to release the lock and pull out the CVT fluid level gauge from the CVT fluid charging pipe.

7. Remove the CVT fluid level gauge and check that the fluid level is within the specified range as shown. If the fluid level is at or below the low side of the range, add the necessary specified NISSAN CVT fluid through the CVT charging pipe.

> : Refer to MA-13, "Fluids and Lubri-Fluid grade cants".

CAUTION:

as far as it will go. **CAUTION:**

fluid level gauge.

- Only use specified NISSAN CVT fluid.
- Do not overfill the CVT.
- 8. Install the CVT fluid level gauge to the CVT fluid charging pipe until it locks.

CAUTION: When CVT fluid level gauge is installed into the CVT fluid charging pipe, make sure that the CVT fluid level gauge is securely locked in place.

< SERVICE INFORMATION >

FLUID CONDITION CHECK

Fluid status	Conceivable cause	Required operation
Varnished (viscous varnish state)	Clutch, brake scorched	Replace the CVT fluid and check the CVT main unit and the vehicle for malfunctions (wire harness, cooler pipes, etc.)
Milky white or cloudy	Water in the fluid	Replace the CVT fluid and check for places where water is getting in.
Large amount of metal powder mixed in fluid	Unusual wear of sliding parts within CVT	Replace the CVT fluid and check for improper operation of the CVT.

Г

CVT FLUID : Changing CVT Fluid

- 1. Warm up CVT fluid by driving the vehicle for 10 minutes.
- < :: Vehicle front
- Radiator (2)
- CVT fluid cooler hose [inlet side (3)]
- Transaxle assembly (4)
- Drain CVT fluid from CVT fluid cooler hose [outlet side (1)] and 2. refill with new specified NISSAN CVT fluid in the CVT fluid charging pipe with the engine running at idle speed.

Fluid capacity and grade

: Refer to MA-13, "Fluids and Lubricants".

CAUTION:

Only use the specified NISSAN CVT fluid.

Refill until new CVT fluid comes out from CVT fluid cooler hose [outlet side (1)]. NOTE:

About 30 to 50% extra fluid will be required for this procedure.

 Check fluid level and condition. Refer to <u>MA-26, "CVT FLUID : Checking CVT Fluid"</u>. **CAUTION:**

Delete CVT fluid deterioration date with CONSULT after changing CVT fluid. Refer to CVT-48, "CONSULT Function (TRANSMISSION)".

CLUTCH FLUID

CLUTCH FLUID : Air Bleeding Procedure

CAUTION:

Do not spill clutch fluid onto painted surfaces. If it spills, wipe up immediately and wash the affected area with water.

NOTE:

- Ν Do not use a vacuum assist or any other type of power bleeder on this system. Use of a vacuum assist or power bleeder will not purge all the air from the system.
- Carefully monitor fluid level in reservoir tank during bleeding operation.
- Fill master cylinder reservoir tank with new clutch fluid. 1

А

< SERVICE INFORMATION >

- 2. Connect a transparent vinyl tube and container to the bleeding connector (1) on the CSC.
- 3. Depress and release the clutch pedal slowly and fully 15 times at an interval of two to three seconds and release the clutch pedal.

4. Push in the lock pin (1) of the bleeding connector (2), and maintain the position.
• RS5F91R transaxle models

Hold the lock pin in to prevent the bleeding connector from separating when fluid pressure is applied.

RS6F94R transaxle models

CAUTION:

Hold the lock pin in to prevent the bleeding connector from separating when fluid pressure is applied.

5. Slide the clutch tube (1) in the direction of the arrow as shown to the dimension (A). (For RS5F91R transaxle models)2: bleeding connector

Dimension (A) : 5 mm (0.20 in)

< SERVICE INFORMATION >

 Slide bleeding connector (1) in the direction of the arrow as shown to the dimension (A). (For RS6F94R transaxle models) 2: clutch housing

Dimension (A) : 10 mm (0.39 in)

 Depress the clutch pedal soon and hold it, and then bleed air from the piping. wait for 5 seconds. CAUTION:

Hold the clutch pedal down to prevent air from getting back into the clutch system.

- 8. Return the clutch tube and lock pin to their original positions.
- 9. Release clutch pedal and wait for 5 seconds.

10. Repeat steps 3 to 8 until no bubbles are observed in the clutch fluid.

M/T OIL

M/T OIL : Changing M/T Oil (RS6F94R)

DRAINING

- 1. Start engine and let it run to warm up transaxle.
- 2. Stop engine. Remove drain plug (1) and drain oil.
- Install a new gasket onto drain plug (1) and install it into transaxle. Tighten drain plug to specification. Refer to <u>MT-19</u>, "Disassembly and Assembly".
 CAUTION:

Do not reuse gasket.

Е

Н

FILLING

1. Remove filler plug (1). Fill with new oil until oil level reaches the specified limit at filler plug hole as shown.

Oil grade and capacity

: Refer to MA-13, "Fluids and Lubricants"

 After refilling oil, check oil level. Install a new gasket on filler plug (1), then install it into transaxle. Tighten filler plug to specification. Refer to <u>MT-19</u>, "<u>Disassembly and Assembly</u>". CAUTION: Do not reuse gasket.

M/T OIL : Checking M/T Oil (RS6FF94R)

OIL LEAKAGE AND OIL LEVEL

1. Make sure that oil is not leaking from transaxle or around it.

INFOID:000000007329170

0

Ρ

< SERVICE INFORMATION >

Remove filler plug (1) and check oil level at filler plug hole as shown.
 CAUTION:

Do not start engine while checking oil level.

3.

Install a new gasket onto filler plug (1) and install it into transaxle. Tighten filler plug to specification. Refer to <u>MT-19, "Disas-</u> <u>sembly and Assembly"</u>. CAUTION:

Do not reuse gasket.

A/T FLUID

A/T FLUID : Checking A/T Fluid

- 1. Warm up engine.
- 2. Check for A/T fluid leakage.
- Before driving, A/T fluid level can be checked at A/T fluid temperatures of 30° to 50°C (86° to 122°F) using the "COLD" range on A/T fluid level gauge.
 - A : Front side
 - B : Reverse side
 - C : Add
 - D : OK
- a. Park vehicle on level surface and set parking brake.
- b. Start engine and move shift selector through each gear position. Leave shift selector in "P" position.
- c. Check A/T fluid level with engine idling.
- d. Remove A/T fluid level gauge and wipe clean with lint-free cloth. **CAUTION:**

When wiping the A/T fluid level gauge, always use lint-free cloth.

 Re-insert A/T fluid level gauge into A/T fluid charging pipe as far as it will go.

CAUTION:

Firmly fix the A/T fluid level gauge to the A/T fluid charging pipe using the stopper attached.

f. Remove A/T fluid level gauge and note reading. If reading is at low side of range, add A/T fluid to the A/T fluid charging pipe. CAUTION:

Do not overfill.

- 4. Drive vehicle for approximately 5 minutes.
- Re-check A/T fluid level at A/T fluid temperatures of 50° to 80°C (122° to 176°F) using "HOT" range on A/ T fluid level gauge.

CAUTION:

- When wiping the A/T fluid level gauge, always use lint-free cloth.
- Firmly fix the A/T fluid level gauge to the A/T fluid charging pipe using the stopper attached.
- Check A/T fluid condition and make any necessary repairs. Refer to <u>AT-49</u>, "Inspections Before Trouble <u>Diagnosis</u>". If the A/T fluid contains frictional material (clutches, bands, etc.), or if the A/T is repaired, overhauled, or replaced, inspect and clean the A/T fluid cooler mounted in the radiator. Refer to <u>AT-17</u>, "<u>A/T</u> <u>Fluid Cooler Cleaning</u>".
- Install the removed A/T fluid level gauge into the A/T fluid charging pipe.
 CAUTION: Firmly fix the A/T fluid level gauge to the A/T fluid charging pipe using the stopper attached.

INFOID:000000007329171

When inner and outer imbalance values are shown on the balancer machine indicator, multiply outer imbalance value by 5/3 (1.67) to determine balance weight that should be used. Select the outer balance weight with a value closest to the calculated value above and	MA
a.	install in to the designated outer position of, or at the designated angle in relation to the road wheel. Indicated imbalance value \times 5/3 (1.67) = balance weight to be	M
	installed Calculation example: 23 g $(0.81 \text{ oz}) \times 5/3$ $(1.67) = 38.33 \text{ g} (1.35 \text{ oz}) \Rightarrow 40 \text{ g} (1.41 \text{ oz})$ balance weight (closer to calculated balance weight value)	Ν

NOTE:

Note that balance weight value must be closer to the calculated balance weight value.

Example:

 $\begin{array}{c} 37.4 \Rightarrow 35 \text{ g} (1.23 \text{ oz}) \\ 37.5 \Rightarrow 40 \text{ g} (1.41 \text{ oz}) \end{array}$

< SERVICE INFORMATION >

- 3. Install balance weight in the position shown. CAUTION:
 - Do not install the inner balance weight before installing the outer balance weight.
 - Before installing the balance weight, be sure to clean the mating surface of the road wheel.
 - When installing balance weight (1) to road wheel, set it into the grooved area (A) on the inner wall of the road wheel as shown so that the balance weight center (B) is aligned with the balancer machine indication position (angle) (C).
 CAUTION:
 - Always use genuine NISSAN adhesive balance weights.
 - Balance weights are non-reusable; always replace with new ones.
 - Do not install more than three sheets of balance weight.

 If calculated balance weight value exceeds 50 g (1.76 oz), install two balance weight sheets in line with each other as shown.
 CAUTION:

Do not install one balance weight sheet on top another.

- 5. Start balancer machine again.
- Install balance weight on inner side of road wheel in the balancer machine indication position (angle).
 CAUTION:

Do not install more than two balance weights.

- 7. Start balancer machine. Make sure that inner and outer residual imbalance values are 5 g (0.17 oz) each or below.
- 8. If either residual imbalance value exceeds 5 g (0.17 oz), repeat installation procedures.

Wheel balance	Dynamic (At flange)	Static (At flange)
Maximum allowable im- balance	Refer to <u>WT-30</u>	, "Road Wheel".

TIRE ROTATION

- Follow the maintenance schedule for tire rotation service intervals. Refer to <u>MA-6</u>, "General Maintenance".
- When installing the wheel, tighten wheel nuts to the specified torque.

CAUTION:

- Do not include the T-type spare tire when rotating the tires.
- When installing wheels, tighten them diagonally by dividing the work two to three times in order to prevent the wheels from developing any distortion.
- Be careful not to tighten wheel nut at torque exceeding the criteria for preventing strain of disc rotor.
- Use NISSAN genuine wheel nuts for aluminum wheels.

Wheel nut tightening : 113 N·m (12 kg-m, 83 ft-lb) torque

Perform the ID registration, after tire rotation. Refer to <u>WT-13, "ID Registration Procedure"</u>.

BRAKE FLUID LEVEL AND LEAKS

BRAKE FLUID LEVEL AND LEAKS : On Board Inspection

CHECKING BRAKE FLUID LEVEL

- Make sure the fluid level in the reservoir tank is within the standard (between MAX and MIN lines).
- Visually check around the reservoir tank for fluid leaks.
- If fluid level is excessively low, check brake system for fluid leaks.
- Release parking brake lever and see if brake warning lamp goes off. If not, check brake system for fluid leaks.

BRAKE FLUID LEVEL AND LEAKS : Drain and Refill

CAUTION:

- Refill using recommended brake fluid. Refer to <u>MA-13, "Fluids and Lubricants"</u>.
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, immediately wipe them with cloth and wash it away with water.
- Before working, disconnect connectors of ABS actuator and electric unit (control unit) or battery negative terminal.
- 1. Connect a vinyl tube to bleed valve.
- 2. Depress the brake pedal, loosen the bleed valve, and gradually remove the brake fluid.

- 3. Clean inside of reservoir tank, and refill with new brake fluid.
- 4. Loosen bleed valve, depress brake pedal slowly to full stroke and then release it. Repeat the procedure every 2 or 3 seconds until the new brake fluid comes out, then close the bleed valve while depressing the brake pedal. Repeat the same procedure for each wheel.
- 5. Bleed the air from the brake hydraulic system. Refer to <u>BR-9.</u> <u>"Bleeding Brake System"</u>.

BRAKE LINES AND CABLES

< SERVICE INFORMATION >

BRAKE LINES AND CABLES : Checking Brake Line and Cables

INFOID:000000007329176

INFOID:000000007329177

· Check brake fluid lines and parking brake cables for improper attachment, leaks, chafing, abrasions, deterioration, etc.

DISC BRAKE

DISC BRAKE : On Board Inspection

PAD WEAR INSPECTION

· Check pad thickness from check hole on cylinder body.

Standard thickness

Repair limit thickness

: Refer to BR-39, "Front Disc Brake". : Refer to BR-39, "Front Disc Brake".

DRUM BRAKE

DRUM BRAKE : Inspection

INFOID:000000007329178

INSPECTION

Lining Thickness Inspection Check lining thickness.

Standard thickness (A)

Repair limit thickness (A)

: Refer to BR-39. "Rear Drum Brake" : Refer to BR-39, "Rear Drum Brake"

Drum Inner Diameter Inspection

< SERVICE INFORMATION >

Wheel Cylinder Leakage Inspection

dition is found, replace it.

Check wheel cylinder for brake fluid leakage.

Check inner diameter of brake drum. Measurement area: lining contact surface (center)

Standard inner diameter	: Refer to <u>BR-39, "Rear</u> <u>Drum Brake"</u>
Repair limit inner diameter	: Refer to <u>BR-39, "Rear</u> Drum Brake"

Other Inspections

Check the following:

- Inside of the drum for excessive wear, damage, and cracks.
- · Lining for excessive wear, damage, and peeling.
- Shoe sliding surface for excessive wear and damage.
- Return spring for sagging.
- Check back plate for damage, cracks, and deformation. Replace back plate as necessary.
- Replace applicable part as necessary.

AXLE AND SUSPENSION PARTS

AXLE AND SUSPENSION PARTS : Axle and Suspension Parts

Check front and rear axle and suspension parts for excessive play, cracks, wear or other damage.

- · Shake each wheel to check for excessive play.
- · Check wheel bearings for smooth operation.
- · Check axle and suspension nuts and bolts for looseness.
- · Check strut (shock absorber) for oil leakage or other damage.
- Check suspension ball joint for grease leakage and ball joint dust cover for cracks or other damage.

< SERVICE INFORMATION >

DRIVE SHAFT

DRIVE SHAFT : Drive Shaft

Check boot and drive shaft for cracks, wear, damage and grease leakage.

LOCKS, HINGES AND HOOD LATCH

LOCKS, HINGES AND HOOD LATCH : Lubricating Locks, Hinges and Hood Latch

SEAT BELT, BUCKLES, RETRACTORS, ANCHORS AND ADJUSTERS SEAT BELT, BUCKLES, RETRACTORS, ANCHORS AND ADJUSTERS : Checking

< SERVICE INFORMATION >

Seat Belts, Buckles, Retractors, Anchors and Adjusters

Check the seat belt buckles, webbing, retractors, anchors and adjusters. Replace any seat belt assembly as necessary. Refer to <u>SB-7, "Seat Belt Inspection"</u>.

- · Check the seat belt anchors for loose bolts, damage, or excessive wear.
- Check the seat belt webbing for any damage, cuts, fraying, or excessive wear.
- Check the retractor for smooth operation.
- Check the function of the buckles by inserting the seat belt tongue and checking for proper engagement of the buckle and press the button on the buckle to check for proper release of the seat belt tongue.

CAUTION:

After any collision, inspect all seat belt assemblies, including retractors and other attached components, such as the guide rail set. NISSAN recommends replacing all seat belt assemblies in use during a collision, unless they are not damaged and are inspected to confirm they are operating properly after a minor collision.

Also inspect all seat belt assemblies that are not in use during a collision, and replace any components if damaged or not operating properly. The seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal collision where the driver and passenger air bags have been deployed.

If any component of the seat belt assembly is suspected of being damaged or not operating properly, do not repair the component. Replace the components as an assembly.

• If the seat belt webbing is cut, frayed, or damaged then replace the seat belt assembly.

- Never lubricate the seat belt buckle or tongue.
- When replacing any seat belt assembly always use a Genuine NISSAN seat belt assembly.
